

Insurance Premium Tax Analyzer

Any transactional tax, anywhere in
the world, in real time

The better the question. The better the answer. The better the world works.

Insurers, intermediaries and policyholders are under pressure to precisely assess their tax liabilities and remain compliant. The more diverse the product portfolio or operational footprint, the harder it is to quickly make the necessary calculations. Manual activities, and incompatible tax applications and systems, only increase the chance of errors – and reduce confidence in tax-related decisions.

The EY Insurance Premium Tax (IPT) Analyzer can calculate tax liabilities and identify risk locations in real time. It makes tax calculations simpler, reduces the chance of errors and helps users of the IPT Analyzer achieve tax compliance.

How the EY Insurance Premium Tax Analyzer can help

The IPT Analyzer is proprietary EY software designed to streamline the process of creating tax schedules and offers:

Accurate, real-time tax calculations

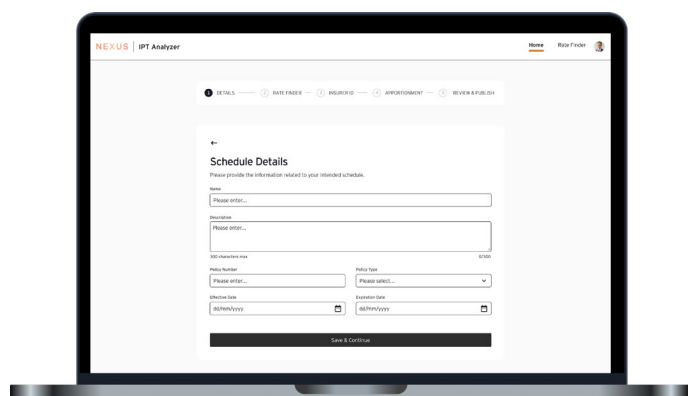

of IPT liabilities for insureds
and insurers – avoiding
time-consuming
research and
manual errors

Automated Application programming interface (API)

by integrating the solution
directly into existing applications,
to access rates, compile
IPT schedules and
identify any
risk locations

Confidence

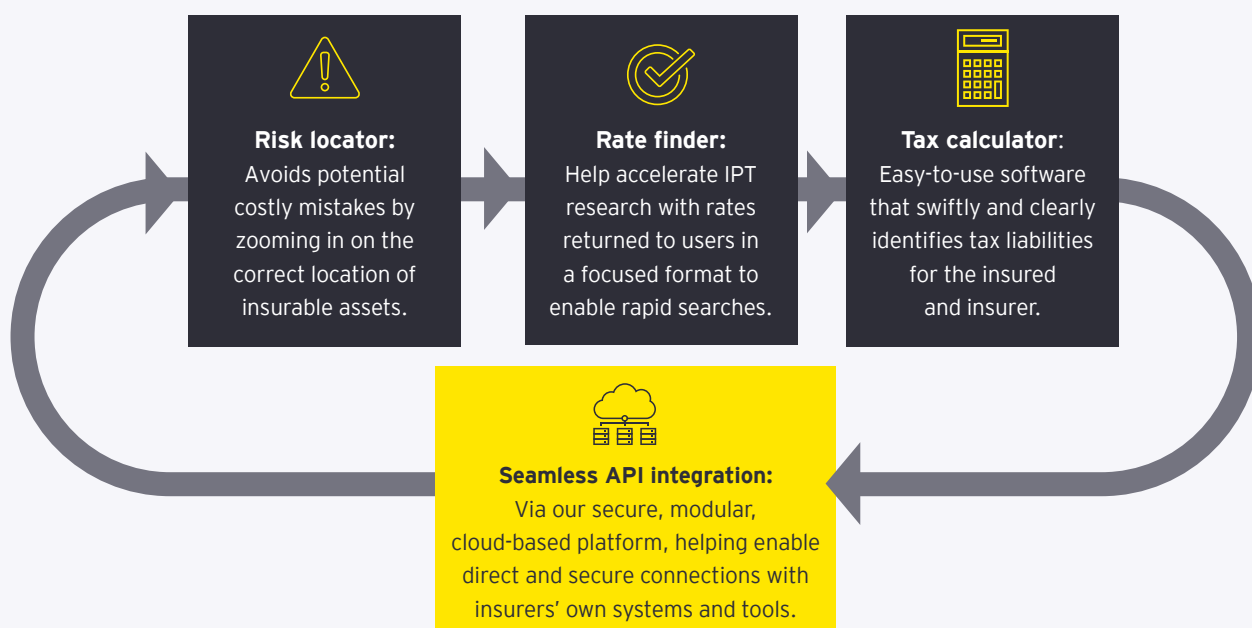

with support provided
from dedicated EY IPT
professionals, with ad-hoc
tax advice, compliance
services and other evolving
concerns
