In our view, significant judgement can be required when making the distinction between what constitutes a corporate asset and what is a core asset to the cash-generating nature of a group of assets. This is particularly true when it comes to intangible assets. Careful consideration of all facts and circumstances is required. When it comes to intangible assets like (corporate) brands and trademarks an entity often concludes that their nature is more akin to corporate assets to avoid setting the CGU level too high with the potential risk of masking impairments.

On the other hand, an entity can have a brand driven business model and previous business acquisitions that resulted in the recognition of significant amounts of intangible assets for brands and trademarks. In such a case, an entity can conclude that the main drivers for the CGU definition are the (individual) brands and trademarks. It is important to note that this does not mean that the brands and trademarks are tested on a stand-alone basis, they would rather be the driver for the CGU identification with allocation of all other assets needed to generate the largely independent cash inflows.

4.4.3 Leased assets and CGUs

Many right-of-use assets recorded under Section 20 *Leases* will be assessed for impairment at a CGU level rather than on individual asset level. While there can be instances where leased assets generate largely independent cash inflows, many leased assets will be used by an entity as an input in its main operating activities whether these are service providing or production of goods related. If a right-of-use asset is tested on a stand-alone basis and is fully impaired, the entity would have to assess the need to recognise an additional onerous lease provision for amounts not already recognised in the lease liability.

One question that can arise, particularly in relation to real estate leases, is what the unit of account for impairment purposes is. In other words, whether the right-of-use asset(s) resulting from a lease governed by one lease contract needs to be assessed and treated consistently at the overall contract level or whether for example the usage of different areas or floors of a leased building for different purposes could result in separate right-of-use assets for impairment assessments. Next to the general principle in Section 27 on how assets contribute to the generation of independent cash inflows (individual asset or part of a CGU), the answer to this question depends on whether the lease contract is over identifiable asset(s) portions that are physically distinct and therefore could effectively be separate units of account. In making this assessment, the guidance in paragraphs 22 and 29 of Section 20 of FRS 102 (See Chapter 23 at 4.1.2 and 4.2.1) and paragraph 4 of Section 16 of FRS 102 (see Chapter 19 at 2.2) could be considered. For leased assets/buildings that are used in parts for different purposes and where these portions are physically distinct, the usage and therefore the generation of independent cash inflows will drive the considerations under Section 27. Judgement may be needed to determine the unit of account of the right-of-use asset(s), and their allocation to different CGUs. This is shown in the following Illustration:

Illustration 4-5: Identification of CGUs - leased assets

Retail store chain M leases 5 floors in a 10-storey building. The floors are used as follows by M:

- Ground floor: used for M's store X, leasehold improvements were made at the beginning of the lease
- First floor and second floor: used for M's HR and marketing department
- Third floor: originally it was planned that the space would be utilised together with the fourth floor for the payroll department, but then floor four was sub-let to a law firm
- Fourth floor: previously partially occupied by Entity M as office space, but currently unoccupied. There is no intention to sublet the space and M now expects that the floor will be empty through the end of the lease

Entity M signed one lease contract with the lessor for the five floors. The lease specifies the rent per floor, which equals the stand-alone price per floor. The building is configured in a way that every floor could be closed off, leased and used separately from the rest of the building.

As the five leased floors are used by entity M for different purposes and each floor is a physically distinguishable unit, M concluded that it needs to assess them separately in its CGU determination exercise.

In identifying CGUs for the stores, M considers whether, for example

- Internal management reporting is organised to measure performance on a store-by-store basis
- The business is run on a store-by-store profit basis or on a region/city basis

The leased ground floor is used for retail store X. The ground floor does not generate largely independent cash inflows from the store and is therefore assessed for impairment together with the store. All M's stores are in different neighbourhoods and were determined to have different customer bases. Although store X is managed at a corporate level, X generates cash inflows that are largely independent of those of M's other stores. M therefore concluded that store X is a separate CGU.

The leased first and second floor are used for marketing and human resources corporate functions. These floors are therefore used in functions which support the entity as a whole rather than specific CGUs. As FRS 102 does not have specific guidance on the application of Section 27 for such assets, the entity has developed an accounting policy based on the requirements of IAS 36. In applying this policy, the part of the right-of-use-asset in relation to these floors is a corporate asset and is allocated on a reasonable and consistent basis to the CGUs to which it relates (see 4.5.2 below).

The leased third floor is sub-let to a law firm. M assessed under the guidance of Section 20 whether the sublease is classified as a finance lease, resulting in de-recognition of the right-of-use asset and recording of a lease receivable equal to the amount of the net investment in the lease, or an operating lease, with continuing recognition of the right-of-use asset (see Chapter 23 at 8.2). M's assessment classified the sub-lease as an operating lease. Under Section 20, M is required to apply the fair value model in Section 16 *Investment Properties* to right-of-use assets that meet the definition of investment property (unless it is applying the exemption in paragraph 16.4A(b)(ii), which would not be applicable in this example as the exemption applies only to investment property rented to another group entity). Therefore, the right of use asset relating to the third floor would be outside the scope of Section 27 and would instead be carried at fair value.

Floor four was previously partially occupied for Entity Ms own use as office space, but is unoccupied and is expected to remain so for the remainder of the lease term. M therefore determines that this part of the right-of-use asset needs to be assessed for impairment on a stand-alone basis by comparing the carrying amount with the recoverable amount (higher of VIU and FVLCD). As the floor is expected to be unoccupied through the end of the lease the VIU will be zero. The fact that M expects not to use the fourth floor or and is not looking for a tenant does not necessarily mean the FVLCD is zero. M would need to determine the fair value under consideration of Section 2A (see Chapter 10) and in addition M would need to consider the need for any accelerated depreciation.

4.4.3.A Decision to change the use of or abandon a right-of-use asset

When entities decide to change the use of or abandon right-of-use assets, they need to consider how such a decision must be assessed from a Section 27 point of view. As highlighted in 4.3 above, paragraph 9 of Section 27 states that significant changes in the manner in which an asset is used, or expected to be used, is an internal source of information for indication of impairment. The entity's decision to change the use of the right-of-use asset (or the entity's conclusion that it has no realistic alternative but to do so) would, therefore, also indicate that an asset, a group of assets or CGU(s) may be impaired. This is particularly true when a store is to be closed or where the decision impacts the level at which the right-of-use asset is assessed for impairment. The existence of an impairment indicator would require an entity to perform an impairment test for the asset or CGU.

To perform an impairment test, an entity would first need to assess at which level such an impairment test must be performed. An entity's decision to change the expected use of a right-of-use asset raises the question of whether the expected use has changed in such a way that it affects the composition of the CGU and, if it does, when this change in the CGU determination is reflected. A decision to abandon or sublease a right-of-use asset impacts the CGU identification differently depending on the nature of the asset and how it is used by the entity. For example, each retail store is often determined to be a separate CGU. In contrast, administrative offices are often tested together with other assets in a CGU or classified as corporate assets and allocated on a reasonable and consistent basis to the CGUs to which they belong.

If an entity concludes that it needs to update its CGU(s), the entity first has to assess when the expected change in use would impact the CGU determination. One important consideration is whether and when the decision to change the use has been made by the level of management that is authorised to make such decisions. This will often be executive management and/or the board of directors. In addition, it is necessary to assess whether the entity has the ability to change the use in the expected manner or whether the lessor's approval is required.

The impact of the change in use will be different depending on the timing of the decision. In particular for real estate leases used as part of a larger CGU, it is important to consider how long the right-of-use asset is expected to be used within the current CGU and, therefore, continues to support the generation of cash inflows of the CGU. In addition, entities have to take into account the length of the remaining lease term and any other facts and circumstances that are relevant to the CGU assessment. Significant judgement will often be required and can, therefore, warrant additional disclosures in the financial statements.

There may be circumstances in which it would be appropriate to test the right-of-use asset on a stand-alone basis rather than as part of its original CGU. For example, when the right-of-use asset is to be used within the original CGU for only a short period of time before the abandonment or sublease occurs, one may, depending on facts and circumstances, judge that the right-of-use asset and the CGU generate largely independent cash inflows. This would mean that the right-of-use asset has to be tested for impairment on a stand-alone basis.

The longer the time between the decision to abandon or sublease the right-of-use asset and the actual change in use occurring, the less likely it is that the decision will immediately impact the level at which any impairment assessment has to be performed. The shorter the time between making the decision and the expected change in use occurring, the more likely it is that the expected change in use currently has to be reflected in the CGU determination and the resulting impairment test. If, having considered all facts and circumstances, it is concluded that the decision will not immediately impact the level at which any impairment assessment is performed, then an entity would still need to reassess the useful lives and residual values of the affected assets.

Illustration 4-6: Decision to change the use of or abandon a right-of-use asset

Scenario A - Abandonment of a right-of-use real estate asset

Entity X ('the entity') recognises a right-of-use asset for a building that it currently occupies as office space. The entity has occupied the building for nine years and has three years remaining on the original 12-year lease. The lease does not include an option to extend or terminate the lease. The right-of-use asset was always tested for impairment as part of CGU 1 as it was not generating largely independent cash inflows. There is significant headroom (i.e., the amount by which the recoverable amount exceeds the carrying amount) in CGU 1. As such, no impairment is identified at the level of CGU 1. It is assumed that the FVLCS of the right-of-use asset is measurable. With many employees working from home, the space is used in a substantially reduced way. Immediately prior to Entity X's year-end of 31 December 20X2, its board (in conjunction with management) made a final decision to permanently cease using the space. There will be a period of five months before the entity vacates the property where the space will continue to be used by CGU 1 to facilitate the transition. Entity X is not able to sublease the space given the location, relatively short remaining lease term and market conditions for office space.

The entity concludes that the decision is an impairment trigger for the right-of-use asset at the balance sheet date as it is considered an internal indicator of impairment as per FRS 102.27.9(f). In this fact pattern, a final decision to vacate the space has been made. The period between the decision and the date at which the entity will vacate the property is short and, therefore, its contribution to the cash inflows of the CGU is not expected to be significant. As the property cannot be subleased for the remaining lease term, the entity concludes that the right-of-use asset's FVLCS is also not expected to be significant and is expected to be close to the right-of-use asset's value in use. Therefore, the entity concludes that it is appropriate to test the right-of-use asset separately from CGU 1 when the decision to vacate is made.

Scenario B - Subleasing of a right-of-use real estate asset

Entity X ('the entity') recognises a right-of-use asset for a building that it currently occupies as office space. The entity has occupied the building for nine years and has eleven years remaining on the original 20-year lease. The lease does not include an option to extend or terminate the lease. The right-of-use asset was always tested for impairment as part of CGU 1 as it was not generating largely independent cash inflows. There is significant headroom (i.e., the amount by which the recoverable amount exceeds the carrying amount) in CGU 1. As such, no impairment is identified at the level of CGU 1. It is assumed that the FVLCS of the right-of-use asset is measurable. With many employees working from home, the space is used in a substantially reduced way. Immediately prior to Entity X's year-end of 31 December 20X2, its board (in conjunction with management) made a final decision to permanently cease using the space. There will be a period of five months before the entity vacates the property where the space will continue to be used by CGU 1 to facilitate the transition. Entity X is permitted to sublease the property and has therefore engaged a property consultant who confirmed that there is a strong demand for properties in the area of the leased property.

The entity concludes that the decision is an impairment trigger for the right-of-use asset at the balance sheet date as it is considered an internal indicator of impairment as per FRS 102.27.9(f). In this fact pattern, a final decision to vacate the space has been made. The period between the decision and the date at which the entity will vacate the property is short and, therefore, its contribution to the cash inflows of the CGU are not expected to be significant, as such the VIU of the right-of-use asset will mainly be driven by the achievable sublease rental income. The entity concludes that the right-of-use asset's FVLCS is expected to be close to the right-of-use asset's value in use. Due to the short period of own use of five months, in this case the entity judges that the right-of-use asset and the CGU generate largely independent cash inflows and therefore that the right-of-use asset must be tested on a stand-alone basis for impairment.

The conclusion would likely be different, if in Scenario B the fact pattern were that the entity expected to use the right-of-use asset for another 30 months before vacating it and the start of a potential lease.

How we see it

Entities need to assess the potential impact of their decision to change the use of a right-of-use asset on their CGUs and, therefore, the level at which impairment assessments are performed. A decision to change the use of a right-of-use asset can result in the need to test the right-of-use asset on a stand-alone basis and, as such, can result in impairment. The shorter the time between the decision and the actual change in use occurring, the more likely the decision will impact the CGU identification.

4.4.4 Active markets and identifying CGUs

Although not directly addressed in FRS 102, IAS 36 stresses the significance of an active market for the output of an asset in identifying a CGU. If an active market exists for the output produced by an asset or group of assets, that asset or group of assets is identified as a cash generating unit, even if some or all of the output is used internally. [IAS 36.70]. The reason for this rule is that the existence of an active market means that the assets or CGU could generate cash inflows independently from the rest of the business by selling on the active market. Paragraph 71 of IAS 36 states “... if the entity could sell the output on an active market...”, [IAS 36.71], thereby making the ability of the entity to access the active market, and sell its output on it, an important consideration. If substantial restrictions to accessing the active market exist, then this must be considered when assessing the CGU determination. For example, if the output could not be sold on an active market without having essential infrastructure in place that would take significant time and effort to be developed, then this would impact the entity's assessment of whether there is an ability to sell on the active market.

An active market is defined in FRS 102 as one in which transactions for the asset or liability take place with sufficient frequency and volume to provide pricing information on an ongoing basis. [FRS 102 Appendix I].

There are active markets for many metals, energy products (various grades of oil product, natural gas) and other commodities that are freely traded.

Illustration 4-7: Identification of CGUs - Active market

Entity M produces a single product and owns plants A, B and C. Each plant is located in a different continent. A produces a component that is assembled in either B or C. The combined capacity of B and C is not fully utilised. M's products are sold worldwide from either B or C. For example, B's production can be sold in C's continent if the products can be delivered faster from B than from C. Utilisation levels of B and C depend on the allocation of sales between the two sites. There is also an active market for A's product.

As there is an active market for its products, it is likely that A is a separate cash-generating unit. Although there is an active market for the products assembled by B and C, cash inflows for B and C depend on the allocation of production across the two sites. It is unlikely that the future cash inflows for B and C can be determined individually. Therefore, it is likely that B and C together are the smallest identifiable group of assets that generates cash inflows that are largely independent.

In determining the value in use of A and B plus C, M adjusts financial budgets/forecasts to reflect its best estimate of future prices that could be achieved in arm's length transactions for A's products.

4.5 Identifying the carrying amount of CGU assets

After an entity has established its CGU(s) for the impairment assessment, it needs to determine the carrying amount of the CGU(s). Section 27 does not provide any explicit guidance on determining the carrying amount of a cash-generating unit. However, in order to perform a meaningful impairment test, the carrying amount must be determined on a basis that is consistent with the way in which the recoverable amount is determined.

A CGU is defined as the smallest identifiable group of assets that generate cash inflows that are largely independent of the cash inflows from other assets or groups of assets. Therefore, entities generally would not include liabilities in arriving at the carrying amount of a CGU, unless the recoverable amount of the cash-generating unit cannot be determined without taking it into account. Both FVLCS and VIU of a CGU are determined excluding cash flows that relate to assets that are not part of the cash-generating unit and liabilities that have been recognised.

It is important to ensure that every asset used in generating the cash flows of the CGU being tested is included in the CGU; otherwise, an impaired CGU can appear to be unimpaired, as its carrying value would be understated by having excluded assets.

As noted above, there are exceptions to the general rule that recognised liabilities are not included in arriving at the CGU's carrying value or VIU. If the buyer would have to assume a liability if it acquired an asset or group of assets, then the FVLCS would be the price to sell the assets or group of assets and the liability together. The liability would then need to be deducted from the CGU's carrying amount and VIU. This would enable a meaningful comparison between carrying amount and recoverable amount, whether the latter is based on FVLCS or VIU.

For practical reasons the entity can determine the recoverable amount of a CGU after taking into account assets and liabilities such as receivables or other financial assets, trade payables, pensions and other provisions that are outside the scope of IAS 36 and therefore not part of the CGU. If the VIU calculation for a CGU or its FVLCS are determined taking into account these sorts of items, then it is essential that the carrying amount of the CGU is determined on a consistent basis. However, this frequently causes confusion in practice, as described at 4.5.1 below.

It is possible that other assets such as goodwill and corporate assets cannot be attributed on a reasonable and consistent basis. In the case of goodwill, Section 27 has separate rules regarding its treatment which are discussed at 5 below. Section 27 does not provide guidance on corporate assets, so entities may refer to the requirements in IAS 36 in developing their accounting policy. Corporate assets are discussed further at 4.5.2 below.

4.5.1 Consistency and the impairment test

Consistency is a very important principle when performing an impairment test. In testing for impairment entities must ensure that the carrying amount of the CGU is consistent for VIU and FVLCS calculations. In calculating VIU, or using a discounted cash flow methodology for FVLCS, entities must ensure that there is consistency between the assets and liabilities of the CGU and the cash flows taken into account, as there must also be between the cash flows and discount rate.

As stated at 4.5, there are exceptions to general rule that recognised liabilities are not included in arriving at the CGU's carrying value. If the buyer would have to assume a liability if it acquired an asset or group of assets (CGU), then the fair value less costs of disposal of the CGU would be the price to sell the assets of the CGU and the liability together, less the costs of disposal. To provide a meaningful comparison this liability must then be deducted from both the VIU and the carrying amount of the asset or group of assets (CGU).

The requirement to deduct the liability from both the CGU's carrying amount and from its VIU avoids the danger of distortion that can arise when cash flows that will be paid to settle the contractual obligation are included in the VIU discounted cash flow calculation. If the liability cash flows are included in the VIU discounted cash flow calculation, they would potentially be discounted using a different discount rate to the rate used to calculate the carrying value of the liability causing distortion.

From a practical point of view an entity could simply calculate the VIU of a CGU excluding the liability cash outflows and compare that to the CGU carrying amount excluding the liability. While this would mean that the VIU is not comparable to the FVLCS, this would not cause an issue as long as the calculated VIU is above the CGU's carrying amount, therefore providing evidence that the CGU is not impaired.

It is also accepted that an entity, for practical reasons, may determine the recoverable amount of a CGU after taking into account assets and liabilities such as receivables or other financial assets, trade payables, pensions and other provisions that are outside the scope of Section 27.

In all cases:

- The carrying amount of the CGU must be calculated on the same basis for VIU and FVLCS, i.e., including the same assets and liabilities.
- And
- It is essential that cash flows are prepared on a consistent basis to the assets and liabilities within CGUs.

In addition, some of these assets and liabilities have themselves been calculated using discounting techniques. Therefore, a danger of distortion arises resulting from differing discount rates, as discussed above.

For further discussion on points around consistency in impairment tests relating to the treatment of provisions, working capital, pensions and hedging, see the EY publication, International GAAP®.

4.5.1.A Lease liabilities under Section 20

A CGU can include a right-of-use asset recorded under Section 20. Right-of-use assets are assessed for impairment by applying Section 27.

When it comes to lease arrangements, in most cases a CGU would be disposed of together with the associated lease arrangements. FVLCS for the CGU would consider the associated lease arrangements and therefore the need to make the contractual lease payments. This would require deducting the carrying amount of the lease liabilities when determining the carrying amount of the CGU.

It is important to note that lease payments reflected in the lease liability recorded in the statement of financial position will have to be excluded from the VIU calculation. If the carrying amount of the lease liabilities is deducted to arrive at the carrying amount of the CGU, the same carrying amount of the lease liabilities would need to be deducted from the VIU. It is not appropriate to calculate the VIU on a net basis directly, through reducing the future cash flows by the lease payments as this bears the risk of distortion that will arise due to the difference in the discount rate used for the VIU calculation and the discount rate used to calculate the carrying amount of the lease liability. See 4.8.9 below for further discussion around VIU and lease payments.

4.5.2 Corporate assets

An entity may have assets that do not generate cash inflows independently of other assets or groups of assets and that contribute to more than one CGU, such as headquarters buildings or central IT facilities. The characteristics that distinguish these corporate assets are that they do not generate cash inflows independently of other assets or groups of assets and their carrying amount cannot be fully attributed to one CGU. Section 27 provides no specific guidance on how to deal with such assets, although they would certainly fall within its scope. Under the hierarchy in Section 10, users may consider guidance which is provided under IAS 36.

Corporate assets are defined in IAS 36 as "...assets other than goodwill that contribute to the future cash flows of both the cash-generating unit under review and other cash-generating units" [IAS 36.6]. Corporate assets can include intangible assets like brands and trademarks (see 4.4.2.A above).

In order to test properly for impairment, the corporate asset's carrying value has to be tested for impairment along with the CGUs. Corporate assets therefore have to be allocated to the CGUs to which they belong and then tested for impairment along with those CGUs.

This presents a problem in the event of those assets themselves showing indications of impairment. It also raises a question of what those indications can be, in the absence of cash inflows directly relating to this type of asset. Some, but not all, of these assets can have relatively easily determinable fair values but while this is usually true of a headquarters building, it could not be said for a central IT facility. We have already noted at 4.3.2 above that a decline in value of the asset itself does not always trigger a need for an impairment test, in particular when it is obvious that the related CGUs are not showing any indications of impairment - unless, of course, management has decided to dispose of the asset. It is most likely that a corporate asset will show indications of impairment if the CGU or group of CGUs to which it relates are showing indications and this is reflected in the methodology by which corporate assets are tested.

If possible, the corporate assets are allocated to individual CGUs on a reasonable and consistent basis. This is not expanded upon in IAS 36 and affords some flexibility, although consistency is vital; the same criteria must be applied at all times. If the carrying value of a corporate asset can be allocated on a reasonable and consistent basis between individual CGUs, each CGU's impairment test is performed separately and its carrying value includes its share of the corporate asset. When allocating corporate assets, entities need to ensure there is no double counting by eliminating any intra-group charges for the use of the corporate assets from the CGU's cash flows. Some entities include a charge for the use of corporate assets rather than allocating the assets to CGUs or groups of CGUs. This is an acceptable approximation as long as entities ensure that the allocation is reasonable and that the total charge has the same NPV as the carrying amount of those assets and there is no impairment. Otherwise, there could be double counting or the omission of assets or cash outflows from CGUs, or the misallocation of impairment to the assets of the CGU. Overheads are discussed further at 4.8.7 below.

If the corporate asset's carrying value cannot be allocated on a reasonable and consistent basis to an individual CGU, IAS 36 suggests the following three steps:

- The CGU (excluding the corporate asset) is tested for impairment and any impairment is recognised.
- The smallest group of CGUs is identified to which, as a group, all or part of the carrying value of the corporate asset can be allocated on a reasonable and consistent basis. This group must include the CGU that was the subject of the first test.

- All CGUs in this group have to be tested to determine if the group's carrying value (including the allocation of the corporate asset's carrying value) is in excess of the group's recoverable amount. If it is not sufficient, the impairment loss will be allocated *pro rata* (subject to the limitation in paragraph 22 of Section 27) to all assets in the group of CGUs and the allocated portion of the corporate asset, as described at 6.2 below.

In the illustrative examples accompanying IAS 36, Example 8 has a fully worked example of the allocation and calculation of a VIU involving corporate assets. The table below is included in the example, and serves to illustrate the allocation of the corporate asset to CGUs:

Illustration 4-8: Allocation of corporate assets

An entity comprises three CGUs and a headquarters building. The carrying amount of the headquarters building of 150 is allocated to the carrying amount of each individual cash-generating unit. A weighted allocation basis is used because the estimated remaining useful life of A's cash-generating unit is 10 years, whereas the estimated remaining useful lives of B and C's cash-generating units are 20 years.

Calculation of a weighted allocation of the carrying amount of the headquarters building:

End of 20X0	A	B	C	Total
Carrying amount	100	150	200	450
Remaining useful life	10 years	20 years	20 years	
Weighting based on useful life	1	2	2	
Carrying amount after weighting	100	300	400	800
<i>Pro rata</i> allocation of the building	(100 ÷ 800)= 12%	(300 ÷ 800)= 38%	(400 ÷ 800)= 50%	100%
Allocation of the carrying amount of the building (based on <i>pro rata</i> above)	19	56	75	150
Carrying amount (after allocation of the building)	119	206	275	600

IAS 36 does not require the allocation to be based on carrying value. In certain circumstances, financial measures such as revenue, employee numbers or a time basis are considered a valid basis.

One effect of this *pro rata* allocation process is that the amount of the head office allocated to each CGU will change as the useful lives and carrying values change. In the above example, the allocation of the head office to CGU A will be redistributed to CGUs B and C as A's remaining life shortens. Similar effects will be observed if the sizes of any other factor on which the allocation to the CGUs is made change relative to one another.

4.5.2.A Leased corporate assets

Companies frequently enter into lease arrangements on a corporate level, such as a leased corporate headquarters or leased IT equipment. Under Section 20 these lease arrangements will result in the recognition of right-of-use assets. Similar to other corporate assets, the right-of-use assets carrying values have to be tested for impairment along with the CGUs they serve. An entity will frequently need to allocate the carrying amount of corporate right-of-use assets to (groups of) CGUs when performing the impairment test. As discussed at 4.5.2 above, some entities include a charge for the use of corporate assets rather than allocating the assets to CGUs or groups of CGUs.

4.6 Measuring recoverable amount

Section 27 requires the carrying amount to be compared with the recoverable amount when there is an indicator of impairment. The recoverable amount of an asset or a CGU is the higher of its fair value less costs to sell and its value in use. [FRS 102.27.11]. If either the FVLCS or the VIU is higher than the carrying amount, the asset is not impaired and it is not necessary to estimate the other amount. [FRS 102.27.12].

The recoverable amount is calculated for an individual asset, unless that asset does not generate cash inflows that are largely independent of those from other assets or groups of assets, in which case the recoverable amount must be estimated for the CGU to which the asset belongs. [FRS 102.27.8].

VIU is defined as the present value of the future cash flows expected to be derived from an asset or CGU. FVLCS is defined as the amount obtainable from the sale of an asset or CGU in an arm's length transaction between knowledgeable, willing parties, less the costs of disposal.

Estimating the VIU of an asset involves estimating the future cash inflows and outflows that will be derived from the continuing use of the asset and from its ultimate disposal, and discounting them at an appropriate rate. [FRS 102.27.15]. There can be complex issues involved in determining the relevant cash flows and choosing a discount rate and these are discussed at 4.8 below.

FVLCS is a measurement based on fair value, applying the guidance in Section 2A *Fair Value Measurement*. [FRS 102.27.14]. The best evidence of fair value is an unadjusted quoted price for an identical or comparable asset or liability in an active market at the measurement date. When an unadjusted quoted price is not available, the price of a recent orderly transaction between market participants for an identical or comparable asset or liability provides evidence of fair value. However, this price may not be a reliable estimate of fair value if there has been a significant change in economic circumstances or a significant period of time between the date of the transaction, and the measurement date. If neither a quoted price nor a recent price for a comparable asset is available, management must estimate FVLCS using another valuation technique. [FRS 102.2A.15]. This can be a complex process as discussed at 4.7 below.

Section 27 mentions circumstances in which it may be appropriate to use an asset or CGU's FVLCS without calculating its VIU, as the measure of its recoverable amount. There may be no reason to believe that an asset's VIU materially exceeds its FVLCS, in which case the asset's FVLCS may be used as its recoverable amount. [FRS 102.27.13]. This is the case, for example, if management is intending to dispose of the asset or CGU, and apart from its disposal proceeds there will be few if any cash flows from further use.

It is not uncommon for the FVLCS of an asset to be readily obtainable while the asset itself does not generate largely independent cash inflows, as is the case with many property assets held by entities. If the FVLCS of the asset is lower than its carrying value then the recoverable amount (which means the higher of FVLCS and VIU) will have to be calculated by reference to the CGU of which the asset is a part. However, as explained at 4.3.2 above, it may be obvious that the CGU to which the property belongs has not suffered an impairment. In such a case it would not be necessary to assess the recoverable amount of the CGU.

4.7 Fair value less costs to sell ('FVLCS')

Section 2A specifies how to measure fair value but does not change when fair value is required or permitted under FRS 102. Section 2A is discussed in detail in Chapter 10.

FRS 102 defines fair value as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. [FRS 102 Appendix I]. When measuring FVLCS, fair value is measured in accordance with Section 2A.

Fair value, like FVLCS, is not an entity-specific measurement but is focused on market participants' assumptions for a particular asset or liability. [FRS 102.2A.3]. For non-financial assets, fair value has to take account of the highest and best use by a market participant to which the asset could be put. [FRS 102.2A.9]. An entity's current use of a non-financial asset is presumed to be its highest and best use unless market or other factors suggest that a different use by market participants would maximise the value of the asset. [FRS 102.2A.11].

Whilst Section 2A makes it clear that transaction costs are not part of a fair value measurement, in all cases, FVLCS must take account of estimated disposal costs. These include legal costs, stamp duty and other transaction taxes, costs of moving the asset and other direct incremental costs. Costs to sell must not include factors that have already been taken into account when determining the fair value of an asset. [FRS 102.2A.14A]. We would not expect business reorganisation costs and employee termination costs to be treated as costs of disposal.

If the disposal of an asset would entail the buyer assuming a liability and there is only a single FVLCS for both taken together, then, to enable a meaningful comparison, the obligation must also be taken into account in calculating VIU and the carrying value of the asset. This is discussed at 4.5.1 above.

4.7.1 Estimating fair value less costs to sell

Section 2A does not prescribe the valuation techniques an entity must use to measure fair value, but requires that that entities select techniques that are 'appropriate in the circumstances and for which sufficient data are available to measure fair value, maximising the use of inputs determined by reference to a market price in an active market'. An active market is a market in which transactions take place with sufficient frequency and volume to provide pricing information on an ongoing basis. [FRS 102 Appendix I]. Section 2A requires that the following methodology be applied to estimate fair value:

- (a) The best evidence of fair value is an unadjusted quoted price for an identical or comparable asset or liability in an active market at the measurement date.

- (b) When an unadjusted quoted price is not available, entities will refer to the price of a recent orderly transaction between market participants for an identical or comparable asset or liability as evidence of fair value. However, Section 2A explains that this price may not be a reliable estimate if there has been a significant change in economic circumstances or a significant period of time between the date of the transaction, and the measurement date.
- (c) If neither (a) nor (b) are available or reliable, fair value must be estimated using another valuation technique, with the objective being to estimate the price at which an orderly transaction would take place between market participants at the measurement date. [FRS 102.2A.15].

Under this methodology, when there is no quoted price for an identical or comparable asset, an entity refers to the price of a recent orderly transaction between market participants for an identical or comparable asset or liability. [FRS 102.2A.15]. If the entity has only recently acquired the asset or CGU in question then it may be able to demonstrate that its purchase price remains an appropriate measure of FVLCS, although it would have to make adjustments for material costs to sell.

To rely on the outcome of a recent transaction for an identical or comparable asset by a third party, the following conditions are considered:

- The transaction needs to be in the same industry, unless the asset is generic and its fair value would not be affected by the industry in which the purchaser operates.
 - The economic environment of the entity needs to be similar to the environment in which the previous sale occurred (e.g., no material circumstances have arisen since the earlier transaction that affect the value of the asset). This means that previous transactions are particularly unreliable if markets are falling.
- And
- The period of time between the date of the transaction and the measurement date cannot be significant.

Where it is necessary under the above methodology to use another valuation technique to estimate fair value, any valuation technique can be applied, provided it is consistent with one of the three valuation approaches in the standard: the market approach, the cost approach and the income approach.

[FRS 102.2A.16]. Section 2A does not place any preference on the techniques that are used as long as the entity achieves the objective of a fair value measurement. In some cases, a single valuation technique will be appropriate, while in other cases, multiple valuation techniques will need to be used. An entity must apply the valuation technique(s) consistently. A change in a valuation technique is considered a change in an accounting estimate in accordance with Section 10 *Accounting Policies, Estimates and Errors*. However, an entity need not provide the disclosures required by paragraph 10.18. [FRS 102.2A.17].

The market approach uses prices and other relevant information generated by market transactions involving identical or comparable (i.e., similar) assets, liabilities or a group of assets and liabilities, such as a business. [FRS 102.2A.16]. For items within scope of Section 27, market techniques will usually involve market transactions in comparable assets or, for certain assets valued as businesses, market multiples derived from comparable transactions.

The cost approach reflects the amount that would be required currently to replace the service capacity of an asset (i.e., current replacement cost). [FRS 102.2A.16]. It is expected to be based on what a market participant buyer would pay to acquire or construct a substitute asset of comparable utility, adjusted for obsolescence. Obsolescence includes physical deterioration, technological (functional) and economic obsolescence so it is not the same as depreciation under Section 17.

The income approach reflects expectations of future performance (e.g., cash flows or income and expenses). This will usually mean using a discounted cash flow technique or one of the other techniques that fall into this classification (e.g., option pricing and multi-period excess earnings methods).

[FRS 102.2A.16].

See Chapter 10 for a further discussion of these valuation approaches.

Using the approach required by Section 2A, most estimates of fair value for Section 27 purposes will use inputs that are directly or indirectly observable and inputs that are not based on observable market data but reflect assumptions used by market participants, including risk.

The objective of using a valuation technique is to establish what the transaction price would have been between market participants at the measurement date. Fair value is estimated on the basis of the results of a valuation technique that makes maximum use of market inputs, and relies as little as possible on entity-determined inputs. A valuation technique would be expected to arrive at a reliable estimate of the fair value if:

- It reasonably reflects how the market could be expected to price the asset.
- And

- The inputs to the valuation technique reasonably represent market expectations and measures of the risk return factors inherent in the asset. [FRS 102.2A.19].

It is clear that in calculating FVLCS it may be appropriate to use cash flow valuation techniques such as discounted cash flows or other valuation techniques such as earnings multiples, if it can be demonstrated that they would be used by the relevant 'market participants' i.e., other businesses in the same industry; while Section 2A emphasises the need to prioritise market inputs i.e., those which are visible to all, over inputs determined by the entity itself. [FRS 102.2A.15].

When selecting and using a valuation technique to estimate FVLCS, an entity would consider all of the following:

- Relevance of the available valuation models - this may include consideration of industry practice. For example, multiples based on occupancy, revenue and EBITDA can be inputs in estimating the fair value of a hotel, but the value of an oilfield would depend on its reserves. The fair value of an oil field would include the costs that would be incurred in accessing those reserves based on the costs a market participant expects to incur instead of the entity's own specific cost structure.
- Assumptions used in the model - these are only those that other market participants would use. They are not to be based on management's uncorroborated views or information that would not be known or considered by other market participants.

And

- Whether there is reliable evidence showing that these assumptions would be taken into account by market participants. For this purpose, it may be necessary for the entity to obtain external advice.

Additionally, when markets are unstable, entities must ensure that multiples remain valid. They cannot assume that the basis underlying the multiples remains unchanged.

An entity must use the best information that is available to it and adjust its own data if reasonably available information indicates that other market participants would use different data or there is something particular to the entity that is not available to other market participants such as an entity-specific synergy. An entity need not undertake exhaustive efforts to obtain information about market participant assumptions, but must take into account all information about market participant assumptions that is reasonably available.

A discounted cash flow technique may be used if this is commonly used in that industry to estimate fair value. Cash flows used when applying the model can only reflect cash flows that market participants would take into account when assessing fair value. This includes the type of cash flows, for example future capital expenditure, as well as the estimated amount of cash flows. For example, an entity may wish to take into account cash flows relating to future capital expenditure, which would not be permitted for a VIU calculation (see 4.8.2 below). These cash flows must be included if, and only if, other market participants would consider them when evaluating the asset. It is not permissible to include assumptions about cash flows or benefits from the asset that would not be available to or considered by a typical market participant.

It is also important to ensure that the cash flows included in the discounted cash flow model are consistent with the asset or CGU being tested. For example, if working capital balances such as trade debtors and creditors are included in the carrying value of the CGU, the cash inflows and outflows from those assets and liabilities must be included in the related cash flow projections.

The following simple Illustration shows how an entity might determine FVLCS for an asset.

Illustration 4-9: Estimating FVLCS

An entity owns two ships, one a chemical tanker designed to transport liquids for entities in the chemical industry and the other a container ship supplying the freight industry. The cash inflows for each ship are independent and as such, each ship is considered a CGU.

At the end of 20X0 the chemical tanker has a carrying value of £9,000,000 (original cost (£19,000,000; accumulated depreciation £10,000,000). The original estimate of the life of the tanker was seven years (measured from the date the tanker was first recognised by the entity) and it had an estimated residual value of £5,000,000.

Because of increased port taxes for liquid chemical consignments in the region, the entity has seen a substantial decrease in demand for use of the tanker since the prior year. The market price for the tanker in an active resale market is £6,000,000. Licence and title fees associated with selling the tanker are £200,000.

The reduction in use is an internal indicator that the tanker is impaired.

The price in an active market provides an estimate of fair value. The entity has calculated the VIU of the tanker as £4,500,000 which is lower than the resale value in an active market. Consequently, the recoverable amount of the tanker is £5,800,000 (£6,000,000 fair value less £200,000 costs to sell). The entity makes the following entries to record the impairment of the tanker:

Dr. Profit or loss (impairment of tanker)	£3,200,000
Cr. Accumulated impairment (property, plant and equipment)	£3,200,000
To recognise the impairment loss on property, plant and equipment.	

4.7.2 Effect of restrictions on fair value

When determining an asset's fair value less costs to sell, consideration must be given to any restrictions imposed on that asset. Costs to sell must also include the cost of obtaining relaxation of a restriction where necessary in order to enable the asset to be sold. If a restriction would also apply to any potential purchaser of an asset, the fair value of the asset may be lower than that of an asset whose use is not restricted.

[FRS 102.27.14A].

Where a restriction on the sale or use of an asset would apply to any potential purchaser of the asset, the effect of that restriction is taken into account in pricing the fair value of the asset. Where the restriction is specific to the entity holding the asset and so would not transfer to a potential purchaser, then that restriction would not reduce the fair value of the asset.

The following Illustration shows a situation where a certain restriction would apply to any potential purchaser of the asset concerned while a further restriction applies to the specific entity holding the asset, but not to other market participants. Only the first of these restrictions will reduce fair value when compared with an equivalent unrestricted asset.

Illustration 4-10: Restrictions on assets

A donor of land specifies that the land must be used by a sporting association as a playground in perpetuity. Upon review of relevant documentation, the association determines that the donor's restriction would not transfer to potential purchasers if the association sold the asset (i.e., the restriction on the use of the land is specific to the association). Furthermore, the association is not restricted from selling the land. Without the restriction on the use of the land, the land could be used as a site for residential development. In addition, the land is subject to an easement (a legal right that enables a utility to run power lines across the land).

Under these circumstances, the effect of the restriction and the easement on the fair value measurement of the land is as follows:

- Donor restriction on use of land - The donor restriction on the use of the land is specific to the association and thus would not apply to potential purchasers. Therefore, a market participant would not take this restriction into consideration when pricing the land and fair value might therefore be based on a residential development.
- Easement for utility lines - Because the easement for utility lines would apply to any potential purchaser, the fair value of the land would include the effect of the easement, regardless of whether the land's valuation premise is as a playground or as a site for residential development.

4.8 Value in use ('VIU')

Value in use ('VIU') is defined as the present value of the future cash flows expected to be derived from an asset or cash-generating unit. [FRS 102 Appendix I].

The calculation of VIU involves the following steps: [FRS 102.27.15]

- Estimating the future cash inflows and outflows to be derived from continuing use of the asset and from its ultimate disposal.

And

- Applying the appropriate discount rate to those future cash flows.

The following extract from Section 27 states the required elements an entity would need to reflect in the VIU calculation: [FRS 102.27.16]

Extract from Section 27

- 16** The following elements shall be reflected in the calculation of an asset's value in use:
- (a) an estimate of the future cash flows the entity expects to derive from the asset;
 - (b) expectations about possible variations in the amount or timing of those future cash flows;
 - (c) the time value of money, represented by the current market risk-free rate of interest;
 - (d) the price for bearing the uncertainty inherent in the asset; and
 - (e) other factors, such as illiquidity, that market participants would reflect in pricing the future cash flows the entity expects to derive from the asset.

Uncertainty as to the timing of cash flows or the market's assessment of risk in the assets ((b), (d) and (e) above) must be taken into account either by adjusting the cash flows or the discount rate. Specifically, the discount rate used to measure an asset's VIU must not reflect risks for which the future cash flow estimates have been adjusted, to avoid double counting. [FRS 102.27.20]. The intention is that the VIU represents the expected present value of those future cash flows.

If possible, recoverable amount is calculated for the individual asset. However, if it is not possible to estimate the recoverable amount of an individual asset, the entity estimates the recoverable amount of the CGU to which the asset belongs. [FRS 102.27.8]. This will frequently be necessary because:

- The single asset may not generate sufficiently independent cash inflows, as is often the case.
- And
- In the case of the possible impairment of a single asset, FVLCS will frequently be lower than the carrying amount.

Goodwill cannot be tested by itself, so must always be tested as part of a CGU or group of CGUs (see 5 below). [FRS 102.27.24].

Where a CGU is being reviewed for impairment, this will involve calculation of the VIU of the CGU as a whole unless a reliable estimate of the CGU's FVLCS can be made and the resulting FVLCS is above the total of the CGU's net assets.

VIU calculations at the level of the CGU will thus be required when no satisfactory FVLCS is available or FVLCS is below the CGU's carrying amount and:

- Goodwill is suspected of being impaired.
- A CGU itself is suspected of being impaired.

Or

- Individual assets are suspected of being impaired and individual future cash flows cannot be identified for them.

In order to calculate VIU there are a series of steps to follow, as set out below. Within each step, we must discuss the practicalities and difficulties in determining the VIU of an asset. The steps in the process are:

- 1: Dividing the entity into CGUs (at 4.4 above).
- 2: Allocating goodwill to CGUs or groups of CGUs (see 5.1 below).
- 3: Identifying the carrying amount of CGU assets (see 4.5 above).
- 4: Estimating the future pre-tax cash flows of the CGU under review (at 4.8.1-4.8.10 below).
- 5: Identifying an appropriate discount rate and discounting the future cash flows (at 4.8.11 below).
- 6: Comparing carrying value with VIU and recognising impairment losses (at 6 below).

Although this process describes the determination of the VIU of a CGU, steps 4 to 6 are the same as those that would be applied to an individual asset if it generated cash inflows independently of other assets.

Illustration 4-11 shows a simple example of how an entity would calculate the VIU of an individual asset following the principles set out at 4.8.1-4.8.10 below.

Illustration 4-11: Estimating value in use

Entity A manufactures an electrical component using a specialised machine. During 20X0, one of Entity A's competitors starts producing an alternative component using a less expensive material. The competitor is able to market their product at a lower cost than Entity A and so sales of Entity A's product fall sharply.

Entity A's specialised machine cannot be modified to work with this cheaper material and so at the end of 20X0 they test the machine for impairment. The machine was bought five years ago for £300,000 when its useful life was estimated to be 15 years and the estimated residual value was nil. At 31 December 20X0, after recognising the depreciation charge for 20X0, the machine's carrying amount is £200,000 and the remaining useful life is 10 years.

The machine's VIU is calculated using a pre-tax discount rate of 14 per cent per year. Budgets approved by management reflect estimated costs necessary to maintain the level of economic benefit expected to arise from the machine in its current condition.

Assume for simplicity, expected future cash flows occur at the end of the reporting period. An estimation of the VIU of the machine at the end of 20X0 is shown below:

Year	Probability-weighted future cash flow	Present value factor 14% ¹	Discounted cash flow
	£		£
20X1	19,949	0.877193	17,499
20X2	19,305	0.769468	14,855
20X3	18,084	0.674972	12,206
20X4	21,016	0.592080	12,443
20X5	20,767	0.519369	10,786
20X6	19,115	0.455587	8,709
20X7	17,369	0.399637	6,941
20X8	16,596	0.350559	5,818
20X9	14,540	0.307508	4,471
20Y0 ²	12,568	0.269744	3,390
Value in use			<u>97,118</u>

¹ The present value factor is calculated as $1/(1+i)^n$ where i is the discount rate and n is the number of periods of discount e.g., for 20Y0 the present value factor is calculated as follows: $1/(1.14)^{10} = 1/3.707221 = 0.269744$.

² The expected future cash flow for year 20Y0 includes £2,500 expected to be paid for the disposal of the asset at the end of its useful life. The residual value is nil because it is expected that the machine will be scrapped at the end of 20Y0.

Assuming that the FVLCS is lower than VIU (and thus VIU is the recoverable amount), the calculation of the impairment loss at the end of 20X0 is as follows:

Carrying amount before impairment loss	£200,000
Less recoverable amount	<u>(£97,118)</u>
Impairment loss	<u>£102,882</u>
Carrying amount after impairment loss	<u>£97,118</u>

As a consequence of the impairment loss recognised at 31 December 20X0, the carrying amount of the machine immediately after the impairment recognition is equal to the recoverable amount of the machine i.e., £97,118. In this case, in subsequent periods, assuming all variables remain the same as at the end of 20X0, the depreciable amount will be £97,118, so the depreciation charge will be £9,712 per year.

4.8.1 Estimating the future pre-tax cash flows of the CGU under review

In measuring value in use, the entity needs to estimate the future cash flows that it will derive from its use and consider possible variations in their amount or timing.

Unlike IAS 36, Section 27 does not mandate that cash flow projections be based on the most recent financial budgets/forecasts approved by management. However, the standard states that entities “may wish to use any recent financial budgets or forecasts to estimate the cash flows, if available”, and in practice, this is the approach we expect to see where such budgets/forecasts are available (also see 4.8.10 below).

However, it must be noted that significant adjustments to the cash flows in the budgets/forecasts can be required to ensure the resulting future cash flows satisfy the requirements of the Section 27. For example, it is necessary to exclude lease payments included in lease liabilities (see 4.8.9) and cash flows that are expected to arise from improving or enhancing the asset’s performance (see 4.8.2). Depending on the entity’s facts and circumstances, these adjustments can require significant effort and judgement. It is important for entities to consider materiality when determining the extent to which the task can be simplified.

In addition, whilst cash flow projections based on the most recent financial budgets/forecasts approved by management will typically be the most appropriate start point, it is usually appropriate and required to revise forecasts where the economic environment or conditions have changed since the most recent financial budgets and forecasts were approved by management (see 4.8.10 below).

This stage of the impairment test illustrates the point that it is not only fixed assets that are being assessed. The future cash flows to be forecast are all cash flows - receipts from sales, purchases, administrative expenses, etc. It is akin to a free cash flow valuation of a business with the resulting valuation then being compared to the carrying value of the assets in the CGU.

As explained in the following standard extract, the cash flow forecast must include three elements:
[FRS 102.27.17]

Extract from Section 27

- 33** In measuring value in use estimates of future cash flows shall include:
- (a) projections of cash inflows from the continuing use of the asset;
 - (b) projections of cash outflows that are necessarily incurred to generate the cash inflows from continuing use of the asset (including cash outflows to prepare the asset for use) and can be directly attributed, or allocated on a reasonable and consistent basis, to the asset; and
 - (c) net cash flows, if any, expected to be received (or paid) for the disposal of the asset at the end of its useful life in an arm’s length transaction between knowledgeable, willing parties.
- The entity may wish to use any recent financial budgets or forecasts to estimate the cash flows, if available. To estimate cash flow projections beyond the period covered by the most recent budgets or forecasts an entity may wish to extrapolate the projections based on the budgets or forecasts using a steady or declining growth rate for subsequent years, unless an increasing rate can be justified.

As noted at 4.8 above, uncertainties as to the timing of cash flows or the market’s assessment of risk in the assets must be taken into account *either* by adjusting the cash flows or the discount rate. Entities must take care to avoid double counting. [FRS 102.27.20]

Although not specified in Section 27, our normal expectation would be for entities to apply a similar rule of thumb to that under IAS 36, being the application of a five-year maximum, for the period before which a steady or declining growth rate could be assumed. This five-year rule is based on general economic theory that postulates above-average growth rates will only be achievable in the short-term, because such above-average growth will lead to competitors entering the market. This increased competition will, over a period of time, lead to a reduction of the growth rate, towards the average for the economy as a whole.

Cash flows can be estimated by taking into account general price changes caused by inflation (nominal terms), or on the basis of stable prices (real terms). If inflation is excluded from the cash flow then the discount rate selected must also be adjusted to remove the inflationary effect. Generally entities will use whichever method is most convenient to them and that is consistent with the method they use in their budgets and forecasts. It is, of course, fundamental that cash flows and discount rate are both estimated on a consistent basis.

The expected future cash flows of the CGU being assessed for impairment must not include cash inflows or outflows from financing activities (including lease payments included in lease liabilities) or tax receipts or payments (see 4.8.3 below).

4.8.2 Cash inflows and outflows from restructuring and improvements

While cash flow projections must include costs of day-to-day servicing, future cash flows are estimated for the asset in its current condition. Estimates of future cash flows must not include estimated future cash inflows or outflows that are expected to arise from: [FRS 102.27.19]

- A future restructuring to which an entity is not yet committed.

Or

- Improving or enhancing the asset's performance.

While the restriction on enhanced performance may be understandable, it adds an element of unreality that is hard to reconcile with other assumptions made in the VIU calculation process. For example, the underlying forecast cash flows an entity uses in its VIU calculation are likely to be based on the business as it is actually expected to develop in the future, growth, improvements and all. Producing a special forecast based on unrealistic assumptions, even for this limited purpose, may be difficult.

Nevertheless, Section 27 explicitly states that projected cash flows must not include expenditure to improve or enhance performance of an asset. [FRS 102.27.19]. The implication of this requirement is that if an asset is impaired the asset will still have to be written down even if the entity is going to make the future expenditure to reverse that impairment. Subsequently, the asset's impairment can be reversed, to the degree appropriate, after the expenditure has taken place. Reversal of asset impairment is discussed at 7 below.

Section 27 does not specifically address the treatment of part completed assets when determining VIU. In contrast, IAS 36 makes it clear that for a part-completed asset, all expected cash outflows required to make the asset ready for use or sale must be considered in the estimate of future cash flows and mentions a building under construction or a development project as examples. [IAS 36.42]. A similar approach would generally be expected under Section 27. Both Section 27 and IAS 36 are clear that the estimate of future cash flows must not include the estimated future cash inflows that are expected to arise from the increase in economic benefits associated with cash outflows to improve or enhance an asset's performance until an entity incurs these cash outflows. [IAS 36.48]. This raises the question of what to do once a project to enhance or improve the performance of an asset or a CGU has commenced, and it has started to incur cash outflows.

How we see it

In our view, once an entity is committed to a future restructuring or an asset is under construction (but not yet ready for use or sale), an entity must consider future cash inflows that are expected to arise from the increase in economic benefits associated with the cash outflows to improve or enhance the asset. Important to note is that it must take into consideration all future cash outflows required to complete the project and any risks in relation with the project, reflected either in the cash flows or the discount rate.

An assumption of new capital investment is in practice intrinsic to the VIU test. What has to be assessed are the future cash flows of a productive unit such as a factory or hotel. The cash flows, out into the far future, will include the sales of product, cost of sales, administrative expenses, etc. They must necessarily include capital expenditure as well, at least to the extent required to keep the CGU functioning as forecast in its current condition.

Accordingly, some capital expenditure cash flows must be built into the forecast cash flows. Whilst improving capital expenditure may not be recognised, routine or replacement capital expenditure necessary to maintain the level of economic benefits expected to arise from the asset (or CGU) in its current condition has to be included. Entities must therefore distinguish between maintenance, replacement and enhancement expenditure. This distinction may not be easy to draw in practice, as shown in the following Illustration.

Illustration 4-12: Distinguishing enhancement and maintenance expenditure

A telecommunications company provides fixed line, telephone, television and internet services. It must develop its basic transmission infrastructure (overhead wires or cables along streets or railway lines etc.) and in order to service a new customer it will have to connect the customer's home via cable and other equipment. It will extend its network to adjoining areas and perhaps acquire an entity with its own network. It will also reflect changes in technology, e.g., fibre optic cables replacing copper ones.

Obviously, when preparing the budgets which form the basis for testing the network for impairment, it will make assumptions regarding future revenue growth and will include the costs of connecting those customers. However, its infrastructure maintenance spend will inevitably include replacing equipment with the current technology. There is no option of continuing to replace equipment with something that has been technologically superseded. Once this technology exists it will be reflected in the entity's budgets and taken into account in its cash flows when carrying out impairment tests, even though this new equipment will enhance the performance of the transmission infrastructure.

Further examples indicate another problem area - the effects of future expenditure that the entity has identified but which the entity has not yet incurred. An entity may have acquired an asset with the intention of enhancing it in future and may, therefore, have paid for future synergies which will be reflected in the calculation of goodwill. Another entity may have plans for an asset that involve expenditure that will enhance its future performance and without which the asset may be impaired.

Examples could include:

- A social media company that, in acquiring another, would expect to pay for the future right to migrate customers from the competing platform to its own platform.
- Or
- An aircraft manufacturer that expects to be able to use one of the acquired plants for a new model at a future point, a process that will involve replacing much of the current equipment.

In both cases the long-term plans reflect both the capital spent and the cash flows that will flow from it. There is no obvious alternative to recognising an impairment when calculating the CGU or CGU group's VIU as Section 27 states that the impairment test has to be performed for the asset in its current condition. This means that it is not permitted to include the benefit of improving or enhancing the asset's performance in calculating its VIU.

An entity in this situation may attempt to avoid an impairment write down by calculating the appropriate FVLCS, as this is not constrained by rules regarding future capital expenditure. As discussed above, these cash flows can be included only to the extent that other market participants would consider them when evaluating the asset. It is not permissible to include assumptions about cash flows or benefits from the asset that would not be available to or considered by a typical market participant.

Section 27 contains similar rules with regard to any future restructuring that may affect the VIU of the asset or CGU. The prohibition on including the results of restructuring applies only to those plans to which the entity is not committed. This is because of the general rule that the cash flows must be based on the asset in its current condition so future events that may change that condition must not be taken into account. [FRS 102.27.19]. When an entity becomes committed to a restructuring Section 27 then allows an entity's estimates of future cash inflows and outflows to reflect the cost savings and other benefits from the restructuring, based on the most recent financial budgets/forecasts approved by management.

As is the case for improvement expenditure above, entities will sometimes be required to recognise impairment losses on assets or CGUs that will be reversed once the expenditure has been incurred and the restructuring completed.

4.8.3 Financing and taxation

Estimates of future cash flows must not include: [FRS 102.27.18]

- Cash inflows or outflows from financing activities.
- Or
- Income tax receipts or payments.

The first of these exclusions is required because the discount rate applied to the cash flow projections represents the associated financing costs (so to include financing cash flows would be double counting this effect). For consistency, generally, financial liabilities are excluded from the carrying amount of the CGU, although there are exceptions, for example, lease liabilities. Consistency and the impairment test is discussed further at 4.5.1 above. Discount rates are discussed further at 4.8.11 below. Similarly, income tax receipts and payments must also be excluded on consistency grounds as Section 27 requires the use of a pre-tax discount rate to be used in the VIU calculation. [FRS 102.27.20].

4.8.4 Future cash flows after the forecast period ('terminal values')

In the case of non-current assets, a large component of value attributable to an asset or CGU arises from its terminal value, which is the net present value of all the forecast free cash flows that are expected to be generated by the asset or CGU after the explicit forecast period.

Where an asset is to be sold at the end of its useful life the disposal proceeds and costs must be based on current prices and costs for similar assets, adjusted if necessary for price level changes if the entity has chosen to include this factor in its forecasts and selection of a discount rate. The entity needs to ensure that its estimate is based on a proper assessment of the amount that would be received in an arm's length transaction.

Whether the life of an asset or CGU is considered to be finite or indefinite will have a material impact on the terminal value. It is therefore of the utmost importance for management to assess carefully the cash generating ability of the asset or CGU and whether the period over which this asset or CGU is capable of generating cash flows is defined or not. While many CGUs containing goodwill will have an indefinite life, the same is not necessarily true for CGUs without allocated goodwill. For example, if a CGU has one main operating asset with a finite life, as in the case of a mine, the cash flow period needs to be limited to the life of the mine. Whether it would be reasonable to assume that an entity would replace the principal assets of a CGU and therefore whether it would be appropriate to calculate the terminal value under consideration of cash flows into perpetuity will depend on the specific facts and circumstances.

In the case of assets or CGUs with indefinite useful lives, the terminal value is calculated by having regard to the forecast maintainable cash flows that are expected to be generated by the asset or CGU in the final year of the explicit forecast period ('the terminal year').

It is essential that the terminal year cash flows reflect maintainable cash flows as otherwise any material one-off or abnormal cash flows that are forecast for the terminal year will inappropriately increase or decrease the valuation. It is essential that the terminal year cash flows reflect maintainable cash flows as otherwise any material one-off or abnormal cash flows that are forecast for the terminal year will inappropriately increase or decrease the valuation.

The maintainable cash flow expected to be generated by the asset or CGU is then capitalised by a perpetuity factor based on either:

- The discount rate if cash flows are forecast to remain relatively constant.
- Or
- The discount rate less the long-term growth rate if cash flows are forecast to grow.

Care is required in assessing the growth rate to ensure consistency between the long-term growth rate used and the assumptions used by the entity generally in its business planning.

4.8.5 Foreign currency cash flows

The cash inflows attributable to an asset or CGU may be generated in a foreign currency. Section 27 does not provide any guidance on this issue, but under the hierarchy in Section 10, entities may wish to consider the guidance in IAS 36. IAS 36 states that foreign currency cash flows must first be estimated in the currency in which they will be generated and then discounted using a discount rate appropriate for that currency. The entity can then translate the present value calculated in the foreign currency using the spot exchange rate at the date of the VIU calculation. [IAS 36.54].

This is to avoid the problems inherent in using forward exchange rates, which would result in double-counting the time value of money, first in the discount rate and then in the forward rate. [IAS 36.BCZ49]. However, the method requires an entity to perform, in effect, separate impairment tests for cash flows generated in different currencies but make them consistent with one another so that the combined effect is meaningful. Arriving at a suitable discount rate could be an extremely difficult exercise as many different factors need to be taken into account including relative inflation rates and relative interest rates as well as appropriate discount rates for the currencies in question. Entities may wish to engage valuers to assist them in this situation.

4.8.6 Internal transfer pricing

Section 27 does not provide any guidance on the estimation of cash flows in situations where the actual cash flows are based on internal transfer pricing.

How we see it

In our view, if the cash inflows generated by an asset or CGU are based on internal transfer pricing, management must use their best estimate of an external arm's length transaction price in estimating the future cash flows to determine the asset's or CGU's VIU.

Further guidance on the approach to internal transfer pricing in value in use calculations is included in the EY publication, International GAAP®.

4.8.7 Overheads

As noted at 4.8.1 above, when measuring VIU, entities must include projections of cash outflows that are: *[FRS 102.27.17(b)]*

- Necessarily incurred to generate the cash inflows from continuing use of the asset (or CGU).
And
- Can be directly attributed, or allocated on a reasonable and consistent basis to the asset (or CGU).

Projections of cash outflows must therefore include those for the day-to-day servicing of the asset/CGU as well as future overheads that can be attributed directly, or allocated on a reasonable and consistent basis, to the use of the asset/CGU.

How we see it

In our view, all overhead costs must be considered, and most must be allocated to CGUs when testing for impairment. Judgements can however be required to determine how far down to allocate some overhead costs and in determining an appropriate allocation basis. This is particularly important when it comes to stewardship costs and overhead costs incurred at a far higher level in a group to the CGU/asset assessed for impairment. Careful consideration of the entity's specific relevant facts and circumstances and cost structure is needed.

Generally, overhead costs that provide identifiable services to a CGU (e.g., IT costs from a centralised function) as well as those that would be incurred by a CGU if it needed to perform the related tasks when operating on a 'stand-alone basis' (e.g., financial reporting function) must be allocated to the CGU being tested for impairment.

Conversely, overhead costs that are incurred with a view to acquire and develop a new business (e.g., costs for corporate development such as M&A activities) would generally not be allocated. These costs are similar in nature to future cash inflows and outflows that are expected to arise from improving or enhancing a CGU's performance which are not considered in the VIU. *[FRS 102.27.19(b)]*.

The selection of a reasonable and consistent allocation basis for overhead costs will require analysis of various factors including the nature of the CGU itself. A reasonable allocation basis for identifiable services may be readily apparent, for example in some cases volume of transaction processing for IT services or headcount for human resource services may be appropriate. However, a reasonable allocation basis for stewardship costs that are determined to be necessarily incurred by the CGU to generate cash inflows may require more analysis. For example, an allocation basis for stewardship costs such as revenue or headcount may not necessarily be reasonable when CGUs have different regulatory environments, (i.e., more regulated CGUs may require more governance time and effort) or maturity stages (i.e., CGUs in mature industries may require less governance effort). The allocation basis may need to differ by type of cost and in some cases may need to reflect an average metric over a period of time rather than a metric for a single period or may need to reflect future expected, rather than historic, metrics.

Overheads not fully pushed down to the lowest level of CGUs might need to be included in an impairment test at a higher-level group of CGUs if it can be demonstrated that the overhead costs are necessarily incurred and can be attributed directly or allocated on a reasonable and consistent basis at that higher level. After a careful analysis, there could be instances when certain overhead costs are excluded from the cash flow projections on the basis that they do not meet the criteria under paragraph 17(b) of Section 27.

Many entities make internal charges, often called management charges, which purport to transfer overhead charges to other group entities. Care must be taken before using these charges as a surrogate for actual overheads as they are often based on what is permitted, (e.g., by the taxation authorities), rather than actual overhead costs. There is also the danger of double counting if a management charge includes an element for the use of corporate assets that have already been allocated to the CGU being tested e.g., an internal rent charge.

In certain situations, it may be argued that some stewardship costs are already included in the impairment test through the discount rate used. This would, among other factors, depend on the way the discount rate has been determined, and whether the relevant stewardship cost can be regarded more as a shareholder cost covered in the shareholders' expected return rather than a cost necessarily incurred by the CGU to generate the relevant cash flows. Due to the complexity of such an approach, it would need to be applied with appropriate care.

4.8.8 Share-based payments

Often employees' remuneration packages include share-based payments. Share-based payments may be cash-settled, equity-settled or give the entity or the counterparty the choice of settlement in equity or in cash. In practice, many share-based payment transactions undertaken by entities are awards of equity settled shares and options. This gives the entity the possibility of rewarding employees without incurring any cash outflows and instead the cash costs are ultimately borne by the shareholders through dilution of their holdings.

When it comes to impairment assessment a question that often faces entities is whether and how to consider share-based payments in the recoverable amount, in particular the VIU calculation. Section 27 itself does not provide any specific guidance in respect of whether or how share-based payments must be considered in determining the recoverable amount.

As Section 27 focuses on cash flows in determining VIU, it seems that expected cash outflows in relation to cash-settled share-based payments would need to be reflected in the VIU calculation. As noted at 4.5.1 above, consistency is a very important principle underlying Section 27. Therefore, in relation to cash-settled share-based payments, entities must be consistent in the extent to which cash flows resulting from these arrangements are included in the carrying amount of the CGU and the cash flows used to determine the value in use. Where the future expected cash flows used in determining the value in use are limited to the expected cash outflows in excess of the liability already recognised at that date in the VIU calculation, the liability already recognised at the date of the VIU determination cannot be included in the carrying amount of the CGU. In contrast, if the entity includes all the future expected cash outflows in determining the value in use, the liability already recognised at the date of the VIU determination must be included in the carrying amount of the CGU in order to be consistent.

Assume for example a cash-settled share-based payment plan with total expected cash outflow of CU90 of which CU30 has already been recognised in a liability. If CU60 is included in the cash flows used to determine the value in use, the liability of CU30 cannot be included in the carrying amount of the CGU. If on the other hand CU90 is included in the cash flows used to determine the value in use, the liability of CU30 must be included in the carrying amount of the CGU.

Whilst theoretically this seems to be straight forward, in practice it can be quite a challenging and judgemental task, particularly when the entity consists of a large number of CGUs. Share-based payments are in general awarded by the parent to employees within the group and any change in the value of share-based payments after the grant date might be disconnected from the performance of the employing CGU. This may be relevant in assessing whether and how such changes in value and the ultimate expected cash flows are allocated to a specific CGU.

What is even less clear is whether an entity should reflect equity-settled share-based payments in the VIU calculation. Such share-based payment transactions may never result in any cash outflows for the entity - for example when newly issued shares are used to settle the equity-settled share-based payment plan, and therefore a literal reading of Section 27 may indicate that they can be ignored in determining the recoverable amount. However, some might argue an entity must appropriately reflect all share-based payments in the VIU calculation, whether or not these result in a real cash outflow to the entity. They note that such share-based payments are part of an employee's remuneration package and therefore costs for services from the employee, which are necessary as part of the overall cash flow generating capacity of the entity. Others may argue that they need to be considered through adjusting the discount rate in order to reflect a higher return to equity holders to counter the dilutive effects of equity settled share-based payment awards. This also depends on the way the discount rate is determined, and whether the level of equity-settled share-based plans are in line with the peer group used to determine the discount rate. If this is not the case, it is likely adjustments are needed in order to reflect the higher return in the current market assessment. In practice this can be very difficult and judgmental to determine.

Averages and computational short cuts may provide reasonable approximations of the detailed computations. In certain situations, it may be acceptable for elements to be included either in the discount rate or in the cash flows. Based on this it might be possible to adjust the cash flows in order to get to a reasonable approximation of the effect on value in use.

The time span over which the recoverable amount is calculated is often much longer than the time period for which share-based payments have been awarded. Companies and their employees would often expect that further share-based payment awards will be made in the future during the time period used for the recoverable amount calculation. Depending on the respective facts and circumstances an entity would need to consider whether to include the effect of share-based payments over a longer period, considering the discussion above.

How we see it

Section 27 itself does not provide any specific guidance as to whether or how share-based payments are considered in determining the recoverable amount. As Section 27 focuses on cash flows in determining VIU, it is our view that share-based payments that result in cash outflows (for example cash-settled share-based payments) would need to be reflected in the VIU calculation.

What is less clear is how an entity reflects equity-settled share-based payments in the VIU calculation when these will not result in a cash outflow for the entity (for example where employees receive newly issued shares of the entity to settle equity-settled share-based payments). In our view a significant amount of judgement can be required to assess how to appropriately reflect such share-based payments in VIU calculations, either by adjusting the cash flows or adjusting the discount rate.

4.8.9 Lease payments

4.8.9.A Lease payments during the lease term

As mentioned in 4.5.1.A above, the VIU calculation does not consider any cash flows for lease liabilities recorded in the statement of financial position. If the carrying amount of the lease liability is deducted to arrive at the carrying value of the CGU, the same carrying amount of the lease liability would need to be deducted from the VIU.

It is important to note that, while under Section 20 in-substance fixed lease payments in connection with lease arrangements are reflected in the lease liability, other lease payments are not. Variable lease payments that do not depend on an index or a rate, such as those based on performance or usage of the underlying asset, are not reflected in the recognised lease liability. These contractual payments therefore would still need to be reflected in the cash flow forecast used for the VIU calculation.

An entity accounts for each non-lease component within a contract separately from the lease component of the contract, unless the lessee applies the practical expedient in paragraph 33 of Section 20. Therefore, unless the practical expedient is applied, the non-lease components would need to be considered in the VIU calculation. If the practical expedient is applied, then the same guidance as discussed above for variable lease payments would apply to variable payments in relation to non-lease components.

In addition, Section 20 has certain exemptions for low-value assets and short-term leases. If a lessee elects to use these exemptions and therefore not to record a right-of-use asset and a lease liability on the balance sheet for these leases, then the cash flows in relation to these leases would still need to be included in the VIU cash flow forecast.

4.8.9.B Lease payments beyond the current lease term

When testing (groups) of CGUs it will frequently be the case that cash flow forecasts in a VIU model are for a longer period than the lease term of the right-of-use assets included in the carrying amount of the CGU.

An assumption of new capital investments is in practice intrinsic to the VIU test. What must be assessed are the future cash flows of the CGU. The cash flows, out into the future, will include sales of products or services, the cost of sales or services and all other cash flows necessary to generate independent cash inflows. They must necessarily include capital expenditure as well, at least to the extent required to keep the CGU functioning as forecast.

In cases where the cash flows of the CGU are dependent on the underlying right-of-use assets, but the lease term will end during the cash flow forecast period, renewal, extension or replacement of the underlying right-of-use asset will have to be assumed. This can be done either by assuming a new lease will be entered into, and therefore considering lease payments for this replacement lease in the cash flow forecast or terminal value, or by assuming a replacement asset will be purchased. This will depend on the entity's planned course of action, including the consideration of any already committed leases that have not yet commenced. It would be inappropriate not to reflect such replacement needs in the CGU's cash flows that the CGU's future cash inflows depend thereon.

Special attention is required when a terminal value calculation is used, where the terminal value is calculated before the end of the lease term. For example, the terminal value can be based on the extrapolation of the cash flow expected for year 5, while the lease term ends at the end of year 8. This means that the cash flow at the end of year 5 does not represent a sustainable cash flow going forward. This can be addressed by including replacement leases or capital expenditures in the terminal year, and separately calculating an adjustment to reflect that some of these expenditures will only start after year 8 (if material).

4.8.10 Events after the reporting period

Events after the reporting period and information received after the end of the reporting period must be considered in the impairment assessment only if changes in assumptions provide additional evidence of conditions that existed at the end of the reporting period. Judgement of all facts and circumstances is required to make this assessment.

Information available after the year end can provide evidence that conditions were much worse than assumed. Whether an adjustment to the impairment assessment would be required or not would depend on whether the information casts doubt on the assumptions made in the estimated cash flows for the impairment assessment.

Competitive pressures resulting in price reductions after the year end do not generally arise overnight but normally occur over a period of time and can represent a reaction to conditions that already existed at the year-end in which case management would reflect this in the year end impairment assessment.

Section 32 *Events after the Reporting Period* distinguishes events after the reporting period between adjusting and non-adjusting events (see Chapter 34). Section 32 mentions abnormally large changes after the reporting period in asset prices or foreign exchange rates as examples of non-adjusting events and therefore these changes would in general not be a reason to update year end impairment calculations. The standard implies that abnormally large changes must be due to an event that occurred after the period end and therefore more or less assumes that the cause of such abnormally large changes are not conditions that existed at the year-end. However, management would need to carefully assess the reason for the abnormally large change and consider whether it is due to conditions which existed at the period end.

As stated in 4.8.1 above, cash flow projections used for the impairment test are generally based on recent financial budgets/forecasts approved by management where available. This begs the question - what to do if a new budget/forecast is approved by management after the reporting period end but before the accounts are authorised for issue? A similar question arises in group scenarios where subsidiaries' accounts are authorised for issue a significant time after the group accounts were authorised for issue. In both scenarios the same general considerations as explained above would apply. An entity would need to assess whether the revised budget/forecast is due to conditions that existed at the reporting period end and therefore would need to be considered in the impairment assessment, or whether the change in budget/forecast is due to circumstances that arose after the end of the reporting period and therefore would only be considered in subsequent impairment tests. In a group scenario, this could lead to a situation where the revised budget/forecast would need to be considered on a subsidiary level when the subsidiaries' accounts are authorised for issue after the revised budget was approved, despite the fact that the group accounts were already authorised for issue based on the previous budget.

4.8.11 Risk in present value: 'traditional' and 'expected cash flow' approaches

The elements that must be taken into account in calculating VIU are described in 4.8 above. Section 27 requires an estimate of the future cash flows the entity expects to derive from the asset and the time value of money, represented by the current market risk-free rate of interest, to be reflected in the VIU calculation. However, the other elements that must be taken into account, all of which measure various aspects of risk, are dealt with either as adjustments to the discount rate or to the cash flows. These elements are:

- Expectations about possible variations in the amount or timing of those future cash flows.
 - The price for bearing the uncertainty inherent in the asset.
- And
- Other factors, such as illiquidity that market participants would reflect in pricing the future cash flows the entity expects to derive from the asset. *[FRS 102.27.16]*.

Section 27 does not provide guidance on how to adjust for these factors, but further guidance is provided in IAS 36 which entities may refer to. Adjusting for these factors in the discount rate is termed the 'traditional approach' in Appendix A to IAS 36. Alternatively, under the 'expected cash flow' approach these adjustments are made in arriving at the risk-adjusted cash flows. Under IAS 36, either method can be used to compute the VIU of an asset or CGU. *[IAS 36.A2]*.

The traditional approach uses a single set of estimated cash flows and a single discount rate, often described as 'the rate commensurate with the risk'. This approach assumes that a single discount rate convention can incorporate all expectations about the future cash flows and the appropriate risk premium, and therefore places most emphasis on the selection of the discount rate.

Due to the problems and difficulties around capturing and reflecting all the variables into a single discount rate (for example, when there is significant uncertainty related to future events), IAS 36 notes that the expected cash flow approach could be the more effective measurement tool.

The expected cash flow approach is a probability weighted net present value approach. This approach uses all expectations about possible cash flows instead of a single most likely cash flow and assigns probabilities to each cash flow scenario to arrive at a probability weighted net present value. The use of probabilities is an essential element of the expected cash flow approach. The discount rate then considers the risks and variability for which the cash flows have not been adjusted. Appendix A to IAS 36 notes some of the downsides of this approach, e.g., that the probabilities are highly subjective and that it can be inappropriate for measuring a single item or one with a limited number of outcomes. Nonetheless, it considers the most valid objection to the method to be the costs of obtaining additional information when weighed against its 'greater reliability'.

Even where an expected cash flow approach is used, an entity would still need to consider adjusting the discount rate for the general uncertainties and risks not reflected in the cash flows. The key message is therefore that an entity needs to ensure that consistent assumptions are used for the estimation of cash flows and the selection of an appropriate discount rate in order to avoid any double-counting or omissions.

4.8.12 Discount rate

After identifying the relevant cash flows for the asset or CGU, the next step is to identify an appropriate discount rate to use in deriving the present value of those cash flows.

The discount rate(s) used in the present value calculation need to be a pre-tax rate(s) that reflect(s) current market assessments of:

- The time value of money.
- And
- The risks specific to the asset for which the future cash flow estimates have not been adjusted.

The discount rate(s) used to measure an asset's value in use must not reflect risks for which the future cash flow estimates have been adjusted, to avoid double-counting. *[FRS 102.27.20]*.

This means the discount rate to be applied needs to be an estimate of the rate that the market would expect on an equally risky investment. The discount rate specific for the asset or CGU will take account of the period over which the asset or CGU is expected to generate cash inflows, and it may not be sensitive to changes in short-term rates.

If at all possible, the rate must be obtained from market transactions or market rates, which means the rate must be the rate implicit in current market transactions for similar assets or the weighted average cost of capital (WACC) of a listed entity that has a single asset (or a portfolio of assets) with similar service potential and risks to the asset under review. If such a listed entity could be found, care would have to be taken in using its WACC as, to determine the VIU, an entity must use a pre-tax discount rate that is independent of the entity's capital structure and the way it financed the purchase of the asset.

Only in rare cases (e.g., property assets) can such market rates be obtained. If an asset-specific rate is not available from the market, estimates will be required. Determining the discount rate that investors would require if they were to choose an investment that would generate cash flows of amounts, timing and risk profile equivalent to those that the entity expects to derive from the asset will not be easy.

As a starting point, the entity may take into account the following rates:

- The entity's weighted average cost of capital determined using techniques such as the Capital Asset Pricing Model.
- The entity's incremental borrowing rate.
- And
- Other market borrowing rates.

From that starting point the rate must be adjusted to:

- Reflect the specific risks associated with the projected cash flows (such as country, currency, price and cash flow risks).
- Exclude risks that are not relevant to the asset or CGU concerned.
- Avoid double counting, by ensuring that the discount rate does not reflect risks for which future cash flow estimates have already been adjusted.

And

- Reflect a pre-tax rate if the basis for the starting rate is post-tax (such as WACC).

As the rate required is one which is specific to the asset (or CGU) and not to the entity, the discount rate must be independent of the entity's capital structure and the way it financed the purchase of the asset.

In practice many entities will use the WACC as a starting point to estimate the appropriate discount rate. WACC is an accepted methodology based on a well-known formula and widely available information and in addition, many entities already know their own WACC. However, it can only be used as a starting point for determining an appropriate discount rate. Some of the issues that must be taken into account are as follows:

- The WACC is a post-tax rate and VIU is required to be calculated using pre-tax cash flows and a pre-tax rate. Converting the former into the latter is not simply a question of grossing up the post-tax rate by the effective tax rate.
- Other tax factors may need to be considered, whether or not these will result in tax cash flows in the period covered by budgets and cash flows.
- An entity's own WACC may not be suitable as a discount rate if there is anything atypical about the entity's capital structure compared with 'typical' market participants.
- The WACC must reflect the risks specific to the asset and not the risks relating to the entity as a whole, such as default risk.

And

- The entity's WACC is an average rate derived from its existing business, yet entities frequently operate in more than one sector. Within a sector, different types of projects may have different levels of risk (e.g., a start-up as against an established product).

The selection of the discount rate is obviously a crucial part of the impairment testing process and in practice it will probably not be possible to obtain a theoretically perfect rate. The objective, therefore, must be to obtain a rate which is sensible and justifiable and in order to do so, specialist advice may be needed.

For further discussion on calculation of an appropriate discount rate there is a considerable amount of guidance included in the EY publication, International GAAP®, which would be relevant for entities applying Section 27 of FRS 102. This includes discussion of how entities can derive the appropriate pre-tax equivalent rate from a starting point of WACC and how VIU can be calculated using post tax cash flows.

Ultimately the selection of discount rates leaves considerable room for judgement and it is likely that many very different approaches will be applied in practice, even though this may not always be evident from the financial statements. Once the discount rate has been chosen, the future cash flows are discounted in order to produce a present value figure representing the VIU of the CGU or individual asset that is the subject of the impairment test.

4.8.13 Assets held for their service potential

While in a for-profit entity it is appropriate to determine VIU by measuring the present value of the cash flows derived from an asset or CGU, this may be less relevant in the context of Public Benefit Entities (PBEs). A PBE is defined in FRS 102 as an entity whose primary objective is to provide goods or services for the general public, community or social benefit and where any equity is provided with a view to supporting the entity's primary objectives rather than with a view to providing a financial return to equity providers, shareholders or members.

In a PBE assets may be held not for cash generating purposes but for their service potential i.e., where the benefits are expected to be derived through use of the asset along with proceeds from sale. To acknowledge this, Section 27 includes the following alternative approach for such assets.

For assets held for their service potential a cash flow driven valuation (such as value in use) may not be appropriate. In these circumstances value in use (in respect of assets held for their service potential) is determined by the present value of the asset's remaining service potential plus the net amount the entity will receive from its disposal. In some cases this may be taken to be costs avoided by possession of the asset. Therefore, depreciated replacement cost, may be a suitable measurement model but other approaches may be used where more appropriate. *[FRS 102.27.20A]*.

4.8.14 Differences between fair value and value in use

Whilst value in use has some similarities to fair value, Section 2A does not apply to value in use, and there are a number of ways in which fair value is different to value in use. Fair value is a market-based measurement, not an entity-specific measurement, and therefore reflects the assumptions market participants would use when pricing the asset. In contrast, value in use is defined as the present value of the future cash flows expected to be derived from an asset or CGU and reflects the effects of factors that may be specific to the entity and not applicable to entities in general.

Whilst not set out in Section 27, IAS 36 gives a number of specific examples of factors that are excluded from fair value under IFRS to the extent that they would not be generally available to market participants. *[IAS 36.53A]*. As Section 2A also requires fair value to be determined from a market participant perspective, these examples would also be relevant to FRS 102 reporters:

- The additional value derived from the grouping of assets.
- Synergies between the asset being measured and other assets.
- Legal rights or legal restrictions that are specific only to the current owner of the asset.

And

- Tax benefits or tax burdens that are specific to the current owner of the asset.

By contrast, an entity calculating FVLCS includes cash flows that are not permitted in a VIU calculation but only to the extent that other market participants would consider them when evaluating the asset. For example, cash inflows and outflows relating to future capital expenditure could be included if they would be taken into account by market participants (see 4.8.2 above).

5 Impairment of goodwill

5.1 Goodwill and its allocation to CGUs

Goodwill, by itself, cannot be sold. Nor does it generate cash flows to an entity that are independent of other assets. As a consequence, the fair value of goodwill cannot be measured directly. Therefore, the recoverable amount of goodwill must be derived from measurement of the recoverable amount of the CGU(s) of which the goodwill is a part. [FRS 102.27.24].

Testing goodwill for impairment therefore requires it to be allocated to CGUs of the acquirer. This process is quite different to the process by which CGUs themselves are identified, as that depends on identifying the smallest group of assets generating largely independent cash inflows. The cash flows of the CGU, or those of a group of CGUs if appropriate, must be sufficient to support the carrying value both of the assets and any allocated goodwill.

For the purposes of impairment testing, goodwill acquired in a business combination must, from the acquisition date, be allocated to each of the acquirer's CGUs that are expected to benefit from the synergies of the combination, irrespective of whether other assets or liabilities of the acquiree are assigned to those units. [FRS 102.27.25].

Goodwill is allocated to CGUs from the acquisition date. There is no specific guidance in Section 27 on circumstances that might lead to a reallocation of goodwill between CGUs. Therefore, under the hierarchy in Section 10 on developing a relevant and reliable accounting policy entities may consider the requirements in IAS 36, which stipulate that the allocation of goodwill is not be revised unless the entity's operations are restructured in such a way as to alter the composition of one or more CGUs to which goodwill has been allocated.

5.1.1 Identifying synergies

Section 27 requires goodwill to be allocated to CGUs or groups of CGUs that are expected to benefit from the synergies of the combination and only to those CGUs. This is irrespective of whether other assets or liabilities of the acquiree are assigned to those CGUs. [FRS 102.27.25].

Operating synergies fall into two broad groups, those that improve margin (e.g., through cost savings and economies of scale) and those that give an opportunity for future growth (e.g., through the benefits of the combined talent and technology).

Illustration 5-1: Identifying synergies

In all of the following cases, the acquiring entity can identify the synergies and the CGUs that benefits from them. Goodwill will be allocated to the relevant CGUs.

- A mining entity (group) extracts a metal ore that does not have an active market until it has been through a smelting and refining process. The entity considers the CGU to comprise the smelter together with the individual mines. When the entity acquires a mine, the synergies relate to cost savings as the mine's fixed costs are already covered by the existing refining operations. Goodwill is therefore allocated to the CGU comprising the smelter, the existing mines and the newly acquired mine.
- An airline is subject to cost pressures common in the sector. It acquires another operation with similar international operations on the basis that it can reduce its workforce and asset base. It will combine its operational management, including its sales, reporting and human resources functions, into one head office and consolidate all aircraft maintenance in a single site that currently has capacity. These cost savings are the synergies of the business combination and goodwill would therefore be allocated to the CGUs that benefit from these cost savings.
- A global consumer products company purchases a company best-known for razors and razor blades. It has not previously manufactured razors although its 'grooming products' CGU does manufacture other shaving products. The acquirer expects that it will be able to increase sales of its shaving products through association with the target company's razors and through branding. No assets of the acquired business are allocated to the grooming products CGU, but this CGU will benefit from the synergies of the business combination and therefore goodwill from the acquisition will be allocated to it.

The process is further shown in the following Illustration which shows the differences for the purposes of testing impairment between the CGUs to which goodwill is allocated and the identification of CGUs.

Illustration 5-2: Allocating goodwill and identifying CGUs

Entity A operates three different types of fish restaurant: fifteen restaurants, twenty-five pubs that contain restaurants serving fish and forty fish bars. Each is separately branded, although the brand is clearly identified with the Entity A identity, e.g., the restaurant range is branded 'Fish by A'.

Entity A acquired Entity B, which had a similar range of restaurants and bars (thirty in total) although that entity had not applied any branding to the types of restaurants.

Entity A recognised goodwill on acquisition and determined that ten of Entity B's outlets were to be allocated and rebranded to each of its brands.

Each restaurant, pub or fish bar is a separate CGU because it has separately identifiable largely independent cash inflows.

Management notes that it manages the 'A' brand at group (entity) level. This may not be appropriate for testing goodwill as management monitors the business at a level which corresponds to the three individual brands (restaurants, pubs and fish bars) to which it has allocated the acquired outlets.

There are costs that cannot be clearly identified as relating to an individual restaurant, including marketing costs, sourcing of fish for the different brands and bulk purchasing. However, these costs are related to the brands and the branding is evidence that there are synergies at this level. Management concludes that it can allocate goodwill on a non-arbitrary basis and that it is appropriate to allocate goodwill to the three brands in order to test it for impairment. This does not prevent the separate outlets being identified as CGUs as Section 27 allows an apportionment of costs. The independence of cash inflows is decisive.

5.1.2 Measuring the goodwill allocated to CGUs or groups of CGUs

Section 27 does not provide any methods for allocating goodwill. This means that once the acquirer's CGUs or groups of CGUs that benefit from the synergies have been identified, as discussed in 5.1.1 above, the entity must use an appropriate methodology to allocate that goodwill between them.

Illustrations 5-1 and 5-2 provide simple examples of how an entity might allocate goodwill to CGUs:

Illustration 5-3: Allocating goodwill to CGUs - a simple example

On 1 January 20X0 Entity A acquired Entity B. As a consequence of the business combination, Entity B became a wholly owned subsidiary of entity A. Entities A and B each have one CGU. Goodwill of £1,000 arose from the business combination, all of which is attributable to synergies of the combination which are expected to arise in Entity B's CGU only.

For the purposes of impairment testing, £1,000 goodwill is allocated to Entity B's CGU. No goodwill is allocated to Entity A's CGU.

Illustration 5-4: Allocating goodwill to more than one CGU

The facts are the same as Illustration 5-1. However, in this example, 60 per cent of the goodwill is attributable to synergies of the combination that are expected to occur in Entity A's CGU. The rest of the goodwill is attributable to synergies in Entity B's CGU.

For the purposes of impairment testing, £600 goodwill is allocated to Entity A's CGU and £400 goodwill is allocated to Entity B's CGU.

The Illustrations above are fairly simple, and in practice entities would need to determine an allocation methodology in order to arrive at the 60 per cent allocation used in Illustration 5-4.

One allocation method which entities may use is a 'direct' method, which is based on the difference between the fair value of the net assets and the fair value of the acquired business (or portion thereof) to be assigned to the CGUs, thereby calculating goodwill directly by reference to the allocated net assets. However, this method will not allocate any goodwill to a CGU if no assets or liabilities are assigned to the CGU and, arguably, it will allocate too little goodwill to CGUs that benefit disproportionately because of synergies with the acquired business. A method that does not have these shortcomings is a 'with and without' method that requires the entity to calculate the fair value of the CGU or groups of CGUs that are expected to benefit before and after the acquisition; the difference represents the amount of goodwill to be allocated to that reporting unit. This will take account of buyer-specific synergies that relate to a CGU or group of CGUs. These methods are discussed in further detail in the EY publication, International GAAP®, together with illustrative examples.

In practice the allocation of goodwill to individual CGUs or groups of CGUs at the date of acquisition is likely to require significant judgement by management.

Where goodwill cannot be allocated to a single cash-generating unit on a non-arbitrary basis, then for the purpose of impairment testing, it may be possible to allocate it to a group of units. Where goodwill can be allocated on a non-arbitrary basis to a CGU grouping, an appropriate approach to the impairment test may be as follows:

- First, test individual CGUs of the CGU grouping without any allocation of goodwill.
And
- Second, test the group of CGUs to which goodwill has been allocated, including the allocated goodwill.

This approach is shown in Illustration 5-5:

Illustration 5-5: Two step approach for testing goodwill allocated to a group of CGUs

On 1 January 20X0 Group X acquired 100% of the ordinary share capital of Entity Z for £10,000. The identifiable net assets acquired had a fair value of £9,000 and therefore goodwill of £1,000 arose on the acquisition. That goodwill is amortised on a straight-line basis over 10 years. Entity Z comprises three CGUs, A, B and C. Management assesses that whilst it cannot allocate the goodwill arising to individual CGUs, it is attributable to synergies of the combination that are expected to occur in cash generating units A, B and C as a group.

On 31 December 20X2, as impairment indicators are present, Group X performs an impairment test on its goodwill. Group X has assessed that the fair value less costs to sell the CGUs is less than value in use, and therefore recoverable amount must be determined based on VIU. The carrying amount of the net assets in CGUs A, B and C and the associated goodwill and VIU of each CGU is shown in the following table:

Cash generating unit	A	B	C	Goodwill	Total
Carrying value	£175	£245	£210	£70	£700
Value in use	£200	£220	£230		£650

Step 1

Group X first assesses the individual CGUs for impairment, without any allocation of goodwill. This results in an impairment loss of £25 being recognised in respect of CGU B in order to reduce its carrying amount from £245 to its recoverable amount of £220.

Doing so reduces the total carrying amount of the group of CGUs, including goodwill, to £675, as shown below:

Cash generating unit	A	B	C	Goodwill	Total
Carrying value	£175	£220	£210	£70	£675
Value in use	£200	£220	£230		£650

Step 2

The second step involves the entity testing the group of CGUs to which goodwill has been allocated, including the allocated goodwill. As shown above, having booked the impairment of £25 in CGU B, the carrying value of the group of CGUs still exceeds its recoverable amount. Therefore, an impairment loss of £25 is recognised in respect of the goodwill reducing its carrying amount from £70 to £45. The total carrying amount of the group of CGUs including goodwill is reduced to £650.

In some cases, management may conclude that it is not possible to allocate goodwill on anything but an arbitrary basis. Section 27 addresses this issue by setting out a method which allows management to test the associated goodwill for impairment by splitting the entity into two parts. It is important to remember that the alternative method set out in below can only be used when goodwill cannot be allocated to CGUs on a non-arbitrary basis.

The requirement is that, if goodwill cannot be allocated to individual CGUs (or groups of CGUs) on a non-arbitrary basis, then for the purposes of testing goodwill the entity must test the impairment of goodwill by determining the recoverable amount of either:

- The acquired entity in its entirety, if the goodwill relates to an acquired entity that has not been integrated. Integrated means the acquired business has been restructured or dissolved into the reporting entity or other subsidiaries.
Or
- The entire group of entities, excluding any entities that have not been integrated, if the goodwill relates to an entity that has been integrated.

In applying this requirement, an entity will need to separate goodwill into goodwill relating to entities that have been integrated and goodwill relating to entities that have not been integrated. The entity must also follow the requirements for CGUs in this section when calculating the recoverable amount of, and allocating impairment losses and reversals to assets belonging to, the acquired entity or group of entities.

[FRS102.27.27].

It is not clear how often this method will be applied in practice as we would generally expect management to have a reasonable basis of allocating goodwill to individual CGUs or group of CGUs. The application of this is shown in the following Illustration.

Illustration 5-6: Non-allocated goodwill and integrated/non-integrated subsidiaries

Group A comprises a parent company and several subsidiaries. On 1 January 20X0 Group A acquired 100% of the ordinary share capital of Entity Z for £10,000. Goodwill of £1,000 arose in accounting for that business combination. That goodwill is amortised on a straight-line basis over 10 years.

At 31 December 20X0 the total carrying amount of goodwill after amortisation, and any impairment made in prior years, in Group A's consolidated financial statements is £3,900. This £3,900 includes goodwill from a number of business combinations including the acquisition of Entity Z.

On 31 December 20X0, as impairment indicators are present, Group A performs an impairment test on all of its goodwill. Management of Group A considers that its goodwill cannot be allocated to individual CGUs or groups of CGUs on a non-arbitrary basis. As a result, it must apply the alternative method set out in paragraph 27 of Section 27.

Assume that, at 31 December 20X0:

- The recoverable amount of Group A excluding Entity Z is £34,000.
- The recoverable amount of Entity Z is £10,500.
- The recoverable amount of Group A including Entity Z is £44,500.

Scenario 1 - Non-integrated subsidiary - Entity Z is engaged in dissimilar activities from the rest of Group A. Entity Z has therefore not been integrated into Group A.

At 31 December 20X0 the carrying amount of the net assets of Group A and Entity Z were as follows:

	Goodwill	Carrying amount (excluding Goodwill) ⁽¹⁾	Total
	£	£	£
Group A (excluding Z)	⁽²⁾ 3,000	30,000	33,000
Entity Z	⁽³⁾ 900	10,000	10,900
Group A	3,900	40,000	43,900

⁽¹⁾ After depreciation and amortisation

⁽²⁾ Goodwill relating to the acquisition of subsidiaries other than Entity Z.

⁽³⁾ Goodwill relating to the acquisition of Entity Z (after 1 year of amortisation).

Because Entity Z's activities are not integrated into Group A, in accordance with paragraph 27(a) of Section 27, the goodwill arising on Entity Z is tested separately from the goodwill relating to Group A's other business combinations. The impairment loss is calculated as follows:

Entity Z

	£
Carrying amount	10,900
Recoverable amount	10,500
Impairment	400

Group A

No impairment arises as the recoverable amount of Group A (excluding Entity Z) of £34,000 exceeds the carrying amount of Group A (excluding Entity Z) of £33,000.

Total impairment loss for Group A = £400.

Scenario 2 - Subsidiary is integrated - Entity Z has been integrated into Group A.

At 31 December 20X0 the carrying amount of the net assets of Group A are:

	Goodwill	Carrying amount ⁽¹⁾	Total
	£	£	£
Group A	⁽²⁾ 3,900	40,000	43,900

⁽¹⁾ After depreciation and amortisation

⁽²⁾ Goodwill relating to the acquisition of subsidiaries including the acquisition of Entity Z.

The goodwill arising on the acquisition of Entity Z is combined with the rest of the goodwill relating to Group A from the date of acquisition of Entity Z. No impairment arises, because the recoverable amount of the group as a whole of £44,500 exceeds the carrying amount of £43,900 (£3,900 goodwill plus £40,000 other assets at group carrying amounts).

As can be seen from the Illustration above, an incidental effect of this approach may be to reduce the incidence of write-downs, as the higher the level at which the goodwill is tested for impairment, the more likely that an impairment loss can be avoided. Judgement will be required in order to assess whether an arbitrary allocation of goodwill is genuinely all that is possible.

5.2 Impairment of assets and goodwill recognised on acquisition

There are a number of circumstances in which the fair value of assets or goodwill acquired as part of a business combination is measured at a higher amount through recognition of deferred tax or notional tax benefits. This raises the question of how to test for impairment and even whether there is, in fact, a 'day one' impairment in value. In other circumstances, deferred tax assets can or cannot be recognised as part of the fair value exercise and this, too, can affect subsequent impairment tests of the assets and goodwill acquired as part of the business combination.

The requirement of IAS 12 *Income Taxes* to recognise deferred tax on all temporary differences arising on net assets acquired in a business combination can have an impact on the amount of goodwill or negative goodwill recognised. In a business combination, there is no initial recognition exemption for deferred tax and the corresponding accounting entry for a deferred tax asset or liability forms part of the goodwill arising on the business combination.

Where an intangible asset, which was not recognised in the acquiree's financial statements, is acquired in a business combination and the intangible asset's tax base is zero, a deferred tax liability based on the fair value of the intangible asset and the prevailing tax rate will be recognised. [FRS 102.29.11]. The corresponding debit entry will increase goodwill. This then begs the question of how to consider this in the VIU when performing an impairment test on that goodwill and whether there could be an immediate impairment that would need to be recognised.

How we see it

In our view, a day one impairment does not arise purely because of recognised deferred tax liabilities in a business combination. To avoid an immediate impairment, goodwill would be reduced by the nominal versus fair value difference of the deferred tax liability when measuring any impairment. Alternatively, an entity could measure the recoverable amount based on fair value less costs of disposal.

Refer to the EY publication, International GAAP®, where this issue is discussed in detail together with Illustrations to further explain the issue.

5.3 Reallocating goodwill to CGUs

Section 27 does not provide any guidance on when goodwill must be reallocated between CGUs, or how such a reallocation must be performed. However, where an entity or group is restructured in a way that changes the composition of one or more CGUs to which goodwill has been allocated, it would generally seem appropriate to reallocate the goodwill to the units accordingly. Such a reallocation is explicitly required by paragraph 87 of IAS 36, and FRS 102 reporting entities may look to IFRS in developing a relevant and reliable accounting policy. As such, an acceptable method to make that reallocation might be to follow the approach set out in IAS 36, which requires the reallocation to be performed using a relative value approach. This is discussed further in the EY publication, International GAAP®.

5.4 Goodwill on non-controlling interests

As required by Section 19 *Business Combinations and Goodwill*, an acquirer must, at the acquisition date: [FRS 102.19.22]

- Recognise goodwill acquired in a business combination as an asset.
- And

- Initially measure that goodwill at its cost, being the excess of the cost of the business combination over the acquirer's interest in the net amount of the identifiable assets, liabilities and contingent liabilities recognised and measured in accordance with the various requirements for those assets, liabilities and contingent liabilities.

