

How can ISO certifications help you compete?

Building trust and driving excellence through management systems

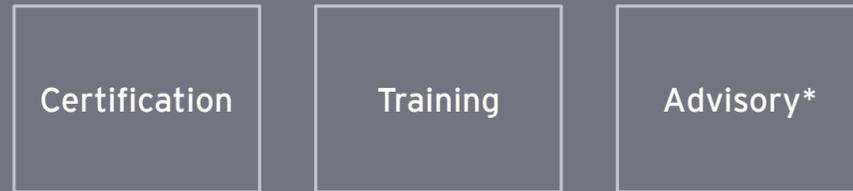

In an increasingly connected world where boundaries between organizations and their clients blur further, establishing trust in this ecosystem is becoming a daunting challenge for enterprises of all sizes. Policy makers, regulators, national bodies and private institutions struggle to establish new guidelines, policies and standards to keep up with the demands of the marketplace. In this regard, the International Organization for Standardization (ISO) has developed standards and guidelines, which are well-established for various industry topics, widely trusted by organizations of all sizes globally and allow companies to get certified to them.

These standards help businesses reduce costs by minimizing waste, duplications and errors to increase efficiency. Being certified demonstrates that your business operates in a secure, reliable and predictable manner to deliver quality products and services.

The standards help companies access new markets, level the playing field for developing countries, and facilitate free and fair global trade. To derive even greater value from ISO standards, many companies are taking the additional step of having an independent third party certify that they meet and operate accordingly with these standards.

Our services

* EY CertifyPoint is an independent certification body and a separate legal entity of the EY global organization and does not provide advisory services. However, the auditors collaborating with EY CertifyPoint are EY advisors experienced in implementation aspects of these standards and thus all advisory projects are performed by EY. Areas where implementation assistance is provided by EY cannot be subject to certification by EY CertifyPoint.
