60 | Indonesia
62 | Pakistan
The pulse of the international Participation banking industry are the nine core markets – Bahrain, Qatar, Indonesia, Saudi Arabia, Malaysia, United Arab Emirates, Turkey, Kuwait and Pakistan. Together, they account for 93% of industry assets, estimated to exceed US$920 billion in 2015. Forward looking industry projections are generally positive, driven by the significant unmet demand, and despite the prevailing macroeconomic and political situation across a number of emerging markets.

The boardroom focus is now shifting, and rightly so, to improve the quality of this growth. EY research has identified a group of 40 leading banks that are systemically important to the progress of the global Participation banking industry. Collectively, the nine core markets and the group of 40 banks are the ‘growth engine’ of the industry.

There are a number of extraordinary opportunities in the making that will influence the regionalization of the industry. Emerging markets will remain central to global growth over the next decade. A group of 25 rapid-growth markets (RGMs) are reshaping the world economy and the global trade flows; and 10 of these 25 RGMs have large Muslim population. In Southeast Asia, the coming together of ASEAN Economic Community (AEC) in 2015 is one of the key milestone towards a larger, integrated financial market. In GCC, falling oil prices, jobs-for-nationals and economic diversification drive is set to transform the role of financial institutions in the region. In addition, the China-led Asian Infrastructure Investment Bank (AIIB) is readying for launch with US$100 billion capital from 56 shareholder countries. And China’s ambitious development framework, the Belt & Road Initiative, has accelerated economic activity in the region, notable initiatives being the China-Pakistan Economic Corridor (CPEC) and the Bangladesh-China-India-Myanmar (BCIM) Economic Corridor.

In the local market context, Participation banks are still attempting to transform their rather generalist business model to more direct integration with priority sectors of the Islamic Economy. There is increasing pressure on these banks to demonstrate their purpose of existence – specifically their role in enabling important sectors such as transportation, retail, telecommunication and SMEs to name a few – that have the greatest impact on the economy and on creating employment alternatives.

Finally, the industry infrastructure – talent development, advocacy, applied research, regulations, capital markets, product design, accounting and rating amongst others – is not fit to support the exciting journey ahead. This requires immediate attention, funding and political will to make it happen. This is also an opportunity for each of the nine jurisdictions to carve a more specialized ‘hub’ positioning for themselves.

The purpose of this report is to inspire and inform the business strategies of Participation banks through specific, actionable insights. We hope you will find it useful in your forward journey ahead.
Participation banking assets with commercial banks in Qatar, Indonesia, Saudi Arabia, Malaysia, UAE and Turkey (QISMUT) are set to cross US$801 billion in 2015 and will represent 80% of the international Participation banking assets. Approximately two-thirds of new industry assets are from three markets of Saudi Arabia, Malaysia and UAE. On the same note, Saudi Arabia, Qatar, Kuwait and Bahrain are seeing Islamic banks capturing market share by outgrowing their traditional peers.

In UAE and Malaysia, the growth appears to be converging to that of traditional banks. This demands fresh thinking and a more differentiated business proposition going forward.

Twenty-two international Participation banks now have US$1 billion or more in shareholder equity, making them better positioned to lead the future regionalization of the industry. In relative terms though, they are still one-third the size of their largest traditional peers in home markets, and also lag in terms of return on equity. In our conversations with boards and senior management of these banks, it was clear that a more inclusive business strategy and digital-first approach can easily help close this gap.

Will you be the one to lead?
Leading participating banks have done well to mainstream with a competitive, sizeable business in their home markets. The combined profit pool of Participation banks across QISMUT-plus-three markets crossed US$12 billion in 2014, which is a notable milestone. Analysts, however, also point out that the return on shareholder equity could be significantly enhanced, by at least 15%-20%, and this need becomes more pressing in the context of prevailing macroeconomic environment.

The next big opportunity is for Participation banks to regionalize. But the challenge is this has to be done in the context of lagging industry infrastructure that could potentially put shareholder value at risk.

Fortunately, the progression of fintechs and the digitization of banking business means that banks will have to completely reinvent their business model. The future of retail banking in emerging markets is a smartphone experience that delights. EY conversations with a large number of banking customers confirms that cyber-trust, convenience and personalization will be the core of customers’ relationship with their bank – and technology is the enabler.