Non-controlling interests (NCI) are measured at the acquisition date at their proportionate share of the acquiree's identifiable net assets, which excludes goodwill. As a result, goodwill attributable to NCI is not recognised in the parent's consolidated financial statements. However, the recoverable amount of a CGU would be calculated for the CGU as a whole. This means that part of the recoverable amount of the CGU determined in accordance with Section 27 is attributable to the non-controlling interest in goodwill.

Therefore, for the purposes of impairment testing of a non-wholly owned CGU with goodwill, the carrying amount of that unit is notionally adjusted, before being compared with its recoverable amount, by grossing up the carrying amount of goodwill allocated to the unit to include the goodwill attributable to the NCI. This notionally adjusted carrying amount is then compared with the recoverable amount of the unit to determine whether the CGU is impaired. [FRS 102.27.26].

How we see it

There is no specific guidance on how the gross up needs to be performed, but we expect the default method will be a simple mechanical gross up based on ownership percentages. This is shown in Illustration 5-4 below. However, in the absence of any guidance, we consider that an entity is not precluded from grossing up goodwill on a basis other than ownership percentages if to do so is reasonable.

Illustration 5-7: Notionally adjusting the carrying amount of goodwill for non-controlling interests

On 30 December 20X0 Entity A acquired 75% of Entity Z. As a consequence of the business combination, Entity Z become a subsidiary of Entity A. Entities A and Z each have one CGU. Goodwill of £750 arose from the business combination, all of which is attributable to synergies of the combination that are expected to occur only in Entity Z's CGU.

In the group's consolidated statement of financial position NCI is measured at their proportionate interest (25%) of the group carrying amount of Entity Z's net assets excluding goodwill.

If Entity Z's CGU was tested for impairment on 31 December 20X0, the £750 goodwill asset allocated to entity Z's CGU would, solely for the purpose of the impairment test at group level, be grossed up by £250 to £1,000 (i.e., it would be notionally increased to include goodwill attributable to the NCI's 25% interest in the CGU).

In the event of an impairment, the entity allocates the impairment loss as usual, first reducing the carrying amount of goodwill allocated to the CGU. However, because only the parent's goodwill is recognised, the impairment loss is apportioned between that attributable to the parent and that attributable to the NCI, with only the former being recognised.

Illustration 6-3 at 6.4 below shows an impairment calculation where goodwill has been notionally adjusted to take account of NCI. Additional guidance and Illustrations on this topic are also provided in the EY publication, International GAAP®.

6 Recognising impairment losses

If the carrying value of an individual asset or of a CGU is equal to or less than its calculated VIU, there is no impairment. On the other hand, an impairment loss must be recognised when the carrying amount of an asset or CGU exceeds its recoverable amount.

There are three scenarios: an impairment loss on an individual asset, an impairment loss on an individual CGU and an impairment loss on a group of CGUs. The last of these occurs where there are corporate assets (see 4.5.2 above) or goodwill (see 5.1.2 above) that have been allocated to a group of CGUs rather than to individual CGUs.

6.1 Recognising an impairment loss on an individual asset

For individual assets, Section 27 states: [FRS 102.27.5, FRS 102.27.6]

Extract from Section 27

5	If, and only if, the recoverable amount of an asset is less than its carrying amount, the entity shall reduce the carrying amount of the asset to its recoverable amount. That reduction is an impairment loss. Paragraphs 27.11 to 27.20A provide guidance on measuring recoverable amount.
6	An entity shall recognise an impairment loss immediately in profit or loss, unless the asset is carried at a revalued amount in accordance with another section of this FRS (for example, in accordance with the revaluation model in Section 17 Property, Plant and Equipment). Any impairment loss of a revalued asset shall be treated as a revaluation decrease in accordance with that other section.

If there is an impairment loss on an asset that has not been revalued, it is recognised in profit or loss. An impairment loss on a revalued asset is first used to reduce the revaluation surplus for that asset. Only when the impairment loss exceeds the amount in the revaluation surplus for that same asset is any further impairment loss recognised in profit or loss. [FRS 102.17.15F, FRS 102.18.18H].

Any amounts written off a fixed asset must be shown as part of the accumulated depreciation or amortisation when an entity discloses the gross carrying amount and the accumulated depreciation or amortisation at the beginning and the end of the period. [FRS 102.17.31(d), FRS 102.18.27(c)]. In the reconciliations required by paragraph 31 of Section 17 and paragraph 27 of Section 18 any impairment recognised or reversed through profit and loss must be shown in a separate line item.

An impairment loss will reduce the depreciable amount of an asset and the revised amount will be depreciated or amortised prospectively over the remaining useful life. However, an entity ought also to review the useful life and residual value of its impaired asset as these may need to be revised. The circumstances that give rise to impairments frequently affect these as well. [FRS 102.27.10].

6.2 Recognising an impairment loss on a CGU

An impairment loss must be recognised for a CGU if, and only if, the recoverable amount of the unit is less than the carrying amount of the unit. The impairment loss must be allocated to reduce the carrying amount of the assets of the unit in the following order: [FRS 102.27.21]

- First, to reduce the carrying amount of any goodwill allocated to the CGU.
And
- Then to the other assets of the unit *pro rata* on the basis of the carrying amount of each asset in the CGU.

This principle is shown in Illustration 6-1 below.

Illustration 6-1: Impairment loss for a CGU with goodwill - a simple example

On 31 December 20X0, Entity T acquires 100% of voting rights in Entity M for £10,000. Entity M has manufacturing plants in three countries, A, B and C, each of which is considered a CGU.

The fair value of identifiable assets in Entity M is £7,000 and goodwill of £3,000 arising on the acquisition has been allocated across the three CGUs A, B and C.

During 20X1, a new government is elected in Country A. It passed legislation that significantly restricts exports of the main product produced by Entity T and its subsidiaries (i.e., Group T). As a result, and for the foreseeable future, Group T's production in Country A will be cut by 40 percent. The significant export restriction and the resulting production decrease require Group T to estimate the recoverable amount of Country A's CGU at the end of 20X1.

Management estimates cash flow forecasts for Country A's operations and determines the CGU's recoverable amount to be £1,360. The carrying amounts of goodwill and identifiable assets of Country A are £800 and £1,833 respectively. The calculation and allocation of the impairment loss for Country A's CGU at the end of 20X1 is as follows:

	Carrying amount	Impairment ⁽¹⁾	Carrying amount after impairment
	£		£
Goodwill	800	(800)	-
Asset 1	500	(129)	371
Asset 2	457	(118)	339
Asset 3	876	(226)	650
Total identifiable assets	1,833	(473)	1,360
Total assets	2,633	(1,273)	1,360

⁽¹⁾ After impairing goodwill in full, the remaining impairment is allocated pro-rata to identifiable assets e.g., for Asset 1 this is $(500 \div 1,833) \times 473 = 129$.

The impairment loss is recorded first against the carrying amount of goodwill (£800) and next, pro-rata against the carrying amount of Country A's identifiable assets (£473).

However, an entity must not reduce the carrying amount of any asset in the CGU below the highest of:
[FRS 102.27.22]

- Its fair value less costs to sell (if determinable)
- Its value in use (if determinable)
- And
- Zero

Any excess amount of the impairment loss that cannot be allocated to an asset because of the restriction above needs to be allocated to the other assets of the unit *pro rata* on the basis of the carrying amount of those other assets. [FRS 102.27.23].

Illustration 6-2 below illustrates how this approach would be applied in practice.

Illustration 6-2: Impairment loss for a CGU with goodwill

An entity's CGU produces a product in a continuous process using three machines i.e., the output of Machine A is the input (raw material) for Machine B, the output of which is the input for Machine C. The output from Machine C is the entity's only marketable product.

After recognising depreciation and amortisation for the year ended 20X0 the carrying amount of the CGU containing Machines A, B and C including goodwill is £72,220. This can be broken down as £13,000 for Machine A, £29,250 for Machine B, £22,750 for Machine C and £7,220 for goodwill.

As there has been a significant downturn in the market for its products, the entity must conduct an impairment test on the associated CGU. The value in use of the CGU is calculated to be £55,000.

With a carrying value of £72,220 and a value in use of £55,000, this gives rise to an impairment loss of £17,220. The impairment loss is first allocated to the goodwill (£7,220) and then to the other assets of the CGU on a *pro rata* basis reflecting the carrying amount of each asset in the CGU.

Management have been able to determine the FVLCS of Machine A at £12,500. They have not been able to determine the FVLCS or VIU of any other individual asset within the CGU.

Absent the information about the FVLCS of Machine A, the remaining impairment loss of £10,000 (total impairment of £17,220 less £7,220 allocated to goodwill) would be allocated to Machines A, B and C on a *pro-rata* basis as follows:

	Carrying amount before impairment	Carrying amount in relation to CGU's carrying amount	Notional impairment allocation	Notional carrying amount after impairment
	£	%	£	£
Machine A	13,000	20	2,000	11,000
Machine B	29,250	45	4,500	24,750
Machine C	22,750	35	3,500	19,250
Total	65,000		10,000	55,000

However, this allocation would reduce the carrying amount of Machine A to £11,000, which is lower than its FVLCS of £12,500. Consequently, in accordance with paragraph 22(a) of Section 27, the impairment loss allocated to Machine A is limited to £500 (i.e., £13,000 carrying amount less £12,500 FVLCS). The remaining impairment loss of £1,500 (i.e., £2,000 less £500 allocated to Machine A) is allocated to Machines B and C on the basis of each machine's carrying amount in relation to the total carrying amount of the two machines as follows:

	Carrying amount after first impairment	Carrying amount in relation to CGU's carrying amount	Second impairment allocation
	£	%	£
Machine B	24,750	56.25	844
Machine C	19,250	43.75	656
Total	44,000		1,500

The total impairment loss allocated to each machine is shown below, together with the carrying amounts of Machines A, B and C immediately after recognising the impairment loss.

	Carrying amount before impairment	First impairment allocation	Second impairment allocation	Total impairment	Carrying amount after impairment
	£	£	£	£	£
Machine A	13,000	500	-	500	12,500
Machine B	29,250	4,500	844	5,344	23,906
Machine C	22,750	3,500	656	4,156	18,594
Goodwill	7,220	7,220	-	7,220	-
Total	72,220	15,720	1,500	17,220	55,000

In the above Illustration, the impairment loss is fully allocated across the assets of the CGU. However, as individual assets cannot be written down below the higher of their FVLCS and their VIU, this may not always be the case, thus an element of the impairment charge may not be recognised.

It must be noted that no impairment loss can be reflected against an individual asset if the CGU to which it belongs has not been impaired, even if its carrying value exceeds its FVLCS. This is explained in the following Illustration:

Illustration 6-3: Individually impaired assets within CGUs

A machine has suffered physical damage but is still working, although not as well as before it was damaged. The machine's FVLCS is less than its carrying amount. The smallest identifiable group of assets that includes the machine and generates cash inflows that are largely independent of the cash inflows from other assets is the production line to which the machine belongs. The recoverable amount of the production line shows that the production line taken as a whole is not impaired.

Scenario 1: No commitment from management to replace the machine

In this scenario, there is no commitment from management to replace the machine, and approved budgets and forecasts do not include cash flows associated with the replacement of it. In such a situation, the recoverable amount of the machine alone cannot be estimated because its VIU is different from its FVLCS (because the entity is going to continue to use it) and can be determined only for the CGU to which it belongs (the production line).

As the production line is not impaired, no impairment loss is recognised for the machine. Nevertheless, the entity needs to reassess the depreciation period or the depreciation method for the machine. Perhaps a shorter depreciation period or a faster depreciation method is required to reflect the expected remaining useful life of the machine or the pattern in which economic benefits are expected to be consumed by the entity.

Scenario 2: Commitment of management to replace the machine and sell it in the near future

In this scenario, management has approved a plan to dispose of the machine in the near future, and the entity's budgets/forecasts reflect this commitment. Cash flows from continuing use of the machine until its disposal are estimated to be negligible. In such a situation, it can be demonstrated that the machine's VIU can be estimated to be close to its FVLCS (because the remaining cash flows associated with it are those arising from its disposal in the near future). Therefore, the recoverable amount of the machine can be determined, and no consideration needs to be given to the CGU (the production line) to which it belongs. As the machine's carrying amount exceeds its FVLCS, an impairment loss is recognised to write it down to FVLCS.

Note that it is assumed that the asset is still useable (otherwise it would not be contributing to the cash flows of the CGU at all and would have to be written off). If the asset is no longer part of the CGU, it will have to be tested for impairment on a stand-alone basis.

6.3 Recognising an impairment loss on a group of CGUs

It is important when applying the requirements above, that impairment testing is conducted in the right order. If there are indicators of impairment in connection with a CGU with which goodwill is associated, i.e., the CGU is part of a CGU group to which goodwill is allocated, the individual CGU must be tested and any necessary impairment loss taken, before the 'CGU group' goodwill is tested for impairment. These impairment losses and consequent reductions in carrying values are treated in exactly the same way as those for individual assets as explained at 6.1 above. An example of the application of this sequencing of impairment testing is provided in Illustration 5-5 above.

6.4 Recognising an impairment loss on a CGU with goodwill and non-controlling interests

As noted at 5.4 above, when impairment testing a non-wholly owned CGU with goodwill, the carrying amount of that unit must be notionally adjusted, before being compared with its recoverable amount, by grossing up the carrying amount of goodwill allocated to the unit to include the goodwill attributable to the NCI. [FRS 102.27.26].

If there is an impairment, the entity allocates the impairment loss as usual, first reducing the carrying amount of goodwill allocated to the CGU. However, because only the parent's goodwill is recognised, the impairment loss is apportioned between that attributable to the parent and that attributable to the NCI, with only the former being recognised.

If any impairment loss remains, it is allocated in the usual way to the other assets of the CGU *pro rata* on the basis of the carrying amount of each asset in the CGU.

These requirements are illustrated in the following Illustration.

Illustration 6-4: A CGU with goodwill and non-controlling interest

Entity X acquires an 80% ownership interest in Entity Y for £1,600 on 1 January 20X0. At that date, Entity Y's identifiable net assets have a fair value of £1,500. Entity X recognises in its consolidated financial statements:

- Goodwill of £400, being the difference between the cost of the business combination of £1,600 and acquirer's interest in the identifiable net assets of Entity Y of £1,200 (being 80% of £1,500).
- Entity Y's identifiable net assets at their fair value of £1,500.

And

- A non-controlling interest of £300, being the remaining 20% of Entity Y's identifiable net assets.

The group considers Entity Y to be a CGU and the full £400 of goodwill is allocated to that CGU. For simplicity, we ignore the amortisation of goodwill in this example.

At the end of 20X0, the carrying amount of Entity Y's identifiable assets (excluding goodwill) has reduced to £1,350 and Entity X determines that the recoverable amount of Entity Y is £1,000.

The carrying amount of Entity Y must be notionally adjusted to include goodwill attributable to the non-controlling interest, before being compared with the recoverable amount of £1,000. Goodwill attributable to Entity X's 80% interest in Entity Y at 31 December 20X0 is £400. Therefore, goodwill notionally attributable to the 20% non-controlling interest in Entity Y at the acquisition date is £100, being $£400 \times 20 \div 80$. Testing Entity Y for impairment at the end of 20X0 gives rise to an impairment loss of £850 calculated as follows:

	Identifiable		
	Goodwill	net assets	Total
	£	£	£
Carrying amount	400	1,350	1,750
Unrecognised non-controlling interest	100	-	100
Notionally adjusted carrying amount	500	1,350	1,850
Recoverable amount			1,000
Impairment loss			850

The impairment loss of £850 is allocated to the assets in the CGU by first reducing the carrying amount of goodwill to zero. Therefore, £500 of the £850 impairment loss for Entity Y is allocated to the goodwill. However, because Entity X only holds a 80% ownership interest in Entity Y, it recognises only 80% of that goodwill impairment loss (i.e., £400). The remaining impairment loss of £350 is recognised by reducing the carrying amounts of Entity Y's identifiable assets, as follows:

	Identifiable		
	Goodwill	net assets	Total
	£	£	£
Carrying amount	400	1,350	1,750
Impairment loss	(400)	(350)	(750)
Carrying amount after impairment loss	-	1,000	1,000

In total, Entity X recognises an impairment loss in the consolidated income statement of £750, of which £400 relates to the impairment of goodwill and £350 relates to the impairment of Entity Y's identifiable assets. Of the impairment loss of £350 relating to Entity Y's identifiable assets, £70 (i.e., 20% thereof) would be attributed to the non-controlling interest.

In this example the same result would have been achieved by just comparing the recoverable amount of £1,000 with the carrying amount of £1,750. However, what if the recoverable amount of the CGU had been greater than the carrying amount of the identifiable net assets prior to recognising the impairment loss?

Assume the same facts as above, except that at the end of 20X0, Entity X determines that the recoverable amount of Entity Y is £1,400. In this case, testing Entity Y for impairment at the end of 20X0 gives rise to an impairment loss of £450 calculated as follows:

	Identifiable		
	Goodwill	net assets	Total
	£	£	£
Carrying amount	400	1,350	1,750
Unrecognised non-controlling interest	100	-	100
Notionally adjusted carrying amount	500	1,350	1,850
Recoverable amount			1,400
Impairment loss			450

All of the impairment loss of £450 is allocated to the goodwill. However, Entity X recognises only 80% of that goodwill impairment loss (i.e., £360). This allocation of the impairment loss results in the following carrying amounts for Entity Y in the financial statements of Entity X at the end of 20X0:

	Identifiable		
	Goodwill	net assets	Total
	£	£	£
Carrying amount	400	1,350	1,750
Impairment loss	(360)	-	(360)
Carrying amount after impairment loss	40	1,350	1,390

Of the impairment loss of £360, none of it is attributable to the non-controlling interest since it all relates to the majority shareholder's goodwill.

In this case the total carrying amount of the identifiable net assets and the goodwill has not been reduced to the recoverable amount of £1,400, but is actually less than the recoverable amount. This is because the recoverable amount of goodwill relating to the non-controlling interest (20% of [£500 - £450]) is not recognised in the consolidated financial statements.

7 Reversal of an impairment loss

An impairment loss recognised for goodwill must not be reversed in a subsequent period. For all assets other than goodwill, if and only if the reasons for the impairment loss have ceased to apply, an impairment loss must be reversed in a subsequent period. [FRS 102.27.29].

An entity must assess at each reporting date whether there is any indication that an impairment loss recognised in prior periods may no longer exist or may have decreased. Indications that an impairment loss may have decreased or may no longer exist are generally the opposite of those discussed at 4.3 above. If any such indication exists, the entity must determine whether all or part of the prior impairment loss must be reversed.

The requirement that an impairment of assets other than goodwill be reversed “if and only if the reasons for the impairment loss have ceased to apply”, [FRS 102.27.29], places a restriction on when impairment losses are reversed. The ‘unwinding’ of the discount in a VIU calculation will increase the present value of future cash flows as they become closer, but Section 27 does not allow the mere passage of time to trigger the reversal of an impairment. In other words, the ‘service potential’ of the asset must genuinely improve if a reversal is to be recognised.

The procedure for making the determination of whether a prior impairment loss can be reversed will depend on whether the prior impairment loss on the asset was based on: [FRS 102.27.29]

- The recoverable amount of that individual asset.
- Or
- The recoverable amount of the cash-generating unit to which the asset belongs.

The process to be followed for the reversal of an impairment on an individual asset is discussed at 7.1 below and for a CGU at 7.2 below.

7.1 Reversal where recoverable amount was estimated for an individual impaired asset

When the prior impairment loss was based on the recoverable amount of the individual impaired asset, the following requirements apply: [FRS 102.27.30]

- (a) The entity must estimate the recoverable amount of the asset at the current reporting date.
- (b) If the estimated recoverable amount of the asset exceeds its carrying amount, the entity must increase the carrying amount to recoverable amount, subject to the limitation described in (c) below. That increase is a reversal of an impairment loss. The entity must recognise the reversal immediately in profit or loss unless the asset is carried at revalued amount in accordance with another section of FRS 102 (for example, the revaluation model in Section 17). Any reversal of an impairment loss of a revalued asset must be treated as a revaluation increase in accordance with the relevant section of FRS 102.
- (c) The reversal of an impairment loss must not increase the carrying amount of the asset above the carrying amount that would have been determined (net of amortisation or depreciation) had no impairment loss been recognised for the asset in prior years. This requirement is illustrated in Illustration 7-1 below.
- (d) After a reversal of an impairment loss is recognised, the entity must adjust the depreciation (amortisation) charge for the asset in future periods to allocate the asset’s revised carrying amount, less its residual value (if any), on a systematic basis over its remaining useful life.

Therefore, if there are indications that a previously recognised impairment loss has disappeared or reduced, it is necessary to determine the recoverable amount (i.e., the higher of FVLCS or VIU) so that the reversal can be quantified.

Illustration 7-1: Impairment reversal for an individually impaired asset

The facts are the same as in Illustration 4-6. During 20X4, it becomes apparent that the cheaper material used by Entity A’s competitor was not fit for purpose and their components need replacement after a year. Sales of Entity A’s product start to return to their previous levels. At 31 December 20X4 the machine has a carrying amount of £58,271. Management has reassessed the future cash flows based on changed circumstances since the end of 20X0 and determined VIU at the end of 20X4 to be £122,072. Management believes FVLCS is less than VIU.

At the end of 20X4, the machine's recoverable amount i.e., its VIU (£122,072) is higher than the machine's carrying amount before the recognition of any reversal of the impairment loss recognised in 20X0 (£58,271). It is an indication that the impairment loss recognised in 20X0 no longer exists or may have decreased.

End of 20X4	Machine
	£
Recoverable amount	122,072
Carrying amount before the reversal of the impairment loss recognised in 20X0	<u>58,271</u>
Difference	<u>63,801</u>

The difference is only an indication of the amount of the reversal because the reversal cannot increase the carrying amount of the asset above the carrying amount that would have been determined had no impairment loss been recognised for the asset in prior years. At 31 December 20X4, the carrying amount that would have been determined, had no impairment loss been recognised for the asset in prior years, is £120,000 (cost £300,000 less accumulated depreciation £180,000). Thus £120,000 is the maximum carrying amount for the asset after the reversal of impairment.

The entity compares the carrying amount at 20X4 if no impairment loss had been recognised, with the carrying amount at 20X4 and determines that the maximum impairment reversal is £61,729.

End of 20X4	Machine
	£
Cost	300,000
Less notional depreciation since acquisition until 20X4	<u>(180,000)</u>
Notional carrying amount at 31/12/20X4 if no impairment loss had been recognised for the asset in 20X0	120,000
Less carrying amount at the year ended 31/12/20X4, before the reversal of the impairment loss recognised in prior reporting periods	<u>(58,271)</u>
Reversal of prior year's impairment loss	<u>61,729</u>

As a consequence of the reversal of part of the impairment loss recognised at 31 December 20X0, the carrying amount of the machine is £120,000 i.e., equal to the carrying amount that would have been determined had no impairment loss been recognised for the asset in prior years. In subsequent periods, assuming that all variables remain the same as at the end of 20X4, the depreciable amount will be £120,000, so the depreciation charge will be £20,000 per annum (£120,000 depreciable amount depreciated over remaining 6 year remaining useful life).

7.2 Reversal when recoverable amount was estimated for a cash-generating unit

When the original impairment loss was based on the recoverable amount of the cash-generating unit to which the asset, including goodwill belongs, the following requirements apply: [FRS 102.27.31]

- (a) The entity must estimate the recoverable amount of that cash-generating unit at the current reporting date.
- (b) If the estimated recoverable amount of the cash-generating unit exceeds its carrying amount, that excess is a reversal of an impairment loss. The entity must allocate the amount of that reversal to the assets of the unit, except for goodwill, *pro rata* with the carrying amounts of those assets subject to the limitation described in (c) below. Those increases in carrying amounts must be treated as reversals of impairment losses and recognised immediately in profit or loss unless the asset is carried at revalued amount in accordance with another section of this FRS (for example, the revaluation model in Section 17). Any reversal of an impairment loss of a revalued asset must be treated as a revaluation increase in accordance with the relevant section of this FRS.
- (c) In allocating a reversal of an impairment loss for a cash-generating unit, the reversal must not increase the carrying amount of any asset above the lower of:
 - (i) Its recoverable amount.
 - And
 - (ii) The carrying amount that would have been determined (net of amortisation or depreciation) had no impairment loss been recognised for the asset in prior periods.

- (d) Any excess amount of the reversal of the impairment loss that cannot be allocated to an asset because of the restriction in (c) above must be allocated *pro rata* to the other assets of the cash-generating unit.
- (e) After a reversal of an impairment loss is recognised, if applicable, the entity must adjust the depreciation (amortisation) charge for each asset in the cash-generating unit in future periods to allocate the asset's revised carrying amount, less its residual value (if any), on a systematic basis over its remaining useful life.

The above requirements are illustrated in the Illustration below.

Illustration 7-2: Impairment reversal for a cash generating unit

The facts are the same as those in Illustration 6-1. In 20X3 the government is still in office in Country A but the business situation is improving. The effects of the export laws on Entity T's production are proving to be less drastic than initially expected by management. As a result, management estimates that production will increase. This favourable change requires Entity T to re-estimate the recoverable amount of the CGU for the net assets of the Country A operations. Management estimates that the recoverable amount of the Country A CGU is now £2,010. Management are unable to estimate the FVLCS or VIU of any individual asset within the CGU. To calculate the reversal of the impairment loss, Entity T compares the recoverable amount and the net carrying amount of Country A's CGU.

	Goodwill	Identifiable assets	Total
	£	£	£
Historical cost	1,000	2,000	3,000
Accumulated amortisation/depreciation ¹	(200)	(167)	(367)
Accumulated impairment loss	(800)	(473)	(1,273)
Carrying amount after impairment loss at 31/12/20X1	-	1,360	1,360
20X2 and 20X3			
Depreciation (2 years) ²	-	(247)	(247)
Carrying amount before impairment reversal	-	1,113	1,113

¹ Goodwill was being amortised over a period of five years ($£1000 \div 5 \text{ years} = £200$), while the identifiable assets were deemed to have a useful life of 12 years ($£2000 \div 12 \text{ years} = £166.70$ depreciation per year).

² Two years of depreciation based on carrying amount of £1,360 at 1/1/20X4 and remaining useful life of 11 years ($(£1,360 \div 11 \text{ years} = £123.6 \text{ per year}) \times 2 \text{ years} = £247$).

Comparing this with the recoverable amount of the CGU:

End of 20X3	CGU A
	£
Recoverable amount	2,010
Carrying amount before the reversal of the impairment loss recognised in 20X1	(1,113)
Difference	897

The difference is only an indication of the amount of the possible reversal because of the restriction in paragraph 31(b) of Section 27, which requires that any impairment reversal can only be applied to assets of the unit other than goodwill, and is subject to the limitation that the reversal cannot increase the carrying amount of any asset above the lower of its recoverable amount and the carrying amount that would have been determined (net of amortisation or depreciation) had no impairment loss been recognised for the asset in prior periods. As can be seen below, this results in the impairment reversal being restricted to £387.

	Identifiable assets
	£
Carrying amount of identifiable assets before impairment reversal	1,113
Carrying amount assuming no prior period impairment ¹	1,500
Impairment reversal applied to assets	387

¹ Identifiable assets continue to be depreciated over their 12 year useful life @£166.70 per year ((£2000 ÷ 12 years = £166.70 per year) × 3 years) = £500. Gives carrying amount of £2000 less depreciation of £500 = £1,500).

Note: if management were able to estimate the recoverable amount for any of the individual identifiable assets then these amounts (if lower) would be used in restricting the impairment reversal.

7.3 Reversals of impairments - revalued assets

If an asset is recognised at a revalued amount under another standard, any reversal of an impairment loss must be treated as a revaluation increase under that other standard. Thus, a reversal of an impairment loss on a revalued asset is credited to other comprehensive income. [FRS 102.27.30, FRS 102.27.31]. However, under the revaluation models in Section 17, Section 18 and Section 20, to the extent that an impairment loss on the same revalued asset was previously recognised as an expense in the income statement, a reversal of that impairment loss is recognised as income in the income statement. [FRS 102.17.15E, FRS 102.18.18G, FRS 102.9.26, FRS 102.20.61].

As with assets carried at cost, after a reversal of an impairment loss is recognised on a revalued asset, the depreciation charge must be adjusted in future periods to allocate the asset's revised carrying amount, less any residual value, on a systematic basis over its remaining useful life. [FRS 102.27.30(d), FRS 102.27.31(e)].

8 Subgroup and separate financial statement issues

The application of Section 27 in group situations is not always straight forward and can give rise to a number of challenging questions. We explore some of these questions in the following sections, including:

- How to identify CGUs and relevant cash flows in the financial statements of an individual entity within a group, the consolidated financial statements of a subgroup, or when impairment testing equity accounted investments or those carried at cost.

And

- Whether the cash flows mentioned above need to be on an arm's length basis, i.e., at fair value, and the extent the restrictions imposed by Section 27 need to be applied.

Note that we have used the term 'individual financial statements' for any stand-alone financial statements that apply FRS 102. The term 'individual financial statements' includes separate financial statements, individual financial statements for subsidiary companies with no investments and, for a subsidiary that does not have any subsidiaries, unconsolidated financial statements whose associates and joint ventures are accounted for using the equity method.

8.1 VIU: intra-group transactions (transfer pricing)

When required by Section 27, an impairment test is performed to:

- Equity accounted investments.
- Investments in subsidiaries, associates or joint ventures carried at cost in the separate financial statements of the parent.

Or

- Assets/CGUs in an individual group company's or subgroup's financial statements.

When performing those impairment tests, the key questions are how to determine the cash flows for intra-group transactions and whether those cash flows need to be on an arm's length basis.

Individual group companies or subgroups may not have truly independent cash flows because of the way in which groups allocate activities between group entities. Transactions between a parent entity and its subsidiaries, between subsidiaries within a group or between subsidiaries/parents and investments in associates and joint ventures can be carried out at terms that differ from an arm's length basis. Entities can benefit from transactions entered into by others that are not reflected in their financial statements, e.g., management and other facilities provided by another group company, or can incur those expenses on their behalf without recharge.

In the context of impairment testing, this means that an entity needs to consider whether the relevant cash flows are those actually generated by the asset (investment in subsidiary, joint venture, associate or individual asset or CGU) or those that it could generate on an arm's length basis. Section 27 gives no clear answer to this question. There are two broad approaches, either:

- The cash flows must take into consideration the manner in which the group has organised its activities and make notional adjustments to reflect arm's length amounts.

Or

- The VIU must be based on the cash flows directly generated under current arrangements, e.g., those received and receivable.

In the UK, we typically expect the former approach to be more common, as it reflects the value of the subsidiary to the parent without an arbitrary overlay of internal transfer pricing.

Calculating the notional adjustments is not always straightforward in practice, as it can be difficult to allocate arm's length prices in intra-group arrangements where there is often a 'bundle' of goods and services and where some transactions do not have commercial equivalents. When making these adjustments, one method that can work in practice is to start from the VIU of the CGU in the consolidated financial statements, of which the subsidiary being tested for impairment is a part, and allocate it to the various subsidiaries. Doing so reflects the arm's length prices of inputs and outputs, and therefore the substitution of transfer prices. This, however, is not a straightforward exercise. It is essential to avoid the following potential pitfalls:

- Taking account of a notional increase in income or VIU to one subsidiary but neglecting to reflect the notional increase in costs or loss of VIU to another.

- Including benefits or costs that cannot be converted into cash flows to the entity. This can be particularly problematic when testing goodwill, including the carrying value of investments when the purchase price reflects goodwill on acquisition. Most would consider this a constraint on the cash flows reflected in this impairment test. This can be revealed if there is a major difference between the subsidiary-based and CGU-based recoverable amount as there could be cash flows or synergies elsewhere in the group that cannot be reasonably attributed to the subsidiary or subgroup in question.
- As explained further in 8.4.2.B below, the entity's investment reflects the net assets of the subsidiary while the CGU reflects the assets and liabilities on a gross basis, so appropriate adjustments to any VIU calculated for the purposes of a CGU at the consolidated level will have to be made in order to arrive at the VIU for an investment.

Whilst in the UK we typically expect entities to apply an approach that involves making notional adjustments to reflect arm's length amounts, it is acknowledged that one may argue against making notional adjustments due to the lack of guidance in Section 27.

How we see it

As Section 27 is silent on how to treat intra-group transactions in a VIU calculation it is important for an entity to disclose sufficient information to enable users of financial statements to understand which approach was applied and how this impacted the entity's financial statements. These disclosures may include a description of the entity's facts and circumstances, how the approach was applied, the basis for selecting an approach and the impact on the financial statements.

8.2 Testing goodwill for impairment in a group company's or subgroup's financial statements

When individual financial statements or the consolidated financial statements of a subgroup include goodwill, impairment testing of assets at the level of that entity or subgroup will be required when indicators are present. Along with the question of whether intra-group cash flows need to be on an arm's length basis for impairment testing purposes (as discussed in 8.1 above), another question which may arise is how to treat synergies arising outside of the reporting entity/subgroup.

If goodwill is being tested in the consolidated financial statements of a subgroup or individual financial statements, it is possible that the synergies that gave rise to the goodwill are in another part of the larger group because the subgroup is part of a CGU containing other subsidiary companies. It is possible that some synergies such as economies of scale cannot be translated into cash flows to the entity or subgroup in question. Although there is no impairment at the level of the CGU in the group consolidated financial statements, it is possible that the entity cannot avoid writing down the goodwill in the individual financial statements or consolidated financial statements of a subgroup statements.

How we see it

In our view, it is not appropriate to consider synergies arising outside the individual financial statements or consolidated financial statements of a subgroup when testing impairment in the individual financial statements or consolidated financial statements of a subgroup unless these synergies are available to market participants and therefore are built into the FVLCS. Whether this impairment loss needs to be recorded in the statement of profit or loss or whether it is appropriate to treat it as an equity transaction in the form of a distribution to the parent is a matter of judgement.

8.3 Intra-group transfer of investments in subsidiaries

A common form of group reorganisation involves the transfer of the entire business of a subsidiary to another subsidiary of the same parent. These transactions often take place at the book value of the transferor's assets rather than at fair value. If the original carrying value was a purchase price that included an element of goodwill, the remaining 'shell', i.e., an entity that no longer has any trade or activities, can have a carrying value in the parent company's statement of financial position in excess of its net worth/recoverable amount. It could be argued that as the subsidiary is now a shell with no possibility in its current state of generating sufficient profits to support its value, a loss must be recognised by the parent in its separate financial statements to reduce its investment in the shell company to its net worth/recoverable amount. However, the transfer of part of the group's business from one controlled entity to another has no substance from the perspective of the group and will have no effect in the consolidated accounts. There has also been no loss overall to the parent as a result of this reorganisation as the loss in net worth/recoverable amount in one subsidiary results in an increase in the net worth/recoverable amount in the other subsidiary.

How we see it

In our view, where part of the group's business has been transferred from one controlled entity to another such that the parent company has suffered no real loss, it is appropriate for the parent to reallocate an appropriate amount of its investment in the transferor company to its investment in the receiving company. The parent company's total investment in its subsidiaries remains the same.

This concept is discussed further, together with an Illustration in Chapter 22 at 5.4.3.A.

It must be noted that there are also legal considerations when an entity sells an asset (or a group of assets and liabilities, for example, a business) to another group company for an amount that is less than its fair value (including for nil consideration). In such instances, the entity is making a transfer at undervalue because it is not receiving an arm's length consideration. Therefore, the entity must consider whether it is making a distribution under Part 23 of the CA 2006 and whether it has sufficient distributable reserves to do so. Distributions in kind (meaning distributions arising on the sale or transfer of a non-cash asset) are specifically addressed in s845 and s846 of Part 23. This is particularly relevant when the transaction involves a transfer of value from a group entity to its direct or indirect parent/owner or to a fellow subsidiary. An example of a transfer of value by the transferor (the selling entity) is a hive up or hive across in which the consideration received by the entity is less than the fair value of the trade and assets sold. An example of a transfer of value by the transferee (the purchasing entity) is a hive down or hive across in which the consideration paid by the entity exceeds the fair value of the trade and assets purchased. This issue is also discussed further in Chapter 22 at 5.4.1.

8.4 Investments in subsidiaries, associates and joint ventures

Investments in subsidiaries, associates and joint ventures carried at cost in separate financial statements of the parent and equity accounted investments are within the scope of Section 27.

However, Section 9 also permits entities to account for investments in subsidiaries, associates and joint ventures in separate financial statements at fair value with changes in fair value recognised in other comprehensive income (or profit or loss) in accordance with Section 27 or at fair value with changes in fair value recognised in profit or loss. [FRS 102.9.26].

The recoverable amount for investments carried at cost is the higher of FVLCS and VIU. Specific questions around FVLCS are dealt with in 8.4.1 below. Challenges in respect of VIU for investments carried at cost are dealt with in 8.4.2 below.

It is important to note that testing an investment in an associate or joint venture carried under the equity method using Section 14 in group financial statements cannot always provide assurance about the recoverability of the cost of shares in the investor's separate financial statements, if they are carried at cost. Accounting for the group's share of losses can take the equity interest below cost and an impairment test could reveal no need for an impairment loss in the consolidated financial statements. This does not necessarily provide any assurance about the (higher) carrying value of the shares in the separate financial statements.

8.4.1 Fair value less costs to sell (FVLCS) for investments in subsidiaries, associates and joint ventures

In order to establish FVLCS an entity must apply Section 2A's requirements as outlined in 4.7 above and described in detail in Chapter 10.

Section 2A states that the best evidence of fair value is an unadjusted quoted price for an identical or comparable asset or liability in an active market at the measurement date. As such, if an entity holds a position in a single asset or liability that is traded in an active market, one would typically expect fair value to be measured at that price, without adjustment. Under IFRS 13, there is an explicit requirement to measure such an asset or liability based on the product of the quoted price for the individual asset or liability and the quantity held ($P \times Q$).

However, when an entity holds an investment in a subsidiary, joint venture or associate the question arises as to what the unit of account is, the individual shares or the investment as a whole, and whether it would be appropriate to include a control premium when determining fair value provided that market participants take this into consideration when pricing the asset. This has led to some diversity of views amongst IFRS reporters as to whether such an investment must be measured at $P \times Q$, or whether, instead, the fair value must include an adjustment (e.g., a control premium). FRS 102 requires that the best evidence of fair value is a quoted price for an identical asset in an active market. This is similar to that in IFRS 13, and therefore similar questions may arise under FRS 102. However, FRS 102 does not reproduce the additional guidance contained in IFRS 13 that the fair value of a portfolio of financial instruments must be measured as $P \times Q$.

How we see it

Given that PxQ guidance is not contained in FRS 102, in our view, the use of PxQ is not required unless an entity uses the requirements and guidance of adopted IFRS in setting an accounting policy as permitted by paragraph 10.6 of FRS 102. This matter is discussed further in Chapter 10 at 4.10.1 and the EY publication, International GAAP®.

Unlike investments with quoted prices, discussed above, there are less issues if FVLCS is used to determine the recoverable amount of an asset that does not have a quoted price in an active market and is either:

- An investment in a subsidiary, joint venture or associate.

Or

- A CGU comprising the investment's underlying assets.

Using FVLCS can avoid some of the complexities of determining appropriate cash flows related to transfer pricing and other intra-group transaction issues, described in 8.1 above and 8.4.2 below.

8.4.2 VIU for investments in subsidiaries, associates and joint ventures

Unlike most other assets, an investment in a subsidiary, joint venture or associate can be viewed as either:

- An individual asset that can generate income, e.g., in the form of dividends.

Or

- As an asset that represents the underlying assets and liabilities that are under the control of the subsidiary, joint venture or the associate.

Reflecting these two ways in which an investment can be viewed, that there are broadly two approaches in testing for impairment:

- To focus on the investment as a single asset, and estimate its VIU based on the cash flows the parent receives (dividends and ultimate disposal proceeds).

Or

- To focus on the underlying assets of the investment and estimate its VIU based on the cash flows generated by these assets through the investee's operations (and if applicable, the ultimate disposal of the investee).

Using appropriate assumptions, both methods give the same result. These two approaches are considered at 8.4.2.A and 8.4.2.B below respectively. Whichever view is taken, the entity needs to ensure that the cash flows are appropriate (see 8.1 above in respect of considerations around intra-group transfer pricing). We note that, when testing subsidiaries for impairment in particular, the second approach is the more common in practice.

It is important to note that, whether an entity calculates VIU using its share of the present value of estimated cash flows of the underlying assets or the dividends expected to be received, it is necessary to adjust them to reflect Section 27 restrictions, e.g., those in respect of improvements, enhancements and restructuring (see 4.8.2 above), growth (see 4.8.1 above) and discount rates (see 4.8.12 above). It can be a practical challenge to obtain sufficiently detailed information to make such adjustments for investments in entities that are not controlled by the parent, in which case it is possible that the entity needs to use FVLCS to establish the recoverable amount.

8.4.2.A VIU of investments in subsidiaries, associates and joint ventures using dividend discount models

One approach to determining the VIU of the equity accounted interest is to base it on the present value of the estimated future cash flows expected to arise from dividends to be received from the investment. This type of approach is referred to as a dividend discount model (DDM). DDMs are financial models frequently used by financial institutions to value shares at the discounted value of future dividend payments. These models value a company on the basis of future cash flows that are expected to be distributed to the shareholders in compliance with the capital requirements provided by law, discounted at a rate expressing the cost and risk of capital. By analogy this approach can be used to calculate the VIU for investments in subsidiaries, associates and joint ventures carried at cost in the separate financial statements of a parent and for equity accounted investments.

It must be noted that in order to use a DDM for calculating VIU, Section 27's requirements (including the various restrictions referred to at 8.4.2 above) must be reflected in the future dividends calculated for use in the model.

8.4.2.B VIU of investments in subsidiaries, associates and joint ventures based on cash flows generated by underlying assets

When testing investments in subsidiaries, associates and joint ventures based on cash flows generated by underlying assets, entities need to ensure that the cash flows are appropriate (see 8.1 above in respect of intra-group transfer pricing) and that the restrictions of Section 27 are appropriately applied (see 8.4.2 above).

If an entity is testing its investments in subsidiaries, associates and joint ventures for impairment can demonstrate that the investment contains one or more CGUs in their entirety, then it can in some circumstances be able to use the results of the group impairment tests of the underlying CGUs to test the investment for impairment. If the aggregate VIU (or FVLCS) of the CGU(s) is not less than the carrying value of the investment, this can be an indication that the investment is not impaired.

However, it is critical to note that the entity's investment reflects the net assets of the subsidiary, associates or joint venture while the CGU reflects the assets and liabilities on a gross basis, so appropriate adjustments will have to be made. For example, any VIU calculated for a CGU is unlikely to include any adjustments for debt held by that CGU, because liabilities are typically excluded from the carrying value of a CGU. In contrast, the carrying value of an investment inherently includes any debt the entity holds and therefore, in order to achieve consistency, the VIU must also be adjusted for that debt. There may also be other balances such as financial assets, working capital, pensions and other provisions which warrant closer attention. In addition, when it comes to investments in associates and joint ventures, an investor with a minority holding will need to assess the impact of holding a minority stake without control.

Illustration 8-1 below is a simple example illustrating the requirement to make appropriate adjustments where group level testing has been used as a start point:

Illustration 8-1: Impairment testing of investment in subsidiary

Entity A is a parent company with three wholly owned subsidiaries: Entity X, Entity Y and Entity Z. The three subsidiaries operate autonomously and do not transact with one another. Entity A prepares consolidated financial statements, and the three subsidiaries each represent separate CGUs for the purposes of its group level impairment testing.

At 31 December 20X0, there are indicators of impairment of CGU X, and therefore the group calculates the VIU of the CGU*. CGU X has an external loan whose carrying value is £750 (with £750 also being materially consistent with the loan's fair value). However, in accordance with the requirements of Section 27, this loan is excluded from the carrying value of CGU X, and financing cash flows are excluded from the VIU calculation when testing the CGU at group. Based on the group level impairment testing, the VIU of CGU X is determined to be £1,500.

For the purposes of Entity A's parent company financial statements, it notes that the impairment indicator relating to CGU X is also an impairment indicator in respect of its investment in Entity X. The carrying value of Entity A's investment in Entity X is £1,000.

In this case, Entity A can leverage the group level impairment testing, because the investment contains the tested CGU in its entirety. However, the cash flows of CGU X cannot all be extracted by Entity A as dividends because Entity X also has a loan. Therefore, the present value of expected cash flows from Entity X's cash flows must be reduced by the fair value of outstanding debt, in order to determine the net amount available to Entity A as an equity investor. Therefore, the outcome of Entity A's impairment test on its equity investment in Entity X is as follows:

	£
Value-in-use of CGU X	1,500
Fair value of debt held by Entity X	(750)
Recoverable amount of Entity X	<u>750</u>
Carrying value of Entity X before impairment	<u>1,000</u>
Impairment loss	<u>(250)</u>

In this example such adjustments would also be required if the debt held by Entity X was payable to its parent or to a fellow subsidiary, as the same principle applies - not all cash flows generated by Entity X are available to Entity A as equity holder.

If the debt was payable to Entity A, Entity A would also need to perform a separate impairment test in respect of the receivable due from Entity X.

* For simplicity in this example, it is assumed that at the year end, working capital for CGU X is insignificant and that in addition, the CGU does not have other complexities such as pensions or provisions to consider.

The example above is relatively simplistic and it is not always so straightforward in practice. There are particular problems if the asset (the investment) and the underlying CGU are not the same.

8.5 Impairment of assets of a subsidiary which is part of a larger CGU

The identification of a group's CGUs may not be consistent with the legal structure of the group, such that the activities of an individual subsidiary may form part of a larger CGU or group of CGUs in the group. When this is the case the cash flows attributable to an individual subsidiary may appear not to support the carrying value of that entity's assets, while from a group perspective no impairment is identified as the subsidiary forms part of a larger profitable CGU or group of CGUs.

An example of this would be where TopCo A has a single direct investment in MidCo B. MidCo B owns OpCo's D to F. In the group accounts, D, E and F form a group of CGUs to which goodwill has been allocated, and the group of CGUs as a whole is highly profitable. However, despite operating on an arm's length basis, the legal entity, OpCo F, is loss making. As a result, the cash flows for OpCo F may not support the carrying value of MidCo B's investment in F, and an impairment may need to be recognised by MidCo. However, from the perspective of the consolidated accounts, the group of CGUs is profitable and therefore no impairment of goodwill is required at that level. In addition, in TopCo's separate financial statements there may be no impairment of its investment in MidCo, as the positive cash flows which can be derived from OpCo's D and E may be sufficient to recover the carrying value of that investment.

However, it must be noted that although goodwill is not impaired in the consolidated accounts in this scenario, if OpCo F corresponds to a CGU in the group accounts, the impairment of MidCo's investment in F may be an indicator of impairment of CGU F itself, which would need to be considered for the purposes of the consolidated accounts (see 6.3 above).

This illustrates that, as a result of the different levels at which impairment testing is performed, impairment losses in individual subsidiaries' financial statements may not follow the losses recognised in the consolidated financial statements.

Even if the CGU and investment coincide, it is possible that the shares have been acquired in a business combination. It is quite possible that the synergies that gave rise to goodwill on acquisition are in another part of the group not controlled by the intermediate parent in question. In such a case it could be that an entity is not able to use the result of the group impairment test and so would have to calculate the recoverable amount of the investment.

9 Disclosures

An entity must disclose the following for each class of assets indicated in the paragraph below:

[FRS 102.27.32]

- The amount of impairment losses recognised in profit or loss during the period and the line item(s) in the statement of comprehensive income (or in the income statement, if presented) in which those impairment losses are included.
- And
- The amount of reversals of impairment losses recognised in profit or loss during the period and the line item(s) in the statement of comprehensive income (or in the income statement, if presented) in which those impairment losses are reversed.

The information above is required for each of the following classes of asset: [FRS 102.27.33]

- Inventories
- Property, plant and equipment (including investment property accounted for by the cost method)
- Right-of-use assets
- Goodwill
- Intangible assets other than goodwill
- Investments in associates
- And
- Investments in joint ventures

An entity must also disclose a description of the events and circumstances that led to the recognition or reversal of the impairment loss. [FRS 102.27.33A].

9.1 Companies Act disclosure requirements

Schedule 1 of the *Large and Medium-sized Companies and Groups (Accounts and Reports) Regulations 2008*, (SI 2008/410) (the Regulations), requires provisions for diminution in value to be made in respect of any fixed asset if the reduction in value is expected to be permanent. Where the reasons for the provision have ceased to apply, the provision must be written back to the extent that it is no longer necessary. In either case, amounts not shown in the profit and loss account must be disclosed in the notes to the accounts. [1 Sch 19].

Accounts prepared under FRS 102 are 'Companies Act accounts' (as opposed to 'IAS accounts') under Company Law, and are subject to all of the requirements set out in the Regulations. Entities subject to Schedule 1 to the Regulations have a choice of formats for the presentation of their financial statements. These choices are as follows:

- Apply one of the two statutory formats set out in Section B of Part 1 of Schedule 1 to the Regulations.
- Or
- Applying paragraph 1A(2) of Schedule 1 to the Regulations and use the 'adapted' formats as set out in Section 5 - *Statement of Comprehensive Income and Income Statement*. 'Adapted' formats are similar to IAS 1 formats used by IFRS reporters.

Under Format 2 of Schedule 1 to the Regulations, where expenses are classified by nature, there is a specific line item, 7(a), headed 'Depreciation and other amounts written off tangible and intangible fixed assets' where impairment losses must be shown. Under Format 1, where expenses are classified by function, impairment losses are generally shown in the same category of expense as depreciation of the relevant asset, with the amount of depreciation and other amounts written off tangible and intangible assets disclosed in a note to the accounts.

Under the adapted format, an entity must present an analysis of expenses, either in the income statement or the notes, equivalent to what would have been presented had the profit and loss account format not been adapted. [FRS 102.5.5B].

Under both the statutory and adapted formats, FRS 102 requires entities to present additional line items, headings and subtotals in the income statement when such presentation is relevant to an understanding of the entity's financial performance. [FRS 102.5.9]. Therefore, in practice, we would not anticipate differences in the level of information given about impairment charges whether entities apply the statutory or adapted formats for the income statement.

The Regulations also require certain information to supplement the balance sheet. In respect of fixed assets, this includes:

- The cumulative amount of provisions for depreciation or diminution in value as at the beginning of the financial year and at the balance sheet date.
- The amount of any such provisions made in respect of the financial year.
- The amount of any adjustments made in respect of any such provisions during that year in consequence of the disposal of any assets.

And

- The amount of any other adjustments made in respect of any such provisions during that year.

[1 Sch 51(3)].

The statutory disclosures overlap with disclosures in FRS 102 of depreciation, amortisation and impairment charges (see above at 8, Chapter 20 at 3.10 and Chapter 21 at 3.4.2). *[FRS 102.17.31, FRS 102.18.27(e), FRS 102.27.32, FRS 102.27.33].*

9 Summary of GAAP differences

The key differences between FRS 102 and IFRS in accounting for impairments are set out below.

	FRS 102	IFRS
Timing of impairment tests	Impairment testing required only when indicators of impairment exist.	Mandatory annual testing for goodwill and indefinite lived intangibles.
Assets held for service potential	Possible to use depreciated replacement cost as a measurement model.	No specific guidance
Guidance on inputs to VIU calculations	Guidance on inputs to VIU calculations is provided but is less extensive than IFRS. Section 27 does not give any further guidance (beyond providing a definition) on the identification of CGUs for impairment testing purposes.	Guidance provided on identifying CGUs, allocating goodwill to those CGUs, estimating cash flows and discount rates and treatment of corporate assets.
Allocation of goodwill to CGUs for purposes of impairment testing	Allocated to each of the acquirer's CGUs that are expected to benefit from the acquisition, whether or not the acquiree's other assets or liabilities are allocated to those units. If unable to allocate to CGUs non-arbitrarily, can test based on simplified split between integrated and non-integrated entities.	Allocated to each of the acquirer's CGUs that are expected to benefit from the acquisition, whether or not the acquiree's other assets or liabilities are allocated to those units. Each CGU or group of CGUs to which goodwill is allocated must represent the lowest level at which goodwill is monitored and cannot be larger than an IFRS 8 <i>Operating Segments</i> operating segment before aggregation.
Disclosures	Limited to amount of impairment losses recognised/reversed and circumstances leading to it.	Extensive additional disclosures required in respect of goodwill/indefinite lived intangibles even where no impairment recognised - includes amounts of goodwill/indefinite lived intangibles allocated to particular CGUs, key assumptions, period over which cash flows projected, growth rates and discount rates applied and further detail where a reasonably possible change in a key assumption could give rise to an impairment.

Appendix A - Defined terms

Extract from FRS 102

Appendix I

Glossary

carrying amount	The amount at which an asset or liability is recognised in the statement of financial position.
cash-generating unit	The smallest identifiable group of assets that generates cash inflows that are largely independent of the cash inflows from other assets or groups of assets.
depreciated replacement cost	The most economic cost required for the entity to replace the service potential of an asset (including the amount that the entity will receive from its disposal at the end of its useful life) at the reporting date.
fair value less costs to sell	The amount obtainable from the sale of an asset or cash-generating unit in an arm's length transaction between knowledgeable willing parties, less the costs of disposal.
impairment loss	The amount by which the carrying amount of an asset exceeds: (a) in the case of inventories, its selling price less costs to complete and sell; or (b) in the case of other assets, its recoverable amount.
recoverable amount	The higher of an asset's (or cash-generating unit's) fair value less costs to sell and its value in use.
service potential	The capacity to provide services that contribute to achieving an entity's objectives. Service potential enables an entity to achieve its objectives without necessarily generating net cash inflows.
value in use	The present value of the future cash flows expected to be derived from an asset or cash-generating unit.
value in use (in respect of assets held for their service potential)	When the future economic benefits of an asset are not primarily dependent on the asset's ability to generate net cash inflows, value in use (in respect of assets held for their service potential) is the present value to the entity of the asset's remaining service potential if it continues to be used, plus the net amount that the entity will receive from its disposal at the end of its useful life.

Overview

Employee benefits typically form a very significant part of any entity's costs and can take many varied forms. These are covered in two separate sections of FRS 102, Section 28 *Employee Benefits* ('Section 28') and Section 26 *Share-based Payment* ('Section 26'). Section 28 deals with all employee benefits not in the scope of Section 26.

Many issues in accounting for employee benefits can be straight forward, such as the allocation of wages paid to an accounting period. In contrast, accounting for the costs of post-employment and other long-term benefits in the financial statements of employers presents a more difficult challenge. The amounts involved are large, the timescale is long, the estimation process is complex and involves many areas of uncertainty for which assumptions must be made. Section 28 includes limited guidance on the recognition of pension surpluses, which further increases the level of judgements preparers of financial statements must make in determining appropriate accounting for employee benefits.

What you need to know

- The general recognition principle for all employee benefits, including a post-employment benefit plan, is to recognise an expense (unless another section of FRS 102 requires it to be recognised as the cost of an asset) alongside a corresponding asset or liability. The expense is recognised when the employees have become entitled to the benefit as a result of services rendered to the entity.
- Post-employment benefit plans are classified as either defined contribution plans or defined benefit plans, depending on their principal terms and conditions.
- The application of Section 28, particularly for defined benefit plans, can be complicated and require significant estimates (i.e., actuarial assumptions) to be made.
- Section 28 requires the cost of a defined benefit plan to be recognised as follows:
 - The change in the net defined benefit liability arising from employee service rendered during the period in profit or loss.
 - Net interest on the defined benefit liability during the reporting period in profit or loss.
 - The cost of plan introductions, benefit changes, curtailments and settlements in profit or loss. And
 - Remeasurement of the net defined liability in other comprehensive income.
- Judgements might need to be made around various requirements of the standard, such as whether the entity is able to recover a surplus, and the date of modification or settlement of a plan.
- In group plans (defined benefit plan that shares risks between entities under common control), an individual entity must recognise their share of the scheme measured as either their contractually agreed share or their contribution payable.

1 Introduction

This chapter deals with Section 28. In March 2018 and September 2024, the FRC published amendments to FRS 102 which resulted in minor changes to this section. In May 2019, the FRC published an amendment to FRS 102 specifically related to multi-employer defined benefit plans setting out clear requirements to address the transition from defined contribution accounting to defined benefit accounting for a multi-employer defined benefit plan. All of these amendments are included in this chapter.

2 Comparison between Section 28 and IFRS

The key differences between Section 28 of FRS 102 and IAS 19 *Employee Benefits* are detailed below.

2.1 Past service costs

IAS 19 defines past service cost as “the change in the present value of the defined benefit obligation for employee service in prior periods, resulting from a plan amendment (the introduction or withdrawal of, or changes to, a defined benefit plan) or curtailment (a significant reduction by the entity in the number of employees covered by a plan).” [IAS 19.8]. FRS 102 does not use the term past service cost, but still requires the cost of plan introductions, benefit changes, curtailments and settlements to be recorded in profit or loss. [FRS 102.28.23(c)]. As both FRS 102 and IAS 19 require a charge to the profit and loss account the only difference is concerned with terminology within disclosures (see 4.1.4 below).

2.2 Recognition of a defined benefit plan surplus

FRS 102 requires that an entity must recognise a defined benefit plan surplus as an asset only to the extent that it is able to recover the surplus either through reduced contributions in the future or through refunds from the plan. [FRS 102.28.22]. FRS 102 does not elaborate on how these reduced future contributions or refunds are quantified.

The lack of guidance provided by FRS 102 will lead to management being required to make a judgement on the amount of a defined benefit pension surplus to be recognised. When making this judgement, FRS 102 states that management may consider the requirements and guidance in adopted IFRS dealing with similar or related issues, as discussed in Chapter 9 at 3.1. [FRS 102.10.6]. The requirements of IFRIC 14 *IAS 19 – The Limited on a Defined Benefit Asset, Minimum Funding Requirements and their Interaction* are discussed in further detail at 3.5.7 below. The treatment of pension surpluses was also dealt with under previous UK GAAP which had a strict requirement that the amount to be recovered from refunds of the scheme must only reflect those that have been agreed by the pension scheme trustees at the balance sheet date, [FRS 17.42]. This has led to a diversity in practice under FRS 102.

2.3 Liability for deficit funding requirements

For entities already recognising assets or liabilities for defined benefit plans in accordance with FRS 102, no additional liabilities are recognised in respect of an agreement with the defined benefit plan to fund a deficit (such as a schedule of contributions). This is a difference with IFRS which requires a liability to be recognised where deficit funding contributions are not recoverable in the future. This is discussed further at 3.5.7 below.

The requirements of IFRIC 14 are discussed where relevant in the remaining sections of this chapter.

2.4 Attributing benefit to years of service

IAS 19 requires benefits to be attributed to the periods in which the obligation to provide post-employment benefits arises. In applying the projected unit credit method, IAS 19 normally requires benefits to be attributed to periods of service under the plan's benefit formula, however if an employee's service in later years will lead to a materially higher level of benefit the benefit must be attributed on a straight-line basis from: [IAS 19.70]

- The date when service by the employee first leads to benefits under the plan.
Until
- The date when further service by the employee will lead to no material amount of further benefits under the plan, other than from further salary increases.

FRS 102 also notes that the present value of an entity's obligations under defined benefit plans must include the effects of benefit formulas that give employees greater benefits for later years of service, [FRS 102.28.16], but does not state that this must be attributed on a straight-line basis. Given the GAAP hierarchy in Section 10 *Accounting Policies, Estimates and Errors* we would expect users to follow the principles in IAS 19, but they are not required to do so.

2.5 Calculation of service cost and net interest following a plan amendment, curtailment or settlement

In February 2018, amendments were issued to IAS 19 which address the accounting when a plan amendment, curtailment or settlement occurs during the reporting period. This guidance has not been replicated in FRS 102. However, given that the standard is silent in this area users of FRS 102 may, under the GAAP hierarchy, turn to IAS 19 for further guidance.

IAS 19 clarifies that the current service cost in the period following a plan amendment, curtailment or settlement must be calculated using the actuarial assumptions used to measure the net defined benefit liability (asset). [IAS 19.122A]. The net interest following a plan amendment or curtailment must be measured using the net defined benefit liability/(asset) after the plan amendment or curtailment and the discount rate used to remeasure the net defined liability/(asset). [IAS 19.123A].

Accounting for plan amendments, curtailments and settlements is discussed further at 3.5.6 below.

2.6 Presentation

Part 1 of Schedule 1 to the Regulations provides a choice of either two statutory formats or the adapted formats for the balance sheet. This is discussed further in Chapter 6 at 3.

The statutory formats of *the Large and Medium-sized companies and Groups (Accounts and Reports) Regulations 2008* (SI 2008/410) ('The Regulations'), presentation under FRS 102 differ from that required by IAS 1 *Presentation of Financial Statements*. The Regulations show pension deficits as the first line item within provisions, and pension surpluses are presented in the same place as pension deficits (i.e., after accruals and deferred income) under format 1 of the Regulations, but after prepayments and accrued income under format 2 of the Regulations. FRS 17 *Retirement benefits* required defined benefit pension assets or liabilities to be presented after accruals and deferred income, but before capital and reserves. [FRS 17.47]. This presentation was based on an interpretation of law. [FRS 17 Appendix II.6]. As a result, there is likely to be divergence in practice in the presentation of defined benefit pension surpluses and deficits under FRS 102. This is further discussed at 3.5.9 below.

2.7 Accounting for multi-employer defined benefit plans when sufficient information becomes available

A multi-employer plan must be classified as either a defined contribution plan or a defined benefit plan on the basis of the terms of the plan, including any constructive obligation. [FRS 102.28.11] However, if sufficient information is not available to use defined benefit accounting for a multi-employer plan that is a defined benefit plan, the entity must account for the plan as if it were a defined contribution plan. [FRS 102.28.11A]. Subsequently, if sufficient information becomes available to use defined benefit accounting, then an entity must apply defined benefit accounting from the date that is the later of the first day for which sufficient information to use defined benefit accounting becomes available, and the first day of the current reporting period (comparative information is not restated). [FRS 102.28.11B(a), FRS 102.28.11C]. The difference between the carrying value of any liability recognised under the previous defined contribution accounting and the net defined benefit liability or surplus, must be recognised as a separate item in other comprehensive income. [FRS 102.28.11B(b)].

IAS 19 does not address the accounting treatment required if sufficient information becomes available for a multi-employer plan which has previously been accounted for as a defined contribution scheme. Therefore, given the lack of guidance, there are two possible approaches that entities may take to account for this:

- Record an immediate charge/credit to profit and loss equal to the deficit/surplus.
- Or
- Record an actuarial gain or loss in other comprehensive income.

3 The requirements of Section 28 for employee benefits

3.1 Scope and general recognition principles

Section 28 is not restricted to pensions and other post-employment benefits, but addresses all forms of consideration given by an employer in exchange for services rendered by employees or for the termination of employment (except for share-based payment transactions which are dealt with by Section 26 and discussed in Chapter 28 of this publication). [FRS 102.28.1]. In particular Section 28 covers:

- Short-term employee benefits, which are employee benefits (other than termination benefits) that are expected to be settled wholly before twelve months after the end of the reporting period in which the employees render the related service. The accounting for these is discussed at 3.2 below.
- Post-employment benefits, which are employee benefits (other than termination benefits and short-term employee benefits) that are payable after the completion of employment. The accounting for these is discussed at 3.3 to 3.6 and 3.9 below.
- Other long-term employee benefits, which are all employee benefits other than short-term employee benefits, post-employment benefits and termination benefits. The accounting for these is discussed at 3.7 below.
- Termination benefits, which are employee benefits provided in exchange for the termination of an employee's employment as a result of either:
 - the entity's decision to terminate an employee's employment before the normal retirement date. Or
 - an employee's decision to accept voluntary redundancy in exchange for those benefits. The accounting for these is discussed at 3.8 below.

The standard does not define the term 'employee'. Similarly, the Companies Act 2006 does not define the term 'employees' in a specific way, only stating that the calculation of the average number of employees would include the number of persons employed under contracts of service by the company. [s382(6)(a)]. Reference to contracts of service would exclude self-employed people such as contractors or consultants. (See Chapter 6 and 7.7). In looking for guidance over what is meant by 'employee' users may turn to IAS 19. Despite there being no direct definition of 'employee' in IAS 19 either, the standard does state that, "An employee may provide services to an entity on a full-time, part-time, permanent, casual or temporary basis" and that employees include "directors and other management personnel". [IAS 19.7]. It is clear from these references that the term is intended to apply widely.

How we see it

Although neither the Companies Act 2006, FRS 102 nor IAS 19 defines the term 'employee' we believe it applies to anyone who is in substance an employee which will be a matter of judgement considering all the facts and circumstances.

Careful consideration is required to determine which section applies in specific circumstances, and it is possible that a single arrangement could have elements of both an employee benefit and a share-based payment. An example of benefits which could be under the scope of either Section 28 or Section 26 is a cash bonus dependent on share performance (see Chapter 28 at 3.4.4). Cash settled awards based on an entity's enterprise value would be under the scope of Section 28 if the enterprise value used in the calculation did not represent the fair value of the entity's equity instruments (see Chapter 28 at 3.4.5). Cash bonuses could also be within the scope of both Section 28 or Section 26 if they require a mandatory investment of part of the bonus into shares (see Chapter 28 at 16.1). The cash element paid would fall within the scope of Section 28, whereas any bonus which results in a required or discretionary investment in shares would come under the scope of Section 26. Each element of a bonus would be under the scope of one of these sections, but not both sections.

As discussed in Chapter 22 at 2.5.3, contingent payments to selling shareholders in a business combination may be accounted for as remuneration dependent on the nature of the arrangement. Where accounted for as remuneration they will fall under the scope of Section 28 (or Section 26 if they represent a share-based payment transaction).

This chapter addresses only the accounting by employers and excludes from its scope reporting by employee benefit plans themselves. These are dealt with in FRS 102 Section 34 *Specialised Activities*. [FRS 102.34.34]. The specialist nature of reporting by employee benefit plans puts them beyond the scope of this book.

The general recognition principle for all employee benefits is that an entity must recognise the cost of employee benefits to which its employees have become entitled as a result of service rendered to the entity during the period:

- As a liability, after deducting amounts that have been paid either directly to the employees or as a contribution to an employee benefit fund. If the amount paid exceeds the obligation arising from service before the reporting date, an entity must recognise that excess as an asset to the extent that the prepayment will lead to a reduction in future payments or a cash refund.
- And
- An expense, unless another section of the FRS requires the cost to be recognised as part of the cost of an asset such as inventories or property, plant and equipment. [FRS 102.28.3].

An employee benefit fund may have been set up as an intermediary payment arrangement. Contributions made to the fund need to be accounted for in accordance with paragraphs 9.33 to 9.38 of FRS 102. This means that when the employer is a sponsoring employer of the fund, the assets and liabilities of the fund will be accounted for by the sponsoring employer as an extension of its own business. As a consequence, the payments to the employee benefit fund do not extinguish the liability of the employer. [FRS 102.28.3(a)]. Accounting for intermediate payment arrangement is discussed in Chapter 28 at 13.3. A pension plan is independent of the employer and is therefore not accounted for as an extension of the employer's business.

3.1.1 Employee benefits settled by a shareholder or another group entity

In some circumstances, employee benefits could be settled by a party other than the entity to which services were rendered by employees. Examples would include a shareholder or another entity in a group of entities under common control.

Except for accounting for defined benefit plans under common control, Section 28 is silent on whether, and if so how, an entity receiving employee services in this way must account for them. Section 26, on the other hand, devotes quite some detail to this topic for employee services within its scope.

An entity could make reference to the hierarchy in Section 10 *Accounting Policies, Estimates and Errors* (discussed in Chapter 9 at 3.1) when deciding on an accounting policy under Section 28.

How we see it

Accordingly, in developing an accounting policy for employee benefits settled by a party other than the entity to which services were rendered by employees the provisions of Section 26 could be applied by analogy to transactions within the scope of Section 28. That accounting policy should be applied consistently to similar transactions.

The relevant requirements of Section 26 are discussed in Chapter 28 at 3.2.1 and 13.3.

3.2 Short-term employee benefits

Short-term employee benefits are employee benefits (other than termination benefits) that are expected to be settled wholly before twelve months after the end of the annual reporting period in which the employees render the related service. The following are examples of short-term employee benefits: [FRS 102.28.4]

- Wages, salaries and social security contributions
- Paid annual leave and paid sick leave
- Profit-sharing and bonuses
- And
- Non-monetary benefits (such as medical care, housing, cars and free or subsidised goods or services) for current employees

Accounting for short-term employee benefits is relatively straight forward as no discounting is required due to their short-term nature. An entity must recognise the undiscounted amount expected to be paid in respect of short-term benefits attributable to services that have been rendered in the period as an expense or as part of the cost of an asset where required by another section of FRS 102. [FRS 102.28.5]. As detailed in the general recognition principles at 3.1 above, any amount of the expense which has not been paid at the reporting date must be recognised as a liability.

Short-term compensated absences occur where the employee does not provide services to the employer, but benefits continue to accrue. This may be made for various reasons including absences for annual leave and sick leave. Short-term compensated absences can either be accumulating or non-accumulating absences. Accumulating absences are those that can be carried forward and used in future periods if the entitlement in the current period is not used in full. An entity must recognise the expected cost of accumulating compensated absences when the employees render service that increases their entitlement to future compensated absences. The amount recognised will be the undiscounted additional amount that the entity expects to pay as a result of the unused entitlement that has accumulated at the end of reporting period. This liability must be presented on the balance sheet as falling due within one year at the reporting date. [FRS 102.28.6].

An example of an accumulating compensated absence is holiday not taken in the current year which can be carried forward.

Illustration 3-1: Accumulating compensated absences

An entity has 100 employees, who are each entitled to 25 working days of paid holiday for each year. Unused holiday may be carried forward for one calendar year. Holiday is taken first out of the current year's entitlement and then out of any balance brought forward from the previous year (a LIFO basis). At 31 December 20X6, the average unused entitlement is two days per employee. The entity expects, based on past experience which is expected to continue, that 92 employees will take no more than 25 days of paid holiday in 20X7, and that the remaining eight employees will take an average of 26 and a half days each.

The entity expects that it will pay an additional 12 days of holiday pay as a result of the unused entitlement that has accumulated at 31 December 20X6 (one and a half days each, for eight employees). Therefore, the entity recognises a liability equal to 12 days of holiday pay.

Non-accumulating absences are those where there is no entitlement to carry forward unused amounts/days. An entity must record the cost of these absences when they occur at the undiscounted amount of salaries and wages paid or payable for the period of absence. [FRS 102.28.7]. Examples of non-accumulating compensating absences include sick leave (to the extent that unused past entitlement cannot be carried forward), maternity or paternity leave, furlough periods and paid absences for jury or military service.

In applying the general recognition criteria to profit-sharing and bonus payments, an entity must recognise the expected cost of profit-sharing and bonus payments when, and only when: [FRS 102.28.8]

- The entity has a present legal or constructive obligation to make such payments as a result of past events (this means that the entity has no realistic alternative but to make the payments).

And

- A reliable estimate of the obligation can be made.

A legal obligation may not always be present, however an entity's past practice in paying profit-sharing or bonuses may have established a constructive obligation, requiring the cost to be recognised.

Cost is not defined in Section 28 and therefore the accounting for such benefits could vary depending on any other sections involved in the recognition of the transaction.

Section 28 provides no guidance on how to determine whether an estimate may be reliable. Reliability is defined in FRS 102, Appendix I as "The quality of information that makes it free from material error and bias and represents faithfully that which it either purports to represent or could reasonably be expected to represent". [FRS 102 Appendix I]. Free from error means there are no errors or omissions in the description of the events, and the process used to produce the reported information has been selected and applied with no errors. In this context, free from error does not mean perfectly accurate in all respects. [FRS 102.2.18]. In looking for guidance over what is meant by a 'reliable estimate' in the context of Section 28 users may turn to IAS 19. This standard states that a reliable estimate of a constructive or legal obligation under a profit-sharing or bonus plan can usually be made when, and only when: [IAS 19.22]

- The formal terms of the plan contain a formula for determining the amount of the benefit.
- The entity determines the amounts to be paid before the financial statements are authorised for issue.

Or

- Past practice gives clear evidence of the amount of the entity's constructive obligation.

It is worth noting that the paragraph above from IAS 19 deals only with the measurement of the provision and not the point of recognition.

Illustration 3-2: Profit sharing and bonus plans

A profit-sharing plan requires an entity to pay a specified proportion of its net profit for the year to employees who serve throughout the year. If no employees leave during the year, the total profit-sharing payments for the year will be 3% of profit. The entity estimates that staff turnover will reduce the payments to 2.5% of profit.

The entity recognises a liability and an expense of 2.5% of profit.

Profit-sharing and bonus plans must only be accounted for as short-term benefits when they are expected to be wholly settled within twelve months from the end of the reporting period. Plans which are expected to be settled over a longer period must be accounted for as other long-term benefits, which are discussed at 3.7 below.

3.3 Post-employment benefits: distinction between defined contribution plans and defined benefit plans

Post-employment benefits are defined as employee benefits (other than termination benefits and short-term employee benefits) that are payable after the completion of employment. [FRS 102 Appendix I]. They include, for example:

- Retirement benefits, such as pensions.
And
- Other post-employment benefits, such as post-employment life insurance and post-employment medical care. [FRS 102.28.9].

Arrangements whereby an entity provides post-employment benefits are post-employment benefit plans as defined in Appendix I. Section 28 applies to all post-employment benefit plans, whether or not they involve the establishment of a separate legal entity to receive contributions or pay benefits. In some cases, these arrangements are imposed by law rather than by the action of the entity. In some cases, these arrangements arise from actions of the entity even in the absence of a formal documented plan.

[FRS 102.28.9].

3.3.1 Distinction between defined contribution plans and defined benefit plans

Section 28 draws the natural, but important, distinction between defined contribution plans and defined benefit plans. The determination is made based on the economic substance of the plan as derived from its principal terms and conditions. The approach it takes is to define defined contribution plans, with defined benefit plans being the default category if a post-employment benefit plan is deemed not to be a defined contribution plan. These definitions are stated in Appendix I. Guidance is also provided explaining how to apply the requirements to insured benefits, multi-employer plans (including state plans) and group plans.

Extract from FRS 102

28.10 Defined contribution plans are post-employment benefit plans under which an entity pays fixed contributions into a separate entity (a fund) and has no legal or constructive obligation to pay further contributions or to make direct benefit payments to employees if the fund does not hold sufficient assets to pay all employee benefits relating to employee service in the current and prior periods. Thus, the amount of the post-employment benefits received by the employee is determined by the amount of contributions paid by an entity (and perhaps also the employee) to a post-employment benefit plan or to an insurer, together with investment returns arising from the contributions.

Defined benefit plans are post-employment benefit plans other than defined contribution plans. Under defined benefit plans, the entity's obligation is to provide the agreed benefits to current and former employees, and actuarial risk (that benefits will cost more or less than expected) and investment risk (that returns on assets set aside to fund the benefits will differ from expectations) are borne, in substance, by the entity. If actuarial or investment experience is worse than expected, the entity's obligation may be increased, and vice versa if actuarial or investment experience is better than expected. [FRS 102.28.10]

The most significant difference between defined contribution and defined benefit plans is that, under a defined benefit plan some actuarial risk or investment risk falls on the employer. Consequently, because the employer is in substance underwriting the actuarial and investment risks associated with the plan, the expense recognised for a defined benefit plan is not necessarily the amount of the contributions due for the period. In contrast the benefits received by the employee from a defined contribution plan are determined by contributions paid (both by the employer and employee) to the benefit plan or insurance company, together with investment returns, and therefore actuarial and investment risk fall in substance on the employee. Hence, the expense of a defined contribution plan is the contributions due for the period from the employer.

Under defined benefit plans the employer's obligation is not limited to the amount that it agrees to contribute to the fund. Rather, the employer is obliged (legally or constructively) to provide the agreed benefits to current and former employees.

An employer's obligation may be increased by a constructive obligation such as the historical practice of discretionary pension increases going beyond the formal terms of the plan or statutory minimum increases.

3.3.2 Multi-employer and state plans

Multi-employer plans, other than state plans, are defined contribution plans or defined benefit plans that:

- Pool assets contributed by various entities that are not under common control.
- And
- Use those assets to provide benefits to employees of more than one entity, on the basis that contribution and benefit levels are determined without regard to the identity of the entity that employs the employees. *[FRS 102 Appendix I]*.

In the UK these are typically industry wide schemes. They exclude group administration plans, which simply pool the assets of more than one employer under common control, for investment purposes and the reduction of administrative and investment costs. Group administration plans keep the claims of different employers segregated for the sole benefit of their own employees. The accounting for these plans is dealt with at 3.9 below.

A multi-employer plan must be classified as either a defined contribution plan or a defined benefit plan in accordance with its terms, including any constructive obligation that goes beyond the formal terms of the plan, in the normal way (see 3.3.1 above). However, if sufficient information is not available to use defined benefit accounting for a multi-employer plan that is a defined benefit plan, the entity must account for the plan as if it were a defined contribution plan and make relevant disclosures (see 4.1.3 below).

[FRS 102.28.11].

In the UK the Pensions Act 2004 requires that where a defined benefit plan is underfunded (i.e., it does not have sufficient assets to cover its obligations), the trustees must establish a recovery plan which confirms how the Statutory Funding Objective must be met and the period over which this is to be met. This recovery plan will detail the contributions to be made by each participating employer. From this agreement it may be possible to establish sufficient information to allow defined benefit accounting as the schedule of deficit funding contributions provides information on how the deficit will be funded by each of the participating employers, and hence their share of assets and liabilities.

Where an entity participates in a defined benefit plan which is a multi-employer plan, and this plan is accounted for as a defined contribution plan, if the entity has entered into an agreement with the multi-employer plan that determines how the entity will fund a deficit, the entity must recognise a liability for the contributions payable that arise from this agreement (to the extent they are related to the deficit). The resulting expense is recognised in profit or loss. *[FRS 102.28.11A]*.

Subsequently, if sufficient information becomes available to use defined benefit accounting, an entity must apply defined benefit accounting from the relevant date which is the date that is the later of the first day for which sufficient information to use defined benefit accounting becomes available, and the first day of the current reporting period (comparative information is not restated). *[FRS 102.28.11B(a), [FRS 102.28.11C]*. Defined benefit accounting is dealt with at 3.5 below. The difference between the carrying value of any liability recognised under the previous defined contribution accounting and the net defined benefit liability or surplus, must be recognised as a separate item in other comprehensive income. *[FRS 102.28.11B(b)]* For the avoidance of doubt, the difference calculated excludes the impact of any plan changes, curtailments or settlements occurring at the relevant date, which are accounted for in accordance with paragraphs 28.21 and 28.21A of FRS 102 (see 3.5.6 below). *[FRS 102.28.11D]*.

A state plan is an employee benefit plan established by legislation to cover all entities (or all other entities in a particular category, for example a specific industry) and operated by national or local government or by another body (for example an autonomous agency created specifically for this purpose) which is not subject to control or influence by the reporting entity. *[FRS 102 Appendix I]*. A state plan must be accounted for in the same way as a multi-employer plan. *[FRS 102.28.11]*.

3.3.3 Insured benefits

One factor that can complicate making the distinction between defined benefit and defined contribution plans is the use of external insurers.

Section 28 helps users to make this distinction by stating that where insurance premiums are paid to fund post-employment benefits, the employer must treat the plan as a defined contribution plan unless it has (either directly or indirectly through the plan) a legal or constructive obligation to:

- Pay the employee benefits directly when they fall due.
- Or
- Pay further amounts if the insurer does not pay all future employee benefits relating to employee service in the current and prior periods.

If the employer has retained such a legal or constructive obligation it must treat the plan as a defined benefit plan. A constructive obligation could arise indirectly through the plan, through the mechanism for setting future premiums, or through a related party relationship with the insurer. *[FRS 102.28.12]*.

If a plan involving insurance is determined to be a defined benefit plan, the insurance policies will represent plan assets which are discussed at 3.5.3 below.

3.4 Defined contribution plans

3.4.1 General

Accounting for defined contribution plans is straightforward under Section 28 as a reporting entity's obligation for each period is determined by the amounts to be contributed for that period. Consequently, no actuarial assumptions are required to be made in order to measure the obligation or the expense and there is no possibility of any actuarial gain or loss to the reporting entity. Moreover, the obligations to pay contributions are measured on an undiscounted basis, except where they are not expected to be settled wholly before twelve months after the end of the period in which the employees render the related service. Where discounting is required, the discount rate must be determined in the same way as for defined benefit plans, which is discussed at 3.5.2.B below. *[FRS 102.28.13A]*. In general, though, it would seem unlikely for a defined contribution scheme to be structured with such a long delay between the employee service and the employer contribution.

Section 28 requires that, when an employee has rendered service during a period, the employer must recognise the contribution payable to a defined contribution plan in exchange for that service:

[FRS 102.28.13]

- As a liability, after deducting any contribution already paid. If the contribution already paid exceeds the contribution due for service before the end of the reporting period, the excess must be recognised as an asset (prepaid expense) to the extent that the prepayment will lead to, for example, a reduction in future payments or a cash refund.
- As an expense, unless another section of the FRS requires the cost to be recognised as part of the cost of an asset such as inventories or property, plant and equipment. See Chapters 16 and 20 respectively.

As discussed at 3.3.2 above, Section 28 requires multi-employer defined benefit plans to be accounted for as defined contribution plans in certain circumstances. It is clear that contractual arrangements to make contributions to fund a deficit must be fully provided for (on a discounted basis) even if they are to be paid over an extended period. The unwinding of any discount is recognised as a finance cost in profit or loss.

[FRS 102.18.13A].

3.5 Defined benefit plans

Accounting for defined benefit plans is complex because actuarial assumptions are required to measure both the obligation and the expense, and there is a possibility of actuarial gains and losses. Moreover, because the obligations are settled many years after the employees render the related service, the obligations are measured on a discounted basis.

3.5.1 Recognition

In applying the general recognition principle (see 3.1 above) to defined benefit plans, an entity is required to recognise: [FRS 102.28.14]

- A liability for its obligations under the defined benefit plans net of plan assets - its 'net defined benefit liability'.

And

- The change in that liability during the period as the cost of its defined benefit plans during the period.

Guidance on how to account for these is covered below.

3.5.2 Measurement of plan liabilities

Extract from FRS 102

Post-employment benefits: Defined benefit plans

Measurement of the net defined benefit liability

28.15 An entity shall measure the net defined benefit liability for its obligations under defined benefit plans at the net total of the following amounts:

- (a) the present value of its obligations under defined benefit plans (its defined benefit obligation) at the reporting date (paragraphs 28.16 to 28.21A provide guidance for measuring this obligation); minus
- (b) the fair value at the reporting date of plan assets (if any) out of which the obligations are to be settled. Section 2A Fair Value Measurement provides guidance on determining the fair values of those plan assets, except that, if the asset is an insurance policy that exactly matches the amount and timing of some or all of the benefits payable under the plan, the fair value of the asset is deemed to be the present value of the related obligation.

3.5.2.A Legal and constructive obligations

The present value of an entity's obligations under defined benefit plans at the reporting date must reflect the estimated amount of benefit that employees have earned in return for their service in the current and prior periods, including benefits that are not yet vested (see below) and the effects of benefit formulas that give employees greater benefits for later years of service. This requires the entity to determine how much benefit is attributable to the current and prior periods on the basis of the plans benefit formula and to make estimates (actuarial assumptions) about demographic variables (such as employee turnover and mortality) and financial variables (such as future increases in salaries and medical costs) that influence the cost of the benefit. The actuarial assumptions must be unbiased (neither imprudent nor excessively conservative), mutually compatible, and selected to lead to the best estimate of the future cash flows that will arise under the plan. [FRS 102.28.16].

Although Section 28 does not use the term 'attribution of benefit to years of service', the fact that it states that defined benefit obligations must reflect the estimated amount of benefit that employees have earned in return for their service, including benefits that are not yet vested, and it requires the effects of benefit formulas that give employees greater benefits for later years of service to be taken into account essentially has the same meaning. In doing this, the projected unit credit method is required to be used (see 3.5.2.C below). However, Section 28 does not provide detail on how greater benefits for later years of service must be taken into account, therefore users of FRS 102 may under the GAAP hierarchy in Section 10 *Accounting Policies, Estimates and Errors* turn to IAS 19 for further guidance. IAS 19 requires that when an employee's service in later years will lead to a materially higher level of benefit, the benefit must be attributed on a straight line basis from: [IAS 19.70]

- The date when service by the employee first leads to benefits under the plan.
Until
- The date when further service by the employee will lead to no material amount of further benefits under the plan, other than from further salary increases.

This requirement is considered necessary because the employee's service throughout the entire period will ultimately lead to benefit at that higher level.

The employee service gives rise to an obligation under a defined benefit plan even if the benefits are conditional on future employment (in other words they have not yet vested). Employee service before the vesting date gives rise to a constructive obligation because, at each successive reporting date, the amount of future service that an employee will have to render before being entitled to the benefit is reduced. When calculating its defined benefit obligation (attributing benefits to years of service) an entity must consider the probability that some employees may not satisfy the vesting requirements (i.e., leave before retirement age). Similarly, although some post-employment benefits (such as post-employment medical benefits) become payable only if a specified event occurs when an employee is no longer employed (such as illness), the obligation is created when the employee renders the service that provides entitlement to the benefit, if the specified event occurs. The probability that the specified event will occur affects the measurement of the obligation but does not determine whether the obligation exists. [FRS 102.28.26].

It is sometimes the case where the plan rules include an automatic exit event, where the entity's involvement in the plan will cease, which cannot be unilaterally avoided by the entity. On occurrence of the exit event, the entity will extinguish its obligation under the plan by the payment of an agreed amount through giving up plan assets. We believe the consequences of this must be included within the calculation of the defined benefit obligation as the best estimate of the ultimate cost to the company, and that this must not be treated as a settlement. An example of this is in relation to Local Government Pension Schemes (LGPS) in England and Wales. The Local Government Pension Scheme Regulations 2013, Regulation 64, explains that an entity becomes 'an exiting employer' when its last member ceases to be active (such as through retirement) and the scheme is closed to new members. As an exiting employer the entity is either liable to pay an exit payment or entitled to receive an exit credit determined by an actuarial valuation obtained at the exit date. The calculation of the defined benefit obligation would be based on cash flows paid to members (i.e., benefit payments) until the expected exit event plus any transfer of assets at the date of the exit event as required under the plan rules.

3.5.2.B Discount rate

Due to the long timescales involved, post-employment benefit obligations are required to be discounted. The rate used must be determined 'by reference to' the market yield (at the end of the reporting period) on high quality corporate bonds of currency and term consistent with liabilities. In countries where there is no deep market in such bonds, the entity must use the market yields on national government bonds instead. [FRS 102.28.17].

FRS 102 does not explain what is meant by 'high quality'. In practice it is considered to mean bonds rated AA or higher by Standard and Poor's, or an equivalent rating from another rating agency.

3.5.2.C Actuarial methodology

An entity is required to use the projected unit credit method to measure its defined benefit obligation and the related expense. It is defined as an actuarial valuation method that sees each period of service as giving rise to an additional unit of benefit entitlement and measures each unit separately to build up the final obligation. [FRS 102 Appendix I]. If defined benefits are based on future salaries, the projected unit method requires an entity to measure its defined benefit obligations on a basis that reflects estimated future salary increases. In addition, the projected unit credit method requires an entity to make various actuarial assumptions in measuring the defined benefit obligation, including discount rates, employee turnover, mortality and (for defined benefit medical plans) medical cost trend rates. [FRS 102.28.18].

As detailed above, this method uses both the vested and non-vested benefits.

IAS 19 provides a simple example of the projected unit credit method: [IAS 19.68]

Illustration 3-3: The projected unit credit method

A lump sum benefit is payable on termination of service and equal to 1% of final salary for each year of service. The salary in year 1 is 10,000 and is assumed to increase at 7% (compound) each year. The discount rate used is 10% per year. The following table shows how the obligation builds up for an employee who is expected to leave at the end of year 5, assuming that there are no changes in actuarial assumptions. For simplicity, this example ignores the additional adjustment needed to reflect the probability that the employee may leave the entity at an earlier or later date.

Year	1	2	3	4	5
Benefit attributed to:					
- prior years	0	131	262	393	524
- current year (1% of final salary)	131	131	131	131	131
- current and prior years	131	262	393	524	655
Opening Obligation	-	89	196	324	476
Interest at 10%	-	9	20	33	48
Current Service Cost	89	98	108	119	131
Closing Obligation	89	196	324	476	655

Note:

- The Opening Obligation is the present value of benefit attributed to prior years.
- The Current Service Cost is the present value of benefit attributed to the current year.
- The Closing Obligation is the present value of benefit attributed to current and prior years.

As can be seen in this simple example, the projected unit credit method also produces a figure for current service cost and interest cost (and, although not illustrated here, would where appropriate produce a figure for past service cost). These cost components are discussed at 3.5.10 below.

The underlying workings relevant to the above are as follows:

Final salary at year 5 (10,000 compounded at 7%)	$10,000 \times (1 + 0.07)^4 = 13,100$
1% of final salary attributed to each year	131
Expected final benefit	$5 \text{ years} \times 1\% \times 131,000 = 655$
Current service cost, being present value of 131 discounted at 10%: e.g.,	
Year 1	$131 \times (1 + 0.1)^{-4} = 89$
Year 2	$131 \times (1 + 0.1)^{-3} = 98$
Closing obligation, being years served multiplied by present value of 131: e.g.,	
Year 3	$3 \text{ years} \times 131 \times (1 + 0.1)^{-2} = 324$

3.5.2.D Actuarial assumptions

As noted above, the projected unit credit method requires an entity to make various actuarial assumptions in measuring the defined benefit obligation. These are defined as an entity's unbiased and mutually compatible best estimates of the demographic and financial variables that will determine the ultimate cost of providing post-employment benefits. [FRS 102 Appendix I].

Demographic assumptions concern the future characteristics of current and former employees (and their dependents) who are eligible for benefits and deal with matters such as:

- Mortality, both during and after employment.
 - Rates of employee turnover, disability and early retirement.
 - The proportion of plan members with dependents who will be eligible for benefits.
- And
- Claim rates under medical plans.

Financial assumptions deal with items such as:

- The discount rate (see 3.5.2.B above).
- Future salary and benefit levels, excluding the cost of benefits that will be met by the employees.

- In the case of medical benefits, future medical costs including claim handling costs.
And
- Price inflation.

The actuarial assumptions must be unbiased (neither imprudent nor excessively conservative), mutually compatible, and selected to lead to the best estimate of the future cash flows that will arise under the plan. [FRS 102.28.16].

In periods of rising inflation this may have a significant impact on the measurement of the defined benefit obligation as this will often be linked to future salary increases, future benefit increases and future medical costs due to either contractual or constructive obligations (for example, through a history of benefit payments to former employees being based on inflation even though there is no legal obligation to do so). Payment options selected by employees on retirement may also change where annuities are linked to fixed annual increases which become lower than expected inflation.

When the level of defined benefits payable by a scheme are reduced for the amounts that will be paid to employees under government-sponsored benefits, an entity must measure its defined benefit obligations on a basis that reflects the benefits payable under the plans, but only if: [FRS 102.28.27]

- Those plans were enacted before the reporting date.
Or
- Past history, or other reliable evidence, indicates that those state benefits will change in some predictable manner, for example, in line with future changes in general price levels or general salary levels.

3.5.2.E Frequency of valuations and use of an independent actuary

An entity must measure its defined benefit obligation and plan assets at the reporting date. [FRS 102.28.15]. An entity is not required to engage an independent actuary to perform the comprehensive actuarial valuation needed to calculate the defined benefit obligation, nor does it require that a comprehensive valuation to be performed annually. If the principal actuarial assumptions have not changed significantly in periods between the comprehensive actuarial valuations, the defined benefit obligation can be measured by adjusting the prior period measurement for changes in employee demographics such as employee numbers or salary levels. [FRS 102.28.20].

In practice we expect that most entities will engage an independent actuary to perform the comprehensive actuarial valuation given its complexity.

3.5.3 Measurement of plan assets

Plan assets are required to be measured at fair value at the reporting date, except that if an asset is an insurance policy that exactly matches the amount and timing of some or all of the benefits payable under the plan, the fair value of the asset is deemed to be the present value of the related obligation. Section 2A *Fair Value Measurement* provides guidance on determining fair value measurement of assets. See Chapter 10. [FRS 102.28.15(b)].

Plan assets are defined as comprising: [FRS 102 Appendix I]

- Assets held by a long-term employee benefit fund.
And
- Qualifying insurance policies.

Assets held by a long-term employee benefit fund are an asset (other than non-transferable financial instruments issued by the reporting entity) that: [FRS 102 Appendix I]

- Is held by an entity (a fund) that is legally separate from the reporting entity and exists solely to pay or fund employee benefits.
And
- Is available to be used only to pay or fund employee benefits, is not available to the reporting entity's own creditors (even in bankruptcy) and cannot be returned to the reporting entity, unless either:
 - The remaining assets of the fund are sufficient to meet all the related employee benefit obligations of the plan or the reporting entity.
Or
 - The assets are returned to the reporting entity to reimburse it for employee benefits already paid.

Qualifying insurance policies are defined as an insurance policy issued by an insurer that is not a related party of the reporting entity, if the proceeds of the policy: *[FRS 102 Appendix I]*

- Can be used only to pay or fund employee benefits under a defined benefit plan.
- And
- Are not available to the reporting entity's own creditors (even in bankruptcy) and cannot be paid to the reporting entity unless either:
 - The proceeds represent surplus assets that are not needed for the policy to meet all the related employee benefit obligations.
- Or
- The proceeds are returned to the reporting entity to reimburse it for employee benefits already paid.

A footnote to the definition clarifies that an insurance policy is not necessarily an insurance contract. Qualifying insurance policies are accounted for as plan assets; however, Section 28 provides no guidance on accounting for other insurance policies which do not meet the definition of a qualifying insurance policy. Under IAS 19 these are accounted for as reimbursement rights (providing the criteria for recognition as reimbursement rights are met). See 3.5.4 below.

3.5.4 Reimbursement rights

Some employers could have in place arrangements to fund defined benefit obligations which do not meet the definition of qualifying insurance policies, but which do provide for another party to reimburse some, or all of the expenditure required to settle a defined benefit obligation. In such cases, the expected receipts under the arrangement are not classified as plan assets.

Section 28 states that when an entity is virtually certain that another party will reimburse some or all of the expenditure required to settle a defined benefit obligation, the entity must recognise its right to the reimbursement as a separate asset, which must be treated the same way as other plan assets (i.e., measured at fair value). The cost of a defined benefit plan recognised in accordance with paragraph 28.23 (i.e., service cost, net interest and the cost of plan introductions, benefit changes, curtailments and settlements) could be presented net of the amounts relating to changes in the carrying amount of the right to reimbursement. *[FRS 102.28.28]*.

3.5.5 Longevity swaps

A longevity swap transfers, from a pension scheme to an external party, the risk of members living longer (or shorter) than expected.

Longevity swaps are not specifically dealt with in FRS 102. Therefore, we would expect users to turn to discussions held by the IFRS IC on the subject.

The IFRS IC was asked in August 2014 to clarify the measurement of longevity swaps held by an entity's defined benefit plan, and in particular discussed whether an entity must:

- (a) Account for a longevity swap as a single instrument and measure its fair value as part of plan assets (discussed at 3.5.3 above) with changes in fair value being recorded in other comprehensive income.

Or

- (b) Split longevity swaps into two components.

The two components in (b) would be a 'fixed leg' and a 'variable leg'. As the variable leg exactly matches some or all of the defined benefit obligation it would represent a qualifying insurance policy and be measured at the present value of the related obligation (discussed at 3.3.3 above). The fixed leg comprises a series of fixed payments to be made in return for the receipt of the variable leg receipts. In other words, a longevity swap could be considered to be economically equivalent to the purchase of qualifying insurance (commonly called a 'buy-in') but with the premium paid over a period of time rather than at inception.

The likely effect of disaggregating a longevity swap in this way would be to recognise a remeasurement loss at inception very similar to that for a buy-in (discussed at 3.5.6 below). Conversely, considering the swap as a single instrument measured at fair value would likely have no initial effect as typically its fair value would be zero (that is, a premium neither received nor paid).

If the two legs were to be considered separately, an appropriate accounting policy would need to be applied to the fixed leg. Two possibilities were discussed by the IFRS IC as follows. The fixed leg would initially be measured at fair value with subsequent accounting either:

- If treated as part of plan assets, at fair value with interest reported in profit or loss and other changes being included in other comprehensive income (discussed at 3.5.3 above).
- Or
- If treated as a financial liability, at amortised cost using the effective interest rate method with interest recognised in profit and loss and no other remeasurements.

