Bribery and corruption: ground reality in India
A survey by EY’s Fraud Investigation & Dispute Services Practice
Bribery and corruption: ground reality in India
About the survey

This survey was conducted from March to May 2013 via an online questionnaire, which was hosted on EY’s website in India. The survey was shared with senior executives in various business functions from which we received over 200 responses. The principal respondents belonged to business functions such as internal audit and finance, legal and compliance, and vigilance and risk management.

Our respondents represented a mix of Indian enterprises with domestic operations, as well as Indian subsidiaries of foreign multinationals in the UK and US, whose annual incomes range from INR50 billion to INR100 billion. They operate in an extensive range of industries. The majority of our respondents were from banking and financial service institutions, and the technology, media and entertainment and manufacturing sectors.

In order to gauge investors’ perspectives on the flow of investments to India, we also interviewed respondents from 15 private equity (PE) firms online.

The survey has been supported by secondary research, conducted by our team, on bribery and corruption cases reported in the media from October 2011 to September 2012. The impact of some large alleged scams, including 2G, the Commonwealth Games and mining, was, however, outside its purview.

The case studies included in this report are on the basis of our experience and incidents reported in news articles.

Note:

- Some percentages in the charts total more than 100% since executives were allowed to make multiple selections.
- Not all the questions in the survey were answered by all respondents. Hence, all the percentage figures are derived from the total number of respondents who answered the particular question and not on the total number of overall respondents.
The high potential of the domestic market, which is driven by India’s emerging middle class, cost competitiveness and its large talent pool, continues to make the country one of the most preferred destinations for investors and businesses\(^1\). However, if we go by recent news reported in the media, most hard-hitting headlines have been about scams, cases of graft, endemic corruption, enforcement and whistle-blowers.

We set out to ask corporate India about their perception of media reports, the country’s future and the role of the private sector in the function of the free market. The responses made uncomfortable reading. We found that corruption — real or perceived — is having a detrimental effect on India’s economy. On the one hand, it is forcing investors to rethink their India entry strategy, and on the other, it is distorting the function of the free market and creating unfair competition in it.

Notwithstanding all the skepticism witnessed in India today, we believe the recent steps taken by the Government of India to improve governance standards in the country are encouraging and are garnering support of various sections of society, e.g., investors, corporate organizations and the general public. Government is considering the option of amending the Indian Penal Code (IPC) to make bribes offered by the private sector a criminal offense that will attract stringent punishment\(^2\). The amendment will make giving and taking bribes in private sector dealings a criminal offense under the IPC.

While the Government is doing its bit to improve the business environment in the country, the private sector also has a significant role to play. Although many organizations demonstrate their awareness of the risks involved and have intensified their anti-corruption compliance initiatives, the results of this survey indicate that there is still much to be done. Companies will have to ensure a high level of transparency in their business conduct and take a steadfast long-term decision to resist any pressure or temptation to pay bribes.

---

\(^1\)Ready for the transition: India attractiveness survey, EY, 2012

4 *Bribery and corruption: ground reality in India*
Some of the specific findings of our survey include:

- **Seeking fair practices:** around 83% of the respondents felt that cases of bribery and corruption can negatively impact Foreign Direct Investment (FDI) inflows.

- **Sectors most vulnerable to corruption:** these include infrastructure and real estate, metals and mining, aerospace and defense, and power and utilities sectors.

- **Strain on ethical behavior:** alarmingly, a large number of respondents appeared to be comfortable with (or were aware of) unethical business conduct, including irregular accounting to hide bribery and corruption, gifts being given to seek favors, and third parties being used to pay bribes.

- **Taking the easy way out:** more than half of the respondents agreed that it is the reluctance to obtain licenses and approvals through authorized channels which may take longer, leads to bribery and corruption.

- **Need for greater enforcement of laws:** around 89% of the respondents felt that there should be greater enforcement of laws to curb the proliferation of bribery and corruption.

We take this opportunity to express our gratitude to the people and organizations who took time to respond to our survey. The report and the findings would not have the same value without the support of these respondents.

**Arpinder Singh**
India Leader
Fraud Investigation & Dispute Services
EY
Given the state of India’s economic development, good governance is absolutely critical to give us a competitive edge and sustain growth. It is becoming increasingly evident that it is impossible to separate good governance and sustainable development.

Empirical evidence suggests that high levels of corruption are associated with lower levels of investment. Corruption invariably increases transaction costs and uncertainty in an economy while lowering efficiency, by forcing entrepreneurs to divert their scarce time and money to bribery rather than production. It inhibits the development of a healthy marketplace and imbalances economic and social development by distorting the rule of law and weakening the institutional foundation on which economic growth depends. Corruption is a double jeopardy for the poor, who are hardest hit by economic decline, are most reliant on the provision of public services and are least capable of paying the extra costs associated with bribery, fraud and the misappropriation of economic privileges.

Today, India is one of the most sought-after investment destinations. Several reports place India among the top three countries globally in terms of an attractive investment destination ranked by global corporations. While several positive factors such as a large and growing domestic market, favorable demographic profile and the availability of a large pool of skilled manpower, have brought global investors to India, in terms of “ease of doing business”, India still has a long way to go. For 2012, the World Bank’s Doing Business Report placed India at 134 out of 183 countries that were ranked in terms of ease of doing business.

Clearly, to stay ahead in this competitive world, we need to improve our governance systems. Good governance in states such as Bihar, Chattisgarh, Madhya Pradesh and Uttar Pradesh is reflected in the improved growth rates.