Participation banks need to focus on a few high-impact opportunities: payments, mortgages and small investment accounts appear to have the highest payoff. The boards of most of the 40 systemically important banks have been generous in sanctioning spend on digital initiatives – between US$15 million and US$50 million over next three years – well aware that inaction could cost up to 50% of their retail banking profit in next few years. The bigger challenge is the implementation of the digital strategies. Majority of banks appear to be struggling to adapt to new customer decision journeys, prototyping of new technologies and the time to market.

The industry today is yet to reach 100 million customers. The potential captive market is six times bigger but requires a different banking model. A digital-first strategy has to be the stimulus for Participation banks to sign up the next 100 million customers over the next decade. This exciting journey is only just beginning.
Participation banking performance review
International Participation banking assets*

Participation banking assets grew strongly in 2014 with GCC gaining above average growth rate.

Participation banking continues to show strong growth of c. 16%, despite political and economic volatility in the major regions.

Sources:
Central banks, EY analysis
*International Participation banking assets exclude Iran which has a unique domestic industry.
ROW includes Jordan, Egypt, Sudan and South Africa.
Regional market contributions

Saudi Arabia and Malaysia are the respective leading markets in GCC and Asia Pacific.

GCC region has accelerated its growth by achieving a YoY** Growth of c. 18%, driving the overall CAGR*** to 16.1% (2010-14).

**Year-over-year.
***Compound annual growth rate.

Sources:
Central banks, EY analysis
*International Participation banking assets exclude Iran which has a unique domestic industry.
Participation industry footprint

Approximately 93% of international Participation banking assets* are based out of nine core markets, while QISMUT share stands at 80%.

More than 50% of Saudi assets are from Participation banking.
Turkey Participation banking growth has eroded due to prevailing political situation having a global impact on the Participation banking.
Kuwait Participation banking assets now comprise 45% of the national banking system assets.

Sources:
Central banks, EY analysis
*International Participation banking assets exclude Iran which has a unique domestic industry.
Market share changes

Saudi Arabia continues to dominate the growth share of the market with strong come back by Kuwait and Qatar. Bahrain is also steadily gaining market share over traditional banks.

Central banks, EY analysis
Leading 20 Participation banks by capitalization

17 out of 20 top banks by capitalization are based in QISMUT.

**Strengthening of capital base**

22 Participation banks now have US$1b or more in shareholder equity as compared to 21 in 2013.

The largest Participation bank has grown its equity by nearly US$1b in just one year, to reach US$11b.

**Capitalization of top 20 banks**

Profitability and shareholders’ equity in focus

Combined profitability of the top 20 Participation banks has increased during the year by US$1b to cross US$7b in 2014, growing with a CAGR of 14% (2010-2014). This resulted in healthy growth of ROE, which has positively contributed towards increasing shareholders’ equity (22 banks have crossed the equity landmark of US$1b).

QISMUT and other core markets are to drive the future growth of the industry with Turkey expected to recover from the current temporary setback.

**Participation banking sector projections**

Based on banking sector asset projections, key players identified on account of “average annual growth rate” and “banking sector assets” are Saudi Arabia, Qatar, Pakistan, UAE and Turkey.

On the other hand, for Participation banking, Saudi Arabia, Kuwait, Bahrain and Qatar will be the major players in terms of banking market share by 2020.

Sources:
Company financial reports, EY universe, EY analysis
Growth drivers

Participation banking continues to drive high growth over traditional banks and capturing market share in all key markets with the exception of Turkey.

Participation banking profit pool across QISMUT estimated at US$10.8b in 2014

By 2020, Participation banking profit pool would reach US$30.3b, out of which US$27.8b is expected to come from the QISMUT markets.

Primary growth drivers will be regionalization, digital acceleration and innovative business models for emerging markets.

Focus on GCC: reimagine banking business
In the Gulf Cooperation Council (GCC), our social attitudes and expectations have changed at an incredible pace. This is influenced by a mostly youthful population of near 50 million, which is increasingly mobile and has greater access to international media and technologies. As a result, the disconnect between what we expect as customers and what banks in the GCC can deliver is more distinct than ever.

This is the message from EY’s conversations with more than 2,000 customers across Saudi Arabia, the UAE, Qatar, Kuwait, Bahrain and Oman; analysis of 700,000 sentiments on social networks; and discussions with 28 leading banks and 80 banking industry leaders.