The IFRS IC noted that when such transactions take place, the predominant practice is to account for a longevity swap as a single instrument and measure it at fair value as part of plan assets.

The IFRS IC decided not to add this issue to its agenda as it did not expect diversity to develop in the application of IAS 19.²³³

How we see it

Given that the IFRS IC decided not to add this to its agenda we believe that either of the accounting options detailed above (i.e., accounting for the swap as either a single instrument or as two components) would be acceptable. An entity must develop an accounting policy after consideration of these options and apply this consistently where there are similar facts and circumstances.

3.5.6 Plan introductions, changes, curtailments and settlements

If a defined benefit plan has been introduced or the benefits have changed in the current period, the entity must increase/(decrease) its net defined benefit liability to reflect the change and recognise the increase/(decrease) as an expense/(income) in profit or loss in the current period. [FRS 102.28.21].

The point in time at which a plan amendment occurs will often be a matter of fact based on the legal entitlements of plan members. Judgement could be required, based on individual facts and circumstances, particularly if the benefits concerned constitute constructive, as opposed to legal, obligations (see 3.5.2.A above).

Sometimes, benefit plans are amended in such a way as to allow members a choice, for a limited period, between two or more benefit arrangements. In such cases, a plan amendment occurs (and a positive or negative past service cost will be recognised) on the date at which the new arrangement comes into existence (legally or constructively) and not at the later date by which members are required to make their choice. This could mean that the initial accounting for the plan amendment will require estimates to be made of the choices which members will make. However, if it is known at the time the relevant financial statements are prepared, what choices members have made (for example, because the 'window' for making selections closes before the financial statements are authorised for issue) this definitive data would remove the need for estimation. Any subsequent changes in estimates in the following years resulting from the confirmation process would be a change in estimate and recognised as a remeasurement gain or loss.

Where a defined benefit plan has been curtailed (i.e., the benefits or group of covered employees are reduced) or settled (i.e., the relevant part of the employer's obligation is completely discharged) in the current period, the defined benefit obligation must be decreased or eliminated and the resulting gain or loss recognised in profit and loss in the current reporting period. [FRS 102.28.21A]. This gain or loss must be disclosed separately as part of the reconciliation of the defined benefit obligation along with the expense/(income) arising from plan introductions and changes. [FRS 102.28.41(f)(iv)]. See 4.1.4 below for further details on disclosure requirements.

An employer could acquire an insurance policy to fund all or some of the employee benefits relating to employee service in the current and prior periods (referred to as a buy-in arrangement). The acquisition of such a policy is not a settlement if the employer retains a legal or constructive obligation to pay further amounts if the insurer does not pay the employee benefits specified in the insurance policy. However, the acquisition of an insurance policy will mean that the entity has an asset which it must measure at fair value. As discussed at 3.5.3 above, certain insurance policies are valued at an amount equal to the present value of the defined benefit obligation they match. The cost of buying such a policy will typically greatly exceed its subsequent carrying amount as the discount rate used by the insurance company will be lower than that used in an FRS 102 valuation. This raises the question of how to treat the resultant loss.

²³³ [IFRIC Update](#), March 2015, available on the IFRS Foundation's website.

How we see it

In our view, a loss arising on purchase of an insurance policy is an actuarial loss as it results from exchanging one plan asset for another, which is recognised in other comprehensive income, unless in substance the acquisition of the qualifying insurance policy is a settlement of the plan.

The plan assets and plan liabilities would remain to be recorded on the statement of financial position until such time as the settlement had occurred and the entity no longer had any obligations under the plan.

3.5.7 Restriction on plan assets

In practice, defined benefit pension plans tend to be funded on a more prudent basis than would be the case if the surplus or deficit was measured in accordance with FRS 102. This is due to the discount rate used for funding purposes typically being lower than that specified by Section 28. For this reason, an FRS 102 valuation could result in a pension asset (surplus), when for funding purposes there is a deficit. A surplus may also arise in economic conditions where discount rates are increased, and therefore the defined benefit obligation decreases, without a corresponding impact on the fair value of plan assets.

FRS 102 states that if the present value of the defined benefit obligation at the reporting date is less than the fair value of plan assets at that date, the plan has a surplus. It goes on to observe that an entity must recognise a plan surplus as a defined benefit asset only to the extent that it is able to recover the surplus either through reduced contributions in the future or through refunds from the plan. [FRS 102.28.22].

No further explanation is given of the meaning of 'reduced contributions in the future or through refunds from the plan'. This lack of guidance will require management to exercise judgement in developing and applying an accounting policy to determine the amount of any defined benefit pension surplus that can be recognised. In making such a judgement, management must refer to and consider the definition of an asset, recognition criteria and measurement concepts for assets, liabilities, income and expenses and the pervasive principles in Section 2 *Concepts and Pervasive Principles* (see Chapter 4).

In exercising judgement when developing and applying an accounting policy when FRS 102 does not specifically address a transaction, other event or condition, management may also consider the requirements and guidance in adopted IFRS dealing with similar or related issues (see Chapter 9 at 3.1).

Due to the problems encountered in practice in applying the asset ceiling test in IAS 19, the IFRS IC issued IFRIC 14 in 2007. IFRIC 14 addresses the issues of:

- When refunds or reductions in future contributions must be regarded as available in accordance with the definition of the asset ceiling in IAS 19.8.
- How a minimum funding requirement might affect the availability of reductions in future contributions. And
- When a minimum funding requirement might give rise to a liability.

FRS 102 does not include the requirements of IFRIC 14. However, paragraph 15A of Section 28 states that "Where an entity has measured its defined benefit obligation using the projected unit credit method (including the use of appropriate actuarial assumptions), as set out in paragraph 28.18, it must not recognise any additional liabilities to reflect differences from these assumptions and those used for the most recent actuarial valuation of the plan for funding purposes. For the avoidance of doubt, no additional liabilities must be recognised in respect of an agreement with the defined benefit plan to fund a deficit (such as a schedule of contributions)." [FRS 102.28.15A]. This means that entities turning to IFRIC 14 (or any other methodology) under the hierarchy in Section 10 *Accounting Policies, Estimates and Errors* must not recognise a liability for a minimum funding requirement.

3.5.7.A IFRIC 14 - General requirements concerning the limit on a defined benefit asset

IFRIC 14 clarifies that economic benefits, in the form of refunds or reduced future contributions, are available if they can be realised at some point during the life of the plan or when plan liabilities are settled. In particular, such an economic benefit could be available even if it is not realisable immediately at the end of the reporting period. [IFRIC 14.8]. Furthermore, the benefit available does not depend on how the entity intends to use the surplus. The entity must determine the maximum economic benefit available from refunds and reductions in future contributions that are mutually exclusive. [IFRIC 14.9].

3.5.7.B Economic benefit available through a refund

IFRIC 14 observes that an unconditional right to a refund can exist whatever the funding level of a plan at the end of the reporting period. However, if the right to a refund of a surplus depends on the occurrence or non-occurrence of one or more uncertain future events not wholly within an entity's control, the entity does not have an unconditional right and must not recognise the asset. [IFRIC 14.12]. Furthermore, the interpretation states that benefits are available as a refund only if the entity has an unconditional right to the refund: [IFRIC 14.11, IFRIC 14.12]

- During the life of the plan, without assuming that the plan liabilities must be settled in order to obtain the refund.
Or
- Assuming the gradual settlement of the plan liabilities over time until all members have left the plan.
Or
- Assuming the full settlement of the plan liabilities in a single event (i.e., as a plan wind up).

The economic benefit available as a refund must be measured as the amount of the surplus at the end of the reporting period (being the fair value of the plan assets less the present value of the defined benefit obligation) that the entity has a right to receive as a refund, less any associated costs. For example, if a refund would be subject to a tax other than income tax of the reporting entity it must be measured net of tax. [IFRIC 14.13].

In measuring the amount of a refund available when the plan is wound up (third bullet point above), the costs to the plan of settling the plan liabilities and making the refund must be included. For example, a deduction must be made for professional fees if these are paid by the plan rather than the entity, and the costs of any insurance premiums that may be required to secure the liability on wind up. [IFRIC 14.14].

Another relatively common situation in the UK is for pension schemes to have a defined benefit section and a defined contribution section. Trustees may be empowered under the trust deed to use any surplus arising on the defined benefit section in paying up contributions to the defined contribution section. Whilst this is equivalent to obtaining a refund for accounting purposes, it may not be regarded as an 'authorised payment' for tax purposes. Therefore, where an entity is recognising a surplus on a defined benefit section on the basis that it could be refunded through a transfer to a defined contribution section of the same plan, there may be no need to provide for the effect of a refund tax.

It is usually the case that the trustees of a pension fund are independent of the entity. Trustees may have a variety of powers to influence a surplus in a plan. For example:

- Setting the investment strategy whereby assets with lower risk and lower return would erode a surplus over time; or the purchase of assets in the form of insurance policies matching all or some of the cash outflows of the plan.
Or
- Full or partial settlement of liabilities; or the improvement of benefits under the plan.

IFRIC 14 makes it clear that for future benefit improvements made by the employer and actuarial gains and losses, the existence of an asset at the end of the reporting period is not affected by possible future changes to the amount of the surplus. If future events occur that change the amount of the surplus, their effects are recognised when they occur. [IFRIC 14.BC10].

IFRIC 14 is also clear that if the right to a refund of a surplus depends on the occurrence or non-occurrence of one or more uncertain future events that are not wholly within an entity's control, the entity does not have an unconditional right and must not recognise a surplus. [IFRIC 14.11, IFRIC 14.12].

However, neither IAS 19 nor IFRIC 14 address the question of whether the entity's right to a refund of a surplus which depends on the occurrence or non-occurrence of uncertain future events means that no surplus is recognised in any scenario where trustees have the power to 'spend' a surplus.

In June 2018 the IASB published an exposure draft of proposed amendments to IAS 19 and IFRIC 14 which addressed whether other parties' (for example pension trustees) power to enhance benefits for plan members or wind up a plan affected the availability of a refund.

This exposure draft was issued as a response to two requests to the IFRS IC, suggesting that there is diversity in practice in this area. In the Basis for conclusions on the exposure draft, the IASB noted that IFRIC 14.BC10 had not specifically addressed the circumstances in which trustees have such unconditional powers. The exposure draft proposed that the amount of the surplus that the entity recognised as an asset on the basis of a future refund must not include amounts that other parties can use for other purposes that affect the benefits for plan members, for example by enhancing those benefits without the entity's consent. In February 2022, the IASB decided to remove this project from its work plan after concluding that the prospects for progress were limited.²³⁴

How we see it

In our view, as IFRS is silent on the circumstances in which trustees have unconditional powers, entities applying IFRIC 14 via the FRS 102 accounting hierarchy have an accounting policy choice as to how unconditional rights by trustees to 'spend' any current surplus are taken into account in the recognition of any existing IAS 19 surplus, to be applied consistently to similar facts and circumstances, and disclosed where material.

If the amount of a refund is determined as the full amount or a proportion of the surplus, rather than a fixed amount, an entity must make no adjustment for the time value of money, even if the refund is realisable only at a future date. [IFRIC 14.15].

There is currently diversity in practice under IFRS in relation to accounting for costs associated with a pension plan. When a UK pension scheme makes a refund (known in tax law as 'an authorised surplus payment') to an employer, the refund gives rise to a liability for the pension scheme to pay a tax of 25% of the amount refunded (a 'refund tax'). As above, IFRIC 14 requires that taxes other than income taxes must be deducted from the measurement of the refund. [IFRIC 14.13].

Where the refund tax is not considered to be an income tax of the sponsoring employer (based on the fact that it is not charged to the employer and does not appear in the employer's tax calculation) and an entity has a surplus on a scheme (measured under FRS 102 or IAS 19) that is recognised on the basis of a potential refund, IFRIC 14 requires the surplus to be restricted to the net of tax amount (i.e., 75% of the gross surplus is recognised).

Where the refund tax is considered to be an income tax (based on the refund tax being economically an income tax of the employer in the sense that it has the effect of claiming back tax relief given to the employer on contributions to the scheme), this will not be deducted in measuring the refund. Instead, deferred tax must be measured based on management's actual expectation of the manner of recovery of the asset, which may be different to the conclusion reached in respect of the recognition of a pension asset which will be based on the ability to recover the asset. The measurement of deferred tax assets and liabilities is discussed in detail in Chapter 31 at 7.4. If a pension asset is expected to be recovered by way of a refund, then the rate of refund tax (currently 25%) must be used to measure the deferred tax asset arising. If however, the pension asset is expected to be recovered in another way such as through reductions in future contributions or the 'spending' of the asset (see below) the deferred tax asset will be measured at the substantively enacted rate of tax expected to apply when the asset reverses.

We note that both of the above approaches are seen in practice.

3.5.7.C Economic benefit available through reduced future contributions where there is no minimum funding requirement

IFRIC 14 addresses, separately, cases where there are minimum funding requirements for contributions relating to future service, and cases where there are no such funding requirements.

This section deals with the situation where there are no such funding requirements. The implications of future service minimum funding requirements are discussed at 3.5.7.D below.

IFRIC 14 requires that the economic benefit available by way of reduced future contributions be determined as the future service cost to the entity for each period over the shorter of the expected life of the plan and the expected life of the entity. The future service cost to the entity excludes amounts that will be borne by employees. [IFRIC 14.16].

²³⁴ [IASB Update](#), February 2022, available on the IFRS Foundation's website.

Future service costs must be determined using assumptions consistent with those used to determine the defined benefit obligation and with the situation that exists at the end of the reporting period as determined by FRS 102/IAS 19. Accordingly, no future changes to the benefits to be provided by a plan must be assumed until the plan is amended, and a stable workforce in the future must be assumed unless the entity makes a reduction in the number of employees covered by the plan. In the latter case, the assumption about the future workforce must include the reduction. The present value of the future service cost must be determined using the same discount rate as that used in the calculation of the defined benefit obligation (discount rates are discussed at 3.5.2.B above). [IFRIC 14.17].

3.5.7.D The effect of a minimum funding requirement on the economic benefit available as a reduction in future contributions

IFRIC 14 defines minimum funding requirements as “any requirements to fund a post-employment or other long-term defined benefit plan”. [IFRIC 14.5]. This is clearly quite a wide definition encompassing more than just statutory regimes.

Some minimum funding arrangements require periodic reappraisal (for example, every three years). Should such an arrangement cover a longer period, all payments over this longer period constitute the minimum funding requirement, not just the three years until the next reappraisal. In its March 2015 meeting the IFRS IC, following a request for clarification, discussed whether an entity should assume that the minimum funding requirement for contributions to cover future services (see below) would continue over the estimated life of the pension plan. In its July 2015 agenda decision, the IFRS IC noted that the entity should assume a continuation of existing funding principles because:²³⁵

- For any factors not specified by the minimum funding basis (for example, the period to continue the plan is not specified by the existing funding principles), the assumptions for determining future service costs and those used to estimate the future minimum funding requirement contributions for future service must be consistent. This is because the Interpretation requires an entity to use assumptions that are consistent with those used to determine the defined benefit obligation and with the situation that exists at the end of the reporting period. [IFRIC 14.17, IFRIC 14.21].
- The estimate should not include changes to the funding principles to determine contributions for future service, if such changes require future negotiations with pension trustees. [IFRIC 14.21, IFRIC 14.BC30].

In the UK, we have observed that for a number of public sector bodies, the life of the defined benefit plan is expected to be indefinite. In line with the agenda decision, it is reasonable to assume minimum funding requirements will continue indefinitely.

The Interpretation requires any minimum funding requirement at a given date to be analysed into contributions that are required to cover: [IFRIC 14.18]

- Any existing shortfall for past service on the minimum funding basis. These contributions do not affect future contributions for future service.
- And
- Future service.

If there is a minimum funding requirement for contributions relating to future service, the economic benefit available as a reduction in future contributions is the sum of: [IFRIC 14.20]

- (a) Any amount that reduces future minimum funding requirement contributions for future service because the entity made a pre-payment (that is, it paid the amount before being required to do so).
- And
- (b) The estimated future service cost in each period less the estimated minimum funding requirement contributions that would be required for future service in those periods if there were no pre-payment as described in (a).

The future minimum funding contributions required in respect of future service should be calculated:

- Taking into account the effect of any existing surplus on the minimum funding requirement basis but excluding the pre-payment discussed in (a) immediately above.
- Using assumptions consistent with the minimum funding requirement basis. For any factors not specified by the minimum funding requirement, the assumptions used should be consistent with those used to determine the defined benefit obligation and with the situation that exists at the end of the reporting period as determined by IAS 19.

²³⁵ [IFRIC Update](#), July 2015, available on the IFRS Foundation's website.

- Including any changes expected as a result of the entity paying the minimum contributions when they are due.
- And
- Excluding the effect of expected changes in the terms and conditions of the minimum funding basis that are not substantively enacted or contractually agreed at the end of the reporting period.

[IFRIC 14.21].

If the future minimum funding contribution required in respect of future service exceeds the future IAS 19 service cost in any given period, the present value of that excess reduces the amount of the asset available as a reduction in future contributions. However, the amount of the asset available as a reduction in future contributions can never be less than zero. [IFRIC 14.22].

The mechanics of the above requirements are illustrated in the following two examples based on the illustrative examples accompanying IFRIC 14. [IFRIC 14.IE9-IE27].

Illustration 3-4: Deficit-clearing future minimum funding requirements when refunds are not available

An entity has a funding level on the minimum funding requirement basis (which is measured on a different basis from that required under IAS 19) of 95% in Plan C. Under the minimum funding requirements, the entity is required to pay contributions to increase the funding level to 100% over the next three years. The contributions are required to make good the deficit on the minimum funding requirement basis (shortfall) and to cover future service.

Plan C also has an IAS 19 surplus at the end of the reporting period of £50m, which cannot be refunded to the entity under any circumstances. There are no unrecognised amounts.

The nominal amounts of the minimum funding contribution requirements in respect of the shortfall and the future IAS 19 service cost for the next three years are set out below.

	Total minimum funding contribution requirement	Minimum contributions required to make good the shortfall	Minimum contributions required to cover future accrual
Year	£ m	£ m	£ m
1	135	120	15
2	125	112	13
3	115	104	11

The entity's present obligation in respect of services already received includes the contributions required to make good the shortfall but does not include the minimum contributions required to cover future service.

The present value of the entity's obligation, assuming a discount rate of 6% per year, is approximately £300m, calculated as follows:

$$£120m \div (1.06) + £112m \div (1.06)^2 + £104m \div (1.06)^3$$

When these contributions are paid into the plan, the IAS 19 surplus (i.e., the fair value of assets less the present value of the defined benefit obligation) would, other things being equal, increase from £50m to £350m. However, the surplus is not refundable although an asset may be available as a future contribution reduction.

As noted above, the economic benefit available as a reduction in future contributions is the present value of:

- The future service cost in each year to the entity
- Less
- Any minimum funding contribution requirements in respect of the future accrual of benefits in that year over the expected life of the plan.

The amounts available as a future contribution reduction are set out below.

	IAS 19 service cost	Minimum contributions required to cover future accrual	Amount available as contribution reduction
Year	£ m	£ m	£ m
1	13	15	(2)
2	13	13	0
3	13	11	2
4+	13	9	4

Assuming a discount rate of 6%, the economic benefit available as a future contribution reduction is therefore equal to:

$$£(2)m \div (1.06) + £0m \div (1.06)^2 + £2m \div (1.06)^3 + £4m \div (1.06)^4 + £34m \div (1.06)^5 + £4m \div (1.06)^6 \dots = £56m.$$

The asset available from future contribution reductions is accordingly limited to £56m.

Illustration 3-5: Effect of a prepayment when a minimum funding requirement exceeds the expected future service charge

An entity is required to fund Plan D so that no deficit arises on the minimum funding basis. The entity is required to pay minimum funding requirement contributions to cover the service cost in each period determined on the minimum funding basis.

Plan D has an IAS 19 surplus of £35m at the beginning of 20X6. This example assumes that the discount rate is 0%, and that the plan cannot refund the surplus to the entity under any circumstances but can use the surplus for reductions of future contributions.

The minimum contributions required to cover future service are £15m for each of the next five years. The expected IAS 19 service cost is £10m in each year.

The entity makes a prepayment of £30m at the beginning of 20X6 in respect of years 20X6 and 20X7, increasing its surplus at the beginning of 20X6 to £65. That prepayment reduces the future contributions it expects to make in the following two years, as follows:

Minimum funding requirement contribution:			
	IAS 19 service cost	Before pre-payment	After pre-payment
Year	£ m	£ m	£ m
20X6	10	15	0
20X7	10	15	0
20X8	10	15	15
20X9	10	15	15
20X0	10	15	15
Total	50	75	45

At the beginning of 20X6, the economic benefit available as a reduction in future contributions is the sum of:

- £30m, being the prepayment of the minimum funding requirement contributions.
And
- Nil. The estimated minimum funding requirement contributions required for future service would be £75m if there was no prepayment. Those contributions exceed the estimated future service cost (£50m); therefore, the entity cannot use any part of the surplus of £35m.

Assuming a discount rate of 0%, the present value of the economic benefit available as a reduction in future contributions is equal to £30. Accordingly, the entity recognises an asset of £30m (because this is lower than the IAS 19 surplus of £65m).

Two points worth noting in Illustration 3-5 above are as follows. The first is that, if IFRIC 14 did not allow the recognition of such prepayments, the full surplus of £65m would have been written off. The second is that, in the fact pattern of the question, it is unnecessary to know that the surplus before the prepayment was £35m. This is because any surplus (other than the prepayment of MFR) would not be recognised because refunds are not available and future MFR exceeds future service costs.

3.5.8 Tax on defined benefit pension plans

The presentation of income and deferred tax on defined benefit pension schemes along with tax on a pension surplus are discussed in Chapter 31 at 9.4.

3.5.9 Presentation of the net defined benefit liability/asset

FRS 102 requires that an entity present a statement of financial position in accordance with one of the formats prescribed by the Regulations, or using one of the 'adapted formats' (see Chapter 6). The Regulations show pension deficits as the first line item in provisions and pension surpluses either in the same place as a pension deficit under Format 1 of the Regulations, or after prepayments and accrued income under Format 2 of the Regulations. Under previous UK GAAP, FRS 17 required defined benefit pension assets or liabilities to be presented, net of deferred tax, after accruals and deferred income, but before capital and reserves (see 2.6 above). The presentation under FRS 17, which was based on an interpretation of company law, could also be used under FRS 102 as it does not conflict with the Companies Act with the exception that any related deferred tax must not be offset against the pension balance. As a result, there is likely to be divergence in practice in the presentation of defined benefit pension surpluses and deficits under FRS 102.

Where the 'adapted formats' are used, neither FRS 102 nor IFRS specify where in the statement of financial position a net asset or a net liability in respect of a defined benefit plan must be presented, nor whether such balances must be shown separately on the face of the statement of financial position or only in the notes. This is left to the judgement of the reporting entity, but FRS 102 requires additional line items, headings and subtotals where relevant to an understanding of the entity's financial position. [FRS 102.4.3]. Classification of post-employment benefit assets and liabilities as current or non-current is discussed in Chapter 6 at 4.1.1.D.

The cost of a defined benefit plan would be included within administration expenses in the income statement, and net interest either within interest receivable and similar income or interest payable and similar charges dependent on whether net interest was an income or expense.

Where an entity has more than one defined benefit pension plan it is possible that it may have a plan with a surplus and another with a deficit. As Section 28 does not deal directly with the presentation of pension plans in the statement of financial position, users are required to look to other sections of FRS 102 which deal with the issue. FRS 102 states that an entity must not offset assets and liabilities unless required or permitted by an FRS. [FRS 102.2.96]. Therefore, defined benefit pension surpluses and deficits arising from different defined benefit schemes must be presented separately on the face of the statement of financial position.

3.5.10 Treatment of defined benefit plans in profit and loss, and other comprehensive income.

Section 28 requires the cost of a defined benefit plan to be recognised as follows:

- The change in the net defined benefit liability arising from employee service rendered during the reporting period in profit or loss.
 - Net interest on the defined benefit liability during the reporting period in profit or loss (see 3.5.10.A below).
 - The cost of plan introductions, benefit changes, curtailments and settlements in profit or loss (see 3.5.6 above).
- And
- Remeasurement of the net defined benefit liability in other comprehensive income (see 3.5.10.B below).

Where another section of FRS 102 requires part or all of a cost of employee benefits to be recognised as part of the cost of an asset such as inventories or plant, property and equipment that cost is not recognised in profit or loss. See Chapters 16 and 20 respectively. [FRS 102.28.3(b)].

Some defined benefit plans require employees or third parties to contribute to the cost of the plan. Contributions by employees reduce the cost of benefits to the entity. [FRS 102.28.23].

3.5.10.A Net interest

The net interest on the net defined benefit liability is determined by multiplying the net defined benefit liability by the discount rate (see 3.5.2.B above), both as determined at the start of the reporting period, taking into account any changes in the net defined liability during the period as a result of contributions and benefit payments. [FRS 102.28.24].

IAS 19 clarifies that net interest must be determined for the remainder of the period after a plan amendment, curtailment or settlement using:

- The net defined benefit liability (asset) reflecting the benefits offered under the plan and the plan assets after that event.

And

- The discount rate used to remeasure that net defined benefit liability (asset). [IAS 19.123A].

Although these amendments have not been reproduced in FRS 102, users may turn to IAS 19 for guidance in this regard and calculate the net interest after significant changes using the net defined benefit liability after the event and possibly the discount rate used to remeasure that net defined benefit liability, as well as applying this guidance for other significant changes in the net defined benefit liability, for example settlements and curtailments.

As the net item in the statement of financial position is comprised of two or three separate components (the defined benefit obligation, plan assets and the asset restriction, if any), the net interest is made up of interest unwinding on each of these components. [FRS 102.28.24A]. Although, for the purposes of presentation in profit or loss, net interest is a single net amount.

Interest on plan assets calculated as described above will not, other than by coincidence, be the same as the actual return on plan assets. The difference is a remeasurement which is recognised in other comprehensive income. [FRS 102.28.24B].

3.5.10.B Remeasurements

Remeasurements of the net defined benefit liability (asset) comprise:

- Actuarial gains and losses.
- The return on plan assets, excluding amounts included in net interest on the net defined benefit liability and after deducting the costs of managing the plan assets.

And

- Any change in the amount of a defined benefit plan surplus that is not recoverable (in accordance with paragraph 28.22), excluding amounts included in net interest on the net defined benefit liability.

[FRS 102.28.25].

Remeasurements of the net defined benefit liability are recognised in other comprehensive income and are not reclassified to profit or loss in a subsequent period. [FRS 102.28.25A].

Actuarial gains and losses are changes in the present value of defined benefit obligation resulting from: experience adjustments (the effects of differences between the previous actuarial assumptions and what has actually occurred); and the effects of changes in actuarial assumptions. [FRS 102 Appendix I].

3.6 Costs of administering employee benefit plans

Some employee benefit plans incur costs as part of delivering employee benefits. These costs are generally more significant for post-retirement benefits such as pensions. Examples of costs would include actuarial valuations, government levies, audits and the costs of managing any plan assets.

FRS 102 does not include any guidance on accounting for these costs. As noted at 2.2 above entities may refer to IAS 19 using the GAAP hierarchy in Section 10 *Accounting Policies, Estimates and Errors*.

IAS 19 deals with some costs but is silent on others.

The following costs are required to be factored into the measurement of the defined benefit obligation:

- In the case of medical benefits, future medical costs, including claim handling costs (i.e., the costs that will be incurred in processing and resolving claims, including legal and adjuster's fees)

And

- Taxes payable by the plan on contributions relating to service before the reporting date or on benefits resulting from that service. [IAS 19.76(b)].

The following costs (and no others) are deducted from the return on plan assets:

- The costs of managing the plan assets

And

- Any tax payable by the plan itself, other than tax included in the actuarial assumptions used to measure the defined benefit obligation. [IAS 19.130].

As discussed at 3.5.10 above, net interest on the net liability or asset is reported in the profit or loss. This is a wholly computed amount which is uninfluenced by actual asset returns; the difference between actual asset returns and the credit element of the net interest amount forms part of remeasurements reported in other comprehensive income.

So, although not expressed in these terms, costs of administering plan assets and the tax mentioned above are under IAS 19, reported in other comprehensive income.

Both Section 28 and IAS 19 do not address the treatment of any other costs of administering employee benefit plans. However, the Basis for conclusions of IAS 19 contains the following: “the Board decided that an entity should recognise administration costs when the administration services are provided. This practical expedient avoids the need to attribute costs between current and past service and future service”. [IAS 19.BC127]. The IASB may well have taken that decision, however it was not articulated in the practical expedient in the standard.

How we see it

In our view, recognising administration costs when the administration services are provided is an acceptable way to account for costs not dealt with in the standard. However other approaches could be acceptable, for example, in relation to closed schemes as discussed below. Once an accounting policy has been determined it must be applied consistently to similar facts and circumstances.

FRS 102 allows only specific items to be presented in other comprehensive income. [FRS 102.5.5A]. Costs of administering employee benefit plans are not required or permitted to be recognised in other comprehensive income and therefore must be presented within profit or loss.

One alternative to simple accruals accounting as costs are incurred could be relevant to closed plans, where employees are no longer exchanging services for defined benefits. In this situation, it is clear that any and all future costs of administering the plan relate to past periods and no attribution is necessary. An entity with such an arrangement could select a policy of full provision of all costs of ‘running-off’ the plan, which must be applied consistently to similar facts and circumstances.

3.7 Other long-term employee benefits

3.7.1 Meaning of other long-term benefits

Other long-term employee benefits include items such as the following, if they are not expected to be wholly settled within 12 months after the end of the annual reporting period in which the employees have rendered the related service: [FRS 102.28.29]

- Long-term paid absences such as long-service or sabbatical leave.
- Other long-service benefits.
- Long-term disability benefits.
- Profit-sharing and bonuses.
- And
- Deferred remuneration.

3.7.2 Recognition and measurement

For other long-term benefits a simplified version of the accounting treatment required in respect of defined benefit plans (which is discussed in detail at 3.5 above) is required. The amount recognised as a liability for other long-term employee benefits must be the net total, at the end of the reporting period, of the present value of the defined benefit obligation and the fair value of plan assets (if any) out of which the obligations are to be settled directly. The net change in the liability during the period must be recognised in profit or loss, except to the extent that FRS 102 requires or permits their inclusion in the cost of an asset, such as inventory or property, plant and equipment. [FRS 102.28.30]. See Chapters 16 and 20.

In other words, all assets, liabilities, income and expenditure relating to such benefits must be accounted for in the same way as those relating to a defined benefit plan (see 3.5 above), except that remeasurements are recognised in profit or loss (and not in other comprehensive income).

Illustration 3-6: Long-term benefits

An employee is entitled to receive a bonus of £100,000 in five years’ time, provided they continue to stay employed by the entity for this period. It is assumed that the employee will remain in employment for the entire five-year period.

In this example, the cost must be spread over the five-year period using the attribution of benefit method described in 3.5.2.C above.

3.7.3 Long-term benefits contingent on a future event

It could be the case that a long-term benefit becomes payable only on the occurrence of an uncertain future event, for example an initial public offering of an entity's shares (IPO) or an exit event, financial KPIs such as revenue or non-financial KPIs such as the number of new customers or retail outlets opened in a period. Such events are binary in nature and would result in payment either to no employees with entitlements under the plan or to all such employees.

As discussed at 3.7.2 above, the projected unit credit method is applied to long-term employee benefits, [FRS 102.28.30], however the key question that arises is whether the accounting should reflect the single best estimate of the outcome; or, the expected value - that is, a weighted average of possible outcomes. Paragraph 26 of Section 28 states that "the probability that the specified event will occur affects the measurement of the obligation, but does not determine whether the obligation exists". This sets out the requirement that probability affects measurement. The manner in which probability affects measurement is dealt with in the definition of actuarial assumptions which requires that these are a best estimate of the ultimate cost of providing benefits. [FRS 102 Appendix I].

How we see it

We believe that the best estimate of the outcome of an uncertain event must be used when accounting for long-term employee benefits where the outcome is binary.

Therefore, where the outcome is binary, if the future event on which the long-term benefit is contingent is not probable, the liability must be measured at nil. When the contingent event is or becomes probable (that is, more likely than not) the actuarial assumption used in applying the projected unit credit method must reflect the full benefits which would be payable upon the occurrence of the event. The result of revising the actuarial assumptions will result in a remeasurement gain or loss being recognised in profit and loss in the year of the change. For example, consider a long-term employee benefit vesting over a five-year period in which the liability was measured based on the projected unit credit method at the end of the first and second year as the contingent event was determined to be probable. If the contingent event becomes no longer probable during the third year, then the liability at the end of year three will be nil and the previous liability recognised in years one and two will be released to the profit and loss account. For an additional example, consider a long-term employee benefit contingent on a future event such as an IPO, where an employee will receive a payment if (and only if) the employing entity becomes listed on a stock exchange within five years. In each of the first two years it was considered probable that the listing would take place in five years from the granting of the benefit and the benefit be paid on that date. Accordingly, the liability was measured using the projected unit credit method at the end of the first and second year with the discounted present value of 20% of the payment attributed to each year for service provided by the employee. If the listing becomes no longer probable during the third year, then the liability at the end of year three will be nil and the previous liability recognised in years one and two will be released to the profit and loss account.

3.8 Termination benefits

Termination benefits occur when an entity is committed, by legislation, by contractual or other agreements with employees or their representatives or by a constructive obligation based on business practice, custom or desire to act equitably, to make payments (or to provide other benefits) to employees when it terminates their employment. [FRS 102.28.31]. Rather than being earned through providing services to an entity, termination benefits arise as a result of an event such as a decision to reduce the size of the workforce.

Termination benefits are required to be recognised by an entity as an expense in profit or loss immediately, as they do not provide an entity with future economic benefits. [FRS 102.28.32].

Termination benefits must be recognised as a liability and an expense only when the entity is demonstrably committed either: [FRS 102.28.34]

- To terminate the employment of an employee or group of employees before the normal retirement age.
Or
- To provide termination benefits as a result of an offer made in order to encourage voluntary redundancy.

An entity becomes demonstrably committed to a termination only when it has a detailed formal plan for the termination and is without realistic possibility of withdrawal from the plan. [FRS 102.28.35]. Section 21 *Provisions and Contingencies* states that a restructuring, which may include termination benefits, gives rise to a constructive obligation only when an entity has a detailed formal plan which identifies at least: [FRS 102.21.11C]

- The business or part of a business concerned.
 - The principal locations affected.
 - The location, function, and approximate number of employees who will be compensated for terminating their services.
 - The expenditures that will be undertaken.
- And
- When the plan will be implemented.

Additionally, the entity must have raised a valid expectation in those affected that it will carry out the restructuring by starting to implement that plan or announcing its main features to those affected by it.

When an entity recognises termination benefits, it could also have to account for a plan amendment or a curtailment of other employee benefits. [FRS 102.28.33].

An entity is required to measure termination benefits at the best estimate of the amount that would be required to settle the obligation at the reporting date. If an offer was made to encourage voluntary redundancy, the measurement of termination benefits must be based on the number of employees expected to accept the offer. [FRS 102.28.36].

Where termination benefits are not due to be settled wholly within 12 months after the end of the reporting period, they must be discounted to their present value using the methodology and discount rate specified as for defined benefit pension schemes (see 3.5.2.B above). [FRS 102.28.37].

Some employers will pay 'stay bonuses' to encourage employees who have been told that they will be made redundant to continue to work for the employer for a further period of time (for example to complete a project). These bonuses are not termination benefits as the individuals are still employed by the entity and the expense does not meet the definition of a termination benefit (see above), and therefore the cost of the stay bonus must be recognised over the period in which the employee is working to earn this bonus.

3.9 Group plans

When an entity participates in a defined benefit plan that shares risks between entities under common control (a group plan), it is required to obtain information about the plan as a whole measured in accordance with FRS 102, on the basis of assumptions that apply to the plan as a whole. If there is a contractual agreement or stated policy for charging the net defined benefit cost of a defined benefit plan as a whole to individual group entities, then the entity is required to recognise the net defined benefit cost based on this allocation in its individual financial statements. [FRS 102.28.38].

If there is no contractual agreement or stated policy for charging the net defined benefit cost to individual group entities, the net defined benefit cost of a defined benefit plan must be recognised in the individual financial statements of the group entity which is the sponsoring employer for the plan. The other group entities must recognise a cost equal to their contribution payable for the period in their individual financial statements. [FRS 102.28.38].

As the net defined benefit cost is calculated by reference to both the defined benefit obligation and the fair value of plan assets, recognising a net defined benefit cost requires the recognition of a corresponding net benefit asset or liability in the individual financial statements of any group entity recognising a net defined benefit cost. [FRS 102.28.38].

3.10 Death-in service benefits

The provision of death-in service benefits is a common part of employment packages (either as part of a defined benefit plan or on a stand-alone basis). Unfortunately, no guidance is provided by FRS 102 or IAS 19 on how to account for such benefits. An appropriate approach could be that:

- Death in service benefits provided as part of a defined benefit post-employment plan are factored into the actuarial valuation. In this case any insurance cover must be accounted for in accordance with the normal rules of IAS 19 i.e., the fair value of the asset is deemed to be the present value of the related obligation. An important point here is that insurance policies for death in service benefits typically cover only one year and hence will have a low or negligible value. As a result, it will not be the case that the insurance asset is equal and opposite to the defined benefit obligation.
- Other death in service benefits which are externally insured are accounted for by expensing the premiums as they become payable.

And

- Other death in service benefits which are not externally insured are provided for as deaths in service occur.

An alternative approach could be to view death in service benefits as being similar to disability benefits. The accounting for disability benefits under IAS 19 is as follows:

- Where a long-term disability benefit depends on the length of service of the employee, an obligation arises as the employee renders service, which is to be measured according to the probability that payment will be required and the length of time for which payment is expected to be made.
- If however, the level of benefit is the same for all disabled employees regardless of years of service, the expected cost is recognised only when an event causing a disability occurs. [IAS 19.157].

How we see it

Given the lack of explicit guidance on death-in-service benefits in FRS 102 and IAS 19, it seems likely that practice will be mixed.

4 Disclosures required by Section 28 including related UK company law

4.1 Section 28 Disclosures

In addition to the disclosures required by Section 28, consideration should also be given to the disclosures required in Section 8 *Notes to the Financial Statements* to disclose:

- Material accounting policy information).
- And
- The judgements made by management, in applying the accounting policies, that have the most significant effect on the amounts recognised in the financial statements.
- As well as
- Assumptions concerning the future and other key sources of estimation uncertainty. [FRS 102.8.5, FRS 102.8.6, FRS 102.8.7].

4.1.1 Disclosures about short-term employee benefits

Section 28 does not require any specific disclosures about short-term employee benefits, [FRS 102.28.39], but preparers of financial statements must also consider the requirements of Section 33 *Related Party Disclosures* discussed in Chapter 35 at 4.

4.1.2 Disclosures about other long-term benefits

For each category of other long-term benefits that it provides to its employees, an entity must disclose the nature of the benefit, the amount of its obligation and the extent of funding at the reporting date. [FRS 102.28.42].

4.1.3 Disclosures about defined contribution plans

An entity is required to disclose the amount recognised in profit or loss as an expense for defined contribution plans. [FRS 102.28.40].

When a multi-employer plan is treated as a defined contribution plan because sufficient information is not available to use defined benefit accounting (see 3.3.2 above) entities must: [FRS 102.28.40A]

- Disclose the fact that it is a defined benefit plan and the reason why it is being accounted for as a defined contribution plan, along with any available information about the plan's surplus or deficit and the implications, if any, for the entity.
- Include a description of the extent to which the entity can be liable to the plan for other entities' obligations under the terms and conditions of the multi-employer plan.
- And
- Disclose how any liability recognised as a result of the entity entering into an agreement to fund a deficit (see 3.3.2 above) has been determined.

4.1.4 Disclosures about defined benefit plans

As discussed at 3.5.9 above, FRS 102 requires that the statement of financial position and income statement must be presented in accordance with The Large and Medium sized companies and Groups (Accounts and Reports) Regulations 2008 or the 'adapted formats'.

4.1.4.A General disclosures

An entity is required to disclose the following information about defined benefit plans (except for multi-employer defined benefit plans that are treated as defined contribution plans - see 3.3.2 above). If an entity has more than one defined benefit plan, these disclosures could be made in aggregate, separately for each plan, or in such groupings as considered to be the most useful:

- A general description of the type of plan, including funding policy. This includes the amount and timing of the future payments to be made by the entity under any agreement with the defined benefit plan to fund a deficit (such as a schedule of contributions).

- The date of the most recent comprehensive actuarial valuation and, if it was not as of the reporting date, a description of the adjustments that were made to measure the defined benefit obligation at the reporting date.
- A reconciliation of opening and closing balances for each of the following:
 - The net defined benefit obligation.
 - The fair value of the plan assets.
 - And
 - Any reimbursement right recognised as an asset.
- Each of the reconciliations above must show each of the following, if applicable:
 - The change in the net defined benefit liability arising from employee service rendered during the period.
 - Interest income or expense.
 - Remeasurements of the defined benefit liability, showing separately actuarial gains and losses and the return on plan assets less amounts included in interest income/expense above.
 - Plan introductions, changes, curtailments and settlements.
 - Contributions to the plan.
 - Payments from the plan.
 - The effect of changes in foreign exchange rates.
 - And
 - The effect of business combinations and disposals.
- For each major class of plan assets, which must include but is not limited to, equity instruments, debt instruments, property, and all other assets, the percentage or amount that each major class constitutes of the fair value of the total plan assets at the reporting date.
- The amounts included in the fair value of plan assets for:
 - Each class of the entity's own financial instruments.
 - And
 - Any property occupied by, or other assets used by, the entity.
- The return on plan assets.
- The principal actuarial assumptions used, including when applicable:
 - The discount rates.
 - The expected rate(s) of salary increases.
 - Medical cost trend rates.
 - And
 - Any other material actuarial assumptions used.
- When applicable, the basis used to determine the limit on recognising a plan surplus (see 3.5.7 above).

The reconciliations above need not be presented for prior periods. [FRS 102.28.41].

FRS 102 sets out that the objective of financial statements, "...is to provide financial information about the entity that is useful for decision-making by a wide range of users who are not in a position to demand reports tailored to meet their particular information needs". An example of a disclosure that is not specifically listed in Section 28, but which may be required to meet the overall objective of financial statements is the remeasurement gain or loss arising on the acquisition of a qualifying insurance policy (or buy-in arrangement) which has been recognised in other comprehensive income.

4.1.4.B Disclosures for plans which share risks between entities under common control

If an entity participates in a defined benefit plan that shares risks between entities under common control (see 3.9 above) it is required to disclose the following information:

- The contractual agreement or stated policy for charging the cost of a defined benefit plan or the fact that there is no policy.
- The policy for determining the contribution to be paid by the entity.
- And
- If the entity accounts for an allocation of the net defined benefit cost, all the information required in 4.1.4.A above.

If the entity accounts for the contributions payable for the period, the following information is also required:

- A general description of the type of plan, including funding policy.
- The date of the most recent comprehensive actuarial valuation and, if it was not as of the reporting date, a description of the adjustments that were made to measure the defined benefit obligation at the reporting date.
- For each major class of plan assets, which must include but is not limited to, equity instruments, debt instruments, property, and all other assets, the percentage or amount that each major class constitutes of the fair value of the total plan assets at the reporting date.

And

- The amounts included in the fair value of plan assets for:
 - Each class of the entity's own financial instruments.
- And
- Any property occupied by, or other assets used by, the entity.

This information can be disclosed by cross-reference to disclosures in another group entity's financial statements if: the group entity's financial statements separately identify and disclose the information required about the plan; and that group entity's financial statements are available to users of the financial statements on the same terms as the financial statements of the entity and at the same time as, or earlier than, the financial statements of the entity. [FRS 102.28.41A].

4.1.5 Disclosures about termination benefits

For each category of termination benefits provided to employees the following must be disclosed:

[FRS 102.28.43]

- The nature of the benefit.
 - The accounting policy.
- And
- The amount of its obligation and the extent of funding at the reporting date.

When there is uncertainty about the number of employees who will accept an offer of termination benefits, a contingent liability exists. Section 21 *Provisions and Contingencies* requires the disclosure of contingent liabilities unless the possibility of an outflow in settlement is remote (see Chapter 24 at 4.2). [FRS 102.28.44].

4.2 UK Companies Act disclosures

The Companies Act does not require any specific disclosure requirements for employee benefits, however there are numerous disclosure requirements for salaries, pensions and other benefits payable to directors. These requirements are within Schedule 5 to the Large and Medium sized Companies and Groups (Accounts and Reports) Regulations 2008. In addition, s411 of the Companies Act requires the disclosure of other pension costs as part of the disclosure of staff costs. See Chapter 6 at 7.7.

5 Summary of GAAP differences

The following table shows the key differences between IFRS and FRS 102.

	FRS 102	IFRS
Pension surpluses/asset ceilings	FRS 102 states that a defined benefit asset can be recognised only to the extent that an entity is able to recover the pension surplus either through reduced contributions in the future or through refunds in the plan. No further guidance is provided and therefore an entity must develop an accounting policy to determine the extent of any pension surplus that can be recognised.	Similar to FRS 102, IAS 19 allows the recognition of a defined benefit asset and restricts its recognition to the lower of the pension surplus and an asset ceiling. The asset ceiling is the present value of benefits available via a reduction in future contributions or a refund. However, IFRIC 14 provides detailed guidance on how to calculate the present value of benefits available and the impact of any minimum funding requirement.
Liability for deficit funding requirements	Under FRS 102, no additional liabilities can be recognised in respect of an agreement with the defined benefit plan to fund a deficit (such as a schedule of contributions).	IFRIC 14 requires a liability to be recorded to the extent that deficit funding contributions payable will not be available after they are paid into the plan.
Attributing benefit to years of service	The present value of a net defined benefit obligation must include the effects of benefit formulas that give employees greater benefits for later years of service. No further guidance is given on how to assess the effect.	If an employee's service in later years will lead to a materially higher level of benefit, the benefit must be attributed on a straight-line basis from the date when service by the employee first leads to benefits under the plan until the date when further service by the employee will lead to no material amount of further benefits under the plan, other than from further salary increases.
Calculation of service cost and net interest following a plan amendment, curtailment or settlement during a reporting period	Silent on the issue.	IAS 19 clarifies that the current service cost in the period following a plan amendment, curtailment or settlement must be calculated using the actuarial assumptions used for the remeasurement. The net interest following a plan amendment or curtailment must be measured using the net defined benefit liability/(asset) after the plan amendment or curtailment and the discount rate used to remeasure the net defined liability/(asset).
Calculation of gain or loss on settlement	Silent on the issue.	IAS 19 clarifies that the effect of the asset ceiling must not be considered in determining any gain or loss as a result of a plan amendment, curtailment or settlement.

	FRS 102	IFRS
Accounting for multi-employer defined benefit plans when sufficient information becomes available	Any difference on the recognition of a net defined benefit liability when applying defined benefit accounting for the first time is recognised in other comprehensive income.	IAS 19 does not address the accounting when sufficient information becomes available for defined benefit accounting to be applied to a multi-employer scheme for the first time. Our view is that there are two approaches in accounting for the difference recognised as a net defined benefit obligation being: ▪ An immediate charge/credit to profit or loss. OR ▪ An actuarial gain or loss recognised in other comprehensive income.
Presentation	FRS 102 requires primary statements to be presented in accordance with one of the formats prescribed by the Regulations, or using one of the 'adapted formats', which can result in presentation in various places on the Balance Sheet (except that deferred tax cannot be offset against the gross pension deficit or surplus).	Follow the general requirements of IAS 1 for the presentation on the statement of financial position.
Disclosure	FRS 102 does not include a disclosure objective and has fewer specific disclosure requirements. For example, sensitivity analysis is not listed as a disclosure requirement.	IAS 19 has a disclosure objective for information in respect of defined benefit schemes along with considerations in order to meet this objective.

Appendix A - Defined terms

Extract from FRS 102

Appendix I

Glossary

accumulating compensated absences	Compensated absences that are carried forward and can be used in future periods if the current period's entitlement is not used in full.
actuarial assumptions	An entity's unbiased and mutually compatible best estimates of the demographic and financial variables that will determine the ultimate cost of providing post-employment benefits.
actuarial gains and losses	Changes in the present value of the defined benefit obligation resulting from: (a) experience adjustments (the effects of differences between the previous actuarial assumptions and what has actually occurred); and (b) the effects of changes in actuarial assumptions
asset held by a long-term employee benefit fund	An asset (other than non-transferable financial instruments issued by the reporting entity) that: (a) is held by an entity (a fund) that is legally separate from the reporting entity and exists solely to pay or fund employee benefits; and (b) is available to be used only to pay or fund employee benefits, is not available to the reporting entity's own creditors (even in bankruptcy), and cannot be returned to the reporting entity, unless either: (i) the remaining assets of the fund are sufficient to meet all the related employee benefit obligations of the plan or the reporting entity; or (ii) the assets are returned to the reporting entity to reimburse it for employee benefits already paid.
constructive obligation	An obligation that derives from an entity's actions where: (a) by an established pattern of past practice, published policies or a sufficiently specific current statement, the entity has indicated to other parties that it will accept certain responsibilities; and (b) as a result, the entity has created a valid expectation on the part of those other parties that it will discharge those responsibilities.
defined benefit obligation (present value of)	The present value, without deducting any plan assets, of expected future payments required to settle the obligation resulting from employee service in the current and prior periods.
defined benefit plans	Post-employment benefit plans other than defined contribution plans.
defined contribution plans	Post-employment benefit plans under which an entity pays fixed contributions into a separate entity (a fund) and has no legal or constructive obligation to pay further contributions or to make direct benefit payments to employees if the fund does not hold sufficient assets to pay all employee benefits relating to employee service in the current and prior periods
employee benefits	All forms of consideration given by an entity in exchange for service rendered by employees.
funding (of post-employment benefits)	Contributions by an entity, and sometimes its employees, into an entity, or fund, that is legally separate from the reporting entity and from which the employee benefits are paid

multi-employer (benefit) plans	Defined contribution plans (other than state plans) or defined benefit plans (other than state plans) that: (a) pool the assets contributed by various entities that are not under common control, and (b) use those assets to provide benefits to employees of more than one entity, on the basis that contribution and benefit levels are determined without regard to the identity of the entity that employs the employees concerned
net defined benefit liability	The present value of the defined benefit obligation at the reporting date minus the fair value at the reporting date of plan assets (if any) out of which the obligations are to be settled.
plan assets (of an employee benefit plan)	Plan assets (of an employee benefit plan) are: (a) assets held by a long-term employee benefit fund; and (b) qualifying insurance policies.
post-employment benefits	Employee benefits (other than termination benefits and short-term employee benefits) that are payable after the completion of employment.
post-employment benefit plans	Formal or informal arrangements under which an entity provides post-employment benefits for one or more employees.
projected unit credit method	An actuarial valuation method that sees each period of service as giving rise to an additional unit of benefit entitlement and measures each unit separately to build up the final obligation (sometimes known as the accrued benefit method pro-rated on service or as the benefit/years of service method).
qualifying insurance policies	An insurance policy issued by an insurer that is not a related party of the reporting entity, if the proceeds of the policy: (a) can be used only to pay or fund employee benefits under a defined benefit plan; and (b) are not available to the reporting entity's own creditors (even in bankruptcy) and cannot be paid to the reporting entity, unless either: (i) the proceeds represent surplus assets that are not needed for the policy to meet all the related employee benefit obligations; or (ii) the proceeds are returned to the reporting entity to reimburse it for employee benefits already paid
retirement benefit plan	Arrangements whereby an entity provides benefits for employees on or after termination of service (either in the form of an annual income or as a lump sum) when such benefits, or the contributions towards them, can be determined or estimated in advance of retirement from the provisions of a document or from the entity's practice.
state (employee benefit) plan	Employee benefit plans established by legislation to cover all entities (or all entities in a particular category, for example a specific industry) and operated by national, regional or local government or by another body (for example an autonomous agency created specifically for this purpose) which is not subject to control or influence by the reporting entity.
termination benefits	Employee benefits provided in exchange for the termination of an employee's employment as a result of either: (a) an entity's decision to terminate an employee's employment before the normal retirement date; or (b) an employee's decision to accept voluntary redundancy in exchange for those benefits.

Overview

This chapter deals with the requirements of Section 29 *Income Tax*. Section 29 applies to income tax and value added tax and other similar taxes which are not income taxes. [FRS 102.29.2].

What you need to know

The overall requirements of Section 29 can be summarised as follows:

- Determine whether a tax is an 'income tax' (see 3 below).
- Recognise income tax due or receivable in respect of the current and prior periods (current tax), measured using enacted or substantively enacted legislation (see 5 below), and having regard to any uncertain tax treatments (see 5 below).
- Determine whether there are timing differences that arise from the inclusion of income and expenses in tax assessments in periods different from those in which they are recognised in financial statements (see 6 below).
- Determine whether there are unrelieved tax losses or other deferred tax assets (see 6 below).
- Determine whether Section 29 prohibits or restricts recognition of deferred tax assets (see 6 below).
- Do not recognise deferred taxes on permanent differences except for those arising from a business combination accounted for by applying the purchase method (see 6 below).
- Allocate any income tax charge or credit for the period to profit or loss, other comprehensive income or equity as appropriate (see 9 below).
- Present income tax in the financial statements as required by Section 29 (see 11 below).
- Disclose information required by Section 29 (see 12 below).

1 Introduction

Section 29 not only applies to accounting for income tax, but also to value added tax (VAT) and other similar sales taxes which are not income taxes, [FRS 102.29.2], as discussed at 4 below. Section 29 also covers specific provisions in relation to withholding tax on dividend income (see 8.1.2 below).

Income tax as described in Section 29 comprises:

- Current tax.
- And
- Deferred tax including deferred tax in respect of assets (other than goodwill) and liabilities recognised as a result of a business combination. [FRS 102.29.2].

An entity is required to recognise the current and future tax consequences of transactions and other events that have been recognised in the financial statements. Current tax is the amount of income tax payable (refundable) in respect of the taxable profit (tax loss) for the current period or past reporting periods. Deferred tax represents the income tax payable (recoverable) in respect of the taxable profit (tax loss) for future reporting periods as a result of past transactions or events. [FRS 102 Appendix I].

The requirements applicable to business combinations are discussed at 6.6 below.

Section 29 includes a mandatory exception from recognising and disclosing deferred tax assets and liabilities related to Pillar Two income tax. [FRS 102.29.2B]. Requirements relating to Pillar Two income tax is discussed in 3.7 below.

1.1 Allocation of tax income and expense between periods

The most significant accounting question which arises in relation to taxation is how to allocate tax expense (income) between accounting periods. The particular period in which transactions are recognised in the financial statements is determined by FRS 102's accounting framework. However, the timing of the recognition of transactions for the purposes of measuring the taxable profit is governed by tax law, which sometimes prescribes an accounting treatment different from that used in the financial statements. The generally accepted view is that it is necessary for the financial statements to seek some reconciliation between these different treatments.

The objective of Section 29 is to reflect the tax consequences of transactions that are recognised in the financial statements following FRS 102. Broadly speaking, the tax consequences that are legal assets or liabilities at the reporting date are referred to as current tax. The other tax consequences, which are expected to become or form part of legal assets or liabilities in a future period, are referred to as deferred tax.

This is shown in Illustration 1-1, and the further discussion at 1.1.1 to 1.1.2 below.

Illustration 1-1: PP&E attracting tax deductions in advance of accounting depreciation

An item of equipment is purchased on 1 January 20X3 for £50,000 and is estimated to have a useful life of five years, at the end of which it will be scrapped. The estimated residual amount is zero and this estimate does not change over the life of the equipment. The depreciation charge will therefore be £10,000 per year for five years.

The applicable corporate tax rate is 30%. No tax deductions are given for depreciation charged in the financial statements. Instead, the cost of the asset may be deducted from taxes payable in the year that the asset is purchased. The entity's profit before tax, after deducting the depreciation charge, for each of the five years ended 31 December 20X3 to 31 December 20X7 is £100,000. All components of pre-tax profit, other than the accounting depreciation, are taxable or tax-deductible.

The entity's tax computations for each year would show the following:

£s	20X3	20X4	20X5	20X6	20X7
Accounting profit	100,000	100,000	100,000	100,000	100,000
Accounting depreciation	10,000	10,000	10,000	10,000	10,000
Tax depreciation	(50,000)	-	-	-	-
Taxable profit	60,000	110,000	110,000	110,000	110,000
Tax payable @ 30%	18,000	33,000	33,000	33,000	33,000

1.1.1 No provision for deferred tax ('flow through')

If the entity in Illustration 1-1 above were to account only for the tax legally due in respect of each year ('current tax'), it would report the amounts in the table below in profit or loss. Accounting for current tax only is generally known as the 'flow through' method.

£s	20X3	20X4	20X5	20X6	20X7	Total
Profit before tax	100,000	100,000	100,000	100,000	100,000	500,000
Current tax	18,000	33,000	33,000	33,000	33,000	150,000
Profit after tax	82,000	67,000	67,000	67,000	67,000	350,000
Effective tax rate (%)	18	33	33	33	33	30

The 'effective tax rate' in the last row of the table above is the ratio, expressed as a percentage, of the tax expense to the profit before tax in the financial statements. As can be seen from the table above, over the full five-year life of the asset, the entity pays tax at the statutory rate of 30% on its total profits of £500,000, but with considerable variation in the effective rate in individual accounting periods.

The generally held view is that simply to account for the tax legally payable as above is distortive, and the tax must therefore be allocated between periods. Under Section 29 this allocation is achieved by means of deferred taxation (see 1.1.2 below).

1.1.2 Provision for deferred tax (the timing difference approach)

The approach required by Section 29 is known as the 'timing difference' approach, which seeks to measure the impact on future tax payments of the cumulative difference, as at the reporting date, between income or expenditure in the financial statements and the amounts recognised for the same income or expense in the tax computation. This is shown in Illustration 1-1 above in the case of depreciation. Such differences are known as 'timing differences'. Timing differences are said to 'originate' in those periods in which the cumulative difference between book and tax income (expense) increases and to 'reverse' in those periods in which that cumulative difference decreases. In Illustration 1-1 above, the differences originate and reverse as follows:

£s	20X3	20X4	20X5	20X6	20X7
Accounting depreciation	10,000	10,000	10,000	10,000	10,000
Tax depreciation	(50,000)	-	-	-	-
(Origination)/reversal	(40,000)	10,000	10,000	10,000	10,000
Cumulative ¹	(40,000)	(30,000)	(20,000)	(10,000)	-

As discussed in more detail at 7 below, Section 29 requires an entity to recognise a liability for deferred tax on the timing difference arising between book and tax depreciation, as follows.

£s	20X3	20X4	20X5	20X6	20X7
Cumulative difference (per table above)	(40,000)	(30,000)	(20,000)	(10,000)	-
Deferred tax liability ¹	(12,000)	(9,000)	(6,000)	(3,000)	-
Movement in deferred tax in period	12,000	(3,000)	(3,000)	(3,000)	(3,000)

1 Cumulative timing difference multiplied by the tax rate of 30%. As discussed at 7 below, Section 29 requires deferred tax to be measured by reference to the tax rates and laws expected to apply when the timing differences will reverse.

The deferred tax liability is recognised in the statement of financial position and any movement in the deferred tax liability during the period is recognised as deferred tax income or expense in profit or loss, with the following impact:

£s	20X3	20X4	20X5	20X6	20X7	Total
Profit before tax	100,000	100,000	100,000	100,000	100,000	500,000
Current tax (at 1.1 above)	18,000	33,000	33,000	33,000	33,000	150,000
Deferred tax	12,000	(3,000)	(3,000)	(3,000)	(3,000)	-
Total tax	30,000	30,000	30,000	30,000	30,000	150,000
Profit after tax	70,000	70,000	70,000	70,000	70,000	350,000
Effective tax rate (%)	30	30	30	30	30	30

It can be seen that the effect of accounting for deferred tax is to present an effective tax rate of 30% in profit or loss for each period.

1.2 Permanent differences

Some differences between an entity's taxable profit and accounting profit arise not because the same items are recognised in taxable profit and accounting profit in different periods (i.e. timing differences), but because certain types of income and expenses are non-taxable or disallowable, or because certain tax charges or allowances are greater or smaller than the corresponding income or expense recognised in accounting profit. For example:

- An item of PP&E is depreciated but its cost is not deductible for tax purposes other than on sale. An example in the UK would be an industrial building. Any depreciation of such an asset recognised for accounting purposes is a permanent difference.
- In the UK a company may obtain a tax deduction for a share-based payment transaction based on its value at vesting or exercise, which is typically higher than its value at grant on which the expense in the financial statements is based. Any excess of the tax deduction over the expense recognised in the financial statements is a permanent difference.

As discussed further at 6.5 below, Section 29 requires that deferred tax is not recognised on permanent differences, except for differences arising on the initial accounting for a business combination accounted for by applying the purchase method. [FRS 102.29.10].

2 Comparison between Section 29 and IAS 12

2.1 Withholding taxes on dividends and VAT and other sales taxes

The requirements of Section 29 in relation to withholding taxes on dividends (see 8.1.2 below) are not all reflected in IAS 12 *Income Taxes*, which refers only to withholding taxes payable by a subsidiary, associate or joint arrangement on distributions to the reporting entity. Practice related to presentation of withholding taxes from dividend income is diverse under IFRS where in some cases such income is measured gross and in other cases net of withholding taxes.

IAS 12, unlike Section 29, does not include VAT and other similar sales taxes in its scope (see section 4 below).

2.2 Current tax and deferred tax

The requirements of Section 29 and IAS 12 in respect of the recognition and measurement of current tax are essentially the same.

As regards deferred tax, Section 29 adopts a 'timing difference' approach, except when the entity initially recognises assets and liabilities acquired in a business combination accounted for by applying the purchase method (where the treatment is largely the same as IFRS). Timing differences are differences between taxable profits and total comprehensive income as stated in the financial statements. They arise from the inclusion of income and expenses in tax assessments in periods different from those in which they are recognised in financial statements. [FRS 102.29.6].

IAS 12 applies a 'temporary difference' approach, whereby deferred tax is recognised on the difference between the carrying amount of an asset or liability and the amount at which that asset or liability is assessed for tax purposes (referred to as its 'tax base'). However, there are some exceptions to this, most notably the initial recognition exception, whereby no deferred tax is recorded on a difference between the carrying amount of an asset or liability and its tax base where that difference arose on the initial recognition of the asset or liability in a transaction which is not a business combination, at the time of the transaction affects neither accounting profit nor taxable profit or tax loss and at the time of the transaction does not give rise to equal taxable and deductible temporary differences (such as leases and decommissioning obligations that lead to the recognition of an asset and a liability). No such exemption is necessary under a 'timing differences' approach as no timing differences arise on the initial recognition of an asset. [FRS 102.BC.B29.5].

Whilst FRS 102 is based on a 'timing differences' approach, it was considered important to maintain consistency with IFRS on the recognition of deferred tax arising from a business combination. Accordingly, in Section 29, the timing difference approach is supplemented with a requirement to recognise deferred tax on business combinations. [FRS 102.BC.B29.6].

Having supplemented the 'timing differences' approach with a requirement to recognise deferred tax on business combinations, the main distinction between Section 29 and IFRS is that IAS 12 requires deferred tax to be recognised on any difference between the carrying amount of an asset or liability and its tax base that arises after the initial recognition of the asset or liability. Section 29 would prohibit the recognition of such differences that are not the result of timing differences. For example, no deferred tax is recognised under Section 29 when: [FRS 102.BC.B29.7]

- The tax base (the tax-deductible amount) of an asset is amended, such as when the legislation changes the amount of future tax relief relating to the asset (see 6.5 below).
- And
- The tax deduction (or estimated future deduction) for share-based payment exceeds the cumulative amount of the related remuneration expense (see 8 below).

3 Scope of Section 29

Section 29 applies not only to income tax, but also includes specific provisions in relation to withholding taxes on dividend income (see 8.1.2 below) and on accounting for VAT and other similar sales taxes that are not income taxes (see 4 below). [FRS 102.29.2].

No transitional reliefs are given for first-time adopters of FRS 102 in respect to the application of Section 29. Accordingly, on transition to FRS 102 entities must apply the requirements of Section 29 on a fully retrospective basis. In particular, deferred tax will arise as a result of the following:

- Past revaluations of property, plant and equipment and investment properties (see Chapter 37 at 3.4.3.C).
 - Accounting for business combinations before the date of transition (see Chapter 37 at 5.2.1 and 5.2.2).
- And
- The application of transitional reliefs, such as the use of fair value or a previous revaluation as the deemed cost of certain assets (see Chapter 37 at 5.5.4).

In addition, the transition to FRS 102 can have direct implications for an entity's corporation tax position in the UK. In some cases, a current tax liability arises in the year of transition and in others the liability is spread over a period of up to 10 years. Such deferral of the liability to corporation tax can either be automatic or require an election to be made and will require deferred tax to be recognised as at the date of transition to FRS 102 to the extent that this creates a timing difference under Section 29. Entities must refer to relevant guidance issued by HM Revenue & Customs and take professional advice as appropriate.²³⁶

3.1 What is an 'income tax'?

Section 29 applies to income tax. [FRS 102.29.2(a)]. Income tax as defined in FRS 102 Appendix I includes:

- All domestic and foreign taxes that are based on taxable profit.
- And
- Taxes, such as withholding taxes, that are payable by a subsidiary, associate or joint arrangement on distributions to the reporting entity.

This definition is somewhat circular, since 'taxable profit' is, in turn, defined in terms of profits "upon which income taxes are payable".

UK corporation tax is an 'income tax' as defined, since it takes as its starting point the totality of a reporting entity's accounting profits. However, both the UK and overseas jurisdictions raise 'taxes' on sub-components of net profit. These include:

- Sales taxes
 - Goods and services taxes
 - Value added taxes
 - Levies on the sale or extraction of minerals and other natural resources
 - Taxes on certain goods as they reach a given state of production or are moved from one location to another
- And
- Taxes on gross production margins

Taxes that are simply collected by the entity from one third party (generally a customer or employee) on behalf of another third party (generally local or national government) are not 'income taxes' for the purposes of Section 29. This view is supported by the requirement of Section 23 *Revenue from Contracts with Customers* that the transaction price excludes amounts collected on behalf of third parties for example some sales taxes, [FRS 102.23.41], (and therefore, by implication, are not an expense of the entity either).

In cases where taxes as noted above are a liability of the entity, they may often have some characteristics both of production or sales taxes (in that they are payable at a particular stage in the production or extraction process and may well be allowed as an expense in arriving at the tax on net profits) and of income taxes (in that they may be determined after deduction of certain allowable expenditure). This can make the classification of such taxes (as income taxes or not) difficult. In this regard, the IFRS Interpretation Committee (IFRS IC) made certain observations that is, in the context of Section 29, described below.

²³⁶ FRS 102 Overview Paper – Tax Implications, H M Customs & Excise, updated 14 October 2016.

Frequently asked questions

Question 3-1: Which taxes are in the scope of Section 29?

The definition of 'income tax' in Section 29 (i.e., taxes that are based on taxable profit) implies that:

- Not all taxes are within the scope of Section 29.
But
- Because taxable profit is not the same as accounting profit, taxes do not need to be based on a figure that is exactly accounting profit to be within the scope of Section 29.

The latter point is also implied by the requirement in Section 29 to disclose a reconciliation of the tax expense (income) included in profit or loss and the profit or loss before tax on ordinary activities multiplied by the applicable rate - see 12 below. [FRS 102.29.27(b)]. Further, the term 'taxable profit' implies a notion of a net rather than gross amount, and that any taxes that are not in the scope of Section 29 are in likely to be in scope of Section 21 *Provisions and Contingencies* (see Chapter 24).

The observations noted above reinforce the difficulty of formulating a single view as to the treatment of taxes. The appropriate treatment will need to be addressed on a case-by-case basis depending on the particular terms of the tax concerned and the entity's own circumstances.

How we see it

Where a tax is levied on multiple components of net income, we believe it is more likely that the tax must be viewed as substantially a tax on income and therefore subject to Section 29.

Even where such taxes are not income taxes, if they are deductible against current or future income taxes, they may nevertheless give rise to tax assets which fall within the scope of Section 29.

3.1.1 Levies

A number of jurisdictions, including the UK, charge levies in relation to certain activities or on certain types of entity, particularly those in the financial services sector. In many cases the levies are expressed as a percentage of a measure of revenue or net assets, or some component(s) of revenue or net assets, at a particular date. Such levies are not income taxes and must be accounted for in accordance with Section 21 (see Chapter 24).

3.1.2 Tonnage tax

In the UK, entities that operate qualifying vessels that are 'strategically and commercially managed in the UK', can take advantage of the tonnage tax regime. The tonnage tax regime differs from the main corporation tax system in a number of key respects, the most significant from an accounting point of view being that an entity in the tonnage tax regime is not assessed to tax on the basis of its reported profits from qualifying activities. Instead, its corporate tax liability is determined by reference to the qualifying tonnage of qualifying vessels. For this reason, it is not an income tax as defined in Section 29. Another feature of the tonnage tax regime is that a qualifying entity does not receive capital allowances for the cost of its ships.

The accounting implications for vessels taken into the tonnage tax regime are discussed at 6.3.1 below.

3.1.3 Hybrid taxes (including minimum taxes)

The term 'hybrid taxes' is applied to arrangements in which:

- (a) An entity's liability to tax is assessed on both a measure of its taxable profits and a non-profit measure.
Or

- (b) The amount of tax to be paid in any period depends on the interaction between those two measures.

Examples of non-profit measures would include amounts based on particular types of revenue, on components of the statement of financial position, such as total equity, net assets or net debt, or to a non-financial measure such as physical output. Tax authorities might require entities to use the alternative measures to determine a minimum amount of tax to be paid in any period. Hybrid taxes do not include arrangements where an entity can elect to operate within one of a number of alternative tax regimes, for example to choose to be assessed on the basis of its taxable profits, or to have its profits exempt from tax and instead be assessed according to a non-profit measure such as revenue, net assets or physical output.

In this case there is no interaction between taxable profits and the non-profit measure in determining the actual tax to be paid in a given period.

Such 'hybrid taxes' (where the tax to be paid depends on the interaction of a profit and a non-profit measure) raise the issue of how they must be accounted for. Does Section 29 apply simply because one of the measures referred to in the tax legislation is based on taxable profits, or must a determination be made based on an assessment of which measure is most likely to influence the actual amount of tax to be incurred by the entity? Alternatively, should the tax charge be bifurcated between the component based on profits and the component based on another measure, with the former accounted as an income tax and the other as a levy under Section 21? This section considers one such arrangement seen in practice as described at 3.1.4 below.

3.1.4 Tax is based on revenues, unless a profit measure gives a lower result

As businesses have increasingly operated across international boundaries, national governments have sought to evolve their tax systems to ensure that the profit of a multinational group is taxed in the countries in which it creates value. As a result, individual governments are introducing taxes based primarily on measures of revenue earned in their jurisdiction by these businesses such as the Digital Services Tax (DST) introduced in the UK. For example, the tax might be levied on revenues above a certain threshold, or an entity might be permitted to elect to be taxed on its profits from that activity if it has a presence in the jurisdiction and it can show that a measure based on profits would give rise to a lower liability.

This is shown in the following Illustration.

Illustration 3-1: Tax based on revenues, unless a profit measure gives a lower result

A government introduces a tax on the revenues of certain digital businesses. A charge of 2% is levied on the digital revenues earned from customers in that country above an annual threshold. Where the local revenues received in connection with digital services activities exceed the annual threshold, the entity must submit DST returns to the local tax authority and will have to pay DST. No tax is payable for revenues up to the annual threshold.

Because the entities subject to this tax often have little or no physical presence in the country in question, DST normally applies at the rate of 2% on local digital services revenues above the annual threshold. However, an entity can elect to calculate its tax liability using an alternative basis. The alternative basis gives rise to a lower DST liability for entities making a loss or operating at a low margin on their local digital services activity.

This election is voluntary, applies for one year, and entities must make or renew the election at the time they submit their tax return for the period they wish to calculate their DST liability using the alternative method. Under the alternative basis, the DST is calculated by reference to the operating margin of the local digital services activity at a rate of 80% of that margin. In cases where the local digital services activity is loss making and the alternative basis is being applied, no DST needs to be paid on revenues attributable to that activity, but at the same time no relief is given in respect of those losses. That is, the DST is set at zero for the current period, but no losses are carried forward or back into other accounting periods.

How should entities account for this tax?

How we see it

In these circumstances we believe that this type of arrangement must be treated wholly as a non-income tax outside the scope of Section 29. In our view, it would not be appropriate to account for the tax as a non-income tax in those years when tax is paid on digital services revenues, and as an income tax when an election is taken to apply the alternative basis, using a measure of profit. It would also be inappropriate to try to bifurcate the tax between a component based on revenue and a component based on the alternative profit measure regardless of whether the election is taken. Such bifurcation is only effective where the tax liability is the higher of one measure or another.

The nature of the arrangement in the Illustration 3-1 above, in both design and operation, is a revenue-based tax that would fall outside the scope of Section 29. The tax is designed to achieve a higher level of tax for entities that do not have a physical presence in the country in which revenues are generated; and in most cases it is this basis that will determine the amount of tax payable. The election to apply the alternative basis represents a relief for those particular entities with a low operating margin in the local jurisdiction (for example because they have a physical presence, employ staff or have other activities that would attract a liability to local taxes). In the Illustration above, only if the entity's operating margin were below 2.5% ($2\% \div 0.8$) would the alternative basis give rise to a lower charge than the levy on revenue.

Governments are also co-operating internationally to establish ways to ensure that the profits of multinational groups are taxed appropriately. An example of such international co-operation and the accounting challenges it presents is discussed in 3.7 below.

3.2 Withholding and similar taxes

As discussed at 3.1 above, Section 29 includes in its scope those taxes, such as withholding taxes, which are payable by a subsidiary, associate or joint arrangement on distributions to the reporting entity. [FRS 102 Appendix I]. FRS 102 also sets specific requirements in relation to withholding taxes on income from entities other than a subsidiary, associate or joint venture.

The rationale for the treatment as income taxes of taxes payable by a subsidiary, associate or joint arrangement on distributions to the investor is discussed further at 8.1 below. Essentially, however, the reason for considering withholding taxes within the scope of income tax accounting derives from the accounting treatment of the investments themselves. The accounting treatment for such investments - whether by consolidation or the equity method - results in the investor recognising profit that may be taxed twice: once as it is earned by the investee entity concerned, and again as that entity distributes the profit as dividends to the investor. Section 29 ensures that the financial statements reflect both tax consequences consistently.

Accounting for income tax withheld on outgoing and incoming dividends is discussed in 8.1 below.

3.2.1 Withholding taxes on royalty payments

Governments often require deduction of tax at source on payments other than dividends, particularly when such payments are made to entities outside the home country of the paying entity, for example in respect of royalties. As discussed at 3.1 above, the determination of whether such withholding taxes are in scope of Section 29 requires the entity to consider whether the taxes are based on a measure of taxable profits.

Illustration 3-2: Withholding taxes on royalty payments

Entity A is domiciled in Country X. Entity A develops and sells software licences to customers in the telecommunications industry. Entity A receives revenue in the form of royalties from licences. The royalties are determined as a fixed percentage of revenue. Entity A has a customer in Country Z from which it receives royalties. The royalties are paid by the customer net of withholding taxes determined as per regulations applicable in Country Z.

In Country Z, a tax is charged on entities that do not have a sufficient presence in Country Z to be required to register a business (branch) in Country Z and to be liable to pay local income tax.

Taxable profit for Entity A's income tax return in its home country (Country X) includes the gross amount of the royalty income (i.e., the amount invoiced by Entity A to the customer in Country Z). The withholding tax on royalties that is paid in Country Z is, however, deductible against income taxes payable in Country X.

How should Entity A account for the tax withheld by the customer in Country Z?

How we see it

In fact patterns similar to that above, the withholding tax is normally treated as a non-income tax outside the scope of Section 29 as the tax is based on the royalty amount invoiced to the customer rather than based on taxable profits. Consequently, the withholding tax is accounted for as an operating expense.

However, in limited circumstances there may be a combination of other factors that are sufficiently distinctive to result in a judgement that such a withholding tax is an income tax within the scope of Section 29, in a particular jurisdiction. Such factors may include, for example, the fact that Entity A receives a foreign tax credit for tax paid in Country Z that reduces its income tax liability in Country X and because the gross amount of royalty income is equal to the net profit earned by Entity A from this activity in Country Z.

Even if the withholding tax is determined not to be in scope of Section 29, it might give rise to timing differences in relation to Entity A's own tax return in its home jurisdiction, for example where the withholding tax incurred is not deductible until a later period. Such timing differences would be in scope of Section 29.

3.3 Investment tax credits

Investment tax credits are not defined in FRS 102, can take different forms and be subject to different terms. Sometimes a tax credit is given as a deductible expense in computing the entity's tax liability, and sometimes as a deduction from the tax liability, rather than as a deductible expense. In some cases, the value of the credit is chargeable to corporation tax and in others it is not. Entitlement to investment tax credits can be determined in a variety of ways. Some investment tax credits may relate to direct investment in property, plant and equipment. Other entities may receive investment tax credits relating to research and development or other specific activities. Some credits may be realisable only through a reduction in current or future corporation tax payable, while others may be settled directly in cash if the entity is loss-making or otherwise does not have sufficient corporation tax payable to offset the credit within a certain period. Access to the credit may be limited according to the total of all taxes paid including employment taxes (such as PAYE and NIC) and VAT, in addition to corporation tax. There may be other conditions associated with receiving the investment tax credit, for example with respect to the conduct and continuing activities of the entity, and the credit may become repayable if ongoing conditions are not met.

Section 24 *Government Grants* excludes from its scope government assistance that is either provided by way of a reduction in taxable income, or determined or limited according to an entity's income tax liability, citing investment tax credits as an example and then stating that taxes based on income are required to be accounted for under Section 29. [FRS 102.24.3]. This implies that those investment tax credits that are excluded from the scope of Section 24 must be accounted for as income tax. However, if government assistance is described as an investment tax credit, but it is neither determined or limited by the entity's income tax liability nor provided in the form of an income tax deduction, such assistance must be accounted for as a government grant under Section 24 (see Chapter 26 at 3.1.5).

This raises the question as to how an entity should assess whether a particular investment tax credit gives rise to assistance in the form of benefits that are available in determining taxable profit or loss, or are determined or limited on the basis of income tax liability and, therefore, whether Section 24 or Section 29 must be applied. [FRS 102.24.3].

How we see it

In our view, the determination of which section to apply to a particular investment tax credit (Section 29 or Section 24) is a matter of judgement and all facts and circumstances relating to the specific incentive need to be considered in assessing the substance of the arrangement.

The following factors will often be relevant, but this list of factors must not be considered exhaustive, and entities may identify other factors which they consider to be more important than those listed below.

Feature of credit	Indicator of Section 29 treatment (income tax)	Indicator of Section 24 treatment (grant)
Method of realisation	Only available as a reduction in income taxes payable (i.e., benefit is forfeited if there are insufficient income taxes payable). However, the longer the period allowed for carrying forward unused credits, the less relevant this indicator becomes.	Directly settled in cash where there are insufficient taxable profits to allow credit to be fully offset, or available for set off against payroll taxes, VAT or amounts owed to government other than income taxes payable.
Number of conditions not related to tax position (e.g. minimum employment, ongoing use of purchased assets)	None or few.	Many.
Restrictions as to nature of expenditure required to receive the grant	Broad criteria encompassing many different types of qualifying expenditure.	Highly specific.
Tax status of grant income	Not taxable.	Taxable.

Illustration 3-3 below describes accounting analysis of a scenario wherein eligible entities are entitled to a type of investment tax credit. The illustration below might be helpful in assessing other investment tax credit schemes governments may implement from time to time.

Illustration 3-3: Research and development expenditure credit (RDEC)

Eligible entities in certain jurisdictions might be entitled to an investment tax credit known as the RDEC (sometimes referred to colloquially as the 'above-the-line' tax credit). Features of the tax credit relevant to an accounting analysis might include the following:

- Entities are generally entitled to a gross credit of 10% of qualifying R&D expenditure (with some entities entitled to a higher rate).
- The gross credit is treated as taxable income.
- The available credit is first set against the entity's corporation tax liability for the current period.
- The amount of any remaining credit (net of corporation tax) is 'capped' by reference to employment expenditure (for example measured by reference to the entity's PAYE and NIC liabilities).
- Any remaining credit (net of corporation tax and the employment costs cap) can be carried back or carried forward to reduce the entity's corporation tax liability for certain earlier and later periods, or ceded by way of group relief.
- Any unrecovered excess can be offset against the entity's other outstanding tax liabilities (e.g. PAYE and NIC).

And

- Any amount not recovered in any of the ways listed above is recoverable in cash from the tax authority.

Should the RDEC credit be treated as a government grant or an element of income tax?

How we see it

In our view, analysis of these features by reference to the criteria set out above leads us to conclude that the RDEC credit is more appropriately regarded as a government grant. In particular, the benefits of the tax credit are capable of being realised in cash where there is insufficient corporation tax capacity; the tax credit relates to specific qualifying expenditure; and the grant income is determined on a pre-tax basis and is itself taxable.

Such an analysis requires a thorough understanding of the rules applying to the particular relief. Other seemingly similar reliefs must be treated as income taxes under Section 29 if, for example, the relief is not itself taxable; the relief could only be recovered by offset against other liabilities to corporation tax; or, where there is a cash payment alternative, the expected cash inflow approximates more closely to the value of the tax benefit rather than to the value of the expenditure incurred.

Where a tax credit is determined to be in the nature of an income tax, an entity will need to determine whether the related benefit is more appropriately accounted for as a discrete tax asset akin to a tax loss, or as a deduction in respect of a specific asset and therefore akin to accelerated capital allowances (see 6.3 below).

How we see it

In most cases, in our view, it will generally be more appropriate to treat a tax credit that is accounted for as income tax as a discrete tax asset akin to a tax loss. As a result, the recoverability of any amounts that are unused and available for carry forward to future years would be assessed in accordance with the criteria discussed at 6.2 below.

3.4 Interest and penalties

UK tax law (and that of other jurisdictions) provides for interest and/or penalties to be paid on late payments of tax. This raises the question of whether such penalties fall within the scope of Section 29. The answer can have consequences not only for the presentation of interest and penalties in the income statement; but also for the timing of recognition and on the measurement of amounts recognised. If such penalties and interest fall within the scope of Section 29, they are presented as part of tax expense and measured in accordance with the requirements of this section. Where uncertainty exists as to whether interest and penalties will be applied by the tax authorities, an entity must consider the effect of uncertain tax positions as discussed at 5.2 below. If interest and penalties do not fall within the scope of Section 29, they must be included in profit before tax, with recognition and measurement determined in accordance with other accounting requirements, most likely to be Section 21.

How we see it

In our view, in the absence of specific guidance in FRS 102 on recognition and measurement of interest and penalties on income tax, an entity may apply the hierarchy provided in Section 10 *Accounting Policies, Estimates and Errors* and accordingly, consider the guidance applied under IFRS.

In September 2017, the IFRS IC considered whether interest and penalties related to income taxes are in scope of IAS 12. The observations made by the IFRS IC in its discussion, that would be helpful to FRS 102 reporters, are described below:

- (a) The determination of whether Section 29 or Section 21 must be applied is not a simple accounting policy choice. Instead, the nature of the particular amount payable or receivable for interest and penalties, how it is calculated and whether this meets the definition of an income tax are relevant to making an appropriate judgement. If Section 29 is determined to apply, then the entity recognises and measures any current tax and deferred tax on that basis. If an entity does not apply Section 29 to interest and penalties, then it applies Section 21 to those amounts.
- (b) Paragraph 26 of Section 29 requires an entity to disclose the major components of tax expense (income) and paragraph 14 of Section 21 require a reconciliation of the carrying amount of a class of provisions at the beginning and end of the reporting period as well as various other pieces of information. Accordingly, regardless of whether an entity applies Section 29 or Section 21 when accounting for interest and penalties related to income taxes, the entity would disclose information about that interest and those penalties if it is material.

And

- (c) Paragraph 6 of Section 8 *Notes to the Financial Statements* requires disclosure of the judgements that management has made in the process of applying the entity's accounting policies and that have the most significant effect on the amounts recognised in the financial statements.

How we see it

In our view, the judgement of whether Section 29 or Section 21 applies must be determined on a tax-by-tax basis. The observations made by the IFRS IC as described above, are clear that this is not an accounting policy choice whereby an entity has 'free rein' to choose the section that is applied. Instead, an entity would make a determination of the nature of the particular interest and penalties in question based on its understanding of the operation of the specific tax law and the way in which the charge or credit is calculated.

The following factors might also be relevant in determining whether an item is in scope of Section 29, although we believe that no particular order must be applied and that no single factor is conclusive:

- Whether there is a predominant local consensus in evidence or specific guidance issued locally by regulators as to the nature of interest and penalties applied to a specific tax in the relevant tax jurisdiction, leading to a predominant practice of accounting under FRS 102 for these as income tax or not. Where a treatment may not otherwise be clear, entities often refer to local practice in determining whether a tax is an income tax; whether legislation has been substantively enacted; and in the treatment of investment tax credits. Determining whether interest and penalties are part of income tax requires careful consideration of the local legislation and hence entities would usually defer to local consensus where it exists. Since the judgement depends on the circumstances of the tax laws in a particular country, it must be accepted that an international group could encounter different conclusions in relation to interest and penalties arising in different jurisdictions. In particular, we would normally not expect a conclusion based on local consensus to be reversed in a subsequent consolidation by an overseas parent.

- Whether the amounts are clearly identifiable as 'interest' or as 'penalty' making it more appropriate to not account for these as income tax. Does the tax legislation have specific rules and requirements that allow an entity to identify the amounts that are to be regarded as 'interest' and as 'penalties'? That is, if an entity pays a single lump sum to settle existing tax positions, it would only identify interest and penalty components to the extent that communications from the tax authorities and/or tax legislation allow the entity to identify such components. An entity would not bifurcate such a single payment to identify notional interest and penalty amounts as this would be too judgemental, but rather account for the whole as an income tax.
- The degree to which an entity believes it is certain that interest and penalties will be applied. A certain payment of interest for example may indicate it being a financing expense rather than an income tax. In some cases, an entity might decide to wait until a tax enquiry is concluded before settling an expected obligation. In others, the entity could be confident of recovering an overpayment of tax, with interest added to the expected refund. In these circumstances, it could be argued that interest and penalties result from an entity's conscious decision not to pay taxes due earlier or to secure the later receipt of interest. Hence, those interest and penalties might be regarded as not directly related to taxable income, but rather the result of the entity's financing decisions.
- Whether the amount is based on net taxable profit, indicating it is an income tax. As noted in 3.1 above, Section 29 only applies to income taxes, which are based on 'taxable profits'. However, in many jurisdictions income tax legislation contains elements that, when looked at in isolation, are not strictly based on a notion of taxable profits. Examples include tax exempt amounts, deductibility caps and super-deductions for certain eligible expenditure. As a practical matter it is normally not considered helpful or necessary to account for such elements as a separate unit of account, unless not doing so would significantly misrepresent the underlying substance of the arrangements.
- Whether the interest rate applied by the tax authorities reflects current market assessments of the time value of money, indicating it being a financing expense rather than income tax. If the applied rate clearly reflects the time value of money, it must be treated as interest. If the rate is largely punitive, the interest must be considered together with penalties. However, it would not be sensible to attempt to identify a notional time value component as this would be too judgemental.

Where the amounts involved are material, it will be appropriate for the entity to consider whether the judgements made and the amounts involved must be disclosed in accordance with the requirements of Section 8 (see Chapter 6 at section 7.3).

3.5 Effectively tax-free entities

Certain classes of entity (for example, in the UK, pension funds and certain partnerships) are exempt from income tax, and accordingly have no transactions within the scope of Section 29.

However, a more typical, and more complex, situation is that tax legislation has the effect that certain classes of entities, whilst not formally designated as 'tax-free' in law, are nevertheless exempt from tax provided that they meet certain conditions that, in practice, they are almost certain to meet. Examples in the UK are certain investment vehicles that pay no tax, provided that they distribute all, or a minimum percentage, of their earnings to investors.

Accounting for the tax affairs of such entities raises a number of challenges, as discussed further at 7.5 below.

3.6 Discontinued operations – interaction with Section 5

Section 5 *Statement of Comprehensive Income and Income Statement* requires the post-tax results of discontinued operations to be shown separately on the face of the statement of comprehensive income (and any separate income statement presenting the components of profit or loss). This is discussed further in Chapter 6.

The definitions of income tax, tax expense and taxable profit in Section 29 (see Appendix A) do not distinguish between the results of continuing and discontinued operations, or the tax on those results. Thus, Section 29 applies not only to the tax income or expense on continuing operations, but also to any tax income or expense relating to the results of discontinued operations.

3.7 International tax reform – Pillar Two model rules

The Organisation for Economic Co-operation and Development (OECD)/G20 Inclusive Framework on Base Erosion and Profit Shifting (BEPS) addresses the tax challenges arising from the digitalisation of the global economy. To restore confidence in the international tax system and with the aim that profits are taxed where economic activities take place and value is created, the Inclusive Framework on BEPS proposes two “pillars”:

- Pillar One applies to multinational enterprises (MNEs) with global turnover above EUR20 billion and profitability (i.e., profit before tax/revenue) above 10%.
- Pillar Two applies to MNEs with consolidated revenue in excess of EUR750 million.

The Pillar Two Global anti-Base Erosion rules (GloBE Rules or Pillar Two model Rules) represent the first substantial overhaul of the international tax rules in almost a century. The GloBE Rules introduce four new taxing mechanisms under which MNEs would pay a minimum level of tax (Minimum Tax):

- The Subject to Tax Rule is a tax treaty-based rule that generally proposes a Minimum Tax on certain cross-border intercompany transactions that otherwise are not subject to a minimum level of tax.
- The Income Inclusion Rule (IIR).
- The Under Taxed Payments Rule (UTPR).
- The Qualified Domestic Minimum Top-up Tax (QDMT).

The new taxing mechanisms can impose a Minimum Tax on the income arising in each jurisdiction in which an MNE operates. The IIR, UTPR and QDMT do so by imposing a Top-up Tax in a jurisdiction whenever the effective tax rate (ETR), determined on a jurisdictional basis under the GloBE Rules, is below a 15% minimum rate (Minimum Rate). The GloBE Rules set out the mechanics for determining which entity (or entities) in an MNE Group (i.e., a group in which the ultimate parent entity has, directly or indirectly, at least one foreign subsidiary or a permanent establishment) would apply the IIR, the UTPR, and/or the QDMT, and the portion of Minimum Tax that is charged to each relevant entity. While the framework for the GloBE Rules is global, the GloBE Rules are being implemented through legislation enacted in jurisdictions that adopt the rules.

The GloBE Rules raise a number of accounting questions, in particular, whether the Minimum Tax is an income tax within the scope of Section 29 and, if so, when and how entities must account for the new tax.

The GloBE Rules are complex and contain complicated terminology that is not discussed in detail in this publication. The OECD has published GloBE model Rules, GloBE model Rules Commentary, and GloBE model Rules Examples, which can be found on their website.²³⁷ In addition, the OECD has published a summary, fact sheets, frequently asked questions, and press releases that provide additional information on the GloBE Rules. EY has published an executive summary and discussion of GloBE model Rules, Commentary and Examples, which provide helpful context and further explanation of the GloBE Rules.²³⁸ There remain numerous areas of uncertainty in the application of the GloBE Rules that require additional interpretive guidance.

3.7.1 The GloBE Rules

The OECD notes that “The GloBE Rules apply a system of Top-up Taxes - that is, an IIR and a UTPR - that brings the total amount of taxes paid on an MNE’s Excess Profit in a jurisdiction up to the Minimum Rate. This Top-up Tax does not operate as a typical direct tax on income of an Entity. Rather it applies to the Excess Profits calculated on a jurisdictional basis and only applies to the extent those profits are subject to tax in a given year below the Minimum Rate. Rather than a typical direct tax on income, the tax imposed under the GloBE Rules is closer in design to an international alternative minimum tax, that uses standardised base and tax calculation mechanics to identify pools of low-taxed income within an MNE Group and imposes a co-ordinated tax charge that brings the Group’s ETR on that income in each jurisdiction up to the Minimum Rate.”²³⁹

²³⁷ OECD website, www.oecd.org, (accessed on 30 September 2022).

3.7.1.A Applying five step process to the GloBE Rules

At the simplest level, the GloBE Rules impose a Top-up Tax that is calculated and applied at a jurisdictional level involving five steps: 1) identify MNE Groups in scope of the GloBE Rules; 2) determine GloBE income or loss for each constituent entity; 3) determine adjusted covered taxes; 4) compute GloBE ETR and Top-up Tax; and 5) determine the entities liable to pay taxes under the IIR, UTPR and/or QDMT. These elements are shown in Illustration 3-4 below.

Illustration 3-4: Application of GloBE Rules

The diagram below sets out the holding structure and location of the members of the ABC Group and illustrates the application of GloBE Rules.

Entities A, B1 and B2 have a GloBE ETR above the 15% Minimum Rate, but Entity C1 and Entity C2 are located in a low-tax jurisdiction with a GloBE ETR below 15%. Only Country Y has enacted an IIR.

Step 1: Identify MNE groups in scope of the GloBE Rules

Entity A, located in Country X, is the ultimate parent entity (UPE) of the consolidated group (ABC Group). ABC Group has determined it is an MNE Group in scope of the GloBE Rules. Accordingly, ABC Group has identified its constituent entities and their locations according to the diagram above. As Countries X and Z have not enacted GloBE Rules, any Top-up Taxes due by the entities located in those jurisdictions will be payable by entities in Country Y to the tax authority in Country Y (see Step 5).

Step 2: Determine GloBE income or loss for each constituent entity

ABC Group has determined GloBE income for each constituent entity in the MNE Group based on the group financial accounting net income of each constituent entity adjusted to the GloBE tax base. Only the results for C1 and C2 are given in this example, as they operate in a low-tax jurisdiction. Assume GloBE income is CU600 for C1 and CU1,800 for C2.

Step 3: Determine adjusted covered taxes

ABC Group has determined adjusted covered taxes for each constituent entity in the MNE Group based on group financial accounting tax expense/benefit adjusted to the GloBE covered taxes. Assume adjusted covered taxes are CU30 for Entity C1 and CU240 for Entity C2.

Step 4: Compute GloBE ETR and Top-up Tax

The GloBE ETR of the constituent entities located in Country Z is $(CU30 + CU240) \div (CU600 + CU1,800) = 11.25\%$ and thus, the Top-up Tax rate is 3.75% (i.e., minimum rate of 15% less GloBE ETR of 11.25%). The Excess Profit (amount of profit upon which the Top-up Tax is levied) is assumed to be equal to GloBE income, so the Top-up Tax is $(CU600 + CU1,800) \times 3.75\% = CU90$. The example assumes the Group does not have any substance-based income exclusion (i.e., exclusion of a fixed return for substantive activities within a jurisdiction from the application of the GloBE Rules).

Step 5: Determine the entities liable for payment of the Top-up Tax

In applying the IIR, a parent entity pays its allocable share of the Top-up Tax with respect to a low-taxed constituent entity. The IIR operates on a top-down approach, starting with the UPE. If the UPE is not located in a jurisdiction that has enacted an IIR, the highest parent entity in the ownership chain that is located in a jurisdiction that has enacted an IIR pays its allocable share of the Top-up Tax. (Note: an exception to the top-down approach applies in split-ownership situations).

In this example, only Country Y has enacted an IIR and thus, the intermediate parent Entities B1 and B2 are required to pay any Top-up Taxes. Entity B1 is liable for 100% of any Top-up Tax attributable to its wholly-owned subsidiary C1 and 20% of the Top-up Tax for C2, as a result of its 20% indirect shareholding interest in C2. Entity B2 is liable for 100% of any Top-up Tax attributable to its wholly-owned subsidiary C2.

As Entity B2 is liable for 100% of any Top-up Tax of C2, Entity B1's allocable share (i.e., 20%) of C2's Top-up Tax due to its indirect interest in C2 via B2 would result in double-taxation. To avoid double taxation, Entity B1 reduces its Top-up Tax attributable to its indirect ownership in C2 that is paid by B2.

In summary, Entity B1 pays Top-up Tax of CU22.5, calculated as follows: Entity C1: CU22.5 (i.e., $3.75\% \times \text{CU}600$), plus Entity C2: CU13.5 (20% of $3.75\% \times \text{CU}1,800$), less CU13.5 paid by Entity B2. Entity B2 pays Top-up Tax of CU67.5, calculated as follows: Entity C2: CU67.5 (i.e., $3.75\% \times \text{CU}1,800$).

