

EY Treasury Analytics Platform

Are you...

- ❑ Still running your Treasury function on conventional spreadsheet tools?
- ❑ Not automating your treasury because of high cost of ownership and long timelines of implementation?
- ❑ Still struggling to manage stakeholders expectations of dynamic decision support on near real time basis?
- ❑ Treasury and finance team taking lot of time in turning around conventional treasury tasks and periodic outcomes especially during COVID ?
- ❑ Still struggling with aggregated view of managing wide spread business groups and subsidiaries treasury operations?
- ❑ Planning to manage sustainability of continuous decision support and management reporting in Covid times?
- ❑ Worried about change management requirements while initiating any digital and automation initiatives in Treasury and Finance function?

Embark on a journey of transforming treasury and making it future ready...

We have developed our Treasury Analytics Platform based on learnings and best practices noted from our engagements with leading corporates, banks and financial institutions. This solution is capable of providing insights that are not available in TMS/ manual excel sheets.

Core modules

Cash and liquidity management

- Near real time availability of cashflow positions
- Bank liquidity monitor for improved visibility of cash
- What-if analysis to simulate various payables and receivables scenarios

Investment management

- Near real time oversight of investment portfolio performance
- Optimal asset class selection engines
- Integration with third party market information sources

Debt management

- Aggregated view of long and short term debt across the group companies
- Debt cost optimization engine
- Internal debt cost benchmarking

Foreign exchange management

- Single window access to global FX exposure and hedge portfolio
- What-if simulation analysis for hedging strategy optimization
- Risk & performance monitoring (VaR, CFaR etc.)

Bank cost optimization

- Insights into Global banking relationships
- Bank wallet share analysis for cost optimization
- Visibility across trade & transaction banking services and retail/ digital cost collection services availed from counterparties

Risk management

- Continuous control monitoring covering 100% of population
- Preventive approach instead of contingency corrective measures
- Enhanced policy & regulatory compliance