Our Government, at both center and state levels, in a bid to introduce governance reforms, has taken various positive steps in the recent past, such as the implementation of various e-governance projects, the Right to Information Act 2005, initiation of electoral funding reforms, the setting up of a second Administrative Reforms Commission, the Gram Nyayalayas Act, 2008 and performance monitoring and evaluation system (PMEs) for central ministries and departments. Despite the positive steps that have been taken to bridge the gaps in the governance infrastructure of the country, there are deficiencies that continue to plague India’s development.

In 2012, India ranked 94 out of 176 countries in the Corruption Perception Index of Transparency International. Other recent surveys also reveal that, globally, corruption has worsened in the last two years. Furthermore, if corruption is not contained, it will grow exponentially, and we need to arrest this inimical growth that is tearing into the social fabric of our economy.

I am happy to report that the Federation of Indian Chambers of Commerce and Industry (FICCI), in its endeavour to promote good governance, has initiated a high-powered – Inclusive Governance Council (IGC) that will act as an umbrella body to address issues of governance. The prime objectives of this council include promoting integrity, creating shared value, strengthening the regulatory mechanism in India and familiarizing and raising awareness on laws such as the US Foreign Corrupt Practices Act and the UK Bribery Act, and their possible implications on Indian businesses.
We are pleased to present this joint report, which identifies and analyzes ground realities, while providing fresh perspectives on combating and wrestling the endemic menace of corruption in India. The results of the survey indicate that it is extremely important that anti-bribery and anti-corruption be on the agenda of senior executives and a comprehensive bribery and corruption risk assessment is done before undertaking any project. On the other hand, Government must also ensure the proper and impartial implementation of various anti-social regulations to take strong, deterrent and timely legal action against the offenders. Such steps are needed to curb the menace of bribery and corruption, and an atmosphere has to be created where the good come forward to serve the country with pride and honesty for the welfare of the people of India.

We hope this Study on Bribery and Corruption risk: scenario in India will provide useful insights to all stakeholders.

Dr Alwyn Didar Singh
Secretary General
FICCI
Corruption in the country continues to be a problem tearing into the fabric of governance. There is corruption in all spheres, and people are adversely affected in their day-to-day life.

Corruption is growing by leaps and bounds in India. As the nation grows, the corrupt invent new methods of cheating the Government and public.

More and more people, all over the world are demanding greater transparency and accountability from public representatives. In May 2011, India ratified the United Nations Convention Against Corruption (UNCAC), an instrument that legally binds all the state parties, to take appropriate punitive and preventive measures to address the problem of corruption.

There is currently no exclusive legislation to check corruption in the private sector in India. Existing legislative tools in India, such as the Prevention of Corruption Act 1988, do not expressly seek to punish corrupt acts by private parties, except to a limited extent through Sections 8 and 9 (dealing with persons accepting gratification to use their influence on a public servant in the conduct of an official act) and Section 12 (dealing with abetment, pursuant to which a person offering a bribe could be punished).

The draft Indian Penal Code (Amendments) Bill 2011 encompasses graft by an individual firm, society, trust, association of individuals or company, whether incorporated or not, that undertakes any economic, financial or commercial activity.

This report provides a study of the current status in the country, various forms of bribery faced by the private companies and efforts made by them toward the compliance program. It also talks about the impact of corruption on the economy, sector-wise corruption and how poor enforcement of existing laws has led to corruption. What is interesting to know in the report are the different ways through which companies manipulate their finances for short term gains.

I wish EY success in their future endeavors and hope they keep publishing reports such as this one, which will hopefully be an eye-opener for companies.

► Investors throwing caution to the wind

Are there adequate safeguards to protect against bribery and corruption risks? 36

► Compliance programs-always more to do
► How are PEs monitoring their portfolio companies?

Conclusion-protect your business 40
Impact of bribery and corruption on India’s economy and corporate organizations

- Nearly 83% of respondents felt that the recent spate of reported scams may negatively impact FDI inflows into the country.

- 73% of investors are expected to bargain hard and factor in the cost of corruption at the time of entering transactions.

- Nearly 50% of the respondents said their companies have lost business to their competitors because of the latter’s unethical conduct.
Estimated loss
The potential losses suffered by the Indian economy (according to reported corruption cases in the media from October 2011 to September 2012 stands at INR364 billion\(^3\). This excludes some large scams such as 2G, the Commonwealth Games and mining.

---

Are corporate organizations fueling corruption?
More than half of the respondents agreed that it is the reluctance of corporate enterprises to obtain licenses and approvals through authorized channels that encourages bribery and corruption.

---

\(^3\)Based on secondary research
Facilitators

- Nearly 75% of the respondents said that it is an organization’s responsibility to monitor activities managed by third parties (vendors, dealers and distributors).
- On the other hand, two-thirds of respondents revealed that their companies do not conduct complete due diligence on third parties or new business partners.

Reality, awareness and perception

- Thirteen out of fifteen of the respondents representing PE firms indicated that accounting fraud is the most common fraudulent practice observed in India.
- With eighty-nine percent of the respondents, cash continues to be the most favored form of bribe.
- Sixty-four percent of the respondents were aware of companies performing irregular accounting to hide bribery and corruption.
- Forty-four percent of the respondents were in favor of legalizing facilitation payments in India.
- Thirty-one percent of the respondents were unaware that making facilitation payments is illegal in India.

Laws in India: good intentions, lacking in actions

- Two-thirds of the respondents were optimistic that new regulations, such as the Companies Bill 2012, will make a difference and help in reducing fraud, bribery and corruption in the country.
- Around 89% of the respondents felt that there should be greater enforcement of laws to curb the proliferation of bribery and corruption.

Are businesses willing to self-report amid lingering skepticism?