This simple example demonstrates the application of only an IIR. In practice, if a UTPR and QDMT are enacted with an IIR, an MNE Group would first calculate the Top-up Tax under QDMT, then apply the IIR to capture residual Top-up Tax not included in the QDMT, and finally apply the UTPR to capture residual Top-up Tax not included in the IIR.

3.7.2 Multinational Top-up Tax – undertaxed profits rule

The UK government introduced the Multinational Top-up Tax and Domestic Top-up Tax in Finance (No.2) Act 2023²⁴⁰. These taxes are the UK's adoption of the GloBE rules. There are two elements to the legislation:

- The multinational top-up tax (MTUT)
- And

- The domestic top-up tax (DTT)

and both apply to large MNEs for accounting periods beginning on or after 31 December 2023.

This measure extends those taxes to give effect to the undertaxed profits rule (UTPR). The UTPR is effective for accounting periods beginning on or after 31 December 2024.

3.7.3 Accounting for Pillar Two income tax

Stakeholders had raised concerns regarding potential implications for income tax accounting resulting from the implementation of the Pillar Two model rules. To address those concerns, in July 2023, the FRC amended FRS 102 by issuing *Amendments to FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland and FRS 101 Reduced Disclosure Framework International tax reform - Pillar Two model rules*. The amendments are based on similar amendments made to IAS 12 in *International Tax Reform–Pillar Two Model Rules (Amendments to IAS 12)*. [FRS 102.BC.B29.21]. The Amendments introduced:

- A mandatory temporary exception to the accounting for deferred taxes arising from the implementation of the Pillar Two model rules. See 3.7.3.A and 3.7.3.B below.
- Disclosure requirements for affected entities to help users of the financial statements better understand an entity's exposure to Pillar Two income taxes arising from that legislation. See 3.7.3.C and 3.7.3.D below.
- An exemption for qualifying entities from certain disclosures. See 3.7.3.F below

3.7.3.A Mandatory exception from recognition and measurement of deferred taxes

The amendments clarify that income taxes as defined in Section 29 include income taxes arising from tax law that implements the Pillar Two model Rules published by the OECD, including tax law that implements qualified domestic minimum top-up taxes described in those rules. Such tax legislation, and the income taxes arising from it, are referred to as 'Pillar Two legislation' and 'Pillar Two income taxes', respectively.

Section 29 now includes an exception from recognising and disclosing deferred tax assets and liabilities related to Pillar Two income taxes. [FRS 102.29.2B]. Further, Section 29 also includes an exception from taking into account the effects of Pillar Two legislation when measuring deferred tax assets and liabilities. [FRS 102.29.12A]. Accordingly, an entity is not permitted to remeasure deferred taxes, recognised under domestic tax regimes applying Section 29, to reflect Pillar Two income taxes it expects to pay because the exception applies to deferred tax assets and liabilities related to such income taxes.

²⁴⁰ [Multinational Top-up Tax – undertaxed profits rule - GOV.UK](#)

3.7.3.B Pillar Two taxes and the scope of Section 29

FRS 102 does not provide specific clarifications about when a Pillar Two top-up tax is considered to be an income tax in the scope of Section 29, nor to require entities to treat all top-up taxes as if they were income taxes. An entity is, therefore, required to apply judgement in determining which top-up taxes it considers to be income taxes in the entity's circumstances.

The scope of Section 29 is described in paragraph 29.2 and Appendix I defines income taxes. Considering the scope of Section 29 and definition of income taxes, Pillar Two top-up tax is considered as an income tax and, therefore, within the scope of Section 29 in the consolidated financial statements of the ultimate parent entity of a group subject to the Pillar Two model rules. However, this would not necessarily hold true in the financial statements of intermediate parents and subsidiaries of an MNE group that is subject to the Pillar Two model rules. For example, when those subsidiaries pay top-up taxes under the UTPR mechanism in respect of a fellow subsidiary's profits and the top-up tax allocation is not necessarily in direct proportion to the intermediate parent's ownership interest in its investees, the top up tax might not be in scope of Section 29.

How we see it

We believe that intermediate parents and subsidiaries of an MNE group need to apply judgement in determining whether in a particular situation a top-up tax meets the definition of an income tax in Section 29 and, where appropriate, disclose those judgements in accordance with Section 8.

If an entity concludes that Pillar Two taxes are outside the scope of Section 29, it needs to consider disclosing information, applying Section 8, that is helpful to other users of the financial statements in understanding how such Pillar Two taxes have been accounted for.

3.7.3.C Disclosure of the entity in scope of Pillar Two legislation

Where an entity is, or expects to be, within the scope of Pillar Two legislation, it shall disclose that fact. [FRS 102.29.28(a)].

3.7.3.D Disclosure of current tax

As discussed in 12.1 below, an entity is required to disclose separately major components of tax expense (income). Such components of tax expense (income) may include current tax expense (income) related to Pillar Two income taxes, as this helps users of financial statements understand the relative level of Pillar Two income taxes. [FRS 102.29.26(g)].

3.7.3.E Disclosure in periods after (substantive) enactment but before the legislation is effective

Although the requirements described in this section are not relevant to MNEs in the UK as the Pillar Two legislation is already effective, for MNEs in jurisdictions where the legislation is (substantively) enacted but not yet effective, FRS 102 requires disclosure of known or reasonably estimable information that helps users of financial statements understand the entity's exposure arising from Pillar Two income taxes. [FRS 102.29.28(b)]. To comply with these requirements, an entity is required to disclose qualitative and quantitative information about its exposure to Pillar Two income taxes at the end of the reporting period. [FRS 102.29.29]. For example, an entity could disclose the following information to meet these requirements:

- Qualitative information such as how an entity is affected by Pillar Two legislation and the main jurisdictions in which exposures to Pillar Two income taxes might exist.
- Quantitative information such as:
 - An indication of the proportion of an entity's profits that risks being subject to Pillar Two income taxes and the average effective tax rate applicable to those profits.
 - An indication of how the entity's overall effective tax rate would have changed if Pillar Two legislation had been effective.

The above information does not need to reflect all the specific requirements of the legislation and could be provided in the form of an indicative range. Further, to the extent information is not known or reasonably estimable, an entity is instead required to disclose a statement to that effect and information about its progress in assessing its exposure. [FRS 102.29.29].

3.7.3.F Exemptions for qualifying entities

As part of introducing disclosure requirements related to Pillar Two legislation, exemption from the requirements in paragraphs 29.28(b) and 29.29, as discussed above, was introduced for qualifying entities, provided that equivalent disclosures are included in the consolidated financial statements in which the entity is included. [FRS 102.1.12]. This approach was considered by the FRC to provide a proportionate solution to users' information needs because top-up taxes are determined on a group basis and therefore users of financial statements will be able to obtain useful information about exposure to paying top-up tax from the consolidated financial statements of the group in which the entity is included. [FRS 102.BC.B1.7].

4 Value Added Tax ('VAT') and other similar sales taxes

FRS 102 requires turnover shown in profit or loss to exclude VAT and other similar taxes on taxable outputs, and VAT imputed under the flat rate²⁴¹ VAT scheme. Similarly, recoverable VAT and other similar recoverable sales taxes must be excluded from expenses. Irrecoverable VAT that can be allocated to fixed assets and to other items disclosed separately in the financial statements must be included in the cost of those items where it is practical to do so, and the effect is material. [FRS 102.29.20].

²⁴¹ The flat rate scheme provides for a simplified calculation of VAT payable by entities with VAT taxable turnover below a certain threshold. Customers are still charged the applicable rate of VAT. Entities do not reclaim input VAT but instead account for output VAT using a fixed percentage according to category of business.

5 Current tax

Current tax is the amount of income taxes payable (refundable) in respect of the taxable profit (tax loss) for the current period or a past reporting period. *[FRS 102 Appendix I]*.

An entity recognises a current tax liability for tax payable on taxable profits for the current and past periods. If the amount already paid for the current and past periods exceeds the tax payable for those periods, the excess must be recognised as a current tax asset. *[FRS 102.29.3]*. An entity must recognise a current tax asset relating to a tax loss that can be carried back to recover tax paid in a previous period. *[FRS 102.29.4]*. Tax losses that can be carried forward to future periods are reflected in deferred tax.

Current tax must be measured at the amount expected to be paid to or recovered from the tax authorities by reference to tax rates and laws that have been enacted or substantively enacted by the reporting date (see 5.1 below). *[FRS 102.29.5]*.

Current tax assets or liabilities must not be discounted. *[FRS 102.29.17]*.

5.1 Enacted or substantively enacted tax legislation

Extract from Section 29

29.5 An entity shall measure a current tax liability (asset) at the amount of tax it expects to pay (recover) using the tax rates and laws that have been enacted or substantively enacted by the reporting date.

Section 29 requires current tax to be measured using tax rates or laws enacted 'or substantively enacted' at the end of the reporting period. *[FRS 102.29.5]*. Section 29 gives no guidance as to how this requirement is to be interpreted in different jurisdictions. In most jurisdictions, however, a consensus has emerged as to the meaning of 'substantive enactment' for that jurisdiction. Nevertheless, apparently similar legislative processes in different jurisdictions may give rise to different treatments under Section 29. For example, in most jurisdictions, tax legislation requires the formal approval of the head of state in order to become law. However, in some jurisdictions, the head of state has real executive power (and could potentially not approve the legislation), whereas in others the head of state has a more ceremonial role (and cannot practically fail to approve the legislation).

The general principle tends to be that in those jurisdictions where the head of state has executive power, legislation is not substantively enacted until approved by the head of state. Where, however, the head of state's powers are more ceremonial, substantive enactment is generally regarded as occurring at the stage of the legislative process where no further amendment is possible.

How we see it

Substantive enactment is a legal process rather than a concept for the purposes of applying the requirements in Section 29. As such the substantive enactment of new tax legislation is specific to a jurisdiction, its legislative processes and traditions. The assessment for a particular new tax must be consistent with the assessment applied to other taxes in that jurisdiction. Accordingly, the determination of the stage of the legislative process that constitutes substantive enactment would not vary because of the complexity of the tax legislation in question. Further, although it might appear that the legislative process in one jurisdiction is similar to that of another, it is possible that the conclusion as to the stage of the process that constitutes substantive enactment is different.

5.1.1 UK

In the UK, legislation is enacted when it receives Royal Assent. For the purposes of FRS 102, tax rates are regarded as substantively enacted when the remaining stages of the enactment process historically have not affected the outcome and are unlikely to do so.

A UK tax rate is regarded as having been substantively enacted if it is included in either:

- A Bill that has been passed by the House of Commons and is awaiting only passage through the House of Lords and Royal Assent.
- Or
- A resolution having statutory effect that has been passed under the Provisional Collection of Taxes Act 1968. Such a resolution is used to collect taxes at a new rate before that rate has been enacted.

FRS 102 notes that, in practice, corporation tax rates are now set a year ahead to avoid having to invoke the Provisional Collection of Taxes Act for the quarterly payment system. [FRS 102 Appendix I].

Section 29 refers to 'tax rates *and laws*' [emphasis added] that have been enacted or substantively enacted, [FRS 102.29.5], whereas the definition of 'substantively enacted' in the Glossary in Appendix I to FRS 102 refers only to 'tax rates'. In our view, there is no intentional distinction, and the guidance in the glossary must be applied equally to determining whether tax laws or tax rates have been substantively enacted.

5.1.2 Republic of Ireland

FRS 102 provides that a Republic of Ireland tax rate can be regarded as having been substantively enacted if it is included in a Bill that has been passed by the Dáil. [FRS 102 Appendix I].

5.1.3 Changes to tax rates and laws enacted before the reporting date

Current tax must be measured at the amount expected to be paid to or recovered from the tax authorities by reference to tax rates and laws that have been enacted, or substantively enacted, by the reporting date. [FRS 102.29.5]. Accordingly, the effects of changes in tax rates and laws on current tax balances are required to be recognised in the period in which the legislation is substantively enacted.

Where the effect of changes in the applicable tax rates compared to the previous accounting period are material, an explanation of those effects is required to be provided in the notes to the financial statements (see 11.1 below). [FRS 102.29.27(d)].

5.1.4 Changes to tax rates and laws enacted after the reporting date

The requirement for substantive enactment by the end of the reporting period is clear. Section 32 *Events after the End of the Reporting Period* identifies the enactment or announcement of a change in tax rates and laws after the end of the reporting period as an example of a non-adjusting event. [FRS 102.32.11(h)]. For example, an entity with a reporting period ending on 31 December issuing its financial statements on 20 April the following year would measure its current tax assets and liabilities by reference to tax rates and laws enacted or substantively enacted as at 31 December even if these had changed significantly before 20 April and even if those changes had retrospective effect. However, in these circumstances the entity would have to disclose the nature of those changes and provide an estimate of the financial effect of those changes if the impact is expected to be significant (see 12.3 below). [FRS 102.32.10].

5.2 Uncertain tax treatments

The terms 'uncertain tax treatment' or 'uncertain tax position' refer to an item, the tax treatment of which is either unclear or is a matter of unresolved dispute between the reporting entity and the relevant tax authority. Uncertain tax treatments generally occur where there is an uncertainty as to the meaning of the law, or to the applicability of the law to a particular transaction, or both. For example, the tax legislation may allow the deduction of research and development expenditure, but there may be disagreement as to whether a specific item of expenditure falls within the definition of eligible research and development costs in the legislation. In some cases, it may not be clear how tax law applies to a particular transaction, if at all. In other situations, a tax return might have been submitted to the tax authorities, who are yet to opine on the treatment of certain transactions, or may even have indicated that they disagree with the entity's interpretation of tax law.

Estimating the outcome of an uncertain tax treatment is often one of the most complex and subjective areas in accounting for tax. Historically, however, Section 29 did not specifically address the measurement of uncertain tax treatments, which are therefore implicitly subject to the general requirement of the standard to measure current tax and deferred tax at the amount expected to be paid or recovered, [FRS 102.29.5], (see 5.1 above).

As part of the Periodic Review 2024, amendments were made to FRS 102 to explain how to account for uncertain tax treatments. The requirements are based on those in IFRIC 23 *Uncertainty over Income Tax Treatments*. [FRS 102.BC.B29.22]. However, the amendments do not include any of IFRIC 23's application guidance. Applying the hierarchy allowed in paragraphs 10.4 to 10.6, the narrative below considers the guidance in IFRIC 23 to explain the application of certain aspects of the new requirements.

In order to support entities that could only apply the new requirements with the use of hindsight, the amendment allows an entity to apply the new requirements with the cumulative effect of doing so recognised at the beginning of the reporting period in which the amendments are first applied.

[FRS 102.BC.B29.22]

5.2.1 Requirements introduced in the periodic review

The amendments clarify how to apply the recognition and measurement requirements of Section 29 when there is uncertainty over income tax treatments. The new requirements are applied after determining the relevant taxable profit (tax loss), tax bases, unused tax losses, unused tax credits and tax rates for the entity.

As described in paragraph 5 of IFRIC 23, the amendments are useful in addressing the following issues:

- a) Whether an entity must consider uncertain tax treatments separately.
- b) The assumptions an entity must make about the examination of tax treatments by taxation authorities.
- c) How an entity must determine taxable profit (tax loss), unused tax losses, unused tax credits and tax rates.
- d) How an entity must consider changes in facts and circumstances.

The newly introduced requirements would apply to interest and penalties where an entity concludes interest and penalties are in scope of Section 29. See 3.5 above for guidance on accounting for interest and penalties.

In determining 'uncertainty', the entity only needs to consider whether a particular tax treatment is probable, rather than highly likely or certain, to be accepted by the taxation authorities. As explained in 5.2.4 below, if the entity determines it is probable that a tax treatment will be accepted, then it must measure its income taxes on that basis. Only if the entity believes the likelihood of acceptance is not probable, would there be an uncertain tax treatment to be addressed by the new requirement reproduced above.

5.2.1.A Business combinations

Section 19 *Business Combinations and Goodwill* clarifies that an acquirer applies Section 29 to recognise and measure a deferred tax asset or liability arising from the assets acquired and liabilities assumed in a business combination. [FRS 102.19.15A]. However, Section 19 does not specifically address recognition and measurement of current tax assets and liabilities acquired in a business combination.

How we see it

Section 19 suggests that current tax assets and liabilities acquired in a business combination must be measured at fair value which differs from the subsequent measurement required by paragraph 29.17B.

Entities must consider whether to apply Section 19's fair value requirements to current tax assets and liabilities recognised in a business combination (which may result in possible Day 2 gains and losses when they are remeasured under Section 29) or the uncertain tax treatment requirements in Section 29.

We believe either approach is acceptable, provided that it is applied consistently (see also Chapter 22 at section 3.7.2.A).

5.2.2 Whether to consider uncertain tax treatments separately (unit of account)

Extract from Section 29

29.17A It may be unclear how tax law applies to a particular transaction or circumstance. An entity shall determine whether to consider each uncertain tax treatment separately or together with one or more other uncertain tax treatments based on which approach better predicts the resolution of the uncertainty.

A key input to any estimation process is to determine the unit of account. In practice this might be an entire tax computation, individual uncertain treatments, or a group of related uncertain treatments (e.g., all positions in a particular tax jurisdiction, or all positions of a similar nature or relating to the same interpretation of tax legislation).

The amendment requires that entities determine whether to consider tax uncertainties separately or grouped together on the basis of which approach provides a better prediction of the resolution of the uncertainty. [FRS 102.29.17A]. For example, if the entity prepares and supports tax treatments as a group or if the entity expects the taxation authority to assess items collectively during a tax examination, it would be appropriate to consider those uncertain tax treatments together. This implies that material tax uncertainties would be considered separately if there was no such inter-dependency as to the expected outcome.

5.2.3 Assumptions about the examination of tax treatments ('detection risk')

'Detection risk' is a term commonly used to refer to the likelihood that the taxation authority examines the amounts reported to it by the entity. The requirements clarify that in cases where the taxation authority has a right to examine amounts reported to it, the entity must assume that it will do so; and that when it performs those examinations, the taxation authority will have full knowledge of all related information. [FRS 102.29.17B]. This position is consistent with the requirement in paragraph 29.5 to measure the amount of a tax liability or asset based on the tax laws that have been enacted or substantively enacted at the reporting date. [FRS 102.29.5].

5.2.4 Determining the effect of an uncertain tax treatment or group of tax treatments

The amendments have established the following requirements regarding measurement of the effect of an uncertain tax treatments or group of tax treatments. [FRS 102.29.17B].

Extract from Section 29

- 29.17B An entity shall assume that a taxation authority will examine amounts it has a right to examine and have full knowledge of all related information when making those examinations. If an entity concludes:
- (a) it is probable that the taxation authority will accept an uncertain tax treatment, the entity shall determine the taxable profit (tax loss), tax bases, unused tax losses, unused tax credits or tax rates consistently with the tax treatment used or planned to be used in its income tax filings.
 - (b) it is not probable that the taxation authority will accept an uncertain tax treatment, the entity shall reflect the effect of uncertainty in determining the related taxable profit (tax loss), tax bases, unused tax losses, unused tax credits or tax rates by using either of the following methods, depending on which better predicts the resolution of the uncertainty:
 - (i) the most likely amount - the single most likely amount in a range of possible outcomes.
 - (ii) the expected value - the sum of the probability-weighted amounts in a range of possible outcomes.

How we see it

FRS 102 defines probable as 'more likely than not'. If the entity concludes that it is probable that the taxation authority will accept the tax treatment used or planned to be used in its tax filings, the entity determines its tax position on that basis. This is consistent with the requirement that current tax is measured at the amount expected to be paid or recovered from the taxation authorities, and that deferred tax is measured using the rates and tax laws expected to apply to the reversal of the timing difference. This means that all likelihoods beyond the probable threshold are treated in the same way. That is, any likelihood of acceptance by the taxation authority beyond 50% is treated in the same way as 100% likelihood of acceptance. Therefore, it is not necessary to distinguish between outcomes that are probable, highly likely or virtually certain.

If the entity concludes that acceptance of the uncertain tax treatment by the taxation authorities is not probable, it must apply one of the following two methods for reflecting the effect of uncertainty in its estimate of the amount it expects to pay or recover from the tax authorities: [FRS 102.29.17B].

- (a) The most likely amount - the single most likely amount in a range of possible outcomes.

Or

- (b) The expected value - the sum of the probability-weighted amounts in a range of possible outcomes.

The entity is required to use the method that it expects to better predict the resolution of the uncertainty. The most likely amount may be an appropriate method if the outcomes are binary (for example where an item might be deductible or disallowed for tax purposes) or are concentrated on one value (that is clearly more likely than the alternative outcomes). The expected value method may be more appropriate if possible outcomes are widely dispersed with low individual probabilities (where a number of individual but related uncertainties have been combined into a single unit of account).

Two illustrations that are based on the examples in IFRIC 23 are presented below. These examples portray hypothetical situations illustrating how an entity might apply some of the requirements in IFRIC 23 based on the limited facts presented as follows:

- When multiple tax treatments are considered together and when the expected value is used to reflect the effect of uncertainty (Illustration 5-1 below).
- When current and deferred tax is recognised and measured based on the most likely amount for a tax base that reflects the effect of uncertainty (Illustration 5-2 below).

In both of these examples, the entities have assumed that the taxation authority will examine the amounts reported to it and have full knowledge of all related information, as discussed in section 5.2.3 above.

Illustration 5-1: Multiple treatments, expected value method

Entity A's tax filing included a number of deductions related to transfer pricing. The taxation authority in its jurisdiction may challenge those tax treatments. Entity A notes that the taxation authority's decision on one transfer pricing matter would affect, or be affected by, the other transfer pricing matters. Entity A determines that the tax treatments must be considered together, because this better predicts the resolution of the uncertainty. At the end of the reporting period, Entity A concludes, on the basis of an evaluation of all available evidence, that it is not probable that the taxation authority will accept all of the tax treatments.

Entity A estimates the probabilities of what would be added to its taxable profits (in GBP), as follows:

	Estimated additional amount	Probability	Expected value
Outcome 1	-	5%	-
Outcome 2	200	5%	10
Outcome 3	400	20%	80
Outcome 4	600	20%	120
Outcome 5	800	30%	240
Outcome 6	1,000	20%	200
		100%	650

Outcome 5 is the most likely outcome, with a probability of 30%. However, entity A observes that the possible outcomes are neither binary nor concentrated in one value. Entity A therefore concludes that the expected value (£650) better predicts the resolution of the uncertainty. Accordingly, Entity A adds £650 to its estimate of the taxable profit, in addition to the amount reported in its tax filing.

Illustration 5-2: Treatment relates to deferred tax asset, most likely amount is applied

Entity B acquired a separately identifiable intangible asset for £100 that has an estimated useful life of 10 years and is, therefore, amortised over a period of 10 years in accordance with Section 18. Tax law specifies that the full amount of the intangible asset is deductible for tax purposes, but the timing of deductibility (i.e., period of amortisation under the tax law) is uncertain. Entity B has no similar intangible assets and it therefore decides that this tax treatment must be considered separately.

Entity B deducted £100 (the cost of the intangible asset) in calculating its taxable profit for Year 1 in its income tax filing. At the end of Year 1, Entity B concludes, on the basis of an evaluation of all available evidence (e.g., information about disputes for other entities' similar transactions), that it is not probable that this tax treatment will be accepted. Entity B estimates that the most likely deduction that the tax authority will accept for Year 1 is £25, and that the most likely amount better predicts the resolution of the tax uncertainty. Accordingly, at the end of Year 1, Entity B recognises and measures a deferred tax liability based on the cumulative amount of timing difference between the expense recognised in the profit or loss and the most likely amount of the tax deduction (i.e., the difference between £10 and £25).

Entity B also concludes that it must make similar judgements in estimating the most likely amount for its current tax for Year 1, because this uncertain tax treatment also affects the taxable profit. Entity B recognises and measures its current tax liability, based on the taxable profit that includes £75, in addition to the amount in its tax filing. (This is because Entity B deducted £100 from taxable income for Year 1, whereas the most likely amount is now estimated to be £25. Entity B concluded that it is not probable that the tax treatment used in its filing will be accepted.)

As emphasised in paragraph 12 of IFRIC 23, where the uncertain tax treatment affects both current tax and deferred tax, an entity is required to make estimates and judgements on a consistent basis.

5.2.5 Consideration of changes in facts and circumstances

Extract from Section 29

29.17C An entity shall reflect the effect of a change in relevant facts and circumstances, or of new information, on its judgements or estimates about uncertain tax treatments as a change in accounting estimate in accordance with paragraphs 10.14D to 10.18.

Facts and circumstances that an entity has considered in the measurement and recognition of uncertain tax treatments could change or new information might become available. In such a situation, the entity must reflect the effect of a change in relevant facts and circumstances, or of new information, on its judgements or estimates about uncertain tax treatments as a change in accounting estimate in accordance with paragraphs 10.14D to 10.18. [FRS 102.29.17C].

The Application Guidance in IFRIC 23 includes examples of changes that can result in the reassessment of judgements or estimates previously made by the entity:

- (a) The results of examinations or actions taken by a taxation authority. For example:
 - (i) Agreement or disagreement by the taxation authority with the tax treatment or a similar tax treatment used by the entity.
 - (ii) Information that the taxation authority has agreed or disagreed with a similar tax treatment used by another entity.
 - (iii) Information about the amount received or paid to settle a similar tax treatment.
- (b) Changes in rules established by the taxation authority.
- (c) The expiry of a taxation authority's right to examine or re-examine a tax treatment.

An uncertain tax treatment is resolved when the treatment is accepted or rejected by the taxation authorities. Such an acceptance or rejection of an uncertain tax treatment by the taxation authorities could be implicit or explicit. In practice, a taxation authority might accept a tax return without commenting explicitly on any particular treatment in it. Alternatively, it might raise some questions in an examination of a tax return. Unless such clearance is provided explicitly, it is not always clear if a taxation authority has accepted an uncertain tax treatment.

An entity may consider the following to determine whether a taxation authority has implicitly or explicitly accepted an uncertain tax treatment:

- The tax treatment is explicitly mentioned in a report issued by the taxation authorities following an examination.
- The treatment was specifically discussed with the taxation authorities (e.g., during an on-site examination) and the taxation authorities verbally agreed with the approach.

Or

- The treatment was specifically highlighted in the income tax filings, but not subsequently queried by the taxation authorities in their examination.

The Application Guidance in IFRIC 23 further clarifies that the absence of agreement or disagreement by a taxation authority with a tax treatment, in isolation, is unlikely to constitute a change in facts and circumstances or new information that affects the judgements and estimates required by IFRIC 23. [IFRIC 23.A3]. In such situations, an entity has to consider other available facts and circumstances before concluding that a reassessment of the judgements and estimates is required.

The amendments do not provide any specific guidance to deal with situations where facts and circumstances change or new information becomes available after the end of the reporting period.

How we see it

We believe where facts and circumstances change or new information becomes available after the end of the reporting period, the entity must apply the guidance in Section 32 to determine whether the change is an adjusting or non-adjusting event.

5.2.6 Disclosures relating to uncertain tax treatments

The amendments have not introduced additional disclosures relating to uncertain tax treatments. IFRIC 23 also did not propose any new disclosures. However, Application Guidance included in IFRIC 23 would be helpful to consider whether the following existing disclosure requirements are relevant in these circumstances:

- To disclose judgements made in the process of applying the entity's accounting policies in accordance with Section 8 *Notes to the Financial Statements* (see Chapter 6 at 7.3). [FRS 102.8.6]. Such judgements might include the decision to consider uncertain tax treatments separately or together (see 5.2.2 above); the determination as to whether acceptance by the taxation authorities is probable; or the decision to apply the 'most likely amount' or 'expected value' method to reflect uncertainty (see 5.2.5 above).
- To disclose information about the assumptions and estimates made in determining taxable profit or loss, unused tax losses, unused tax credits and tax rates in accordance with Section 8 regarding the sources of significant estimation uncertainty (see Chapter 6 at 7.4). [FRS 102.8.7].

As discussed in 5.2.4 above, if an entity determines that it is probable that a taxation authority will accept the tax treatment used or planned to be used in its tax filings, it determines its tax position on that basis. [FRS 102.29.17B].

As noted above, uncertain tax treatments generally relate to the estimate of the entity's liability for current tax. Any amount recognised for an uncertain current tax treatment must therefore normally be classified as current tax, and presented (or disclosed) accordingly (see Chapter 6 at 4).

However, there are circumstances where an uncertain tax treatment affects the timing difference and therefore relates to deferred tax, as shown in Illustration 5-2 in 5.2.4 above. For example, there might be doubt as to the amount of tax depreciation that can be deducted in respect of a particular asset, which in turn could lead to a permanent difference impacting recognition of deferred taxes.

5.2.7 Presentation of liabilities or assets for uncertain tax treatments

The Periodic Review 2024 did not introduce any requirements regarding the presentation of uncertain tax liabilities or assets in the statement of financial position and therefore an entity must follow the guidance set out at 10.1 below.

Where an entity selects an adapted format for the statement of financial position, it is clear it would present uncertain tax liabilities as current tax liabilities or deferred tax liabilities and uncertain tax assets as current tax assets or deferred tax assets as appropriate, rather than in a separate line item such as provisions.

[FRS 102.4.2A(o), FRS 102.4.2A(p)]. This is reinforced by observations made by the IFRS IC²⁴² when it discussed the presentation of uncertain tax liabilities when applying IAS 1 *Presentation of Financial Statements*, the requirements of which are substantially the same in this respect as those of FRS 102.

5.2.8 First time application

On initial application, entities can choose either to apply the requirements addressed in 5.2.1 to 5.2.7 above with full retrospective effect or by recognising their cumulative effect as an adjustment to the opening balance of retained earnings (or other component of equity, as appropriate) and without restating comparative information. The full retrospective approach can only be applied if that is possible without the use of hindsight. [FRS 102.1.68].

5.3 'Prior year adjustments' of previously presented tax balances and expense (income)

The determination of the tax liability for all but the most straightforward entities is a complex process. It may be several years after the end of a reporting period before the tax liability for that period is finally agreed with the tax authorities and settled. Therefore, the tax liability initially recorded at the end of the reporting period to which it relates is no more than a best estimate at that time, which will typically require revision in subsequent periods until the liability is finally settled.

Tax practitioners often refer to such revisions as 'prior year adjustments' and regard them as part of the overall tax charge or credit for the current reporting period whatever their nature. However, for financial reporting purposes, the normal provisions of Section 10 (see Chapter 9) apply to tax balances and the related expense (income). Therefore, the nature of any revision to a previously stated tax balance must be considered to determine whether the revision represents:

- A correction of a material prior period error (in which case it must be accounted for retrospectively, with a restatement of comparative amounts and, where applicable, the opening balance of assets, liabilities and equity at the start of the earliest period presented). [FRS 102.10.21]

242 [IFRS - IFRIC Update September 2019](#)

Or

- A refinement in the current period of an estimate made in a previous period (in which case it must be accounted for in the current period). [FRS 102.10.17].

In some cases the distinction is clear. If, for example, the entity used an incorrect substantively enacted tax rate (see 5.1 above) to calculate the liability in a previous period, the correction of that rate would – subject to materiality – be a prior year adjustment. A more difficult area is the treatment of accounting changes to reflect the resolution of uncertain tax positions (see 5.2 above). These are in practice almost always treated as measurement adjustments in the current period. However, a view could be taken that the eventual denial, or acceptance, by the tax authorities of a position taken by the taxpayer indicates that one or other party (or both of them) were previously taking an erroneous view of the tax law. As with other aspects of accounting for uncertain tax positions, this is an area where considerable judgement may be required. Section 29 suggests that entities would reassess judgements and estimates in response to a change in facts and circumstances, and that the financial effect must be recognised as a change in estimate under Section 32, i.e., in the period of change (see section 5.2.5 above). [FRS 102.29.17C].

6 Deferred tax – Recognition

Deferred tax is defined as the amount of income tax payable (recoverable) in respect of the taxable profit (tax loss) for future reporting periods as a result of past transactions or events. *[FRS 102 Appendix I]*.

Section 29 requires deferred tax to be recognised in respect of all timing differences at the reporting date (see 6.1 below), subject to further considerations relating to: *[FRS 102.29.6]*

- Unrelieved losses and other deferred tax assets (see 6.2 below).
- Tax allowances for the cost of a fixed asset when all the conditions for retaining the tax allowances have been met (see 6.3 below).

And

- Certain timing differences relating to the recognition in the financial statements of income and expenses from a subsidiary, associate, branch or an interest in a joint venture (see 6.4 below).

Deferred tax is not recognised in respect of permanent differences (see 6.5 below). *[FRS 102.29.10]*.

However, the general 'timing differences approach' of Section 29 does not apply when an entity recognises assets and liabilities in a business combination accounted for by applying the purchase method. In this situation, deferred tax is recognised in respect of the differences between the values recognised in the financial statements for the acquired assets (other than goodwill) and liabilities in the business combination accounted for by applying the purchase method and the respective amounts that can be deducted or otherwise assessed for tax purposes. *[FRS 102.29.11]*. Accounting for deferred tax in a business combination is discussed at 6.6 below.

6.1 Recognition of deferred tax on timing differences

Extract from Section 29

- 29.6 Deferred tax shall be recognised in respect of all **timing differences** at the reporting date, except as otherwise required by paragraphs 29.7 to 29.9 and 29.11A below. Timing differences are differences between taxable profits and **total comprehensive income** as stated in the **financial statements** that arise from the inclusion of **income** and **expenses** in tax assessments in periods different from those in which they are recognised in financial statements.

Timing differences are differences between taxable profits and total comprehensive income as stated in the financial statements that arise from the inclusion of income and expenses in tax assessments in periods different from those in which they are recognised in financial statements. *[FRS 102.29.6]*. Timing differences are said to originate in the accounting period in which they first arise or increase and to reverse in subsequent periods when they decrease, eventually to zero.

6.1.1 Examples of timing differences

A deferred tax liability arises when:

- Expenditure is recognised for tax purposes before it is recognised in the financial statements.
- Or
- Income is recognised in the financial statements before it is recognised for tax purposes.

A deferred tax asset arises when:

- Expenditure is recognised for tax purposes after it is recognised in the financial statements.
- Or
- Income is recognised in the financial statements after it is recognised for tax purposes.

Examples of timing differences include:

- Tax deductions for the cost of property, plant and equipment are recorded before (deferred tax liability) or after (deferred tax asset) the related depreciation is charged to the income statement.
- Tax deductions are available in respect of provisions only when payments are made to settle the obligation. In this case, a deferred tax asset will arise when the entity recognises a provision for that obligation and the associated expense in the financial statements.

- Expenditure is capitalised in the financial statements, whereas tax deductions are obtained as the expenditure is incurred. Examples include capitalised borrowing costs and capitalised development costs. Another example arises when an entity accounts for tax-deductible loan issue costs (as a reduction in the recorded net proceeds as required by Section 11 *Basic Financial Instruments* and Section 12 *Other Financial Instruments Issues*), whereas tax relief is given when the issue costs are incurred. In these cases a deferred tax liability will be recognised, because the tax deduction is received before the related cost is depreciated or amortised through the income statement.
- Pensions liabilities are recognised in the financial statements but are allowed for tax purposes only when contributions are paid at a later date. This will give rise to a deferred tax asset when a pension liability is recorded and a deferred tax liability to the extent that a pension asset is recognised.
- Revaluations of property, plant and equipment give rise to a gain or loss recorded through other comprehensive income, but do not attract a tax charge until the asset is sold. In this example, a deferred tax liability would be recognised. A similar situation arises when an asset is sold and the related taxable gain is rolled over into the cost of a replacement asset.
- In consolidated financial statements, the elimination of intra-group profits in inventory will give rise to a timing difference (deferred tax asset) because tax is payable on the inter-company transfer before the sale of the related inventory (by the transferee subsidiary) is recognised in the consolidated income statement.
- Where a tax loss or tax credit is not relieved against past or current taxable profits but can be carried forward to reduce future taxable profits, a timing difference arises. Subject to the additional criteria set out at 6.2 below, this may give rise to a deferred tax asset being recognised.

And

- Where an entity holds an investment in a subsidiary, associate or joint venture and additional tax is payable when dividends are remitted to the investor, a timing difference will arise (deferred tax liability) to the extent that profits are recognised in the consolidated income statement before the related earnings are distributed by the investee. In certain circumstances the related timing difference is not required to be recognised, as explained at 6.4 below.

6.1.2 Deferred taxable gains

The UK (and some overseas) tax regime mitigates the tax impact of some asset disposals by allowing some or all of the tax liability on such transactions to be deferred, typically subject to conditions, such as a requirement to reinvest the proceeds from the sale of the asset disposed of in a similar 'replacement' asset. The postponement of tax payments achieved in this way may either be for a fixed period (often called holdover relief) or for an indefinite period until the new asset is disposed of without the sale proceeds being again reinvested in another replacement asset (often called rollover relief).

The ability to postpone tax payments in this way does not affect the recognition of deferred tax. The original disposal transaction gives rise to a timing difference on which deferred tax must be recognised.

6.2 Restrictions on the recognition of deferred tax assets

Embodied in the definition of an asset in FRS 102 is the expectation of an inflow of future economic benefits. [FRS 102 Appendix I]. A deferred tax asset can be recovered only out of future *taxable* profit. Evidence of future accounting profit is not necessarily evidence of future taxable profit (for example, if significant tax deductions or credits not reflected in the accounting profit are likely to be claimed by the entity in the relevant future periods).

Section 29 restricts the recognition of unrelieved tax losses and other deferred tax assets to the extent that it is probable that they will be recovered against the reversal of deferred tax liabilities or other future taxable profits. Section 29 observes that the very existence of unrelieved tax losses is strong evidence that there may not be other future taxable profits against which the losses will be relieved. [FRS 102.29.7].

How we see it

In our view, this does not represent a prohibition on their recognition in the absence of recognised deferred tax liabilities; just that more convincing evidence of the existence of profits is required.

6.2.1 Recovery against the reversal of recognised deferred tax liabilities

As stated above, recovery against the reversal of recognised deferred tax liabilities must be considered when recognising unrelieved tax losses and other deferred tax assets. Accordingly, before considering forecasts of future taxable profits, an entity must look to the deferred tax liabilities it has already recognised at the reporting date as a source of probable taxable profits that would allow any deferred tax assets to be utilised. IAS 12, on which this part of FRS 102 is based, explains it is 'probable' that there will be sufficient taxable profit if a deductible temporary difference can be offset against a taxable temporary difference relating to the same tax authority and the same taxable entity which will reverse in the same period as the asset, or in a period into which a loss arising from the asset may be carried back or forward. In such circumstances, a deferred tax asset is recognised. [IAS 12.28].

Any deferred tax liability used as the basis for recognising a deferred tax asset must represent a future tax liability against which the future tax deduction represented by the deferred tax asset can actually be offset. For example, in a tax jurisdiction where revenue and capital items are treated separately for tax purposes, a deferred tax asset representing a capital loss cannot be recognised by reference to a deferred tax liability relating to PP&E against which the capital loss could never be offset in a tax return. There is no need at this stage to estimate the future taxable profits of the entity. If there are sufficient deferred tax liabilities to justify the recognition of a deferred tax asset, then the asset is recognised.

Where there are insufficient deferred tax liabilities relating to the same tax authority to offset a deferred tax asset, the entity must then look to the availability of future taxable profits.

6.2.2 The availability of future taxable profits

Section 29 does not provide specific guidance regarding the availability of future taxable profits. However, IAS 12 provides certain clarifications as discussed below:

- Estimates of future taxable profits are only required to justify the recoverability of deferred tax assets in excess of the amounts already 'matched' against deferred tax liabilities recognised at the reporting date in the manner described in 6.2.1 above. [IAS 12.29].
 - A deferred tax asset must be recognised to the extent that it is probable that in future periods there will be sufficient taxable profits: [IAS 12.29]
 - Relating to the same tax authority and same taxable entity and arising in the same period as the reversal of the difference or in a period into which a loss arising from the deferred tax asset may be carried back or forward.
- Or
- Tax planning opportunities are available that will create taxable profit in appropriate periods.

How we see it

In our view, any deferred tax liability or future taxable profit used as the basis for recognising a deferred tax asset must also represent a future tax liability against which the future tax deduction can actually be realised. For example, where revenue and capital items are treated separately for tax purposes, a deferred tax asset representing a capital loss cannot be recognised by reference to an expected taxable profit from revenue items, against which the capital loss could never be offset in a tax return.

As discussed above, where a deferred tax asset is recognised on the basis of expected future taxable profits and those taxable profits arise from trading activities, the 'quality' of those profits must be considered. For example, it might be appropriate to give more weight to (say) revenues from existing orders and contracts than to those from merely anticipated future trading. Where an entity expects to recover from a recent loss-making position, greater scepticism as to the speed of a recovery in profits would also be appropriate. In the context of determining expected future taxable profits, neither Section 29 nor IAS 12 prescribe or suggest a forecast period.

How we see it

In our view, it will generally not be appropriate to restrict the assumed availability of future taxable profit to an arbitrary future timeframe (e.g., 3 years, 5 years etc.) unless such a restriction is imposed because losses expire under tax law. For example, it may well be the case that a deferred tax asset recoverable in twenty years from profits from a currently existing long-term supply contract with a creditworthy customer may be more robust than one recoverable in one year from expected future trading by a start-up company.

To the extent that it is not probable that taxable profit will be available against which the unused tax losses, unused tax credits or other timing differences can be utilised, a deferred tax asset is not recognised. [FRS 102.29.7]. In the UK, it is also relevant to consider that unused tax losses can normally be carried forward indefinitely.

6.2.2.A Tax planning opportunities

'Tax planning opportunities' are actions that the entity would take in order to create or increase taxable income in a particular period before the expiry of a tax loss or tax credit carryforward. Examples of ways taxable profit may be created or increased are:

- Electing to have interest income taxed on either a received or receivable basis.
- Deferring the claim for certain deductions from taxable profit.
- Selling, and perhaps leasing back, assets that have appreciated but for which the tax base has not been adjusted to reflect such appreciation.
- Selling an asset that generates non-taxable income (such as, in some jurisdictions, a government bond) in order to purchase another investment that generates taxable income.

How we see it

In our view, the requirement to have regard to future tax planning opportunities applies only to the measurement of deferred tax assets. Where an entity recognises a deferred tax asset on the basis that it will be recovered through profits generated as a result of a tax planning strategy, the entity must:

- Be able to demonstrate that the strategy is one that it will undertake, not merely one that it could theoretically undertake.
- Measure any deferred tax asset recognised on the basis of a tax planning strategy net of any cost of implementing that strategy (measured, where applicable, on an after-tax basis).

And

- Expect to be in a net taxable profit position at the relevant time. Where the entity is expected to remain tax loss-making (such that the strategy effectively will simply reduce future tax losses), we believe that the strategy does not generally form the basis for recognising a deferred tax asset, except to the extent that it will create net future taxable profits.

6.2.2.B Future changes to tax rates and laws are ignored

The assessment as to the probable existence of future taxable profits, including the availability of tax planning opportunities, is based on those tax rates and laws that have been enacted or substantively enacted by the reporting date. [FRS 102.29.12]. As noted at 5.1 above and at 7 below, the use of enacted rates is applied very strictly. In particular, no account must be taken of changes to tax rates and laws that are announced or enacted after the reporting date, even if they will create a new tax planning opportunity or result in a deductible timing difference ceasing to be recoverable. Section 32 identifies the enactment or announcement of a change in tax rates and laws after the end of the reporting period as an example of a non-adjusting event. [FRS 102.32.11(h)]. Similarly, in assessing which tax planning opportunities 'are available', the entity can only consider its circumstances as they exist at the end of the reporting period, including the result of actions within the entity's control as at that date.

6.2.3 Reassessment of deferred tax assets

Section 29 does not provide any specific guidance on reassessment of deferred tax assets. However, IAS 12 provides the following guidance that might be helpful for an entity applying Section 29 in its assessment of whether to continue recognising deferred tax assets or recognise additional deferred tax assets that were previously unrecognised.

6.2.3.A Previously recognised assets

An entity must reduce the carrying amount of a deferred tax asset to the extent that it is no longer probable that sufficient taxable profit will be available to enable the asset to be recovered. Any such reduction must be reversed if it subsequently becomes probable that sufficient taxable profit will be available. [IAS 12.56].

6.2.3.B Previously unrecognised assets

An entity recognises a previously unrecognised deferred tax asset to the extent that it has become probable that sufficient taxable profit will be available to enable the asset to be recovered. For example, an improvement in trading conditions may make it more probable that the entity will be able to generate sufficient taxable profit in the future for the deferred tax asset to meet the recognition criteria. Special considerations apply when an entity re-appraises deferred tax assets of an acquired business at the date of the business combination or subsequently (see section 6.6.2 below). [IAS 12.37].

6.3 Capital allowances – when all conditions for their retention have been met

Section 29 requires deferred tax to be recognised on timing differences arising when the tax allowances for the cost of a fixed asset are accelerated (i.e., received before the depreciation of the asset is recognised in profit or loss) or decelerated (i.e., received after the depreciation of the asset is recognised in profit or loss). However, any recorded deferred tax must be reversed if and when all conditions for retaining the allowances have been met. [FRS 102.29.8].

A past example of a situation giving rise to such a reversal in the UK related to entities that had previously claimed industrial buildings allowances (IBAs) which ceased to be subject to clawback (or a balancing charge) if the asset had been held for 25 years. However, IBAs were phased out in the UK by 2012.

6.3.1 Treatment of assets brought into the UK tonnage tax regime

Companies subject to UK corporation tax, which operate qualifying vessels that are ‘strategically and commercially managed in the UK’, can take advantage of the tonnage tax regime. The tonnage tax regime differs from the main corporation tax system in a number of key respects, the most significant from an accounting point of view being that an entity in the tonnage tax regime is not assessed to tax on the basis of its reported profits from qualifying activities and does not receive capital allowances for the cost of its ships. Therefore, an entity’s operations within the tonnage tax regime are outside the scope of Section 29, because tonnage tax does not meet the definition of an income tax discussed at 3.1 above.

When an entity first enters the tonnage tax regime, not only does it cease to qualify for further capital allowances in relation to the vessels it held at the time of the change, but it is also exempt from any balancing charges on disposals of those vessels made while it is still in the tonnage tax regime. However, if the entity returns to the corporation tax system at a later date, there are rules which may cause this exposure to be reinstated. Membership of the tonnage tax regime is determined for a fixed period, albeit with a renewal option at the entity’s discretion; but HMRC also has the power in limited circumstances to withdraw an entity from the tonnage tax regime.

The question therefore arises as to whether an entity entering the tonnage tax regime should derecognise deferred tax balances related to its vessels on the basis that, ‘all conditions for retaining the tax allowances have been met’. [FRS 102.29.8].

How we see it

In our view it is appropriate for entities reporting under FRS 102 to continue the practice applied under previous UK GAAP and IFRS of derecognising the deferred tax balances related to assets brought into the tonnage tax regime unless there is evidence of a real possibility that the entity will become subject to the main corporation tax regime at a later date. Consideration must be given to the need to disclose (as a contingent liability) the financial consequences of a return to the main corporation tax system. An entity must not anticipate the effect of entering the tonnage tax regime before it is evident that the necessary clearances have been granted by the tax authorities.

6.4 Income or expenses from a subsidiary, associate, branch or joint venture

Entities are required to recognise deferred tax on timing differences that arise when income or expenses from a subsidiary, branch, associate or joint venture have been recognised in the financial statements and will be assessed to or allowed for tax in a future period, except where: [FRS 102.29.9]

- The reporting entity is able to control the reversal of the timing difference.
- And

- It is probable that the timing difference will not reverse in the foreseeable future.

Section 29 notes that such timing differences may arise where there are undistributed profits in a subsidiary, branch, associate or joint venture. [FRS 102.29.9]. For example, an entity may have recognised in its consolidated financial statements the profits of its subsidiaries or recognised in its consolidated income statement an amount in respect of its share of the earnings of its equity-accounted associates and joint ventures. In cases where the investee is required to deduct withholding tax on any distribution of those profits to its parent, there will be future tax consequences relating to those earnings that have been recognised in the entity's financial statements. Subject to the exception above, deferred tax must be recognised for such timing differences.

6.4.1 'Control' over reversal of timing differences

For this exception to apply, the investor must be able to control the reversal of the timing difference and not expect there to be a reversal in the foreseeable future. [FRS 102.29.9]. Section 29 does not discuss what is meant by 'control' in this context. However, IAS 12, in discussing the similar requirements, takes the following position:

- In respect of a subsidiary or a branch, the parent is able to control when and whether retained earnings are distributed. Therefore, no provision need be made for the tax consequences of distributing profits if the parent has determined that those profits will not be distributed in the foreseeable future. [IAS 12.40]
 - In the case of a joint venture, no amount is recorded for the tax consequences of distributing the share of profits recognised by the entity in its statement of comprehensive income to the extent that the joint venture agreement requires the consent of the entity before a dividend can be paid and the entity expects that it will not give such consent in the foreseeable future. [IAS 12.43]
- And
- In the case of an associate, however, the investor cannot usually control distribution policy. Therefore provision must be made for the tax consequences of the distribution of the share of profits recognised by the entity from its associate, except to the extent that there is a shareholders' agreement to the effect that those earnings will not be distributed in the foreseeable future. [IAS 12.42].

How we see it

In our view, an entity must consider the above criteria in determining whether it controls the reversal of such timing differences. Of course, if control is deemed to exist, but the entity expects its investee to make a distribution in the foreseeable future, any related tax consequences will have to be recognised at the reporting date.

6.5 Permanent differences

Extract from Section 29

29.10 Permanent differences arise because certain types of income and expenses are non-taxable or disallowable, or because certain tax charges or allowances are greater or smaller than the corresponding income or expense in the financial statements. Deferred tax shall not be recognised on permanent differences except for circumstances set out in paragraph 29.11.

Permanent differences are differences between an entity's taxable profits and its total comprehensive income as stated in the financial statements, other than timing differences. [FRS 102 Appendix I]. Permanent differences arise because certain types of income or expenses are non-taxable or disallowable, or because certain tax charges or allowances are greater than or smaller than the corresponding income or expense in the financial statements. [FRS 102.29.10]. These latter items are sometimes referred to as 'super-deductible' or 'partially-deductible' assets and liabilities. Examples of disallowable expenses might include certain penalties, fines and entertainment costs. Under Section 29, deferred tax is not recognised on permanent differences, except when an entity is accounting for assets and liabilities acquired in a business combination accounted for by applying the purchase method (see 6.6 below). [FRS 102.29.10].

A permanent difference might arise from the tax status of an asset (or liability) at the time of its initial recognition. For example, in the UK certain categories of building attract no tax deduction in respect of their use within the business, but are deductible only on a subsequent sale. Conversely, the tax deductions made available may exceed the actual expenditure incurred, such as in the case of certain companies engaged in North Sea exploration activities. A permanent difference might also arise when an asset is

transferred at book value from one member of a group to another, together with its tax history. In this case, the selling subsidiary derecognises the asset and any related deferred tax; but, in its own financial statements, the buying subsidiary recognises only the asset, despite the fact that the cost may be partially deductible for tax purposes.

In other cases, a permanent difference can be created as a result of changes in tax law subsequent to the original recognition of the asset, for example when the cost of an asset becomes deductible for tax purposes having previously been disallowed. Such changes can give rise to the recognition of deferred tax assets or liabilities under IFRS, but do not under Section 29, where the effect is recognised prospectively as timing differences arise.

In most cases, the application of this requirement for permanent differences is straightforward – either an item is deductible or assessable for tax, or it is not. However, certain items give rise to accounting income and expenditure of which some is assessable or deductible for tax, and some is not. Accounting for the deferred tax effects of such items can raise some issues of interpretation which particularly affect:

- Non-deductible assets subject to revaluation (see 6.5.1 below).
- And
- Partially deductible and super-deductible assets (see 6.5.2 below).

6.5.1 Non-deductible assets subject to revaluation

Where a non-deductible asset is acquired separately (i.e., not as part of a larger business combination), the difference between the original cost of the asset and the amount deductible for tax (i.e., zero) is a permanent difference on which no deferred tax is recognised. However, where a non-deductible asset is subsequently revalued, the revaluation would give rise to a timing difference as it results in the recognition of income which is expected to be taxed at a later date (either when the asset is used that generates taxable income or is sold resulting in taxable gain).

Further, as discussed at 7.4.2.B below, deferred tax related to a non-depreciable asset that is measured using the revaluation model in Section 17 *Property, Plant and Equipment* is measured using the tax rates and allowances that apply to the sale of the asset. [FRS 102.29.15].

The deferred tax impact where an asset is revalued is shown in Illustration 6-1 and Illustration 6-2 below.

Illustration 6-1: Revaluation of non-depreciable non-deductible asset

On 1 January 20X6 an entity paying tax on both revenue and capital profits at 20% acquires a non tax-deductible property for £2,000,000. Application of Section 17 results in no depreciation being charged on the property.

On 1 January 20X7 the entity revalues the property to £2,400,000. The revaluation of £400,000 is a timing difference giving rise to a deferred tax expense at 20% of £80,000. This tax expense would be recognised in other comprehensive income with the related revaluation gain (see 8 below).

Illustration 6-2: Revaluation of depreciable, non-deductible asset

On 1 January 20X6 an entity paying tax on revenue profits at 20% acquires a non-tax-deductible property for £2,000,000. The property is depreciated over 20 years at £100,000 per year to a residual value of zero. The entity's financial year ends on 31 December.

At 31 December 20X7, the carrying amount of the property is £1,800,000, and it is revalued upwards by £900,000 to its current market value of £2,700,000. As there is no change to the estimated residual value of zero, or to the expected life of the property, this will be depreciated over the next 18 years at £150,000 per year.

As stated above, subsequent revaluation of an asset gives rise to a timing difference. Accordingly, the revaluation in 20X7 gives rise to a timing difference of £900,000 resulting in a deferred tax charge of £180,000, at the tax rate of 20%, that is recognised in OCI (see 8 below) in the year ended 31 December 20X7. As the property is depreciated in future periods the £900,000 timing difference relating to the revaluation will reverse. However, £1,800,000 of the depreciation charged over a period of 18 years relates to the original cost which is not taxable.

How we see it

In our view, for the purposes of applying Section 29, £900,000 of depreciation charged in future periods must be considered as giving rise to a reversal of the timing difference created by the revaluation, and £1,800,000 must be considered as giving rise to a permanent difference.

For example, in 20X8, total depreciation is disaggregated as follows:

<i>Total depreciation</i>	<i>Permanent difference</i>	<i>Timing difference</i>
£	£	£
150,000	100,000	50,000

As the difference reverses in 20X8 the entity recognises deferred tax income of £10,000, representing the tax effect at 20% of the £50,000 depreciation relating to the revalued element of the property.

6.5.2 Partially deductible and super-deductible assets

The tax deductions for an asset are generally based on the cost of that asset to the legal entity that owns it. However, in some jurisdictions, certain categories of asset are deductible for tax but for an amount either less than the cost of the asset ('partially deductible') or more than the cost of the asset ('super-deductible'). In such cases the difference between the cost and the tax-deductible amount (whether lower or higher) is a permanent difference as defined in Section 29. Section 29 provides no specific guidance on the treatment of partially deductible and super-deductible assets. The issues raised by such assets are shown in Illustration 6-3 and Illustration 6-4 below.

Illustration 6-3: Partially deductible asset

An entity acquires an asset with a cost of £100,000, for which tax deductions of only £60,000 are available, in a transaction which is not a business combination. The asset is depreciated to a residual value of zero over 10 years, and qualifies for tax deductions of 20% per year over 5 years. In our view, in applying Section 29, the entity could analyse the annual depreciation of £10,000 per annum into a tax-deductible element of £6,000 and a non-deductible element of £4,000, reflecting the fact that only 60% of the cost of the asset is tax-deductible. Timing differences are then calculated by reference to the interaction of tax deductions claimed with the tax-deductible 'element' of the depreciation as set out below.

Year	Depreciation	40% non-deductible element	60% deductible element	Tax deductions	Cumulative timing difference
	a	b (40% of a)	c (60% of a)	d	c - d
1	10,000	4,000	6,000	12,000	6,000
2	10,000	4,000	6,000	12,000	12,000
3	10,000	4,000	6,000	12,000	18,000
4	10,000	4,000	6,000	12,000	24,000
5	10,000	4,000	6,000	12,000	30,000
6	10,000	4,000	6,000	-	24,000
7	10,000	4,000	6,000	-	18,000
8	10,000	4,000	6,000	-	12,000
9	10,000	4,000	6,000	-	6,000
10	10,000	4,000	6,000	-	-

If the entity pays tax at 30%, the amounts recorded for this transaction during year 1 (assuming that there are sufficient other taxable profits to absorb the tax loss created) would be as follows:

	£
Depreciation of asset	(10,000)
Current tax income ¹	3,600
Deferred tax charge ²	(1,800)
Net tax credit	1,800
Post tax depreciation	(8,200)

1 £100,000 [cost of asset] × 60% [deductible element] × 20% [tax depreciation rate] × 30% [tax rate]

2 £6,000 [timing difference] × 30% [tax rate] = £1,800 - brought forward deferred tax balance [nil] = £1,800

If this calculation is repeated for all 10 years, the following would be reported in the financial statements.

Year	Depreciation	Current tax credit	Deferred tax (charge)/credit	Total tax credit	Effective tax rate
	A	b	c	d (=b+c)	e (=d/a)
1	(10,000)	3,600	(1,800)	1,800	18%
2	(10,000)	3,600	(1,800)	1,800	18%
3	(10,000)	3,600	(1,800)	1,800	18%
4	(10,000)	3,600	(1,800)	1,800	18%
5	(10,000)	3,600	(1,800)	1,800	18%
6	(10,000)	-	1,800	1,800	18%
7	(10,000)	-	1,800	1,800	18%
8	(10,000)	-	1,800	1,800	18%
9	(10,000)	-	1,800	1,800	18%
10	(10,000)	-	1,800	1,800	18%

This methodology has the result that, throughout the life of the asset, a consistent tax credit is reported in each period. The effective tax rate in each period corresponds to the effective tax rate for the transaction as a whole - i.e. cost of £100,000 attracting total tax deductions of £18,000 (£60,000 at 30%), an overall rate of 18%.

How we see it

Whilst we believe that the approach shown above results in an appropriate effective tax rate in each period, it cannot be said to be required by Section 29 and other methodologies could well be appropriate, provided that they are applied consistently in similar circumstances.

Illustration 6-4: Super-deductible asset

The converse situation to that in Illustration 6-3 arises where tax authorities seek to encourage certain types of investment by giving tax allowances for an amount in excess of the expenditure actually incurred. Suppose that an entity invests £1 million in PP&E, for which tax deductions of £1.2 million are available, in a transaction which is not a business combination. The asset is depreciated to a residual value of zero over 10 years, and qualifies for five annual tax deductions of 20% of its deemed tax cost of £1,200,000.

The methodology we propose in Illustration 6-3 could be applied 'in reverse' - i.e., with the tax deductions, rather than the depreciation, of the asset being apportioned in the ratio 10:2 into a 'cost' element and a 'super deduction' element, and the timing difference calculated by reference to the 'cost' element as follows.

Year	Depreciation	Tax deduction	'Super deduction' element	Cost element	Cumulative timing difference
	a	b	c (=2/12 of b)	d (=10/12 of b)	a - d
1	100,000	240,000	40,000	200,000	100,000
2	100,000	240,000	40,000	200,000	200,000
3	100,000	240,000	40,000	200,000	300,000
4	100,000	240,000	40,000	200,000	400,000
5	100,000	240,000	40,000	200,000	500,000
6	100,000	-	-	-	400,000
7	100,000	-	-	-	300,000
8	100,000	-	-	-	200,000
9	100,000	-	-	-	100,000
10	100,000	-	-	-	-

If the entity pays tax at 30%, the amounts recorded for this transaction during year 1 (assuming that there are sufficient other taxable profits to absorb the tax loss created) would be as follows:

	£
Depreciation of asset	(100,000)
Current tax income ¹	72,000
Deferred tax charge ²	(30,000)
Net tax credit	42,000
Profit after tax	(58,000)

1 £1,200,000 [deemed tax cost of asset] × 20% [tax depreciation rate] × 30% [tax rate]

2 £100,000 [timing difference] × 30% [tax rate] = £30,000 - brought forward balance [nil] = £30,000.

If this calculation is repeated for all 10 years, the following would be reported in the financial statements.

Year	Depreciation	Current tax credit	Deferred tax (charge)/credit	Total tax credit	Effective tax rate
	a	b	c	d (=b+c)	e (=d/a)
1	(100,000)	72,000	(30,000)	42,000	42%
2	(100,000)	72,000	(30,000)	42,000	42%
3	(100,000)	72,000	(30,000)	42,000	42%
4	(100,000)	72,000	(30,000)	42,000	42%
5	(100,000)	72,000	(30,000)	42,000	42%
6	(100,000)	-	30,000	30,000	30%
7	(100,000)	-	30,000	30,000	30%
8	(100,000)	-	30,000	30,000	30%
9	(100,000)	-	30,000	30,000	30%
10	(100,000)	-	30,000	30,000	30%

This results in an effective 42% tax rate for this transaction being reported in years 1 to 5, and a rate of 30% in years 6 to 10, in contrast to the average effective rate of 36% for the transaction as a whole - i.e., cost of £1,000,000 attracting total tax deductions of £360,000 (£1,200,000 at 30%). This is because, in the case of a partially deductible asset as in Illustration 6-3 above, there is an accounting mechanism (i.e., depreciation) for allocating the non-deductible cost on a straight-line basis. However, in the present case of a super deductible asset there is no basis for spreading the £60,000 tax super-deductions, and these are therefore reflected as current tax income in the years in which they are claimed.

How we see it

Similar to Illustration 6-3 above, in our view, no single approach can be said to be required by FRS 102 and other methodologies could well be appropriate, provided that they are applied consistently in similar circumstances.

6.5.3 UK indexation allowance

UK tax legislation provides that when certain types of asset are disposed of the cost of the asset deducted in calculating any taxable gain on disposal may be increased by an 'indexation allowance' that is broadly intended to exclude from taxation any gains arising simply as a result of general price inflation.

On a strict interpretation of the definition of 'permanent difference', an indexation allowance is a permanent difference since it is effectively an item of expenditure that appears in taxable profit, but not in total comprehensive income.

How we see it

However, in our view - supported by long-standing practice under FRS 19 *Deferred tax* under which the same issue of interpretation would have arisen - it is more appropriate to deal with indexation allowance in the measurement of the related deferred tax liabilities (see 7.5 below).

6.6 Business combinations

Additional deferred tax arises on business combinations as a result of items such as:

- The application of Section 29 to the assets and liabilities of the acquired business in the consolidated financial statements, when it has not been applied in the separate financial statements of that business.
- Adjustments made to measure the assets and liabilities of the acquired business at fair value, with consequential changes in the temporary differences associated with those assets and liabilities.

Any deferred tax assets or liabilities on temporary differences that arise on a business combination affect the amount of goodwill or negative goodwill. [FRS 102.29.11].

6.6.1 Measurement and recognition of deferred tax in a business combination

Extract from Section 19

19.15A The acquirer shall recognise and measure a deferred tax asset or liability arising from the assets acquired and liabilities assumed in accordance with Section 29 Income Tax.

Section 19 generally requires the acquiree's identifiable assets and liabilities and a provision for certain contingent liabilities (those that satisfy the recognition criteria) to be measured at their fair values at the acquisition date (see Chapter 22). However, as an exception to this general principle, Section 19 requires an acquirer to recognise deferred tax asset and liability arising from the acquisition applying the principles in Section 29.

As discussed above, Section 29 follows a 'timing differences' approach that is different from the 'temporary differences approach' applied under IFRS. As an exception an entity is required to recognise deferred taxes on the differences between the values recognised for assets (other than goodwill) and liabilities acquired in a business combination accounted for applying the purchase method and the amounts at which those assets and liabilities will be assessed for tax (i.e., tax base of the asset or liability). [FRS 102.29.11].

This exception requires entities to account for deferred tax arising in a business combination accounted for applying the purchase method using the 'temporary differences' approach of IAS 12.

The accounting for deferred taxes arising from business combinations is largely consistent with the guidance in IAS 12 except for recognition of deferred taxes on goodwill. Whilst IAS 12 explicitly prohibits only the recognition of a deferred tax liability relating to the initial recognition of goodwill, [IAS 12.15(a)], Section 29 prohibits the recognition of both a deferred tax liability and a deferred tax asset on initial recognition of goodwill arising in a business combination. [FRS 102.29.11]. Accordingly, in the (albeit rare) situation where goodwill is tax deductible and the deductible amount exceeds the value recognised in the financial statements, no asset would be recognised under FRS 102 whereas a deductible temporary difference may qualify for recognition as a deferred tax asset under IAS 12. Deferred tax recognised in a business combination is reflected in the measurement of goodwill and not taken to total comprehensive income or equity. [FRS 102.29.11].

FRS 102 defines tax base as the amount that for an asset can be deducted for tax or for a liability will be assessed for tax. Accordingly, as explained in IAS 12, the tax base of an asset is the amount that will be deductible for tax purposes against any taxable economic benefits that will flow to an entity when it recovers the carrying amount of the asset. IAS 12 further explains that if those economic benefits will not be taxable, the tax base of the asset is equal to its carrying amount. [IAS 12.7]. The tax base of a liability is its carrying amount, less any amount that will be deductible for tax purposes in respect of that liability in future periods. In the case of revenue which is received in advance, the tax base of the resulting liability is its carrying amount, less any amount of the revenue that will not be taxable in future periods. [IAS 12.8].

As noted above, deferred tax recognised in a business combination is reflected in the measurement of goodwill. This requirement may lead to the creation of goodwill which, on a literal reading of Section 27 *Impairment of Assets*, would be required to be immediately impaired, as shown by Illustration 6-5 below.

Illustration 6-5: Apparent 'day one' impairment arising from recognition of deferred tax in a business combination

Entity A, which is taxed at 20%, acquires Entity B for £100m in a transaction that is a business combination. The fair values of the identifiable net assets of Entity B, and the amounts deductible for those net assets for tax purposes are as follows:

	Fair value £m	Tax deduction £m
Brand name	60	-
Other net assets	20	15
This will give rise to the following consolidation journal:		
	£m	£m
Goodwill (balance)	33	
Brand name	60	
Other net assets	20	
Deferred tax ¹		13
Cost of investment		100

1 20% of (£[60m + 20m] - £15m)

The fair value of the consolidated assets of the subsidiary (excluding deferred tax) and goodwill as presented in the financial statements is now £113m, but the cost of the subsidiary is only £100m. Clearly £13m of the goodwill arises solely from the recognition of deferred tax. However, Section 27, paragraph 18(b), explicitly requires tax to be excluded from the estimate of future cash flows used to calculate any impairment. This raises the question of whether there should not be an immediate impairment write-down of the assets to £100m. In our view, this cannot have been the intention of Section 27, as discussed in Chapter 29 at 4.8.3.

6.6.2 Determining the manner of recovery of assets and settlement of liabilities

In determining the tax base of an asset or a liability arising from a business combination, Section 29 requires an entity to consider the manner in which the entity expects to recover the relevant asset or settle the liability at the end of the reporting period. [FRS 102.29.11A].

The acquirer's assessment of the manner of recovery for the purposes of Section 29 may well differ from that of the acquired entity. For example, the acquired entity might have intended to recover an asset through use, whereas the acquirer intends to sell it.

How we see it

In our view, the requirement in Section 19 to recognise and measure deferred tax arising in a business combination in accordance with Section 29 has the effect that the expectations of the acquirer are used to determine the tax base of an item and the measurement of any deferred tax associated with the item.

See 7.4 below for further discussion regarding expected manner of recovery that will apply to the recognition of deferred taxes on assets and liabilities arising from business combinations.

6.6.2.A Changes in tax base consequent to the business combination

In some jurisdictions, a business combination may provide the opportunity to revise the tax base of an asset to an amount equal to the fair value assigned to it in accounting for the business combination. Most significantly, this may include the ability to create a tax base for an intangible asset or goodwill which may have had no tax base at all for the acquiree.

In some cases, the increase (as it generally is) in tax base may be more or less automatic. In others, the taxpayer may be required to make a formal claim or election for the increase to the tax authority. Sometimes further restructuring may be required - for example, it may be necessary for the business of the acquired entity to be transferred to another entity in the acquirer's group in the same tax jurisdiction.

An increase in a tax base that requires action by the relevant entity after the acquisition (such as making a claim or election or undertaking a restructuring) occurs after the business combination. However, some hold the view that the ability to increase a tax base following a business combination is a benefit that is taken into account by an informed buyer in negotiating the purchase price. Accordingly, it is argued, the increase is most appropriately reflected by adjusting the tax base of assets acquired as at the date of the business combination as if the increase had occurred at that date. This reduces any deferred tax liability and, therefore, reduces any goodwill (or increases any negative goodwill).

Those who support this view note that, if the increase in tax base is accounted for only when it legally occurs in the post-combination period, the net effect is to increase goodwill and reduce post-combination tax expense when in reality the entity may have done little more than fill in a form. It might also be difficult to sustain the higher carrying amount of goodwill arising from this treatment.

How we see it

We believe that it is generally appropriate to anticipate an increase to a tax base that legally occurs following a business combination in accounting for the business combination where the increase:

- Is automatic or requires only a notification to the tax authority.
 - Requires an application to the tax authority that is not normally refused for transactions of a comparable nature.
- Or
- Is contingent on some post-acquisition restructuring, where this can be done without substantial difficulty.

Conversely, we believe that it would not generally be appropriate to account for an increase in a tax base until it occurs where the increase:

- Relies on 'bespoke' tax planning that may be challenged by the tax authority.
 - Requires an application to the tax authority that in practice is frequently and successfully challenged for transactions of a comparable nature.
- Or
- Is contingent on some post-acquisition restructuring, where this will involve a substantial process, such as obtaining approval from regulators, unions, pension fund trustees etc.

6.6.3 Deferred tax assets arising on a business combination

Deferred tax assets that were previously not recognised by the acquirer or the acquiree, might arise in a business combination as discussed below.

6.6.3.A Assets of the acquirer

Section 29 does not provide specific guidance regarding the recognition of previously unrecognised deferred tax asset of the acquirer as a result of the business combination. However, IAS 12 provides further guidance that would be helpful when applying the requirements in Section 29.

Extract from IAS 12

- 67 As a result of a business combination, the probability of realising a pre-acquisition deferred tax asset of the acquirer could change. An acquirer may consider it probable that it will recover its own deferred tax asset that was not recognised before the business combination. For example, the acquirer may be able to utilise the benefit of its unused tax losses against the future taxable profit of the acquiree. Alternatively, as a result of the business combination it might no longer be probable that future taxable profit will allow the deferred tax asset to be recovered. In such cases, the acquirer recognises a change in the deferred tax asset in the period of the business combination, but does not include it as part of the accounting for the business combination. Therefore, the acquirer does not take it into account in measuring the goodwill or bargain purchase gain it recognises in the business combination.

Therefore, when the acquiring entity is able to recognise a previously unrecognised tax asset of its own (e.g., unused tax losses), the recognition of the asset is accounted for as income in the period of the business combination, and not as part of the accounting for the business combination. Accordingly, the acquirer does not take it into account in measuring the goodwill or bargain purchase gain it recognises in the business combination. [IAS 12.67].

As noted in section 6.6.2.B below, an acquirer does not recognise the effect (positive or negative) relating to a target entity being acquired until the period in which the business combination is accounted for.

6.6.3.B Assets of the acquiree

It may be the case that deferred tax assets of an acquired entity do not meet the recognition criteria of Section 29 from the perspective of the acquired entity, but do meet the criteria from the perspective of the acquirer. Similar to above, Section 29 does not provide specific guidance regarding recognition of deferred tax assets that is previously not recognised by the acquiree. However, IAS 12 provides further guidance that would be helpful.

In such cases, the general principles of IAS 12 require the acquirer's perspective to be applied as at the date of the business combination. Accordingly, a deferred tax asset would be recognised, with a corresponding reduction in goodwill. [IAS 12.66].

The potential benefit of the acquiree's income tax loss carryforwards or other deferred tax assets may not satisfy the criteria for separate recognition when a business combination is initially accounted for but may be realised subsequently. Any changes in recognised deferred tax assets of an acquired entity are accounted for as follows:

- Acquired deferred tax benefits recognised within the measurement period (see Chapter 22 at 2.6) that result from new information about facts and circumstances that existed at the acquisition date are applied to reduce the carrying amount of any goodwill related to that acquisition. If the carrying amount of that goodwill is zero, any remaining deferred tax benefits are recognised in profit or loss.
- All other acquired deferred tax benefits realised are recognised in profit or loss (or outside profit or loss if IAS 12 so requires - see 8 below). [IAS 12.68].

6.6.4 Deferred tax liabilities of acquired entity

Neither Section 29 (nor IAS 12) provide specific guidance regarding the recognition of a deferred tax liability of an acquired entity after the date of the original combination. The recognition of such liabilities must therefore be accounted for in accordance with the general principles in Section 29 (i.e., in the period in which the liability arises), unless either:

- The recognition of the liability occurs within the provisional measurement period for the business combination and reflects new information about facts and circumstances that existed at the acquisition date, in which case the acquisition date value of the liability is retrospectively adjusted - see Chapter 22 at 2.6
- Or
- The failure to recognise the liability at the time of the combination was an error, in which case the provisions of Section 10 must be applied - see Chapter 9 at 3.6.

6.6.5 Acquisition of subsidiary not accounted for as a business combination

Occasionally, an entity may acquire a subsidiary which is accounted for as the acquisition of an asset rather than as a business combination. This will most often be the case where the subsidiary concerned is a 'single asset entity' holding a single item of property, plant and equipment which is not considered to comprise a business as defined in FRS 102 (see Chapter 22). Where an asset is acquired in such circumstances, the normal provisions of Section 29 apply. Accordingly, any difference between the cost of the asset and the amount (if any) that will be deductible for tax in respect of that asset is a permanent difference, and deferred tax must not be recognised.

6.6.6 Group reconstructions for which the merger accounting method is used

Section 19 requires all business combinations to be accounted for using the purchase method, except for group reconstructions and certain public benefit entity combinations that are a merger. [FRS 102.19.6].

These are accounted for using the merger accounting method under which the carrying values of the assets and liabilities of the parties to the combination are not required to be adjusted to fair value, although appropriate adjustments are required to be made to achieve uniformity of accounting policies in the combining entities. [FRS 102.19.29].

How we see it

In our view, this approach applies equally to any deferred tax assets and liabilities of the parties to the combination, such that carrying values would not be adjusted in a transaction accounted for using the merger accounting method other than any consequential adjustments as are necessary to align accounting policies of the combining entities.

6.7 'Tax-transparent' ('flow-through') entities

Certain entities are not taxed in their own right. Instead, the income of such entities is taxed in the hands of their owners as if it were income of the owners. An example might be a partnership which does not itself pay tax, but whose partners each pay tax on their share of the partnership's profits. Such entities are sometimes referred to as 'tax-transparent' or 'flow-through' entities. Generally, a tax transparent entity does not recognise tax paid by its owners in its financial statements.

The tax status of such an entity is of no particular relevance to the accounting treatment, in the investor's financial statements, of the current tax on the income of the entity. An investor in such an entity will determine whether the entity is a subsidiary, associate, joint arrangement, branch or a financial asset investment and account for it accordingly. The investor then accounts for its own current tax payable as it arises under the relevant tax legislation.

7 Deferred tax – Measurement

7.1 Legislation at the end of the reporting period

Extract from Section 29

29.12 An entity shall measure a deferred tax liability (asset) using the tax rates and laws that have been enacted or substantively enacted by the reporting date that are expected to apply to the reversal of the timing difference.

Like current tax, deferred tax must be measured by reference to the tax rates and laws that have been enacted or substantively enacted by the reporting date. *[FRS 102.29.12]*. 'Enacted or substantively enacted' for the purposes of deferred tax has the same meaning as for the purposes of calculating current tax, as discussed at 5.1 above. Similar to current tax deferred tax must not be discounted. *[FRS 102.29.17]*.

In measuring deferred tax assets and deferred tax liabilities, an entity is required to apply those enacted rates that are expected to apply to the reversal of the timing difference. *[FRS 102.29.12]*. As noted at 5.1 and 6.2.2.B above, the use of enacted rates is quite clear in the literature. In particular, no account must be taken of changes to tax rates and laws that are announced or enacted after the reporting date, even if they will be applied retrospectively or result in a deductible temporary difference ceasing to be recoverable. Section 32 identifies the enactment or announcement of a change in tax rates and laws after the end of the reporting period as an example of a non-adjusting event. *[FRS 102.32.11(h)]*.

When different tax rates apply to different levels of taxable profit, deferred tax assets and liabilities are measured using the average enacted or substantively enacted rates that are expected to apply to the taxable profit (tax loss) of the periods in which the entity expects the deferred tax asset to be realised or the deferred tax liability to be settled. *[FRS 102.29.13]*.

7.1.1 Changes to tax rates and laws enacted before the reporting date

Deferred tax must be measured by reference to the tax rates and laws, as enacted or substantively enacted by the end of the reporting period. *[FRS 102.29.12]*. This requirement for substantive enactment is clear. Changes that have not been enacted by the end of the reporting period are ignored, but changes that are enacted before the reporting date must be applied, even in circumstances when legislation is substantively enacted shortly before the end of an annual or interim reporting period.

In cases where the effective date of any enacted changes is after the end of the reporting period, deferred tax must still be calculated by applying the new rates and laws to the timing differences that are expected to reverse in those later periods. *[FRS 102.29.12]*. When the effective date of any rate changes is not the first day of the entity's annual reporting period, deferred tax would be calculated by applying a blended rate to the taxable profits for each year.

Disclosures related to such changes in tax rates and laws required by Section 29 are discussed in 11.2 below.

7.1.2 Changes to tax rates and laws enacted after the reporting date

Section 32 identifies the enactment or announcement of a change in tax rates and laws after the end of the reporting period as an example of a non-adjusting event. *[FRS 102.32.11(h)]*. For example, an entity with a reporting period ending on 31 December issuing its financial statements on 20 April the following year would measure its deferred tax assets and liabilities by reference to tax rates and laws enacted or substantively enacted as at 31 December even if these had changed significantly before 20 April and even if those changes have retrospective effect. However, in these circumstances the entity would have to disclose the nature of those changes and provide an estimate of the financial effect of those changes if the impact is expected to be significant (see 11.2 below). *[FRS 102.32.10]*.

7.2 Revalued non-depreciable assets and investment property measured at fair value

Section 29 specifies the manner of recovery that must be applied by entities in two situations as follows:

- Deferred tax relating to a non-depreciable asset that is measured using the revaluation model in Section 17 must be measured using the tax rates and allowances that apply to the sale of the asset. [FRS 102.29.15].
And
- Deferred tax relating to investment property that is measured at fair value in accordance with Section 16 *Investment Property* must be measured using the tax rates and allowances that apply to the sale of the asset, except for investment property that has a limited useful life and is held within a business model whose objective is to consume substantially all of the economic benefits embodied in the property over time. [FRS 102.29.16].

These provisions of Section 29 are derived from IAS 12, where they appear as an exception to a more general principle that measurement of deferred tax must have regard to the manner in which an entity expects to recover the asset, or settle the liability, to which the deferred tax relates. [IAS 12.51, IAS 12.51B, IAS 12.51C]. There is no such equivalent general principle expressed in Section 29, although it could be implied from the requirement that deferred tax is measured using the tax rates 'that are expected to apply to the reversal of the timing difference'. [FRS 102.29.12]. In measuring deferred tax arising on a business combination accounted for by applying the purchase method, an entity must consider the manner in which it expects, at the end of the reporting period, to recover or settle the carrying amount of its assets and liabilities (see 6.6.1 above). [FRS 102.29.11A].

How we see it

Whilst this requirement applies only to the measurement of deferred tax arising on a business combination accounted for by applying the purchase method, in our view, its underlying principle must be applied more generally.

The concept of the 'manner of recovery' is discussed in more detail at 7.4 below.

7.3 'Prior year adjustments' of previously presented tax balances and expense (income)

The requirement to revise estimates of amounts recognised as deferred tax assets and liabilities at successive reporting dates is an inevitable consequence of the Standard and, in that respect, the normal requirements of Section 10 apply (see Chapter 9). As discussed in the context of current tax at 5.3 above, the nature of any revision to a previously stated deferred tax balance must be considered to determine whether the revision represents:

- A correction of a material prior period error (in which case it must be accounted for retrospectively, with a restatement of comparative amounts and, where applicable, the opening balance of assets, liabilities and equity at the start of the earliest period presented). [FRS 102.10.21].
Or
- A refinement in the current period of an estimate made in a previous period (in which case it must be accounted for in the current period). [FRS 102.10.17].

7.4 Expected manner of recovery of assets or settlement of liabilities

As noted at 7.2 above, Section 29 requires that in measuring deferred tax arising on a business combination accounted for by applying the purchase method, an entity must consider the manner in which it expects to recover or settle the carrying amount of its assets and liabilities. [FRS 102.29.11A].

How we see it

In our view the principle described above must be applied in measuring all deferred tax, in order to meet the requirement of Section 29 to measure deferred tax using the tax rates and laws that are 'expected' to apply to the reversal of the timing difference.

If a different rate or law would apply to the reversal of the difference depending on the manner of reversal (e.g., depreciation or sale), the expected manner of reversal is an essential input to the assessment of the expected applicable tax rate or law.

7.4.1 Tax planning strategies to reduce liabilities are not anticipated

As discussed at 6.2.2.A above, it may be appropriate for an entity to have regard to tax planning strategies in determining whether a deferred tax asset is recognised. Some believe that this must be extended and have argued that, where an entity has the ability and intention to undertake transactions in the future that will lead to its being taxed at a lower rate, it may take this into account in measuring deferred tax liabilities relating to timing differences that exist at the reporting date and will reverse in future periods when the lower rate is expected to apply.

How we see it

In our view, while tax planning opportunities may be relevant in assessing whether a deferred tax asset must be *recognised*, entities are not permitted to take into account future tax planning opportunities in relation to the measurement of deferred tax liabilities as at the reporting date, nor are entities allowed to anticipate future tax deductions that are expected to become available. Such opportunities do not impact on the *measurement* of deferred tax until the entity has undertaken them, or is at least irrevocably committed to doing so.

7.4.2 Assets and liabilities with more than one manner of recovery (settlement) ('dual-based' assets)

In the UK, and some jurisdictions, the manner in which an entity recovers (settles) the carrying amount of an asset (liability) may affect either or both of:

- The tax rate applicable when the entity recovers (settles) the carrying amount of the asset (or liability).
And
- The amount at which the asset or liability is recognised for tax purposes.

For example, in the UK, many types of building are not eligible for capital allowances while they are in use, but are deductible on sale for an amount equal to cost plus indexation allowance. Assets which are treated differently for tax purposes depending on whether their value is recovered through use or sale are commonly referred to as 'dual-based' assets.

In practice, however, many such assets are not realised wholly through use or wholly through sale, but are routinely acquired, used for part of their life and then sold before the end of that life. This is particularly the case with long-lived assets such as property. We set out below the approach which we believe must be adopted in assessing the manner of recovery of:

- Depreciable PP&E and intangible assets (see 7.3.2.A below).
- Non-depreciable PP&E and investment properties (see 7.3.2.B below).
And
- Other assets and liabilities (see 7.4.2.C below).

7.4.2.A Depreciable PP&E and intangible assets

Depreciable PP&E and investment properties that are rented to another group entity when the reporting entity chooses to use the cost model are accounted for in accordance with Section 17. Intangible assets are accounted for in accordance with Section 18 *Intangible Assets other than Goodwill*. Sections 17 and 18, which are discussed in detail in Chapters 20 and 21, require the carrying amount of a depreciable asset to be separated into a 'residual value' and a 'depreciable amount'.

'Residual value' is defined as:

"... the estimated amount that an entity would currently obtain from disposal of an asset, after deducting the estimated costs of disposal, if the asset were already of the age and condition expected at the end of its useful life"

and 'depreciable amount' as:

"... the cost of an asset, or other amount substituted for cost ... , less its residual value".

[FRS 102 Appendix I].

It is inherent in the definitions of 'residual value' and 'depreciable amount' that, in determining residual value, an entity is effectively asserting that it expects to recover the depreciable amount of an asset through use and its residual value through sale. If the entity does not expect to sell an asset, but to use and scrap it, then the residual value (i.e., the amount that would be obtained from sale) must be nil.

How we see it

Accordingly, we believe that, in determining the expected manner of recovery of an asset for the purposes of Section 29, an entity must assume that, in the case of an asset accounted for under Section 17 or Section 18, it will recover the residual value of the asset through sale and the depreciable amount through use.

Such an analysis is also consistent with the requirement of Section 10 to account for similar transactions consistently (see Chapter 9). This suggests that consistent assumptions must be used in determining both the residual value of an asset for the purposes of Section 17 or Section 18 and the expected manner of its recovery for the purposes of Section 29.

The effect of this treatment, in the context of a business combination, is as follows.

Illustration 7-1: Dual-based asset

As part of a business combination an entity purchases an opencast mine to which there is assigned a fair value of £10 million. The tax system of the jurisdiction where the mine is located provides that, if the site is sold (with or without the minerals *in situ*), £9 million will be allowed as a deduction in calculating the taxable profit on sale. The profit on sale of the land is taxed as a capital item. If the mine is exploited through excavation and sale of the minerals, no tax deduction is available.

The entity intends to fully exploit the mine and then to sell the site for retail development. Given the costs that any developer will need to incur in preparing the excavated site for development, the ultimate sales proceeds are expected to be £2 million. Thus, for the purposes of Section 17, the quarry is treated as having a depreciable amount of £8 million and a residual value of £2 million.

On the analysis above, there is a deferred tax liability arising from the temporary difference of £8 million associated with the depreciable amount of the asset (i.e. difference between the carrying amount of £8 million less tax base in use of nil), and a deferred tax asset arising from the temporary difference of £7 million associated with the residual value (i.e. difference between the carrying amount of £2 million less tax base on disposal of £9 million).

The entity will therefore provide for a deferred tax liability on the temporary difference of £8 million. The extent to which a deferred tax asset is recognised in respect of the temporary difference as described above will depend on whether it is probable that taxable profits will be available against which that deferred tax asset can be utilised (see 6.2 above). In some tax regimes, capital profits and losses are treated separately from revenue profits and losses to a greater or lesser degree, so that it may be difficult to recognise such an asset due to a lack of suitable taxable profits.

Historically, under IAS 12, there were alternative interpretations adopted in practice in substantially similar fact patterns that had resulted in diversity as a result. Some might have persuaded themselves that there is single net deferred tax liability based on the net book-tax difference of £1 million. However, in response to a request for guidance on a similar matter, the IFRS IC issued an agenda decision in April 2020 that would also be helpful to entities applying Section 29 since the underlying deferred tax treatment in the context of business combinations is aligned with IAS 12 (see 6.6 above). The agenda decision, described below²⁴³, supports the above analysis.

243 [IFRIC Update](#), April 2020, available on the IFRS Foundation's website.

Frequently asked questions

Question 7-1: How do you determine the tax base of an asset under IAS 12, when for tax purposes no deductions are available through use; but its cost is fully deductible when sold?

The IFRS IC was asked to consider an example in which an entity acquires an intangible asset with a finite useful life (a licence) as part of a business combination. The entity intends to recover the carrying amount of the licence through use, and the expected residual value of the licence at expiry is nil. Under the applicable tax law, two tax regimes are prescribed: an income tax regime and a capital gains tax regime. Any tax arising under each regime is not permitted to be offset in determining taxable profit. Tax paid under both regimes meets the definition of income taxes in IAS 12. Recovering the licence's carrying amount has both of the following tax consequences:

- Under the income tax regime - the entity pays income tax on the economic benefits it receives from recovering the licence's carrying amount through use, but receives no tax deductions in respect of amortisation of the licence (taxable economic benefits from use).
- Under the capital gains tax regime - the entity receives a tax deduction when the licence expires that is equal to its initial carrying value (capital gain deduction). The capital gain deduction cannot be used to offset the taxable economic benefits from use in determining taxable profits.

In reaching its conclusion, the IFRS IC cited the fundamental principle on which IAS 12 is based, that "an entity shall, with certain limited exceptions, recognise a deferred tax liability (asset) whenever recovery or settlement of the carrying amount of an asset or liability would make future tax payments larger (smaller) than they would be if such recovery or settlement were to have no tax consequences".

[IAS 12.10]. The IFRS IC determined that the entity must separately identify the temporary differences in a manner that reflects the distinct tax consequences under the two tax regimes of recovering the asset's carrying amount, by comparing:

- (a) The portion of the asset's carrying amount that will be recovered under one tax regime
To
- (b) The tax deductions the entity will receive under that same tax regime (which are reflected in the asset's tax base)

In the fact pattern described in the request, the IFRS IC concluded that the entity identifies both:

- (a) A taxable temporary difference under the income tax regime, reflecting the fact that it will receive no tax deductions as it recovers the asset through use
And
- (b) A deductible temporary difference under the capital gains tax regime, representing the deduction received upon expiry of the licence

The entity must then apply the requirements in IAS 12 considering the applicable tax law in recognising and measuring deferred tax for the identified temporary differences.

On this basis, the IFRS IC concluded that the principles and requirements in IAS 12 provide an adequate basis for an entity to recognise and measure deferred tax in the fact pattern described in the request and consequently decided not to add the matter to its standard-setting agenda.²⁴⁴

7.4.2.B Non-depreciable PP&E and investment properties at fair value

As noted at 7.2 above, Section 29 requires that where a non-depreciable asset, such as land, is accounted for using the revaluation model, any deferred tax on the revaluation must be calculated by reference to the tax consequences that would arise on sale of the asset. [FRS 102.29.15]. Section 29 also requires any deferred tax asset or liability associated with an investment property that is measured at fair value in accordance with Section 16 to be measured by reference to the tax consequences that would arise on sale of the asset, except when the investment property has a limited useful life and the entity's business model is to consume substantially all the economic benefits embodied in the investment property over time, in which case the deferred tax is measured using tax rates and allowances that apply when the carrying amount of the property is recovered through use. [FRS 102.29.16].

²⁴⁴ [IFRIC Update](#), April 2020, available on the IFRS Foundation's website.

7.4.2.C Other assets and liabilities

In a number of areas of accounting FRS 102 effectively requires a transaction to be accounted for in accordance with an assumption as to the ultimate settlement of that transaction that may not reflect the entity's expectation of the actual outcome.

For example, if the entity enters into a share-based payment transaction with an employee that gives the employee the right to require settlement in either shares or cash, Section 26 *Share-based Payment* requires the transaction to be accounted for on the assumption that it will be settled in cash, however unlikely this may be. Section 28 *Employee Benefits* may assert that an entity has a surplus on a defined benefit pension scheme on an accounting basis, when in reality it has a deficit on a funding basis. Similarly, if an entity issues a convertible bond that can also be settled in cash at the holder's option, Section 11 requires the bond to be accounted for on the assumption that it will be repaid, however probable it is that the holders will actually elect for conversion. It may well be that such transactions have different tax consequences depending on the expected manner of settlement, as illustrated in Illustration 7-2 below.

Illustration 7-2: Convertible bond deductible if settled

An entity, with functional currency of GBP, issues a convertible bond for £1 million. After three years, the holders can elect to receive £1.2 million or 100,000 shares of the entity. If the bond were settled in cash, the entity would receive a tax deduction for the £200,000 difference between its original issue proceeds and the amount payable on redemption. If the bond is converted, no tax deduction is available.

Under Section 11, the premium on redemption of the bond would be accreted as interest over the three-year issue period. Since tax relief on the interest is not given until the bond is settled, a deductible timing difference of £200,000 arises over the issue period. It is assumed that the deferred tax asset relating to this difference would meet the recognition criteria in Section 29 (see 6.2 above).

For various reasons, it is extremely unlikely that the bond will be redeemed in cash.

Illustration 7-2 raises the issue of whether any deferred tax asset must be recognised in respect of the £200,000 temporary difference.

One view would be that deferred tax must be recognised and measured based on management's actual expectation of the manner of recovery of the asset (or settlement of the liability) to which the deferred tax relates, even where this differs from the expectation inherent in the accounting treatment. The contrary view would be that deferred tax must be recognised and measured based on the expectation inherent in the accounting treatment of the manner of recovery of the asset (or settlement of the liability) to which the deferred tax relates, even where this differs from management's actual expectation.

How we see it

In our view, the treatment must be based on management's actual expectation. We see a difference between the analysis here and that relating to depreciable PP&E and intangible assets discussed at 7.4.2.A above. In the case of depreciable PP&E and intangibles, Sections 17 and 18 effectively require management to assess whether such assets will be realised through use or sale, and it therefore seems reasonable to use that same assessment for the purpose of measuring deferred tax under Section 29. In the case of the items discussed above, however, FRS 102 may require management to make assumptions that are directly contrary to its expectations, which therefore need not be used for the purposes of Section 29. Therefore, while the entity accretes interest on the bond, it assumes that no tax deduction will be available, because it is unlikely that the liability will be settled in cash.

7.4.3 Timing differences relating to subsidiaries, branches, associates and joint ventures

Such differences, and the special recognition criteria applied to them in Section 29, are discussed in more detail at 6.4 above.

Where deferred tax is recognised on such a timing difference, the question arises as to how it must be measured. Broadly speaking, investors can realise an investment in one of two ways – either indirectly (by remittance of retained earnings or capital) or directly (through sale of the investment). In many jurisdictions, the two means of realisation have very different tax consequences.

How we see it

In our view, the entity must apply the general principle (discussed above) that, where there is more than one method of recovering an investment, the entity must measure any associated deferred tax asset or liability by reference to the expected manner of recovery of the investment. In other words, to the extent that the investment is expected to be realised through sale, the deferred tax is measured according to the tax rules applicable on sale, but to the extent that the temporary difference is expected to be realised through a distribution of earnings or capital, the deferred tax is measured according to the tax rules applicable on distribution.

Where the expected manner of recovery is through distribution, there may be tax consequences for more than one entity in the group. For example, the paying company may be required to deduct a withholding tax on the dividend paid and the receiving company may suffer income tax on the dividend received. In such cases, provision must be made for the cumulative effect of all tax consequences. A withholding tax on an intragroup dividend is not accounted for in the consolidated financial statements as a withholding tax (i.e. within equity), but as a tax expense in profit or loss, since the group is not making a distribution but transferring assets from a group entity to a parent of that entity.

7.4.4 Change in expected manner of recovery of an asset or settlement of a liability

A change in the expected manner of recovery of an asset or settlement of a liability must be dealt with as an item of deferred tax income or expense for the period in which the change of expectation occurs, and recognised in profit or loss or in other comprehensive income or movements in equity for that period as appropriate (see 8 below).

This may have the effect, in certain situations, that some tax consequences of a disposal transaction are recognised before the transaction itself. For example, an entity might own an item of PP&E which has previously been held for use but which the entity now expects to sell.

How we see it

In our view, any deferred tax relating to that item of PP&E must be measured on a 'sale' rather than a 'use' basis from the point when the entity's expected manner of recovery changes, even though the disposal itself, and any related current tax, will not be accounted for until the disposal occurs.

7.5 UK indexation allowance

A UK company, in computing the taxable gain on the sale of an asset, may be allowed to increase the cost of the asset by an indexation allowance, depending on when it was acquired. The broad intention of this is to exclude purely inflationary gains from taxation. As noted at 6.5.3 above, on a strict interpretation of the definition of 'permanent difference', an indexation allowance is a permanent difference since it is effectively an item of expenditure that appears in taxable profit, but not in total comprehensive income.

How we see it

In our view, supported by long-standing practice under FRS 19 (under which the same issue of interpretation would have arisen), it is more appropriate to take account of the indexation allowance in measuring any deferred tax that would be expected to arise on the sale of an asset.

Furthermore, deferred tax at the reporting date must be computed based on the indexation that would be available if disposal were to occur at the balance sheet date. Possible increases in the allowance due to future inflation must not be assumed.

Under the UK tax regulations, the benefit of an indexation allowance can be taken only to the extent that it reduces a tax liability. It cannot be used to create or increase a tax loss. Therefore, a deferred tax asset must not be recognised in respect of an asset whose indexed cost for tax purposes is greater than its carrying amount.

7.6 Effectively tax-free entities

In the UK, and elsewhere, certain types of entity, typically investment vehicles, are exempt from corporate income tax provided that they fulfil certain criteria, which generally include a requirement to distribute all, or a minimum percentage, of their annual income as a dividend to investors. Examples in the UK include investment trusts and real estate investment trusts 'REITs'. This raises the question of how such entities must measure income taxes.