This wealth of customer data is now informing new product and service design for several of our banking clients. Addressing your customer needs in an increasingly digital world means disrupting and rewiring existing business models for a fresh customer experience. But this investment has to be made wisely. Our experience suggests that up to 50% of retail banks’ net profit could be at stake.

“The first question that the ATM asks is for me to choose my preferred language. Really? I have been with the same bank now for over 17 years and they still want to know my language preference ... “ commented a customer, mirroring what we all experience.

“The mortgage process, no matter what they say, takes at least two months from start to finish. I wish I had a choice,” shared another affluent customer we interviewed.

These are just two examples from the EY GCC digital banking report that highlight the changing expectations of banking experience in the region. Digital is enabling this lifestyle transformation.

EY’s study has confirmed that the future of retail banking in the GCC is a smartphone experience that delights. This customer desire for a “bank in your pocket” is notably visible. However, mobile banking usage in the UAE stands at 34%, followed by 27% in Kuwait, 19% in Qatar and 15% in Saudi Arabia. Customers are generally not impressed with the mobile proposition on offer, it appears, and this holds true for both traditional and Islamic banks. Among reasons cited for this low take-up is the lack of convenience and simplicity. Less than half of the customers surveyed were happy with their mobile banking experience.

Clearly, it is not enough for banks to introduce new digital channels. They must completely reinvent their customer processes to offer technology-enabled, simple end-to-end experiences. Key solutions in demand are payments, account opening and mortgages, with the potential for banks to increase value per customer significantly. Digitization of these would entail a combination of connectivity, user experience, automation, decisioning, collaboration and execution.

The other astonishing finding was the dwindling loyalty among customers. Three out of four customers surveyed felt comfortable to transition to a digital-first relationship and were willing to switch banks for a better digital experience.

How will you respond?
The customer decision journey has changed with the proliferation of digital technology and mobile devices. No surprise, therefore, that more GCC banks see digital transformation as reinvention, and not incremental enhancement to their existing offering. A case in point is the start-up, digital-first, Sharia-compliant retail bank in Saudi Arabia.

Just under half the banks surveyed have budgeted between US$5 million and US$20 million for digital initiatives (channels, customer journeys, automation, new technologies, etc.). Some of the larger banks are demonstrably willing to spend more.

Popular new technologies include payment solutions, customized alerts and efficient account opening. In one instance, the account opening process of a bank is targeted to take less than seven minutes from the time the customer walks into the branch.

By contrast, banks have seen muted demand for voice-driven banking, pre-login balance and gamification. Another observation is the exceptionally long time it is taking banks to prototype and bring to market, as well as the costs being incurred.

The boards are generally generous in sanctioning spend on digital, but the sheer scale and complexity of transformation is making the management of some banks nervous.

As yet, there is no clear leader in the digital banking space in the GCC. Banks are positioning themselves to create value using a range of approaches, from digitally enabling their existing business to adopting new disruptive propositions focused on customers and service design. This exciting journey is just beginning.
The five principles of digital acceleration

1. You know your customers, but you’re not treating them as if you do.

2. The future of GCC retail banking is a smartphone experience that delights; think beyond a killer app.

3. Not every technology is right for the GCC; place your bets wisely.
Retail banking customers today have more choices than ever on how, where and when to bank – and they are turning to a digital experience for convenience. Currently, only one in four customers are convincingly happy that their smartphone banking experience enables them to achieve their financial goals. But then, digital banking concepts are only just emerging in the GCC. As the pace accelerates, we expect a winner-takes-all trend to emerge. There are five helpful lessons for leading banks, based on our customer conversations.

4. Get better at executing.

5. Digital shift is a cultural shift; collaborate to win.
The verdict on mobile banking

The GCC enjoys a unique combination of highly educated people, high levels of income and uptake of digital equipment. Mobile usage is very developed in the region, which is a fertile ground for mobile banking. However, uptake has still not reached its full potential, mainly because the proposed solutions are falling short of customer expectations.

In the GCC, smartphones are “a way of life” for a dominant majority of banking customers ...

98% of surveyed banking customers are equipped with modern smartphones.

The market is almost evenly split between the two leading smartphone device vendors, with respectively 46% and 49%.

A large number of the surveyed banking customers use smartphone apps daily and build their digital expectations based on these interactions.