- Around 75% of the respondents were of the opinion that companies should self-report cases of bribery and corruption to the appropriate authorities. However, in reality, very few cases of bribery and corruption are reported in India. In our experience, most of the companies take cognizance in India only after they are investigated at the global level.
Around 77% of the respondents think that it is the responsibility of managing directors to handle bribery and corruption-related issues in organizations.
India Inc. voicing its opinion*

Although the representatives of companies state that they do not support corruption, they have hidden mechanisms to support corrupt practices. It is important that ethical leadership is practiced as a virtue if the private sector is to show the way.

-An Indian Multinational company

These days, bribery is, in many cases, regarded as a norm rather than an evil. This is eroding the country’s very fiber. The Government will have to be proactive in handling such cases to prevent further damage to the economy and Indian citizens.

-A foreign Multinational company

Automation of all procedures or processes involving interface with the Government is the ideal it needs to focus on. Doing away with person-to-person interface (as far as possible), especially for approvals, services, licenses, etc., would greatly reduce the scope for corruption.

-An Indian Multinational company

The tone at the top is extremely important to ensure awareness and compliance with anti-bribery and corruption issues. Serious action on reported instances of bribery and corruption, and wide publicity of such actions across organizations, are other effective deterrents.

-A foreign Multinational company

Bribery seeps slowly into the culture of an organization. If it decides not to resort to bribery, it can keep its business going, but its profit will be based on its efforts.

-An Indian Multinational company

There should be transparency at all levels in organizations to reduce corruption. There should not be any discretionary power and every official should be made accountable for his or her omissions and commissions.

-A US-based foreign Multinational company

*Responses given by survey participants to open-ended questions
Are there adequate safeguards to protect against bribery and corruption risks?

Companies taking the first step toward compliance programs

More than 90% of the respondents reported that their companies had anti-bribery and corruption policies in place, standalone or covered under their code of conduct policy.

Lack of training making programs ineffective

According to 34% of the respondents, their organizations do not conduct anti-bribery and corruption-related training for their employees.

Companies relying more on reporting mechanism than monitoring themselves

76% of the respondents’ companies have a whistle-blowing mechanism to report corruption issues; less than 60% of the respondents’ companies monitor the expenses and activities of their business partners to ensure compliance with their anti-bribery programs.

How effective are vigilance setups and existing regulatory bodies for investigation of bribery and corruption cases in India?

The Prevention of Corruption Act 1988 is the law governing bribery and corruption in India. It extends to the whole of the country, except Jammu and Kashmir, and it is only applicable to public servants.

State level: every state has a Criminal Investigation Department (CID) for either investigating or taking over control of sensitive or special report cases registered at a police station, anywhere within the jurisdiction of the state. The Economic Offenses Wing (EOW) may be a part of the State CID or a separate wing altogether. It mainly takes up cases of financial frauds, counterfeit currency, bribery and corruption. Besides this, every State has a separate Vigilance Department for investigation of bribery and corruption cases against public servants.

National level: the premier investigation agency at the center is the Central Bureau of Investigation (CBI). The CBI is a nodal agency for coordinating with other central vigilance departments on vigilance matters. CBI has an Anti-Corruption Division to deal with cases of corruption and fraud committed by public servants of all central government departments, central public sector undertakings and central financial institutions.

Central Vigilance Commission (CVC): is an autonomous body and is free of control from any executive authority. It has the power to monitor all vigilance activity under the Central Government of India, and advise various authorities in central government organizations on planning, executing, reviewing and reforming their vigilance work. They coordinate the various vigilance departments involved in the public sector and also supervise the CBI’s work.

At the Center, every Ministry has a vigilance cell. Similarly, all the public sector undertakings and nationalized banks operating in India have their own vigilance setup.
Impact of bribery and corruption on India’s economy and corporate organizations

According to a recently released biannual country update by the World Bank, the overall outlook for India remains positive, with its economic growth expected to accelerate to 6.1% in FY2014. However, despite this optimism, our survey respondents believe that increasing corruption may act as a speed-breaker in the India growth story (see Figure 2).

The detrimental effects of corruption are pervasive. At the macro level, it results in unbalanced economic growth, skewed distribution of wealth and inefficient utilization of resources. According to a World Bank estimate, 0.5% of India’s gross domestic product (GDP) is lost due to corruption every year. Furthermore, it makes the business environment less attractive to foreign investment.

The clandestine nature of corrupt acts makes it difficult to put an exact figure to the losses incurred due to corruption. However, the study would have been incomplete if we did not try to gauge the gravity of the situation. By analyzing reported corruption cases in the media, we estimated that the potential losses suffered by the Indian economy amount to INR364 billion.5

4India Development Update, the World Bank Group, April 2013, Page 3
5Based on secondary research
India Inc. experiencing detrimental effect of overarching corruption

Today, businesses are operating in extremely challenging conditions. EY’s 2013 EMEIA Fraud Survey⁶, brought to the fore the fact that executives and their teams are under increasing pressure to deliver unrealistic results in difficult markets. Three out of four Indian respondents agreed that managers in their companies are under tremendous pressure to deliver exceptional financial performance over the next fiscal year.

Corrupt practices undermining the level playing field

A concerning number of the respondents (nearly 50%) said that their companies have lost business to their competitors due to the latter’s unethical conduct.

The most worrying aspect of this finding is the negative impact this may have on the losing parties. Under increased pressure to “deliver,” they may indulge in corrupt practices the next time to win business.