One view would be that such an entity has a liability to tax at the normal rate until the dividend for a year becomes a liability. The liability for a dividend for an accounting period typically arises after the end of that period. Under this analysis, therefore, such an entity would be required, at each period end, to record a liability for current tax at the standard corporate rate. That liability would be released in full when the dividend is recognised as a liability in the following period. This would mean that, on an ongoing basis, the income statement would show a current tax charge or credit comprising:

- A charge for a full liability for the current period.
- And
- A credit for the reversal of the corresponding liability for the prior period.

In addition, deferred tax would be recognised at the standard tax rate on all timing differences.

A second view would be that the provisions of Section 29 regarding different tax rates for distributed and undistributed tax rates are intended to apply where the only significant factor determining the differential tax rate is the retention or distribution of profit.

How we see it

On this view, the analysis would be that such an entity can choose to operate within one of two tax regimes (a 'full tax' regime or a 'no tax' regime), rather than that it operates in a single tax regime with a dual tax rate depending on whether profits are retained or distributed.

By contrast, the tax status of an investment fund typically depends on many more factors than whether profits are distributed, such as restrictions on its activities, the nature of its investments and other regulatory or listing requirements.

7.6.1 Subsidiaries of charitable entities

Arrangements whereby tax legislation grants an entity tax-exempt status must be distinguished from those situations where legislation provides allowances and reliefs that allow an entity to effectively extinguish its liability to corporation tax. For example, many charitable entities, including registered providers of social housing and higher education institutions, carry out trading activities through a non-charitable subsidiary. Profits from the subsidiary might be distributed to the parent charity in a tax-efficient manner as a donation which is eligible for corporation tax relief under the gift aid rules, provided it is made during the relevant reporting period or during the following nine months. [FRS 102.BC.B29.11]. Such entities that gift-aid 100% of their taxable profits within the required period can therefore achieve an effective tax rate of zero.

However, these are not tax-exempt entities and must therefore account for income taxes, and deferred tax, under Section 29, for the following reasons:

- Unlike the entities described at 7.6 above, there are no conditions as to the establishment and conduct of these trading subsidiaries over and above the simple requirement to make a gift-aid payment equal to the otherwise determined taxable profit.
- Such gift-aid payments have been determined in law to be distributions of profits, and therefore subject to the same restrictions that apply to the declaration and payment of dividends. An entity would be unable to distribute an amount equal to its taxable profits in any period (as determined under enacted tax laws) if the value of its distributable profits (as determined under accounting standards and the Companies Act) is lower.

For example, a subsidiary that has recognised a significant level of provisions would have to deduct those amounts from its measure of distributable profits, whilst for tax purposes such costs might not be deductible. Any shortfall between the gift-aid payment that it can legally make to its parent and the measure of its taxable profits would result in a corporation tax liability. That is, the subsidiary would have taxable profits and need to recognise a tax expense.

As it performed its triennial review of FRS 102, the FRC was made aware of significant differences in accounting treatment arising in practice in relation to the accounting for payments made, or expected to be made, by a subsidiary to its charitable parent that will qualify for gift aid (expected gift aid payments).

[FRS 102.BC.B29.10].

The general rule in Section 29 requires an entity to measure current and deferred taxes at the tax rate applicable to undistributed profits until it recognises a liability to pay a dividend (see 9.1.1 below). When the entity recognises a liability to pay a dividend, it recognises the resulting current or deferred tax liability (asset), and the related tax expense (income). [FRS 102.29.14]. However, FRS 102 contains an exception to this requirement when:

- (a) An entity is wholly-owned by one of more charitable entities.
- (b) It is probable that a gift aid payment will be made to a member of the same charitable group, or a charitable venturer, within nine months of the reporting date.

And

- (c) That payment will qualify to be set against profits for tax purposes.

If all of these conditions are satisfied, the income tax effects of that gift-aid payment are measured consistently with the tax treatment planned to be used in the entity's income tax filings. Consequently, a deferred tax liability is not recognised in relation to such a gift aid payment. [FRS 102.29.14A]. The footnote to paragraph 14A clarifies that in this context, 'charitable' refers to an entity that has been recognised by HMRC as being eligible for certain tax reliefs because of its charitable purposes.

8 Share-based payment transactions

The accounting treatment of share-based payment transactions, some knowledge of which is required to understand the discussion below, is dealt with in Chapter 28.

In the UK, and many other jurisdictions, an entity receives a tax deduction in respect of remuneration paid in shares, share options or other equity instruments of the entity. The amount of any tax deduction may differ from the related remuneration expense, and may arise in a later accounting period. For example, in the UK, an entity recognises an expense for employee services in accordance with Section 26 (based on the fair value of the award at the date of grant), but does not receive a tax deduction until the award is exercised (in the case of options) or vests (in the case of free shares). The tax deduction is for the fair value of the award at the date of vesting or exercise (as the case may be), which will be equal to the intrinsic value at that date.

Under Section 29, any tax deduction received in excess of the amount recognised as an expense under Section 26 gives rise to a permanent difference which is recognised as current tax when it is received. However, recognition of the Section 26 expense in advance of the tax deduction being received to the extent of that expense gives rise to timing differences, on which a deferred tax asset must be recognised (subject to the general restrictions discussed at 6.2 above).

Section 29 does not prescribe how these timing differences must be calculated. As the tax relief will ultimately be given for the intrinsic value of the award, this forms a reasonable basis for computing the timing difference, which has generally been followed in practice under UK GAAP. However, practice varies as to whether the timing difference is computed as:

- The lower of (a) the total expected tax deduction based on the intrinsic value at the reporting date and (b) the cumulative share-based payment expense (Approach 1).
- Or
- The lower of (a) the cumulative share-based payment expense and (b) the total expected tax deduction based on the intrinsic value at the reporting date, multiplied by the expired portion of the vesting period at that date (Approach 2).

Where the intrinsic value of the award is equal to, or more than, the grant date fair value used in applying Section 26, the two approaches have the same effect. However, where the intrinsic value falls below the grant date fair value, the two approaches give rise to a different result, as shown in Illustration 8-1 below.

Illustration 7-3: Timing differences on share-based payment transactions

On 1 January 20X5, an entity with a reporting date of 31 December makes an award of free shares to an employee with a grant date fair value of £300,000. The vesting period is three years. In applying Section 26, it is assumed throughout the vesting period that the award will vest in full. The award actually vests, and is fully deducted for tax in the year of vesting at its intrinsic value on vesting date.

The expense recognised under Section 26 would therefore be as follows:

Year ending	Expense for period	Cumulative expense
	£	£
31 December 20X5	100,000	100,000
31 December 20X6	100,000	200,000
31 December 20X7	100,000	300,000

The intrinsic value of the award at each reporting date is as follows:

	£
31 December 20X5	270,000
31 December 20X6	290,400
31 December 20X7	320,000

Under Approach 1 above, the timing difference would be calculated as the lower of (a) the total intrinsic value at the reporting date and (b) the cumulative share-based payment expense.

Year ending	Total intrinsic value	Cumulative expense	Timing difference
	<i>a</i>	<i>b</i>	<i>Lower of a and b</i>
	£	£	£
31 December 20X5	270,000	100,000	100,000
31 December 20X6	290,400	200,000	200,000
31 December 20X7	320,000	300,000	N/A ¹

1 The award vests at this point so that any tax relief is recognised as current tax.

Under Approach 2 above, the timing difference would be calculated as the lower of (a) the cumulative share-based payment expense and (b) the total intrinsic value, multiplied by the expired portion of the vesting period at that date.

Year ending	Total intrinsic value	Pro-rated intrinsic value	Cumulative expense	
	<i>a</i>	<i>b</i>	<i>c</i>	<i>Lower of b and c</i>
	£	£	£	£
31 December 20X5	270,000	90,000	100,000	90,000
31 December 20X6	290,400	193,600	200,000	193,600
31 December 20X7	320,000	320,000	300,000	N/A ¹

1 The award vests at this point so that any tax relief is recognised as current tax.

How we see it

In our view, either approach is acceptable provided that it is applied consistently.

8.1 Allocation of tax deduction between profit or loss and equity

As discussed above, under Section 29, any tax deduction received in excess of the amount recognised as an expense under Section 26 gives rise to a permanent difference therefore, deferred tax is not recognised. However, current tax on the excess deduction is recognised when the deduction is received. Section 29 does not provide specific guidance regarding where current tax related to the excess deduction must be recognised besides requiring an entity to present tax expense and income in the same component of total comprehensive income or equity as the transaction or other event that resulted in the tax expense or income. Consequently, an entity might regard the tax as relating to the share-based payment expense and recognise such current tax in profit or loss.

IAS 12, however, specifically clarifies that where the amount of any tax deduction exceeds the amount of the related cumulative remuneration expense, the tax associated with the excess must be recognised directly in equity. IAS 12 explains that the excess tax deduction 'indicates that the tax deduction relates not only to remuneration expense but also to an equity item.' [IAS 12.68C]. Accordingly, an entity applying FRS 102 could consider the following two approaches to recognise current tax related to the excess deduction as described below:

- All taxes on share-based payments transactions including tax related to excess deductions is recognised in profit or loss.
- Or
- All taxes on share-based payment transaction are recognised in the profit or loss with the exception of tax related to excess deductions that is recognised in the statement of changes in equity.

How we see it

In our view, either approach is acceptable provided that it is applied consistently.

9 Allocation of tax charge or credit

Section 29 requires an entity to present changes in current tax and deferred tax as tax income or tax expense, except for those changes that arise on the initial recognition of a business combination accounted for by applying the purchase method, which is taken into account in the determination of goodwill or negative goodwill (see 6.6 above). [FRS 102.29.21].

Section 29 also requires an entity to present tax expense (or tax income) in the same component of comprehensive income (i.e. continuing or discontinued operations, and in profit or loss or in other comprehensive income) or equity as the transaction or other event that resulted in the tax expense (or tax income). [FRS 102.29.22]. This would be the case even in instances where the transaction or other event that results in a tax impact occurred in a different period in the past.

The approach described above is consistent with IAS 12. This requirement to have regard to the previous history of a transaction in accounting for its tax effects is commonly referred to as 'backward tracing'. However, an entity must present the tax income or tax expense effects of distributions to owners in profit or loss. [FRS 102.29.22A].

Except as stated above in relation to distributions to owners, Section 29 does not consider profit or loss as a default statement to recognise tax impact. Section 29 does not explicitly require tax that is not directly related to a particular component of total comprehensive income or equity to be recognised in profit or loss.

9.1 Dividends and transaction costs of equity instruments

9.1.1 Dividend subject to differential tax rate

In some jurisdictions, the rate at which tax is paid depends on whether profits are distributed or retained. In other jurisdictions, distribution may lead to an additional liability to tax, or a refund of tax already paid. Section 29 requires current and deferred taxes to be measured using the rate applicable to undistributed profits until a liability to pay a dividend is recognised, at which point the tax consequences of that dividend must also be recognised. [FRS 102.29.14]. This is discussed further at 8 above.

Where taxes are remeasured on recognition of a liability to pay a dividend, the difference must normally be recognised in profit or loss rather than directly in equity, even though the dividend itself is recognised directly in equity under FRS 102. Section 29 implicitly takes the view that any additional (or lower) tax liability relates to the original profit now being distributed rather than to the distribution itself. Where, however, the dividend is paid out of profit arising from a transaction that was originally recognised in other comprehensive income or equity, the adjustment to the tax liability must also be recognised in other comprehensive income or equity.

9.1.2 Dividends subject to withholding tax

When an entity pays dividends to its shareholders, it may be required to pay a portion of the dividends to taxation authorities on behalf of shareholders. Where dividends are paid by the reporting entity subject to withholding tax, such withholding tax must be included as part of the dividend deducted from equity. Other taxes, such as attributable tax credits, must be excluded from the amount recorded as a dividend.

[FRS 102.29.18].

Incoming dividends and similar income receivable are recognised at an amount that includes any withholding tax but excludes other taxes, such as attributable tax credits. Any withholding tax suffered is shown as part of the tax charge. [FRS 102.29.19].

9.1.2.A Distinction between a withholding tax and a differential rate for distributed profits

The provisions of Section 29, described above, may prove somewhat problematic in practice. There may be little economic difference, from the paying entity's perspective, between a requirement to pay a 5% 'withholding tax' on all dividends and a requirement to pay an additional 5% 'income tax' on distributed profit. Yet, the accounting treatment varies significantly depending on the analysis. If the tax is considered a withholding tax, it is treated as a deduction from equity in all circumstances. If, however, it is considered as an additional income tax, it will generally be treated as a charge to profit or loss (see 9.1.1 above).

9.1.2.B Intragroup dividend subject to withholding tax

Where irrecoverable withholding tax is suffered on intragroup dividends, the withholding tax does not relate to an item recognised in equity in the consolidated financial statements (since the intragroup dividend to which it relates has been eliminated in those financial statements). The tax must therefore be accounted for in profit or loss for the period.

9.2 Gain/loss in profit or loss and loss/gain outside profit or loss offset for tax purposes

It often happens that a gain or loss accounted for in profit or loss can be offset for tax purposes against a gain or loss accounted for in other comprehensive income (or an increase or decrease in equity). This raises the question of how the tax effects of such transactions must be accounted for, as shown in Illustration 9-1 below.

Illustration 9-1: Loss in other comprehensive income and gain in profit or loss offset for tax purposes

During the year ended 31 December 20X5, an entity that pays tax at 20% makes a taxable profit of £50,000 comprising:

- £80,000 trading profit less finance costs accounted for in profit or loss.
- And
- £30,000 foreign exchange losses accounted for in other comprehensive income ('OCI').

Should the total tax liability of £10,000 (20% of £50,000) be presented as either:

(a) A charge of £10,000 in profit or loss.

Or

(b) A charge of £16,000 (20% of £80,000) in profit or loss and a credit of £6,000 (20% of £30,000) in other comprehensive income?

How we see it

In our view, (b) is the appropriate treatment, since the amount accounted for in other comprehensive income represents the difference between the tax that would have been paid absent the exchange loss accounted for in other comprehensive income and the amount actually payable. This indicates that this is the amount of tax that, in the words of paragraph 22 of Section 29, 'resulted' from items that are recognised in other comprehensive income.

Similar issues may arise where a transaction accounted for outside profit or loss generates a suitable taxable profit that allows recognition of a previously unrecognised tax asset relating to a transaction previously accounted for in profit or loss, as shown in Illustration 9-2 below.

Illustration 9-2: Recognition of deferred tax asset in profit or loss on the basis of tax liability accounted for outside profit or loss

An entity that pays tax at 20% has brought forward unrecognised deferred tax assets (with an indefinite life) totalling £1 million, relating to trading losses accounted for in profit or loss in prior periods. On 1 January 20X5 it invests £100,000 in government bonds, which it holds until they are redeemed for the same amount on maturity on 31 December 20X8. For tax purposes, any taxable income arising from revaluation of the bonds can be offset against the brought forward tax losses.

Where an entity elects to account for the bonds as available-for-sale applying the requirements in IAS 39 it carries the bonds at fair value (see Chapter 13). Over the period to maturity the fair value of the bonds at the end of each reporting period (31 December) is as follows:

	£
20X5	110,000
20X6	115,000
20X7	120,000
20X8	100,000

Movements in value would be accounted for in other comprehensive income ('OCI'). Taken in isolation, the valuation gains in 20X5 to 20X7 would give rise to current tax liabilities (at 20%) of £2,000 (20X5), £1,000 (20X6) and £1,000 (20X7). However, these liabilities can be offset against the losses brought forward. This raises the question as to whether there should be either:

- (a) No tax charge or credit in either profit or loss or other comprehensive income in any of the periods affected.
- Or
- (b) In each period, a current tax charge in other comprehensive income (in respect of the taxable income arising from valuation gains on the bonds) and current tax income in profit or loss (representing the recognition of the previously unrecognised deferred tax asset).

How we see it

In our view, the treatment in (b) must be followed. Although the previously unrecognised deferred tax asset can only be recovered as the result of the recognition of a current tax liability arising from a transaction accounted for in other comprehensive income, the previously unrecognised asset relates to a trading loss previously recorded in profit or loss. Accordingly, the current tax credit arising from the recognition of the asset is properly accounted for in profit or loss.

9.3 Discontinued operations

As noted above, Section 29 requires tax income and tax expense to be allocated between continuing and discontinued operations. Some of the practical issues raised by this requirement are shown in illustrations 9-3 to 9-5 below.

Illustration 9-3: Profit in continuing operations and loss in discontinued operations offset for tax purposes

Entity A, which pays tax at 25%, has identified an operation as discontinued for the purposes of Section 5. During the period the discontinued operation incurred a loss of £2 million and the continuing operations made a profit of £10 million. The net £8 million profit is fully taxable in the period, and there is no deferred tax income or expense. In our view, the tax expense must be allocated as follows:

	£m	£m
Dr. Current tax expense (continuing operations) ¹	2.5	
Cr. Current tax income (discontinued operation) ²		0.5
Cr. Current tax liability ³		2.0

- 1 Continuing operations profit £10m @ 25% = £2.5m
- 2 Discontinued operations loss £2m @ 25% = £0.5m.
- 3 Net taxable profit £8m @ 25% = £2.0m

The tax allocated to the discontinued operation represents the difference between the tax that would have been paid absent the loss accounted for in discontinued operations and the amount actually payable.

Illustration 9-4: Taxable profit on disposal of discontinued operation reduced by previously unrecognised tax losses

Entity B disposes of a discontinued operation during the current accounting period. The disposal gives rise to a charge to tax of £4 million. However, this is reduced to zero by offset against brought forward tax losses, which relate to the continuing operations of the entity, and for which no deferred tax asset has previously been recognised.

In our view, even though there is no overall tax expense, this must be reflected for financial reporting purposes as follows:

	£m	£m
Dr. Current tax expense (discontinued operation)	4.0	
Cr. Current tax income (continuing operations)		4.0

This allocation reflects that fact that, although the transaction that allows recognition of the brought forward tax losses is accounted for as a discontinued operation, the losses themselves arose from continuing operations. This is essentially the same analysis as is used in Illustration 9-2 above (where a current tax liability recognised in other comprehensive income gives rise to an equal deferred tax asset recognised in profit or loss).

Illustration 9-5: Taxable profit on disposal of discontinued operation reduced by previously recognised tax losses

Entity B disposes of a discontinued operation during the current accounting period. The disposal gives rise to a charge to tax of £4 million. However, this is reduced to zero by offset against brought forward tax losses, which relate to the entity's continuing operations, and for which a deferred tax asset has previously been recognised.

In our view, even though there is no overall tax expense, this must be reflected for financial reporting purposes as follows:

	£m	£m
Dr. Current tax expense (discontinued operation)	4.0	
Dr. Deferred tax expense (continuing operations)	4.0	
Cr. Current tax income (continuing operations)		4.0
Cr. Deferred tax asset (statement of financial position)		4.0

This allocation reflects that fact that, although the transaction that allows recognition of the brought forward tax losses is accounted for as a discontinued operation, the losses themselves arose from continuing operations. This is essentially the same analysis as is used in Illustration 9-3 above.

9.4 Defined benefit pension plans

Section 28 requires an entity, in accounting for a defined benefit post-employment benefit plan, to recognise actuarial gains and losses relating to the plan in full in other comprehensive income ('OCI'). At the same time, a calculated current (and, where applicable, past) service cost and finance income and expense relating to the plan assets and liabilities are recognised in profit or loss – see Chapter 30.

In the UK, and many other jurisdictions, tax deductions for post-employment benefits are given on the basis of cash contributions paid to the plan fund (or benefits paid when a plan is unfunded).

This significant difference between the way in which defined benefit plans are treated for tax and financial reporting purposes can make the allocation of tax deductions for them between profit or loss and OCI somewhat arbitrary, as shown in Illustration 9-6 below.

Illustration 9-6: Tax deductions for defined benefit pension plans

At 1 January 20X5 an entity that pays tax at 20% has a fully-funded defined benefit pension scheme. During the year ended 31 December 20X5 it records a total cost of £1 million, of which £800,000 is allocated to profit or loss and £200,000 to other comprehensive income ('OCI'). In January 20X6 it makes a funding payment of £400,000, a tax deduction for which is received through the current tax charge for the year ended 31 December 20X5.

Assuming that the entity is able to recognise a deferred tax asset for the entire £1 million charged in 20X5, it will record the following entry for income taxes in 20X5.

	£	£
Dr. Deferred tax asset [£1,000,000 @ 20%]	200,000	
Cr. Deferred tax income (profit or loss) [£800,000 @ 20%]		160,000
Cr. Deferred tax income (OCI) [£200,000 @ 20%]		40,000

When the funding payment is made in January 20X6, the accounting deficit on the fund is reduced by £400,000. This gives rise to a current tax deduction of £80,000 (£400,000 @ 20%), in relation to the contribution paid to the pension scheme, and a deferred tax expense of £80,000 in respect of the reversal of the temporary difference arising as some of the deferred tax asset as at 31 December 20X5 is released. The difficulty is how to allocate this movement in the deferred tax asset between profit or loss and OCI, as it is ultimately a matter of arbitrary allocation as to whether the funding payment is regarded as making good (for example):

- £400,000 of the £800,000 deficit previously accounted for in profit or loss.
- The whole of the £200,000 of the deficit previously accounted for in OCI and £200,000 of the £800,000 deficit previously accounted for in profit or loss.

Or

- A pro-rata share of those parts of the total deficit accounted for in profit or loss and OCI.

In the example above, the split is of relatively minor significance, since the entity was able to recognise 100% of the potential deferred tax asset associated with the pension liability. This means that, as the scheme is funded, there will be an equal and opposite amount of current tax income and deferred tax expense. The only real issue is therefore one of presentation, namely whether the gross items comprising this net nil charge are disclosed within the tax charge in profit or loss or in OCI.

In other cases, however, there might be an amount of net tax income or expense that needs to be allocated. Suppose that, as above, the entity recorded a pension cost of £1 million in 20X5 but determined that the related deferred tax asset did not meet the criteria for recognition under Section 29. In 20X6, the entity determines that an asset of £50,000 can be recognised in view of the funding payments and taxable profits anticipated in 20X6 and later years. This results in a total tax credit of £130,000 (£80,000 current tax, £50,000 deferred tax) in 20X6, raising the question of whether it must be allocated to profit or loss, to OCI, or allocated on a pro-rata basis. This question might also arise if, as the result of newly enacted tax rates, the existing deferred tax balance were required to be remeasured.

How we see it

In our view, any reasonable method of allocation may be used, provided that it is applied on a consistent basis.

One approach might be to compare the funding payments made to the scheme in the previous few years with the charges made to profit or loss under Section 28 in those periods. If, for example, it is found that the payments were equal to or greater than the charges to profit or loss, it might reasonably be concluded that the funding payments have 'covered' the charge recognised in profit or loss, so that any surplus or deficit on the statement of financial position is broadly represented by items that have been accounted for in OCI.

However, a surplus may also arise from funding the scheme to an amount greater than the liability recognised under Section 28 (for example under a minimum funding requirement imposed by local legislation or agreed with the pension fund trustees). In this case, the asset does not result from previously recognised income but from a reduction in another asset (i.e. cash). The entity must assess the expected manner of recovery of any asset implied by the accounting treatment of the surplus - i.e. whether it has been recognised on the basis that it will be 'consumed' (resulting in an accounting expense) or refunded to the entity in due course.

Where it is concluded that the asset will be 'consumed' (resulting in accounting expense), the entity will need to determine whether such an expense is likely to be recognised in profit or loss or in OCI in a future period.

9.5 Change in tax status of entity or shareholders

Sometimes there is a change in an entity's tax assets and liabilities as a result of a change in the tax status of the entity itself or that of its shareholders, for example an entity becoming a REIT. Section 29 does not address how the impact of such change in tax status must be reflected. However, SIC 25 specifies that the effect of such a change must be recognised in profit or loss for the period except to the extent that it involves a remeasurement of tax originally accounted for in other comprehensive income or in equity, in which case the change must also be dealt with in, respectively, other comprehensive income or equity.

[SIC-25.4].

10 Offset of taxable profits and losses within groups

10.1 Transfer of tax losses within groups

In the UK, it is possible for one member of a group to transfer tax losses to one or more other members of the group in order to reduce their tax liabilities. In some groups a company whose tax liability is reduced by such an arrangement may be required, as a matter of group policy, to make a payment to the member of the group that transfers losses to it. In other groups no such charge is made.

The transfer of any tax losses in this way raises the question of the appropriate accounting treatment in the separate financial statements of the group entities involved. In particular, should the company receiving the tax losses simply reflect a reduction in their tax expense/increase in tax income equal to the amount mitigated as a result of the transfer or should the benefit be reflected as a capital contribution (when the losses are transferred by a parent or fellow subsidiary) or as other income akin to a dividend (when transferred by a subsidiary)?

How we see it

Section 29 is silent on this issue and, in our view, no single approach can be said to either be prohibited or required. However, there is a long-standing practice by many companies in the UK for the company receiving such tax losses to present the benefit as a reduction in their tax expense/increase in tax income, rather than as a capital contribution or other income akin to a dividend.

In the context of payments made by subsidiaries of charitable entities in the UK under the gift aid regime, specific requirements are discussed at 7.6.1 above.

10.2 Payments for intragroup transfer of tax losses

Where one member of a group transfers tax losses to another member of the group, the entity whose tax liability is reduced may be required, as matter of group policy, to pay an amount of compensation to the member of the group that transferred to it the losses. Such payments are referred to in the discussion below as 'group relief payments'.

Group relief payments are generally made in an amount equal to the tax saved by the paying company. In some cases, however, payment may be made in an amount equal to the nominal amount of the tax loss, which will be greater than the amount of tax saved. This raises the question of how such payments must be accounted for.

The first issue is whether such payments should be recognised wholly or partly:

- In total comprehensive income.
And/or
- As a distribution (e.g. in the case of a payment from a subsidiary to a parent) or a capital contribution (e.g., in the case of a payment from a parent to a subsidiary).

The second issue is, to the extent that the payments are accounted for in total comprehensive income, whether, and/or the extent to which, they must be classified as:

- Income tax, allocated between profit or loss, other comprehensive income or equity (see 9 above). The argument for this treatment is that the payments made or received are amounts that would otherwise be paid to or received from (or offset against an amount paid to) a tax authority.
Or
- Operating income or expense in profit or loss (for example on the grounds that, as a matter of fact, the payments are not made to or received from any tax authority).

How we see it

Section 29 is silent on this issue and, in our view, no single approach can be said to either be prohibited or required. However, there is a long-standing practice by many companies in the UK that to the extent such payments do not exceed the amount of tax that would otherwise have been paid by the paying company they are treated as if they were income taxes. Where a group relief payment is made in excess of this amount, we consider that it is more appropriate to account for the excess not as an income tax but as either:

- A distribution or capital contribution (as applicable).
- Or
- Operating income or expense (as applicable).

The chosen treatment must be applied consistently.

The Guidance on Realised and Distributable Profits under the Companies Act 2006 (TECH 02.17BL) indicates the acquisition or surrender of tax losses (group relief) for a non-arms-length sum (such as paying a parent or fellow subsidiary more than the tax relief that will be obtained) may, as a matter of law, involve a distribution. Therefore, companies must be cautious when making such transfers, especially those with a deficit of distributable profits.

11 Presentation

In addition to meeting any requirements specified in FRS 102 discussed below, entities preparing statutory accounts must also comply with relevant legislation in the UK or Ireland, as appropriate.

For entities incorporated in the UK, these regulations are principally The Large and Medium-sized Companies and Groups (Accounts and Reports) Regulations 2008 (Regulations). The Regulations establish prescribed formats for the statutory accounts and include the option to apply 'adapted formats' which are similar but not identical to formats included in IAS 1 *Presentation of Financial Statements*.

Companies subject to the small companies regime are entitled to apply The Small Companies and Groups (Accounts and Directors' Report) Regulations 2008 (Small Companies Regulations). Micro-entities are entitled to apply The Small Companies (Micro Entities' Accounts) Regulations 2013 (Micro-entity Regulations).

The requirements under the UK Companies Act for statutory accounts and reports are discussed in Chapter 6 at 3. The presentation requirements for financial statements prepared under FRS 102 are explained in Chapter 6, with the application of 'adapted formats' discussed in Chapter 6 at 4.1.

11.1 Statement of financial position

Section 29 requires deferred tax liabilities to be included within provisions for liabilities and deferred tax assets to be included within debtors when an entity applies statutory formats to present its statement of financial position. [FRS 102.29.23]. Where an entity applies the adapted formats permitted under the UK Companies Act (see Chapter 6 at 4.1), deferred tax assets and liabilities must be shown as separate line items on the face of the statement of financial position, but classified as non-current. [FRS 102.4.2A(p)].

When the statutory formats are applied, deferred tax assets are included within current assets, even if due after more than one year. However, where the amount of debtors due after more than one year is so material in the context of net current assets that in the absence of disclosure of the debtors due after more than one year on the face of the statement of financial position readers may misinterpret the financial statements, FRS 102 requires the amount to be disclosed on the face of the statement of financial position, but still within current assets. [FRS 102.4.4A].

As noted in Chapter 6 at 4.1.12, certain of the statutory disclosures in the Regulations may cause particular complexity when deferred tax is included as a line item within provisions. In particular, UK companies preparing Companies Act accounts must state the provision for deferred tax separately from any other tax provisions and reconcile movements in deferred tax (as it is a line item under provisions). [1 Sch 59-60].

How we see it

In our view, the reconciliation of movements in deferred tax is also required where 'adapted formats' (as well as statutory formats) are used, even though deferred tax is not shown as a provision in the balance sheet.

Section 29 does not explicitly require separate disclosure of the current tax creditor on the face of the statement of financial position and, as discussed in Chapter 6 at 4.3.8.G, note (9) to the balance sheet statutory formats in Schedule 1 to the Regulations would require current tax to be disclosed within the line item for 'Other creditors, including taxation and social security'. However, where an entity applies the 'adapted formats' permitted under the UK Companies Act, current tax assets and current tax liabilities must be shown as separate line items on the face of the statement of financial position, and classified appropriately as current and/or non-current. [FRS 102.4.2A(o)].

11.1.1 Offset

11.1.1.A Current tax

Current tax assets and liabilities must be offset if, and only if, the entity:

- Has a legally enforceable right to set off the amounts.
- And
- Intends either to settle them net or simultaneously. [FRS 102.29.24].

11.1.1.B Deferred tax

Deferred tax assets and liabilities must be offset if, and only if:

- The entity has a legally enforceable right to set off current tax assets and liabilities.
And
- The deferred tax assets and liabilities concerned relate to income taxes raised by the same taxation authority on either:
 - The same taxable entity.
Or
 - Different taxable entities which intend to settle their current tax assets and liabilities either on a net basis or simultaneously, in each future period in which significant amounts of deferred tax are expected to be settled or recovered. [FRS 102.29.24A].

The offset criteria for deferred tax are less clear than those for current tax. The position is broadly that, where in a particular jurisdiction current tax assets and liabilities relating to future periods will be offset, deferred tax assets and liabilities relating to that jurisdiction and those periods must be offset (even if the deferred tax balances actually recognised in the statement of financial position would not satisfy the criteria for the offset of current tax).

IAS 12 (from which these requirements are derived) suggests that this slightly more pragmatic approach was adopted in order to avoid the detailed scheduling of the reversal of temporary differences that would be necessary to apply the same criteria as for current tax. However, IAS 12 notes that, in rare circumstances, an entity may have a legally enforceable right of set-off, and an intention to settle net, for some periods but not for others. In such circumstances, detailed scheduling may be required to determine the extent of permitted offset.

11.1.1.C Offset of current and deferred tax

Section 29 contains no provisions allowing or requiring the offset of current tax and deferred tax. Accordingly, in our view, given the general restrictions on offset in Section 2 *Concepts and Pervasive Principles* (see Chapter 4) current and deferred tax may not be offset against each other and must always be presented gross.

11.2 Statement of comprehensive income

As discussed at 9 above, except for tax relating to distributions to owners that are accounted in profit or loss, Section 29 requires an entity to present tax expense (or tax income) in the same component of comprehensive income (i.e., continuing or discontinued operations, and in profit or loss or in other comprehensive income) or equity as the transaction or other event that resulted in the tax expense (or tax income). [FRS 102.29.22].

An entity must also disclose on the face of the income statement (or statement of comprehensive income if presented) an amount comprising the total of the post-tax profit or loss of discontinued operations and the post-tax gain or loss attributable to the impairment or on the disposal of the assets or disposal group(s) constituting discontinued operations. [FRS 102.5.7E].

The results of equity-accounted entities must be presented on a post-tax basis. [FRS 102.14.8].

11.3 Statement of cash flows

Cash flows arising from taxes on income are separately disclosed and classified as cash flows from operating activities, unless they can be specifically identified with financing and investing activities. Where tax cash flows are allocated over more than one class of activity, the total amount of taxes paid must be disclosed. [FRS 102.7.17].

12 Disclosure

Section 29 requires an entity to disclose information that enables users of its financial statements to evaluate the nature and financial effect of the current and deferred tax consequences of recognised transactions and other events. [FRS 102.29.25]. Disclosure requirements are summarised below.

12.1 Components of tax expense

The major components of tax expense (or income) must be disclosed separately. These may include: [FRS 102.29.26]

- (a) Current tax expense (or income)
- (b) Any adjustments recognised in the period for current tax of prior periods
- (c) The amount of deferred tax expense (or income) relating to the origination and reversal of timing differences
- (d) The amount of deferred tax expense (or income) relating to changes in tax rates or the imposition of new taxes
- (e) Adjustments to deferred tax expense (or income) arising from a change in the tax status of the entity or its shareholders
- (f) The amount of tax expense (or income) relating to changes in accounting policies and errors (see Chapter 9 at 3.6)

And

- (g) Current tax expense (income) relating to Pillar Two income tax

12.2 International tax reform-Pillar Two model rules

See 3.7.3.C and 3.7.3.D above for the disclosure requirements related to Pillar Two Income Taxes.

12.3 Other disclosures required by FRS 102

The following must also be disclosed separately: [FRS 102.29.27]

- (a) The aggregate current and deferred tax relating to items that are recognised as items of other comprehensive income or equity.
- (b) A reconciliation between the tax expense (income) included in profit or loss and the profit or loss on ordinary activities multiplied by the applicable tax rate.
- (c) The amount of the net reversal of deferred tax assets and deferred tax liabilities expected to occur during the year beginning after the reporting period together with a brief explanation for the expected reversal.
- (d) An explanation of changes in the applicable tax rate(s) compared with the previous reporting period.
- (e) The amount of deferred tax liabilities and deferred tax assets at the end of the reporting period for each type of timing difference.
- (f) The amount of unused tax losses and tax credits and the expiry date, if any, of timing differences, unused tax losses and unused tax credits.

And

- (h) Where different tax rates apply to retained and distributed profits (see 8 above), an explanation of the nature of the potential income tax consequences that would result from the payment of dividends to shareholders.

The requirement at (c) above is noteworthy in that it is not required by IAS 12. The disclosure must be given on a net basis, which takes account of both the reversal of existing timing differences and the origination of new ones. [FRS 102.BC.B29.9J]. For example, for timing differences related to property, plant and equipment, an entity needs to compare next year's depreciation charge and next year's tax writing down allowances to see if it reverses or increases the timing difference.

The Basis for Conclusions notes that the net basis provides information that is relevant to the entity's future cash flows, and hence is more relevant than disclosure on a gross basis. The Basis for Conclusions also noted that the additional benefit of disclosure on a net basis outweighed the cost to preparers of forecasting future new timing differences. [FRS 102.BC.B29.9]. Given that, unlike the requirement at (e) above, the disclosure does not ask for an analysis for each type of timing difference, it would appear that the disclosure of a single net figure would be sufficient.

In addition, Section 32 requires entities to provide information about the nature of any changes in tax rates or tax laws enacted or announced after the reporting period that have a significant effect on current and deferred tax assets and liabilities. [FRS 102.32.11(h)]. An estimate of the financial effect of these changes must also be disclosed, or a statement given that such an estimate cannot be made. [FRS 102.32.10]. The requirements of Section 32 are discussed in Chapter 34.

13 Summary of GAAP differences

The differences between FRS 102 and IFRS are set out below.

FRS 102		IFRS
Deferred tax on unremitted earnings of subsidiaries etc.	Recognise in relation to timing differences only, and subject to a control test.	Control test.
Deferred tax on accelerated capital allowances where conditions for retaining allowances are met.	Derecognise.	Continue to recognise.
Deferred tax relating to effect of changes in tax base (e.g., grant of North Sea Field Allowance).	Not recognised (only changes measurement of previously recognised deferred tax).	Recognised.
Deferred tax on excess tax relief on share-based payments.	Permanent difference, no deferred tax.	Recognise deferred tax in equity.
Discounting of current tax receivable or payable.	Prohibited	Neither prohibited nor required. Entities must consider discounting current tax balances if the amounts involved are material.
Balance sheet classification of current tax assets and liabilities.	Not specified in Section 29. Statutory formats require current tax to be included within 'Other creditors, including taxation and social security'. When an entity applies the 'adapted formats', current tax assets and liabilities are disclosed as separate line items on the face of the balance sheet, classified as current or non-current as appropriate.	Disclosed as separate line items on face of balance sheet, classified as current or non-current as appropriate.
Balance sheet classification of deferred tax assets and liabilities.	When 'statutory formats' are applied, deferred tax assets are shown in the balance sheet as a current asset. Deferred tax liabilities are disclosed within provisions for liabilities. When an entity applies the 'adapted formats', deferred tax assets and liabilities are disclosed as separate line items on the face of the balance sheet, as non-current assets (liabilities) when an entity presents current and non-current assets, and current and non-current liabilities, as separate classifications in its balance sheet.	Disclosed as separate line items on face of balance sheet. When an entity presents current and non-current assets, and current and non-current liabilities, as separate classifications in its balance sheet, it does not classify deferred tax assets (liabilities) as current assets (liabilities)
Disclose split of current tax charge between domestic and foreign tax.	Not specified in Section 29, however, this additional information is required by 1 Sch 67 of the Regulations.	Not explicitly required.

FRS 102		IFRS
Disclose effect of double tax relief.	Not specified in Section 29, however, this additional information is required by 1 Sch 67 of the Regulations.	Not explicitly required.
Disclose nature of evidence to support recognition of deferred tax assets.	Not explicitly required.	Required.
Disclose expected net reversal of timing differences in the following reporting period.	Required.	Not required.
Pillar Two income tax	Section 29 includes an exemption for qualifying entities from certain disclosures that are primarily relevant to the consolidated financial statements of a group, provided that equivalent disclosures are included in the consolidated financial statements in which the qualifying entity is included.	No such exemptions in IAS 12.

Appendix A – Terms used in Section 29

Extract from FRS 102

Appendix I Glossary

actuarial gains and losses	Changes in the present value of the defined benefit obligation resulting from: (a) experience adjustments (the effects of differences between the previous actuarial assumptions and what has actually occurred); and (b) the effects of changes in actuarial assumptions.
business combination	The bringing together of separate entities or businesses into one reporting entity.
contingent liability	A contingent liability is either: (a) a possible obligation that arises from past events and whose existence will be confirmed only by the occurrence or non-occurrence of one or more uncertain future events not wholly within the control of the entity; or (b) a present obligation that arises from past events but is not recognised because: (i) it is not probable that an outflow of resources embodying economic benefits will be required to settle the obligation; or (ii) the amount of the obligation cannot be measured with sufficient reliability.
current tax	The amount of income tax payable (refundable) in respect of the taxable profit (tax loss) for the current period or past reporting periods.
deferred tax	Income tax payable (recoverable) in respect of the taxable profit (tax loss) for future reporting periods as a result of past transactions or events.
deferred tax assets	Income tax recoverable in future reporting periods in respect of: (a) future tax consequences of transactions and events recognised in the financial statements of the current and previous periods; (b) the carry forward of unused tax losses; and (c) the carry forward of unused tax credits.
deferred tax liabilities	Income tax payable in future reporting periods in respect of future tax consequences of transactions and events recognised in the financial statements of the current and previous periods.
income tax	All domestic and foreign taxes that are based on taxable profits. Income tax also includes taxes, such as withholding taxes, that are payable by a subsidiary, associate or joint venture on distributions to the reporting entity.
permanent differences	Differences between an entity's taxable profits and its total comprehensive income as stated in the financial statements, other than timing differences.
pillar Two income tax	Income tax arising from Pillar Two legislation.
pillar Two legislation	Tax law that implements the Pillar Two model rules published by the Organisation for Economic Co-operation and Development (OECD), including tax law that implements qualified domestic minimum top-up taxes described in those rules.
probable	More likely than not.

substantively enacted	Tax rates shall be regarded as substantively enacted when the remaining stages of the enactment process historically have not affected the outcome and are unlikely to do so. A UK tax rate shall be regarded as having been substantively enacted if it is included in either: (a) a Bill that has been passed by the House of Commons and is awaiting only passage through the House of Lords and Royal Assent; or (b) a resolution having statutory effect that has been passed under the Provisional Collection of Taxes Act 1968. (Such a resolution could be used to collect taxes at a new rate before that rate has been enacted. In practice, corporation tax rates are now set a year ahead to avoid having to invoke the Provisional Collection of Taxes Act for the quarterly payment system). A Republic of Ireland tax rate can be regarded as having been substantively enacted if it is included in a Bill that has been passed by the Dáil.
tax base	The amount that for an asset can be deducted for tax or for a liability will be assessed for tax.
tax expense	The aggregate amount included in total comprehensive income or equity for the reporting period in respect of current tax and deferred tax.
taxable profit (tax loss)	The profit (loss) for a reporting period upon which income taxes are payable or recoverable, determined in accordance with the rules established by the taxation authorities. Taxable profit equals taxable income less amounts deductible from taxable income.
timing differences	Differences between taxable profits and total comprehensive income as stated in the financial statements that arise from the inclusion of income and expenses in tax assessments in periods different from those in which they are recognised in financial statements.
uncertain tax treatment	A tax treatment for which there is uncertainty over whether the relevant taxation authority will accept the tax treatment under tax law. For example, a tax treatment that relies on an interpretation of the law that is not in accordance with the way in which the taxation authority is known to interpret the law.

Overview

This chapter discusses the requirements of Section 30 *Foreign Currency Translation* in respect of foreign currency transactions and foreign operations into the financial statements of an entity and how to translate financial statements into a presentation currency.

Section 30 of FRS 102 is similar to IAS 21 *The Effects of Changes in Foreign Exchange Rates*, with the differences discussed below. Other differences, not discussed, mainly relate to issues addressed by IAS 21 that are not discussed in FRS 102.

What you need to know

- Each entity - whether a stand-alone entity, an entity with foreign operations (such as a parent) or a foreign operation (such as a subsidiary or branch) - must determine its functional currency. The functional currency is the currency of the primary economic environment in which it operates.
- Where an entity enters into a transaction denominated in a currency other than its functional currency, it translates the related foreign currency items into its functional currency and reports the effects of the translation in accordance with the requirements of Section 30, with exchange differences reported in profit or loss.
- An entity may present its financial statements in any currency (or currencies). If the presentation currency differs from the entity's functional currency, it is required to translate its results and financial position into the presentation currency. The results and financial position of any individual entity within the reporting entity whose functional currency differs from the presentation currency are translated in accordance with the provisions of Section 30, with exchange differences reported in other comprehensive income.
- Exchange differences recognised in other comprehensive income are not reclassified to profit or loss on disposal of the foreign operation.
- Section 30 requires management to use its judgement to determine the entity's functional currency such that it most faithfully represents the economic effects of the underlying transactions, events and conditions that are relevant to the entity. Accordingly, once it has been determined, it may only be changed if there is a change to those underlying transactions, events and conditions. A change in functional currency is accounted for prospectively from the date of the change.
- Changing presentation currency is not addressed in Section 30, but is, in our view, similar to a change in accounting policy. Therefore, when an entity chooses to change its presentation currency, we consider it appropriate to follow the approach in Section 10 *Accounting policies, Estimates and Errors* which requires retrospective application except to the extent it is impracticable. Comparatives must be restated and presented in the new presentation currency. This is discussed further at 3.9 below.

1 Introduction

An entity can conduct foreign activities in two ways. It may enter directly into transactions which are denominated in foreign currencies, the results of which need to be translated into the currency in which the company measures its results and financial position. Alternatively, it may conduct foreign operations through a foreign entity, such as a subsidiary, associate, joint venture or branch which keeps its accounting records in terms of its own currency. In this case it will need to translate the financial statements of the foreign entity for the purposes of inclusion in the consolidated financial statements.

2 Comparison between Section 30 and IFRS

2.1 Reclassification of foreign exchange differences on disposal of a foreign operation

Under IAS 21 all exchange differences arising on translation of a foreign operation that have been accumulated in equity are reclassified to profit and loss on disposal of the net investment. [IAS 21.48]. Section 30 of FRS 102 prohibits such reclassifications on disposal. [FRS 102.9.18A, FRS 102.30.13].

2.2 Unrealised exchange gains on intercompany balances

Unrealised exchange gains on intercompany balances that are part of the net investment in a foreign operation are recognised in other comprehensive income in the separate financial statements of the reporting entity or the individual financial statements of the foreign operation. Under IAS 21, all such exchange gains are recognised in profit or loss. [FRS 102.30.13, IAS 21.32]. The treatment in FRS 102 results from the general restriction in the Companies Act 2006 (CA 2006) from recognising unrealised profits in the profit and loss account (see 4 and 5 below).

3 Requirements of Section 30 for foreign currency translation

3.1 Scope

Section 30 applies to foreign currency transactions, foreign operations and the translation of financial statements into a presentation currency. [FRS 102.30.1].

Section 30 does not apply to hedge accounting of foreign currency items. This is dealt with in Section 12 *Other Financial Instruments Issues* (see Chapter 14). [FRS 102.30.1A].

3.2 Summary of the approach required by Section 30

In preparing financial statements, the following approach is required to be followed:

- Each entity - whether a stand-alone entity, an entity with foreign operations (such as a parent) or a foreign operation (such as a subsidiary or branch) - determines its functional currency. [FRS 102.30.2]. This is discussed at 3.3 below.
In the case of group financial statements, there is not a 'group' functional currency; each entity included within the group financial statements, be it the parent, a subsidiary, associate, joint venture or branch, has its own functional currency.
- Where an entity enters into a transaction denominated in a currency other than its functional currency, it translates the related foreign currency items into its functional currency and reports the effects of the translation in accordance with the requirements of Section 30 discussed at 3.4 below.
- The results and financial position of any individual entity within the reporting entity whose functional currency differs from the presentation currency are translated in accordance with the provisions of Section 30 discussed at 3.6 below.

Many reporting entities comprise a number of individual entities (e.g., a group is made up of a parent and one or more subsidiaries). Entities may also have investments in associates or joint ventures or have branches (see 3.3.2 below). It is necessary for the results and financial position of each individual entity included in the reporting entity to be translated into the currency in which the reporting entity presents its financial statements (if this presentation currency is different from the individual entity's functional currency). [FRS 102.30.17].

3.3 Determination of an entity's functional currency

Functional currency is defined as the currency of "the primary economic environment in which the entity operates". [FRS 102.30.2].

Section 30 sets out a number of factors or indicators that an entity needs to consider in determining its functional currency. When the factors or indicators are mixed and the functional currency is not obvious, management must use its judgement to determine the functional currency that most faithfully represents the economic effects of the underlying transactions, events and conditions. We believe that as part of this approach, management must give priority to the most important indicators before considering the other indicators, which are designed to provide additional supporting evidence to determine an entity's functional currency.

The primary factors that FRS 102 requires an entity to consider in determining its functional currency are as follows:

Extract from Section 30

- 30.3** The primary economic environment in which an entity operates is normally the one in which it primarily generates and expends cash. Therefore, the following are the most important factors an entity considers in determining its functional currency:
- (a) The currency:
 - (i) that mainly influences sales prices for goods and services (this will often be the currency in which sales prices for its goods and services are denominated and settled); and
 - (ii) of the country whose competitive forces and regulations mainly determine the sales prices of its goods and services; and
 - (b) The currency that mainly influences labour, material and other costs of providing goods or services. (this will often be the currency in which such costs are denominated and settled). [FRS 102.30.3].

Where the functional currency of the entity is not obvious from the above, the following factors may also provide evidence of an entity's functional currency: [FRS 102.30.4]

(a) The currency in which funds from financing activities (issuing debt and equity instruments) are generated.

And

(b) The currency in which receipts from operating activities are usually retained.

An operation that carries on business as if it were an extension of the parent's operations, will have the same functional currency as the parent. In this context, the term parent is drawn broadly and is the entity that has the foreign operation as its subsidiary, branch, associate or joint venture. Therefore, the following additional factors are also considered in determining the functional currency of a foreign operation, particularly whether its functional currency is the same as that of the reporting entity: [FRS 102.30.5]

(a) Whether the activities of the foreign operation are carried out as an extension of the reporting entity, rather than being carried out with a significant degree of autonomy. An example of the former is when the foreign operation only sells goods imported from the reporting entity and remits the proceeds to it. An example of the latter is when the operation accumulates cash and other monetary items, incurs expenses, generates income and arranges borrowings, all substantially in its local currency.

(b) Whether transactions with the reporting entity are a high or a low proportion of the foreign operation's activities.

(c) Whether cash flows from the activities of the foreign operation directly affect the cash flows of the reporting entity and are readily available for remittance to it.

(d) Whether cash flows from the activities of the foreign operation are sufficient to service existing and normally expected debt obligations without funds being made available by the reporting entity.

Since an entity's functional currency reflects the underlying transactions, events and conditions that are relevant to it, once it is determined, Section 30 requires that the functional currency is not changed unless there is a change in those underlying transactions, events and conditions. [FRS 102.30.15]. The implication of this is that management of an entity cannot decree what the functional currency is - it is a matter of fact, albeit subjectively determined fact based on management's judgement of all the circumstances.

3.3.1 Intermediate holding companies or finance subsidiaries

For many entities the determination of functional currency will be relatively straightforward. However, for some entities, particularly entities within a group, this may not be the case. One particular difficulty is the determination of the functional currency of an intermediate holding company or finance subsidiary within an international group.

Illustration 3-1: Functional currency of intermediate holding companies or finance subsidiaries

An international group is headquartered in the UK. The UK parent entity has a functional currency of pound sterling, which is also the group's presentation currency. The group has three international sub-operations, structured as follows:

What is the functional currency of the three Mid Cos?

There are a variety of factors to be considered for intermediate holding companies or finance subsidiaries when deciding on the appropriate functional currency. Therefore, there will not be a single analysis applicable to all such entities.

FRS 102 defines a 'foreign operation' as "an entity that is a subsidiary...the activities of which are based or conducted in a country or currency other than those of the reporting entity" (see 3.3 above). This definition suggests that a foreign operation must have its own 'activities'.

Paragraph 2 of Section 30 states that the functional currency is "the currency of the primary economic environment in which the entity operates". However, this is determined by reference to the currency that mainly influences sales prices and the operation's costs (see 3.3 above) and is therefore not directly relevant to intermediate holding companies or finance subsidiaries. Paragraphs 4 and 5 of Section 30 set out several factors to consider in determining the functional currency of a foreign operation. The theme running through these factors is the extent to which the activities and cash flows of the foreign operation are independent of those of the reporting entity.

How we see it

In the case of an intermediate holding company or finance subsidiary, the acid-test question to consider is whether it is an extension of the parent and performing the functions of the parent - i.e., whether its role is simply to hold the investment in, or provide finance to, the foreign operation on behalf of the parent company or whether its functions are essentially an extension of a local operation (e.g., performing selling, payroll or similar activities for that operation) or indeed it is undertaking activities on its own account.

This means that subsidiaries that do nothing but hold investments or borrow money on behalf of the parent will normally have the functional currency of the parent. The borrowings of such companies are frequently guaranteed by the parent, which is itself likely to be a relevant factor. In other words, on whose credit is the lender relying? If the lender is looking to the ultimate parent, then the functional currency is likely to be that of the ultimate parent. However, if the lender is looking to the sub-group, then the functional currency of the companies in the sub-group will be relevant.

How we see it

Accordingly, any analysis that such a company has a functional currency other than that of the parent will require careful consideration of the features of the entity which give rise to that conclusion. Complex situations are likely to require the application of careful management judgement.

As for other entities within a group, the circumstances of each entity are reviewed against the indicators and factors set out in Section 30. This requires management to use its judgement in determining the functional currency that most faithfully represents the economic effects of the underlying transactions, events and conditions applicable to that entity.

3.3.2 Branches and divisions

Section 30 uses the term 'branch' to describe an operation within a legal entity that may have a different functional currency from the entity itself. However, it contains no definition of that term, nor any further guidance on what arrangements are regarded as a branch. Many countries' governments have established legal and regulatory regimes that apply when a foreign entity establishes a place of business (often called a branch) in that country.

How we see it

Where an entity has operations that are subject to such a regime, it will normally be appropriate to regard them as a branch and evaluate whether those operations have their own functional currency. In this context, the indicators in paragraph 30.5 used to assess whether an entity has a functional currency that is different from its parent (see 3.3 above) will be particularly relevant.

An entity may also have an operation, e.g., a division, that operates in a different currency environment to the rest of the entity but which is not subject to an overseas branch regime.

How we see it

If that operation represents a sufficiently autonomous business unit it may be appropriate to view it as a branch and evaluate whether it has a functional currency that is different to the rest of the legal entity. However, in our experience, this situation will not be a common occurrence.

3.4 Reporting foreign currency transactions in the functional currency of an entity

Where an entity enters into a transaction denominated in a currency other than its functional currency then it will have to translate those foreign currency items into its functional currency and report the effects of such translation. The general requirements of Section 30 are discussed at 3.4.1 to 3.4.13 below.

3.4.1 Initial recognition

Extract from Section 30

- 30.6** A foreign currency transaction is a transaction that is denominated or requires settlement in a foreign currency, including transactions arising when an entity:
- (a) buys or sells goods or services whose price is denominated in a foreign currency;
 - (b) borrows or lends funds when the amounts payable or receivable are denominated in a foreign currency; or
 - (c) otherwise acquires or disposes of assets, or incurs or settles liabilities, denominated in a foreign currency. [FRS 102.30.6].
- 30.7** An entity shall record a foreign currency transaction, on initial recognition in the functional currency, by applying to the foreign currency amount the spot exchange rate between the functional currency and the foreign currency at the date of the transaction. [FRS 102.30.7].

The date of a transaction is the date on which the transaction first qualifies for recognition in accordance with FRS 102. For practical reasons, a rate that approximates the actual rate at the date of the transaction is often used, for example, an average rate for a week or a month might be used for all transactions in each foreign currency occurring during that period. However, if exchange rates fluctuate significantly, the use of the average rate for a period is inappropriate. [FRS 102.30.8].

3.4.2 Identifying the date of transaction

The date of a transaction is the date on which it first qualifies for recognition in accordance with FRS 102. Although this sounds relatively straightforward, the following Illustration shows the difficulty that can sometimes arise in determining the transaction date:

Illustration 3-2: Establishing the transaction date (1)

A UK entity buys an item of inventory from a Canadian supplier. The dates relating to the transaction, and the relevant exchange rates, are as follows:

Date	Event	£1=C\$
14 April 20X6	Goods are ordered	1.50
5 May 20X6	Goods are shipped from Canada and invoice dated that day	1.53
7 May 20X6	Invoice is received	1.51
10 May 20X6	Goods are received	1.54
14 May 20X6	Invoice is recorded	1.56
7 June 20X6	Invoice is paid	1.60

Section 13 *Inventories* does not make any reference to the date of initial recognition of inventory and Section 11 *Basic Financial Instruments* deals with the initial recognition of financial liabilities only in general terms. Generally, an entity does not recognise a liability at the time of the commitment but delays recognition until the ordered goods have been shipped or delivered, i.e., the date that the risks and rewards of ownership have passed. Accordingly, it is unlikely that the date the goods are ordered is required to be used as the date of the transaction.

If the goods are shipped free on board (f.o.b.) then as the risks and rewards of ownership pass on shipment (5 May) then this date must be used.

If, however, the goods are not shipped f.o.b. then the risks and rewards of ownership will often pass on delivery (10 May) and therefore the date the goods are received will be treated as the date of the transaction. In practice, the transaction date will depend on the precise terms of the agreement (which are often based on standardised agreements such as the Incoterms rules).

The dates on which the invoice is received and is recorded are irrelevant to when the risks and rewards of ownership pass and therefore is not, in principle, considered to be the date of the transaction. In practice, it may be acceptable that as a matter of administrative convenience that the exchange rate at the date the invoice is recorded is used, particularly if there is no undue delay in processing the invoice. If this is done, then care must be taken to ensure that the exchange rate used is not significantly different from that ruling on the 'true' date of the transaction.

It is clear from Section 30 that the date the invoice is paid is not the date of the transaction because if it were then no exchange differences would arise on unsettled transactions.

Illustration 3-2 above highlights that the date that a transaction is recorded in an entity's books and records is not necessarily the same as the date at which it qualifies for recognition under FRS 102.

One of the difficulties in identifying the date of transaction is the fact that Section 13 contains little guidance on determining when purchased inventory is recognised as an asset. Others such as Section 23 *Revenue from Contracts with Customers* contains more detailed guidance in this respect. As such, determining the date of transaction may require the application of judgement and the date that a transaction is recorded in an entity's books and records will not necessarily be the same as the date at which it qualifies for recognition under FRS 102.

Other situations where this is likely to arise is where an entity is recording a transaction that relates to a period, rather than one being recognised at a single point in time, as illustrated below:

Illustration 3-3: Establishing the transaction date (2)

On 30 September 20X6 Company A, whose functional currency is the pound sterling, acquires a US dollar bond for US\$8,000. The bond carries fixed interest of 5% per annum paid quarterly, i.e., US\$100 per quarter. The exchange rate on acquisition is US\$1 to £1.50.

On 31 December 20X6, the US dollar has appreciated, and the exchange rate is US\$1 to £2.00. Interest received on the bond on 31 December 20X6 is US\$100 (= £200).

Although the interest might be recorded only on 31 December 20X6, the rate on that date is not the spot rate ruling at the date of the transaction. Since the interest has accrued over the 3 month period, it is translated at the spot rates applicable to the accrual of interest during the 3 month period. Accordingly, a weighted average rate for the period is used. Assuming that the appropriate average rate is US\$1 to £1.75 the interest income is £175 (= US\$100 × 1.75).

Accordingly, there is also an exchange gain on the interest receivable of £25 (= US\$100 × [2.00 - 1.75]) to be reflected in profit or loss. The journal entry for recording the receipt of the interest on 31 December 20X6 is therefore as follows:

	£	£
Dr. Cash	200	
Cr. Interest income (profit or loss)		175
Cr. Exchange gain (profit or loss)		25

3.4.3 Using average rates

Rather than using the actual rate ruling at the date of the transaction "an average rate for a week or month may be used for all foreign currency transactions occurring during that period", if the exchange rate does not fluctuate significantly (see 3.4.1 above). [FRS 102.30.8]. For entities which engage in many foreign currency transactions it will be more convenient for them to use an average rate rather than using the exact rate for each transaction. If an average rate is to be used, what guidance can be given in choosing and using such a rate?

(a) Length of period

As an average rate is only used as an approximation of actual rates then care has to be taken that significant fluctuations in the day-to-day exchange rates do not arise in the period selected. For this reason, the period chosen is not to be too long.

How we see it

We believe that it would be inappropriate to use a period of more than one month and where there is volatility of exchange rates it will be better to set rates more frequently, say on a weekly basis, especially where the value of transactions is significant.

(b) Estimate of average rate relevant to date of transaction

The estimation of the appropriate average rate will depend on whether the rate is to be applied to transactions which have already occurred or to transactions which will occur after setting the rate. Obviously, if the transactions have already occurred then the average rate used relates to the period during which those transactions occurred, e.g., purchase transactions for the previous week are translated using the average rate for that week, not an average rate for the week the invoices are being recorded. If the rate is being set for the following period, the rate selected is a reasonable estimate of the expected exchange rate during that period. This could be done by using the closing rate at the end of the previous period or by using the actual average rate for the previous period.

How we see it

We would suggest that the former be used. Whatever means is used to estimate the average rate, the actual rates during the period need to be monitored and if there is a significant move in the exchange rate away from the average rate then the rate being applied is revised.

(c) Application of average rate to type of item

How we see it

We believe that average rates are to be used only as a matter of convenience where there are a large number of transactions.

Even where an average rate is used, we recommend that the actual rate is used for large one-off transactions such as the purchase of a fixed asset or an overseas investment or taking out a foreign loan. Where the number of foreign currency transactions is small it will probably not be worthwhile setting and monitoring average rates and therefore actual rates are to be used.

3.4.4 Calculation of an average rate

When translating the results of an entity whose functional currency is not that of a hyperinflationary economy, for practical reasons, the reporting entity may use a rate that approximates the actual exchange rate, e.g., an average rate for the period, to translate income and expense items. [FRS 102.30.8].

The standard does not give any guidance on the factors that are to be taken into account in determining what may be an appropriate average rate for the period - it merely says that "if exchange rates fluctuate significantly, the use of the average rate for the period is inappropriate". [FRS 102.30.8]. What methods are, therefore, available to entities to use in calculating an appropriate average rate? Possible methods include:

- (a) Mid-year rate
- (b) Average of opening and closing rates
- (c) Average of month end/quarter end rates
- (d) Average of monthly average rates
- (e) Monthly/quarterly results at month end/quarter end rates
- (f) Monthly/quarterly results at monthly/quarterly averages

Illustration 3-4: Calculation of average rate

A UK entity has a foreign subsidiary and is preparing its consolidated financial statements for the year ended 30 April 20X6. It intends to use an average rate for translating the results of the subsidiary. The relevant exchange rates for £1=FC are as follows:

Month	Month end	Average for month	Average for quarter	Average for year
April 20X5	1.67			
May 20X5	1.63	1.67		
June 20X5	1.67	1.64		
July 20X5	1.64	1.65	1.65	
August 20X5	1.67	1.64		
September 20X5	1.70	1.63		
October 20X5	1.67	1.68	1.65	
November 20X5	1.65	1.70		
December 20X5	1.66	1.66		
January 20X6	1.64	1.67	1.68	
February 20X6	1.60	1.65		
March 20X6	1.61	1.63		
April 20X6	1.61	1.62	1.63	1.65

Average of month end rates - 1.65
 Average of quarter end rates - 1.64

The results of the subsidiary for each of the 12 months to 30 April 20X6 and the translation thereof under each of the above methods (using monthly figures where appropriate) are shown below:

Method (a)	FC31,050 @ 1.67 = €18,593
Method (b)	FC31,050 @ 1.64 = €18,933
Method (c) - monthly	FC31,050 @ 1.65 = €18,818
Method (c) - quarterly	FC31,050 @ 1.64 = €18,933
Method (d)	FC31,050 @ 1.65 = €18,818

		(e)	(e)	(f)	(f)
		quarterly	monthly	quarterly	monthly
Month	FC	£	£	£	£
May 20X5	1,000		613		599
June 20X5	1,100		659		671
July 20X5	1,200	2,012	732	2,000	727
August 20X5	1,300		778		793
September 20X5	1,300		765		798
October 20X5	1,350	2,365	808	2,394	804
November 20X5	1,400		848		824
December 20X5	1,400		843		843
January 20X6	2,000	2,927	1,220	2,857	1,198
February 20X6	5,000		3,125		3,030
March 20X6	10,000		6,211		6,135
April 20X6	4,000	11,801	2,484	11,656	2,469
Total	31,050	19,105	19,086	18,907	18,891

It can be seen that by far the simplest methods to use are the methods (a) to (d).

How we see it

In our view methods (a) and (b) are not normally used as it is unlikely in times of volatile exchange rates that they will give appropriate weighting to the exchange rates which have been in existence throughout the period in question. They are only likely to give an acceptable answer if the exchange rate has been static or steadily increasing or decreasing throughout the period.

Method (c) based on quarter end rates has similar drawbacks and therefore is not normally used.

Method (c) based on month end rates and method (d) are better than the previous methods as they do take into account more exchange rates which have applied throughout the year, with method (d) being more precise, as this will have taken account of daily exchange rates. Method (d) will normally give reasonable and acceptable results when there are no seasonal variations in items of income and expenditure.

Average monthly rates for most major currencies are likely to be given in publications issued by the government, banks and other sources and therefore it is unnecessary for entities to calculate their own. The work involved in calculating an average for the year, therefore, is not very onerous.

Where there are seasonal variations in items of income and expenditure, using a single average rate for the entire reporting period is unlikely to result in a reasonable approximation of applying actual rates. In these situations, appropriate exchange rates are applied to the appropriate items. This can be done by using either of methods (e) or (f) preferably using figures and rates for each month. Where such a method is being used care is to be taken to ensure that the periodic accounts are accurate and that cut-off procedures have been adequate, otherwise significant items may be translated at the wrong average rate.

Where there are significant one-off items of income and expenses then it is likely that actual rates at the date of the transaction will need to be used to translate such items.

3.4.5 Dual rates or suspension of rates

One practical difficulty in translating foreign currency amounts is where there is more than one exchange rate for that particular currency depending on the nature of the transaction. In some cases, the difference between the exchange rates can be small and therefore it probably does not matter which rate is actually used. However, in other situations the difference can be quite significant. So, what rate is used?

There is no specific guidance on this matter in FRS 102. So, in accordance with the hierarchy set out in Section 10 an entity could look to the requirements in IFRS for guidance. IAS 21 states that “when several exchange rates are available, the rate used is that at which the future cash flows represented by the transaction or balance could have been settled if those cash flows had occurred at the measurement date”. [IAS 21.26]. Companies would therefore normally look at the nature of the transaction and apply the appropriate exchange rate.

Another practical difficulty which could arise is where, for some reason, exchangeability between two currencies is temporarily lacking at the transaction date or subsequently at the end of the reporting period. Again FRS 102 provides no specific guidance although IAS 21 requires that the rate to be used is “the first subsequent rate at which exchanges could be made”. [IAS 21.26].

In certain circumstances it might not be possible to determine an exchange rate for a particular currency pair directly. For example, geopolitical developments may have stopped substantially all exchanges of Currency A and Currency B. However, in such circumstances it will normally be possible to derive an exchange rate indirectly. For example, if those geopolitical developments had not significantly affected exchanges of Currency A for Currency C nor exchanges of Currency B for Currency C, one could derive an exchange rate for Currency A and Currency B from the Currency A/Currency C exchange rate and the Currency B/Currency C rate. When using such a method, the result will be more reliable if the intermediate currency (Currency C in this case) is one that is stronger and/or more actively exchanged.

In August 2023, the IASB published amendments to IAS 21 which provide additional guidance for scenarios where there is a lack of exchangeability. Refer to the EY publication, International GAAP®.

3.4.6 Reporting at the ends of the subsequent reporting periods

Extract from Section 30

- 30.9** At the end of each reporting period, an entity shall:
- (a) translate foreign currency monetary items using the closing rate;
 - (b) translate non-monetary items that are measured in terms of historical cost in a foreign currency using the exchange rate at the date of the transaction; and
 - (c) translate non-monetary items that are measured at fair value in a foreign currency using the exchange rates at the date when the fair value was determined. [FRS 102.30.9].

The treatment of exchange differences arising from this is set out at 3.4.7 and 3.4.8 below for monetary and non-monetary items respectively.

3.4.7 Treatment of exchange differences - monetary items

The general rule in Section 30 is that exchange differences on the settlement or retranslation of monetary items is recognised in profit or loss in the period in which they arise. [FRS 102.30.10].

Where additional guidance is required in applying paragraph 30.10 of the standard, an entity could look to the requirements within IFRS under for further guidance. IAS 21 requires that when the transaction is settled in a subsequent accounting period, the exchange difference recognised in each period up to the date of settlement is determined by the change in exchange rates during each period. [IAS 21.29].

These requirements can be shown in the following illustrations:

Illustration 3-5: Reporting an unsettled foreign currency transaction in the functional currency

A UK entity purchases plant and equipment on credit from a Canadian supplier for C\$328,000 in January 20X6 when the exchange rate is £1=C\$1.64. The entity records the asset at a cost of £200,000. At the UK entity's year end at 31 March 20X6 the account has not yet been settled. The closing rate is £1=C\$1.61. The amount payable would be retranslated at £203,727 in the balance sheet and an exchange loss of £3,727 would be reported as part of the profit or loss for the period. The cost of the asset would remain as £200,000.

Illustration 3-6: Reporting a settled foreign currency transaction in the functional currency

A UK entity sells goods to a German entity for €87,000 on 28 February 20X6 when the exchange rate is £1=€1.45. It receives payment on 31 March 20X6 when the exchange rate is £1=€1.50. On 28 February the UK entity will record a sale and corresponding receivable of £60,000. When payment is received on 31 March the actual amount received is only £58,000. The loss on exchange of £2,000 would be reported as part of the profit or loss for the period.

There are situations where the general rule above will not be applied. The first exception relates to exchange differences arising on a monetary item that, in substance, forms part of an entity's net investment in a foreign operation (see 3.6.4 below). In this situation the exchange differences are recognised in other comprehensive income and accumulated in equity. However, in general, this treatment applies only in the financial statements that include the foreign operation and the reporting entity (e.g., consolidated financial statements when the foreign operation is a subsidiary). It does not normally apply to the reporting entity's separate financial statements or the financial statements of the foreign operation. This is discussed further at 3.6.6 below.

The next exception relates to hedge accounting for foreign currency items, to which Section 12 applies. The application of hedge accounting requires an entity to account for some exchange differences differently from the treatment required by Section 30. For example, Section 12 requires that exchange differences on monetary items that qualify as hedging instruments in a cash flow hedge are recognised initially in other comprehensive income to the extent the hedge is effective. Hedge accounting is discussed in more detail in Chapter 14.

Another situation where exchange differences on monetary items are not recognised in profit or loss in the period they arise would be where an entity capitalises borrowing costs under Section 25 *Borrowing Costs* since that section of FRS 102 requires exchange differences arising from foreign currency borrowings to be capitalised to the extent that they are regarded as an adjustment to interest costs (see Chapter 27 at 3.5.4). [FRS 102.25.1].

3.4.8 Treatment of exchange differences - non-monetary items

When non-monetary items are measured at fair value in a foreign currency, they are translated using the exchange rate as at the date when the fair value was determined. [FRS 102.30.9(c)]. Therefore, any re-measurement gain or loss will include an element relating to the change in exchange rates. In this situation, the exchange differences are recognised as part of the gain or loss arising on the fair value re-measurement.

When a gain or loss on a non-monetary item is recognised in other comprehensive income, any exchange component of that gain or loss is also recognised in other comprehensive income. [FRS 102.30.11]. For example, Section 17 *Property, Plant and Equipment* requires some gains and losses arising on a revaluation of property, plant and equipment to be recognised in other comprehensive income (see Chapter 20 at 3.7). When such an asset is measured in a foreign currency, the revalued amount is translated using the rate at the date the value is determined, resulting in an exchange difference that is also recognised in other comprehensive income.

Conversely, when a gain or loss on a non-monetary item is recognised in profit or loss, e.g., financial instruments that are measured at fair value through profit or loss in accordance with Section 12 (see Chapter 13 at 6.4) or an investment property accounted for using the fair value model (see Chapter 19 at 3.3.1, any exchange component of that gain or loss is recognised in profit or loss. [FRS 102.30.11].

The carrying amount of some items is determined by comparing two or more amounts. For example, Section 13 *Inventories* requires the carrying amount of inventories to be determined as the lower of cost and estimated selling price less costs to complete and sell. Similarly, in accordance with Section 27 *Impairment of Assets* the carrying amount of an asset for which there is an indication of impairment is the lower of its carrying amount before considering possible impairment losses and its recoverable amount. When such an asset is non-monetary and is measured in a foreign currency, the carrying amount is determined by comparing:

- The cost or carrying amount, as appropriate, translated at the exchange rate at the date when that amount was determined (i.e., the rate at the date of the acquisition for an item measured in terms of historical cost).
- And
- The estimated selling price less costs to complete or recoverable amount, as appropriate, translated at the exchange rate at the date when that value was determined (e.g., the closing rate at the end of the reporting period).

The effect of this comparison may be that an impairment loss is recognised in the functional currency but would not be recognised in the foreign currency, or *vice versa*.

3.4.9 Determining whether an item is monetary or non-monetary

Section 30 generally requires that monetary items denominated in foreign currencies be retranslated using closing rates at the end of the reporting period and non-monetary items must not be retranslated (see 3.4.7 and 3.4.8 above). Monetary items are defined as “units of currency held and assets and liabilities to be received or paid in a fixed or determinable number of units of currency”. [FRS 102 Appendix I]. Section 30 does not elaborate further on this, however IAS 21 states that ‘the essential feature of a monetary item is a right to receive (or an obligation to deliver) a fixed or determinable number of units of currency’. Some examples given by IAS 21 (and which would also apply under FRS 102) are pensions and other employee benefits to be paid in cash; provisions that are to be settled in cash; and cash dividends that are recognised as a liability. More obvious examples are cash and bank balances; trade receivables and payables; and loan receivables and payables.

Conversely, the essential feature of a non-monetary item is the absence of a right to receive (or an obligation to deliver) a fixed or determinable number of units of currency. Examples are amounts prepaid for goods and services (e.g., prepaid rent); goodwill; intangible assets; inventories; property, plant and equipment; and provisions that are to be settled by the delivery of a non-monetary asset. Investments in equity instruments are generally non-monetary items. However, there are several situations where the distinction may not be altogether clear.

3.4.10 Deposits or progress payments

Entities may be required to pay deposits or progress payments when acquiring certain assets, such as property, plant and equipment or inventories, from foreign suppliers. The question then arises as to whether such payments must be retranslated as monetary items or non-monetary items.

FRS 102 does not provide any guidance on this area therefore following the GAAP hierarchy in Section 10 users may turn to IFRS in developing an accounting policy. IFRIC 22 *Foreign Currency Transactions and Advance Consideration* contains guidance on determining the date of the transaction for deposits or progress payments where these deposits or progress payments are recognised as non-monetary items.

IFRIC 22 applies to foreign currency transactions where an entity recognises a non-monetary asset or non-monetary liability arising from the payment or receipt of advance consideration before the entity recognises the related asset, expense, or income. It requires that the exchange rate to use on initial recognition of the related asset, expense, or income is the exchange rate on the date of the transaction, which is the date on which the entity initially recognises the non-monetary asset or non-monetary liability arising from the advance consideration.

Illustration 3-7: Deposits or progress payments

A UK entity contracts to purchase an item of plant and machinery for €10,000 on the following terms:

Payable on signing contract (1 August 20X6)	10%
Payable on delivery (19 December 20X6)	40%
Payable on installation (7 January 20X6)	50%

At 31 December 20X6 the entity has paid the first two amounts on the due dates when the respective exchange rates were £1=€1.25 and £1=€1.20. The closing rate at the end of its reporting period, 31 December 20X6, is £1=€1.15.

	€	(i) £	(ii) £
First payment	1,000	800	870
Second payment	4,000	3,333	3,478
		<u>4,133</u>	<u>4,348</u>

- If the payments made are regarded as prepayments or as progress payments, then the amounts must be treated as non-monetary items and included in the balance sheet at £4,133.
- If the payments made are regarded as deposits, and are refundable, then the amounts could possibly be treated as monetary items and included in the balance sheet at £4,348 and an exchange gain of £215 recognised in profit or loss. A variant of this would be to treat only the first payment as a deposit until the second payment is made, since once delivery is made it is less likely that the asset will be returned and a refund sought from the supplier.

How we see it

In practice, it will often be necessary to consider the terms of the contract to ascertain the nature of the payments made to determine the appropriate accounting treatment and this may require the application of judgement. An entity could look to the additional guidance set out in IFRIC 22 when determining the appropriate accounting treatment.

3.4.11 Investments in preference shares

Entities may invest in preference shares of other entities. Whether such shares are monetary items or not will depend on the rights attaching to the shares. As discussed at 3.4.8 above, investments in equity instruments are generally considered to be non-monetary items. Thus, if the terms of the preference shares are such that they are classified by the issuer as equity, rather than as a financial liability, then they are non-monetary items. However, if the terms of the preference shares are such that they are classified by the issuer as a financial liability (e.g., a preference share that provides for mandatory redemption by the issuer for a fixed or determinable amount at a fixed or determinable future date), then it would appear that they must be treated as monetary items.

3.4.12 Assets and liabilities arising from insurance contracts

FRS 103 *Insurance Contracts* states that for the purposes of applying the requirements of Section 30 an entity must treat all assets and liabilities arising from an insurance contract as monetary items. [FRS 103.2.26]. This means that items such as deferred acquisition costs and unearned premiums that arose in a foreign currency will be retranslated into the entity's functional currency at the closing exchange rate at each reporting date even though they have characteristics that are more akin to a non-monetary item.

3.4.13 Post-employment benefit plans - foreign currency assets

For most entities, benefits payable under a defined benefit post-employment plan will be payable in the functional currency of the entity. However, such a plan may have monetary assets that are denominated in a foreign currency and/or non-monetary assets, the fair value of which are determined in a foreign currency.

Consider, for example, a UK company with the pound sterling as its functional currency which has a funded pension scheme in which benefit payments are based on the employees' sterling denominated salaries and are paid in sterling. The majority of plan assets comprise a mix of sterling denominated bonds, UK equities and UK properties. However, those assets also include a number of US dollar denominated bonds and equities issued by US companies that are listed on a US stock exchange. Section 28 *Employee Benefits* requires all plan assets to be measured at their fair value at the end of the reporting period, but how does the entity deal with any exchange differences or changes in fair value attributable to changes in exchange rates arising on the US assets?

The standard defines monetary items as "units of currency held and assets and liabilities to be received or paid in a fixed or determinable number of units of currency". [FRS 102 Appendix I]. Pension assets fall within this definition. Further, the accounting for defined benefit schemes under Section 28 requires an entity to reflect net interest on the net defined benefit asset or liability in profit or loss, and any difference between this amount and the actual return on plan assets in other comprehensive income (see Chapter 30 at sections 3.5.10.B). [FRS 102.28.25A].

How we see it

It would consequently seem appropriate to view the net pension asset or liability as a single unit of account measured in the functional currency (in this case sterling). Therefore, the gains and losses on all the assets denominated in a non-functional currency (in this case the US plan assets) which are attributable to changes in foreign exchange rates, would be dealt with as remeasurements in accordance with Section 30 and recognised in other comprehensive income.

3.5 Change in functional currency

Section 30 requires management to use its judgement to determine the entity's functional currency such that it most faithfully represents the economic effects of the underlying transactions, events and conditions that are relevant to the entity (see 3.3 above). Accordingly, once the functional currency is determined, it may be changed only if there is a change to those underlying transactions, events and conditions. For example, a change in the currency that mainly influences the sales prices of goods and services may lead to a change in an entity's functional currency. [FRS 102.30.15].

Extract from Section 30

30.14 When there is a change in an entity's functional currency, the entity shall apply the translation procedures applicable to the new functional currency prospectively from the date of the change. [FRS 102.30.14].

In other words, an entity translates all items into the new functional currency using the exchange rate at the date of the change. The resulting translated amounts for non-monetary items are treated as their historical cost. [FRS 102.30.16].

Illustration 3-8: Change in functional currency

The management of Entity A has considered the functional currency of the entity to be the Sterling. However, as a result of change in circumstances affecting the operations of the entity, management determines that on 1 January 20X6 the functional currency of the entity is now the US dollar. The exchange rate at that date is £1=US\$1.20. The balance sheet of Entity A at 1 January 20X6 in its old functional currency is as follows:

	£
Property, plant and equipment	200,000
Current assets	
Inventories	10,000
Receivables	20,000
Cash	5,000
	35,000
Current liabilities	
Payables	15,000
Taxation	3,000
	18,000
Net current assets	17,000
	217,000
Long-term loans	120,000
	97,000

Included within the balance sheet at 1 January 20X6 are the following items:

- Inventories with a cost of £6,000. These were purchased for US\$6,000 and have been translated at the rate ruling at the date of purchase of £1=US\$1.00.
- Payables of £5,000 representing the US\$6,000 due in respect of the above inventories, translated at the rate ruling at 1 January 20X6.

Entity A applies the translational procedures applicable to its new functional currency prospectively from the date of change. Accordingly, all items in its balance sheet at 1 January 20X6 are translated at the rate of £1=US\$1.20 giving rise to the following amounts:

	\$
Property, plant and equipment	240,000
Current assets	
Inventories	12,000
Receivables	24,000
Cash	6,000
	<u>42,000</u>
Current liabilities	
Payables	18,000
Taxation	3,600
	<u>21,600</u>
Net current assets	<u>20,400</u>
Property, plant and equipment plus net current assets	260,400
	<u>144,000</u>
Long-term loans	<u>116,400</u>

The inventories purchased in US dollars are included at \$7,200, being £6,000 translated at £1=US\$1.20. This is despite the fact that Entity A knows that the original cost was \$6,000.

As far as the payables in respect of the inventories are concerned, these are included at \$6,000, being £5,000 translated at £1=US\$1.20. This represents the original amount payable in US dollars.

Often an entity's circumstances change gradually over time, and it may not be possible to determine a precise date on which the functional currency changes. In these circumstances an entity will need to apply judgement to determine an appropriate date from which to apply the change, which might coincide with the beginning or end of an interim or annual accounting period.

Where an entity's functional currency changes, its management will often choose to align the entity's presentation currency with the new functional currency. The approach to be adopted when changing presentation currency is covered in 3.9 below.

3.6 Use of a presentation currency other than the functional currency

An entity may, subject to the requirements of relevant laws and regulations, present its financial statements in any currency (or currencies) (see 3.3 above).

Extract from Section 30

30.17 An entity may present its financial statements in any currency (or currencies). If the presentation currency differs from the entity's functional currency, the entity shall translate its items of income and expense and financial position into the presentation currency. For example, when a group contains individual entities with different functional currencies, the items of income and expense and financial position of each entity are expressed in a common currency so that consolidated financial statements may be presented. [FRS 102.30.17].

There is no concept of a 'group' functional currency. Each entity within the group has its own functional currency, and the results and financial position of each entity must be translated into the presentation currency that is used for the consolidated financial statements.

The requirements of Section 30 in respect of this translation process are discussed below. The procedures to be adopted apply not only to the inclusion of foreign subsidiaries in consolidated financial statements but also to the incorporation of the results of associates and joint ventures. They also apply when the results of a foreign branch are to be incorporated into the financial statements of an individual entity and to a stand-alone entity presenting financial statements in a currency other than its functional currency.

In addition to these procedures, Section 30 has additional provisions that apply when the results and financial position of a foreign operation are translated into a presentation currency so that the foreign operation can be included in the financial statements of the reporting entity by consolidation or the equity method. These additional provisions are covered at 3.6.3 to 3.6.12 below.

3.6.1 Translation to the presentation currency

The method of translation depends on whether the entity's functional currency is that of a hyperinflationary economy or not, and if it is, whether it is being translated into a presentation currency which is that of a hyperinflationary economy or not. Guidance identifying hyperinflationary economies is provided in Section 31 *Hyperinflation* (see Chapter 33 at 3.1). This chapter covers only the requirements for translating an operation into a presentation currency of a non-hyperinflationary economy. For information on translation to the presentation currency which is that of a hyperinflationary economy see Chapter 33.

The results and financial position of an entity whose functional currency is not the currency of a hyperinflationary economy are translated into a different presentation currency using the following procedures: [FRS 102.30.18]

- (a) Assets and liabilities for each balance sheet presented (i.e., including comparatives) are translated at the closing rate at the date of each respective balance sheet.

And

- (b) Income and expenses for each statement of comprehensive income (i.e., including comparatives) are translated at exchange rates at the dates of the transactions.

And

- (c) All resulting exchange differences are recognised in other comprehensive income.

For practical reasons, the reporting entity may use a rate that approximates the actual exchange rate, e.g., an average rate for the period, to translate income and expense items. However, if exchange rates fluctuate significantly, the use of the average rate for a period is inappropriate. [FRS 102.30.19].

The exchange differences referred to in item (c) above result from: [FRS 102.30.20]

- (a) Translating income and expenses at the exchange rates at the dates of the transactions and assets and liabilities at the closing rate.

And

- (b) Translating the opening net assets at a closing rate that differs from the previous closing rate.

The use of an exchange rate which approximates the actual exchange rate, is not completely accurate because, if the entity has had any transactions with equity holders that have resulted in a change in the net assets during the period, there are likely to be further exchange differences that need to be recognised to the extent that the closing rate differs from the rate used to translate the transaction. For example, this would be the case if a parent had subscribed for further equity shares in a subsidiary.

How we see it

In our view, the guidance noted above does not apply to the translation of an entity's results into a presentation currency; instead, the date of transaction for this purpose is the date on which income or expense is recorded in profit or loss or other comprehensive income of the foreign operation.

A foreign operation may have reclassification adjustments to profit or loss of gains or losses previously recognised in other comprehensive income, for example as a result of the application of cash flow hedge accounting. However, FRS 102 does not explicitly address how these adjustments are translated into the presentation currency. The most commonly applied approach is to regard them as income or expenses of the foreign operation to be translated at the exchange rate at the date of reclassification in accordance with paragraph 18 of Section 30. For cash flow hedges, this better reflects the hedge accounting reported in the foreign operation's own financial statements. Nevertheless, some would argue that reclassification adjustments do not represent income or expenses. Consequently, paragraph 18 of Section 30 would not apply, and the reclassification is translated using the historical exchange rates at the dates the original gains or losses arose.

How we see it

In our view, each of the approaches described above represents an acceptable accounting policy choice.

The application of these procedures is shown in the following Illustration.

Illustration 3-9: Translation of a non-hyperinflationary functional currency to a non-hyperinflationary presentation currency

A UK entity owns 100% of the share capital of a foreign entity which was set up a number of years ago when the exchange rate was £1=FC2. It is consolidating the financial statements of the subsidiary in its consolidated financial statements for the year ended 31 December 20X6. The exchange rate at the year-end is £1=FC4 (20X5: £1=FC3). For the purposes of illustration, it is assumed that exchange rates have not fluctuated significantly and the appropriate weighted average rate for the year was £1=FC3.5, and that the currency of the foreign entity is not that of a hyperinflationary economy. The income statement of the subsidiary for that year and its balance sheet at the beginning and end of the year in its functional currency and translated into £ are as follows:

Income statement

	FC	£
Sales	35,000	10,000
Cost of sales	(33,190)	(9,483)
Depreciation	(500)	(143)
Interest	(350)	(100)
Profit before taxation	960	274
Taxation	(460)	(131)
Profit after taxation	500	143

Balance sheets	20X5	20X6	20X5	20X6
	FC	FC	£	£
Property, plant and equipment	6,000	5,500	2,000	1,375
Current assets				
Inventories	2,700	3,000	900	750
Receivables	4,800	4,000	1,600	1,000
Cash	200	600	67	150
	7,700	7,600	2,567	1,900
Current liabilities				
Payables	4,530	3,840	1,510	960
Taxation	870	460	290	115
	5,400	4,300	1,800	1,075
Net current assets	2,300	3,300	767	825
	8,300	8,800	2,767	2,200
Long-term loans	3,600	3,600	1,200	900
	4,700	5,200	1,567	1,300
Share capital	1,000	1,000	500	500
Retained profits*	3,700	4,200	1,500	1,643
Exchange reserve*			(433)	(843)
	4,700	5,200	1,567	1,300

* The opening balances for 20X5 in £ have been assumed and represent cumulative amounts since the foreign entity was set up.

The movement of £(410) in the exchange reserve included as a separate component of equity is made up as follows:

- The exchange loss of £392 on the opening net investment in the subsidiary, calculated as follows:

Opening net assets at opening rate	FC4,700 at FC3 =	£1,567
Opening net assets at closing rate	FC4,700 at FC4 =	£1,175
Exchange loss on net assets		£392

- The exchange loss of £18, being the difference between the income account translated at an average rate, i.e., £143, and at the closing rate, i.e., £125.

When the exchange differences relate to a foreign operation that is consolidated but not wholly-owned, accumulated exchange differences arising from translation and attributable to non-controlling interests are allocated to, and recognised as part of, non-controlling interests in the consolidated balance sheet.

[FRS 102.30.20].

3.6.2 Functional currency is that of a hyperinflationary economy

A UK based group preparing consolidated financial statements under FRS 102 might have a subsidiary that operates in, and has a functional currency of, a country subject to hyperinflation. In this case, FRS 102 requires the subsidiary's results and financial position to be adjusted using the procedures specified in Section 31 (see Chapter 33) before translating them into a different presentation currency as follows: All amounts (i.e., assets, liabilities, equity items, income and expenses, including comparatives) are translated at the closing rate at the date of the most recent statement of financial position. However, when amounts are translated into the currency of a non-hyperinflationary economy, comparative amounts must be those that were presented as current year amounts in the relevant prior period financial statements.

[FRS 102.30.21].

3.6.3 Exchange differences on intragroup balances

The incorporation of the results and financial position of a foreign operation with those of the reporting entity follows normal consolidation procedures, such as the elimination of intragroup balances and intragroup transactions of a subsidiary. [FRS 102.30.22]. On this basis, there is a tendency sometimes to assume that exchange differences on intragroup balances will not affect the reported profit or loss for the group in the consolidated financial statements. However, an intragroup monetary asset (or liability), whether short-term or long-term, cannot be eliminated against the corresponding intragroup liability (or asset) without the entity with the currency exposure recognising an exchange difference on the intragroup balance.

This exchange difference will be reflected in that entity's profit or loss for the period (see 3.4.7 above) and, except as indicated at 3.6.4 below, Section 30 requires this exchange difference to continue to be included in profit or loss in the consolidated financial statements. This is because the monetary item represents a commitment to convert one currency into another and exposes the reporting entity to a gain or loss through currency fluctuations. [FRS 102.30.22].

3.6.4 Monetary items included as part of the net investment in a foreign operation - general

As an exception to the general rule at 3.6.3 above, where an exchange difference arises on an intragroup balance that, in substance, forms part of an entity's net investment in a foreign operation, the exchange difference is not recognised in profit or loss in the consolidated financial statements but is recognised in other comprehensive income and accumulated in a separate component of equity. [FRS 102.30.13].

The 'net investment in a foreign operation' is defined as being "the amount of the reporting entity's interest in the net assets of that operation". [FRS 102 Appendix I]. This will include a monetary item that is receivable from or payable to a foreign operation for which settlement is neither planned nor likely to occur in the foreseeable future (often referred to as a 'permanent as equity' loan) because it is, in substance, a part of the entity's net investment in that foreign operation. Such monetary items may include long-term receivables or loans. They do not include trade receivables or trade payables. [FRS 102.30.12].

How we see it

In our view, trade receivables and payables can be included as part of the net investment in the foreign operation, but only if cash settlement is not made or planned to be made in the foreseeable future. However, if a subsidiary makes payment for purchases from its parent but is continually indebted to the parent as a result of new purchases, then in these circumstances, since individual transactions are settled, no part of the inter-company balance is regarded as part of the net investment in the subsidiary. Accordingly, exchange differences on such balances are recognised in profit or loss.

These requirements are shown in the following Illustration.

Illustration 3-10: Receivables/payables included as part of net investment in a foreign operation

A UK entity, A, has a Belgian subsidiary, B. A has a receivable due from B amounting to £1,000,000. In each of the following scenarios, could the receivable be included as part of A's net investment in B?

Scenario 1

The receivable arises from the sale of goods, together with interest payments and dividend payments which have not been paid in cash but have been accumulated in the inter-company account. A and B agree that A can claim at any time the repayment of this receivable. It is likely that there will be a settlement of the receivable in the foreseeable future.

Although Section 30 states that trade receivables and payables are not included, we do not believe that it necessarily precludes deferred trading balances from being included. Such balances can be included as part of the net investment in the foreign operation, but only if cash settlement is not made or planned to be made in the foreseeable future.

In this scenario, the settlement of A's receivable due from B is not planned; however, it is likely that a settlement will occur in the foreseeable future. Accordingly, the receivable does not qualify to be treated as part of A's net investment in B. The term 'foreseeable future' is not defined and no specific time period is implied. It could be argued that the receivable is only considered as part of the net investment if it will be repaid only when the reporting entity disinvests from the foreign operation. However, it is recognised that in most circumstances this would be unrealistic and therefore a shorter time span must be considered in determining the foreseeable future.

Scenario 2

The receivable represents a loan made by A to B and it is agreed that the receivable will be repaid in 20 years. In this scenario, A's receivable due from B has a specified term for repayment. This suggests that settlement is planned. Accordingly, the receivable does not qualify to be treated as part of A's investment in B.

Scenario 3

A and B have previously agreed that the receivable under scenario 2 will be repaid in 20 years but A now decides that it will replace the loan on maturity either with a further inter-company loan or with an injection of equity. This approach is consistent with A's intention to maintain the strategic long-term investment in B.

In this scenario, the words from paragraph 12 of Section 30 "... settlement is neither planned nor likely to occur in the foreseeable future ..." are potentially problematic, since a loan with a fixed maturity must, *prima facie*, have a planned settlement. However, from the date A decides that it will re-finance the inter-company debt upon maturity with a further long-term instrument, or replace it with equity, the substance of the inter-company loan is that it is part of the entity's net investment in the foreign operation, and there is no actual 'intent' to settle the investment without replacement. On this basis, loans with a stated maturity may qualify to be treated in accordance with paragraph 13 of Section 30, with foreign currency gains and losses recognised in other comprehensive income and accumulated in a separate component of equity in the consolidated financial statements.

How we see it

However, in our view, management's intention to refinance the loan must be documented appropriately, for example in the form of a minute of a meeting of the management board or board of directors. In addition, there must not be any established historical pattern of the entity demanding repayment of such inter-company debt without replacement.

Consequently, when the purpose of the loan is to fund a long-term strategic investment then it is the entity's overall intention regarding the investment and ultimate funding thereof, rather than the specific terms of the inter-company loan funding the investment, that must be considered.

Scenario 4

The receivable arises from the sale of goods, together with interest payments and dividend payments which have not been paid in cash but have been accumulated in the inter-company account. However, in this scenario, A and B agree that A can claim the repayment of this receivable only if the subsidiary is disposed of. A has no plans to dispose of entity B.

In this scenario, the settlement of A's receivable due from B is not planned nor is it likely to occur in the foreseeable future. Although the term 'foreseeable future' is not defined, it will not go beyond a point of time after the disposal of a foreign operation. Accordingly, the receivable does qualify for being treated as part of a net investment in a foreign operation.

The question of whether a monetary item is as permanent as equity can, in certain circumstances, require the application of significant judgement.

3.6.5 Monetary items included as part of the net investment in a foreign operation - currency of the monetary item

When a monetary item is considered to form part of a reporting entity's net investment in a foreign operation and is denominated in the functional currency of the reporting entity, an exchange difference will be recognised in the foreign operation's individual financial statements. If the item is denominated in the functional currency of the foreign operation, an exchange difference will be recognised in the reporting entity's separate financial statements, normally in profit or loss, although an unrealised gain is recognised in other comprehensive income (see 3.6.6 below).

In the financial statements that include the foreign operation and the reporting entity (i.e., financial statements in which the foreign operation is consolidated or accounted for using the equity method), such exchange differences are recognised in other comprehensive income and accumulated in a separate component of equity. [FRS 102.30.12, FRS 102.30.13].

Illustration 3-11: Monetary item in functional currency of either the reporting entity or the foreign operation

A UK entity has a Belgian subsidiary. On the last day of its financial year, 31 March 20X5, the UK entity lends the subsidiary £1,000,000. Settlement of the loan is neither planned nor likely to occur in the foreseeable future, so the UK entity regards the loan as part of its net investment in the Belgian subsidiary. The exchange rate at 31 March 20X5 was £1=€1.40. Since the loan was made on the last day of the year there are no exchange differences to recognise for that year. At 31 March 20X6, the loan has not been repaid and is still regarded as part of the net investment in the Belgian subsidiary. The relevant exchange rate at that date was £1=€1.50. The average exchange rate for the year ended 31 March 20X6 was £1=€1.45.

In the UK entity's separate financial statements, no exchange difference is recognised since the loan is denominated in its functional currency of pound sterling. In the Belgian subsidiary's financial statements, the liability to the parent is translated into the subsidiary's functional currency of euros at the closing rate at €1,500,000, giving rise to an exchange loss of €100,000, i.e., €1,500,000 less €1,400,000 (£1,000,000 @ £1=€1.40). This exchange loss is reflected in the Belgian subsidiary's profit or loss for that year. In the UK entity's consolidated financial statements, this exchange loss included in the subsidiary's profit or loss for the year will be translated at the average rate for the year, giving rise to a loss of £68,966 (£100,000 @ £1=€1.45). This will be recognised in other comprehensive income and accumulated in the separate component of equity together with an exchange gain of £2,299, being the difference between the amount included in the Belgian subsidiary's income statement translated at average rate, i.e., £68,966, and at the closing rate, i.e., £66,667 (£100,000 @ £1=€1.50). The overall exchange loss recognised in other comprehensive income is £66,667. This represents the exchange loss on the increased net investment of €1,400,000 in the subsidiary made at 31 March 20X5, i.e., £1,000,000 (£1,400,000 @ £1=€1.40) less £933,333 (£1,400,000 @ £1=€1.50).