- 88% use mail daily on their smartphones.
- 82% use social media daily on their smartphones.
- 72% use instant messaging daily on their smartphones.
- 57% use GPS navigation daily on their smartphones.
... yet mobile banking has not fully taken off.

A large number of transactions are still made on home computers or at ATMs, or through traditional channels involving human interaction, such as branches or call centers.

Only a limited number of banking transactions are completed via mobile banking.

Smartphone penetration for main banking interactions is low.

Why?

Customers speak of a lack of convenience that is holding them back

"I am not satisfied with my mobile banking. It is difficult to access, not always available and sometimes not tailored to my needs."

EY view: challenge yourself to co-create digital solutions

It is only six years since apps first appeared on mobile devices, and customers now expect to be able to check their balance and make transfers through their phones, at the minimum. Specifically, increased use of smartphones is set to transform the c.US$100b remittance business in the GCC – for which combined transaction fees and exchange rate margins can still cost more than 10%.

Beyond the transactional mindset, the future lies in reinventing mobile banking journeys by asking yourself: “How would a start-up do this?” The typical customer experience starts long before the transaction. Be there. Play a bigger role in the customer’s life and continue to reward and support them through the life cycle of specific financial decisions.

In the meantime, smart branches and reskilled branch staff are taking up the critical advisory and sales roles.

Global context

The UK is currently seen as a global leader for experience standards. A large proportion of GCC residents have been exposed to these standards and expect the same, if not higher.

Europe is at the forefront of the adoption of digital banking over the use of more traditional channels.

The US is leading the way in the realm of innovation, with groundbreaking digital-only banks.

Asia-Pacific countries are seen as global leaders in technology normalization and effectiveness.

Across the GCC, we are seeing early signs of smartphone onboarding. Capabilities such as photographing ID and authentication documents, or using fingerprint scanning, are bringing down the onboarding time dramatically.
We asked your customers what banking digitization would do for them.

They expect their bank to provide more convenience and speed, less paper, pinpoint accuracy and a friendly service environment.

Banks have much at stake with digital; customers have a good understanding of the benefits digital can provide and are ready to spend more with their bank if more digital convenience is provided. On the other hand, they are also ready to switch to another institution if their expectations are not met.

A clear consensus emerged on the following three priorities:

1. Anywhere, anytime
2. Paperless
3. Fast, accurate and friendly
We heard customers praising the introduction of digital across the GCC ...

- 87% of mobile banking users strongly agreed that their banking app allowed for improved control over their finances.
- 88% of mobile banking users strongly agreed that their banking app allowed them to get closer to their financial goals.
- 77% of mobile banking users strongly agreed that their banking app facilitated easier payments.

... but this was neutralized by an overwhelming majority asking for an improved banking experience.

Digital banking amounts to much more than adding another channel to a bank’s offering; it signifies completely new propositions. The wealth of data that banks hold on their customers should facilitate a deeper understanding of customer patterns and behaviors. A robust analytics engine can generate “next conversation” and also “next product” offers.
Consumer expectations of banking relationships are increasingly shaped by other digital industries.

The future of retail banking in the GCC is a mobile app that delights, integrated with the individual’s lifestyle and everyday banking needs.

### Customer expectations for innovation

Social media has become a key influencer for your customer’s financial decisions ...

- 55% of customers follow their bank on social media.
- 64% rely on social media as a source of information for their banking decisions.
- Mid-aged customers are most active in discussing their bank on social media.

... however, it is important to consider it as a mechanism for dialogue with customers, rather than a medium for sales and marketing.
The survey evidenced a strong correlation between the customer’s digital experience and the bank’s revenue.

Enable me and I will bank more ...

GCC banking customers would significantly increase their banking relationship if this experience was made convenient, simple and accessible.

71% of customers would increase payment usage.
57% of customers would increase credit facilities usage.
57% of customers would increase credit card usage.
51% of customers would increase savings usage.
43% of customers would increase investments usage.

... or I would prefer to switch to a digitally stronger bank.

Three out of four GCC banking customers would be ready to switch banks for a better digital experience.

73% of conventional banking customers would be ready to switch banks.
81% of Participation banking customers would be ready to switch banks.
82% of hybrid banking customers would be ready to switch banks.

My bank needs to invest in better digital services rather than more branches.