Case study

Paying to gain unfair advantage in business

A company was alleged to have paid a government official to influence and facilitate the process of a license being issued to it in order to delay the entry of its competitors. These payments were routed through a subsidiary of the organization, and the amounts were recorded by it as expenditure on service contracts for intermediaries and agents. On closure of the investigation, the company and its subsidiary had to pay a significant amount as penalty. In addition, they were also forced to incur the cost of implementation of an enhanced compliance program.

⁶Navigating today’s complex business risks, EY’s EMEIA Fraud Survey 2013.
Corruption percolating through the sectors

Bribery and corruption are pervasive, but some sectors tend to witness a relatively higher degree of such instances. Our respondents perceived the following sectors as the most vulnerable to corruption:

- Infrastructure and real estate (85%)
- Metal and mining (76%)
- Aerospace and defense (64%)
- Power and utilities (51%)

There are a range of specific factors that make a sector more susceptible to bribery and corruption risks than others (see Figure 4). It is imperative for MNCs to understand these factors, with increasing enforcement of the FCPA by US regulators. The Securities and Exchange Commission (SEC) and Department of Justice (DOJ) have targeted industries such as oil and gas, pharmaceuticals and freight forwarding during their investigations in the past. It is observed that the regulators are sharp enough to identify red flags such as corruption schemes and use of intermediaries. Once identified, they focus on the companies that meet these criteria and can subject them to increased scrutiny.

In India, in recent years, international businesses in sectors such as mining, construction, food and manufacturing have been sanctioned for breaches of the FCPA, often relating to awarding of licenses or payments in relation to sales contracts. It is important for businesses with government contacts, whether as customers or suppliers, to pay particular attention to their conduct in India.
A close look at sectors indicates that the perceived levels of corruption depend on sector-specific vulnerability factors. These factors drive the depth, volume and frequency of bribery and corruption in the respective sectors. For example, stringent regulations, large-value contracts and continuous government interaction have been instrumental in sectors such as infrastructure, defense, metals and mining, making them more vulnerable to bribery and corruption. On the other hand, high use of middlemen, consultants and PR agencies play a key role in making telecoms, media and entertainment sectors vulnerable to corruption. Also, factors such as multilayered supply chains and complex webs of legislation make other sectors such as pharmaceutical, retail and manufacturing vulnerable. Other factors such as liaising activities and speed money continue to be deep-rooted in nearly all the sectors.

“According to 73% of the respondents from PE firms, a company operating in a sector that is perceived as highly corrupt may lose ground when it comes to a fair valuation of its business, as it bargains hard and factors in the cost of corruption in the sector during a transaction.”
What is making bribery and corruption widespread in the country?

Are corporate organizations fueling corruption? The results of the survey (see Table 1) seem to say “yes,” with the majority of respondents indicating that it is the reluctance of organizations to obtain licenses and approvals the right way that is encouraging bribery and corruption. Companies that indulge in corrupt acts weigh the cost of their actions against expected returns. With 89% of the respondents pointing to inadequate enforcement of laws, it is not surprising that companies resort to unethical conduct to make profits, at least in the short term, in the absence of deterrents.

“Despite the fact that the Prevention of Corruption Act has established a legal framework to punish the corruption of public servants with fines and up to three years in prison, actual punishment for these offenses rarely occurs.”

Looking toward a bright future

Two-thirds of the respondents are largely optimistic that new regulations such as the Companies Bill 2012 will make a difference and help in reducing fraud, bribery and corruption. On 18 December 2012, the Lok Sabha passed the much-awaited Companies Bill 2012. According to clause 177 of the Bill, every listed company has to establish a “vigil” mechanism for its directors and employees to report genuine concerns relating to bribery and corruption in the prescribed manner.
**Strengthening anti-graft laws**

At present, there are no legal provisions to check graft in the private sector in India. Government has proposed amendments in existing acts and certain new bills for checking corruption in the private sector.

Big-ticket corruption is mainly witnessed in the operations of large commercial or corporate entities. In order to prevent bribery on the supply side, it is proposed that key managerial personnel of companies and also the company itself shall be held liable for offering bribes to gain undue benefits.

The Prevention of Money Laundering Act 2002 provides that the properties of the corrupt public servants shall be confiscated. However, the Government is considering incorporating provisions for confiscation or forfeiture of the property of corrupt public servants in the Prevention of Corruption Act 1988, to make it more self-contained and comprehensive.

A committee headed by the Chairman of the Central Board of Direct Taxes (CBDT) has been constituted to examine ways to strengthen laws to curb the generation of black money in India, its illegal transfer abroad and its recovery. The Committee shall examine the existing legal and administrative framework to deal with the menace of the generation of black money through illegal means, including inter alia the following:

1. Declaring wealth generated illegally as a national asset
2. Enacting and amending laws to confiscate and recover such assets
3. Providing for exemplary punishment against its perpetrators

It is significant and relevant that, according to information provided by the CBI, it has not unearthed any case in which a government official has undisclosed property worth more than INR1 billion.