If, on the other hand, the loan made to the Belgian subsidiary had been denominated in the equivalent amount of euros at 31 March 20X5, i.e., €1,400,000, the treatment would have been as follows:

In the UK entity's separate financial statements, the amount receivable from the Belgian subsidiary would be translated at the closing rate at £933,333 (£1,400,000 @ £1=€1.50), giving rise to an exchange loss of £66,667, i.e., £1,000,000 (£1,400,000 @ £1=€1.40) less £933,333, which is included in its profit or loss for the year. In the Belgian subsidiary's financial statements, no exchange difference is recognised since the loan is denominated in its functional currency of euros. In the UK entity's consolidated financial statements, the exchange loss included in its profit or loss for the year in its separate financial statements will be recognised in other comprehensive income and accumulated in the separate component of equity. As before, this represents the exchange loss on the increased net investment of €1,400,000 in the subsidiary made at 31 March 20X5, i.e., £1,000,000 (£1,400,000 @ £1=€1.40) less £933,333 (£1,400,000 @ £1=€1.40).

In most situations, intragroup balances for which settlement is neither planned nor likely to occur in the foreseeable future will be denominated in the functional currency of either the reporting entity or the foreign operation. However, this will not always be the case. If a monetary item is denominated in a currency other than the functional currency of either the reporting entity or the foreign operation, the exchange difference arising in the reporting entity's separate financial statements and in the foreign operation's individual financial statements is also recognised in other comprehensive income, and accumulated in the separate component of equity, in the financial statements that include the foreign operation and the reporting entity (i.e., financial statements in which the foreign operation is consolidated or accounted for using the equity method).

3.6.6 Monetary items included as part of the net investment in a foreign operation - treatment in individual financial statements

The exception for exchange differences on monetary items forming part of the net investment in a foreign operation applies only in the consolidated financial statements. It does not normally apply to the reporting entity's separate financial statements or the financial statements of the foreign operation. Rather, the exchange differences will normally be recognised in profit or loss in the period in which they arise in the financial statements of the entity that has the foreign currency exposure. However, as an exception, an unrealised exchange gain is recognised in other comprehensive income. [FRS 102.30.12, FRS 102.30.13]. This treatment results from the general restriction in the CA 2006 from recognising unrealised profits in the profit and loss account. The ICAEW/ICAS Technical Release TECH 02/17BL *Guidance on realised and distributable profits under the Companies Act 2006* (TECH 02/17BL) explains that a receivable for which settlement is neither planned nor likely to occur in the foreseeable future is not qualifying consideration and therefore any cumulative exchange gain on such an asset is not a realised profit (see 4 below). [TECH 02/17BL.3.11].

3.6.7 Monetary items becoming part of the net investment in a foreign operation

An entity's plans and expectations in respect of an intragroup monetary item may change over time and the status of such items must be assessed at each period. For example, a parent may decide that its subsidiary requires refinancing and instead of investing more equity capital in the subsidiary, the parent decides that an existing inter-company account, which has previously been regarded as a normal monetary item, is a long-term deferred trading balance and no repayment of such amount will be requested within the foreseeable future.

How we see it

In our view, such a 'capital injection' is regarded as having occurred at the time it is decided to redesignate the inter-company account. Consequently, the exchange differences arising on the account up to that date are recognised in profit or loss and the exchange differences arising thereafter would be recognised in other comprehensive income on consolidation. This is discussed further in the following Illustration.

Illustration 3-12: Monetary item becoming part of the net investment in a foreign operation

A UK entity has a wholly owned Canadian subsidiary whose net assets at 31 December 20X5 were C\$2,000,000. These net assets were arrived at after taking account of a liability to the UK parent of £250,000. Using the closing exchange rate of £1=C\$2.35 this liability was included in the Canadian company's balance sheet at that date at C\$587,500. On 30 June 20X6, when the exchange rate was £1=C\$2.45, the parent decided that in order to refinance the Canadian subsidiary it would regard the liability of £250,000 as a long-term liability which would not be called for repayment in the foreseeable future. Consequently, the parent thereafter regarded the loan as being part of its net investment in the subsidiary. In the year ended 31 December 20X6 the Canadian company made no profit or loss other than any exchange difference to be recognised on its liability to its parent. The relevant exchange rate at that date was £1=C\$2.56. The average exchange rate for the year ended 31 December 20X6 was £1=C\$2.50.

The financial statements of the subsidiary in C\$ and translated using the closing rate are as follows:

	31 December 20X6		31 December 20X5	
	C\$	£	C\$	£
<i>Balance sheet</i>				
Assets	2,587,500	1,010,742	2,587,500	1,101,064
Amount due to parent	(640,000)	(250,000)	(587,500)	(250,000)
Net assets	1,947,500	760,742	2,000,000	851,064
<i>Income statement</i>				
Exchange difference	(52,500)			

If the amount due to the parent is not part of the parent's net investment in the foreign operation, this exchange loss would be translated at the average rate and included in the consolidated profit and loss account as £21,000. As the net investment was C\$2,000,000 then there would have been an exchange loss recognised in other comprehensive income of £69,814, i.e., £851,064 less £781,250 (C\$2,000,000 @ £1=C\$2.56), together with an exchange gain of £492, being the difference between profit or loss translated at average rate, i.e., £21,000, and at the closing rate, i.e., £20,508.

However, the parent now regards the amount due as being part of the net investment in the subsidiary. The question then arises as to when this must be regarded as having happened and how the exchange difference on it must be calculated. No guidance is given in Section 30.

The 'capital injection' is regarded as having occurred at the time it is decided to redesignate the inter-company account. The exchange differences arising on the account up to that date is recognised in profit or loss. Only the exchange difference arising thereafter would be recognised in other comprehensive income on consolidation. The inter-company account that was converted into a long-term loan becomes part of the entity's (UK parent's) net investment in the foreign operation (Canadian subsidiary) at the moment in time when the entity decides that settlement is neither planned nor likely to occur in the foreseeable future, i.e., 30 June 20X6. Accordingly, exchange differences arising on the long-term loan are recognised in other comprehensive income and accumulated in a separate component of equity from that date. The same accounting treatment would have been applied if a capital injection had taken place at the date of redesignation.

At 30 June 20X6 the subsidiary would have translated the inter-company account as C\$612,500 (£250,000 @ £1=C\$2.45) and therefore the exchange loss up to that date was C\$25,000. Translated at the average rate this amount would be included in consolidated profit or loss as £10,000, with only an exchange gain of £234 recognised in other comprehensive income, being the difference between profit or loss translated at average rate, i.e., £10,000, and at the closing rate, i.e., £9,766. Accordingly, £11,000 (£21,000 less £10,000) offset by a reduction in the exchange gain on the translation of profit or loss of £258 (£492 less £234) would be recognised in other comprehensive income. This amount represents the exchange loss on the 'capital injection' of C\$612,500. Translated at the closing rate this amounts to £239,258 which is £10,742 less than the original £250,000.

Some might argue that an approach of regarding the 'capital injection' as having occurred at the beginning of the accounting period would have the merit of treating all of the exchange differences for this year in the same way. However, for the reasons provided above we do not regard such an approach as being acceptable.

Suppose instead of the inter-company account being £250,000, it was denominated in dollars at C\$587,500. In this case the parent would be exposed to the exchange risk; what would be the position?

The subsidiary's net assets at both 31 December 20X5 and 20X6 would be:

Assets	C\$2,587,500
Amount due to parent	(587,500)
Net assets	<u>C\$2,000,000</u>

As the inter-company account is expressed in Canadian dollars, there will be no exchange difference thereon in the subsidiary's profit or loss.

There will, however, be an exchange loss in the parent as follows:

C\$587,500	@ 2.35 =	£250,000
	@ 2.56 =	<u>£229,492</u>
		£20,508

In the consolidated financial statements, some of this amount must be recognised in other comprehensive income as the inter-company account is now regarded as part of the equity investment. For the reasons stated above, it is only the exchange differences that have arisen after the date of redesignation, i.e., 30 June 20X6, that must be recognised in other comprehensive income.

On this basis, the exchange loss would be split as follows:

C\$587,500	@ 2.35 =	£250,000	
	@ 2.45 =	<u>£239,796</u>	
			£10,204
	@ 2.45 =	£239,796	
	@ 2.56 =	<u>£229,492</u>	
			£10,304

The exchange loss up to 30 June 20X6 of £10,204 would be recognised in consolidated profit or loss and the exchange loss thereafter of £10,304 would be recognised in other comprehensive income. This is different from when the account was expressed in sterling because the 'capital injection' in this case is C\$587,500 whereas before it was effectively C\$612,500.

3.6.8 Monetary items ceasing to be part of the net investment in a foreign operation

The situation where a pre-existing monetary item was subsequently considered to form part of the net investment in a foreign operation was discussed at 3.6.7 above. However, what happens where a monetary item ceases to be considered part of the net investment in a foreign operation, either because the circumstances have changed such that it is now planned or is likely to be settled in the foreseeable future or indeed that the monetary item is in fact settled?

Where the circumstances have changed such that, the monetary item is now planned or is likely to be settled in the foreseeable future, then similar issues to those discussed at 3.6.4 above apply; i.e., are the exchange differences on the intragroup balance to be recognised in profit or loss only from the date of change or from the beginning of the financial year?

How we see it

For the same reasons as set out in Illustration 3-12 above, in our view the monetary item ceases to form part of the net investment in the foreign operation at the moment in time when the entity decides that settlement is planned or is likely to occur in the foreseeable future. Accordingly, exchange differences arising on the monetary item up to that date are recognised in other comprehensive income and accumulated in a separate component of equity. The exchange differences that arise after that date are recognised in profit or loss.

Consideration also needs to be given as to the treatment of the cumulative exchange differences on the monetary item that have been recognised in other comprehensive income, including those that had been recognised in other comprehensive income in prior years. The treatment of these exchange differences is to recognise them in other comprehensive income and accumulate them in a separate component of equity. [FRS 102.30.22]. The principal question is whether the change in circumstances or actual settlement in cash of the intragroup balance represents a disposal or partial disposal of the foreign operation and this is considered in more detail at 3.7 below.

3.6.9 Dividends

If a subsidiary pays a dividend to the parent during the year the parent records the dividend at the rate ruling when the dividend was declared. An exchange difference will arise in the parent's own financial statements if the exchange rate moves between the declaration date and the date the dividend is actually received. This exchange difference is required to be recognised in profit or loss and will remain there on consolidation.

The same will apply if the subsidiary declares a dividend to its parent on the last day of its financial year and this is recorded at the year-end in both entities' financial statements. There is no problem in that year as both the intragroup balances and the dividends will eliminate on consolidation with no exchange differences arising. However, as the dividend will not be received until the following year an exchange difference will arise in the parent's financial statements in that year if exchange rates have moved in the meantime. Again, this exchange difference will remain in consolidated profit or loss as it is no different from any other exchange difference arising on intragroup balances resulting from other types of intragroup transactions. It will not be recognised in other comprehensive income.

It may seem odd that the consolidated results can be affected by exchange differences on inter-company dividends. However, once the dividend has been declared, the parent now effectively has a functional currency exposure to assets that were previously regarded as part of the net investment. To minimise the effect of exchange rate movements, entities must, therefore, arrange for inter-company dividends to be paid on the same day the dividend is declared, or as soon after the dividend is declared as possible.

3.6.10 Share capital

Where an entity presents its financial statements in a currency other than its functional currency, the same issues arise as they do when an entity issues foreign currency share capital. In these circumstances it would also seem more appropriate that the entity's share capital (whether they are ordinary shares or are otherwise irredeemable and classified as equity instruments) are translated at historical rates of exchange.

Translation at an historical rate would imply using the rate ruling at the date of the issue of the shares, however, where a subsidiary is presenting its financial statements in the currency of its parent, it may be that the more appropriate historical rate for share capital that was in issue at the date it became a subsidiary would be that ruling at the date it became a subsidiary of the parent, rather than at earlier dates of issue.

How we see it

Where such share capital is retranslated at the closing rate, we do not believe that it is appropriate for the exchange differences to be recognised in other comprehensive income, but are either taken to retained earnings or some other reserve.

Consequently, whether such share capital is maintained at a historical rate, or is dealt with in this way, the treatment has no impact on the overall equity of the entity.

3.6.11 Other equity balances resulting from transactions with equity holders

In addition to share capital, an entity may have other equity balances resulting from the issue of shares, such as a share premium account (additional paid-in capital). Like share capital, the translation of such balances could be done at either historical rates or at the closing rate.

How we see it

There is no specific guidance on which rate to apply within FRS 102, however, in accordance with the hierarchy set out in Section 10 an entity could apply the guidance in IAS 21. Based on this guidance we believe that whichever method is adopted, it is to be consistent with the treatment used for share capital. Again, where exchange differences arise through using the closing rate, we believe that it is not appropriate for them to be recognised in other comprehensive income but are either taken to retained earnings or some other reserve as would be required by IAS 21.

3.6.12 Unrealised profits on intragroup transactions

The other problem area is the elimination of unrealised profits resulting from intragroup transactions when one of the parties to the transaction is a foreign subsidiary.

Illustration 3-13: Unrealised profits on intragroup transaction

A UK parent has a wholly owned Swiss subsidiary. On 30 November 20X6 the subsidiary sold goods to the parent for CHF1,000. The cost of the goods to the subsidiary was CHF700. The goods were recorded by the parent at £685 based on the exchange rate ruling on 30 November 20X6 of £1=CHF1.46. All of the goods are unsold by the year-end, 31 December 20X6. The exchange rate at that date was £1=CHF1.52. How must the intragroup profit be eliminated?

Neither Section 30 nor IAS 21 contain specific guidance on this matter. However, US GAAP requires the rate ruling at the date of the transaction to be used.

If the exchange rate ruling at the date of the transaction is used, the profit shown by the subsidiary is CHF300 which translated at £1=CHF1.46 equals £205. Consequently, the goods will be included in the balance sheet at:

Per parent company balance sheet	£685
Less unrealised profit eliminated	£(205)
	<u>£480</u>

It can be seen that the resulting figure for inventory is equivalent to the original CHF cost translated at the rate ruling on the date of the transaction. Whereas if the subsidiary still held the inventory, it would be included at £461 (CHF700 @ £1=CHF1.52).

If in the above example the goods had been sold by the UK parent to the Swiss subsidiary then the approach in US GAAP would say the amount to be eliminated is the amount of profit shown in the UK entity's financial statements. Again, this will not necessarily result in the goods being carried in the consolidated financial statements at their original cost to the group.

3.6.13 Non-coterminous period ends

Unlike IAS 21, Section 30 does not deal with situations where a foreign operation is consolidated on the basis of financial statements made up to a different date from that of the reporting entity. However, in accordance with the hierarchy set out in Section 10 an entity could apply the guidance in IAS 21. In such a case, IAS 21 initially states that the assets and liabilities of the foreign operation are translated at the exchange rate at the end of the reporting period of the foreign operation rather than at the date of the consolidated financial statements. However, it then goes on to say that adjustments are made for significant changes in exchange rates up to the end of the reporting period of the reporting entity (i.e., the date of the consolidated financial statements). This approach is consistent with the requirements in paragraph 16(a) of Section 9 *Consolidated and Separate Financial Statements* which requires that adjustments be made for the effects of significant transactions that occur between the date of subsidiary financial statements and the date of the consolidated financial statements. The same approach is used in applying the equity method to associates and joint ventures in accordance with IAS 28 *Investments in Associates and Joint Ventures*.

3.6.14 Goodwill and fair value adjustments

Any goodwill arising on the acquisition of a foreign operation and any fair value adjustments to the carrying amounts of assets and liabilities arising on the acquisition of that foreign operation are treated as assets and liabilities of the foreign operation. Therefore, they are expressed in the functional currency of the foreign operation and translated at the closing rate in accordance with paragraph 30.18(a). [FRS 102.30.23].

If an entity acquires a single foreign entity this will be a straightforward exercise. Where, however, the acquisition is of a multinational operation comprising a number of businesses with different functional currencies this will not be the case. The goodwill needs to be allocated to the level of each functional currency of the acquired operation, however, the standard gives no guidance on how this is to be done.

In our experience, the most commonly applied way of allocating goodwill to different functional currencies is an economic value approach. This approach effectively calculates the goodwill relating to each different functional currency operation by allocating the cost of the acquisition to the different functional currency operations on the basis of the relative economic values of those businesses and then deducting the fair values that have been attributed to the net assets of those businesses as part of the fair value exercise in accounting for the business combination.

How we see it

We consider that any basis for allocating goodwill to different functional currencies other than one based on the economic value as set out above would need to be substantiated.

The level to which goodwill is allocated for the purpose of foreign currency translation may be different from the level at which the goodwill is tested for impairment under Section 27 *Impairment of Assets*. In many cases the allocation under Section 30 will be at a lower level. This will apply not only on the acquisition of a multinational operation but could also apply on the acquisition of a single operation where the goodwill is allocated to a larger cash generating unit that is made up of businesses with different functional currencies.

As a consequence of this different level of allocation one particular difficulty that entities are likely to face is how to deal with an impairment loss that is recognised in respect of goodwill under Section 27. If the impairment loss relates to a larger cash generating unit made up of businesses with different functional currencies, again some allocation of this impairment loss will be required to determine the amount of the remaining carrying amount of goodwill in each of the functional currencies for the purposes of translation under Section 30.

3.7 Disposal of a foreign operation

Exchange differences resulting from the translation of a foreign operation to a different presentation currency are to be recognised in other comprehensive income and accumulated within a separate component of equity (see 3.6.1 above).

On the disposal of a foreign operation, the exchange differences relating to that foreign operation that have been recognised in other comprehensive income and accumulated in the separate component of equity are not recognised in profit or loss. [FRS 102.30.13]. Instead, the cumulative exchange differences relating to the foreign operation that have accumulated in the separate component of equity are transferred directly to retained earnings on disposal. [FRS 102.9.18A, FRS 102.9.18B]. This is a clear difference to IAS 21 which requires reclassification of the exchange differences from equity to profit or loss on disposal of the foreign operation.

In addition to the disposal of an entity's entire interest in a foreign operation, an entity could have a circumstance where only a partial disposal has occurred.

How we see it

In the circumstances an entity recognises only a proportionate gain or loss in respect of the proportion disposed of, our view is that only a proportion of the accumulated exchange differences are transferred.

How we see it

In our view, entities will need to apply judgement and select an appropriate accounting policy for determining what constitutes a partial disposal, particularly whether an absolute reduction in ownership interest represents a partial disposal.

The treatment of exchange differences relating to an investment in an associate or joint venture that becomes a subsidiary in a business combination is not clearly specified in Section 30.

How we see it

In these circumstances, Section 30 requires the reclassification of equity accounted exchange differences of the net investment in a foreign operation that were recognised in other comprehensive income and, in our view, the same treatment applies to the exchange differences arising on the associate or joint venture itself.

Illustration 3-14: Disposal of a foreign operation

A UK entity has a Swiss subsidiary which was set up on 1 January 20X3 with a share capital of CHF200,000 when the exchange rate was £1=CHF1.55. The subsidiary is included in the parent's separate financial statements at its original cost of £129,032. The profits of the subsidiary, all of which it has retained, for each of the three years ended 31 December 20X5 were CHF40,000, CHF50,000 and CHF60,000 respectively, so that the net assets at 31 December 20X5 are CHF350,000. In the consolidated financial statements, the results of the subsidiary have been translated at the respective average rates of £1=CHF1.60, £1=CHF1.68 and £1=CHF1.70 and the net assets at the respective closing rates of £1=CHF1.71, £1=CHF1.65 and £1=CHF1.66. All exchange differences have been recognised in other comprehensive income and accumulated in a separate exchange reserve. The consolidated reserves have therefore included the following amounts in respect of the subsidiary:

	Retained profit	Exchange reserve
	£	£
1 January 20X3	-	-
Movement during 20X3	25,000	(13,681)
31 December 20X3	25,000	(13,681)
Movement during 20X4	29,762	5,645
31 December 20X4	54,762	(8,036)
Movement during 20X5	35,294	(209)
31 December 20X5	90,056	(8,245)

The net assets at 31 December 20X5 of CHF350,000 are included in the consolidated financial statements at £210,843.

On 1 January 20X6 the subsidiary is sold for CHF400,000 (£240,964), thus resulting in a gain on disposal in the parent entity's books of £111,932, i.e., £240,964 less £129,032.

In the consolidated financial statements for 20X5, Section 9 and Section 30 requires the cumulative exchange losses of £8,245 to be transferred directly to retained earnings without being recognised in profit or loss. The gain recognised in the consolidated financial statements would be £30,121 (the difference between the proceeds of £240,964 and net asset value of £210,843 at the date of disposal).

3.8 Tax effects of all exchange differences

Gains and losses on foreign currency transactions and exchange differences arising on translating the results and financial position of an entity (including a foreign operation) into a different currency may have tax effects to which Section 29 *Income Tax* applies. The requirements of Section 29 are discussed in Chapter 31. In broad terms the tax effects of exchange differences will follow the reporting of the exchange differences, i.e., they will be recognised in profit or loss except to the extent they relate to exchange differences recognised in other comprehensive income, in which case they will also be recognised in other comprehensive income. [FRS 102.29.22].

3.9 Change of presentation currency

Neither Section 30 nor IAS 21 address how an entity must approach presenting its financial statements if it changes its presentation currency. This is a situation that is commonly faced when the reporting entity determines that its functional currency has changed (see 3.6 above). However, because entities have a free choice of their presentation currency it can occur in other situations too.

How we see it

Changing presentation currency is, in our view, similar to a change in accounting policy, the requirements for which are set out in Section 10. Therefore, when an entity chooses to change its presentation currency, we consider it appropriate to follow the approach in Section 10 which requires retrospective application except to the extent it is impracticable [FRS 102.10.11] (see Chapter 9 at 3.3.1). Comparatives must be restated and presented in the new presentation currency. Further, they must be prepared as if this had always been the entity's presentation currency (at least to the extent practicable).

The following Illustration shows the impact of a change in presentation currency in a relatively simple group.

Illustration 3-15: Change of presentation currency

A UK parent, P, was established on 1 January 20X4 and issued new shares for £20 million. On the same date it established two wholly owned subsidiaries, S1 and S2 incorporated in the UK and Canada respectively and subscribed £10 million and C\$4.5 million for their entire share capital. The functional currency of each group company was determined to be its local currency, i.e., pound sterling for P and S1 and Canadian dollars for S2. During 20X4, S1 made a profit of £800,000, S2 made a profit of C\$350,000 and P made a loss of £25,000. On 30 September 20X4, P issued new shares for £10 million of which C\$4 million was used immediately to subscribe for additional shares in S2.

During 20X5, S1 made a profit of £700,000, S2 made a profit of C\$750,000 and P made a loss of £30,000 before dividends received from S2. On 30 June 20X5, S2 paid dividends (out of profits then made) of C\$700,000 to P and on 30 September 20X5 P paid dividends of £1,000,000 to its shareholders.

The relevant exchange rates for £1=C\$ were as follows:

1 January 2X4	2.10
30 September 20X4	2.28
31 December 20X4	2.35
Average for 20X4	2.24
30 June 20X5	2.55
30 September 20X5	2.63
31 December 20X5	2.40
Average for 20X5	2.52

Consequently, the statement of changes in equity in P's consolidated financial statements for 20X4 and 20X5 can be summarised as follows:

	Share capital	Retained earnings	Foreign exchange	Total
	£	£	£	£
1 January 20X4	-	-	-	-
Issue of shares	30,000,000	-	-	30,000,000
Comprehensive income	-	931,250	(287,536)	643,714
31 December 20X4	30,000,000	931,250	(287,536)	30,643,714
Comprehensive income	-	967,619	(80,733)	886,886
Dividends	-	(1,000,000)	-	(1,000,000)
31 December 20X5	30,000,000	898,869	(368,269)	30,530,600

The comprehensive income reflected within retained earnings represents the profit for each year, calculated as follows:

$$20X4: £800,000 + (C\$350,000 \div 2.24) - £25,000 = £931,250$$

$$20X5: £700,000 + (C\$750,000 \div 2.52) - £30,000 = £967,619$$

The foreign exchange differences recognised in other comprehensive income can be calculated as follows:

20X4				20X5		
	C\$	Rate	£	C\$	Rate	£
Opening net assets*	4,500,000	2.10	2,142,857	8,850,000	2.35	3,765,957
		2.35	1,914,893		2.40	3,687,500
Exchange loss			(227,964)			(78,457)
Additional capital	4,000,000	2.28	1,754,386	-	-	-
		2.35	1,702,128		-	-
Exchange loss			(52,258)			-
Dividend	-	-	-	(700,000)	2.55	(274,510)
		-	-		2.40	(291,667)
Exchange loss			-			(17,157)
Profit	350,000	2.24	156,250	750,000	2.52	297,619
		2.35	148,936		2.40	312,500
Exchange (loss)/gain			(7,314)			14,881
	8,850,000		(287,536)	8,900,000		(80,733)

* For 20X4, includes the proceeds received for issuing shares on 1 January.

For the year ended 31 December 20X6, P decided to change its presentation currency to Canadian dollars. (This may or may not have coincided with a change of P's functional currency.) The remainder of this example illustrates how one might determine the amounts to be included in respect of the comparative period in P's consolidated financial statements for the year ended 31 December 20X6.

The revised statement of changes in equity in P's consolidated financial statements can be summarised as follows and these are the amounts that will be reflected as comparative amounts in P's consolidated financial statements for the year ended 31 December 20X6:

	Share capital	Retained earnings	Foreign exchange	Total
	C\$	C\$	C\$	C\$
1 January 20X4	-	-	-	-
Issue of shares	64,800,000	-	-	64,800,000
Comprehensive income	-	2,086,000	5,126,729	7,212,729
31 December 20X4	64,800,000	2,086,000	5,126,729	72,012,729
Comprehensive income	-	2,438,400	1,452,311	3,890,711
Dividends	-	(2,630,000)	-	(2,630,000)
31 December 20X5	64,800,000	1,894,400	6,579,040	73,273,440

FRS 102 does not address the exchange rate to use when recording equity instruments issued such as share capital. In the example P uses the historical exchange rates at the date the equity instruments were issued on the basis that they are non-monetary items ($C\$64,800,000 = £20,000,000 \times 2.10 + £10,000,000 \times 2.28$). Even if P retranslated those amounts at year end rates any difference arising would simply be recorded in another component of equity and this difference would not affect profit or loss or other comprehensive income in any period.

The calculations showing how these amounts have been determined are shown below.

The comprehensive income reflected within retained earnings represents the profit for each year, calculated as follows:

$$20X4: (£800,000 \times 2.24) + C\$350,000 - (£25,000 \times 2.24) = C\$2,086,000$$

$$20X5: (£700,000 \times 2.52) + C\$750,000 - (£30,000 \times 2.52) = C\$2,438,400$$

In this case, the profit calculated in this way results in the same amount as translating the consolidated profit of £931,250 and £967,619 presented in sterling at the average rate for the period of £1=C\$2.24 and £1=C\$2.52 respectively. In practice minor differences can arise as a result of imperfections in the average rates used.

Similarly, the net assets presented above are the same as the amounts obtained by translating consolidated net assets of £30,643,714 and £30,530,600 at the closing rates at the end of the relevant period, £1=C\$2.35 and £1=C\$2.40 respectively. This is always the case.

However, the foreign exchange reserve is fundamentally different to that in the financial statements presented in sterling. In this case it represents exchange differences arising from the translation of both P's and S1's financial statements into Canadian dollars whereas previously it represented exchange differences arising from the translation of S2's financial statements into sterling.

The foreign exchange differences recognised in other comprehensive income can be calculated as follows:

20X4				20X5		
	£	Rate	C\$	£	Rate	C\$
Opening net assets*	17,857,143	2.10	37,500,000	26,877,757	2.35	63,162,729
		2.35	41,964,286		2.40	64,506,617
Exchange gain			4,464,286			1,343,888
Additional capital**	8,245,614	2.28	18,800,000	-	-	-
		2.35	19,377,193		-	-
Exchange gain			577,193			-

- * For 20X4, includes the proceeds received for issuing shares on 1 January (£20,000,000) less amounts invested in S2 (£2,142,857 = C\$4,500,000 ÷ 2.10) on the same date.
- ** Reduced by the amounts invested in S2 on the same date (£10,000,000 - (C\$4,000,000 ÷ 2.28)).
- *** Profits of S1 (£800,000 and £700,000 in 20X4 and 20X5 respectively) less losses of P (£25,000 and £30,000 in 20X4 and 20X5).

In the Illustration above, it was reasonably straightforward to recreate the consolidated equity balances using the new presentation currency. This is because the group had a very simple structure with operations having only two functional currencies, a short history and few (external and internal) equity transactions. Whilst entities must strive for a theoretically perfect restatement, in practice it is unlikely to be such an easy exercise.

As noted above, where an accounting policy is changed, Section 10 requires retrospective application except to the extent that this is impracticable, in which case an entity must adjust the comparative information to apply the new accounting policy prospectively from the earliest practicable date. A similar approach is, appropriate when an entity changes its presentation currency.

How we see it

Applying a similar approach to that in Section 10 is, in our view, appropriate when an entity changes its presentation currency. In this context the most important component of equity to determine correctly (or as near correctly as possible) is normally the foreign exchange reserve because that balance, or parts of it, are transferred from equity to retained earnings in the event of any future disposal of the relevant foreign operation and could therefore affect future earnings.

3.10 Disclosure requirements

Section 30 requires an entity to disclose:

- (a) The amount of exchange differences recognised in profit or loss during the period, except for those arising on financial instruments measured at fair value through profit or loss in accordance with Section 11 and Section 12. [FRS 102.30.25(a)]. No specific line items are specified in terms of where exchange differences must be presented.

How we see it

In the light of this need to apply judgement, we recommend that entities in disclosing the amount of such exchange differences indicate the line item(s) in which they are included.

- (b) The amount of exchange differences recognised in other comprehensive income arising during the period. [FRS 102.30.25(b)].
- (c) FRS 102 requires:

Extract from Section 30

- 30.26** An entity shall disclose the currency in which the financial statements are presented. When the presentation currency is different from the functional currency, an entity shall state that fact and shall disclose the functional currency and the reason for using a different presentation currency. [FRS 102.30.26]

For this purpose, in the case of a group, the references to 'functional currency' are to that of the parent. [FRS 102.30.24].

- (d) When there is a change in the functional currency of either the reporting entity (the parent in the case of consolidated financial statements) or a significant foreign operation, that fact and the reason for the change in functional currency. [FRS 102.30.27].

4 UK company law matters

The CA 2006 contains a general prohibition against recognising unrealised profits in profit and loss, although there is an exception to this rule when the fair value provisions of the Act are applied.

TECH 02/17BL provides guidance on realised and distributable profits under the CA 2006. The main aspects of TECH 02/17BL that deal with foreign exchange are:

- (a) Unless there are doubts as to the convertibility or marketability of the currency in question, foreign exchange profits arising on the retranslation of monetary items are realised, irrespective of the maturity date of the monetary item. However, a profit on retranslation of a monetary asset will not be a realised profit where the underlying balance on which the exchange difference arises does not itself meet the definition of 'qualifying consideration' - e.g., some long-term intercompany balances. *[TECH 02/17BL.3.21]*. This principle is replicated in FRS 102, see 3.7.6 above.
- (b) Realised profits and losses are measured by reference to the functional currency of the company. *[TECH 02/17BL.11.7]*. Therefore, an accounting gain or loss arising from the retranslation of an entity's accounts from its functional currency to a presentation currency is not a profit or loss as a matter of law. It cannot therefore be a realised profit or loss. *[TECH 02/17BL.11.8]*.
- (c) The profit or loss arising on the necessary retranslation of an autonomous branch, from its functional currency into the functional currency of the company, is a realised profit or loss to the extent that the branch net assets were qualifying consideration when the profit or loss arose. *[TECH 02/17BL.11.12]*.
- (d) Where a company's shares, irrespective of whether those shares are classified as equity or debt for accounting purposes, are denominated in a currency other than the company's functional currency, the adjustment arising upon any translation for accounting purposes of the share capital is not a profit or loss at law. Therefore, it is not a realised profit or loss. *[TECH 02/17BL.11.18]*.
- (e) Where share capital is denominated in a currency other than the functional currency, it is fixed at that other currency amount. A distribution cannot be made if it would reduce the company's net assets below the level of the company's share capital. *[TECH 02/17BL.11.21]*. This needs to be considered when assessing the distribution that can be made.

5 Summary of GAAP differences

The key differences between FRS 102 and IFRS in accounting for foreign currency translation are set out below.

	FRS 102	IFRS
Disposal of a foreign operation	On disposal of a foreign operation, the exchange differences relating to that foreign operation that have been accumulated in the separate component of equity are not recognised in profit and loss. The cumulative exchange differences are transferred directly to retained earnings on disposal.	Exchange differences arising on translation of a foreign operation that have been accumulated in equity are reclassified to profit and loss on disposal of the net investment.
Exchange gains on intercompany balances forming part of the net investment in a foreign operation	Exchange differences arising on a monetary item that forms part of a reporting entity's net investment in a foreign operation are recognised in profit or loss in the separate financial statements of the reporting entity or the individual financial statements of the foreign operation, as appropriate, except that any unrealised gain is recognised in other comprehensive income.	Exchange differences arising on a monetary item that forms part of a reporting entity's net investment in a foreign operation are recognised in profit or loss in the separate financial statements of the reporting entity or the individual financial statements of the foreign operation, as appropriate.

Appendix A - Defined terms

Extracts from FRS 102

Appendix I Glossary

closing rate	The spot exchange rate at the end of the reporting period.
fair value	The price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. In the absence of any specific guidance provided in the relevant section of FRS 102, the guidance in Section 2A <i>Fair Value Measurement</i> must be used in determining fair value.
financing activities	Activities that result in changes in the size and composition of the contributed equity and borrowings of the entity.
foreign operation	An entity that is a subsidiary, associate, joint venture or branch of a reporting entity, the activities of which are based or conducted in a country or currency other than those of the reporting entity.
functional currency	The currency of the primary economic environment in which the entity operates.
group	A parent and all its subsidiaries.
monetary items	Units of currency held and assets and liabilities to be received or paid in a fixed or determinable number of units of currency.
net investment in a foreign operation	The amount of the reporting entity's interest in the net assets of that operation.
operating activities	The principal revenue-producing activities of the entity and other activities that are not investing or financing activities.
presentation currency	The currency in which the financial statements are presented.

Overview

Section 31 Hyperinflation sets out the accounting requirements for an entity whose functional currency is the currency of a hyperinflationary economy. It requires such an entity to prepare financial statements that have been adjusted for the effects of hyperinflation. [FRS 102.31.1].

The UK does not currently suffer from hyperinflation therefore the most likely scenario where this section would be applicable is that of a UK based group preparing consolidated financial statements under FRS 102, with a subsidiary that operates in and has a functional currency of a country subject to hyperinflation.

What you need to know

- Where a UK based group preparing consolidated financial statements under FRS 102 has a subsidiary that operates in, and has a functional currency of, a country subject to hyperinflation, the subsidiary's results and financial position must be adjusted using the procedures specified in Section 31 before translating them into a different presentation currency. These procedures are as follows:
 - All amounts (i.e., assets, liabilities, equity items, income and expenses, including comparatives) are translated at the closing rate at the date of the most recent statement of financial position.
 - However, when amounts are translated into the currency of a non-hyperinflationary economy, comparative amounts must be those that were presented as current year amounts in the relevant prior period financial statements.
- Section 31 does not establish an absolute level at which an economy is deemed hyperinflationary. An entity makes that judgement by considering all available information.
- When an economy ceases to be hyperinflationary and an entity discontinues the application of Section 31, it treats the amounts expressed in the presentation currency at the end of the previous reporting period as the basis for the carrying amounts in its subsequent financial statements.
- There is little substantive difference between the accounting and disclosure requirements in Section 31 compared to IAS 29 *Financial Reporting in Hyperinflationary Economies*. However, IAS 29 does contain more application guidance.

1 Introduction

1.1 The concept of hyperinflation

Accounting standards are applied on the assumption that the value of money (the unit of measurement) is constant over time, which normally is an acceptable practical assumption. However, when the effect of inflation on the value of money is no longer negligible, the usefulness of historical cost based financial reporting is often significantly reduced. High rates of inflation give rise to a number of problems for entities that prepare their financial statements on a historical cost basis, for example:

- Historical cost figures expressed in terms of monetary units do not show the 'value to the business' of assets.
 - Holding gains on non-monetary assets that are reported as operating profits do not represent real economic gains.
 - Financial information presented for the current period is not comparable with that presented for the prior periods.
- And
- Real capital can be reduced because profits reported do not take account of the higher replacement costs of resources used in the period. Therefore, if calculating a nominal return on capital based on profit, and not distinguishing this properly from a real return of capital, the erosion of capital may go unnoticed in the financial statements. This is the underlying point in the concept of capital maintenance.

For entities used to working in economies with low inflation it is easy to overlook that there are countries where inflation is still a major economic concern. In some of these countries, inflation has reached such levels that the local currency is no longer a useful measure of value in the economy and the general population may prefer not to hold its wealth in the local currency. Instead, they hold their wealth in a stable foreign currency or in non-monetary assets. Such a condition is often referred to as hyperinflation.

1.2 Relevance in the UK

The UK does not suffer from hyperinflation, but it would be theoretically possible, although extremely unlikely, for a UK company to have the functional currency of a hyperinflationary economy. In that case, the requirements of Section 31 would apply in full to the accounting and disclosures in that company's own financial statements.

A more likely scenario would be that of a UK based group preparing consolidated financial statements under FRS 102 with a subsidiary that operates in, and has a functional currency of, a country subject to hyperinflation. This is discussed at 3.5 below.

2 Comparison between Section 31 and IFRS

There is little substantive difference between the accounting and disclosure requirements in Section 31 compared to IFRS (IAS 29). However, IAS 29 does contain more application guidance.

Where non-monetary items, such as property plant and equipment have been revalued at an earlier date, under Section 31, the revaluation reserve is not restated when adjustments are made for the effects of hyperinflation, the difference arising being included in retained earnings. This reflects the requirement under company law to maintain a revaluation reserve and is therefore a difference from IAS 29 (see 3.4.1 below).

3 Requirements of Section 31 for hyperinflation

3.1 A hyperinflationary economy

Extract from Section 31

- 31.2** This section does not establish an absolute rate at which an economy is deemed hyperinflationary. An entity shall make that judgement by considering all available information including, but not limited to, the following possible indicators of hyperinflation:
- (a) The general population prefers to keep its wealth in non-monetary assets or in a relatively stable foreign currency. Amounts of local currency held are immediately invested to maintain purchasing power.
 - (b) The general population regards monetary amounts not in terms of the local currency but in terms of a relatively stable foreign currency. Prices may be quoted in that currency.
 - (c) Sales and purchases on credit take place at prices that compensate for the expected loss of purchasing power during the credit period, even if the period is short.
 - (d) Interest rates, wages and prices are linked to a price index.
 - (e) The cumulative inflation rate over three years is approaching, or exceeds, 100%.
- [FRS 102.31.2]

Please refer to our publication *IFRS Developments Hyperinflationary economies*²⁴⁵, for an up to date assessment of countries that are considered to be hyperinflationary for IFRS purposes, as well as economies that are not currently hyperinflationary, but which should be monitored. As the IFRS criteria is the same as that under FRS 102, this provides a useful guide for entities reporting under FRS 102 in assessing whether an economy is hyperinflationary.

3.2 Measuring unit in the financial statements

Section 31 requires the following approach: [FRS 102.31.3].

- All amounts in the financial statements of an entity whose functional currency is the currency of a hyperinflationary economy are stated in terms of the measuring unit current at the end of the reporting period (i.e., the accounting value is adjusted for a factor of current purchasing power).
And
- The comparative information in those financial statements for the previous period required by Section 3 *Financial Statement Presentation*, paragraph 14, and any information presented in respect of earlier periods, are also be stated in terms of the measuring unit current at the reporting date.

The restatement of financial statements in accordance with Section 31 requires the use of a general price index that reflects changes in general purchasing power. Section 31 says that in most economies there is a recognised general price index, normally produced by the government, which entities will follow.

[FRS 102.31.4].

In more extreme cases of hyperinflation such indices may not be available, especially if the prevailing circumstances that led to hyperinflation significantly impact the operation of governmental and/or social systems.

Section 31 provides no further guidance on what is meant by a general price index. It is generally accepted practice to use a Consumer Price Index (CPI) for this purpose, unless that index is clearly flawed. National statistical offices in most countries issue several price indices that potentially could be used for the purposes of Section 31. Important characteristics of a good general price index include the following:

- A wide range of goods and services has been included in the price index
 - Reflective of currency-wide, rather than regional, purchasing power
 - Continuity and consistency of measurement techniques and underlying assumptions
 - Free from bias
 - Frequently updated
- And
- Available for a long period

²⁴⁵ Available on [IFRS technical resources | EY - Global](#)

The entity must assess the above characteristics and select the most reliable and most readily available general price index and use that index consistently. It is important that the index selected is representative of the real position of the hyperinflationary currency concerned.

If the general price index is not available for all periods for which the restatement of long-lived assets is required, then FRS 102 offers no guidance. However, using the FRS 102 hierarchy, an entity is permitted to refer to IAS 29 which requires an entity to make an estimate of the price index. The entity could base the estimate, for example, on the movements in the exchange rate between the functional currency and a relatively stable foreign currency. [IAS 29.17].

Entities could use a similar approach to estimating a price index when they cannot find a general price index that is sufficiently reliable (e.g., if the national statistical office in the hyperinflationary economy is subject to significant political bias). However, this would only be acceptable if all available general price indices are fatally flawed.

It is noted that this method of determining the price index is only acceptable if the currency of the hyperinflationary economy is freely exchangeable, i.e., not subject to currency controls and 'official' exchange rates. Entities should be mindful that, especially in the short term, the exchange rate may fluctuate significantly in response to factors other than changes in the domestic price level.

How we see it

In a scenario where there is a wide spread consensus that all available general price indices do not meet the minimum criteria for reliability (e.g., because the national statistical office in the hyperinflationary economy may be subject to significant political bias) and thus are fatally flawed, or in the absence of a general price index, entities could use an estimate based on currency movements, similar to the approach to that described in paragraph 17 of IAS 29. In these instances, preparers must consider the reliability of the movements in the currency as an inflation proxy. Where this is also not appropriate, the use of other sources of economic data or even the use of experts may be required.

3.3 Procedures for restating historical cost financial statements

3.3.1 Statement of financial position

Amounts in the statement of financial position that are not expressed in terms of the measuring unit current at the end of the reporting period are restated by applying a general price index as discussed below. [FRS 102.31.5].

Monetary items (money held and items to be received or paid in money) are not restated because they are expressed in terms of the measuring unit current at the end of the reporting period. [FRS 102.31.6].

Assets and liabilities linked by agreement to changes in prices, such as index-linked bonds and loans, are adjusted in accordance with terms of the underlying agreement and presented at this adjusted amount in the restated statement of financial position. [FRS 102.31.7].

All other assets and liabilities are non-monetary: [FRS 102.31.8]

- (a) Some non-monetary items are carried at amounts current at the end of the reporting period, such as net realisable value and fair value, so they are not restated. All other non-monetary assets and liabilities are restated using the approach in (b) to (d) as appropriate.
- (b) Most non-monetary items are carried at cost or cost less depreciation; hence they are expressed at amounts current at their date of acquisition. The restated cost, or cost less depreciation, of each item is determined by applying to its historical cost and accumulated depreciation the change in a general price index from the date of acquisition to the end of the reporting period.
- (c) Some non-monetary items are carried at amounts that were current at dates other than that of acquisition or the reporting date, for example, property, plant and equipment that has been revalued at some earlier date. In these cases, the carrying amounts are restated by applying to the revalued amount the change in a general price index from the date of the revaluation to the end of the reporting period.
- (d) The restated amount of a non-monetary item is reduced, in accordance with Section 27 *Impairment of Assets* (see Chapter 29), when it exceeds its recoverable amount.

At the beginning of the first period of application of Section 31, the components of equity, except retained earnings and any revaluation surplus, are restated by applying a general price index from the dates the components were contributed or otherwise arose. Any revaluation surplus that arose in previous periods is not restated. This reflects the requirement under company law to maintain a revaluation reserve. Restated retained earnings are derived from all the other amounts in the restated statement of financial position, including the effect of not restating the revaluation reserve. Retained earnings is essentially the balancing figure after all other restatements. [FRS 102.31.9].

At the end of the first period in which hyperinflation arises and in subsequent periods, all components of owners' equity are restated by applying a general price index from the beginning of the period or the date of contribution, if later. The changes for the period in owners' equity are disclosed in accordance with Section 6 *Statement of Changes in Equity and Statement of Income and Retained Earnings* (see Chapter 6). [FRS 102.31.10].

3.3.2 Statement of comprehensive income and income statement

All items in the statement of comprehensive income (and in the income statement, if presented) must be expressed in terms of the measuring unit current at the end of the reporting period. Therefore, all amounts need to be restated by applying the change in the general price index from the dates when the items of income and expenses were initially recognised in the financial statements. If general inflation is approximately even throughout the period, and the items of income and expense arose approximately evenly throughout the period, an average rate of inflation may be appropriate. [FRS 102.31.11].

How we see it

Inevitably, in practice there is some approximation in this process because of the assumptions that the entity is required to make, for example the use of weighted averages rather than more detailed calculations and assumptions as to the timing of the underlying transactions. A number of factors may need to be considered in determining the appropriate level of detail to be applied:

- The level of data available: most jurisdictions only make inflation statistics available on a monthly basis. In addition, when the hyperinflation process requires data from long ago e.g., for a property that was purchased decades ago), even monthly information may not be available.
- The materiality of the item being adjusted for inflation: a more detailed calculation should be performed for more material items. For example, revenue should be adjusted for inflation using a more detailed calculation than a low value expense account.
- Frequency of transactions: more specific inflation data would be more appropriate for one-off transactions, especially where these are material. For example, more attention should be paid to the inflation data on the date of a material business combination than to data related to purchases made relatively consistently throughout the year.

Other factors to be considered would include the regularity of transactions and the level of variation in the inflation rate.

3.3.3 Statement of cash flows

An entity must express all items in the statement of cash flows in terms of the measuring unit current at the end of the reporting period. [FRS 102.31.12].

3.3.4 Gain or loss on net monetary position

In a period of inflation, an entity holding an excess of monetary assets over monetary liabilities loses purchasing power, and an entity with an excess of monetary liabilities over monetary assets gains purchasing power, to the extent the assets and liabilities are not linked to a price level. An entity therefore includes in profit or loss the gain or loss on the net monetary position, except that any unrealised gain must be recognised in other comprehensive income. An entity must offset the adjustment to those assets and liabilities linked by agreement to changes in prices (see 3.3.1 above) against the gain or loss on net monetary position. [FRS 102.31.13].

3.3.5 Comparative information

As noted at 3.3 above, comparative information in financial statements is also stated in terms of the measuring unit current at the end of the reporting period. [FRS 102.31.3]. This means the comparative information will require restatement using the relevant general price index.

3.3.6 Economies ceasing to be hyperinflationary

When an economy ceases to be hyperinflationary and an entity discontinues the application of Section 31, it treats the amounts expressed in the presentation currency at the end of the previous reporting period as the basis for the carrying amounts in its subsequent financial statements. [FRS 102.31.14].

3.4 Accounting for a hyperinflationary subsidiary in consolidated financial statements

As previously mentioned, a more likely scenario relevant to FRS 102 would be that of a UK based group preparing consolidated financial statements under FRS 102 with a subsidiary that operates in, and has a functional currency of, a country subject to hyperinflation. Section 30 *Foreign Currency Translation* (see Chapter 32 at 3.6.2), requires the subsidiary's results and financial position to be adjusted using the procedures specified in Section 31 before translating them into a different presentation currency using the following procedures. [FRS 102.30.21].

- All amounts (i.e., assets, liabilities, equity items, income and expenses, including comparatives) are translated at the closing rate at the date of the most recent statement of financial position, except that
- When amounts are translated into the currency of a non-hyperinflationary economy, comparative amounts are those that were presented as current year amounts in the relevant prior period financial statements.

4 Disclosures required by Section 31

An entity which applies Section 31 in its own financial statements must disclose the following: *[FRS 102.31.15]*

- The fact that financial statements and other prior period data have been restated for changes in the general purchasing power of the functional currency.
- The identity and level of the price index at the reporting date and changes during the current reporting period and the previous reporting period.

And

- The amount of gain or loss on monetary items.

5 Summary of differences between Section 31 and IFRS

The key differences between FRS 102 and IFRS in accounting for Hyperinflation are set out below.

FRS 102		IFRS
Situations where non-monetary items have been revalued at an earlier date such as PPE.	Under Section 31, the revaluation reserve is not restated when adjustments are made for the effects of hyperinflation, the difference arising being included in retained earnings. This reflects the requirement under Company Law to maintain a revaluation reserve.	Any revaluation surplus that arose in previous periods is eliminated.

Appendix A - Defined terms

Extract from FRS 102 Appendix 1 Glossary

Definitions

functional currency	The currency of the primary economic environment in which the entity operates.
monetary items	Units of currency held and assets and liabilities to be received or paid in a fixed or determinable number of units of currency.
presentation currency	The currency in which the financial statements are presented.

Overview

Section 32 *Events after the End of the Reporting Period* applies to the recognition, measurement and disclosure of events after the end of the reporting period. In particular the section sets out the circumstances in which financial statements must be adjusted for events which have happened after the reporting period, the disclosures an entity must give about the date on which the financial statements were authorised for issue, and the required disclosures relating to events after the reporting period.

Events after the end of the reporting period are those events, both favourable and non-favourable, which occur between the last day of the reporting period and the date on which the financial statements are authorised for issue. Section 32 divides such events into two categories: adjusting and non-adjusting events. Adjusting events provide evidence of conditions which existed at the end of the reporting period and, consequently, an entity is required to adjust the amounts recognised in its financial statements to reflect those events. This may require the recognition of a previously unrecognised item. Conversely, no adjustment is made for non-adjusting events, though disclosures may be required for such events.

Section 32 does not permit an entity to prepare its financial statements on a going concern basis if events after the end of the reporting period indicate that the going concern assumption is no longer appropriate.

What you need to know

- Section 32 identifies two types of events after the end of the reporting period: adjusting and non-adjusting.
- Adjusting events are events which provide evidence of conditions which existed at the end of the reporting period; amounts recognised in financial statements are adjusted for such events.
- Non-adjusting events are indicative of conditions which arose after the end of the reporting period, but before the financial statements were authorised for issue; amounts recognised in the financial statements are not adjusted for such events, but those events may need to be disclosed.
- When the going concern basis becomes inappropriate after the end of the reporting period, an entity is required to change its basis of accounting.

1 Introduction

Section 32 deals with accounting for, and disclosure of “those events, favourable and unfavourable, that occur between the end of the reporting period and the date when the financial statements are authorised for issue”. [FRS 102.32.1, FRS 102.32.2]. This definition includes all events occurring between those dates. The principal issue is determining which of these events are required to be reflected in the financial statements as adjustments, which are material enough to require additional disclosure, and which require neither adjustment nor disclosure.

The following timeline illustrates events after the end of the reporting period that are within the scope of Section 32 for an entity with a 31 December year-end:

The financial statements of an entity present, among other things, its financial position at the end of the reporting period. Therefore, it is appropriate to adjust the financial statements for all events that offer greater clarity about conditions that existed at the end of the reporting period (reporting date), and which occur prior to the date the financial statements are authorised for issue, even if those events occur after the public announcement of profit or loss or other selected financial information. [FRS 102.32.3]. The standard, therefore, requires entities to adjust the amounts recognised in the financial statements for ‘adjusting events’, events that provide evidence of conditions that existed at the end of the reporting period. [FRS 102.32.2(a), FRS 102.32.4]. By the same reasoning an entity does not recognise in the financial statements those events that relate to conditions that arose after the reporting period (‘non-adjusting events’). However, if non-adjusting events are material (that is, non-disclosure of the event could reasonably be expected to influence decisions that the users of general-purpose financial statements make on the basis of those financial statements), certain disclosures are required. [FRS 102.32.2(b), FRS 102.32.6, FRS 102.32.7, FRS 102.32.10, FRS 102.32.11].

One exception to the general rule for non-adjusting events is when the going concern basis becomes inappropriate. This is always treated as an adjusting event. [FRS 102.32.7A, FRS 102.32.7B].

The requirements of Section 32 and some practical issues resulting from these requirements are dealt with in 3 and 4 below, respectively.

2 Comparison between Section 32 and IFRS

There are no key differences between Section 32 and the comparable IFRS accounting standard, IAS 10 *Events after the Reporting Period*.

3 Requirements of Section 32 for events after the end of the reporting period

3.1 Scope

Extract from FRS 102

Scope of this section

32.1 This section applies to the recognition, measurement and disclosure of events after the end of the reporting period. *[FRS 102.32.1].*

The financial statements of an entity present, among other things, its financial position at the end of the reporting period. Therefore, it is appropriate to adjust the financial statements for all events that offer greater clarity concerning the conditions that existed at the end of the reporting period, that occur prior to the date the financial statements are authorised for issue. Section 32 requires entities to adjust the amounts recognised in the financial statements for 'adjusting events' that provide evidence of conditions that existed at the end of the reporting period. *[FRS 102.32.2(a), FRS 102.32.4].* An entity does not recognise in the financial statements those events that relate to conditions that arose after the reporting period, 'non-adjusting events'. However, if non-adjusting events are material, Section 32 requires certain disclosures about them. *[FRS 102.32.10].*

Section 32 deals with the accounting for and the disclosure of events after the reporting period, which are defined as "those events, favourable and unfavourable, that occur between the end of the reporting period and the date when the financial statements are authorised for issue". *[FRS 102.32.2].* The definition includes all events that provide evidence of conditions that existed at the end of the reporting period (adjusting events) and those events that are indicative of conditions that arose after the end of the reporting period (non-adjusting events).

Events after the end of the reporting period include all events that occur up to the date the financial statements are authorised for issue, even if those events occur after the public announcement of profit or loss or other financial information. *[FRS 102.32.3].*

Section 32 does not permit an entity to prepare its financial statements on a going concern basis if events after the end of the reporting period indicate that the going concern assumption is not appropriate (see 3.2.2 below). *[FRS 102.32.7A].* The going concern basis is discussed in Chapter 6 at 8.3.

3.1.1 Date when financial statements are authorised for issue

Given the definition above, the meaning of 'the date when the financial statements are authorised for issue' is clearly important. Section 32 states that events after the end of the reporting period include all events up to the date that the financial statements are authorised for issue, even if those events occur after the public announcement of profit or loss or other selected financial information. *[FRS 102.32.3].*

The Illustration below shows a situation when an entity releases preliminary information, but not complete financial statements, before the date of the authorisation for issue.

Illustration 3-1: Release of financial information before date of authorisation for issue

The management of an entity completes the primary financial statements for the year to 31 December 20X6 on 21 January 20X7 but has not yet completed the explanatory notes. On 26 January 20X7, the board of directors reviews the primary financial statements and authorises them for public media release. The entity announces its profit and certain other financial information on 28 January 20X7. On 1 February 20X7 an error is discovered in the year-end stock valuation of £1m. On 11 February 20X7, management issues the financial statements (with full explanatory notes) to the board of directors, which approves the financial statements for filing on 18 February 20X7. The entity files the financial statements with a regulatory body on 21 February 20X7.

The financial statements are authorised for issue on 18 February 20X7 (date the board of directors approves the financial statements for filing). Therefore, the error discovered in the year-end stock valuation on 1 February 20X7, before the financial statements have been authorised for issue, is an adjusting event after the end of the reporting period which must be reflected, if material, in the 31 December 20X6 financial statements (see 3.2.1 below).

Illustration 3-1 shows that events after the end of the reporting period include all events up to the date when the financial statements are authorised for issue, even if those events occur after the public announcement of profit or of other selected financial information. Accordingly, the information in the financial statements might differ from the equivalent information in a preliminary announcement.

3.1.1.A Re-issuing financial statements

Section 32 does not address whether and how an entity may amend its financial statements after they have been authorised for issue. Generally, such matters are dealt with in local regulations. There are a number of reasons why financial statements may be re-issued after they have been authorised for issue, such a reason could be that the original financial statements were defective, or the entity is re-issuing financial statement for a listing.

If an entity reissues financial statements to correct an error, the UK *Companies (Revision of Defective Accounts and Reports) Regulation 2008 (SI 2008/373)* must be followed in correcting the defective financial statements. The regulations permit the defective financial statements to be either replaced or revised by a supplementary note. If the financial statements are replaced or revised by a supplementary note, they are required to appropriately reflect all adjusting events, by updating the amounts recognised in the financial statements, and non-adjusting events, to the date when the original financial statements were approved. This means that the financial statements do not reflect events that occurred between the date when the original financial statements were authorised for issue and the date the revised financial statements were authorised for re-issue.

3.1.2 Adjusting events

Adjusting events are “those that provide evidence of conditions that existed at the end of the reporting period.” [FRS 102.32.2(a)]. An entity must adjust the amounts recognised in its financial statements, including any related disclosures, to reflect adjusting events. [FRS 102.32.4].

The following are examples of adjusting events after the end of the reporting period that require amounts in the financial statements to be adjusted or to recognise items that were not previously recognised: [FRS 102.32.5]

- The settlement after the end of a reporting period of a court case that confirms that the entity had a present obligation at the end of the reporting period. In this situation, an entity adjusts any previously recognised provision related to this court case under Section 21 *Provisions and Contingencies* or recognises a new provision. Mere disclosure of a contingent liability is not sufficient because the settlement provides additional evidence of conditions that existed at the end of the reporting period that would give rise to a provision in accordance with Section 21 (see Chapter 24 at 3.2.1).
- The receipt of information after the end of the reporting period indicating that an asset was impaired at the end of the reporting period, or that the amount of a previously recognised impairment loss for that asset needs to be adjusted. For example:
 - The bankruptcy of a customer that occurs after the end of the reporting period usually confirms that a loss existed at the end of the reporting period on a trade receivable and that the entity needs to adjust the carrying amount of the trade receivable (see 4.3 below).
 - And
 - The sale of inventories after the end of the reporting period may give evidence about their selling price at the end of the reporting period for the purpose of assessing impairment at that date (see 4.1 below).
- The determination after the end of the reporting period of the cost of assets purchased, or the proceeds from assets sold, before the end of the reporting period.
- The determination after the end of the reporting period of the amount of profit-sharing or bonus payments, if the entity had a legal or constructive obligation at the end of the reporting period to make such payments as a result of events before that date.
- And
- The discovery of fraud or errors that show that the financial statements are incorrect (see 4.4 below).

In addition, those entities that apply IAS 33 *Earnings per Share* (as adopted in the UK) as permitted by Section 1 *Scope*, are required to make adjustments to earnings per share for certain share transactions after the reporting period (such as bonus issues, share splits or share consolidations), even though the transactions themselves are non-adjusting events (see 3.1.3 below). IAS 33 is not discussed in detail in this publication. Instead, readers are referred to the EY publication, International GAAP®. When applying IAS 33, references made to other IFRS accounting standards within IAS 33 shall be taken to be references to the relevant section or paragraph in FRS 102. [FRS 102.1.7].

3.1.3 Non-adjusting events

Section 32 states that non-adjusting events are “those that are indicative of conditions that arose after the end of the reporting period”. [FRS 102.32.2(b)]. An entity shall not adjust the amounts recognised in its financial statements to reflect non-adjusting events. [FRS 102.32.6].

Examples of non-adjusting events are as follows: [FRS 102.32.7]

- A decline in market value of investments between the end of the reporting period and the date when the financial statements are authorised for issue. The decline in market value does not normally relate to the condition of the investments at the end of the reporting period but reflects circumstances that have arisen subsequent to the end of the reporting period.
- And
- An amount that becomes receivable as a result of a favourable judgement or settlement of a court case after the reporting date but before the financial statements are authorised for issue. This would be a contingent asset at the reporting date (see Chapter 24 at 3.5) and disclosure may be required. However, if an agreement is reached before the financial statements are authorised for issue, on the amount of damages for a judgement that was reached before the reporting date, but that was not previously recognised on the basis it could not be measured reliably, this may constitute an adjusting event.

The following are further examples of non-adjusting events after the end of the reporting period that would generally result in disclosure in the financial statements. The disclosures will reflect information that becomes known after the end of the reporting period but before the financial statements are authorised for issue:

- A major business combination or disposal of a major subsidiary (Section 19 *Business Combinations and Goodwill* does not require any specific disclosures in respect of business combinations occurring after the reporting date).
- Announcing a plan to discontinue an operation.
- Major purchases of assets, disposals or plans to dispose of assets, or expropriation of major assets by governments.
- The destruction of a major production plant by a fire.
- Announcing, or commencing the implementation of a major restructuring.
- The issue or repurchase of an entity's debt or equity instruments.
- Abnormally large changes in asset prices or foreign exchange rates.
- Changes in tax rates or tax laws enacted or announced that have a significant effect on current and deferred tax assets and liabilities.
- Entering into significant commitments or contingent liabilities, for example, by issuing significant guarantees.
- And
- Commencing major litigation arising solely out of events that occurred after the end of the reporting period. [FRS 102.32.11].

3.1.3.A Dividends

Extract from FRS 102

- 32.8** If an entity declares dividends to holders of equity after the end of the reporting period, the entity shall not recognise those dividends as a liability at the end of the reporting period because no obligation exists at that time. The amount of the dividend may be presented as a segregated component of retained earnings at the end of the reporting period. [FRS 102.32.8].

Dividends are only recognised as a liability if declared by the end of the reporting period. Dividends declared by an entity to holders of its equity instruments after the end of the reporting period are not adjusting events as no obligation exists at the end of the reporting period. However, although dividends declared after the reporting date are not liabilities, entities may present the amount of dividends declared after the end of the reporting period, as a segregated component of retained earnings. [FRS 102.32.8]. This allows entities to show the amount of retained earnings that are set aside for future dividends, as at the date the financial statements are authorised for issue.

The accounting for dividends in FRS 102 reflects the legal status of dividends under the Companies Act 2006. ICAEW/ICAS Technical Release 02/17BL *Guidance on Realised and Distributable Profits under the Companies Act 2006* (TECH 02/17BL) states that a distribution is made when it becomes a legally binding liability, regardless of the date on which it is to be settled. In the case of a final dividend, the legally binding liability arises at the time the dividend is declared by the company in a general meeting or, for private companies, by the members passing a general resolution. In the case of interim dividends authorised under common articles of association, normally no legally binding liability is established prior to payment being made. In such cases, dividends are normally recognised when they are paid although TECH 02/17BL also provides guidance in determining whether an interim dividend is a legally binding liability at a date earlier than when payment is made. [TECH 02/17BL.2.10].

The examples of non-adjusting events discussed at 3.1.3 above do not include declared dividends. However, the Companies Act requires disclosure of any dividends proposed before the date of approval of the financial statements (see 3.4.2 below).

3.2 The treatment of adjusting events

3.2.1 Events requiring adjustment to the amounts recognised, or disclosures in the financial statements

Section 32 requires that an entity must adjust the amounts recognised in the financial statements, including related disclosures, to take account of adjusting events after the end of the reporting period. [FRS 102.32.4].

3.2.2 Events indicating that the going concern basis is not appropriate

If management determines after the reporting period (but before the financial statements are authorised for issue) either that it intends to liquidate the entity or to cease trading, or that it has no realistic alternative but to do so, the financial statements must not be prepared on the going concern basis. [FRS 102.32.7A].

Deterioration in operating results and financial position after the reporting period may indicate a need to consider whether the going concern assumption is still appropriate. If the going concern assumption is no longer appropriate, Section 32 states that the effect is so pervasive that it results in a fundamental change in the basis of accounting, rather than an adjustment to the amounts recognised within the original basis of accounting. [FRS 102.32.7B]. Section 3 *Financial Statement Presentation* contains guidance and specific disclosure requirements when the financial statements are not prepared on a going concern basis or when there are uncertainties that cast significant doubt upon an entity's ability to continue as a going concern (see Chapter 6 at 8.3).

3.3 The treatment of non-adjusting events

Section 32 prohibits the adjustment of amounts recognised in the financial statements to reflect non-adjusting events. [FRS 102.32.6]. However, an entity must disclose the following in the financial statements for each category of non-adjusting event after the end of the reporting period:

- The nature of the event.
- And
- An estimate of its financial effect, or a statement that such an estimate cannot be made. [FRS 102.32.10].

Examples of non-adjusting events after the end of the reporting period that would generally result in disclosures are provided at 3.1.3 above. It is important to note that the list of examples of non-adjusting events in Section 32 and summarised at 3.1.3 above, is not an exhaustive one; Section 32 requires disclosure of any material non-adjusting event.

3.3.1 Breach of a long-term loan covenant and its subsequent rectification

The rectification of the breach or default of a loan payable, or the renegotiation of the terms of the loan, subsequent to the reporting date is not an adjusting event and therefore does not change the classification of the liability in the statement of financial position from current to non-current. This is further discussed in Chapter 6 at 4.1.2.D.

When a breach or default of a loan payable exists at the reporting date, an entity discloses the following:

- Details of the breach or default.
 - The carrying value of the related loans at the reporting date.
- And
- Whether the breach or default was remedied, or whether the terms of the loan payable were renegotiated, before the financial statements were authorised for issue. *[FRS 102.11.47]*.

These disclosures are not required for qualifying entities that are non-financial institutions.

3.4 Other disclosure requirements

The disclosures required in respect of non-adjusting events are discussed in 3.3 above.

3.4.1 Date when financial statements are authorised for issue

An entity is required to disclose the date when the financial statements were authorised for issue and who authorised the financial statements for issue. *[FRS 102.32.9]*.

3.4.2 Additional Companies Act 2006 disclosure requirements in respect of reserves and dividends

The following disclosures in respect of reserves and dividends intended to be distributed after the reporting period are required for large and medium sized companies, as defined by The Large and Medium-sized Companies and Groups (Accounts and Reports) Regulations 2008 as amended (the Regulations):

- Any amount set aside or proposed to be set aside to, or withdrawn, or proposed to be withdrawn from, reserves.
- And
- The aggregate amount of dividends that are proposed before the date of approval of the financial statements. *[1 Sch 43, 2 Sch 56, 3 Sch 64]*.

4. Practical issues

Although Section 32 does not use the term ‘practical issues’, it alludes to practical issues such as those discussed below. For example, Section 32 asserts that the bankruptcy of a customer that occurs after the reporting period usually confirms that a loss on a trade receivable existed at the end of the reporting period (see 3.1.2 above). It also states that a decline in fair value of investments after the reporting period does not normally relate to conditions at the end of the reporting period (see 3.1.3 above). Judgement of the facts and circumstances is required to determine whether an event that occurs after the reporting period provides evidence about a condition that existed at the end of the reporting period, or whether the condition arose subsequent to the reporting period.

4.1 Valuation of inventory

The sale of inventories after the reporting period is normally a good indicator of their selling price at that date. Section 32 states that such sales “may give evidence about their selling price at the end of the reporting period” (see 3.1.2 above). [FRS 102.32.5(b)(ii)]. However, in some cases, selling prices decrease because of conditions that did not exist at the end of the reporting period.

Therefore, it is important to determine why the selling price decreased. Did it decrease because of circumstances that existed at the end of the reporting period, which subsequently became known, or did it decrease because of circumstances that arose after the end of the reporting period? A decrease in price is merely a response to changing conditions so it is important to assess the reasons for these changes.

Some examples of changing conditions are as follows:

- Price reductions caused by a sudden increase in cheap imports
Whilst it is arguable that the ‘dumping’ of cheap imports after the reporting period is a condition that arises subsequent to that date, it is more likely that this is a reaction to a condition that already existed such as overproduction in other parts of the world. Thus, it might be more appropriate in such a situation to adjust the value of inventories based on its subsequent selling price.
- Price reductions caused by increased competition
The reasons for price reductions and increased competition do not generally arise overnight but normally occur over a period. For example, a competitor may have built up a competitive advantage by investing in machinery that is more efficient. In these circumstances, it is appropriate for an entity to adjust the valuation of its inventories because its own investment in production machinery is inferior to its competitor’s and this situation existed at the end of the reporting period.
- Price reductions caused by the introduction of an improved competitive product
It is unlikely that a competitor developed and introduced an improved product overnight. Therefore, it is more appropriate to adjust the valuation of inventories to their selling price after that introduction because the entity’s failure to maintain its competitive position in relation to product improvements that existed at the end of the reporting period.

Price reductions after the reporting period caused by increased competition are generally evidence of conditions that developed over a period and existed at the end of the reporting period. For certain types of inventories, there may be clear evidence of a price at the end of the reporting period. If this is the case, it is inappropriate to adjust the price of that inventory to reflect a subsequent decline. An example is inventories for which there is a price on an active commodities market. In addition, inventory may be physically damaged or destroyed after the reporting period (e.g., by fire, flood, or other disaster). In these cases, the entity does not adjust the financial statements. However, the entity may be required to disclose the subsequent decline in selling price of the inventories if the impact is material (see 3.3 above).

4.2 Over time measurement of progress

Events after the reporting period frequently give evidence about the profitability of contracts with customers, which are in progress at the end of the reporting period and where revenue is recognised over time.

Section 23 *Revenue from Contracts with Customers* requires an assessment to be made of the progress towards complete satisfaction of performance obligations satisfied over time (see Chapter 25 at 8.1). [FRS 102.23.100]. In such an assessment, consideration must be given to events that occur after the reporting period and a determination must be made as to whether they are adjusting or non-adjusting events for which the financial effect is included in the method used to measure progress over time.

4.3 Insolvency of a debtor

The insolvency of a debtor or inability to pay debts usually builds up over a period. Section 32 states that the “bankruptcy of a customer that occurs after the end of the reporting period usually confirms that a loss existed at the end of the reporting period” (see 3.1.2 above). [FRS 102.32.5(b)(i)]. If, however, there is evidence to show that the insolvency of the debtor resulted solely from an event occurring after the reporting period, then the event is a non-adjusting event. If the impact is material, the entity will be required to disclose the impact of the debtor’s default.

4.4 Discovery of fraud after the end of the reporting period

The timing of when fraud is discovered will affect the accounting considerations. When fraud is discovered after the end of the reporting period, but before the financial statements have been authorised for issue, the discovery of fraud is often an adjusting event, i.e., an event that provides evidence of conditions that existed at the reporting date. However, the discovery of fraud may also be a non-adjusting event. For example, for investments, the discovery of fraud may affect the fair value of the assets subsequent to the discovery of the fraud, but not their fair values on the reporting date.

When fraud is discovered after the financial statements have been authorised for issue this may indicate prior period errors. Application of the definition of a ‘prior period error’ (see Chapter 9 at 3.5) in Section 10 *Accounting Policies, Estimates and Errors* in the case of a fraud requires judgement. Facts and circumstances must be evaluated to determine if the discovery of fraud resulted from a previous failure to use, or misuse of, reliable information, or from new information.

4.5 Valuation of donations in the form of legacies to public benefit entities

Section 34 *Specialised Activities* requires public benefit entities or entities within a public benefit entity group to recognise donations in the form of legacies when it is probable that the legacy will be received, and the value can be reliably measured. The ability to meet these criteria may be affected by events such as disputes and valuations. These entities are required to consider the requirements of Section 32 to determine whether the receipt of evidence about a legacy after the reporting date is an adjusting event after the end of the reporting period. [FRS 102.PBE34.70A].

Overview

This chapter addresses the requirements of Section 33 *Related Party Disclosures*. The standard defines related party relationships and transactions and sets out the relevant disclosure requirements. It is important to note that the standard does not address the accounting for related party transactions. Related party transactions are accounted for under the relevant section of FRS 102.

The aim of Section 33 is to ensure that an entity's financial statements contain the necessary disclosures required to draw attention to the possibility that its financial position and profit or loss may have been affected by the existence of related parties and by transactions and outstanding balances, including commitments, with such parties.

What you need to know

- Section 33 of FRS 102 is a disclosure standard only. Transactions within its scope are accounted for under the relevant section of FRS 102.
- Section 33 requires an entity to include in its financial statements the disclosures necessary to draw attention to the possibility that its financial position and profit or loss have been affected by the existence of related parties and by transactions and outstanding balances with such parties.
- A related party is a person or entity which is related to the entity that is preparing its financial statements; Section 33 provides a wide-ranging definition of what constitutes a related party.
- Information must be disclosed about related party transactions, outstanding balances and commitments. Section 33 also requires disclosure about key management personnel compensation.

1 Introduction

Section 33 requires an entity to include in its financial statements the disclosures necessary to draw attention to the possibility that its financial position and profit or loss have been affected by the existence of related parties and by transactions and outstanding balances with such entities. [FRS 102.33.1].

Section 33 requires disclosures only. It does not establish any recognition or measurement requirements. Related party transactions are accounted for in accordance with the requirements of the section of FRS 102 applicable to the transaction. The disclosures required by Section 33 are in addition to those required by other sections. For example, a loan to a related party will also be subject to the disclosure requirements of Section 11 *Basic Financial Instruments*.

1.1 Scope of Section 33

Section 33 applies to all financial statements prepared under FRS 102 including both group and individual financial statements. However, disclosure is not required in consolidated financial statements, of any transactions or balances between group entities that have been eliminated on consolidation (see 1.1.1 below).

In addition to the above, disclosures required by Section 33 need not be given in individual or separate financial statements of transactions entered into between two members of a group, provided that any subsidiary which is a party to the transaction is wholly owned by such a member (see 1.1.2 below).

[FRS 102.33.1A].

1.1.1 Transactions eliminated on consolidation

Although Section 33 does not specifically include a paragraph stating that intra-group transactions eliminated on consolidation are not required to be disclosed in the consolidated financial statements of an entity, this is not so much an exemption as a statement of the obvious since, so far as the group accounts are concerned, such items do not exist. The effect is that no related party disclosures between subsidiary undertakings are required in group accounts. However, disclosure is still required in respect of transactions or balances with associates or joint ventures since these are not 'eliminated' on consolidation, although they may be subject to consolidation adjustments. This would also apply to the parts of transactions which have been eliminated when applying equity accounting.

1.1.2 Transactions between wholly-owned subsidiary undertakings

The wording of the exemption from disclosure of transactions between wholly-owned subsidiary undertakings has been taken directly from UK company law. The exemption may be applied to transactions between entities within a sub-group where the transacting subsidiary is wholly-owned by the intermediate parent of that sub-group, even if that intermediate parent is not wholly-owned by the ultimate parent.

[FRS 102.A3.40D, FRS 102.A3.40E].

The Basis for Conclusions clarifies that this disclosure exemption applies only to transactions between wholly owned subsidiary undertakings and not to outstanding balances between those entities. This is because UK company law requires disclosure of outstanding balances in aggregate for group undertakings and, separately, for undertakings in which the company has a participating interest. Therefore, it is not possible to provide an exemption from the disclosure of outstanding balances with group undertakings, although the requirement is for the balances to be disclosed only in aggregate. This disclosure should be met through the compliance with the requirements of Section 4 *Statement of Financial Position* (see Chapter 6). [FRS 102.BC.B33.2].

The Note on Legal Requirements clarifies that, in the FRC's view, the exemption may not be applied to transactions between entities in an intermediate parent's sub-group (including the intermediate parent itself) and the entities in the larger group if the intermediate parent is not wholly-owned by the parent of that larger group. Otherwise, related party transactions could be obscured by a partly-owned intermediate parent creating a wholly-owned subsidiary and passing transactions through it. [FRS 102.A3.40F].

Illustration 1-1 below illustrates the application of the disclosure exemption based on the interpretation above.

Illustration 1-1: Application of the exemption from disclosure of transactions between wholly-owned subsidiary undertakings

Because H PLC only owns 95% of S2 Limited, the wholly owned subsidiaries exemption cannot be used in (a) the individual company financial statements of H PLC in respect of transactions with S2 Limited and S3 Limited, (b) the individual financial statements of S1 Limited in respect of transactions with S2 Limited and S3 Limited (c) the consolidated and/or individual financial statements of S2 Limited in respect of any transactions with H PLC and S1 Limited or (d) the individual financial statements of S3 Limited in respect of any transactions with H PLC and S1 Limited.

The exemption can be used for any transactions in individual financial statements between H PLC and S1 Limited and between S2 Limited and S3 Limited.

However, if the remaining 5% of S2 Limited (not directly held by H PLC) was held by another wholly owned subsidiary undertaking of H PLC, then S2 Limited would be a wholly owned subsidiary undertaking of H PLC. In those circumstances, the exemption from disclosing transactions with the other entities in the group must be available in the individual financial statements of H PLC, S1 Limited, S2 Limited and S3 Limited and the consolidated financial statements of S2 Limited (as S1 Limited, S2 Limited and S3 Limited would all be wholly owned subsidiary undertakings of the H PLC group).

The exemption has no other conditions: it can be applied, for example, to an entity with an overseas parent, an entity whose parent does not prepare publicly available consolidated financial statements or to an entity whose parent does not prepare consolidated financial statements.

2 Comparison between Section 33 and IFRS

The principal differences between Section 33 and IAS 24 - *Related Party Disclosures* - are in respect of:

- The scope exemption for wholly-owned subsidiaries (see 2.1 below).
- The government-related exemption (see 2.2 below).
- Disclosure of key management compensation (see 2.3 below).
- Aggregation of disclosures (see 2.4 below).

And

- Disclosure of commitments (see 2.5 below).

In summary, the disclosure requirements of Section 33 are less onerous to a reporting entity than those of IAS 24.

2.1 Scope exemption for wholly-owned subsidiaries

Section 33 has an exemption from disclosure of transactions entered into between two members of a group, provided that any subsidiary which is a party to the transaction is wholly-owned by such a member (see 1.1.2 above). IAS 24 does not have such an exemption.

2.2 Government-related exemption

Section 33 exempts an entity from disclosing information about related party transactions with a related party that is a government or another entity related because that same government has control, joint control or significant influence over it (see 4.3.3 below).

IAS 24 has a similar but not identical exemption for government-related entities. However, the IAS 24 exemption is conditional on disclosure of (i) the nature and amount of each individually significant transaction; and (ii) for other transactions that are collectively, but not individually, significant, a qualitative or quantitative indication of their type. [IAS 24.25, IAS 24.26]. In addition, under IAS 24, the reporting entity must disclose the name of the government and the nature of its relationship with the reporting entity. In contrast, Section 33 does not require these additional disclosures, and the reporting entity is only obliged to disclose the name of the government if the government is the parent of the reporting entity. [FRS 102.33.11]. Therefore, a government with significant influence over a reporting entity need not be named in FRS 102 financial statements, nor will any transactions and balances with that government be disclosed.

2.3 Disclosure of key management compensation

Section 33 requires key management compensation to be disclosed only in total. [FRS 102.33.7].

In addition, when an entity is subject to a legal or regulatory requirement to disclose directors' remuneration (or equivalent), it is exempt from the requirement to disclose key management personnel compensation if the key management personnel and directors are the same. [FRS 102.33.7A].

Directors' remuneration is subject to additional company law requirements (see 4.4 below).

IAS 24 requires key management compensation to be disclosed in total and also split between short-term employee benefits, post-employment benefits, other long-term benefits, termination benefits and share-based payment. [IAS 24.17].

2.4 Aggregation of disclosures

Section 33 requires related party transaction disclosures to be made in aggregate for the following separate categories (a) entities with control, joint control or significant influence over the reporting entity; (b) entities over which the entity has control, joint control or significant influence (c) key management personnel of the entity or its parent (in the aggregate); (d) entities that provide key management personnel services to the entity and (e) other related parties. [FRS 102.33.10].

IAS 24 has a similar requirement but requires the disclosures to be made separately for seven categories instead of four. [IAS 24.19].

2.5 Disclosure of commitments

Section 33 states that information about 'commitments' must be disclosed if necessary for an understanding of the potential effect of the related party relationship on the financial statements.

[FRS 102.33.9].

IAS 24 states explicitly that 'commitments to do something if a particular event occurs or does not occur in the future, including executory contracts (recognised and unrecognised)' are transactions requiring disclosure if they are with a related party. In addition, a commitment is listed as an example of a related party transaction requiring disclosure. *[IAS 24.21(i)].*

3 Requirements of Section 33 for related party disclosures

Section 33 defines a related party and then requires various disclosures of related party transactions, balances and relationships.

3.1 Definition of a related party

A related party is defined as 'a person or entity that is related to the entity that is preparing its financial statements (the reporting entity)'. [FRS 102.33.2]. Preparers must use this definition of 'related party' when applying concepts elsewhere in FRS 102 where this term or similar terms are used and not otherwise defined.

In considering each possible related party relationship, attention is directed to the substance of the relationship and not merely the legal form. [FRS 102.33.3].

A related party transaction is defined as 'a transfer of resources, services or obligations between a reporting entity and a related party, regardless of whether a price is charged'. [FRS 102.33.8].

The following are considered to be related parties of the reporting entity:

- A person or a close member of that person's family, if that person has either control, joint control, or significant influence over the reporting entity, or is a member of the key management personnel of the reporting entity, or of a parent of the reporting entity (see 3.1.1 below).
 - Entities that are members of the same group (see 3.1.2 below).
 - Entities that are associates or joint ventures (see 3.1.3 below).
 - Entities that are joint ventures of the same third party (see 3.1.4 below).
 - Entities that are joint ventures and associates of the same third entity (see 3.1.5 below).
 - Post-employment benefit plans (see 3.1.6 below).
 - Entities under control or joint control of certain categories of persons or close members of such a person's family (see 3.1.7 below).
 - Entities under significant influence of certain categories of persons or close members of such a person's family (see 3.1.8 below).
- And
- Entities, or any member of a group of which they are a part, that provide key management personnel services to the reporting entity or its parent (see 3.1.9 below).

3.1.1 Persons or close members of a person's family that are related parties

A person or close member of that person's family is related to a reporting entity if that person:
[FRS 102.33.2(a)]

- (i) Has control or joint control over the reporting entity.
 - (ii) Has significant influence over the reporting entity.
- Or
- (iii) Is a member of the key management personnel of the reporting entity or of a parent of the reporting entity.

'Control', 'joint control' and 'significant influence' have the same meanings here as in Section 9 - *Consolidated and Separate Financial Statements*, Section 14 - *Investments in Associates* - and Section 15 - *Investments in Joint Ventures*.

3.1.1.A Close members of a family

Close members of a family of a person are defined as 'those family members who may be expected to influence, or be influenced by, that person in their dealings with the entity' including: [FRS 102 Appendix I]

- (a) That person's children and spouse or domestic partner.
 - (b) Children of that person's spouse or domestic partner.
- And
- (c) Dependants of that person or that person's spouse or domestic partner.

This list of family members is non-exhaustive and does not preclude other family members from being considered as close members of the family of a person. As well as those specific family members described in (a) to (c) above, the definition also applies to any other family members who may be expected to influence or be influenced by that person in their dealings with the reporting entity. For example, this may include parents, siblings or relatives who are even more distant.

The IFRS Interpretations Committee confirmed in May 2015, that the definition of close members of a family of a person under IFRS (which is identical to the definition in FRS 102) appears to provide no scope to argue that there are circumstances in which the specific family members described in (a) to (c) above are not related parties. Dependants are not limited to children and may include other relatives depending on the facts and circumstances.

The Interpretations Committee observed that the definition of close members of the family of a person:

- Is expressed in a principle-based manner and involves the use of judgement to determine whether members of the family of a person (including that person's parents) are related parties or not.
- And
- Includes a list of family members that are always considered close members of the family of a person.

The IFRS IC further noted that the list of family members that are always considered close members is non-exhaustive and does not preclude other family members from being considered as close members of the family of a person. Consequently, other family members, including parents or grandparents, could qualify as close members of the family depending on the assessment of specific facts and circumstances.²⁴⁶

3.1.1.B Key management personnel

Key management personnel are those persons with authority and responsibility for planning, directing and controlling the activities of an entity, directly or indirectly, including any director (whether executive or otherwise) of that entity. [FRS 102.33.6]. A director of a reporting entity is automatically a member of key management personnel, even if they are not paid for their services by the reporting entity - thus, a director of a subsidiary is still a member of key management personnel of the subsidiary, even if their services are paid for by the parent.

A related party includes all key management personnel of a reporting entity and of a parent of the reporting entity. This means that all key management personnel of all parents (i.e., the immediate parent, any intermediate parent and the ultimate parent) of a reporting entity are related parties of the reporting entity. When the reporting entity's financial statements represent a group, key management personnel of subsidiaries might not be key management personnel of the group if those persons do not have the authority or responsibility for planning, directing and controlling the activities of the group.

Some entities may have more than one level of key management. For example, some entities may have a supervisory board, whose members have responsibilities similar to those of non-executive directors, as well as a board of directors that sets the overall operating strategy.

How we see it

In our view, all members of either board constitute key management personnel, as both levels of management have authority and responsibility for planning, directing and controlling the activities of the entity directly or indirectly.

The definition of key management personnel is not restricted to directors. It also includes other individuals with authority and responsibility for planning, directing and controlling the activities of an entity. For example, a chief financial officer or a chief operating officer may not be directors but could meet the definition of key management personnel. Other examples of the type of persons who are not directors but may meet the definition of key management personnel include a divisional chief executive or a director of a major trading subsidiary of the entity, but not of the entity itself, who nevertheless participates in the management of the reporting entity. A reference to individuals who are not directors in a reporting entity's strategic review might indicate that those persons are considered to be key management personnel.

Key management personnel are normally employees of the reporting entity (or of another entity in the same group). However, the definition does not restrict itself to employees. Therefore, seconded staff and persons engaged under management or outsourcing contracts may also have a level of authority or responsibility such that they are key management personnel.

²⁴⁶ IFRIC Update, May 2015, IASB.

A related party of a reporting entity also includes an entity that provides key management personnel services to that reporting entity (see 3.1.9 below). However, it is unclear whether individuals employed by that management entity (e.g., key management personnel of the management entity) can be key management personnel of the reporting entity. IAS 24, which has an identical definition of a related party to FRS 102, does not require a reporting entity to look through a management entity to the compensation paid or payable by the management entity to the management entity's employees or directors on the grounds that it is impracticable to access the detailed information required. [IAS 24.17A, IAS 24.BC51].

How we see it

In our view, as FRS 102 provides no specific guidance on whether a reporting entity can look through a management entity to the management entity's employees or directors, an entity could use the hierarchy in Section 10 *Accounting Policies, Estimates and Errors* (see Chapter 9) in order to apply the guidance in IAS 24 and not disclose any remuneration paid by a management entity to its employees or directors.

3.1.2 Entities that are members of the same group

Extract from Section 33

33.2(b) An entity is related to a reporting entity if:

- (i) The entity and the reporting entity are members of the same group (which means that each parent, subsidiary and fellow subsidiary is related to the others). [FRS 102.33.2(b)(i)]

'Parent' and 'subsidiary' have the same meanings as in Section 9. Therefore, all entities that are controlled by the same ultimate parent are related parties. This would include entities where the reporting entity holds less than a majority of the voting rights but which are still considered to be subsidiaries. There are no exceptions to this rule although transactions between wholly-owned subsidiaries are not required to be disclosed (see 1.1.2 above). Conversely, a group would not include entities where the reporting entity holds a majority of the voting rights but which are not subsidiaries (for example, because the group does not have control), though these could be related parties of the reporting entity as they may fall into other categories of related party, such as associates.

3.1.3 Entities that are associates or joint ventures

Extract from Section 33

33.2(b) An entity is related to a reporting entity if:

- (ii) one entity is an associate or joint venture of the other entity (or an associate or joint venture of a member of a group of which the other entity is a member). [FRS 102.33.2(b)(ii)]

'Associate' and 'joint venture' have the same meanings as in Sections 14 and 15 respectively.

In the definition of a related party, an associate includes subsidiaries of the associate and a joint venture includes subsidiaries of the joint venture. Therefore, for example, an associate's subsidiary and the investor that has significant influence over the associate are related to each other. [FRS 102.33.4A].

The definition also means that an associate of a reporting entity's parent is also a related party of the reporting entity.

However, the definition does not cause investors in a joint venture to be related to each other (see 3.1.10 below).

3.1.4 Entities that are joint ventures of the same third party

Extract from Section 33

33.2(b) An entity is related to a reporting entity if:

- (iii) both entities are joint ventures of the same third party. [FRS 102.33.2(b)(iii)]

As discussed at 3.1.3 above, a joint venture includes subsidiaries of the joint venture. [FRS 102.33.4A]. Therefore, for example, a joint venture's subsidiary and the investor that has joint control over the joint venture are related parties of one another.

3.1.5 Entities that are joint ventures and associates of the same third entity

Extract from Section 33

- 33.2(b)** An entity is related to a reporting entity if:
- (iv) one entity is a joint venture of a third entity and the other entity is an associate of the third entity. *[FRS 102.33.2(b)(iv)]*

This definition treats joint ventures in a similar manner to subsidiaries. Therefore, an associate and a joint venture are related parties where they have an investor in common. This is because joint control exists in one leg of the indirect relationship between the investees.

3.1.6 Post-employment benefit plans

Extract from Section 33

- 33.2(b)** An entity is related to a reporting entity if:
- (v) the entity is a post-employment benefit plan for the benefit of employees of either the reporting entity or an entity related to the reporting entity. If the reporting entity is itself such a plan, the sponsoring employers are also related to the reporting entity. *[FRS 102.33.2(b)(v)]*

The definition is quite wide-ranging and includes post-employment benefit plans of any entity related to the reporting entity. This includes, for example, post-employment benefit plans of an associate or joint venture of the reporting entity or a post-employment benefit plan of an associate of the reporting entity's parent.

The related party relationship would not extend to investment managers of the pension fund, provided that their acting for the fund was the only relationship. Any fees paid by the sponsoring employers (for example, to the investment manager) on behalf of the pension fund would be a related party transaction. 'Sponsoring employers' is not defined in FRS 102, but is generally taken to mean the entity which has a legal duty to ensure that funds are available in the pension fund when the payment of pensions falls due.

Sponsoring employers are also related parties of a post-employment benefit plan.

3.1.7 Entities under control or joint control of certain persons or close members of their family

Extract from Section 33

- 33.2(a)** A person or a close member of that person's family is related to a reporting entity if that person:
- (i) has control or joint control over the reporting entity;
 - (ii) has significant influence over the reporting entity; or
 - (iii) is a member of the key management personnel of the reporting entity or of a parent of the reporting entity *[FRS 102.33.2(a)]*
- 33.2(b)** An entity is related to a reporting entity if any of the following conditions apply:
- (vi) The entity is controlled or jointly controlled by a person identified in (a). *[FRS 102.33.2(b)(vi)]*

This is intended to address situations in which an entity is controlled or jointly controlled by a person or close family member of that person and that person or close family member also controls, jointly controls, has significant influence or is a member of key management personnel of the reporting entity, or of the parent of the reporting entity.

3.1.8 Entities under significant influence of certain persons or close members of their family

Extract from Section 33

- 33.2(a)** A person or a close member of that person's family is related to a reporting entity if that person:
- (i) has control or joint control over the reporting entity; [FRS 102.33.2(a)(i)]
- 33.2(b)** An entity is related to a reporting entity if any of the following conditions apply:
- (vii) a person identified in (a)(i) has significant influence over the entity or is a member of the key management personnel of the entity (or of a parent of the entity). [FRS 102.33.2(b)(vii)]

This is the reciprocal of 3.1.7 above and covers situations where a reporting entity is controlled or jointly controlled by a person, or close family member of that person and that person, or close member of that person's family, has significant influence or is a member of key management personnel of the entity (or of a parent of the entity).

Entities that have a director or other member of key management personnel in common are not *de facto* related parties. Similarly, if a member of key management personnel of one entity has significant influence over another entity, this does not make the two entities related parties in the absence of any control or joint control by those persons (see 3.1.10 below).

3.1.9 Entities, or any member of the group of which they are a part, that provide key management personnel services

Extract from Section 33

- 33.2(b)** An entity is related to a reporting entity if any of the following conditions apply:
- (viii) the entity, or any member of a group of which it is a part, provides key management personnel services to the reporting entity or to the parent of the reporting entity. [FRS 102.33.2(b)(viii)]

This is intended to address situations in which an entity (described as a 'management entity'), or a member of its group, provides key management personnel services to the reporting entity and is most commonly seen in the fund management sector.

How we see it

As discussed at 3.1.1.B above, in our view, an entity could look to apply the guidance in IAS 24 and not disclose any remuneration paid by a management entity to its employees or directors.

The definition of key management personnel is 'those persons having authority and responsibility for planning, directing and controlling the activities of the entity, directly or indirectly, including any director (whether executive or otherwise)'. [FRS 102.33.6]. It therefore follows that to determine whether an entity is providing key management personnel services to another entity, the same attributes would need to be considered.

The effect of the requirement is included in the following Illustration.

Illustration 3-1: Entities that provide key management personnel services to a reporting entity

Entity C provides key management personnel (KMP) services to Entity A. For Entity A's financial statements, Entities B, C and D are all related parties. For the financial statements of Entities B, C and D, there is no related party relationship with Entity A. The related party relationship between the management entity and the reporting entity is not symmetrical. In the absence of any other indicator of a related party relationship, the reporting entity (Entity A) cannot affect the management entity's (Entity C's) activities, financial position or profit or loss.

In addition, an entity is required to disclose separately transactions with entities that provide key management personnel services. [FRS 102.33.10(d)]. The type of transactions that require disclosure are discussed at 4.3 below.

3.1.10 Parties that are not related parties

Having included such a detailed definition of related parties, Section 33 clarifies that the following are not related parties: [FRS 102.33.4]

Extract from Section 33

33.4 In the context of this FRS, the following are not related parties:

- (a) Two entities simply because they have a director or other member of key management personnel in common or because a member of key management personnel of one entity has significant influence over the other entity
- (b) Two venturers simply because they share joint control over a joint venture.
- (c) Any of the following simply by virtue of their normal dealings with an entity (even though they may affect the freedom of action of an entity or participate in its decision-making process):
 - (i) providers of finance;
 - (ii) trade unions;
 - (iii) public utilities; and
 - (iv) government departments and agencies.
- (d) A customer, supplier, franchisor, distributor or general agent with whom an entity transacts a significant volume of business, merely by virtue of the resulting economic dependence.

The reason for these exclusions is that, without them, many entities that are not normally regarded as related parties could fall within the definition of related party. For example, a small clothing manufacturer selling 90% of its output to a single customer could be under the effective economic control of that customer.

These exclusions are effective only where these parties are 'related' to the reporting entity simply because of the relationship noted above. If there are other reasons why a party is a related party, the exclusions do not apply.

3.1.11 Illustrative examples of related party relationships

The following Illustrations, based on examples in IAS 24 which has the same definition of a related party as Section 33, show the related party relationships discussed at 3.1.1 to 3.1.8 above.

Illustration 3-2: Related party relationships between entities

In Parent's consolidated financial statements, Subsidiaries A, B and C, Joint Venture 1, Associates 1 and 2 and Associate 1's subsidiary (referred hereafter as 'Associate 4') are related parties to the group. However, Parent's consolidated financial statements need not disclose transactions entered into with Subsidiaries A, B and C as they would be eliminated on consolidation (see 1.1.1 above).

In Parent's individual financial statements, Subsidiaries A, B and C, Joint Venture 1 and Associates 1, 2 and 4 are related parties. However, Parent need not disclose transactions entered into with Subsidiaries A, B and C as they are 100% owned by Parent (see 1.1.2 above).

For Subsidiary B's consolidated financial statements, Parent, Subsidiary A, Subsidiary C, Joint Venture 1 and Associates 1, 2 and 4 are related parties. However, Subsidiary B need not disclose transactions with Parent or Subsidiaries A and C as both Subsidiary B and Subsidiaries A and C are 100% owned by Parent (see 1.1.2 above).

For Subsidiary A, Subsidiary B and Subsidiary C's individual financial statements, Parent, all fellow subsidiaries, Joint Venture 1 and Associates 1, 2 and 4 are related parties. However, the subsidiaries need not disclose transactions entered into with Parent or the other subsidiaries as all entities party to the any transaction are 100% owned by a member of the group (see 1.1.2 above).

For Joint Venture 1's individual financial statements, Parent, Subsidiaries A, B and C and Associates 1, 2 and 4 are related parties.

For Associate 1's consolidated financial statements, Parent, Subsidiaries A, B and C, Associate 4 and Joint Venture 1 are related parties. However, Associate 1's consolidated financial statements need not disclose transactions entered into with Associate 4 as they would be eliminated on consolidation (see 1.1.1 above). Associate 2 is not a related party.

For Associate 1's individual financial statements, Parent, Subsidiaries A, B and C, Joint Venture 1 and Associate 4 are related parties. Associate 2 is not a related party. Associate 1 must disclose transactions with Associate 4 as Associate 4 is not 100% owned by Associate 1 (see 1.1.2 above).