64% of GCC banking customers would feel comfortable switching to a digital-first relationship.

55% of conventional banking customers would be ready to switch to a digital-only bank.
70% of Participation banking customers would be ready to switch to a digital-only bank.
72% of hybrid banking customers would be ready to switch to a digital-only bank.

EY experience suggests that up to 50% of retail banks’ net profit could be at stake.
Kuwait customer verdict

89% customers would shift if they were offered a better digital experience.
80% customers would be willing to shift to a digital-only bank.

EY view: the challenge of putting customers first

It may seem counterintuitive, but technology is in fact enabling banks to have a closer relationship with their customers. The average users of online or smartphone banking log into their app several times a week, significantly more than their visits to bank branches.

Payment solutions top our list of seven leading innovations that GCC customers expect from their banks. Payment is one of the most contested areas, representing a sizeable share of bank revenues in some cases. Ongoing innovation could have a direct impact on the bottom line of these banks.

Banks have to show rigor when considering which technology to invest in and the expected impact it delivers. In one of our sessions, a Saudi bank that was expecting 30% of its customers to migrate to online and mobile channels said it is experiencing a “disappointing uptake.” This several million-dollar experiment could have been avoided, in our view, by first understanding the source of value for the bank. For example, in another case, a bank in Kuwait has very specifically prioritized salary transfers, as its penetration rates were significantly below that of its peers.

The lesson learned is that, although banks have a great deal of customer data, it can be quite complex to organize across channels and get that “360-degree view” of customers. Applying this 360-degree view for smarter targeting of customers and sharper assessment of risk, consistently, can be a true game changer.

Reliability of new technology is crucial. While we don’t expect many GCC banks to replace their core banking system, we do believe that achieving a digital transformation will require continued high investment in middleware.

It is not enough to introduce new digital channels and tools. Banks must do so in the context of transforming the end-to-end customer banking journey. Digital is an enabler of this transformation, not an end in itself.
Banks are keen, but ...

Although the budget is there, together with the willingness, the priority and the sponsorship, it appears that regulations, IT legacy and lack of process automation are slowing down the digital transformation. In many cases, banks are also facing some challenges articulating a clear path to digital success.

Game on!

Ranking of digital objectives

1. Business growth
   through customer satisfaction to improve retention and net promoter score (NPS)

2. Operational efficiency
   to support growth through enriched straight-through processing (STP), process automation and the elimination of process errors

3. Scalability
   to build the business quickly, with exceptional quality and lower proportionate cost increase

Digital is not just about cost reduction anymore, GCC banks rely on digital to enable delivering their growth plan.
Management support is in place.

The digital transformation in the region enjoys strong management attention with a strong, direct sponsorship from the top.

Resources are allocated.

47% of banks in the GCC have planned a budget of US$5m to US$20m over the next five years, for enhancing their digital capabilities. Some larger banks are ready to spend even more.

“So far, our board is easy on the budget when it comes to digital initiatives ... this is a long-term play.”

GCC banks consider cybersecurity risk the most serious threat to achieving their digital aspirations. Our assessment shows customers are also equally nervous about the prospects of data breaches. They expect intuitive security processes and much more clarity on terms of use.

The emerging challenge for banks is to balance the need for security, cost of execution and customer expectation.
... but the digital transformation across the region is proving tougher than many had hoped.

Major hurdles faced by financial institutions in the GCC in their digital transformation

- Regulatory environment
- Limited technology support (legacy systems)
- Limited process automation
- Organizational silos and culture
- Limited digital skills

When asked about the key challenges they are facing with digital transformation, a staggering majority of the banks’ leadership cited lack of regulatory clarity and direction as a major impediment.

“Banks should not see regulators as an inhibitor of innovation, but as a partner in helping to develop digital banking in a secured way.”

“We only focus on security to protect the financial health of our residents and, as soon as it is demonstrated that a function is secured and that it is supported by an appropriate legal framework, such as electronic signature, we don't analyze the relevance any further to approve it.”

“Unfortunately, we have often had to reject some requests in the past that were insufficiently developed and demonstrated.”

A GCC central bank Vice Governor

The majority of banks also appear frustrated with managing legacy technologies and the painfully slow progress they are making in automating key customer processes.

A limited technology support, including the burden of IT legacy and application complexity resulting from duplicated functions, point-to-point interfaces, and heterogeneous and outdated technologies, is slowing down the deployment of digital services.