“More often than not, instances of large-scale corruption in India invariably involve corporations, either as the bribe-giver or as a conduit. That being said, it remains a matter of surprise that the criminal laws in India, specifically those pertaining to anti-corruption, do not specifically cater to dealing with infractions by corporations, let alone being lackadaisical in their application, as is the case with individuals. This lacunae has been taken note of by the political establishment, with recent statements of the Prime Minister specifically expressing the need to amend the provisions of the Indian Penal Code and the Prevention of Corruption Act 1988 to cover the actions of corporates. However, it remains to be seen if this would be allowed to be translated into the black-letter law and be implemented with the zealousness as shown by authorities such as the SEC and the DOJ in the US.”

| **Prevention of Bribery of Foreign Public Officials and Officials of Public International Organizations Bill 2011 (India’s FCPA equivalent)**<sup>8</sup> | India signed the United Nations Convention against Corruption on 9 December 2005. The Bill is required for the ratification of the convention. It provides a mechanism to deal with bribery among foreign public officials (FPOs) and those of public international organizations (OPIO). The Bill criminalizes the following acts:  
  - Acceptance or solicitation of bribes by FPOs and OPIOs for acts or omissions in their official capacity  
  - Offering or promising to offer a bribe to any FPO and OPIO to obtain or retain business |
| **Prevention of Corruption (Amendment) Bill 2008<sup>9</sup>**                           | To make the anti-corruption laws more effective, the recommendations of the Law Commission of India and the Committee on Civil Services Reforms (Hota Committee) formed the basis of a Bill introduced in the Lok Sabha. The salient features of the Bill include:  
  - Forfeiture of property acquired by the holders of public office through corrupt means, by incorporating the provisions of the Criminal Law (Amendment) Ordinance 1944 in the Prevention Of Corruption Act 1988 (PC Act)  
  - Deletion of section 13(1) (d) (iii) of PC Act by observing that a commercial decision taken by an officer acting in good faith may benefit one party or another, which does not constitute grounds for prosecution of the officer who may have acted in good faith  
  - Proposal to amend section 16 of the PC Act to provide a quantum of fine for a person accused of an offense under section 13(1) (d) so as not to exceed the pecuniary resources or value of property for which the accused person is unable to account for satisfactorily  
  - Section 19 of the PC Act to be amended to provide for obtaining sanction for prosecution, even against those who cease to be public servants, on the lines of section 197 of the Cr.P.C., 1973 |
| **Public Procurement Bill 2012<sup>10</sup>**                                             | After its implementation, the Bill will enable India to achieve compliance with the stipulations contained in the UNCAC. It aims to regulate public procurement with the following objectives:  
  - Ensuring transparency, accountability and probity in the procurement process  
  - Fair and equitable treatment of bidders  
  - Promoting competition, enhancing efficiency and economy  
  - Maintaining integrity and public confidence in the public procurement process  
  - Matters connected therewith or incidental thereto |

<sup>8</sup> Bill No. 26 of 2011, the Prevention of Bribery of Foreign Public Officials and Officials of Public International Organizations Bill, 2011  
<sup>10</sup> India: Proity in Public Procurement, United Nations Office on Drugs and Crime (UNODC) Report, 2013, page 22 and 23
How is India Inc. complying with the provisions of various anti-graft laws?

Bribery and corruption continue to pose a major challenge in India. The 2011 Transparency International Corruption Perceptions and Bribe Payers Indices rank India 94 (out of 176) and 19 (out of 28), respectively, indicating the severity of the issue.

Around 28% of the Indian respondents to EY’s 12th Global Fraud Survey were willing to make cash payments to win or retain business, compared with 15% of respondents globally\(^\text{11}\). Corruption is perceived as being acceptable in business dealings as a means of avoiding administrative bottlenecks. Low public sector wages increase the risk of bribes being accepted for quick favors or to ignore wrongdoing.

According to the Ministry of Finance’s white paper\(^\text{12}\) on “black money,” the “corrupt” component of this money could stem from bribery received and theft by those holding public office, e.g., by grant of business, leakages from government social spending programs, “speed” money to circumvent or fast-track procedures, black marketing of price-controlled services and altering land use by regularizing unauthorized construction.

\(^{11}\)12\(^{\text{th}}\) Global Fraud Survey, EY 2012  
\(^{12}\)Ministry of Finance’s White Paper on Black Money, May 2012
**Bribery with cash reigning supreme**

Cash continues to be the most preferred mode of paying bribes – 89% of the respondents selected it from the list of possible modes (see Figure 4).

According to the annual report of the CBI in 2012, 213 cases were registered for bribes being demanded by public servants for grant of official favors and 67 cases were filed for possession of assets disproportionate to known sources of income. This is the demand side of corruption.

![Figure 4: Businesses cashing in on “cash” bribes](image)

**What about the supply side?**

It is concerning that, a large number of respondents from this survey appear to be comfortable with (or are aware of) unethical conduct. This includes irregular accounting to hide bribery and corruption, gifts being given to seek favors or using agents and third parties to pay bribes.

**Innovative ways of paying bribes**

- Paying high salaries to selected employees, with an understanding that the excess amount will be used to make improper payments
- Routing improper payments through payment facilitators (existing vendors or material suppliers), who pass on the cash to liaising agents, keeping themselves out of the loop
- Paying a periodic performance bonus to vendors assisting in procurement of licenses
- Presenting gift cards (prepaid cash cards issued by banks) to government officials with whom organizations frequently interact
Some contagious issues in emerging markets that can expose companies to bribery and corruption risks

**Corporate hospitality:** established norms in some countries may be extravagant and at risk of being perceived as intended to have a direct impact on decision-making. The key issue here is when does influence become inducement? A simple rule a company in doubt can follow is to stay away from giving gifts or offering entertainment at the time of negotiating a contract.

**Facilitation payments:** such payments, also known as “grease payments,” are allowed under the FCPA, but are prohibited under the UK Bribery Act. In fact, many payments that meet the FCPA’s narrow definition of “facilitating payments” may be illegal in the country in which they are made, e.g., such payments are prohibited under the PC Act in India.