For Associate 2's individual financial statements, Parent, Subsidiaries A, B and C and Joint Venture 1 are related parties. Associates 1 and Associate 4 are not related to Associate 2.

For Associate 4's individual financial statements, Associate 1, Parent, Subsidiaries A, B and C and Joint Venture 1 are related parties. Associate 2 is not a related party. Subsidiary 4 must disclose transactions with Associate 1 as Subsidiary 4 is not 100% owned by Associate 1 (see 1.1.2 above).

Illustration 3-3: Close members of the family holding investments

Mr X is the spouse of Mrs X. Mr X has an investment in Entity A and Mrs X has an investment in Entity B.

For Entity A's financial statements, if Mr X controls or jointly controls Entity A, Entity B is related to Entity A when Mrs X has control, joint control or significant influence over Entity B.

For Entity B's financial statements, if Mrs X controls or jointly controls Entity B, Entity A is related to Entity B when Mr X has control, joint control or significant influence over Entity A.

If Mr X has significant influence (but not control or joint control) over Entity A and Mrs X has significant influence (but not control or joint control) over Entity B, Entities A and B are not related to each other.

If Mr X is a member of the key management personnel of Entity A but does not have control or joint control over Entity A and Mrs X is a member of the key management personnel of Entity B, but does not have control or joint control over Entity B then Entities A and B are not related to each other.

4 Disclosures of related party transactions, balances and relationships

The following disclosures are required:

- Controlling party relationships (see 4.1 below).
 - Key management personnel compensation (see 4.2 below).
- And
- Related party transactions and balances (see 4.3 below).

There is no requirement to disclose information about related party transactions in one comprehensive note. However, it may be more useful to users of the financial statements to present information this way.

Section 3 - *Financial Statement Presentation* - requires that, except when FRS 102 permits otherwise (which Section 33 does not), comparative information in respect of the previous period must be disclosed for all amounts reported in the current period's financial statements. [FRS 102.3.14].

4.1 Disclosure of controlling party relationships

The standard requires the following disclosures in respect of relationships with controlling parties: [FRS 102.33.5]

Extract from Section 33

33.5 Relationships between a parent and its subsidiaries shall be disclosed irrespective of whether there have been related party transactions. An entity shall disclose the name of its parent and, if different, the ultimate controlling party. If neither the entity's parent nor the ultimate controlling party produces financial statements available for public use, the name of the next most senior parent that does so (if any) shall also be disclosed.

The use of the word 'party' means that the disclosure applies to both individuals and to entities. Disclosure must be made even if the parent or ultimate controlling party does not prepare financial statements.

The ultimate controlling party could be a group of individuals or entities acting together. Section 33 is silent on the issue of individuals or entities acting together to exercise joint control as a result of contractual relationships. Two venturers are not related parties simply because they share joint control over a joint venture. [FRS 102.33.4(b)]. Section 33 is also silent on whether a group of individuals acting in an informal way could be considered to be the ultimate controlling party of an entity. However, it is likely that such an informal arrangement would at least give such individuals acting collectively significant influence over the reporting entity and as such those individuals collectively would be related parties to the reporting entity.

It is stressed that these relationships between a parent and its subsidiary must be disclosed irrespective of whether there have been related party transactions. [FRS 102.33.5].

4.2 Disclosure of key management personnel compensation

An entity is required to disclose key management compensation in total. [FRS 102.33.7].

Compensation includes all employee benefits (as defined in Section 28 - *Employee Benefits*) including those in the form of share-based payments. Employee benefits includes all forms of consideration paid, payable or provided by the entity, or on behalf of the entity (e.g., by its parent or shareholder), in exchange for services rendered to the entity. It also includes such consideration paid on behalf of a parent of the entity in respect of goods and services provided to the entity. [FRS 102.33.6].

A related party includes all key management personnel of a reporting entity and of a parent of the reporting entity. This means that all key management personnel of all parents (i.e., the immediate parent, any intermediate parent and the ultimate parent) of a reporting entity are related parties of the reporting entity. When the reporting entity's financial statements represent a group, key management personnel of subsidiaries might not be key management personnel of the group if those persons do not participate in the management of the group.

Disclosure is required only of key management compensation in total. There is no need to split the amount into its constituent parts. There is also no requirement to disclose individual key management compensation or to name those individuals considered to be key management. In addition, when an entity is subject to a legal or regulatory requirement to disclose directors' remuneration (or equivalent), it is exempt from the requirement to disclose key management personnel compensation if the key management personnel and directors are the same. [FRS 102.33.7A].

One practical difficulty for an entity in a group is that the disclosure of its key management personnel compensation is for the services rendered to the reporting entity. Accordingly, where key management personnel of the reporting entity also provide services to other entities within the group, an apportionment of the compensation is necessary. Likewise, where the reporting entity receives services from key management personnel that are also key management personnel of other entities within the group, the reporting entity may have to impute the compensation received. Such apportionments and allocations require judgement, and an assessment of the time commitment involved.

How we see it

As discussed in 3.1.1.B above, in our view, an entity could look to apply the guidance in IAS 24 and not disclose any remuneration paid by a management entity to its employees or directors.

Company law requires disclosures in respect of directors' remuneration which are in addition to the requirement to disclose key management personnel compensation (see 4.4 below).

4.3 Disclosure of related party transactions and balances

4.3.1 Definition of and examples of related party transactions

A related party transaction 'is a transfer of resources, services or obligations between a reporting entity and a related party, regardless of whether a price is charged'.

Examples of related party transactions include but are not limited to:

- Transactions between an entity and its principal owner(s).
- Transactions between an entity and another entity when both entities are under the common control of a single entity or person.

And

- Transactions in which an entity or person that controls the reporting entity incurs expenses directly that would have been borne by the reporting entity. [FRS 102.33.8].

Section 33 provides the following examples of transactions that must be disclosed if they are with a related party:

- Purchases or sales of goods (finished or unfinished).
- Purchases or sales of property and other assets.
- Rendering or receiving of services.
- Leases.
- Transfers of research and development.
- Transfers under licence agreements.
- Transfers under finance arrangements (including loans and equity contributions in cash or in kind).
- Provisions of guarantees or collateral.
- Commitments to do something if a particular event occurs or does not occur in the future.
- Settlement of liabilities on behalf of the entity or by the entity on behalf of another party.

And

- Participation by a parent or a subsidiary in a defined benefit plan that shares risks between group entities. [FRS 102.33.12].

This list is not intended to be exhaustive. Information about commitments must be disclosed if necessary for an understanding of the potential effect of the related party relationship on the financial statements. [FRS 102.33.9].

Items of a similar nature may be disclosed in aggregate except where separate disclosure is necessary for an understanding of the effects of related party transactions on the financial statements of an entity.

[FRS 102.33.14].

4.3.2 Disclosures required in respect of related party transactions and outstanding balances

If an entity has related party transactions of the type described at 4.3.1 above, it must disclose the nature of the related party relationship as well as information about the transactions, outstanding balances and commitments necessary for an understanding of the potential effect of the relationship on the financial statements. These disclosure requirements are in addition to the requirements to disclose key management personnel compensation (see 4.2 above). However, when, an entity takes advantage of the exemption from disclosing key management personnel compensation (see 4.2 above) it is not required to provide additional disclosure about directors' share-based payment arrangements.

At a minimum, disclosures must include:

- The amount of the transactions.
 - The amount of the outstanding balances and commitments, and:
 - Their terms and conditions, including whether they are secured, and the nature of the consideration to be provided in settlement.

And

 - Details of any guarantees given or received.
 - Provisions for uncollectible receivables related to the amount of outstanding balances.
- And
- The expense recognised during the period in respect of bad or doubtful debts due from related parties. *[FRS 102.33.9].*

The disclosures required above must be made in aggregate for each of the following separate categories:

- Entities with control, joint control or significant influence over the entity.
 - Entities over which the entity has control, joint control or significant influence.
- Key management personnel of the entity or its parent (in the aggregate).
- And
- Other related parties. *[FRS 102.33.10].*

Section 33 stresses that an entity must not state that related party transactions were made on terms equivalent to those that prevail in arm's length transactions unless such terms can be substantiated. *[FRS 102.33.13].* However, there is no requirement to state that transactions have not been made on an arm's length basis. There is no exemption from disclosure on the grounds of confidentiality. However, since there is no requirement to disclose the name of a related party (apart from the name of the parent, or if different, the ultimate controlling entity), this lack of exemption is likely to be less of a concern.

In determining whether an entity discloses related party transactions in financial statements, the general concept of materiality is applied. Section 33 does not refer specifically to materiality since this qualitative characteristic is described in Section 2 - *Concepts and Pervasive Principles*. Omissions or misstatements of items are material if they 'individually or collectively, could influence the economic decisions of users taken on the basis of the financial statements. Materiality depends on the size and nature of the omission or misstatement judged in the surrounding circumstances. The size or nature of the item, or a combination of both, could be the determining factor'. *[FRS 102.2.6].*

This may have the effect that any related party transaction whose disclosure is considered sensitive (for tax reasons perhaps) is by definition material because it is expected by the reporting entity to influence a user of the financial statements.

How we see it

It may not be possible to avoid disclosing sensitive related party transactions on the grounds that they are quantitatively immaterial. In addition, a transaction conducted at advantageous terms to either the related party or the reporting entity is more likely to be material than one conducted at arm's length. Since Section 33 requires disclosure of related party transactions irrespective of whether consideration is received, disclosure cannot be avoided on the argument that, since there is no consideration, the transaction must be immaterial.

Section 33 is also unclear whether disclosure of outstanding balances at the reporting date is required in situations where an entity ceases to be a related party during the reporting period. In such situations, one view is that outstanding balances are not disclosable since the entity is not a related party as at the reporting date. A second view is that if the outstanding balances as at the reporting date comprise of amounts related to the transactions when the entities were related, such outstanding balances must be included in related party disclosures.

How we see it

In our view, either view is acceptable. However, if an entity becomes a related party during the year, outstanding balances as at the reporting date, that include amounts related to transactions entered into when the entities were unrelated, are disclosable.

In the case that entities become related after the reporting date, but before the financial statements were authorised for issue, it may be necessary to disclose the relationship, if it is considered by management to be a material non-adjusting event, in accordance with Section 32 *Events after the Reporting Period*. See Chapter 34 for further details.

4.3.3 Disclosure exemption for government-related entities

An entity is exempt from the disclosure requirements discussed at 4.3.1 above in relation to:

- A government that has control, joint control or significant influence over the reporting entity.
And
- Another entity that is a related party because the same government has control, joint control or significant influence over both the reporting entity and the other entity.

This is a generous exemption as there is no requirement to give even an indication of the type of transactions with the government or other government-related entity that is a related party.

However, the entity must still disclose a controlling party relationship as discussed at 4.1 above.

[FRS 102.33.11].

4.4 Additional UK company law disclosures

UK company law requires disclosures of transactions with directors including disclosure of directors' remuneration and disclosure of directors' advances, credits and guarantees.

These disclosures are in addition to the disclosure of key management personnel compensation discussed at 4.2 above.

4.4.1 Disclosure of directors' remuneration - all companies

Disclosure of directors' remuneration is required for all entities and disclosures are required for both individual and group financial statements. The requirements are contained in Schedule 5 of *The Large and Medium-sized Companies and Groups (Accounts and Report) Regulations 2008* (SI 2008/410) (The Regulations). It is beyond the scope of this publication to address the requirements at length which differ slightly between AIM listed and unquoted entities that are not AIM listed. The following summarises the major points: [5 Sch 1-15]

- Disclosure is required of:
 - The aggregate amount of remuneration paid to or receivable by directors (i.e., all directors including non-executive directors) in respect of qualifying services.
 - Gains made by directors on share options in aggregate (as well as the number of directors who exercised share options).
 - The aggregate of the amount of money paid to or receivable by directors and the net value of assets (other than money or share options) received or receivable by directors under long term incentive plans in respect of qualifying services (as well as the number of directors in respect of whose qualifying services shares were received or receivable under long term incentive schemes).
 - The aggregate value of any company contributions paid, or treated as paid, to a pension scheme in respect of directors' qualifying services and contributions by reference to which the rate or amount of any money purchase benefits that may become payable will be calculated.
- And

- The number of directors to whom retirement benefits are accruing in respect of qualifying services under both money purchase and defined benefit schemes.
- When aggregate remuneration of all directors, share option gains and amounts receivable on long-term incentive plans exceeds £200,000 disclosures are required of the total of those aggregates for the highest paid director of:
 - The amount of remuneration, share option gains and amounts receivable on long-term incentive plans.
 - The amount of any company contributions paid into a money purchase pension scheme.
 - The accrued pension and the amount of the accrued lump sum in respect of any defined benefit pension plan.
- And
- Whether the director has exercised any share options and whether any shares were received or receivable by that director in respect of qualifying services under a long-term incentive scheme.
- Disclosure is required in aggregate of any excess retirement benefits paid or receivable by directors or past directors (compared to their entitlement when the benefits first became payable or as at 31 March 1997, whichever is the later).
- Disclosure is required of the aggregate amount of compensation paid to directors or past directors for loss of office (which includes loss of office as director, loss of any other office in connection with management of the company's affairs and any office as director or otherwise in connection with the management of the affairs of any subsidiary undertaking of the company).
- Disclosure is required of the aggregate amount of any consideration paid to or receivable by third parties (i.e., a person other than the director or a person connected with him or a body corporate controlled by him or the company or any of its subsidiary undertakings) for making available the services of any person as a director of the company or, while a director of the company, as director of any of its subsidiary undertakings or otherwise in connection with the management of the affairs of the company or any of its subsidiary undertakings.

'Qualifying services' are defined as a person's services as director of a company and his services at any time while he is a director of the company as a director of any of its subsidiary undertakings or otherwise in connection with the management of the affairs of the company or any of its subsidiary undertakings.

'Remuneration' means salary, fees, bonuses, sums paid by way of expense allowance (chargeable to UK income tax) and the estimated money value of other benefits received otherwise than in cash. It does not include the value of share options, gains made on exercise of share options, company contributions paid into a pension scheme or amounts paid/receivable under a long term incentive plan.

All amounts disclosed must include sums paid by or receivable from the company, its subsidiary undertakings or any other person. In other words, disclosures are required, regardless of who actually pays the director.

Payments made to persons connected with the director or persons connected with a body corporate 'controlled' by a director (as defined in sections 252-255 of CA 2006) are required to be included in the aggregate remuneration disclosed.

In group financial statements, the directors' remuneration disclosure requirements only extend to directors of the holding company.

In group situations, it is common practice for a holding company, whose directors also act as directors of subsidiary companies, to remunerate the directors in respect of their services to the subsidiary companies. In this situation, remuneration disclosures are still required in the subsidiary company's financial statements and there must be an apportionment of the remuneration received for qualifying services to each subsidiary. It may also be possible that, given the level of services required by each subsidiary company, the remuneration for qualifying services is £nil.

However, in the rare cases that the directors believe that it is not practicable to make such an apportionment, we believe that full disclosure of the total amount received as remuneration would be required, accompanied by a statement that it is not practicable to allocate this amount between services as directors of the company and services as directors of holding and fellow subsidiary companies. The note to the financial statements must explain that the charge disclosed as remuneration has been borne by the holding company or other group company.

It may be the case that a blanket management charge has been charged by a holding company to its subsidiaries in respect of a variety of expenditure incurred on its subsidiaries' behalf, including the remuneration of the subsidiaries' directors. The reporting company must seek to analyse the expenditure between types and thereby arrive at a figure for directors' remuneration.

4.4.2 Directors' remuneration report - quoted companies only

Quoted companies are required to prepare a directors' remuneration report. A quoted company is a company whose equity share capital is included in the official list of the UK Listing Authority, officially listed in an EEA state or admitted to dealing on either the New York Stock Exchange or NASDAQ. [s385(2)]. AIM and OFEX companies are not quoted.

The contents of a directors' remuneration report are specified by Schedule 8 of The Regulations.

4.4.3 Disclosure of directors' advances, credits and guarantees - all companies

Disclosure of directors' advances, credits and guarantees is required by section 413 of the CA 2006 for all entities. [s413]. These disclosures are required for each credit, advance or guarantee.

Disclosure is required in respect of all transactions during the reporting period as well as balances outstanding at the reporting date. Disclosure is required of transactions with any person who was a director of the company at any time during the period, irrespective of whether that person was a director at such time that the transaction or arrangement was made. See Chapter 6 at 7.9 for further detail.

4.5 Stock exchange requirements

In addition to the requirements of the Companies Act, there are explicit statutory, London Stock Exchange (LSE) and Disclosure and Transparency Rules (DTR) requirements and reliefs regarding disclosure of certain related party transactions and relationships. These disclosure requirements are not addressed in detail in this chapter and reference must be made to the original regulatory requirements. These disclosure requirements go beyond those required by FRS 102.

Both the LSE and AIM have definitions of a related party which differ from the definition in FRS 102. For related party transactions meeting certain thresholds, the Listing Rules require the company to make notification of the related party transaction, and to send a circular containing specified details to shareholders, and to obtain shareholder approval. There are modified rules for smaller related party transactions. AIM Rules 13 and 16 also require notification of related party transactions meeting certain thresholds. Disclosure of certain related party transactions can be required in the financial statements.

4.6 Disclosure of commitments

Section 33 provides no definition of commitments, though definitions relating to commitments are present in other sections of the standard. The appendix to FRS 102 defines a firm's commitment as a binding agreement for the exchange of a specified quantity of resources at a specified price on a specified future date or dates. A performance related condition in respect of funding commitments is also defined in the appendix to FRS 102 as a condition under which entitlement to resources is conditional on the performance of:

- (a) A specified activity.

Or

- (b) A particular level of service or units of output to be delivered. [FRS 102 Appendix I].

Commitments must however be considered more widely than these definitions. The words "commitments to do something if a particular event occurs or does not occur in the future" can potentially have a wide application and does not limit itself to contractual commitments required to be disclosed by other sections of the standard.

Section 33 requires a disclosure of commitments to do something if a particular event occurs or does not occur in the future when it is with a related party. [FRS 102.33.12(hA)].

With respect to the details of commitment to be disclosed, FRS 102 requires an entity that has made a commitment to disclose the following: [FRS 102.33.9(b)]

The amount of outstanding balances and commitments, and:

- (i) Their terms and conditions, including whether they are secured, and the nature of the consideration to be provided in settlement;

And

(ii) Details of any guarantees given or received.

The above disclosures may be made in aggregate, provided that such aggregation does not obscure significant information. However, separate disclosure must be made for recognised and unrecognised commitments.

Provisions of guarantees including a financial guarantee contract which are a form of commitment also require separate disclosures.

5 Summary of GAAP differences

The following table shows the differences between FRS 102 and IFRS.

FRS 102		IFRS
Transactions between wholly owned subsidiaries	Disclosure exemption available.	No disclosure exemption available.
Disclosure of key management personnel compensation	Disclose in total only. However, no disclosure is required if there is a legal or regulatory requirement to disclose directors' remuneration and the key management personnel and the directors are the same.	Disclose in total and by five categories.
Government-related parties	Disclosure exemption available.	Disclosure exemption conditional on certain additional disclosures being made.
Aggregation of disclosures by category	Disclosure by five categories. ▪ Entities with control, joint control or significant influence over the entity. ▪ Entities over which the entity has control, joint control or significant influence. ▪ Key management personnel of the entity or its parent (in the aggregate). ▪ Entities that provide key management personnel services to the entity; and ▪ Other related parties. Under FRS 102 entities can aggregate transactions: With a controlling party together with those with joint control or significant influence. With entities for which the entity has control, joint control or significant influence (i.e., subsidiaries and associates).	Disclosure by seven categories. ▪ The parent. ▪ Entities with joint control of, or significant influence over, the entity. ▪ Subsidiaries. ▪ Associates. ▪ Joint ventures in which the entity is a joint venturer. ▪ Key management personnel of the entity or its parent; and ▪ Other related parties.
Disclosure of commitments	Disclose required if necessary for understanding of relationship.	Explicit statement that the commitment is a type of related party transaction.

Appendix A - Defined terms

Extract from FRS 102

Appendix I

Glossary

related party	A related party is a person or entity that is related to the entity that is preparing its financial statements (the reporting entity). (a) A person or a close member of that person's family is related to a reporting entity if that person: (i) has control or joint control over the reporting entity; (ii) has significant influence over the reporting entity; or (iii) is a member of the key management personnel of the reporting entity or of a parent of the reporting entity. (b) An entity is related to a reporting entity if any of the following conditions apply: (i) the entity and the reporting entity are members of the same group (which means that each parent, subsidiary and fellow subsidiary is related to the others). (ii) one entity is an associate or joint venture of the other entity (or of a member of a group of which the other entity is a member). (iii) both entities are joint ventures of the same third entity. (iv) one entity is a joint venture of a third entity and the other entity is an associate of the third entity. (v) the entity is a post-employment benefit plan for the benefit of employees of either the reporting entity or an entity related to the reporting entity. If the reporting entity is itself such a plan, the sponsoring employers are also related to the reporting entity. (vi) the entity is controlled or jointly controlled by a person identified in (a). (vii) a person identified in (a)(i) has significant influence over the entity or is a member of the key management personnel of the entity (or of a parent of the entity). (viii) the entity, or any member of a group of which it is a part, provides key management personnel services to the reporting entity or to the parent of the reporting entity.
related party transaction	A transfer of resources, services or obligations between a reporting entity and a related party, regardless of whether a price is charged.
key management personnel	Those persons having authority and responsibility for planning, directing and controlling the activities of the entity, directly or indirectly, including any director (whether executive or otherwise) of that entity.
government	Government, government agencies and similar bodies whether local, national or international.

1 Introduction

This chapter covers (unless stated otherwise below) the financial reporting requirements for entities applying FRS 102 involved in the following types of specialised activities:

- Agriculture (see 2 below)
- Extractive Activities (see 3 below)
- Service Concession Arrangements (see 4 below)
- Heritage Assets (see 5 below)
- Public Benefit Entities, including incoming resources from non-exchange transactions, public benefit entity business combinations and public benefit concessionary loans (see 6 below)
- Financial Institutions (see Chapter 15 at 4.1.4)
- Funding Commitments (see Chapter 19 at 3.10)

These are all dealt with in Section 34 *Specialised Activities*.

Accounting by retirement benefit plans is outside the scope of this publication.

2 Agriculture

2.1 Overview

Section 34 sets out the recognition, measurement and disclosure requirements for agricultural activities. While these requirements are based on the *IFRS for SMEs* Accounting Standard, the FRC included in FRS 102 an accounting policy choice to apply either a fair value model or a cost model.

What you need to know

- Agricultural activity is defined as the management by an entity of the biological transformation of biological assets for sale, into agricultural produce or into additional biological assets.
- Each entity engaged in agricultural activity is required to determine an accounting policy to use either the fair value model or the cost model for each class of biological asset and its related agricultural produce.

2.2 Introduction

The requirements in Section 34 for agricultural activities were originally proposed to be based on the fair value model in line with IAS 41 *Agriculture*. However, concerns were raised that fair value information was inconsistent with the way most agricultural businesses are managed and would not benefit the users of financial statements. Therefore, an accounting policy choice between a cost model and a fair value model was introduced for biological assets. The use of the cost model for agricultural produce is limited to those entities that had chosen the cost model for biological assets. Such entities also have the choice of using the fair value model for their agricultural produce. [FRS 102.BC.B34A.1, FRS 102.BC.B34A.2, FRS 102.BC.B34A.4]. The accounting policy choice between the cost model and the fair value model is one of the key differences with IAS 41 and is discussed further at 2.3 below.

2.3 Key differences to IFRS

There are three principal differences between Section 34 and IAS 41:

- The first relates to the measurement basis for biological assets and related agricultural produce (see 2.3.1 below).
- The second relates to the concept of bearer plants (see 2.3.2 below).
- The third relates to the scope of government grants related to biological assets (see 2.3.3 below).

2.3.1 Measurement basis

Section 34 permits an accounting policy choice between the fair value model and the cost model. See 2.6 below.

IAS 41 requires the measurement of biological assets at fair value less costs to sell, unless at initial recognition the entity cannot reliably measure the fair value, in which case the entity would measure the biological asset or agricultural produce at historic cost less any accumulated depreciation and any accumulated impairment losses until fair value becomes reliably measurable. [IAS 41.12, IAS 41.30].

2.3.2 Bearer plants

Section 34 does not make a distinction between biological assets and bearer plants. Therefore, bearer plants are treated as biological assets and accounted for in accordance with Section 34.

IAS 41 distinguishes between biological assets and bearer plants. IAS 41 defines a bearer plant as a living plant which is used in the production or supply of agricultural produce, is expected to bear produce for more than one period and has a remote chance of being sold as agricultural produce, except for incidental scrap sales. [IAS 41.5]. Bearer plants are scoped out of IAS 41 and instead fall in the scope of IAS 16 *Property, Plant and Equipment* however, the produce growing on a bearer plant remains within the scope of IAS 41. [IAS 41.2]

2.3.3 Government grants related to biological assets

Government grants related to biological assets are not within the scope of Section 34. Government grants are recognised and measured in accordance with Section 24 *Government Grants*.

Government grants involving biological assets that are within the scope of IAS 41 (i.e., excluding bearer plants, which are specifically scoped out of IAS 41) are only accounted for under IAS 20 *Accounting for Government Grants and Disclosure of Government Assistance* if the biological asset is measured at its cost less any accumulated depreciation and any accumulated impairments losses. IAS 41 applies to government grants relating to all other biological assets (including produce growing on a bearer plant) accounted for at fair value less costs to sell.

2.4 Scope

Agricultural activity is the management by an entity of the biological transformation of biological assets for sale, into agricultural produce or into additional biological assets. It covers a wide range of activities. FRS 102 provides no examples of agricultural activity. However, IAS 41 provides examples of raising livestock, forestry, annual or perennial cropping, cultivating orchards and plantations, floriculture, and aquaculture (including fish farming). [IAS 41.6].

The table below, which appears in IAS 41, provides examples of biological assets, agricultural produce and products that are the result of processing after harvest. [IAS 41.4]

Biological assets	Agricultural produce	Products that are the result of processing after harvest
Sheep	Wool	Yarn, carpet
Trees in a plantation	Felled trees	Logs, lumber
Plants	Cotton Harvested cane	Thread, clothing Sugar
Dairy cattle	Milk	Cheese
Pigs	Carcass	Sausages, cured hams
Bushes	Leaf	Tea, cured tobacco
Vines	Grapes	Wine
Fruit trees	Picked fruit	Processed fruit

An entity that is engaged in agricultural activity must determine an accounting policy for each class of biological asset and its related agricultural produce. [FRS 102.34.2]. In addition, leases of biological assets within the scope of Section 34 held by a lessee must be measured in accordance with Section 34.

[FRS 102.20.1(b)].

Biological assets may be outside the scope of Section 34 when they are not used in agricultural activity. For example, animals in a zoo (or game park) that does not have an active breeding programme and rarely sells any animals or animal products would be outside the scope of the standard. Another example is activities in the pharmaceutical industry that involve the culture of bacteria. Such activity would not fall within the scope of Section 34. While the bacteria may be considered a biological asset, the development of a culture by a pharmaceutical company would not constitute agricultural activity.

Prior to harvest, agricultural produce is not distinguished from the biological asset to which it is related. [FRS 102.34.3C]. Once harvested, agricultural produce is no longer within the scope of Section 34. At that point, it is measured at its fair value less costs to sell and this measurement becomes the cost at that date when applying Section 13 *Inventories* or another applicable section of FRS 102. [FRS 102.34.5].

2.4.1 Trees held to generate carbon offsets for use or sale

Climate change and carbon emissions are a global concern. In an effort to offset some of their emissions, entities might buy or plant trees that will absorb carbon dioxide (i.e., act as carbon sinks) and thereby generate carbon offsets. Similarly, forestry companies might change their business models to defer, or cease, planned harvests of trees to generate carbon offsets.

Entities that directly own such trees will need to determine whether the trees are:

- Biological assets related to agricultural activity to which Section 34 applies.

Or

- Assets not related to agricultural activity, in which case, it is likely an entity would apply the requirements in Section 17 *Property Plant and Equipment*.

Trees are living plants and therefore, meet the definition of a biological asset. However, to be within the scope of Section 34, they must relate to agricultural activity.

Considering the definition of agricultural activity, by their very nature, trees will be subject to biological transformation (growth, degeneration, production and procreation processes), which will result in qualitative and quantitative changes. For there to be agricultural activity, as defined by Section 34, there needs to be the management of change and the harvest of agricultural produce.

- Management of change
For trees, management normally includes silviculture activities, such as planting, pruning, thinning, and fertilising. Harvesting unmanaged sources (deforestation) will not meet the definition of agricultural activity.
- Harvest of agricultural produce
Section 34 limits the definition of agricultural produce to that which can be harvested. This includes harvesting produce growing on, or in the trees (e.g., fruit, latex) and felling the trees.

How we see it

While carbon dioxide is absorbed and oxygen is produced by the trees, the oxygen cannot be captured at the point of production and detached in the manner contemplated by the definition of agricultural produce in Section 34. Similarly, in our view, carbon offsets are not agricultural produce of trees.

No guidance is provided on the extent of harvest needed to qualify as an agricultural activity. If the entity actively manages the trees, thinning the trees will involve harvesting some trees to give space for others to grow. Trees can also be felled to create, or maintain, an access road. Even if the entity does not plan to harvest, a wind or water event might naturally fell the trees. It is not clear the extent to which such felling might constitute harvesting of agricultural produce (and, therefore agricultural activity) if the entity were to sell (e.g., at stump) or use the logs.

The considerations discussed above will, in turn determine the nature of the asset.

Nature of the asset	Agricultural activity	Example
Biological asset related to agricultural activity	Yes	Trees in a plantation forest with deferred harvest to allow generation of carbon offsets.
Asset not related to agricultural activity	No	Trees held to generate carbon offsets that are unmanaged and/or not harvested.

How we see it

If the trees are held solely to generate carbon offsets, whether sold or used, determining the nature of the asset may require judgement.

After initial recognition, it is not clear whether reassessment might be required if circumstances change. For example, assume an entity had no intention of felling the trees, but that subsequently changed for some of the trees due to windthrow. If these circumstances were to arise, an entity would need to apply the hierarchy in Section 10 *Accounting Policies, Estimates and Errors* to develop an appropriate policy.

2.5 Recognition

An entity must recognise a biological asset or an item of agricultural produce only when:

- The entity controls the asset as a result of past events.
 - It is probable that future economic benefits associated with the asset will flow to the entity.
- And
- The fair value or cost of the asset can be measured reliably. [FRS 102.34.3].

As discussed at 2.4 above, Section 34 only applies to agricultural produce (i.e., harvested product) at the point of harvest and not prior or subsequent to harvest. Unharvested agricultural produce is considered to be part of the biological asset from which it will be harvested. Therefore, before harvest, agricultural produce must not be recognised separately from the biological asset from which it comes. For example, grapes on the vine are accounted for as part of the vines themselves right up to the point of harvest.

2.6 Measurement

For each class of biological asset and its related agricultural produce, Section 34 provides an entity an accounting policy choice to use either: *[FRS 102.34.3A]*

- The fair value model set out at 2.7 below.

Or

- The cost model set out at 2.8 below.

However, once an entity has elected to use the fair value model for a class of biological asset and its related agricultural produce, it is not subsequently permitted to change its accounting policy to the cost model.

[FRS 102.34.3B].

The Regulations and the LLP Regulations state that if the fair value model is adopted by an entity, it must be adopted for all living animals and plants where their fair value can be reliably determined. *[1 Sch 39(2), 2 Sch 47(2), 3 Sch 33(2), 1 Sch 39(2)(LLP)]*. However, the Note on legal requirements to FRS 102 states that the ability of an entity to subdivide biological classes such that some classes may be at measured cost and others at fair value is consistent with the most reasonable and common-sense interpretation of the Regulations. *[FRS 102.A3.37D].*

2.7 Fair value model

2.7.1 Measurement

If an entity applies the fair value model, it must measure a biological asset on initial recognition and at each reporting date at its fair value less costs to sell. Changes in fair value less costs to sell must be recognised in profit or loss. *[FRS 102.34.4]*. Agricultural produce harvested from an entity's biological assets is measured at the point of harvest at its fair value less costs to sell. This then becomes the cost at that date when applying Section 13 or another applicable section of FRS 102. *[FRS 102.34.5]*.

Fair value is defined as "the price at which an orderly transaction to sell an asset or to transfer a liability would take place between market participants at the measurement date". *[FRS 102.2A.2]*.

Costs to sell are not defined in FRS 102. However, IAS 41 defines costs to sell as "the incremental costs directly attributable to the disposal of an asset, excluding finance costs and income taxes". *[IAS 41.5]*.

Therefore, of all the costs that are necessary for a sale to occur, costs to sell only include those costs that would not otherwise arise. However, costs already included within the fair value measurement, such as transportation costs, are excluded from costs to sell. Examples of costs to sell include brokers' and dealers' commissions, levies by regulatory agencies and commodity exchanges, transfer taxes and duties.

[IAS 41.BC3, IAS 41.B22]

Section 2A *Fair value measurement* provides guidance on fair value measurement which is applicable to the measurement of a biological asset when the fair value model is applied (see Chapter 10). The application of fair value techniques may involve sector benchmarks such as the value of an orchard expressed per export tray, bushel, or hectare, or the value of cattle expressed per kilogram of meat. *[FRS 102.34.6]*.

2.7.2 Fair value of a biological asset that is not reliably measurable

If an entity cannot measure the fair value of a biological asset reliably then it must apply the cost model (see 2.8 below) to that biological asset until such time that the fair value can be reliably measured.

[FRS 102.34.6A].

Valuation techniques or the use of multiple techniques can result in a range of reasonable valuations which require judgement to be applied when determining the most appropriate fair value within the range.

[FRS 102.2A.20]. If the range of reasonable fair value measures is significant and the probabilities of the various measures within the range cannot be reasonably assessed, the entity is precluded from measuring the asset at fair value. *[FRS 102.2A.22]*. For agricultural produce, the FRC's view is that agricultural produce must be capable of measurement at fair value without undue cost or effort and must provide more relevant information for users. *[FRS 102.BC.B34A.4]*.

2.8 Cost model

2.8.1 Measurement

2.8.1.A Biological assets

An entity that applies the cost model must measure biological assets at cost less any accumulated depreciation and any accumulated impairment losses. [FRS 102.34.8].

Impairment losses on biological assets measured under the cost model are within the scope of Section 27 *Impairment of Assets* (see Chapter 24 at 3.1).

2.8.1.B Agricultural produce

Section 34 requires that in applying the cost model, agricultural produce harvested from an entity's biological assets are measured at the point of harvest at either: [FRS 102.34.9]

- The lower of cost and estimated selling price less costs to complete and sell.
- Or
- Its fair value less costs to sell. Any gain or loss arising on initial recognition of agricultural produce at fair value less costs to sell is included in profit or loss for the period in which it arises.

That amount is then the cost at that date when applying Section 13 or another applicable section of FRS 102.

Therefore, if an entity elects to measure its biological assets under the cost model, it will still be allowed to measure agricultural produce under the fair value model. However, the converse would not be true, if an entity measures its biological assets under the fair value model, then it must measure the resulting agricultural produce under the fair value model as well.

2.8.1.C Elements of cost

The cost of a biological asset comprises all of the following: [FRS 102.34.9A]

- Purchase price, including legal and brokerage fees, import duties and non-refundable purchase taxes, after deducting trade discounts and rebates.
- Any costs directly attributable to bringing the asset to the location and condition necessary for it to be capable of operating in the manner intended by management.
- The initial estimate of the costs, recognised and measured in accordance with Section 21 *Provisions and Contingencies*, of removing the item and restoring the site on which it is located, the obligation for which an entity incurs either when the item is acquired or as a consequence of having used the item during a particular period.
- And
- Any borrowing costs capitalised in accordance with Section 25 *Borrowing Costs*.

2.9 Disclosures required by Section 34

2.9.1 Disclosures for each class of biological asset that is measured using the fair value model

An entity must disclose the following information for each class of biological asset that is measured using the fair value model: [FRS 102.34.7]

- A description of each class of biological asset.
- The methods and significant assumptions applied in determining the fair value of each class of biological asset.
- And
- A reconciliation of changes in the carrying amount of each class of biological asset between the beginning and the end of the current period which includes:
 - The gain or loss arising from changes in fair value less costs to sell
 - Increases resulting from purchases
 - Decreases attributable to sales

- Decreases resulting from harvest
- Increases resulting from business combinations
- And
- Other changes

This reconciliation need not be presented for prior periods.

A class of assets is a grouping of assets of a similar nature and use in an entity's operations. *[FRS 102 Appendix I]*. In grouping biological assets into classes in order to make the disclosures above, an entity may consider distinguishing between different types of assets, such as consumable biological assets, bearer biological assets or mature and immature assets. In particular, it must be noted that for the purposes of the reconciliation noted above, it would be unhelpful to combine information about annual crops (which are akin to inventory) with that on bearer plant or long-lived biological assets (which are more like property, plant and equipment).

If an entity measures any individual biological assets at cost because fair value cannot be measured reliably (see 2.7.2 above), it must explain why fair value cannot be reliably measured. If the fair value of such a biological asset becomes reliably measurable during the current period, an entity must explain why fair value has become reliably measurable and the effect of the change. *[FRS 102.34.7A]*.

Finally, an entity must disclose the methods and significant assumptions applied in determining the fair value at the point of harvest of each class of agricultural produce. *[FRS 102.34.7B]*.

2.9.2 Disclosures for each class of biological asset that is measured using the cost model

For each class of biological asset measured under the cost model, an entity discloses the following: *[FRS 102.34.10]*

- A description of each class of biological asset
- The depreciation method used
- The useful lives or the depreciation rates used
- And
- A reconciliation of changes in the carrying amount of each class of biological asset between the beginning and the end of the current period which includes:
 - Increases resulting from purchases
 - Decreases attributable to sales
 - Decreases resulting from harvest
 - Increases resulting from business combinations
 - Impairment losses recognised or reversed in profit or loss in accordance with Section 27
 - And
 - Other changes

This reconciliation need not be presented for prior periods.

In addition, an entity must disclose, for any agricultural produce measured at fair value less costs to sell, the methods and significant assumptions applied in determining the fair value at the point of harvest of its agricultural produce. *[FRS 102.34.10A]*.

The comments at 2.9.1 above regarding classes of assets also apply.

2.10 Summary of GAAP differences

The following table shows the differences between FRS 102 and IFRS.

FRS 102		IFRS
Measurement	Accounting policy choice of either the fair value model or the cost model. If the measurement of a class of biological assets and its related agricultural produce is changed from the cost model to the fair value model, this change in accounting policy is to be dealt with as a change in fair value less costs to sell, rather than retrospectively as a change in accounting policy in accordance with Section 10.	Entities must measure biological assets and agricultural produce at fair value less costs to sell unless the fair value cannot be reliably measured at initial recognition. In the latter case, the entity would measure at cost less accumulated depreciation and accumulated impairment losses. There is a presumption in IAS 41 that the fair value of all biological assets can be measured reliably. This presumption can only be rebutted on initial recognition for a biological asset (not agricultural produce). Once fair value becomes reliably measurable, the fair value model is applied from that date.
Bearer plants	Definition does not exist in Section 34.	Defined as a living plant used in the production or supply of agricultural produce, expected to bear produce for more than one period and has a remote likelihood of being sold as agricultural produce, except for incidental scrap sales. Such plants are accounted for under IAS 16.
Government grants	Accounting for government grants related to biological assets is not in the scope of Section 34.	Accounting for government grants related to biological assets measured at fair value less costs to sell is set out in IAS 41. Grants related to biological assets measured at cost are in the scope of IAS 20.

2.11 Defined terms

Extract from FRS 102 Appendix 1 Glossary

Definitions

agricultural activity	The management by an entity of the biological transformation of biological assets for sale, into agricultural produce or into additional biological assets.
agricultural produce	The harvested product of the entity's biological assets.
biological asset	A living animal or plant that may or may not be intended for use on a continuing basis in the entity's activities.

3 Extractive activities

3.1 Overview

FRS 102 does not contain its own guidance in respect of the accounting for extractive activities.

What you need to know

- Entities engaged in the exploration for and/or evaluation of mineral resources (extractive activities), such as oil and gas upstream entities and mining entities, must apply the requirements of IFRS 6 *Exploration for and Evaluation of Mineral Resources* (as adopted in the UK).
- Activities outside the E&E phase are outside the scope of IFRS 6, and therefore an entity must apply the requirements of the relevant sections in FRS 102.

3.2 Introduction

An entity applying FRS 102 which is engaged in the exploration for and/or evaluation of mineral resources (extractive activities) must apply the requirements of IFRS 6 (as adopted in the UK). [FRS 102.34.11].

Exploration for and evaluation of mineral resources is defined in IFRS 6 as “the search for mineral resources, including minerals, oil, natural gas and similar non-regenerative resources after the entity has obtained legal rights to explore in a specific area, as well as the determination of the technical feasibility and commercial viability of extracting the mineral resource.” [IFRS 6 Appendix A].

IFRS 6 covers the accounting for exploration and evaluation (E&E) expenditures, which are defined as “expenditures incurred by an entity in connection with the exploration for and evaluation of mineral resources before the technical feasibility and commercial viability of extracting a mineral resource are demonstrable”. E&E assets are defined as “exploration and evaluation expenditures recognised as assets in accordance with the entity’s accounting policy”. [IFRS 6 Appendix A]. IFRS 6 is limited to accounting for E&E expenditures and does not address the other aspects of accounting for entities engaged in these activities. This section will therefore not apply to expenditures incurred before the exploration for, and evaluation of, mineral resources (e.g., expenditures incurred before the entity has obtained legal rights to explore in a specific area) or after the technical feasibility and commercial viability of extracting a mineral resource are demonstrable. [IFRS 6.5]. Equipment used in the E&E phase, e.g., property, plant and equipment and any other intangible assets such as software, are not in the scope of IFRS 6, instead they are in the scope of Sections 17 and 18, respectively.

The scope and objectives of IFRS 6 are covered in further detail in EY’s publication, International GAAP®.

Activities outside the E&E phase which are not covered by IFRS 6, may be covered by the following sections of FRS 102:

- Section 13 *Inventories*
 - Section 16 *Investment Property*
 - Section 17 *Property, Plant and Equipment*
 - Section 18 *Intangible Assets other than Goodwill*
- Or
- Section 20 *Leases*

In many of these sections ‘minerals and mineral reserves’ are excluded from their scope, although the exact wording of the scope exclusions differs between standards.

3.3 Requirements of Section 34 for extractive activities

As noted at 3.2 above, FRS 102 requires an entity engaged in extractive activities to apply the requirements of IFRS 6 to account for E&E expenditures. [FRS 102.34.11].

IFRS 6 is not discussed in detail in this publication. Instead, readers are referred to EY’s publication, International GAAP®.

IFRS 6 contains within it a number of references to other IFRS Accounting Standards. In applying FRS 102, the references within IFRS 6 are taken to mean the relevant section or paragraph of FRS 102.

[FRS 102.34.11A]. For example, paragraph 6 of IFRS 6 refers to IAS 8 *Accounting Policies, Changes in Accounting Estimates and Errors*. The relevant section of FRS 102 in this case would be Section 10 *Accounting Policies, Estimates and Errors*.

However, when applying paragraph 21 of IFRS 6, which deals with the allocation of E&E assets to cash-generating units or groups of cash-generating units for the purpose of assessing such assets for impairment, Section 34 states that the cash-generating unit or group of cash-generating units cannot be larger than an operating segment as defined by FRS 102 and the reference to IFRS 8 *Operating Segments* is ignored. [FRS 102.34.11B].

If on first-time adoption, an entity determines that it is impractical to apply any of the requirements related to the assessment of exploration and evaluation assets for impairment to previous comparative amounts, an entity must disclose this fact. [FRS 102.34.11C].

On transition to FRS 102, an entity which previously accounted for exploration and development costs for oil and gas properties in the development or production phases under the full cost accounting method may elect to measure these assets on the following basis:

- Exploration and evaluation assets at the amount determined under the entity's previous financial reporting framework.
- And
- Assets in the development or production phases at the amount determined for the cost centre under the entity's previous financial reporting framework. The entity shall allocate this amount to the cost centre's underlying assets *pro rata* using reserve volumes or reserve values as of that date.

Both E&E assets and assets in the production and development phases must be tested for impairment, at the date of transition, in accordance with Section 34 (IFRS 6) or Section 27, respectively. [FRS 102.35.10(j)].

This transitional provision eliminates the requirement for a restatement for companies which had previously adopted the full cost method and make the process of allocating E&E assets into cash-generating units required easier under FRS 102.

3.4 Practical implementation issues

Practical issues in the extractive industries are covered in EY's publication, International GAAP®.

3.5 Defined terms

Extract from FRS 102 Appendix 1 Glossary

Definitions

cash-generating unit	The smallest identifiable group of assets that generates cash inflows that are largely independent of the cash inflows from other assets or group of assets.
operating segment	An operating segment is a component of an entity: (a) that engages in business activities from which it may earn revenues and incur expenses (including revenues and expenses relating to transactions with other components of the same entity); (b) whose operating results are regularly reviewed by the entity's chief operating decision maker to make decisions about resources to be allocated to the segment and assess its performance; and (c) for which discrete financial information is available.

Extract from IFRS 6

Definitions

exploration and evaluation assets

Exploration and evaluation expenditures recognised as assets in accordance with the entity's accounting policy.

exploration and evaluation expenditures

Expenditures incurred by an entity in connection with the **exploration for and evaluation of mineral resources** before the technical feasibility and commercial viability of extracting a mineral resource are demonstrable.

exploration for and evaluation of mineral resources

The search for mineral resources, including minerals, oil, natural gas and similar non-regenerative resources after the entity has obtained legal rights to explore in a specific area, as well as the determination of the technical flexibility and commercial viability of extracting the mineral resource.

4 Service concession arrangements

4.1 Overview

Section 34 *Specialised Activities - Service Concession Arrangements* requires entities to determine whether an arrangement meets the definition of a service concession and then directs entities to the relevant sections of FRS 102 to be applied to each component of the transaction.

What you need to know

- Service concession arrangements (SCAs) are used as a mechanism for procuring public services using private sector finance and management expertise. An SCA is an arrangement whereby a public sector body or public benefit entity contracts with a private sector entity to construct, operate, and maintain infrastructure assets for a specified period of time.
- Given the range of activities which may fall under an SCA, accounting issues arise in a number of areas, including accounting for revenue, property, plant and equipment, leasing, intangible assets, financial instruments, and borrowing costs.
- Section 34 requires a grantor to account for its interest in an SCA as a lease liability and recognise the infrastructure assets applying the initial measurement criteria as if they were right-of-use assets. The lease liability is subsequently accounted for as if the grantor were a lessee, according to the requirements of Section 20 *Leases*. The infrastructure assets are subsequently accounted for as property, plant and equipment or intangibles, according to the requirements of Section 17 *Property, Plant and Equipment* and Section 18 *Intangible Assets other than Goodwill* respectively.
- An operator in an SCA has a right to access the infrastructure assets, but does not control them, and therefore they do not recognise the infrastructure assets. Revenue for the services performed, which may include construction or upgrade services and operating services, is accounted for under Section 23 *Revenue from Contracts with Customers*. An SCA will give the operator the right to receive consideration (cash or non-cash consideration) in return for its services - that consideration will be accounted for either as:
 - A financial asset - representing an unconditional right to receive a specified or determinable amount of cash or another financial asset.
 - Or
 - An intangible asset - representing the right to charge (in the future) for the use of the infrastructure assets.
- Sometimes an SCA may entitle the operator to both types of consideration - a financial asset and an intangible asset.
- The nature of the consideration determines its subsequent accounting, but both types of consideration are accounted for as a contract asset during the construction period.

4.2 Introduction

Service concession arrangements have been developed in many countries as a mechanism for procuring public services using private sector finance and management expertise. Under a service concession arrangement (SCA), private capital is used to provide major economic and social facilities for public use. The concept is that, rather than having bodies in the public sector taking on the entire responsibility and risk of funding and building infrastructure assets such as roads, bridges, railways, hospitals, prisons and schools, some of these are contracted out to private sector entities. In the UK, such arrangements are referred to as Public Private Partnerships and formerly as arrangements under the Private Finance Initiative.

SCAs are contractual arrangements between the public sector body and the private sector operator which set out the rights of each party, the related performance obligations and measures and the mechanisms for payment. The transactions involved in a typical service concession are wide-ranging and include the construction or refurbishment of infrastructure assets, the delivery of operating and maintenance services, collection of revenues from the public, and the receipt of payments from the public sector body (some of which may have been deferred). As a result, the accounting issues raised by service concessions range across a number of areas, including accounting for revenue, property, plant and equipment, leasing, intangible assets, financial instruments, and borrowing costs (as these arrangements are often financed by borrowings of the operator).

The requirements of Section 34 related to service concessions require an entity to determine whether an arrangement meets the definition of a service concession and then directs that entity to the other sections of FRS 102 that are applied to each component of the transaction. Central to the definition of an SCA is whether the public sector body (or grantor) has control over the infrastructure, by virtue of both its rights under the contract to direct how the assets are used during the concession and thereafter by controlling any significant residual interest in the assets. [FRS 102.34.12A].

Only minor changes were made to the Service Concession Arrangements part of Section 34 by the Periodic Review March 2024 of FRS 102, primarily being consequential amendments to the Section in connection with the introduction into Section 23 of the five-step revenue recognition model based on IFRS 15 *Revenue from Contracts with Customers*, reflecting similar amendments made to IFRIC 12 *Service Concession Arrangements* by IFRS 15. [FRS 102.BC.B34C.1].

4.3 Key differences to IFRS

Under IFRS, two Interpretations apply to the treatment of service concession arrangements: IFRIC 12, and SIC-29 *Service Concession Arrangements: Disclosures*.

Unlike IFRIC 12, FRS 102 sets out requirements for accounting by the public sector body grantor in an SCA, requiring it to recognise a lease liability and related asset, initially measured in accordance with the initial measurement guidance for lease liabilities and right-of-use assets respectively within Section 20 of FRS 102. Applying this guidance, if the grantor has not recognised a liability, it does not recognise an infrastructure asset. [FRS 102.34.12F]. IFRIC 12 does not specify the accounting by grantors. [IFRIC 12.9].

For operators in a service concession, Section 34 applies the same control criteria as IFRIC 12 (see 4.4.2 below). However, whilst the resulting accounting principles are very similar to those established in IFRIC 12, the requirements set out in FRS 102 are very much a simplification of the Interpretation and there is no guidance on how the control criteria might be interpreted in different situations; exactly what is meant by services 'for the benefit of the public' (see 4.4.1.A below); and how to classify arrangements where only part of the infrastructure is controlled by the grantor (see 4.4.1.B below). In addition, Section 34 does not consider situations where the following features exist in a service concession arrangement:

- Assets of the operator are used in the service concession.
- Payments are made by the operator to the grantor (for example rentals payable for assets retained by the grantor or for other services provided by the public sector body).
- Payments under the service concession contract are variable.
- Where both an intangible asset and a financial asset exists.
- Major upgrade, replacement or maintenance works are required at intervals during the concession term.

IFRIC 12 also provides a number of examples, tables and flow charts to assist entities in implementing its requirements. None of these are included in Section 34.

4.4 Requirements of FRS 102 for service concession arrangements

4.4.1 Scope

An SCA arises from an agreement whereby a public sector body or public benefit entity (the grantor) contracts a private sector entity (the operator) to construct or upgrade, operate and maintain infrastructure assets for a specified period of time (the concession period). The operator is paid for its services over the period of the arrangement. [FRS 102.34.12]. Such payments are often referred to as 'unitary charges' because the amounts to be paid under the contract compensate the operator for both services in constructing or upgrading the infrastructure assets and for their maintenance and operation over a longer period.

A common feature of an SCA is the public service nature of the obligation undertaken by the operator, whereby the arrangement contractually obliges the operator to provide services to, or on behalf of, the grantor for the benefit of the public. [FRS 102.34.12]. This feature, that the operator is providing services to the public or for public benefit, is often applied to distinguish a service concession from the provision by a private sector entity of outsourcing, leasing or other services to a public sector body or public benefit entity (see 4.4.1.A below).

Extract from Section 34

34.12A Specifically an arrangement is a service concession arrangement when the following conditions apply:

- (a) the grantor controls or regulates what services the operator must provide using the infrastructure assets, to whom, and at what price; and
- (b) the grantor controls, through ownership, beneficial entitlement or otherwise, any significant residual interest in the infrastructure assets at the end of the term of the arrangement. *[FRS 102.34.12A].*

As noted above, classification as a service concession arrangement requires that the grantor controls or regulates, what services the operator must provide using the infrastructure assets, to whom, and at what price. The control or regulation of services does not have to be governed by contract as it could include control via an industry regulator. Control also extends to circumstances in which the grantor buys all the output as well as those in which it is bought by other users. The grantor and relevant related parties must be considered together. If the grantor is a public sector entity, the public sector as a whole, together with any independent regulators acting in the public interest, are to be regarded as related to the grantor. 'Price' can mean the amount at which the grantor buys the service or the amount that the operator charges members of the public or a combination of both.

Unlike Section 34, IFRIC 12 stresses that the grantor does not need to have complete control of the price. It is sufficient for the price to be regulated, which could be by way of a capping mechanism (regulated utilities are usually free to charge lower prices). Other 'caps' may not be so apparent. A contract may give the operator freedom to set its prices, but any excess is clawed back by the grantor, e.g., through setting a maximum return on an agreed investment in the infrastructure. In such a case, the operator's return is capped, and the price element of the control test is substantively met. However, care must be taken to look to the substance of the agreements, so a cap that only applies in remote circumstances will be ignored. *[IFRIC 12.AG3].* As Section 34 applies the same control criteria as IFRIC 12 in defining an SCA, we believe that this guidance in IFRIC 12 will also be relevant to entities applying Section 34.

How we see it

In our view, a requirement in the agreement for the grantor to review or approve prices would also generally be sufficient to determine that the grantor controls the price. It would not be appropriate to assume that such approvals are insubstantial or 'rubber stamps' that could be disregarded by the operator.

In practice, it is not uncommon for the use of the infrastructure assets to be partly regulated and partly unregulated. This is discussed further at 4.4.1.B below.

Where the infrastructure assets have no significant residual value at the end of the term of the arrangement (i.e., the arrangement is for the entire useful life of the infrastructure assets), then the arrangement is accounted for as a service concession if the grantor controls or regulates the services provided using the infrastructure as described at (a) above. *[FRS 102.34.12A].*

For the purpose of condition (b) above, the grantor's control over any significant residual interest will both restrict the operator's practical ability to sell or pledge the infrastructure assets and give the grantor a continuing right of use throughout the concession period. *[FRS 102.34.12A].* Control over the residual interest does not require that the infrastructure is returned to the grantor at the end of the concession. It is sufficient that the deployment of the infrastructure is controlled by the grantor, as shown in the Illustration below.

Illustration 36-1: Residual arrangements

A gas transmission system is being operated under a concession arrangement with the State Gas Authority. At the end of the term, the grantor will either acquire the infrastructure assets at their net book value, determined on the basis of the contract, or it may decide to grant a new SCA on the basis of a competitive tender, which will exclude the current operator. If the grantor elects to do the latter, the operator will be entitled to the lower of the following two amounts:

- (a) The net book value of the infrastructure, determined on the basis of the contract.
- And

- (b) The proceeds of a new competitive bidding process to acquire a new contract.

Although the operator cannot enter the competitive tender, it also has the right to enter into a new concession term but, in order to do so, it must match the best tender offer made. It has to pay to the grantor the excess of the best offer (b) above the amount in (a); if the tender offer be lower than (a), it will receive an equivalent refund.

In this arrangement, the grantor will control the residual. It can choose to take over the activities of the concession itself or it can allow potential operators, including the incumbent, to bid for a second term. The price that might be received by the operator, or paid by the grantor, is not relevant.

FRS 102 states that a concession may contain a group of contracts and sub-arrangements as elements of the SCA as a whole. Such an arrangement is treated as a whole when the group of contracts and sub-arrangements are linked in such a way that the commercial effect cannot be understood without reference to them as a whole. Accordingly, the contractual terms of certain contracts or arrangements may meet both the scope requirements of an SCA under Section 34, as noted above, and the definition of a lease under Section 20. Where this is the case, the requirements of Section 34 prevail. *[FRS 102.34.12C]*.

4.4.1.A Public service nature of the obligation

A common feature of a service concession arrangement is the public service nature of the obligation undertaken by the operator, whereby the operator is contractually obliged to provide services to, or on behalf of, the grantor for the benefit of the public. *[FRS 102.34.12]*. Whilst neither FRS 102 nor IFRIC 12 provide a definition of the term 'public service nature of the obligation', IFRIC 12 refers to examples of service concession arrangements and identifies roads, bridges, tunnels, prisons, hospitals, airports, water distribution facilities, energy supply and communication networks as examples of infrastructure used for public services. *[IFRIC 12.1]*.

How we see it

In our view, it is not necessary for the operator to have direct involvement with the public in order to be providing services to, or on behalf of, the grantor for the benefit of the public.

Service concessions are not the only contractual arrangements between public sector bodies and private sector providers of services. Public sector bodies lease buildings or other property, plant and equipment from private sector entities for their own use. The private sector entity might also be engaged to construct the buildings or other property before it is occupied by the public sector body. The public sector also engages independent subcontractors to perform procurement services or to outsource the operation of its internal activities and functions. It is important to consider whether the infrastructure is being used by the operator to provide services for the benefit of the public (such as in the case of a water treatment facility, for example), rather than to the grantor for its own benefit. Where the operator is contracted to provide services to the grantor for its own benefit (rather than providing infrastructure services to the public), depiction of the arrangement as a lease could be more appropriate. For example, where a government department has outsourced its information technology function to a private sector operator, it would be more usual to account for this arrangement as an IT services contract rather than a service concession. However, where an arrangement meets the scope requirements of paragraphs 12 and 12A of Section 34, and the definition of a lease in Section 20, the requirements of Section 34 prevail. *[FRS 102.34.12C]*.

4.4.1.B Partially regulated assets

As noted at 4.4.1 above, to be an SCA in scope of Section 34, the grantor must control or regulate what services the operator must provide using the infrastructure assets, to whom, and at what price. *[FRS 102.34.12A]*. In practice, it is not uncommon for the use of infrastructure to be partly regulated and partly unregulated. Section 34 gives no guidance on whether such arrangements are accounted for using Section 34. Entities therefore must apply the hierarchy in Section 10 *Accounting Policies, Estimates and Errors* to develop an appropriate policy in this area. *[FRS 102.10.4, FRS 102.10.6]*. As Section 34 applies the same control criteria as IFRIC 12 (see 4.4.12 above) in defining an SCA, we believe that the guidance in IFRIC 12 will be relevant to entities developing an accounting policy for partially regulated assets.

How we see it

In our view:

- Any infrastructure that is physically separable and meets the definition of a cash-generating unit as defined in FRS 102 must be analysed separately if it is used wholly for unregulated purposes. For example, this might apply to a private wing of a hospital, where the remainder of the hospital is used by the grantor to treat public patients.
- When purely ancillary activities (such as a hospital shop) are unregulated, the control tests must be applied as if those services did not exist, because in cases in which the grantor controls the services in the manner described in paragraph 12A of Section 34 of FRS 102, the existence of ancillary activities does not detract from the grantor's control of the infrastructure.

In both cases set out above, the grantor may have given to the operator a right to use the unregulated asset in question. This right may be in substance a lease from the grantor to the operator; if so, this is to be accounted for in accordance with Section 20. Determining whether the right is, in substance, a lease would involve using the principles in Section 20 (see Chapter 23 at 4.1).

IFRIC 12 gives no guidance on how an entity might interpret the term 'purely ancillary' in evaluating whether an unregulated activity is ignored for the purposes of determining if the control criteria are met or considered to detract from the grantor's control of the asset. The hospital shop is clearly insignificant by virtue of its size relative to the whole hospital, the proportion of cash flows attributable to it and the fact that the existence of a shop has no direct impact on the function of the infrastructure in the provision of regulated services. However, it is not clear at what point a secondary activity would become or cease to be 'purely ancillary'. This will be a matter of judgement, as demonstrated by Illustration 36-2 below.

Illustration 36-2: Partially regulated assets - Airport

Entity A has been contracted by the government department of transport to construct a regional airport and operate it for a period of 25 years.

Entity A will have the right to charge airlines using the airport fees for aeronautical services provided by Entity A, such as landing fees, passenger fees, terminal fees and fees for gate and ground services. These aeronautical services and fees will be subject to regulation by the department of transport. Entity A expects 55% of its income from the airport over the contract period to come from aeronautical fees and expects the remainder of its income over the term of the contract to arise from unregulated non-aeronautical activities within the airport, such as rent for concessions, retail and parking.

Whilst some of the areas of the airport used to provide concession, retail and parking services are physically separable, Entity A concludes that they do not meet the definition of a cash-generating unit because the cash inflows from these areas are not largely independent of the cash inflows from other parts of the airport infrastructure, because the users of those services are also passengers of the airlines to whom Entity A provides aeronautical services.

As the use of the airport infrastructure is partially regulated and partially unregulated, Entity A will need to apply judgement to assess whether the non-aeronautical activities are purely ancillary.

Entity A could base this judgement on a qualitative assessment. Entity A could take the view that, although the non-aeronautical services are outside the primary purpose of the airport infrastructure, they are important to managing the flow of passengers through the airport, and do not significantly impact the function of the infrastructure in the provision of the regulated aeronautical services. Entity A could therefore conclude that the non-aeronautical services are purely ancillary and apply the control test in paragraph 12A(a) of Section 34 as if those services did not exist.

Alternatively, Entity A could base its judgement on a quantitative assessment, comparing total estimated revenues from regulated services over the life of the arrangement to estimated revenues from unregulated services. Under this approach, Entity A could conclude that the unregulated non-aeronautical services are not ancillary as the proportion of cash flows attributable to those services is not clearly insignificant. Entity A could conclude that the extent of unregulated services provided using the airport infrastructure is such that the grantor is not considered to control the infrastructure.

Regardless of which approach is used or the emphasis placed by the entity on qualitative or quantitative factors, there may be judgement involved in making the determination of whether non-aeronautical services are ancillary. Entity A must apply a consistent approach and determine its judgements consistently to all similar contractual arrangements.

In practice, there are concession agreements that include unregulated services that are neither purely ancillary nor delivered by using a physically separable portion of the total infrastructure. For example, a grantor may control prices charged to children, pensioners and the unemployed who use a sports facility, but the amounts charged to other adults are not controlled. The same facility is being used by all, regardless of the amount that they pay. Alternatively, price regulation could apply only to services provided at certain times of the day rather than to different classes of user.

Illustration 36-3: Partially regulated assets - Rail transportation

Entity B has been contracted by the government department of transport to build and operate a regional rail network for 10 years.

Entity B will operate the trains across the regional network, employ the required staff, and manage the railway stations and depots across the regional network. The department of transport will specify the level of train services to be provided, set certain specifications of trains to be used, and establish overall performance targets. Train fares charged by Entity B to rail passengers will consist of regulated fares (for peak-time rail tickets), and unregulated fares (for off-peak time rail tickets). Entity B expects 60% of rail fare revenue over the term of the contract to come from regulated fares, and 40% from unregulated fares.

The same rail infrastructure will be used to provide both peak-time and off-peak services. Entity B will therefore need to apply judgement in assessing the criteria (a) in paragraph 34.12A of FRS 102 ("The grantor controls or regulates the services that the operator must provide using the infrastructure, to whom, and at what price"). [FRS 102.34.12A(a)].

In this case, Entity B could base its judgement on a quantitative assessment, comparing total estimated revenues from regulated fares over the life of the arrangement to estimated revenues from unregulated fares. As Entity B expects 40% of its revenue over the term of the contract to come from unregulated fares, Entity B could conclude that although the department of transport may control the services that the operator must provide with the rail infrastructure, they do not control the price given that a significant portion of non-regulated rail fare revenue is expected to be generated by Entity B. In this case, the arrangement is not in scope of Section 34. Entity B could reach a different conclusion if the proportion of non-regulated rail fare income was expected to be clearly insignificant.

In practice, there may be judgement involved in making the determination of whether enough of the service or process for the service is unregulated in order to demonstrate that the grantor is not considered to control the infrastructure. Whilst we do not believe that there are any clear cut-off points or bright lines in making this judgement, entities must apply a consistent approach and determine its judgements consistently to all similar contractual arrangements.

How we see it

When a concession agreement includes unregulated services that are neither purely ancillary, nor delivered by using a physically separable portion of the total infrastructure, it will be a matter of judgement whether enough of the service is unregulated in order to demonstrate that the grantor is not considered to control the asset, which would lead to the arrangement as a whole falling out of the scope of Section 34. We would expect entities to apply these judgements consistently to similar arrangements.

The assessment of whether enough of the service is unregulated in order to demonstrate that the grantor is not considered to control the asset will be made at the beginning of the contract and will not be revisited unless errors were made in the original assessment, i.e., it will not be revisited simply because there are significantly more or fewer unregulated users than originally anticipated. In practice, partial price regulation is often a reason for an arrangement to fall outside the scope of Section 34.

However, if it transpires that there are significantly fewer unregulated users than anticipated then it is likely that the contract will be renegotiated. This is because of the public service obligation, which means that the grantor will want the service to continue to be provided to the public albeit under new terms. Whilst Section 34 does not address changes to concession arrangements, it would be necessary to look to the requirements of other sections of FRS 102 that Section 34 indicates would be relevant (such as Section 18, Section 23, and Section 11 *Basic Financial Instruments* and Section 12 *Other Financial Instrument Issues*) in order to determine the impact on the accounting for the concession, including the impact on any assets and liabilities recognised in respect of the concession. Similar considerations apply where there is a change in regulation that impacts whether the grantor controls or regulates the services that the operator must provide using the infrastructure, to whom it must provide them, and at what price, and/or whether grantor controls any significant residual interest in the infrastructure at the end of the concession term.

4.4.1.C Accounting for arrangements determined not to be SCAs under FRS 102

Where an arrangement does not meet both the definition of an SCA and the control criteria noted at 4.4.1 above, Section 34 does not apply and the arrangement is accounted for in accordance with Section 17, Section 18, Section 20 or Section 23, as appropriate, based on the nature of the arrangement.

[FRS 102.34.12D].

4.4.2 Accounting by grantors - Lease liability model

Section 34 requires a grantor to account for its interest in a service concession contract using a lease liability model.

Therefore, the infrastructure assets are recognised as assets of the grantor together with a liability for its obligation under the concession. [FRS 102.34.12E]. The grantor initially recognises the liability associated with the infrastructure assets applying the initial measurement rules for a lease liability in paragraphs 49 to 54 of Section 20, and recognises the infrastructure assets by applying the initial measurement rules for a right-of-use asset in paragraphs 46 to 48 of Section 20. [FRS 102.34.12F]. Initial measurement of lease liabilities and right-of-use assets are discussed in Chapter 23 at 6.2.2 and 6.2.1 respectively.

The liability is recognised as a lease liability and subsequently accounted for by applying the subsequent measurement rules for a lease liability in paragraphs 62 to 64 of Section 20, as if the grantor were a lessee. [FRS 102.34.12G]. The infrastructure assets are recognised as property, plant and equipment or as intangible assets, as appropriate, and subsequently accounted for in accordance with Section 17 or Section 18.

[FRS 102.34.12H]. This includes the determination of useful lives and amortisation methods for the assets, the estimation of residual values, as discussed in Chapters 20 and 21 for property, plant and equipment and for intangible assets respectively, and also includes accounting for impairment as discussed in Chapter 29.

If the grantor is not required to recognise a liability to make payments to the operator, for example, because the operator is expected to charge the users of the infrastructure directly, the grantor does not recognise the infrastructure assets. [FRS 102.34.12F]. In other words, the grantor recognises an asset only to the extent of its obligation to make payments to the operator for the construction of the infrastructure, its upgrade or its residual value at the end of the concession.

4.4.3 Accounting by operators

Accounting by the operator is more complicated, because its involvement in the concession comprises transactions relating to the construction of the infrastructure or its upgrade; the provision of services to the public using the infrastructure; and the collection of payments from either the grantor, users of the service or a combination of both.

4.4.3.A Consideration for services provided

Most service concession agreements are for both construction (or upgrade) services and operating services. Operators almost always negotiate a single contract with the grantor and, although Section 34 does not refer to this, this will usually include a single payment mechanism throughout the concession term, sometimes called a 'unitary payment'. The operator is unlikely to be remunerated separately for its different activities.

Section 34 requires that the operator recognises and measures revenue in accordance with Section 23 for the services it performs, which may include construction or upgrade services and operating services.

[FRS 102.34.12J]. This requires:

- Identifying who is the customer(s) of the service concession arrangement (see Chapter 25 at 3.1.3).
 - Identifying the performance obligations under the contract with the customer (see Chapter 25 at 5).
 - Determining the transaction price under the contract(s) (see Chapter 25 at 6).
 - Allocating that transaction price to the performance obligations in the contract (see Chapter 25 at 7).
- And
- Recognising revenue when, or as, the operator satisfies a performance obligation (see Chapter 25 at 8).

Section 34 notes that the operator accounts for construction or upgrade services, and operating services in accordance with Section 23. *[FRS 102.34.12K, FRS 102.34.16]*. This suggests that the operator would typically identify at least construction services, upgrade services and operating services as separate performance obligations. In practice, operators may often sub-contract some or all the construction activities under a service concession arrangement. In such cases, the operator applies the guidance in Section 23 to determine whether it is acting as principal or agent for the provision of construction services. This determination will impact whether the operator's performance obligation under the contract is to provide construction services, or to arrange for another party to provide construction services. Principal versus agent considerations under Section 23 are discussed in Chapter 25 at 5.4.

How we see it

It is important that entities understand and assess the facts and circumstances of their own arrangements in order to determine whether their current service concession accounting is supported under the 5-step model within Section 23.

4.4.3.B Determining the accounting model

As the grantor controls the use of the assets during the concession term and any significant residual interest in them after the contract has ended, *[FRS 102.34.12A]*, an operator in an arrangement determined to be a service concession does not recognise the infrastructure assets as property, plant and equipment because the operator does not have a right to control the use of the infrastructure. The operator has only a right of access to the assets in order to provide the public service on behalf of the grantor in accordance with the terms specified in the concession. *[FRS 102.34.12I]*.

A service concession contract gives the operator the right to consideration in return for meeting its obligations to construct, upgrade, operate and maintain the infrastructure assets controlled by the grantor. If an operator provides construction or upgrade services, Section 34 sets out two principal categories of concession consideration:

- In one, the operator receives a financial asset - an unconditional contractual right to receive a specified or determinable amount of cash or another financial asset from, or at the direction of, the grantor in return for constructing (or upgrading) the infrastructure assets and then operating and maintaining the asset for a specified period of time. This category includes guarantees by the grantor to pay for any shortfall between amounts received from users of the public service and specified or determinable amounts. *[FRS 102.34.13(a)]*.

And

- In the other, the operator receives an intangible asset - a right to charge for the use of the infrastructure assets that it constructs (or upgrades) and then operates and maintains for a specified period of time. A right to charge users is not an unconditional right to receive cash because the amounts are contingent on the extent to which the public uses the service. *[FRS 102.34.13(b)]*.

Sometimes an SCA may entitle the operator to both types of consideration - a financial asset and an intangible asset. *[FRS 102.34.13]*. To the extent that the grantor has given an unconditional guarantee of payment for the construction (or upgrade) of the infrastructure assets, the operator has a financial asset; to the extent that the operator receives a right to charge the public for using the service, the operator has an intangible asset. The nature of the consideration determines the subsequent accounting, as discussed at 4.3.4.C and 4.3.4.D below. However, both types of consideration are classified as a contract asset during the construction or upgrade period in accordance with Section 23. *[FRS 102.34.12J, FRS 102.34.13A]*.

The boundary between the financial and the intangible asset models is based on the operator's unconditional contractual right to receive cash from, or at the direction of, the grantor. *[FRS 102.34.13(a)]*.

The grantor does not need to pay the cash to the operator directly. Fees or tolls received from users are viewed as essentially no more than collections on behalf of the grantor if they are part of an overall arrangement under which the grantor bears ultimate responsibility. If the grantor pays but the amounts are wholly based on usage of the infrastructure and there is no minimum guaranteed payment, the entity has no unconditional contractual right to receive cash, as the amounts receivable are contingent on the extent to which the public uses the service. In this case, the intangible asset model will apply.

The operator will recognise a financial asset to the extent that it has a contractual right to receive cash or other financial assets from the grantor for the construction services, where the grantor has little, if any, discretion to avoid payment. This is usually because the agreement is legally enforceable. *[FRS 102.34.13(a)]*. The recognition of a financial asset is not affected by the fact that the operator's contractual right to receive cash may be contingent on performance standards. *[FRS 102.34.14]*.

The analysis between the different models can be seen in the following table:

	<i>Arrangement</i>	<i>Applicable model</i>
1	Operator receives fixed payments from grantor	Financial asset
2	Operator receives payments from grantor which vary with demand	Intangible asset
3	Operator receives payments from users which vary with demand and from grantor guaranteed amounts	Financial asset or bifurcated (part financial, part intangible)
4	Operator receives payments from users which vary with demand until it achieves specified return	Intangible asset
5	Operator receives payment from users which vary with demand - no grantor guarantees	Intangible asset

Common examples of arrangements that fall within (3) above are transport concessions where the operator collects revenue from users but is entitled to an agreed return on capital invested in the infrastructure, guaranteed by the grantor. The fees or tolls up to this amount are considered to be collections on behalf of the grantor. There will be a financial asset to the extent of the guaranteed return. There may be an intangible asset as well if the value of the financial asset is less than the fair value of the construction services.

However, arrangements of the type in (4) above remain to be treated as intangible assets even if the overall risk to the operator of not obtaining a specified result is very low. For example, an arrangement where an operator enters into a toll bridge concession and is permitted to collect revenues from users or the grantor until it achieves a 6% return on its agreed infrastructure spend (at which point the arrangement comes to an end), would be accounted for under the intangible asset model.

In commercial terms, the toll bridge concession may be virtually identical to a transaction that falls within (3) above, e.g., where the users pay tolls but the grantor guarantees a minimum 6% return. The crucial difference is the grantor's guarantee. The distinction between the financial asset and intangible asset models is linked less to the transfer of commercial risk, but more to the existence (or not) of an unconditional contractual right to cash flows.

How we see it

An arrangement that effectively caps revenue collected from users once an agreed level of return is reached, is not a contractual right to cash but a right to collect revenues from users and it is not relevant that the risk is low or that the operator will, in effect, get a fixed return.

4.4.3.C Financial asset model

The operator recognises a financial asset to the extent it has an unconditional contractual right to receive a specified or determinable amount of cash or another financial asset from, or at the direction of, the grantor for the construction (or upgrade) services. The operator accounts for the financial asset in accordance with Section 11 and Section 12. [FRS 102.34.14].

Whether the financial asset represents a basic financial instrument within the scope of Section 11 or other financial instrument within the scope of Section 12 will depend on the terms of the concession and judgement is required (see Chapter 11). In classifying the financial asset as basic or other, a payment being contingent on the operator ensuring that the infrastructure meets specified quality or efficiency requirements does not prevent its classification as basic. [FRS 102.34.14].

The following Illustration is based on Illustrative Example 1 in IFRIC 12.

Illustration 36-4: Financial asset model - recording the construction asset

Table 1 Concession terms

The terms of the arrangement require an operator to construct a road - completing construction within two years - and maintain and operate the road to a specified standard for eight years (i.e., years 3-10). The terms of the concession also require the operator to resurface the road at the end of year 8. At the end of year 10, the arrangement will end. Assume that the operator identified three performance obligations, for construction services, operating services and road resurfacing. The operator estimates that the costs it will incur to fulfil its obligations will be:

	Year	£
Construction services (per year)	1-2	500
Operating services (per year)	3-10	10
Road resurfacing	8	100

The terms of the concession require the grantor to pay the operator £200 per year in years 3-10 for making the road available to the public.

For the purpose of this Illustration, it is assumed that all cash flows take place at the end of the year.

Table 2 Contract revenue

The operator recognises contract revenue and costs in accordance with Section 23. Revenue - the amount of consideration to which the operator expects to be entitled from the grantor for the services provided - is recognised when (or as) the performance obligations are satisfied.

The total consideration (£200 in each of years 3-8) is allocated to the performance obligations based on the relative stand-alone selling prices of the construction services, operating services and road resurfacing, taking into account the effects of the time value of money, as follows:

Transaction price allocation (including effect of the time value of money)	
Construction (a)	£1,050
Operating services (b)	£96
Road resurfacing (c)	£110
Market rate of interest (d)	6.18% per year

(a) The operator estimates the relative stand-alone selling price by reference to forecast cost plus 5%.

(b) The operator estimates the relative stand-alone selling price by reference to forecast cost plus 20%.

(c) The operator estimates the relative stand-alone selling price by reference to forecast cost plus 10%.

(d) The operator concludes that the arrangement is a financing transaction and estimates that the market rate of interest is 6.18%.

Financial asset

During the first two years, the operator recognises a contract asset and accounts for effects of the time value of money in accordance with Section 23. Once construction is complete, the amounts due from the grantor are accounted for as a receivable in scope of Section 11. The arrangement is considered to constitute a financing transaction, so the receivable is measured initially at the present value of the future payments discounted at a market rate of interest. It is subsequently measured at amortised cost, i.e., the amount initially recognised plus the cumulative interest on that amount calculated using the effective interest method minus repayments.

Table 3 Measurement of contract asset/receivable

	£
Amount due for construction in year 1	525
Contract asset at end of year 1*	525
Effective interest in year 2 on contract asset at the end of year 1 (6.18% × £525)	32
Amount due for construction in year 2	525
Receivable at end of year 2	1,082
Effective interest in year 3 on receivable at the end of year 2 (6.18% × £1,082)	67
Amount due for operation in year 3 (£10 × (1 + 20%))	12
Cash receipts in year 3	(200)
Receivable at end of year 3	961

* No effective interest arises in year 1 because the cash flows are assumed to take place at the end of the year.

4.4.3.D Intangible asset model

Under this accounting model, the operator recognises an intangible asset reflecting a right (a licence) to charge users of the public service. The operator accounts for the intangible asset in accordance with Section 18. [FRS 102.34.15]. The following Illustration is based on Example 2 in IFRIC 12.

Illustration 36-5: Intangible asset model - recording the construction asset**Arrangement terms**

The terms of a service arrangement require an operator to construct a road - completing construction within two years - and maintain and operate the road to a specified standard for eight years (i.e., years 3-10). The terms of the arrangement also require the operator to resurface the road when the original surface has deteriorated below a specified condition. The operator estimates that it will have to undertake the resurfacing at the end of the year 8. At the end of year 10, the service arrangement will end. The operator estimates that the costs it will incur to fulfil its obligations will be:

Table 1 Contract costs

	Year	£
Construction services (per year)	1-2	500
Operating services (per year)	3-10	10
Road resurfacing	8	100

The terms of the arrangement allow the operator to collect tolls from drivers using the road. The operator forecasts that vehicle numbers will remain constant over the duration of the contract and that it will receive tolls of £200 in each of years 3-10.

For the purpose of this Illustration, it is assumed that all cash flows take place at the end of the year.

Intangible asset

The operator provides construction services to the grantor in exchange for an intangible asset, i.e., a right to collect tolls from road users in years 3-10. In accordance with Section 23, the operator measures this non-cash consideration at fair value. In this case, the operator determines the fair value indirectly by reference to the stand-alone selling price of the construction services delivered.

During the construction phase of the arrangement the operator's contract asset (representing its accumulating right to be paid for providing construction services) is presented as an intangible asset (licence to charge users of the infrastructure). The operator estimates the stand-alone selling price of the construction services to be equal to the forecast construction costs plus 5% margin. It is also assumed that the operator adopts the allowed alternative treatment in Section 25 *Borrowing Costs* and therefore capitalises the borrowing costs, estimated at 6.7%, during the construction phase:

Table 2 Initial measurement of intangible asset

	£
Construction services in year 1 ($£500 \times (1 + 5\%)$)	525
Capitalisation of borrowing costs	34
Construction services in year 2 ($£500 \times (1 + 5\%)$)	525
Intangible asset at end of year 2	1,084

The intangible asset is amortised over the period in which it is expected to be available for use by the operator, i.e., years 3-10. In this case, the directors determine that it is appropriate to amortise using a straight-line method. The annual amortisation charge is therefore £1,084 divided by 8 years, i.e., £135 per year.

Construction costs and revenue

The operator recognises the revenue in accordance with Section 23. It measures contract revenue at the fair value of the non-cash consideration received or receivable. Thus, in each of years 1 and 2 it recognises in its income statement construction costs of £500, construction revenue of £525 (cost plus 5%) and, hence, construction profit of £25.

Toll revenue

The road users pay for the public services at the same time as they receive them, i.e., when they use the road. The operator therefore recognises toll revenue when it collects the tolls.

How we see it

We believe that amortisation of the intangible asset recognised by the operator in exchange for construction services would likely commence once construction is complete, and the operator can begin using the licence received in exchange for construction services in order to generate revenues.

4.4.3.E Construction or upgrade services

Section 34 requires the operator to account for revenue relating to the construction or upgrade services it performs in accordance with Section 23. [FRS 102.34.12K]. As discussed at above, this will involve recognising revenue when, or as, the operator satisfies the construction or upgrade performance obligation. See Chapter 25 at 8 for discussion on satisfaction of performance obligations under Section 23.

4.4.3.F Operating services

Section 34 requires the operator to account for revenue relating to the operating services it performs in accordance with Section 23. [FRS 102.34.16]. As discussed at above, this will involve recognising revenue when, or as, the operator satisfies the performance obligation(s) relating to operating services. See Chapter 25 at 8 for discussion on satisfaction of performance obligations under Section 23.

4.4.3.G Borrowing costs incurred during the construction or upgrade phase

Many operators will borrow funds to finance the up-front construction or upgrade costs associated with the SCA. Only under the intangible asset model will an operator have the option to capitalise any borrowing costs. Otherwise, borrowing costs attributable to the concession are recognised as an expense. Entities must account for their borrowing costs in accordance with Section 25. [FRS 102.34.16A]. Accounting for borrowing costs is discussed in Chapter 27.

4.4.3.H 'Bifurcation' - single arrangements that contain both financial and intangible assets

Section 34 notes that sometimes an SCA may entitle the operator to both types of consideration - a financial asset and an intangible asset. [FRS 102.34.13]. However, the section provides no further guidance on such arrangements.

The following Illustration, based on Illustrative Example 3 in IFRIC 12, illustrates how an entity may account for a service concession arrangement under the bifurcated model.

Illustration 36-6: The bifurcated model - recording the construction asset

Arrangement terms

The terms of a service arrangement require an operator to construct a road - completing construction within two years - and maintain and operate the road to a specified standard for eight years (i.e., years 3-10). The terms of the arrangement also require the operator to resurface the road when the original surface has deteriorated below a specified condition. The operator estimates that it will have to undertake the resurfacing at the end of the year 8. At the end of year 10, the service arrangement will end. The operator estimates that the costs it will incur to fulfil its obligations will be:

Table 1 Contract costs

	Year	£
Construction services (per year)	1-2	500
Operating services (per year)	3-10	10
Road resurfacing	8	100

The operator estimates the consideration in respect of construction services to be £1,050 by reference to the stand-alone selling price of those services, which it estimates at forecast cost plus 5%. The terms of the arrangement allow the operator to collect tolls from drivers using the road. In addition, the grantor guarantees the operator a minimum amount of £700 and interest at a specified rate of 6.18% to reflect the timing of cash receipts. The operator forecasts that vehicle numbers will remain constant over the duration of the contract and that it will receive tolls of £200 in each of years 3 to 10. All cash flows occur at the end of the year.

Dividing the arrangement

The contractual right to receive cash from the grantor for the services and the right to charge users for the public services are regarded as two separate assets. Therefore, in this arrangement it is necessary to divide the operator's contract asset during the construction phase into two components - a financial asset component based on the guaranteed amount and an intangible asset for the remainder. When the construction services are complete, the two components of the contract asset would be classified and measured as a financial asset and an intangible asset accordingly.

Table 2 Dividing the operator's consideration

Year	Total	Financial asset	Intangible asset
Construction services in year 1	525	350	175
Construction services in year 2	525	350	175
Total construction services	1,050	700	350
	100%	67%	(a) 33%
Finance income, at specified rate of 6.18% (see Table 3)	22	22	-
Borrowing costs capitalised (interest paid in years 1 and 2 × 33%)	11	-	11
Total fair value of the operator's consideration	1,083	722	361

(a) Amount guaranteed by the grantor as a proportion of the construction services.

Financial asset

During the first two years, the entity recognises a contract asset and accounts for the effects of the time value of money in the arrangement in accordance with Section 23. Once the construction is complete, the amount due from, or at the direction of, the grantor in exchange for the construction services is accounted for in accordance with Sections 11 and 12 as a receivable.

Table 3 Measurement of the contract asset/receivable

	£
Construction services in year 1 allocated to the contract asset	350
Contract asset at end of year 1	350
Construction services in year 2 allocated to the contract asset	350
Interest in year 2 on contract asset at end of year 1 (6.18% × CU350)	22
Receivable at end of year 2	722
Interest in year 3 on receivable at end of year 2 (6.18% × CU722)	45
Cash receipts in year 3 (see table 5)	(117)
Receivable at end of year 3	650

Intangible asset

In accordance with Section 18, the operator recognises the intangible asset at cost, i.e., the fair value of the consideration received or receivable. During the construction phase of the arrangement, the portion of the operator's contract asset that represents its accumulating right to be paid amounts in excess of the guaranteed amount for providing construction services is presented as a right to receive a licence to charge users of the infrastructure. The operator estimates the stand-alone selling price of the construction services as equal to the forecast construction costs plus 5%, which the operator concludes is consistent with the rate that a market participant would require as compensation for providing the construction services and for assuming the risk associated with the construction costs. It is also assumed that, in accordance with Section 25, the operator capitalises the borrowing costs, estimated at 6.7%, during the construction phase.

Table 4 Initial measurement of the intangible asset

	£
Construction services in year 1	175
Borrowing costs (interest paid in years 1 and 2 × 33%)	11
Construction services in year 2	175
Intangible asset at the end of year 2	361

In accordance with Section 18, the intangible asset is amortised over the period in which it is expected to be available for use by the operator, i.e., years 3-10. The depreciable amount of the intangible asset (£361 including borrowing costs) is allocated using a straight-line method. The annual amortisation charge is therefore £361 divided by 8 years, i.e., £45 per year.

Revenue and costs

The operator provides construction services to the grantor in exchange for a financial asset and an intangible asset. Under both the financial asset model and intangible asset model, the operator accounts for the construction services in accordance with Section 23. Thus, in each of years 1 and 2 it recognises in profit or loss construction costs of £500 and construction revenue of £525.

Toll revenue

The road users pay for the public services at the same time as they receive them, i.e., when they use the road. Under the terms of this arrangement the cash flows are allocated to the financial asset and intangible asset in proportion, so the operator allocates the receipts from tolls between repayment of the financial asset and revenue earned from the intangible asset.

4.4.4 Disclosures relating to service concession arrangements

An operator and a grantor must disclose information that enables users of the entity's financial statements to evaluate the nature and extent of relevant risks arising from service concession arrangements. This information typically includes, but is not limited to:

- A description of the arrangement including any rights, obligations or options arising.
And
- Any significant terms of the arrangement that may affect the amount, timing and certainty of future cash flows. *[FRS 102.34.16B].*

In addition, an operator is required to disclose the amount of revenue, profits or losses and other income recognised in the period on exchanging construction services for a financial asset or an intangible asset. *[FRS 102.34.16C].*

Significant terms of the arrangement that may affect the amount, timing and certainty of future cash flows can include the period of the concession, re-pricing dates and the basis upon which re-pricing or re-negotiation is determined.

In addition to the disclosures required by Section 34, the disclosure requirements of other Sections relevant to the SCA will also need to be considered, including the disclosure requirements of Sections 11 and 12, Section 17, Section 18, Section 20, Section 23, and Section 25.

4.5 Summary of GAAP differences

The following table shows the differences between Section 34 in relation to service concession arrangements and IFRS.

	FRS 102	IFRS
Accounting by Grantor	Recognise a lease liability and related asset to the extent that there is a contractual obligation to pay for the infrastructure assets.	Not specified in IFRIC 12.

4.6 Defined terms

Extract from FRS 102 Appendix I Glossary

Definitions

borrowing costs	Interest and other costs incurred by an entity in connection with the borrowing of funds.
financial asset [extract]	An asset that is: (a) cash; (c) a contractual right: (i) to receive cash or another financial asset from another entity; or (ii) to exchange financial assets or financial liabilities with another entity under conditions that are potentially favourable to the entity; ...
infrastructure asset	Infrastructure for public services, such as roads, bridges, tunnels, prisons, hospitals, airports, water distribution facilities, energy supply and telecommunications networks.
intangible asset	An identifiable non-monetary asset without physical substance. Such an asset is identifiable when: (a) it is separable, i.e. capable of being separated or divided from the entity and sold, transferred, licensed, rented or exchanged, either individually or together with a related contract, asset or liability; or (b) it arises from contractual or other legal rights, regardless of whether those rights are transferable or separable from the entity or from other rights and obligations.
public benefit entity	An entity whose primary objective is to provide goods or services for the general public, community or social benefit and where any equity is provided with a view to supporting the entity's primary objectives rather than with a view to providing a financial return to equity providers, shareholders or members.
residual value (of an asset)	The estimated amount that an entity would currently obtain from disposal of an asset, after deducting the estimated costs of disposal, if the asset were already of the age and in the condition expected at the end of its useful life.
revenue	Income arising in the course of an entity's ordinary activities.
service concession arrangement (SCA)	An arrangement whereby a public sector body or public benefit entity (the grantor) contracts with a private sector entity (the operator) to construct (or upgrade), operate and maintain infrastructure assets for a specified period of time (the concession period).
useful life	The period over which an asset is expected to be available for use by an entity or the number of production or similar units expected to be obtained from the asset by an entity.

5 Heritage assets

5.1 Overview

Paragraphs 49 to 56 of Section 34 of FRS 102 contain guidance on the accounting for the recognition, measurement and disclosure of heritage assets. A heritage asset is a separate class of asset which requires separate disclosures from those required for similar types of assets that are not heritage assets.

Recognition and measurement of heritage assets follows the appropriate section of FRS 102 which reflects the nature of the asset (i.e., property plant and equipment, intangible assets or right-of-use assets).

What you need to know

- FRS 102 defines heritage assets as tangible and intangible assets with historic, artistic, scientific, technological, geophysical or environmental qualities that are held and maintained principally for their contribution to knowledge and culture. Assets held by commercial companies for other purposes, such as a historic building held as an investment property, are not heritage assets.
- Heritage assets are accounted for in accordance with the requirements of Section 17 *Property, Plant and Equipment*, Section 18 *Intangible Assets other than Goodwill* or Section 20 *Leases*, with a modification for heritage assets acquired in a non-exchange transaction for which the fair value cannot be measured reliably.
- Heritage assets have different disclosure requirements from those required for other assets accounted for in accordance with sections 17, 18 and 20.

5.2 Introduction

There have been some changes and clarifications to reflect amendments made to other sections of FRS 102. These include the following:

- The applicable recognition and measurement sections of FRS 102 for heritage assets have been expanded to apply to right-of-use assets under Section 20. Separate disclosure of heritage assets that are right-of-use assets is now required. The FRC does not expect right-of-use heritage assets to be common.
- A clarification has been added that an investment property is unlikely to be a heritage asset.
- Assets with the characteristics of a heritage asset, but which are used by the entity itself and are therefore not heritage assets, are accounted for in accordance with the applicable section of FRS 102 but an entity is still encouraged to provide the disclosures specified by Section 34.

If a heritage asset is acquired in a non-exchange transaction, the entity usually measures the asset at fair value on initial recognition. If, in exceptional cases, the fair value of such a heritage asset cannot be reliably measured, the entity should state the reason for this.

5.3 Key differences to IFRS

Unlike FRS 102, IFRS has no specific measurement or disclosure requirements for heritage assets.

Therefore, heritage assets are accounted for and disclosed according to their nature under either IFRS 16 *Leases*, IAS 16 *Property, Plant and Equipment* or IAS 38 *Intangible Assets*.

5.4 Requirements of FRS 102 for heritage assets

5.4.1 Terms used in Section 34 on heritage assets

Heritage assets are “tangible and intangible assets with historic, artistic, scientific, technological, geophysical, or environmental qualities that are held and maintained principally for their contribution to knowledge and culture”. [FRS 102 Appendix I].

5.4.2 Scope

FRS 102 defines heritage assets according to their intended use (‘maintained principally for their contribution to knowledge and culture’) rather than according to their nature as a tangible or intangible asset.

Heritage assets must be accounted for according to the requirements of Section 34. *[FRS 102.34.49]*.

Extract from FRS 102

- 34.50** In determining whether an asset is a heritage asset, the entity's management shall use its judgement to assess the characteristics of the asset and whether it is held and maintained principally for its contribution to knowledge and culture. For example:
- (a) works of art and similar objects are sometimes held by commercial entities but are not heritage assets because they are not maintained principally for their contribution to knowledge and culture entity; and
 - (b) An investment property is unlikely to be a heritage asset because it is held to earn rentals or for capital appreciation or both. *[FRS 102.34.50]*.

An asset with the characteristics of a heritage asset, but which is used by the entity itself, for example historical buildings used for teaching by an education establishment, does not meet the definition of a heritage asset. Such assets are accounted for in accordance with the applicable section of FRS 102. However, an entity is encouraged to provide the disclosures set out in 5.4.4 below in respect of such assets, in addition to the disclosures required by the applicable section of FRS 102. *[FRS 102.34.50A]*.

5.4.3 Recognition and measurement of heritage assets

Heritage assets must be recognised and measured in accordance with the FRS 102 sections on property plant and equipment, intangible assets or right-of-use assets as appropriate, subject to the requirements on non-exchange transactions discussed below. *[FRS 102.34.51]*. Accounting for property plant and equipment, intangible assets and right-of-use assets is discussed in Chapters 20, 21 and 23, respectively. No option is given to measure heritage assets under Section 16 since it is considered that an investment property is unlikely to meet the definition of a heritage asset (see 5.4.2 above).

It is observed in the Basis for Conclusions that the FRC gave consideration as to whether a right-of-use asset could be a heritage asset. The FRC concluded that there is nothing in principle that would prevent a right-of-use asset from meeting the definition of a heritage asset. However, the FRC does not expect right-of-use heritage assets to be common. *[FRS 102.BC.B34F.2]*.

When a heritage asset is acquired in a non-exchange transaction, the asset must usually be measured at its fair value on initial recognition. In exceptional cases, if the fair value of a heritage asset cannot be measured reliably at a cost that is commensurate with the benefit to users of the financial statements, the heritage asset must not be recognised in the financial statements. In these circumstances, certain disclosures are required (see 5.4.4 below). *[FRS 102.34.53]*.

At each reporting date, an entity must apply the requirements of Section 27 *Impairment of Assets* to determine whether a heritage asset is impaired and, if so, how to recognise and measure the impairment loss. Physical deterioration, breakage or doubts arising as to an asset's authenticity are examples of impairment indicators for heritage assets. *[FRS 102.34.54]*. The requirements of Section 27 are discussed in Chapter 29.

5.4.4 Presentation and disclosures required for heritage assets

Heritage assets must be presented in the statement of financial position separately from other assets. *[FRS 102.34.54A]*.

An entity must disclose the following for all heritage assets it holds, showing separately heritage assets held as a right-of-use asset: *[FRS 102.34.55]*

- (a) An indication of the nature and scale of heritage assets held.
- (b) The policy for the acquisition, preservation, management and disposal of heritage assets (including a description of the records maintained by the entity of its collection of heritage assets and information on the extent to which access to the assets is permitted).
- (c) The accounting policies adopted for heritage assets, including details of the measurement bases used.
- (d) For heritage assets that have not been recognised in the statement of financial position, the notes to the financial statements must:
 - (i) Explain the reasons why.
 - (ii) Describe the significance and nature of those assets.

And

 - (iii) Disclose information that is helpful in assessing the value of those heritage assets.

- (e) When heritage assets are recognised in the statement of financial position the following disclosure is required:
- (i) The carrying amount of heritage assets at the beginning of the reporting period and the reporting date, including an analysis between classes or groups of heritage assets recognised at cost and those recognised at valuation.
 - And
 - (ii) When assets are recognised at valuation, sufficient information to assist in understanding the valuation being recognised (date of valuation, method used, whether carried out by external valuer and if so their qualification and any significant limitations on the valuation).
- (f) A summary of transactions relating to heritage assets for the reporting period and each of the previous four reporting periods disclosing;
- (i) The cost of acquisitions of heritage assets.
 - (ii) The value of heritage assets acquired by donations.
 - (iii) The carrying amount of heritage assets disposed of in the period and proceeds received.
 - And
 - (iv) Any impairment recognised in the period.
 - And
 - (v) Any depreciation or amortisation recognised in the period.