To increase IT agility, the following is recommended:

- Upgrade core banking system to gain access to out-of-the-box digital functionality and technologies
- Rationalize the application portfolio
- Modernize IT architecture (middleware, SOA, BPM) and eliminate point-to-point interfaces
- Upgrade the IT operating model to gain agility and enable faster time to market for new evolutions
- Hire and acquire digital talents
EY view: rising to the challenge

At the core of the digital bank lies a fundamentally different approach to how business and IT work together. In the new model, the business-technology integration permeates across the organization. Critically, as customers expect greater real-time services, some improvements will require further cross-industry collaboration.

Given the size of GCC banks, there are 15 to 20 major processes that would be highly compatible with rapid automation, and that would deliver significant cost savings and scalability. Among them are account openings, mortgages and customer inquiries. The end-to-end process redesign should not take more than 8 to 12 weeks, and a full rollout should be possible within 6 to 8 months for complex processes. This could be a significant opportunity for local banks, many that are struggling, either due to capacity or digital capability issues. Our discussions with banks revealed that, in a number of cases, the time to market could drag up to 12 months, and in some cases, the launch was still not error free. In one case, the board has not ruled out exiting digital retail banking if the operational execution fails to live up to the bank’s quality standards. The stakes continue to rise.

It is early in the transition, but Saudi Arabia is getting its head around this very well. It has a central innovation strategy and has begun engagement with the leading local banks. It is expecting industry-wide innovation and for the regulator to set the agenda and provide governance.
Country outlook
Bahrain

- Participation banking has loyal retail and corporate followers in Bahrain that have maintained a stable investment accounts and financings in the face of contraction in conventional banking. This phenomenon has noticeably boosted Participation banking’s relative market share during 2014.
- Participation banking in Bahrain suffers from ROE underperformance primarily driven by its high relative cost base and lack of scale benefits. There is a case for consolidation to reduce the cost base.
- On the other hand, Bahrain is showing signs of recovery witnessing a slight increase of 1% in their share of Participation banking assets. Furthermore, it has maintained a stable investment accounts and financing assets. Growth in 2014 for total assets, financing assets and investment accounts exceeded CAGR (banking assets 4%, financing assets 5%, investment accounts 6%) over the past 4 years.

Participation banking penetration in Bahrain

The industry is stabilizing at the current level.

Participation banking sector’s national market share in terms of domestic banking assets has remained broadly stable during the past five years.

• The recent phenomenal growth in Saudi Arabian Participation banking has been the primary engine of global growth rates. Having gained a majority national market share and considering the fact that the government will continue to spend on development of projects, despite reduced government revenues due to decreasing oil prices, there is no reason to believe that exceptionally high annual growth in Saudi Arabian Participation banking could not continue for long. In view of the above, we expect positive trend to continue with promising future of Participation banking.

• High relative cost base and lower fee-based sources of income represent a noticeable shortcoming for Participation banking players in Saudi Arabia.

Participation banking penetration in Saudi Arabia

Participation banking sector gains a majority national market share in terms of banking assets making Saudi Arabia the first country to achieve this milestone.

*Market share calculated excluding Iran.
• Participation banking was unable to gain any incremental market share during 2014 after noticeable increase in national market share in the previous four years. UAE’s noticeable contribution towards global growth of Participation banking was fuelled by a surging real estate market during 2014 and a steep rise in the UAE banking assets.

• Lower leverage and lower non-financing sources of income are magnifying the relative cost disadvantage of Participation banks in the UAE.

Participation banking penetration in UAE

Is Participation banking’s market share likely to stabilise in the UAE at somewhere near the current level of penetration?

*Market share calculated excluding Iran.
• After plateauing during the previous three years, Participation banking national market share increased noticeably in 2014, as the trend for conventional banks to transform into Islamic banks continues to meet consumer preferences. Kuwait is expected to remain a key contributor to global growth in Participation banking.

• Participation banking in Kuwait needs to address its historic cost inefficiency that worsened noticeably during 2014. Technology-based growth initiatives could potentially play a meaningful role.