**Third-party risk:** in a new market, a company must work with multiple suppliers, intermediaries and agents, who may themselves depend on a web of second-tier third parties. This creates a complex network to manage. The UK Bribery Act states that where a bribe is paid by an “associated person,” i.e., an employee, agent or subsidiary (as defined in Section 8 of the Act), with the intention of benefitting the company, the organization will automatically be guilty of a criminal offense. In short, a business may be held responsible for the actions of persons employed by or associated with it. It has also become increasingly clear that ignorance of laws does not absolve senior management of their liabilities for the activities of their local subsidiaries and agents.
Rules governing government officials

According to the rules of conduct governing government servants\(^\text{13}\), they are not to accept or permit members of their families (or other persons acting on their behalf) to accept gifts. The expression “gift” includes free transport, boarding, lodging or other services, or any other pecuniary advantage provided by any person other than a near relative or personal friend with no official dealings with the civil servant. Acceptance of gifts needs to be well regulated on occasions such as weddings, anniversaries, funerals, religious functions, transfer and retirement when presentation of gifts (including gifts from their own staff) conforms with prevailing religious and social practices. A report should be submitted to the Government by the civil servant if the value of such gifts exceeds the laid down limits defined on the basis of the grade of post of the person.

Case study

Prosecution for presentation of expensive gifts

A large multinational company was prosecuted by the regulator for violating transnational bribery laws by presenting expensive gifts and offering extravagant hospitality to secure the sale of its products. These expenses were improperly recorded by its subsidiaries and joint ventures, which paid for these. In addition, the subsidiaries also made payments to vendors for fictitious services to create a “slush” fund for providing lavish entertainment to government officials to secure contracts. The company was charged with violating the laws and was fined for a significant amount as penalty.

---

\(^{13}\)Central Civil Services (Conduct) Rules, 1964
Facilitating or expediting payments are illegal in India

Thirty-one percent of respondents are unaware that making facilitation payments is illegal in India. As per the Prevention of Corruption Act 1988, facilitation payments are considered as an act of bribery and, therefore, punishable under the act.

Fourty- four percent of respondents are in favor of legalizing facilitation payments in India (see Figure 6).

While 44% of the respondents were in favor of legalizing facilitation payment under Indian laws, similar to the FCPA, the Organizations of Economic Cooperation and Development (OECD) has a different view.\(^\text{14}\)

In view of the corrosive effect of small facilitation payments, the OECD recommends that the countries should:

- Undertake a periodic review of their policies and approach on small facilitation payments to combat the phenomenon effectively.
- Encourage companies to prohibit or discourage the use of small facilitation payments in internal company controls, ethics and compliance programs or measures, recognizing that such payments are generally illegal in the countries in which they are made and must, in all cases, be accurately accounted for in companies’ books and financial records.

Further the OECD urges all countries to raise the awareness of their public officials on their domestic bribery and solicitation laws with a view to stop solicitation and acceptance of small facilitation payments.

“The FCPA’s prohibition of bribery contains a narrow exception for facilitating or expediting payments made in furtherance of routine governmental action that involves non-discretionary acts.”

\(^\text{14}\)Convention on combating bribery of foreign public officials in international business transactions, OECD 2011, page 22
Case study

Arrest for small payments
There are no de minimis limits in bribery and corruption—a small bribe may expose you to risk. There are reported instances of government officers being arrested for accepting bribes as small as INR 1,000. For instance, a forest officer was arrested for accepting a bribe of INR 1,000 from two people. The forest official had caught these two individuals while collecting firewood illegally and the official in return demanded a bribe from them. In another instance, an officer of a state electricity department was arrested for accepting a bribe of INR 1,000 for processing a request to replace a damaged transformer.

What happens if an executive pays a bribe out of his own pocket?
The regional head of a multinational company was suspended for paying INR 1,000, in cash to an electricity board official. There was a sudden electricity outage. The regional head rushed to the site and immediately paid the amount from his personal funds. He paid the amount to restore continuous electricity supply and save the diesel cost of running the generators. He did not claim the amount as reimbursement. However, as soon as the company came to know of this event, he was suspended.

"The anti-bribery enforcement actions of DOJ and SEC have been focusing on small payments and gifts when these are part of a systemic or long-standing course of conduct that provides evidence of a scheme to make illegal payments to foreign officials to obtain or retain business."

-A Resource Guide to the US Foreign Corrupt Practices Act
Hiding it in the books

Some examples of hiding bribes in books of accounts include promotion expenses, payments made to sales agents, expenditure on gifts and entertainment and payment of agents’ commission.

When we questioned respondents on what they had to say about companies performing irregular accounting to hide bribery and corruption, around 64% of them mentioned that they were aware of companies performing such practices (see Figure 5, to see how companies hide illicit payments?)

Figure 5: How companies are doing it?

- Miscellaneous expenses: 53%
- Through third parties: 47%
- Industry practices, such as markup, commissions, “stealth” discounts or rebates: 47%
- Capital expenditure: 24%

Do companies perform irregular accounting to hide bribery and corruption? If yes, how do they do it?

Senior management should ask tough questions about the following:

- High levels of travel, entertainment and gifts, inadequate supporting documentation, no clear business purpose, attendees not identified, etc
- Unclear and varying wording of distributor contracts
- Fixed fee or percentage contracts with unclear scope and deliverables
- Lack of clear explanations regarding the services of hired agents or consultants
- Excess fees paid to agents to obtain licenses as compared with nominal government fees
- Distributor commission higher than industry standards

Common ways of hiding bribes

- Capitalizing bribes paid to set up a factory, offices and shop
- Bribes paid in cash and recorded fictitiously under repairs and maintenance
- Bribes paid through dealers and distributors and recorded as annual performance bonus payments
- Expenditure on giving gifts recorded under reimbursement for meals, refreshments or travel
- Funds spent on liaising with government offices recorded as retainer fees
Too good to be true?