Central banks, company financial reports, EY Universe, EY analysis of selective banks
Sources:
Central banks, company financial reports, EY Universe, EY analysis of selective banks

*Market share calculated excluding Iran.
In the backdrop of regulatory changes, Participation banking’s national market share plateaued in the recent past. This changed during 2014 when it achieved a noticeable increase in its national market share and became the third largest contributor towards global growth in Participation banking.

Supply-side initiatives involving transformations or set up of new Participation banks are needed if Participation banking in Qatar wishes to go mainstream.

Participation banking penetration in Qatar

Participation banking grew at three times the rate of conventional banking in Qatar during 2014.

Like Turkey, Indonesia is a promising market for global growth in Participation banking but the sector is still in its infancy and its national market share is growing at a snail’s pace.

Without an initiative from the regulatory authorities to nurture and grow Participation banking, this sector could remain stuck in its infancy for years. A regulatory environment that attracts new entrants from the more established Participation banking markets could potentially create a spark to help Participation banking grow in Indonesia.

The development of the Participation banking sector in Pakistan demonstrates how regulatory authorities can nurture this sector in other promising markets.

With a five years strategic plan prepared by the State Bank of Pakistan working as the driving force, the Participation banking sector has continued to grow at a rate faster than conventional banking and has achieved a median 1% gain in national market share during each of the past few years. The sector is on course to achieve its targeted 15% national market share in the next few years.

Participation banking penetration in Pakistan

Participation banking in Pakistan continues its steady growth to pass the 10% market share milestone.

Global Participation banking assets are estimated based on publicly available data from 15 Participation banking markets.

The research and insights are primarily based on EY Participation Banking Universe (EY Universe), which is proprietary, based on sample and is not meant to be fully exhaustive.

The EY Universe analysis covers 69 Participation banks and 45 conventional banks across Participation banking markets.

For the purpose of this report, the analysis excludes the Iranian market because of its unique characteristics.

QISMUT+3 covers approximately 93% of the estimated international Participation banking assets in 2014 (excluding Iran market).

Insights are also based on interviews with banking executives and industry observers, to identify key trends, risks and priorities.

Limited disclosures on Participation banking windows, subsidiary operation and offshore businesses was a limiting factor.

The EY Universe is categorized as follows:

- QISMUT – Qatar, Indonesia, Saudi Arabia, Malaysia, UAE and Turkey
- GCC – Bahrain, Kuwait, Oman, Qatar, Saudi Arabia, UAE
- ASEAN – Malaysia, Indonesia
- SOUTH ASIA – Pakistan, Bangladesh
- Turkey and rest of the world – Egypt, Jordan, Turkey, South Africa, Sudan, etc.

The breakdown of banks for each country is as given below:

- Qatar – 3 Participation and 3 conventional banks
- Indonesia – 6 Participation and 4 conventional banks
- Saudi Arabia – 4 Participation and 5 conventional banks
- Malaysia – 12 Participation and 4 conventional banks
- UAE – 8 Participation and 4 conventional banks
- Turkey – 4 Participation and 5 conventional banks
- Bahrain – 7 Participation and 4 conventional banks
- Kuwait – 4 Participation and 3 conventional banks
- Pakistan – 5 Participation and 3 conventional banks
- Bangladesh – 5 Participation and 2 conventional banks
- Egypt – 2 Participation and 4 conventional banks
- Jordan – 2 Participation and 2 conventional banks
- Oman – 4 Participation and 2 conventional banks
- South Africa – 1 Participation bank
- Sudan – 2 Participation banks

About EY
EY is a global leader in assurance, tax, transaction and advisory services. The insights and quality services we deliver help build trust and confidence in the capital markets and in economies the world over. We develop outstanding leaders who team to deliver on our promises to all of our stakeholders. In so doing, we play a critical role in building a better working world for our people, for our clients and for our communities.

EY refers to the global organization, and may refer to one or more, of the member firms of Ernst & Young Global Limited, each of which is a separate legal entity. Ernst & Young Global Limited, a UK company limited by guarantee, does not provide services to clients. For more information about our organization, please visit ey.com.

The MENA practice of EY has been operating in the region since 1923. For over 90 years, we have grown to over 5,000 people united across 20 offices and 15 countries, sharing the same values and an unwavering commitment to quality. As an organization, we continue to develop outstanding leaders who deliver exceptional services to our clients and who contribute to our communities. We are proud of our accomplishments over the years, reaffirming our position as the largest and most established professional services organization in the region.