Businesses have good reason to look critically at what is being reported to headquarters from other jurisdictions and ask the question: do these results add up? As getting more for less becomes more challenging, some managers may look at an alternate option, such as meeting targets by misrepresenting performance.

According to our EMEIA Fraud Survey 2013 more than 50% of respondents said that they have seen financial manipulation of some kind occurring in their own company (see Figure 6).

</table>

Which, if any, of the following have you heard of happening at your company in the last 12 months?

Source: For the purpose of the EMEIA Fraud Survey 2013, developed countries include Austria, Belgium, Finland, France, Germany, Greece, Ireland, Italy, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and UK. Rapid growth countries include Czech Republic, Egypt, India, Nigeria, Poland, Russia, Saudi Arabia, South Africa, Turkey, UAE and Ukraine

The EMEIA Fraud Survey 2013’s results serve as a warning for multinational companies with subsidiaries in rapid-growth markets such as India, where 54% think financial performance is often exaggerated. Unfortunately, a major financial statement fraud by the local management of a multinational company, which was exposed last year in India, supports this result.
Asking questions, demanding answers

According to nearly 75% of the respondents, it is an organization’s responsibility to monitor activities managed by third parties, including vendors, dealers and distributors (see Figure 7).

In today’s business environment, the risks faced by global companies relating to business associates, including customers, vendors and outsourced business relationships, are greater than ever before. The rise in fraud risk and awareness, originating from the economic crisis, along with strong governmental enforcement activity and an increased focus on enterprise risk, is resulting in global corporations and their audit committees taking a closer look at how they manage their vendor and customer-compliance relations.

Are business partners really as good as they seem?

Our survey revealed that two-third of the respondents’ -75% of the respondents of this survey, organizations do not conduct a complete due diligence on third parties or new business partners.

Any due diligence is incomplete without the following checks:

- Information collected on company ownership and key personnel
- Facts and figures collated on the business history, activities and operations of enterprises
- Data gathered on market reputation and credentials
- Information collected on background, reputation and ethical track record of business partners
- Relevant data garnered on associations or relationships of potential concern (government connections and political exposure)
- Red flag coverage on the company and personnel on sources such as sanction and watch list, local and international, media and litigation database

Sample: 131 respondents
Base: All respondents
Businesses willing to self-report amid lingering skepticism

According to around 75% of the respondents, companies should self-report cases of bribery and corruption to the appropriate authorities (see Figure 8).

The question is, “What is the right thing to do and what happens in reality?” Some of the reasons why organizations do not self-report are lack of trust in the system, fear of a backlash and victimization.

Figure 8: Own the problem

- No: 11%
- Yes: 75%
- Others: 14%

Do you think that companies should self report cases of bribery and corruption to the appropriate authorities?

Sample: 204 respondents
Base: 202 respondents

Investors throwing caution to the wind

The survey revealed that 73% of PE respondents’ organizations do not conduct anti-bribery and corruption due diligence before investing in enterprises.

Investing in another business is fraught with risk as this may expose the investors to unknown risks. This is further compounded by aggressive enforcement of anti-graft laws such as the US FCPA. PE firms that do not conduct due diligence are doing so at their own peril and are overlooking specific risks, such as:

- Impaired value of an acquired company in the event of its value being based on revenues generated by paying bribes
- Significant expenses incurred in conducting an internal investigation, responding to regulatory inquiries, and paying significant fines and penalties for issues identified after closure of the transaction and related litigation costs
- Loss of expected revenue due to inherited segment-specific operations in the area where the problem is concentrated
- Successor liability for PE firm and directors due to violating activity performed by the portfolio company, even before its ownership by the PE firm
- Liability exposure for directors, fund managers, executives and other associated individuals with management or guidance responsibilities over the portfolio company

Source: Navigating today’s complex business risks, EY EMEIA Fraud Survey 2013

Case study

Exemplary case of a company self-reporting

In a recent case, the SEC signed a non-prosecution agreement for violation of the Foreign Corrupt Practices Act due to a company’s prompt self-reporting of violations, the completeness of the information it provided and its extensive, thorough and real-time cooperation during the SEC’s investigation. However, although the SEC wants to set this up as an example for companies who want to self-report, companies are still hesitant to do so.

15Anti-corruption considerations for private equity firms, EY, 2012
Are there adequate safeguards to protect against bribery and corruption risks?

Multinational organizations are under increasing pressure to improve their anti-bribery and anti-corruption compliance programs, as jurisdictions around the world increase their enforcement of laws and regulations to combat bribery and corruption. Executives need to be acutely aware of the liability they personally face for the actions of their employees and business partners.
Perception that the managing director (MD) is responsible for the handling corruption-related issues

“The MD should be made responsible for combating bribery and corruption. They must ensure strict adherence to the laid-down code of ethics, fraud risk management systems and close supervision, surveillance and monitoring on needs basis. However, he can’t be held responsible for an individual aberration on an equal footing as the person having committed the offense. Here, the MD’S role should be gauged by the seriousness with which the fraud was inquired into and the punitive action taken by him.”

- Shri Uday Shankar Dutt, IPS (Retired)

In your opinion who should be responsible for bribery and corruption issues in a company?

Sample: 204 respondents
Base: All respondents
Compliance programs - always more to do

According to the United Nations Office on Drugs and Crime (UNODC) recent report\(^{16}\), organizations are realizing that preventing corruption makes good business sense. Many companies have learnt from their own experiences or through the experiences of others that complicity can make them vulnerable to repeated illegal demands, result in cost escalation and compel them to commit economic offenses, including fraud and forgery, for unaccounted cash flows. Even worse, as has been witnessed of late, the unethical practices of some large and formerly reputed companies have led to their economic collapse (and loss of reputation) in the market, as well as among their competitors and customers.

Companies are taking their first steps toward implementing compliance programs. More than 90% of the respondents reported that their companies have anti-bribery and corruption policies that are standalone or covered under their code of conduct policies (see Figure 10). In the EMEIA fraud survey it goes further to say that 53% of respondents in India believed them to be relevant and effective.’

Figure 10: Does your company have an anti-bribery and corruption policy?

Organizations falling behind in training employees on risks

Around 34% of the respondents reported that their organizations do not conduct anti-bribery and corruption training for their employees (see Figure 11). This is a clear indication that these organizations underestimate the threat posed by their own employees.

Figure 11: Does your organization conduct anti-bribery and corruption training for employees?

“There is a strong need to enhance training and awareness for government sector officials, since it is often seen that they do not fully understand the workings of the private sector, and vice versa, making way for vulnerability to corruption in this sector.”

- Probity in Public Procurement, UNODC Report on India, 2013

\(^{16}\) Corporate Integrity, UNODC Report, 2013
Companies relying more on reporting mechanism than on monitoring themselves

While it is a positive factor that 76% of the respondents’ companies have whistle-blowing mechanisms to report corruption issues, less than 60% of their organizations monitor their own activities to ensure that these comply with anti-bribery laws (see Figure 14).

Figure 12: Methods used to mitigate risks

- Whistle-blowing mechanism to report potential bribery or corruption issues (76%)
- Anti-bribery and corruption clauses in the contract with business partners or third parties (72%)
- Monitoring expenses to ensure that they are compliant with anti-bribery laws (60%)
- Monitoring and auditing of business partner’s compliance activities (45%)

How are PEs monitoring their portfolio companies?

The majority of the PE respondents indicated that their companies use management information and accounting systems to monitor their portfolio companies (see Table 3).

Conclusion-protect your business

**Acknowledge:** there are diverse risks for different divisions and geographies, and the one-size-fits-all approach is not effective

**Be alert:** constant updating is required on current bribery risks in a country, sector, transaction, business opportunity and business partnership

**Take the right approach:** action taken on policies and procedures should be proportionate to the risks faced and the complexity of the nature, location and scale of commercial activities

**Define “zero tolerance”**: clearly communicate what this means for the business

**Do not be ambiguous:** provide clear guidance on gifts, hospitality, political and charitable donations, and demands for facilitation payments

**Perform due diligence:** carry out systematic risk assessment of third parties, undertake site visits, perform information searches in the public domain and conduct local interviews to collect information on identified vendors

**Conduct tailor-made training:** a continual and relevant training process needs to be in place for the day-to-day issues employees are likely to face, to guide them effectively for the addressing these effectively

**Employ a dynamic approach:** make required adjustments as business risks change

Lastly, ensure that “speak up” channels such as hotlines are available for your employees. Businesses need to consider how they incentivize employees to act ethically. As they focus more closely on driving ethical growth for shareholder value, the absence of mechanisms to recognize ethical behavior seems a missed opportunity.

About EY’s Fraud Investigation & Dispute Services

Dealing with complex issues of fraud, regulatory compliance and business disputes can detract from your efforts to achieve your company’s potential. Enhanced management of fraud risk and compliance is a critical business priority — whatever the industry sector. With more than 2000 fraud investigation and dispute professionals around the world, we will assemble the right multidisciplinary and culturally aligned team to work with you and your legal advisors. In addition, we will give you the benefit of our broad sector experience, our deep subject matter knowledge and the latest insights from our global activities.

FIDS India

- **Deep competencies**: our FIDS team has wide industry experience
- **Forensic technology**: we use sophisticated tools and established forensic techniques to provide requisite services to address individual client challenges
- **Global exposure**: our team members have been trained on international engagements and have had global exposure to fraud scenarios
- **Market intelligence**: we have dedicated professionals who are specifically experienced and trained in corporate intelligence, and are capable of conducting extensive market intelligence and background studies on various subjects, industries, companies and people
- **Thought leadership**: we serve a variety of leading clients, which gives us deep insight into a wide range of issues affecting our clients and business globally
- **Qualified professionals**: we have a qualified and experienced mix of chartered accountants, certified fraud examiners, lawyers, CIAs, CISAs, engineers, MBAs and forensic computer professionals

Our services:

- Anti-bribery program
- Anti-fraud and fraud risk assessment
- Fraud, bribery and corruption investigation
- Dispute advisory services
- Forensic technology and discovery services
- Regulatory compliance
- Ethics and integrity due diligence
- Third-party due diligence
- Whistle-blowing services
- Competition and trade services
About FICCI

Established in 1927, FICCI is one of the largest and oldest apex business organizations in India. FICCI’s history is closely interwoven with India’s struggle for independence, industrialization and emergence as one of the most rapidly growing global economies. FICCI has contributed to this historical process by encouraging debate, articulating the private sector's views and influencing policy.

A not-for-profit organization, FICCI is the voice of India's business and industry.

FICCI draws its membership from the corporate sector, both private and public, including MNCs, with an indirect membership of over 20 million companies from various regional chambers of commerce.

FICCI provides a platform for sector-specific consensus building and networking, and is the first port of call for Indian industry and the international business community.

Our vision
To be the thought leader for industry, its voice for policy change and its guardian for effective implementation.

Our mission
To carry forward our initiatives in support of rapid, inclusive and sustainable growth that encompasses health, education, livelihood, governance and skill development. To enhance the efficiency and global competitiveness of the Indian industry and to expand business opportunities, both in domestic and foreign markets, through a range of specialized services and global linkages.