The must show separately those transactions that are included in the statement of financial position and those that are not.

Where it is impracticable to do so, the disclosures required by (f) need not be given for more than one comparative period. If impracticability applies, then a statement must be made to that effect.

[FRS 102.34.56].

In exceptional cases, when a heritage asset acquired during the reporting period in a non-exchange transaction is not recognised because its fair value cannot be measured reliably, the reason that fair value cannot be measured reliably must be stated. This disclosure can be aggregated for groups or classes of heritage assets provided significant information is not obscured. [FRS 102.34.55A].

A lessee is not required to provide the disclosure requirements of paragraphs 20.80(e) and 20.81 for right-of-use assets that are heritage assets when the disclosure requirements described above have been applied to those assets. [FRS 102.20.84].

The disclosure requirements of Sections 17 and 18 do not apply to heritage assets since heritage assets are excluded from their scope. [FRS 102.17.3(a), FRS 102.18.3(b)].

5.5 Summary of GAAP differences

The following table shows the differences between FRS 102 and IFRS.

	FRS 102	IFRS
Scope	Heritage assets are assets which are held and maintained principally for their contribution to knowledge or culture. Judgement is required to assess the characteristics of an asset and whether it is principally held for knowledge and culture.	No specific requirements for heritage assets. Accounting will follow the nature of the asset (e.g., lease, property, plant and equipment, intangible or investment property).
Recognition and measurement	In accordance with Section 17, Section 18 or Section 20 (which requires depreciated cost or fair value with valuation gains/losses through OCI). An investment property is unlikely to be a heritage asset.	Not applicable.

FRS 102		IFRS
Presentation and disclosures	Heritage assets must be presented in the statement of financial position separately from other assets. Separate disclosures are required for heritage assets with further separation for heritage assets held as a right-of-use asset.	No specific presentation or disclosures for heritage assets.

6 Requirements that apply only to Public Benefit Entities

6.1 Overview

This section relates to paragraphs in Section 34 that are prefixed with 'PBE' and must be applied only by Public Benefit Entities. A public benefit entity is an entity whose primary objective is to provide goods or services for the general public, community or social benefit and where any equity is provided with a view to supporting the entity's primary objectives rather than with a view to providing a financial return to equity providers, shareholders or members. *[FRS 102 Appendix I]*.

There are three sub-sections within Section 34 which deal with PBEs and which are headed as follows:

- Incoming Resources from Non-Exchange Transactions (see 6.4 below).
- Public Benefit Entity Combinations (see 6.6 below).
- Public Benefit Concessionary Loans (see 6.7 below).

What you need to know

- A non-exchange transaction is defined as one whereby an entity receives value from another entity without directly giving approximately equal value in exchange or gives value to another entity without directly receiving approximately equal value in exchange. A non-exchange transaction that meets the definition of a government grant falls under the scope of *Section 24 Government Grants*. The requirements in Section 34 apply to resources received in a non-exchange transaction by public benefit entities, or entities within a public benefit entity group, when those resources can be reliably measured. In this context, non-exchange transactions can include, but are not limited to, donations of cash or goods, facilities such as the free use of office accommodation and services usually provided by an individual or entity as part of their trade or profession for a fee.
- If a public entity business combination is in substance a gift, the combination is accounted for under Section 19 of FRS 102, except for the following:
 - The excess of the fair value of the assets received over the fair value of the liabilities assumed is recognised as a gain in income and expenditure. This gain represents the gift of the value of one entity to another and is recognised as income.
 - The excess of the fair value of the liabilities assumed over the fair value of the assets received is recognised as a loss in income and expenditure. This loss represents the net obligations assumed, for which the receiving entity has not received a financial reward and is recognised as an expense.
- Entities making or receiving public benefit entity concessionary loans have a policy choice and must use either:
 - The accounting policy choice made for its financial instruments under paragraphs 11.2 and 12.2. Or
 - The accounting treatment specified in Section 34 which is as follows: such loans must be initially measured at the amount received or paid and recognised in the statement of financial position. Subsequently, the carrying amount of concessionary loans in the financial statements must be adjusted to reflect any accrued interest payable or receivable. To the extent that a loan is irrecoverable, any impairment loss must be recognised as an expense.

The following minor changes were introduced by the Periodic Review March 2004 amendments to FRS 102: *[FRS 102.BC.B34I.7, FRS 102.BC.B34I.8, FRS 102.BC.B34I.9]*.

- A clearer articulation of whether and when incoming resources from non-exchange transactions must be recognised and, if so, measured either at the fair value of the resources received or receivable, or the value to the entity. The determination of the value to the entity was also clarified.
- Guidance on legacies has been clarified to focus on the principle that income from a legacy must be recognised when it is probable that the legacy will be received and its value can be measured reliably. As this principle was unchanged, the amendments are not expected to alter existing practice.
- The deletion of Appendix B of Section 34, which specified aspects of recognition for legacies and services and set out requirements relating to performance conditions and measurement, incorporating these requirements within paragraphs PBE34.67 to PBE34.74. The changes made are not intended to alter practice but rather to make the standard easier to apply.

6.2 Introduction

The requirements of FRS 102 apply to public benefit entities and other entities, not just to companies. However, paragraph numbers prefixed with 'PBE' must only be applied by public benefit entities. These paragraphs must not be applied directly, or by analogy, by entities that are not public benefit entities, other than, when specifically directed, entities within a public benefit entity group. A public benefit entity must apply all paragraphs in FRS 102 prefixed with 'PBE' to the extent that they are relevant, including in applying the remaining sections of FRS 102. For those public benefit entities within the scope of a Statement of Recommended Practice (SORP), the use of these paragraphs is permitted by the applicable SORP. [FRS 102.1.2].

The definition of a public entity group (see 6.9 below) refers only to wholly-owned subsidiaries of a public-benefit entity. Therefore, the requirements of the 'PBE' paragraphs of Section 34 of FRS 102 do not apply to partially-owned subsidiaries of a public benefit entity parent.

Separate guidance has been provided in FRS 102 as the topic is only addressed in the Government Grants section of IFRS for SME's. The FRC observe in the Basis for Conclusions that the receipt of resources from non-exchange transactions is an inflow of resources that is highly significant for many PBEs and is a major source of their funding. [FRS 102.BC.B34I.1].

The FRC gave consideration as to whether to add guidance for PBEs as to when a liability for a funding commitment should be recognised. In the FRC's view, an entity must only recognise a liability if the commitment to provide funding is made unconditionally, and the grantor cannot realistically withdraw from the commitment. In this situation, an entity recognises a liability for the present value of the total funding promised. However, as this view is an application of the principles in Section 2 and Section 21, it was concluded that the requirements for funding commitments should apply to all entities and not just PBEs. [FRS 102.BC.B34G.3, FRS 102.BC.B34G.4].

Where not discussed elsewhere, the requirements of 'PBE' provisions in other Sections of FRS 102 are listed at 6.8 below.

6.3 Comparison between Section 34 for Public Benefit Entities and IFRS

IFRS does not have a separate section or standard dealing with public benefit entities. Therefore, public benefit entities using IFRS would recognise, measure and make disclosures in respect of assets and liabilities according to the applicable IFRS's.

6.4 Incoming resources from non-exchange transactions

6.4.1 Introduction

The receipt of resources from non-exchange transactions is an inflow of resources that is highly significant for many PBEs. This was not addressed in the *IFRS for SMEs* Accounting Standard and therefore guidance on the topic was included in FRS 102. [FRS 102.BC.B34I.1].

A non-exchange transaction is defined as one where an entity receives value from another entity without directly giving approximately equal value in exchange or gives value to another entity without directly receiving approximately equal value in exchange. [FRS 102 Appendix I]. A non-exchange transaction that meets the definition of a government grant falls under the scope of Section 24, and these are covered in Chapter 26 [FRS 102.PBE34.64].

Where public benefit entities, or entities within a public benefit entity group, receive other resources from non-exchange transactions then the public benefit entity requirements in Section 34 are applied. [FRS 102.PBE34.65].

Non-exchange transactions can include, but are not limited to, donations (of cash, goods, and services) and legacies (see 6.4.2 below). [FRS 102.PBE34.66].

6.4.2 Recognition

An entity must recognise receipts of resources from non-exchange transactions as follows: [FRS 102.PBE34.67]

- (a) Transactions that do not impose specified future performance-related conditions on the entity are recognised in income when the resources are received or receivable.
- (b) Transactions that do impose specified future performance-related conditions on the entity are recognised in income only when the performance-related conditions are satisfied.

- (c) When resources are received or receivable before the performance-related conditions are satisfied, the entity recognises a liability.

A 'restriction' is defined as "a requirement that limits or directs the purposes for which a resource may be used that does not meet the definition of a performance related condition". [FRS 102 Appendix I]. A performance condition is defined as "A condition under which entitlement to resources is conditional on the performance of: (a) a specified activity; or (b) a particular level of service or units of output to be delivered." [FRS 102 Appendix I].

The existence of a restriction does not prohibit a resource from being recognised in income when receivable. [FRS 102.PBE34.68]. An example of a restriction is when a donor requires that a donation must be used to fund a specific activity, but the donor does not set any requirements making the donation conditional on achieving specific outputs or service levels from the activity, i.e., use of the donation is not dependent on a performance related condition).

Resources must only be recognised when the value of the incoming resources can be measured reliably. [FRS 102.PBE34.69].

The standard gives the following examples of resources that can usually be measured reliably:

- Donations of cash or goods.
- Facilities such as free use of office accommodation or event space.

Or

- Services usually provided by an individual or an entity as part of their trade or profession for a fee.

It is expected that other contributions made by volunteers cannot be measured reliably and must therefore must not be recognised. [FRS 102.PBE34.69A].

The FRC consider this is a pragmatic solution recognising there are potential issues in determining a value to the entity for volunteer services and their contribution to the organisation and notes that quantifying this type of service may not be practicable. It is noted that there is an argument to suggest that volunteer services could be measured by reference to a metric such as the minimum wage, however this measure does not take into consideration an organisation's requirements for volunteers. This arbitrary value may also not be reflective of their skills, experience or role, and to determine a different method of valuation would be very subjective. [FRS 102.BC.B34I.5]. However, when a service is provided voluntarily and its value can be measured reliably, for example a service for which the entity would otherwise have had to pay (e.g., legal or financial advice), the value to the entity of that service must be recognised in the financial statements. [FRS 102.BC.B34I.6].

In some situations, it may be impracticable to estimate the value of a resource with sufficient reliability when the resource received or receivable (e.g., in the case of high volume, low value second-hand goods donated for resale). In such cases, the income must be recognised in the period when the resource is sold or distributed. [FRS 102.PBE34.70]. When goods are donated for subsequent sale (e.g., donations to charity shops), the FRC noted that it could be argued that the donated goods must be valued only when they are sold. However, this is not consistent with the accruals concept which requires the financial statements to recognise goods when they are received. On pragmatic grounds, FRS 102 requires that when it is impracticable to estimate the value of a resource with sufficient reliability when the resource is received or receivable, the income shall be recognised in the period when the resource is sold or distributed (e.g., in the case of high volume, low value second-hand goods donated for resale). Further, the same accounting may be applied by other wholly-owned entities in a public benefit entity group, to eliminate the need to restate goods donated for subsequent sale on consolidation (e.g., where a charity operates its shops through a subsidiary that is a non-charitable company. [FRS 102.BC.B34I.4, FRS 102.BC.B34I.5].

The recognition of receipts of resources will result in the recognition of income and a corresponding asset or expense by the entity. There may be circumstances when resources are used in the production of an asset, for example erecting a building. In those cases, the associated resources would be recognised as a part of the cost of that asset. When a lease contains a non-exchange transaction (e.g., when lease payments are significantly below market rents), the incoming resources must be accounted for as a receipt of resources that form part of the cost of the right-of-use asset. [FRS 102.PBE34.70B].

An entity must recognise a liability for any resource, previously received and recognised in income, when a subsequent failure to meet restrictions or performance-related conditions attached to it, causes repayment to become probable. [FRS 102.PBE34.71].

6.4.2.A Legacies

Donations in the form of legacies must be recognised when it is probable that the legacy will be received and its value can be measured reliably. Whether the receipt of a legacy is probable and whether its value can be measured reliably may be affected by events such as valuations or disputes. In determining the probability of receipt and reliability of measurement, and in measuring the expecting inflow, an entity may apply estimates and assumptions to a portfolio of legacies if it reasonably expects that the result of doing so would not differ materially from the result of applying the approach to each individual legacy.

[FRS 102.PBE34.70A].

When a legacy meets the definition of a contingent asset, the entity must not recognise it but provide the disclosures required by Section 21 of FRS 102 for contingent assets. Similarly, when a legacy meets the definition of an asset, but the recognition criteria are not met, the entity is encouraged to consider disclosing information relevant to user's understanding of the entity's financial position. [FRS 102.PBE34.70A].

An entity must apply Section 32 *Events after the End of the Reporting Date* to determine whether the receipt of evidence after the reporting date is an adjusting event. [FRS 102.PBE34.70A].

6.4.3 Measurement

FRS 102 requires donated assets to be valued at their fair value as the FRC considered that circumstances in which this was not possible, such as an inability to exploit an asset fully, would rarely occur.

[FRS 102.BC.B34I.2].

Consequently, an entity must measure incoming resources from non-exchange transactions as follows:

[FRS 102.PBE34.73]

- (a) Donated services and facilities that would otherwise have been purchased must be measured at the value to the entity.
- (b) All other incoming resources from non-exchange transactions must be measured at the fair value of the resources received or receivable.

The value to the entity in (a) above will be the price the entity estimates it would pay in the open market for a service or facility of equivalent utility. For example, the amount the entity would have paid if the service or facility had not been donated. This might not be the same as the market value of the service or utility received. For example, if the entity received a premium service but would otherwise only have paid for a standard service, the value to the entity may be the value of a standard service. If an entity would not have purchased the service or facility at all, had it not been donated, the value to the entity is expected to be nil.

[FRS 102.PBE34.73A].

In (b) the fair value of resources received or receivable are usually the price that the entity would have paid on the open market for an identical or equivalent resource. Section 2A *Fair Value Measurement* provides guidance on determining fair value. When there is no evidence of an open market value for an identical or comparable resource, fair value must be estimated using another valuation technique. Relevant evidence for use in another valuation technique may include: [FRS 102.PBE34.73B].

- (a) The cost of the item to the donor.

Or

- (b) In the case of goods that are expected to be sold, the estimated resale value (which may reflect the amount actually realised) after deducting the cost to sell the goods.

As noted in 6.4 above, donated services are recognised as income with an equivalent amount recognised as an expense in income and expenditure, unless the expense can be capitalised as part of the cost of an asset.

[FRS 102.PBE34.70B].

6.4.3.A Impairment of assets held for service potential

Section 17 *Impairment of assets* requires assets within its scope to be carried at the lower of their fair value less costs to sell and their value in use. In a for-profit context, value in use is determined by measuring the present value of the cash flows derived from the asset. However, a PBE will often hold assets for their service potential rather than their ability to generate cash flows. In these circumstances, it is sometimes impossible to determine a value in use by reference to cash flows and will be more appropriate to regard value in use as the present value of future service potential. [FRS 102.BC.B27.1].

6.4.4 Disclosures regarding non-exchange transactions

An entity must disclose the following relating to non-exchange transactions: [FRS 102.PBE34.74]

- (a) The nature and amounts of resources receivable from non-exchange transactions recognised in the financial statements.
- (b) Any unfulfilled conditions or other contingencies attaching to resources from non-exchange transactions that have not been recognised in income.
And
- (c) An indication of other forms of resources from non-exchange transactions from which the entity has benefited, for example unrecognised volunteer services, or donated goods that have been received but which the entity does not expect to recognise until the goods are sold or distributed.

6.5 Property held for the provision of social benefits

Extract from FRS 102

BC.B17.1 The requirements for property held for the provision of social benefits apply to all entities applying FRS 102 and are not restricted to PBEs.

In drafting FRS 102, the FRC considered whether properties held for the provision of social benefits would meet the definition of an investment property. The definition of investment property includes properties held to earn rentals and/or for capital appreciation, but excludes properties held for use in the production or supply of goods and services, or for administrative purposes. However, the FRC observed that although many PBEs that engage in the provision of social housing receive rental income, their primary purpose is to provide social benefits. Provision of social housing is similar to supplying a service and therefore, property held for the primary purpose of providing social benefits is excluded from the scope of investment property and must be accounted for as property, plant and equipment. Similarly, PBEs may hold investment properties, being those that are not held primarily to provide social benefits but return market value rentals and/or are held for their capital appreciation. Those properties must be accounted for as investment properties. [FRS 102.BC.B17.2, FRS 102.BC.B17.3, FRS 102.BC.B17.4].

6.6 Public benefit entity combinations

These requirements in Section 34 apply only to public benefit entities entering into the following entity combinations (i.e., business combinations) which involve a whole entity or parts of an entity combining with another entity: [FRS 102.19.6(b), FRS 102.PBE34.75]

- Combinations at nil or nominal consideration which are in substance a gift.
And
- Combinations which meet the definition and criteria of a merger.

In all other cases, in particular for combinations which are determined to be acquisitions, public benefit entities must apply the requirements of Section 19 *Business Combinations and Goodwill* (see Chapter 22). [FRS 102.PBE19.2A, FRS 102.PBE34.76].

6.6.1 Combinations that are in substance a gift

A combination that is in substance a gift must be accounted for in accordance with Section 19, except for following matters: [FRS 102.PBE34.77]

- (a) Any excess of the fair value of the assets received over the fair value of the liabilities assumed is recognised as a gain in income and expenditure. This gain represents the gift of the value of one entity to another and must be recognised as income. [FRS 102.PBE34.78].
- (b) Any excess of the fair value of the liabilities assumed over the fair value of the assets received is recognised as a loss in income and expenditure. This loss represents the net obligations assumed, for which the receiving entity has not received a financial reward and must be recognised as an expense. [FRS 102.PBE34.79].

6.6.2 Combinations that are an acquisition

Any entity combination which is: [FRS 102.PBE34.81]

- In substance neither a gift nor a merger.
Or
- For which merger accounting is not permitted under the statutory framework under which the public benefit entity reports, must be accounted for as an acquisition in accordance with Section 19.

6.6.3 Combinations that are a merger

Extract from FRS 102

PBE34.80 Unless it is not permitted by the statutory framework under which a public benefit entity reports, an entity combination that is a merger shall apply merger accounting as prescribed below. If merger accounting is not permitted, an entity combination shall be accounted for as an acquisition in accordance with Section 19. [FRS 102.PBE34.80].

The note on legal requirements to FRS 102 states that, for public benefit entities, the use of merger accounting has not been extended beyond its applicability in company law, or other relevant statutory framework. If a public benefit entity that is a company considers that, for the overriding purpose of giving a true and fair view, merger accounting must be applied in circumstances other than those set out in paragraph 10 of Schedule 6 to the Regulations, it may do so providing the relevant disclosures are made in the notes to the financial statements. [FRS 102.A3.30A].

Under merger accounting the following procedures are applied: [FRS 102.PBE34.82, FRS 102.PBE34.83, FRS 102.PBE34.84, FRS 102.PBE34.85]

- (a) The carrying value of the assets and liabilities of the parties to the combination are not adjusted to fair value, although adjustments must be made to achieve uniformity of accounting policies across the combining entities.
- (b) The results and cash flows of all the combining entities must be brought into the financial statements of the newly formed entity from the beginning of the financial period in which the merger occurs. However, an exception is provided from this if either paragraph 9.9 or paragraph 9.9A of FRS 102 applies to a subsidiary (i.e., a subsidiary has either severe long-term restrictions which substantially hinder the parent's rights, has been acquired exclusively with a view to resale and has not previously been consolidated, or the subsidiary is immaterial. See Chapter 8 at 3.4)
- (c) The comparative amounts, marked as 'combined figures', must be restated by including the results for the previous accounting period for all the combining entities and their statements of financial position for the previous reporting date.
And
- (d) All costs associated with the merger must be charged as an expense in the period incurred.

6.6.4 Disclosures for combinations that are a merger

For each entity combination accounted for as a merger in the reporting period the following disclosures are required in the newly formed entity's financial statements: [FRS 102.PBE34.86]

- (a) The names and descriptions of the combining entities or businesses.
- (b) The date of the merger.
- (c) An analysis of the principal components of the current year's total comprehensive income to indicate:
 - (i) The amounts relating to the newly formed merged entity for the period after the date of the merger.
And
 - (ii) The amounts relating to each party to the merger up to the date of the merger.
- (d) An analysis of the previous year's total comprehensive income between each party to the merger.
- (e) The aggregate carrying value of the net assets of each party to the merger at the date of the merger.
And
- (f) The nature and amount of any significant adjustments required to align accounting policies and an explanation of any further adjustments made to net assets as a result of the merger.

6.6.5 Relief from applying Section 34 to combinations before transition

A first-time adopter may elect not to apply the requirements detailed in 6.6 to 6.6.4 above to public benefit entity combinations that were effected before the date of transition to FRS 102. However, if on first-time adoption a public benefit entity restates any entity combination to comply with this section, it must restate all later entity combinations. *[FRS 102.35.10(q)].*

6.7 Public benefit entity concessionary loans

Public benefit entities and other members of a public benefit entity group that make or receive public benefit entity concessionary loans must refer to the relevant paragraphs of Section 34 for the accounting requirements for such loans. *[FRS 102.PBE11.1A, FRS 102.PBE12.1A].*

Public benefit entity concessionary loans are defined as loans made or received between a public benefit entity, or an entity within the public benefit entity group, and another party at below the prevailing market rate of interest that are not repayable on demand and are for the purposes of furthering the objectives of the public benefit entity or public benefit entity parent. *[FRS 102.PBE34.88].*

The prevailing market rate is defined as the rate of interest that would apply to the entity in an open market for a similar financial instrument. *[FRS 102 Appendix I].*

6.7.1 Accounting policy choice

An entity making or receiving public benefit entity concessionary loans must choose to apply to those loans either:

(a) The recognition, measurement and disclosure requirements in Section 11 or Section 12 (see Chapter 13 and 15).

Or

(b) The accounting treatment set out at 6.7.2 below.

A public benefit entity or an entity within a public benefit entity group must apply the same accounting policy to concessionary loans both made and received. *[FRS 102.PBE34.89].*

The effect of choosing the accounting treatment set out in 6.7.2 below is that all public benefit entity concessionary loans are recognised at cost rather than at either amortised cost or fair value under Sections 11 or 12 of FRS 102, depending on the nature of the loan.

6.7.2 Accounting requirements

6.7.2.A Initial measurement

A public benefit entity or an entity within a public benefit entity group making or receiving concessionary loans must initially measure these arrangements at the amount received or paid and recognise these in the statement of financial position. *[FRS 102.PBE34.90].*

6.7.2.B Subsequent measurement

In subsequent years, the carrying amount of concessionary loans in the financial statements must be adjusted to reflect any accrued interest payable or receivable. *[FRS 102.PBE34.91].* There is no requirement that an entity use the effective interest method for a public benefit entity concessionary loan and accrete interest on a loan received or paid at an amount above or below the redemption amount.

To the extent that a loan that has been made is irrecoverable, any impairment loss must be recognised as an expense. *[FRS 102.PBE34.92].* An impairment loss is recognised if the carrying amount of the public benefit entity concessionary loan is lower than its recoverable amount (i.e., the higher of its fair value less costs to sell and value in use).

6.7.2.C Presentation and disclosure

Concessionary loans made and concessionary loans received must be presented by the entity either as separate line items on the face of the statement of financial position or in the notes to the financial statements. *[FRS 102.PBE34.93].*

Concessionary loans must be presented separately between amounts repayable or receivable within one year and amounts repayable or receivable after more than one year. *[FRS 102.PBE34.94].*

The entity must disclose in its significant accounting policies the measurement basis used for concessionary loans and any other accounting policies which are relevant to the understanding of these transactions within the financial statements. *[FRS 102.PBE34.95]*.

The entity must also disclose: *[FRS 102.PBE34.96]*

- (a) The terms and conditions of concessionary loan arrangements, for example the interest rate, any security provided and the terms of the repayment.

And

- (b) The value of concessionary loans which have been committed but not taken up at the year end.

Concessionary loans made or received must be disclosed separately. However multiple loans made or received may be disclosed in aggregate, providing that such aggregation does not obscure significant information. *[FRS 102.PBE34.97]*.

6.8 Other sections in FRS 102 relating to public benefit entities

The following requirements of FRS 102 are also relevant to public benefit entities:

- A public benefit entity that applies the 'PBE' prefixed paragraphs shall make an explicit and unreserved statement that it is a public benefit entity. *[FRS 102.PBE1AC.2B, FRS 102.3.3A]*. This disclosure is not required for a small entity in the Republic of Ireland applying Section 1A. *[FRS 102.3.1AA]*.
- Property held primarily for the provision of social benefits, e.g., social housing held by a public benefit entity, shall not be classified as investment property and shall be accounted for as property, plant and equipment in accordance with Section 17. *[FRS 102.16.3A]*.
- A public benefit entity that is a lessee with lease payments significantly below market rents must, at commencement or lease modification date, use the information readily available to it to determine whether it is in receipt of such incoming resources. If so, the lessee shall recognise those incoming resources as part of the cost of the right-of-use asset. *[FRS 102.1.51(b), FRS 102.20.35]*.
- A public benefit entity that is unable readily to determine either the interest rate implicit in the lease, or the lessee's incremental or obtainable borrowing rate for a lease, must use the rate of interest otherwise obtainable by the public benefit entity on deposits held with financial institutions. *[FRS 102.PBE20.50]*.

Appendix A – Defined terms

Extract from FRS 102 Appendix I Glossary

Definitions

combination that is in substance a gift non-exchange	A combination carried out at nil or nominal consideration that is not a fair value exchange but in substance the gift of one entity to another. A transaction whereby an entity receives value from another entity without directly giving approximately equal value in exchange, or gives value to another entity without directly receiving approximately equal value in exchange.
performance-related condition (in respect of funding commitments, government grants and other non-exchange transactions)	A condition under which entitlement to resources is conditional on the performance of: (a) a specified activity; or (b) a particular level of service or units of output to be delivered.
public benefit entity (PBE)	An entity whose primary objective is to provide goods or services for the general public, community or social benefit and where any equity is provided with a view to supporting the entity's primary objectives rather than with a view to providing a financial return to equity providers, shareholders or members.
public benefit entity concessionary loan	A loan made or received between a public benefit entity or an entity within a public benefit entity group and another party: (a) at below the prevailing market rate of interest; (b) that is not repayable on demand; and (c) that is for the purposes of furthering the objectives of the public benefit entity or public benefit entity parent.
public benefit entity group restriction	A public benefit entity parent and all of its wholly-owned subsidiaries. A requirement that limits or directs the purposes for which a resource may be used that does not meet the definition of a performance-related condition.

Footnote 63 to Appendix I *Glossary* of FRS 102 elaborates that a PBE does not necessarily imply that the purpose of the entity is for the benefit of the public as a whole. For example, many PBEs exist for the direct benefit of a particular group of people, although it is possible that society as a whole also benefits indirectly. In the FRC's view, the most important factor is what the primary purpose of such an entity is, and that it does not exist primarily to provide economic benefit to investors. Organisations such as mutual insurance companies, other mutual co-operative entities and clubs that provide dividends or other economic benefits directly and proportionately to their owners, members or participants are not PBEs.

Some PBEs undertake certain activities that are intended to make a surplus in order to fund their primary activities and that consideration must be given to the primary purpose of an entity's (or group's) activities in assessing whether it meets the definition of a PBE.

A PBE may have received contributions in the form of equity, even though the entity does not have a primary profit motive. However, because of the fundamental nature of public benefit entities, any such contributions are made by the equity holders of the entity primarily to enable the provision of goods and services to beneficiaries rather than with a view to a financial return for themselves. This is different from the position of lenders; loans do not fall into the category of equity. [FRS 102 Appendix I.fn63].

Chapter 37

Transition to FRS 102

Contents

Overview	1956
1 Introduction	1957
1.1 Changes made by the Periodic Review 2024 to FRS 102	1957
1.2 References to IFRS 1	1958
2 Key differences between Section 35 and IFRS	1959
3 Scope and preparation of the opening FRS 102 statement of financial position	1961
3.1 Scope of Section 35	1961
3.1.1 Who is a first-time adopter?	1961
3.1.2 Repeat application of FRS 102	1962
3.2 First-time adoption timeline	1962
3.3 Determining the previous financial reporting framework	1963
3.4 Preparation of the opening FRS 102 statement of financial position	1964
3.4.1 Changes of accounting policy made on transition to FRS 102	1965
3.4.2 Impairment testing at the date of transition	1965
3.4.3 Use of the historical cost accounting rules, alternative accounting rules and fair value accounting rules	1966
3.4.3.A Deemed cost	1967
3.4.3.B Financial instruments held at fair value	1967
3.4.3.C Investment property - transitional adjustments	1967
3.4.4 Impracticability exemption, and subsequent application of transition exemptions	1968
3.4.5 Transition issues where a previous IFRS or FRS 101 reporter applies IFRS 9 to the recognition and measurement of financial instruments under FRS 102	1969
3.4.5.A Previous IFRS or FRS 101 reporter already applying IFRS 9 continues to apply IFRS 9	1969
3.4.5.B Previous IFRS or FRS 101 reporter previously applying IAS 39 to hedge accounting continues to apply IAS 39 to hedge accounting	1969
3.4.5.C Previous IFRS or FRS 101 reporter previously applying IAS 39 to account for hedge accounting but changes to IFRS 9	1970
4 Mandatory exceptions to retrospective application	1972
4.1 Derecognition of financial assets and financial liabilities	1972
4.1.1 Implementation issues	1972
4.1.2 First-time adopters that previously applied IFRS 9 and choose to apply IAS 39 or IFRS 9 to the recognition and measurement of financial instruments on adoption of FRS 102	1973
4.1.3 Financial assets and financial liabilities previously derecognised	1974
4.1.4 Financial assets and financial liabilities previously not derecognised	1974

4.1.5	Specific implementation issues where a previous IFRS or FRS 101 reporter (previously applying IFRS 9) applies Sections 11 and 12 under FRS 102.	1974
4.1.5.A	Financial assets - what is derecognition?	1974
4.1.5.B	Financial liabilities	1975
4.2	Accounting estimates	1976
4.2.1	Exception to retrospective application	1976
4.2.2	Post-balance sheet events and correction of errors	1976
4.3	Non-controlling interest	1976
5	Optional exemptions to retrospective application	1978
5.1	Introduction	1978
5.2	Business combinations, including group reconstructions	1979
5.2.1	Option to restate business combinations retrospectively	1979
5.2.1.A	Considerations on restatement of business combinations	1980
5.2.2	Scope of the transition exemption not to restate business combinations	1981
5.2.3	Application of the transition exemption when not restating business combinations - general	1982
5.2.3.A	Classification of business combination	1982
5.2.3.B	Recognition and derecognition of assets and liabilities	1982
5.2.3.C	Measurement of assets and liabilities	1983
5.2.4	Restatement of goodwill when not restating business combinations	1984
5.2.4.A	Impairment of goodwill	1984
5.2.4.B	Transition accounting for contingent consideration	1985
5.2.4.C	Goodwill on a pre-transition business combination that is a foreign operation (where not restated under Section 19)	1986
5.2.4.D	Negative goodwill	1986
5.2.4.E	Goodwill previously deducted from equity	1987
5.2.4.F	Goodwill and intangible asset amortisation	1987
5.2.5	Changes in scope of consolidation	1988
5.2.5.A	Changes in scope of consolidation compared to the previous financial reporting framework	1988
5.2.5.B	Previously unconsolidated subsidiaries	1988
5.2.5.C	Previously consolidated entities that are not subsidiaries	1990
5.2.6	Business combination - transition example	1990
5.3	Public-benefit entity combinations	1992
5.4	Share-based payment transactions	1993
5.5	Fair value or previous revaluation as deemed cost	1993
5.5.1	Scope of the deemed cost exemption	1994
5.5.2	Establishing deemed cost at a date other than transition	1994
5.5.3	Impairment	1995
5.5.4	Deferred tax	1995
5.5.5	Revaluation reserve	1995
5.6	Deemed cost for oil and gas assets	1996
5.7	Individual and separate financial statements	1997
5.7.1	Use of cost or deemed cost for investments - implementation issues	1998
5.8	Development costs	1998
5.9	Borrowing costs	1999

5.10	Decommissioning liabilities included in the cost of property, plant and equipment and right-of-use assets	2000
5.11	Leases	2000
5.11.1	Assessment of whether a contract contains a lease	2001
5.11.2	IFRS 16 election	2002
5.11.2.A	Implementation issues	2002
5.11.3	Transition arrangements for lessees not applying the IFRS 16 election	2003

Overview

Section 35 *Transition to this FRS* ('Section 35') addresses the first-time adoption of FRS 102. The guidance in Section 35 is a simplified version of IFRS 1 *First-time Adoption of International Financial Reporting Standards*.

The underlying principle in Section 35 is that a first-time adopter must prepare financial statements applying FRS 102 retrospectively. However, Section 35 sets out a number of optional exemptions and mandatory exceptions that allow or require a first-time adopter to deviate from this principle in preparing an opening statement of financial position at the date of transition (i.e., at the beginning of the earliest period presented). Section 35 also sets out the disclosures required to explain the transition to FRS 102. These include reconciliations from its previous financial reporting framework to FRS 102 of equity at the date of transition and the comparative period end, and of the comparative profit or loss.

What you need to know

- A first-time adopter is an entity that presents its first financial statements that conform to FRS 102 (being the first financial statements in which the entity makes an explicit and unreserved statement of compliance with FRS 102), regardless of whether its previous financial reporting framework was adopted IFRS, FRS 101, FRS 105 or another set of accounting standards.
- Section 35 applies to the first FRS 102 financial statements. An entity that applied FRS 102 in a previous reporting period, but whose most recent annual financial statements did not contain an explicit and unreserved statement of compliance, could choose to apply Section 35 or to retrospectively apply FRS 102 as if it had never stopped applying it.
- The 'date of transition' to FRS 102 is the beginning of the earliest period for which the entity presents full comparative information in accordance with FRS 102 in its first financial statements that comply with FRS 102.
- In preparing its opening statement of financial position (at the date of transition), a first-time adopter must follow the requirements of FRS 102, subject to application of the mandatory exceptions (relating to derecognition of financial assets and financial liabilities, non-controlling interests and accounting estimates) and optional exemptions provided in Section 35. Adjustments arising as a result of the transition to FRS 102 are recognised directly in retained earnings (or, if appropriate, another category of equity).
- When an entity makes estimates in accordance with FRS 102, these must be consistent with estimates made under previous GAAP for the same date (after adjusting for the effects of any differences in accounting policies), unless there is objective evidence that the previous GAAP estimates were in error.
- From the date of transition, FRS 102 must be applied in full, except where provided otherwise in Section 35. Consistent accounting policies are applied throughout the periods presented and transitional provisions in amendments to FRS 102 that apply to ongoing FRS 102 reporters are not relevant (unless replicated in Section 35 itself).
- A first-time adopter must explain the transition to FRS 102, including presenting reconciliations of equity at the date of transition and the end of the comparative period, and of profit or loss of the comparative period with previous GAAP. These reconciliations must, to the extent practicable, distinguish between adjustments arising from changes in accounting policies and those relating to the correction of errors. There is no requirement in Section 35 (unlike IFRS 1) to present an opening statement of financial position and related notes. There are also certain disclosures where an entity has applied FRS 102 in a previous reporting period but not in its most recent annual financial statements and is re-applying FRS 102.

1 Introduction

Entities transitioning to FRS 102 are likely to have applied adopted IFRS or FRS 101 *Reduced Disclosure Framework* (or if previously applying the micro-entities regime, FRS 105 *The Financial Reporting Standard applicable to the Micro-entities Regime*). This chapter therefore focuses on differences between adopted IFRS (given that FRS 101 follows the same recognition and measurement requirements, with limited exceptions) and FRS 102.

There may be many reasons why an entity might choose to change its financial reporting framework to FRS 102. These could include:

- The entity ceasing to have its instruments listed on a UK regulated market (or other public markets) which required reporting in accordance with IFRS.
 - A change in ownership of the entity (where a different accounting framework is followed by the new group of which the entity is a member).
 - A change in the financial framework followed by the group of which the entity is a member.
 - Tax and/or distributable profit implications of different financial reporting frameworks.
 - A desire to reduce GAAP complexity and disclosure (e.g., arising from the implementation of new IFRS).
- And
- Ineligibility to continue applying FRS 105.

1.1 Changes made by the Periodic Review 2024 to FRS 102

In March 2024, the FRC issued *Amendments to FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland and other FRSS* (Periodic Review 2024). The key changes affecting Section 35 can be summarised as follows:

- Section 35 provides first-time adopters certain optional exemptions from full retrospective application of FRS 102 and under the amendments, certain new exemptions have been introduced for first-time adopters in connection with lease accounting and revenue recognition. These exemptions are not the same as the transitional provisions offered to existing FRS 102 reporters but offer similar reliefs. There are also changes to other exemptions, such as deemed cost exemptions, to reflect the new lease model for lessees and to remove exemptions that related to the previous lease accounting model.
- Optional exemptions available to first time adopters in respect of lease accounting comprise:
 - The option to assess whether a contract contains a lease based on facts and circumstances at the date of transition, rather than at the commencement date of the lease (see 5.11.1 below).
 - For an entity previously applying IFRS 16 *Leases*, an option to use the lease liability and right-of-use asset balances calculated under IFRS 16 as the FRS 102 lease liability and right-of-use asset balances on the date of transition to FRS 102 and to rely on its previous assessment of impairment (under adopted IFRS) at that date (see 5.11.2 below).
 - A lessee not applying the Section 35 optional exemption to carry forward the lease liability calculated under IFRS 16 measures lease liabilities at the date of transition at the present value of remaining lease payments, discounted using the lessee's incremental borrowing rate or the lessee's obtainable borrowing rate (see 5.11.3 below). The right-of-use assets must be measured at an amount equal to the lease liability, adjusted by the amount of any prepaid or accrued lease payments (except in the case of a right-of-use asset that meets the definition of investment property, which is generally measured at fair value). However, a lessee is permitted to apply one or more of the following options, which are available on a lease-by-lease basis:
 - (a) An option to apply a single discount rate to a portfolio of leases with reasonably similar characteristics.
 - (b) An option not to recognise a lease liability and right-of-use asset for leases ending within 12 months of the date of transition or for which the underlying asset is of low value.
 And
 - (c) An option to use hindsight in the assessment of lease term.
- With regards to revenue recognition, a first-time adopter is permitted to apply any of the same practical expedients which are available to existing FRS 102 reporters on transition to the amended standard. These practical expedients (which must be applied consistently to all contracts and periods presented) comprise the following (see 5.12 below):

- For 'completed contracts' (meaning a contract for which the entity has transferred all the goods or services identified in accordance with its previous financial reporting framework), an optional relief from restating contracts that either begin or end in the same reporting period or are completed contracts as at the beginning of the earliest period presented.
- For completed contracts with variable consideration, an option to use the transaction price at the date the contract was completed rather than estimating variable consideration in the comparative periods.

And

- An optional relief from full retrospective restatement of contracts modified before the date of initial application or the date of transition.
- Additional disclosure requirements have been introduced requiring first-time adopters to state which optional exemptions have been applied in the transition to FRS 102, and to provide an explanation of material changes to reported financial position that are not presented in the reconciliations of profit or loss and equity, including whether these arise from errors or changes in accounting policy (see 6.2 and 6.3 below).
- First-time adopters will no longer be able to elect to apply the recognition and measurement provisions of IAS 39 *Financial instruments: Recognition and Measurement* unless doing so would make the entity's accounting policies consistent with those adopted in the consolidated financial statements in which the entity is included (see 4.1.1 below).
- A new optional exemption is introduced to allow a first-time adopter selecting an accounting policy of capitalising development costs to elect to treat the date of transition as the date on which capitalisation commences (see 5.8 below).
- Certain exemptions included in the previous version of FRS 102 have been removed where no longer considered to be required.
- Other wording changes have been made to reflect the fact that entities will typically be transitioning from IFRS, FRS 101 or FRS 105 (meaning that some previous exemptions that were relevant for first-time adopters transitioning from previous UK GAAP are no longer relevant). There are also a number of clarifications to the existing text of Section 35.

1.2 References to IFRS 1

IFRS 1, as referred to throughout this chapter, is the version of IFRS 1 issued as of July 2024 as amended by *Annual Improvements to IFRS Accounting Standards - Hedge Accounting by a First-Time Adopter (Amendments to IFRS 1)*. However, as described below, IFRS 1 continues to be amended as changes are made to other IFRSs.

2 Key differences between Section 35 and IFRS

The transition exceptions and exemptions included in Section 35 are similar to those included in IFRS 1. However, Section 35 omits certain exceptions and exemptions that are included in IFRS 1, adds certain others and modifies the wording in places. Overall Section 35 contains significantly less guidance and examples on the application of the transition exceptions and exemptions than IFRS 1. Many transition exemptions in IFRS 1 that do not appear in Section 35 relate to the implementation of IFRSs that do not have a direct counterpart in FRS 102.

IFRS 1 contains specific transition exemptions relating to IFRS 9 *Financial Instruments* not included in Section 35 (although IFRS 9 is available as an accounting policy choice for the recognition and measurement of financial instruments under FRS 102). Section 35 does, however, include transition provisions for hedge accounting where IAS 39 or IFRS 9 is to be applied to financial instruments under FRS 102. These are similar to the transition provisions for hedge accounting included in IFRS 1 but include a concession over the timing of completion of the designation and documentation of hedging relationships (see 5.16.3 below). There is also a transition exception for derecognition of financial assets and financial liabilities (see 4.1 below).

The main differences between Section 35 and IFRS 1 are listed below:

- Section 35 contains relief where it is impracticable for an entity to restate the opening statement of financial position or make the required disclosures. [FRS 102.35.11].
- The disclosure requirements regarding transition in the annual financial statements are less extensive in Section 35. For example, there are no requirements to:
 - Present an opening statement of financial position and related notes. [FRS 102.35.7]
 - Explain how the transition affects the reported cash flows or to disclose the adjustments made for impairment or reversal of impairment in preparing the opening statement of financial position.
 - Reconcile total comprehensive income determined in accordance with its previous financial reporting framework to FRS 102 (although there is a requirement to reconcile profit or loss). [FRS 102.35.13(c)]
 - Make certain disclosures relating to designation of financial assets or financial liabilities and to the use of deemed cost. [IFRS 1.29-31C]
 Or
 - Explain changes to accounting policies or the use of exemptions between the first FRS 102 interim financial report and the first FRS 102 financial statements and update the reconciliations previously included in the interim financial statements. [IFRS 1.32(c)].
- In addition, Section 35 includes the following transition exemptions not in IFRS 1:
 - Dormant entities (see 5.17 below). [FRS 102.35.10(m)]
 - Public benefit entity combinations effected pre-transition (see 5.3 below). [FRS 102.35.10(q)]
 And
 - Development costs (see 5.8 below).
- As part of the Periodic Review 2024, several transitional provisions were added as a result of revisions to Section 20 *Leases* and Section 23 *Revenue from Contracts with Customers*. The main differences between Section 35 and IFRS 1 are listed below:
 - Section 35 contains a specific transition exemption for a lessee applying IFRS 16 immediately prior to the date of transition to FRS 102. [FRS 102.35.10(x)]
 - When not applying the IFRS 16 election, Section 35 allows a lessee to choose an obtainable borrowing rate as a discount rate in measuring the lease liability at the date of transition. [FRS 102.35.10(x)]
 - The practical expedients in Section 35 for lessees do not include the option available in IFRS 1 to exclude initial direct costs from measurement of the right-of-use asset at the date of transition. [FRS 102.35.10(x)]
 - Section 35 provides optional relief from full retrospective restatement of contracts modified before the beginning of the reporting period. The entity, instead, may reflect the aggregate effect of all of the modifications that occurred before the beginning of the earliest period presented or before the beginning of the reporting period. Under IFRS 1, however, the relief applies only to contracts modified before the date of transition rather than before the beginning of the reporting period. [FRS 102.35.10(y), FRS 102.35.1.65(c)].

Where FRS 102 does not specifically address a transaction, Section 10 *Accounting Policies, Estimates and Errors* requires management to use judgement in developing and applying a relevant and reliable accounting policy. In making that judgement, management must refer to and consider the sources listed in Section 10, and may consider the requirements and guidance in adopted IFRS dealing with similar and related issues. [FRS 102.10.4, FRS 102.10.5, FRS 102.10.6]. Consequently, management may refer to the IFRS 1 requirements and guidance relating to the same exception or exemption. However, care needs to be taken in doing so where the first-time adoption or underlying accounting for the item differs.

3 Scope and preparation of the opening FRS 102 statement of financial position

3.1 Scope of Section 35

Section 35 applies to a first-time adopter of FRS 102 regardless of whether its previous financial reporting framework was adopted IFRS, FRS 101, FRS 105 or another set of generally accepted accounting principles (GAAP) such as its national accounting standards, or another framework such as the local income tax basis (see 3.1.1 below). [FRS 102.35.1].

Most FRS 102 reporters in the UK will be UK companies or LLPs preparing statutory accounts under the Companies Act 2006 ('CA 2006') (or the CA 2006 as applied to LLPs). In such cases, the previous financial reporting framework will be FRS 101, FRS 105, or adopted IFRS.

A first-time adopter must apply the requirements of Section 35 in its first financial statements that conform to FRS 102. [FRS 102.35.3]. These are the first financial statements (excluding interim financial statements) in which the entity makes an explicit and unreserved statement of compliance with FRS 102. [FRS 102.35.4]. These financial statements are referred to as the 'first FRS 102 financial statements' below.

Section 35 also addresses the situation where an entity re-applies FRS 102 after a period of applying a different financial reporting framework (see 3.1.2 below).

3.1.1 Who is a first-time adopter?

Normally, it will be clear whether an entity is a first-time adopter of FRS 102, i.e., an entity that presents its first annual financial statements that conform to FRS 102, regardless of whether its previous financial reporting framework was adopted IFRS or another set of accounting standards. [FRS 102 Appendix I]. However, Section 35 provides a description of circumstances in which an entity is a first-time adopter and therefore is within the standard's scope (see the extract from Section 35 below): [FRS 102.35.4]

Extract from Section 35

- 35.4** An entity's first financial statements that conform to this FRS are the first financial statements⁵⁸ in which the entity makes an explicit and unreserved statement in those financial statements of compliance with this FRS. Financial statements prepared in accordance with this FRS are an entity's first such financial statements if, for example, the entity:
- (a) did not present financial statements for previous periods;
 - (b) [Deleted]
 - (c) presented its most recent previous financial statements in conformity with adopted IFRS;
 - (d) presented its most recent previous financial statements in conformity with FRS 101; or
 - (e) presented its most recent previous financial statements in conformity with FRS 105.

⁵⁸ This excludes interim financial statements.

The first FRS 102 financial statements must be a complete set of financial statements, as defined in paragraph 3.17 of FRS 102 (see Chapter 6 at 2.3). This means that the financial statements must include a full set of primary statements and notes (together with comparatives). [FRS 102.35.4, FRS 102.35.5, FRS 102.35.6].

Small entities applying Section 1A *Small Entities* of FRS 102 are required to present an income statement, statement of financial position and notes (together with comparatives), but are not required to present a cash flow statement. [FRS 102.1A.8, FRS 102.7.1B]. However, a small entity may need to present a statement of comprehensive income when it recognises gains or losses in other comprehensive income and a statement of changes in equity (or, where appropriate, a statement of income and retained earnings) when it has changes in equity other than profit or loss. [FRS 102.1A.9]. See Chapter 5 at 3.3.3.

The first FRS 102 financial statements of a UK company (or LLP) will usually be the statutory financial statements, but this might not always be the case (e.g., first-time adoption in an offering document). In practice, most companies publishing offering documents are likely to be applying IFRS or adopted IFRS rather than FRS 102.

An entity is not a first-time adopter if it presented financial statements in the previous year that contained an explicit and unreserved statement of compliance with FRS 102 even if its auditors qualified the auditor's report on those financial statements.

3.1.2 Repeat application of FRS 102

An entity that has applied FRS 102 in a previous reporting period, but whose most recent previous annual financial statements did not contain an explicit and unreserved statement of compliance with FRS 102, has a choice either to apply Section 35 or else to apply FRS 102 retrospectively in accordance with Section 10, as if the entity had never stopped applying FRS 102. [FRS 102.35.2]. Such an entity must also disclose the reason it stopped applying FRS 102, the reason it is resuming application of FRS 102 and whether it has applied Section 35 or FRS 102 retrospectively (see 6.4 below). [FRS 102.35.12C].

Where the entity chooses to re-apply Section 35, it must apply the transition exceptions and exemptions without regard to the elections made when it applied Section 35 previously. The entity will, therefore, apply the transition exceptions and exemptions of Section 35 based on its new date of transition to FRS 102. However, where an entity chooses to apply FRS 102 retrospectively, it does so as if it had never stopped applying FRS 102. [FRS 102.35.2]. Therefore, the entity must retain the transition exceptions and exemptions applied in its first FRS 102 financial statements.

3.2 First-time adoption timeline

An entity's first FRS 102 financial statements must include at least two statements of financial position, two statements of comprehensive income, two separate income statements (if presented), two statements of cash flows (unless exempt) and two statements of changes in equity and related notes. [FRS 102.3.17, FRS 102.3.20, FRS 102.7.1B, FRS 102.35.5]. Where permitted by the standard, statements of income and retained earnings may be included in place of the statements of comprehensive income and statements of changes in equity. [FRS 102.3.18, FRS 102.6.4].

As a small entity is not generally required to present a statement of comprehensive income or a statement of changes in equity, a small entity's first FRS 102 financial statements need only include at least two statements of financial position, two income statements and related notes. [FRS 102.1A.8]. However, Section 1A explains that in order for the financial statements to meet the 'true and fair requirement', a small entity may need to present a statement of comprehensive income when it recognises gains or losses in other comprehensive income and a statement of changes in equity (or, where appropriate, a statement of income and retained earnings) when it has changes in equity other than profit or loss. [FRS 102.1A.9].

The date of transition is the beginning of the earliest period for which the entity presents full comparative information in accordance with FRS 102 in its FRS 102 financial statements. [FRS 102.35.6, FRS 102 Appendix I]. Figure 3-1 below shows how for an entity with a December year-end the above terms are related:

Figure 3-1: First-time adoption timeline

The following Illustration shows how an entity determines its date of transition to FRS 102.

Illustration 3-1: Determining the date of transition to FRS 102

- (i) *Entity A's year-end is 31 December and it presents financial statements that include one comparative period. Entity A changes its financial reporting framework to prepare financial statements in conformity with FRS 102 for the first accounting period starting on or after 1 January 20X6.*
Entity A's first financial statements in conformity with FRS 102 are for the period ending on 31 December 20X6. Its date of transition to FRS 102 is 1 January 20X5, which is the beginning of the comparative period included in its first financial statements in conformity with FRS 102.
- (ii) *Entity B's year-end is 30 November and it presents financial statements that voluntarily include full information for two comparative periods. Entity B changes its financial reporting framework to prepare financial statements in conformity with FRS 102 for the accounting period ended 30 November 20X6.*
Entity B's first financial statements in conformity with FRS 102 are for the accounting period ended 30 November 20X6. Its date of transition to FRS 102 is 1 December 20X3, which is the beginning of the earliest period for which full comparative information is included in its first financial statements in conformity with FRS 102.
- (iii) *Entity C's most recent financial statements under its previous financial reporting framework are for the period from 1 July 20X4 to 31 December 20X5. Entity C presents its first financial statements (with one comparative period) in conformity with FRS 102 for the period ending 31 December 20X6.*
Entity C's date of transition is 1 July 20X4.

How we see it

While FRS 102 requires presentation of at least one comparative period, neither FRS 102 (nor the CA 2006, for a UK company) require the comparative period to be a 12-month period. Thus, the entity's date of transition will be the beginning of the earliest comparative period, irrespective of the length of that period.

However, the financial statements must disclose that the comparative period is not a 12-month period, the reason why the comparative period is not 12 months and that the periods presented are not entirely comparable.

[FRS 102.3.10, FRS 102.3.14, FRS 102.3.17, FRS 102.35.5].

3.3 Determining the previous financial reporting framework

Although FRS 102 does not define 'previous financial reporting framework', it is generally taken to mean the basis of accounting that a first-time adopter used immediately before adopting FRS 102. This is the equivalent term to 'previous GAAP' as used in IFRS 1. [IFRS 1 Appendix A].

Most UK companies (and LLPs) are required to prepare and file statutory accounts. [s394, s441, s394 (LLP), s441 (LLP)]. There are exemptions for certain dormant subsidiary companies (and LLPs) not to prepare and file statutory accounts. [s394A, s448A, s394A (LLP), s448A (LLP)]. In addition, certain unlimited companies are not required to file statutory accounts. [s448]. Consequently, it will generally be appropriate to regard the GAAP used in the latest set of statutory accounts of a UK company (or LLP) prior to implementation of FRS 102 as the previous financial reporting framework. While there may be scope for judgement in certain situations over what is the previous financial reporting framework, such situations are likely to be rare.

3.4 Preparation of the opening FRS 102 statement of financial position

The fundamental principle in Section 35 is to require full retrospective application of FRS 102, subject to certain mandatory exceptions and optional exemptions that can be applied at the date of transition.

[FRS 102.35.7].

Extract from Section 35

- 35.7** Except as provided in paragraphs 35.9 to 35.11B, an entity shall, in its opening statement of financial position as of its date of transition to this FRS (ie the beginning of the earliest period presented):
- (a) recognise all assets and liabilities whose recognition is required by this FRS;
 - (b) not recognise items as assets or liabilities if this FRS does not permit such recognition;
 - (c) reclassify items that it recognised under its previous financial reporting framework as one type of asset, liability or component of equity, but are a different type of asset, liability or component of equity under this FRS; and
 - (d) apply this FRS in measuring all recognised assets and liabilities.
- This section does not require the opening statement of financial position to be presented.

A first-time adopter might identify errors under its previous financial reporting framework when transitioning to FRS 102. Material prior period errors identified under its previous financial reporting framework must be adjusted retrospectively, to the extent practicable. [FRS 102.10.21]. The reconciliations required by Section 35 must also, to the extent practicable, distinguish the correction of those errors from changes in accounting policies (see 6.3 below). [FRS 102.35.14].

Where the accounting policies applied in the opening statement of financial position under FRS 102 differ from those applied under an entity's previous financial reporting framework, the resulting adjustments arise from transactions, other events or conditions before the date of transition. Therefore, an entity must recognise those adjustments directly in retained earnings (or, if appropriate, another category of equity - see Illustration 3-2 below) at the date of transition to FRS 102. [FRS 102.35.8].

Illustration 3-2: Revaluation of property

On transition to FRS 102, Entity A adopts a policy of revaluation for its freehold property. [FRS 102.17.15E, FRS 102.17.15F]. The freehold property, with a net book value of £500,000 under its previous financial reporting framework (where the cost model had been applied), is revalued to £1.1m, being its fair value at the date of transition. A revaluation reserve of £600,000 is recognised at the date of transition.

Under FRS 102, freehold property is revalued through other comprehensive income and consequently deferred tax arises on this timing difference. [FRS 102.29.6]. The adjustment to reflect the revaluation (and related deferred tax) is recognised in equity as at the date of transition. [FRS 102.35.8].

If Entity A is a UK company (or LLP) preparing statutory accounts, a statutory revaluation reserve is required to be established by the alternative accounting rules in the Regulations (and LLP Regulations). [1 Sch 35, 1 Sch 35 (LLP)]. The related deferred taxation charge arising on the revaluation may be offset against the statutory revaluation reserve in accordance with the alternative accounting rules rather than taken to retained earnings. [1 Sch 35(3)]. See 3.4.3 below and Chapter 20 at 3.7.3 and Chapter 31 at 6.

Another example where adjustments (if any) may be reflected in a category of equity other than retained earnings concerns where cash flow hedge accounting is applied under FRS 102. See 5.16 below for further discussion of the hedge accounting transition provisions.

IFRS 1 includes additional requirements and guidance in respect of the transition compared to FRS 102 that can provide further insight into the requirements of Section 35. The application of specific exceptions and exemptions in Section 35 (including any relevant additional guidance in IFRS 1) are addressed at 4 and 5 below, respectively. However, some general issues are discussed below, namely:

- Changes of accounting policy made on transition to FRS 102 (see 3.4.1 below).
 - Impairment testing at the date of transition (see 3.4.2 below).
 - Use of the historical cost accounting rules, alternative accounting rules, and fair value accounting rules (by UK companies, LLPs and certain other entities) (see 3.4.3 below).
 - The impracticability exemption, and subsequent application of transition exemptions (see 3.4.4 below).
- And
- Transition issues where a previous IFRS or FRS 101 reporter applies IFRS 9 to the recognition and measurement of financial instruments under FRS 102 (see 3.4.5 below).

3.4.1 Changes of accounting policy made on transition to FRS 102

The fundamental principle in Section 35 is to require full retrospective application of FRS 102. This means that consistent accounting policies are used in the opening statement of financial position and for all periods presented in an entity's first FRS 102 financial statements. [FRS 102.10.7, FRS 102.35.8].

A first-time adopter is not under a general obligation to ensure that its FRS 102 accounting policies are as similar as possible to its accounting policies under its previous financial reporting framework. Therefore, a first-time adopter could adopt a revaluation model for property, plant and equipment even if it had applied a cost model under its previous financial reporting framework (or *vice versa*).

A first-time adopter would, however, need to take into account the requirements of Section 10 to ensure that its choice of accounting policy results in information that is relevant and reliable. In doing so, in situations where an FRS does not specifically address the issue, management must refer to the hierarchy set out in paragraph 10.5 and may consider the requirements and guidance in adopted IFRS dealing with similar and related issues. [FRS 102.10.4, FRS 102.10.5, FRS 102.10.6].

Following the Periodic Review 2024 amendments, first-time adopters may choose to apply the accounting policy choice available under paragraphs 11.2(b) and 12.2(b) - which are the recognition and measurement provisions of IAS 39 (as adopted in the relevant jurisdiction), the disclosure requirements of Section 11 *Basic Financial Instruments* and Section 12 *Other Financial Instruments Issues*, and the presentation requirements of paragraphs 11.28A and 12.25W - only if this would make the entity's accounting policies consistent with those adopted in the consolidated financial statements in which the entity is included.

Otherwise, the first-time adopter must choose to apply either: [FRS 102.35.8C]

- The accounting policy choice available under paragraphs 11.2(a) and 12.2(a) - which are the provisions of Section 11 and Section 12 in full.

Or

- The accounting policy choice available under paragraphs 11.2(c) and 12.2(c) - which are the recognition and measurement provisions of IFRS 9 (as adopted in the relevant jurisdiction) and IAS 39 (as amended following the publication of IFRS 9), the disclosure requirements of Section 11 and 12, and the presentation requirements of paragraphs 11.28A and 12.25W,

to account for all of its financial instruments (see 4.1.1 below).

How we see it

In our view, transitional provisions in other sections of FRS 102, other FRC standards (such as FRS 103 *Insurance Contracts*), IAS 39 or IFRS 9 (where applied to the recognition and measurement of financial instruments), and other IFRSs that are required to be applied by certain FRS 102 reporters, are ignored when an entity applies Section 35 to the transition. This is the case unless the transitional provisions are stated to apply to a first-time adopter (as is the case for FRS 103) or are provided for as a specific transition exception or exemption in Section 35.

Section 35 contains a number of transition exemptions relating to Sections 11 and 12. The only transition exemption explicitly referring to the use of IAS 39 or IFRS 9 relates to hedge accounting (see 5.16 below).

TECH 02/17BL *Guidance on Realised and Distributable Profits under the Companies Act 2006* ('TECH 02/17BL'), issued by the ICAEW and ICAS, provides guidance on how and when transition to a new GAAP affects distributable profits. This guidance is discussed in Chapter 1 at 4.5 and Chapter 1 at 5.8.

3.4.2 Impairment testing at the date of transition

FRS 102 permits first-time adopters to make use of deemed cost for certain assets as the initial carrying amount on transition. Section 35 specifically requires that the carrying amounts of exploration and evaluation assets and assets in the development and production phases are tested for impairment when the exemption in paragraph 35.10(j) is taken for oil and gas assets (see 5.6 below). However, while FRS 102 does not specifically call for an impairment test of other assets, a first-time adopter should be mindful that there are no exemptions from full retrospective application of the requirements set out in Section 27 *Impairment of Assets* (or indeed in relation to the impairment of financial assets under Sections 11 and 12, IAS 39, or IFRS 9).

Therefore, an entity must consider whether there is an indicator of impairment (or reversal of previous impairment) of assets at the date of transition that might require an impairment test to be performed. In relation to financial assets, an entity is required to consider whether there is objective evidence that an impairment loss has been incurred (where Sections 11 and 12, or IAS 39 is applied), and to recognise a loss allowance for expected credit losses in accordance with IFRS 9 where that standard is applied.

If an entity uses fair value as deemed cost for an asset whose fair value is above cost, an impairment test may be appropriate for other assets where the deemed cost election has not been taken.

Impairment losses for assets (except goodwill) are reversed under Section 27 if, and only if, the reasons for the impairment loss have ceased to apply. Hence, for assets (other than goodwill), no practical differences between applying Section 27 fully retrospectively or as at the date of transition are expected. [FRS 102.27.28, FRS 102.27.29]. Performing the test at the date of transition results in recognition of any required impairment as of that date, remeasuring any impairment determined under the entity's previous financial reporting framework to comply with the approach in Section 27.

The estimates used to determine whether a first-time adopter recognises an impairment provision at the date of transition to FRS 102 need to be consistent with estimates made for the same date under its previous financial reporting framework (after adjustments to reflect any difference in accounting policies), unless there is objective evidence that those estimates were in error. If a first-time adopter needs to make estimates for that date that were not necessary under its previous financial reporting framework, such estimates and assumptions must not reflect conditions that arose after the date of transition to FRS 102.

If a first-time adopter's opening FRS 102 statement of financial position reflects impairment losses for an asset held at deemed cost (whether the losses were recognised under its previous financial reporting framework or upon transition to FRS 102), any later reversal of those impairment losses (not permitted for goodwill) must be recognised in profit or loss provided that Section 27 does not require such reversal to be treated as a revaluation. [FRS 102.27.30].

How we see it

Where an entity makes use of deemed cost exemptions at transition, deemed cost is used as a surrogate for cost at the date the deemed cost is established. Therefore, if the carrying amount at the date the deemed cost is established reflects previous impairment, these impairment losses cannot be later reversed and any later impairment losses are reflected in profit or loss.

Certain transition exemptions permit use of a deemed cost equal to the carrying amount of the asset as determined under the entity's previous financial reporting framework – an example includes investments in subsidiaries, associates or jointly controlled entities in individual or separate financial statements.

[FRS 102.35.10(f)].

How we see it

Where this is the case, we consider that application of Section 27 could lead to a further impairment on transition, but not to a reversal of an impairment determined correctly under the entity's previous financial reporting framework (as reflecting a reversal of impairment is not consistent with the deemed cost being equal to the previous financial reporting framework carrying amount). See 5.5 below.

Section 35 does not require specific disclosures regarding any impairment losses recognised or reversed on transition to FRS 102; however, where material, disclosure of such adjustments is likely to be relevant to an explanation of the transition. [FRS 102.35.12]. Indeed, a first-time adopter is required to present reconciliations of the statement of equity at the date of transition and at the end of the latest comparative period presented, and to explain material changes to its reported financial position, where not presented in the reconciliation. [FRS 102.35.12B, FRS 102.35.13,]. See 6.2 below.

3.4.3 Use of the historical cost accounting rules, alternative accounting rules and fair value accounting rules

A UK company's (or LLP's) statutory accounts prepared in accordance with FRS 102 are Companies Act accounts (non-IAS accounts, for an LLP). Therefore, the company (or LLP), in preparing its FRS 102 opening statement of financial position, must consider whether it makes use of the historical cost accounting rules, alternative accounting rules or fair value accounting rules set out in Part 2 of Schedule 1 to the Regulations (or the equivalent requirements in Schedules 2 and 3 to the Regulations or Schedule 1 to the LLP Regulations).

This is relevant both to whether any adjustments made at the date of transition are reported in retained earnings or another category of equity, and to subsequent accounting and disclosure requirements. For example, where the revaluation model is applied to property, plant and equipment, a statutory revaluation reserve must be established under the alternative accounting rules. See Chapter 20 at 3.7.3.

3.4.3.A Deemed cost

A number of the transition exemptions permit an entity to establish a deemed cost that may differ from the historical cost carrying amount under its previous financial reporting framework. The implications of deemed cost are discussed at 5.5 below. For a UK company's (or LLP's) statutory accounts, the deemed cost, in many cases, will need to comply with either the alternative accounting rules or the fair value accounting rules, as applicable. Illustration 3-2 at 3.4 above illustrates that where a revaluation policy is adopted by a UK company (or LLP), a statutory revaluation reserve is established where required under the alternative accounting rules. However, even if, for example, a UK company (or LLP) records an item of property, plant and equipment at a deemed cost equal to its fair value at the date of transition or treats a revaluation under its previous financial reporting framework as a deemed cost at the date of the revaluation (see 5.5 below), application of the alternative accounting rules may require the company (or LLP) to establish (or maintain an existing) statutory revaluation reserve. [1 Sch 35, 1 Sch 35 (LLP)].

3.4.3.B Financial instruments held at fair value

Where financial instruments are measured at fair value under the fair value accounting rules, certain fair value movements are required to be recognised in other comprehensive income and accumulated in the statutory fair value reserve. [1 Sch 40, 1 Sch 40 (LLP)]. The most common examples relate to fair value movements arising on: cash flow hedges (see Chapter 14 at 4.8), exchange differences in respect of monetary items forming part of a net investment in a foreign operation (and hedges of a net investment in a foreign operation) (see Chapter 14 at 4.9), and, where IAS 39 is applied to the recognition and measurement of financial instruments, available-for-sale financial assets. [IAS 39.45(d)].

How we see it

As discussed in Chapter 13 at 4.4.2.C, our view is that the fair value accounting rules also apply to investments in debt instruments accounted at fair value through other comprehensive income in accordance with IFRS 9. This is because the accounting is similar to that for an available-for-sale financial asset. Therefore, fair value movements arising on such debt instruments are also, where appropriate, reflected in the statutory fair value reserve.

A statutory fair value reserve may sometimes be required for a cash flow hedge on transition, even where hedge accounting is not being used going forward. This will, however, depend on whether IAS 39, or IFRS 9, or Sections 11 and 12 are being used as the transition provisions differ. See 5.16 below for a discussion of the transition provisions for hedge accounting.

By contrast, in our view, accounting for an investment in equity instruments at fair value through other comprehensive income in accordance with IFRS 9 makes use of the alternative accounting rules. Therefore, fair value movements (other than dividends from that investment, which are required to be recognised in profit or loss) must be reflected in the statutory revaluation reserve.

Where a financial liability is designated at fair value through profit or loss in accordance with IFRS 9, fair value changes attributable to changes in the credit risk of the liability are accounted in other comprehensive income (unless that treatment would create or enlarge an accounting mismatch). [IFRS 9.4.2.2, IFRS 9.5.7.1(c), IFRS 9.5.7.7-9]. Recording such fair value gains and losses attributable to changes in credit risk in other comprehensive income in accordance with IFRS 9 will usually be a departure from the requirement of paragraph 40 of Schedule 1 to the Regulations (which requires fair value gains and losses to be included in the profit and loss account, except where the financial instrument is a hedging instrument or an available for sale security) for the overriding purpose of giving a true and fair view. [FRS 102.A3.12C]. This is discussed further at Chapter 13 at 4.4.1.

Whether or not adjustments are taken to retained earnings or another category of equity, particular care needs to be taken in evaluating whether such adjustments are realised or not for the purposes of determining the distributable profits of a UK company. TECH 02/17BL provides guidance. See also Chapter 1 at 4.5 and Chapter 1 at 5.8.

3.4.3.C Investment property – transitional adjustments

Under FRS 102, investment property is remeasured at fair value through profit or loss (except for investment property rented to another group entity, where a policy choice is made to transfer the investment property to property, plant and equipment (as owner) or to right-of-use assets (as lessee) and apply the cost model). [FRS 102.16.7, FRS 102.16.4A]. In a UK company's (or LLP's) statutory accounts, this accounting makes use of the fair value accounting rules.

It is possible that a first-time adopter previously accounted for investment property using the cost model as a policy choice under adopted IFRS (or FRS 101). Where the fair value model is applied to the investment property under FRS 102, the adjustment of the carrying amount to fair value at the date of transition is included in retained earnings (or transferred to a separate non-distributable reserve) as the revaluation applies the fair value accounting rules.

It is also possible that a first-time adopter previously accounted for investment property rented to another group entity at fair value through profit or loss under adopted IFRS (or FRS 101) but, on transition to FRS 102, makes a policy choice to transfer the investment property to property, plant and equipment (or to right-of-use asset, if a lessee) and to apply the cost model. If this is the case, the investment property will need to be restated to original cost or deemed cost on transition (see 3.4.3.A above and 5.5 below). [FRS 102.A3.40B, FRS 102.A3.40C]. Where a deemed cost is used on transition for such investment properties to be accounted using the cost model, a statutory revaluation reserve may arise where the deemed cost exceeds the depreciated historical cost of such properties (see 5.5 below).

On transition, deferred tax is provided on any revaluation in accordance with Section 29 *Income Tax*, as this is generally a timing difference recognised on or prior to transition. Deferred tax relating to investment property that is measured at fair value must be measured using the tax rates and allowances that apply to sale of the asset, except for investment property that has a limited useful life and is held within a business model whose objective is to consume substantially all of the economic benefits embodied in the property over time. [FRS 102.29.6, FRS 102.29.16].

3.4.4 Impracticability exemption, and subsequent application of transition exemptions

If it is impracticable for an entity to restate the opening statement of financial position at the date of transition for one or more of the adjustments required by paragraph 35.7(a) to (d) (see 3.4 above), an entity must:

- Apply paragraphs 35.7 to 35.10 (i.e., retrospective application of FRS 102, subject to the transition exceptions and exemptions) for such adjustments in the earliest period for which it is practicable to do so.
- And
- Identify which amounts in the financial statements have not been restated.

If it is impracticable for an entity to provide any disclosures required by FRS 102 for any comparative period(s) presented, the omission of the disclosure(s) must be disclosed. [FRS 102.35.11]. Applying a requirement is impracticable when an entity cannot apply it, after making every reasonable effort to do so. [FRS 102 Appendix I].

If it is not practical on first-time adoption to apply a particular requirement of paragraph 18 of IFRS 6 *Exploration for and Evaluation of Mineral Resources* to previous comparative amounts, an entity must disclose that fact. [FRS 102.34.11C].

Section 35 states that, where applicable to the transactions, events or arrangements affected by applying the exemptions, an entity may continue to use the exemptions that are applied at the date of transition to FRS 102 when preparing subsequent financial statements, until such time when the assets and liabilities associated with those transactions, events or arrangements are derecognised. [FRS 102.35.11A]. This simply confirms that, in preparing FRS 102 financial statements after first-time adoption, the exemptions and exceptions taken at the date of transition continue to be applied as opposed to Section 35 only applying to the first FRS 102 financial statements. Once the associated assets and liabilities are derecognised, those transition exemptions cease, in any event, to have any accounting effect.

However, when there is subsequently a significant change in the circumstances or conditions associated with transactions, events or arrangements that existed at the date of transition, to which an exemption has been applied, an entity must reassess the appropriateness of applying that exemption in preparing subsequent financial statements in order to maintain a true and fair view in accordance with Section 3 *Financial Statement Presentation*. [FRS 102.35.11B]. It is not clear what circumstances are envisaged by this requirement, but it appears to permit the possibility of an entity later ceasing to use transition exemptions taken.

How we see it

Transition exemptions are pragmatic concessions available in the first FRS 102 financial statements that involve a departure from fully retrospectively applying FRS 102. In our view, if an entity did not take a particular transition exemption in its first FRS 102 financial statements, the entity is unable to apply that transition exemption as a 'voluntary change in accounting policy' in later financial statements as this would not meet the requirement that the financial statements provide reliable and more relevant information about the effects of transactions, other events or conditions on the entity's financial position, financial performance or cash flows.

3.4.5 Transition issues where a previous IFRS or FRS 101 reporter applies IFRS 9 to the recognition and measurement of financial instruments under FRS 102

A first-time adopter of FRS 102 that previously reported under IFRS or FRS 101 would have applied IFRS 9, including the transitional provisions set out in Chapter 7 of IFRS 9 on first applying that standard (or the transitional provisions set out in IFRS 1 on first-time adoption of IFRS/FRS 101). The transitional provisions for an ongoing IFRS/FRS 101 reporter, for example, meant that the classification and measurement of financial assets (including the ability to make designations of financial assets at fair value through profit or loss or of investments in equity instruments at fair value through profit or loss) was determined, based on the facts and circumstances at the date of initial application of IFRS 9. The following sections cover issues on recognition and measurement of financial instruments when choosing to apply IFRS 9 or IAS 39 when transitioning to FRS 102.

Additionally, an entity that transitioned from IAS 39 to IFRS 9 may have elected to continue to apply the hedge accounting requirement in IAS 39 to all its hedging relationships, when it first applied IFRS 9. [IFRS 9.7.2.21]. Therefore, in the following section, we also consider transition issues that apply when a first-time adopter applied IAS 39's requirements to its hedge accounting.

3.4.5.A Previous IFRS or FRS 101 reporter already applying IFRS 9 continues to apply IFRS 9

A previous IFRS or FRS 101 reporter already applying IFRS 9 is likely to continue applying IFRS 9 to the recognition and measurement of financial instruments when it transitions to FRS 102 in a subsequent accounting period. It would have applied the transition provisions in IFRS 9 when it first applied that standard (see 3.4.5 above). For example, it might have made determinations on initial recognition of financial instruments, such as whether to designate a financial asset or liability meeting certain criteria as at fair value through profit or loss, or an investment in an equity instrument as at fair value through other comprehensive income. [IFRS 9.4.1.4, IFRS 9.4.1.5, IFRS 9.4.2.2]. These IFRS 9 transition provisions would not apply on transition to FRS 102 (see 3.4.1 above). Section 35 only addresses derecognition of financial assets and financial liabilities (see 4.1 below) and hedge accounting (see 5.16 below). [FRS 102.35.9(a), FRS 102.35.10(t)].

How we see it

We doubt that the FRC intended that an entity already applying IFRS 9 under adopted IFRS or FRS 101 would change their accounting treatment (even if that relied on determinations made or included adjustments to equity under transitional provisions when first applying IFRS 9) when choosing to apply IFRS 9 on transition to FRS 102. Therefore, we would not expect any changes on application of FRS 102.

3.4.5.B Previous IFRS or FRS 101 reporter previously applying IAS 39 to hedge accounting continues to apply IAS 39 to hedge accounting

Ongoing IFRS/FRS 101 reporters were permitted to choose an accounting policy to continue to apply the hedge accounting provisions of IAS 39 (together with IFRIC 16 *Hedges of a Net Investment in a Foreign Operation*) on initial application of IFRS 9. [IFRS 9.7.2.21]. This concession is located in the section on transition for hedge accounting in IFRS 9 but is more in the nature of an accounting policy choice available within the standard for ongoing IFRS/FRS 101 reporters and hence is not permitted on first-time adoption of IFRS.

First-time adopters of FRS 102 have an accounting policy choice of applying IFRS 9 (as adopted in the relevant jurisdiction) and IAS 39 (as amended following the publication of IFRS 9) to the recognition and measurement of financial instruments. Accordingly, although this chapter refers to applying IFRS 9 to the recognition and measurement of financial instruments, this should be read as applying “the recognition and measurement provisions of IFRS 9 *Financial Instruments* (as adopted by the relevant jurisdiction) and IAS 39 (as amended following the publication of IFRS 9)” to be in line with FRS 102. [FRS 102.35.8C, FRS 102.11.2(c), FRS 102.12.2(c)].

How we see it

Therefore, we believe that an entity already applying IFRS 9 and applying IAS 39 to its hedges can continue to adopt this accounting policy on transition to FRS 102.

If the entity changes its policy to apply IFRS 9’s hedge accounting requirements on transition to FRS 102, certain issues arising are discussed at 3.4.5.C below.

3.4.5.C Previous IFRS or FRS 101 reporter previously applying IAS 39 to account for hedge accounting but changes to IFRS 9

If a first-time adopter had applied IAS 39 to account for hedge accounting under its previous financial framework but changes to IFRS 9 on transition to FRS 102, it must apply IFRS 9 retrospectively, subject to the transition provisions on hedge accounting (see 5.16.3 below).

For many entities, the existing hedging relationships under IAS 39 may continue under IFRS 9 (after consideration of rebalancing), with no accounting adjustments to the hedge accounting required to the opening statement of financial position under FRS 102. See the most recent version of EY’s publication, International GAAP® for further discussion of IFRS 9’s requirements on hedge accounting.

However, entities will need to consider the following implementation issues in relation to hedge accounting on transition to FRS 102:

- It will be necessary to ensure that all the qualifying criteria for hedge accounting under IFRS 9 are met at the date of transition (except that the entity may complete the designation and documentation of the hedging relationship after the date of transition but before the date of authorisation of the financial statements) in order for hedge accounting for existing hedging relationships to continue from the date of transition. [IFRS 9.6.4.1, FRS 102.35.10(t)(iv)]. Otherwise, hedge accounting will need to be discontinued prospectively from the date of transition. [IFRS 9.6.5.6, IFRS 9.6.5.7, IFRS 9.6.5.10, IFRS 9.6.5.12].
- If new hedging relationships are identified under IFRS 9 (that were not identified under IAS 39), the opening statement of financial position would not reflect the hedging relationship. However, hedge accounting could be established prospectively from the date all qualifying criteria for hedge accounting under IFRS 9 are met (subject to the concession over the timing of designation and documentation allowed for in the transition provision), which might be prospectively from the date of transition or a later date. [FRS 102.35.10(t)(iv)]. See 5.16.3 below.
- Under IAS 39, a hedging relationship that failed the effectiveness tests would have been required to be discontinued. [IAS 39.88, IAS 39.91(b), IAS 39.101(b)]. Under IFRS 9, the retrospective effectiveness test has been withdrawn, although the qualifying criteria for hedge accounting include ongoing effectiveness requirements such as the existence of an economic relationship between the hedged item and the hedging instrument. [IFRS 9.6.4.1(c)]. In these circumstances, the opening statement of financial position of the entity would continue to reflect the discontinuance of the past hedging relationship but, if all the qualifying criteria (subject to the concession over the timing of designation and documentation allowed for in the transition provision) are met at the date of transition, the entity could re-establish hedge accounting prospectively from the date of transition. [FRS 102.35.10(t)(iv)]. See 5.16.3 below.
- An entity changing from IAS 39 to IFRS 9 on adoption of FRS 102 may also need to adjust the hedge ratio of the hedging relationship (‘rebalancing’) in its hedge documentation. It would appear that the effects of any rebalancing would be reflected in profit or loss following the date of transition. This is the same position as would be the case if an ongoing IFRS reporter had moved from IAS 39 to IFRS 9. [IFRS 9.7.2.25(b)]. IFRS 9’s requirements for rebalancing of hedges are discussed in the most recent version of EY’s publication, International GAAP®.
- The hedge accounting under IAS 39 differs, or may differ, compared to under IFRS 9 where the intrinsic value of an option (or the spot element of a forward contract) was designated as a hedging instrument. IFRS 9 also permits an entity to exclude the foreign currency basis spread when designating a financial instrument as a hedging instrument (but this was not permitted under IAS 39).

Under IAS 39, where the time value of an option or the forward element of a foreign currency contract was excluded from the hedging relationship, fair value movements on those elements were recognised in profit or loss. Under IFRS 9, where the time value of an option is excluded from the hedging relationship, the fair value movements on the time value of the option are first recognised in other comprehensive income (and a separate component of equity), with the subsequent treatment depending on the nature of the hedged transaction. A similar treatment may be elected on a hedge-by-hedge basis for the fair value movements attributable to the forward element of foreign currency contracts (and foreign currency basis spread). [IAS 39.74, IFRS 9.6.5.15, IFRS 9.6.5.16].

For first-time adopters, the accounting for 'costs of hedging' at the date of transition requires careful consideration. IFRS 9's accounting for 'costs of hedging' is discussed in the most recent version of EY's publication, International GAAP®.

4 Mandatory exceptions to retrospective application

Section 35 prohibits retrospective application of its requirements in some areas, many of which correspond to similar mandatory exceptions in IFRS 1. The mandatory exceptions in FRS 102 cover areas where full retrospective application could be costly, onerous, or may involve use of hindsight.

The mandatory exceptions in Section 35 cover the following areas: [FRS 102.35.9]

- Derecognition of financial assets and financial liabilities (see 4.1 below)
- Accounting estimates (see 4.2 below)
- And
- Non-controlling interests (see 4.3 below)

Each of the exceptions is explained further below. However, the following exemptions in Section 35 contain certain mandatory requirements:

- Hedge accounting where IFRS 9 or IAS 39 are applied to the recognition and measurement of financial instruments (see 5.16.3 below).
- An entity becoming a first-time adopter in its consolidated financial statements later than its subsidiary, associate or joint venture (see 5.15.2 below).
- A parent adopting FRS 102 in its separate financial statements earlier or later than in its consolidated financial statements (see 5.15.4 below).
- And
- A lessee applying the other transitional arrangement when not applying the IFRS 16 election (see 5.11.3 below).

4.1 Derecognition of financial assets and financial liabilities

Extract from Section 35

- 35.9** On first-time adoption of this FRS, an entity shall not retrospectively change the accounting that it followed under its previous financial reporting framework for any of the following transactions:
- (a) Derecognition of financial assets and financial liabilities

Financial assets and liabilities derecognised under an entity's previous financial reporting framework before the date of transition shall not be recognised upon adoption of this FRS. Conversely, for financial assets and liabilities that would have been derecognised under this FRS in a transaction that took place before the date of transition, but that were not derecognised under an entity's previous financial reporting framework, an entity may choose:

 - (i) to derecognise them on adoption of this FRS; or
 - (ii) to continue to recognise them until disposed of or settled.

Derecognition is defined as the removal of all or part of a recognised asset or liability from an entity's statement of financial position. [FRS 102 Appendix I].

4.1.1 Implementation issues

There is no further implementation guidance on this transition exception. The main first-time adoption implementation issues are:

- What comprises derecognition of financial assets and financial liabilities under the entity's previous financial reporting framework.
- And
- Whether there are financial assets and financial liabilities that would have been derecognised under FRS 102 in a pre-transition transaction, but were not derecognised under the entity's previous financial reporting framework.

An FRS 102 reporter has an accounting policy choice of applying the following to the recognition and measurement of financial instruments: [FRS 102.11.2, FRS 102.12.2]

- Section 11 and Section 12 of FRS 102.
- IAS 39 (as adopted in the relevant jurisdiction) as the standard applies prior to the application of IFRS 9 (referred to as 'IAS 39' below).

Or

- IFRS 9 (as adopted in the relevant jurisdiction) and IAS 39 (as amended following the publication of IFRS 9) (together referred to as 'IFRS 9' below).

FRS 102 defines which version of IAS 39 must be applied. See Chapter 13 at 3. However, following the Periodic Review 2024 amendments, a first-time adopter may choose to apply IAS 39 only if this would make the entity's accounting policy choice consistent with the accounting policy adopted in the consolidated financial statements in which the entity is included. [FRS 102.35.8C, FRS 102.11.2, FRS 102.12.2]. See 4.1.2 below for possible implementation issues.

In practice, previous IFRS or FRS 101 reporters will be applying IFRS 9, given that IAS 39 has already been superseded by IFRS 9. This commentary highlights some issues that might be relevant for a first-time adopter previously applying IFRS 9 to consider, depending on the policy choice for the recognition and measurement of financial instruments selected.

Comparatives need to be restated in accordance with the accounting policy choice applied to the recognition and measurement of financial instruments under FRS 102.

Financial assets and financial liabilities that remain recognised on transition will need to be measured in accordance with the accounting policy choice that the entity applies to the recognition and measurement of financial instruments under FRS 102. Consequently, if the accounting policy adopted differs to that applied under the previous financial framework (generally, FRS 105, IFRS or FRS 101), adjustments may be required on transition to FRS 102.

4.1.2 First-time adopters that previously applied IFRS 9 and choose to apply IAS 39 or IFRS 9 to the recognition and measurement of financial instruments on adoption of FRS 102

FRS 102 reporters are permitted to apply IAS 39 (in certain circumstances, explained at 4.1.1 above) or IFRS 9 to the recognition and measurement of financial instruments under FRS 102. The derecognition requirements for financial assets and financial liabilities in IAS 39 and IFRS 9 are the same. However, if financial assets or financial liabilities had been derecognised prior to the date of transition to FRS 102 (e.g., on transition to IFRS in the past, [IFRS 1.B2, IFRS 1.B3]) which would not ordinarily qualify for derecognition under the policy choice adopted under FRS 102, any such financial assets or financial liabilities still in existence at the date of transition remain derecognised on transition to FRS 102 because of the derecognition exception in paragraph 35.9(a). The discussion at 4.1.3 below may still be relevant to a previous IFRS or FRS 101 reporter.

Where an exchange or modification of a financial asset or liability is not accounted as an extinguishment (and is therefore not derecognised), the measurement of the financial asset or financial liability could differ under IFRS 9 compared to IAS 39 (depending on the approach taken under IAS 39).

Under IFRS 9, the modified contractual cash flows of a financial asset or financial liability (that is not accounted as an extinguishment following an exchange or modification), will be discounted at the original effective interest rate, with an adjustment to the carrying amount of the financial liability and profit or loss. [IFRS 9.3.3.2, IFRS 9.5.4.3, IFRS 9.BC4.252, IFRS 9.BC4.253]. However, IAS 39 (which only addresses modifications of financial liabilities) does not provide conclusive guidance as to whether an adjustment is made to the carrying amount of the financial liability or financial asset for such changes in contractual cash flows (or whether the effective interest rate must be changed). Consequently, there could be measurement adjustments required if an IFRS 9 reporter changes to IAS 39 on transition to FRS 102 (if permitted to do so).

4.1.3 Financial assets and financial liabilities previously derecognised

Financial assets and financial liabilities derecognised under the entity's previous financial reporting framework before the date of transition (and consequently not recognised on transition to FRS 102) would be re-recognised if they qualify for recognition as a result of a later transaction or event (i.e., subsequent to the date of transition) using the accounting policy choice that the entity applies to the recognition and measurement of financial instruments under FRS 102, i.e., IAS 39 (where permitted to be used), or IFRS 9, or Sections 11 and 12.

Some arrangements for the transfer of assets, particularly securitisations, may last for some time, with the result that transfers might be made both before and on or after the date of transition under the same arrangement. Where assets were transferred prior to the date of transition and derecognised under the previous financial reporting framework (IFRS or FRS 101), the assets are not re-recognised (unless the transferee is required to be consolidated under FRS 102 – see discussion below).

FRS 102's requirements on consolidation of special purpose entities ('SPEs'), [FRS 102.9.10, FRS 102.9.11, FRS 102.9.12], differ from those in IFRS 10 *Consolidated Financial Statements*. [FRS 102.BC.B9.2, FRS 102.BC.B9.3, FRS 102.BC.B9.4]. Since there are no specific transitional or first-time adoption provisions, FRS 102's requirements must be applied fully retrospectively by first-time adopters. Therefore, financial assets and financial liabilities derecognised on transfer to an SPE that was not consolidated under the entity's previous financial reporting framework (but would be required to be consolidated under FRS 102) will be re-recognised on transition to FRS 102 by way of consolidation of the SPE. This is unless the SPE itself had subsequently achieved derecognition of the items concerned under the entity's previous financial reporting framework before the date of transition, other than by transfer to another entity consolidated by the FRS 102 first-time adopter.

4.1.4 Financial assets and financial liabilities previously not derecognised

There may be cases where financial assets and financial liabilities were retained in the balance sheet under the entity's previous financial reporting framework but would have been derecognised under FRS 102. On transition to FRS 102, a first-time adopter is permitted to derecognise financial assets and financial liabilities in accordance with the derecognition requirements of the accounting policy choice applied to the recognition and measurement of financial instruments under FRS 102.

Where the entity continues to recognise them on transition, it must retrospectively apply the accounting standard that it applies to the recognition and measurement of financial instruments under FRS 102. These might lead to measurement adjustments of the financial assets and financial liabilities as the recognition and measurement requirements of IAS 39, IFRS 9 and Sections 11 and 12 differ in certain respects. In particular, care should also be taken where an IFRS or FRS 101 reporter had undertaken an exchange or modification of a financial asset or financial liability with the original counterparty prior to the date of transition (but this was not accounted as an extinguishment and therefore not derecognised). [IAS 39.40, IFRS 9.3.3.2, IFRS 9.5.4.3, IFRS 9.BC4.252, IFRS 9.BC4.253].

See 4.1.5.B below and Chapter 13 at 6.2 and Chapter 13 at 7.4 where Sections 11 and 12 are applied to the recognition and measurement of financial instruments under FRS 102.

4.1.5 Specific implementation issues where a previous IFRS or FRS 101 reporter (previously applying IFRS 9) applies Sections 11 and 12 under FRS 102.

4.1.5.A Financial assets – what is derecognition?

Generally, it will be clear whether a financial asset has been derecognised under IFRS 9 and therefore must not be re-recognised on transition to FRS 102. However, Section 35 does not specifically address whether derecognition of a part of a financial asset or continued recognition of an asset to the extent of its continuing involvement are regarded as derecognition for the purposes of paragraph 35.9(a).

IFRS 9 requires an entity to determine whether the derecognition requirements are to be applied to a part of a financial asset (or a part of a group of financial assets) or a financial asset (or a group of similar financial assets) in its entirety. [IFRS 9.3.2.2]. Situations where parts of a financial asset are capable of derecognition under IFRS 9 include: specifically identified cash flows (e.g., the interest cash flows of a debt instrument, commonly referred to as an interest rate strip), a fully proportionate share of the cash flows (e.g., 90% share of all cash flows of a debt instrument), and a fully proportionate share of specifically identified cash flows (e.g., 90% of the interest cash flows from a financial asset). [IFRS 9.3.2.2(a)].

Section 11, unlike IFRS 9, does not refer to derecognition of parts of a financial asset (although it does so in respect of parts of a financial liability). [FRS 102.11.33, FRS 102.11.36, FRS 102.12.14].

How we see it

Nevertheless, in our view, specifically identified cash flows or a fully proportionate share of all or of specifically identified cash flows would meet the definition of a financial asset. Therefore, derecognition of a part of a financial asset in accordance with IFRS 9 would be regarded as derecognition of a financial asset for the purposes of the transition exception in paragraph 35.9(a). Consequently, the part of the original financial asset derecognised would not be reinstated on transition to FRS 102.

IFRS 9 states that if the entity neither transfers nor retains substantially all the risks and rewards of ownership of the financial asset but has retained control, it must continue to recognise the financial asset to the extent of its continuing involvement. IFRS 9 sets out how the continuing involvement in the asset (or part of the asset) and the associated liability must be measured. [IFRS 9.3.2.6(c)(ii), IFRS 9.3.2.16].

How we see it

It would seem unlikely that an entity with assets (or parts of assets) recognised to the extent of the continuing involvement would choose to apply Sections 11 and 12, since these sections do not set out rules for accounting for such arrangements (see Chapter 13 at 7.2.3.B). However, if Sections 11 and 12 are applied to the recognition and measurement of financial instruments where an entity transitions to FRS 102, in our view, the accounting for the continuing involvement would need to be retrospectively restated (and hence the financial instruments not recognised).

4.1.5.B Financial liabilities

IFRS 9 addresses derecognition of financial liabilities, including when an exchange of debt between an existing borrower and lender, or modification of the terms of existing debt gives rise to derecognition. Hence, it will be clear whether a financial liability has been derecognised under IFRS 9 prior to the date of transition and therefore must not be re-recognised on transition to FRS 102.

IAS 39 (where permitted), IFRS 9 and Sections 11 and 12 require an entity to derecognise a financial liability (or part of a financial liability) only when it is extinguished (i.e., when the obligation specified in the contract is discharged, is cancelled or expires). [IAS 39.11.36, IFRS 102.12.14, IAS 39.39, IFRS 9.3.3.1]. Sections 11 and 12 contain the same basic requirements on accounting for exchanges of a financial liability between an existing borrower and lender and the modification of terms of an existing financial liability as IAS 39 and IFRS 9, but not the related application guidance. [IAS 39.AG57, IFRS 9.B3.3.1]. In particular, the application guidance in IAS 39 and IFRS 9 covers the evaluation of whether an exchange or modification of debt has substantially different terms, and the accounting for an exchange or modification. As discussed in Chapter 13 at 7.4.2, an entity applying Sections 11 and 12 as an accounting policy choice under FRS 102 could look to Section 10 and develop an appropriate policy, such as by considering what is contained in IFRS. [FRS 102.10.4, FRS 102.10.5, FRS 102.10.6].

An entity previously applying IFRS 9 that exchanged or modified debt with the same lender in circumstances where the terms of the exchanged or 'modified' debt are not 'substantially different' would not have accounted for the extinguishment of the original financial liability. [IFRS 9.3.3.2]. On initial application of FRS 102, there is no exemption from measuring the exchanged or 'modified' debt that continues to be recognised in accordance with the requirements of Sections 11 and 12. The measurement adjustments, if any, required on transition for exchanged or 'modified' debt will depend on the accounting previously adopted under IFRS 9, as discussed further below, and on the accounting adopted under Sections 11 and 12.

The application guidance in IFRS 9 addresses the treatment of costs or fees associated with the exchange or modification of a financial liability that is not accounted as an extinguishment - requiring that the costs or fees are adjusted against the carrying amount of the liability, and amortised over the remaining term of the modified liability. [IFRS 9.B.3.3.6A]. Under IFRS 9, the modified contractual cash flows of a financial liability (that is not accounted as an extinguishment following an exchange or modification), will be discounted at the original effective interest rate, with an adjustment to the carrying amount of the financial liability and profit or loss. [IFRS 9.3.3.2, IFRS 9.5.4.3, IFRS 9.BC4.252, IFRS 9.BC4.253]. See the most recent version of EY's publication, International GAAP® for further discussion of IFRS 9's requirements on exchange or modification of debt by the original lender.

FRS 102 does not provide any specific guidance on the subsequent accounting where it is determined that an exchange or modification of a financial liability is not an extinguishment of the original financial liability. This matter is addressed in Chapter 13 at 7.5.

4.2 Accounting estimates

4.2.1 Exception to retrospective application

On first-time adoption of FRS 102, an entity must not retrospectively change the accounting that it followed under its previous financial reporting framework for accounting estimates. [FRS 102.35.9(c)]. However, FRS 102 offers no further guidance in respect of this exception. Since paragraph 35.9(c) does not refer to accounting estimates 'at the date of transition', as other exceptions do, it seems that the exception relates to accounting estimates made under the entity's previous financial reporting framework in both the opening statement of financial position at the date of transition and in the comparative period(s) presented. As this is consistent with the corresponding exception in IFRS 1, entities may want to consider the guidance in that standard.

IFRS 1 requires an entity to use estimates under IFRSs that are consistent with the estimates made for the same date under its previous GAAP – after adjusting for any difference in accounting policies – unless there is objective evidence that those estimates were in error. [IFRS 1.14]. Under IFRS 1, an entity cannot apply hindsight and make 'better' estimates when it prepares its first IFRS financial statements. Therefore, an entity is not allowed to consider subsequent events that provide evidence of conditions that existed at the date of transition (or at the end of the comparative period), but that came to light after the date that the entity's financial statements under its previous financial reporting framework were finalised. If an estimate made under its previous financial reporting framework requires adjustment because of new information after the relevant date, an entity treats this information in the same way as a non-adjusting event after the reporting period. In addition, the exception also ensures that a first-time adopter need not conduct a search for, and change the accounting for, events that might have otherwise qualified as adjusting events, e.g., the resolution of a court case relating to an obligation as at the date of transition or end of the comparative period.

Similarly, where FRS 102 requires a first-time adopter to make estimates that were not required under its previous financial reporting framework, the general approach is to base those estimates on conditions that existed at the date of transition (or, where applicable, the end of the comparative period).

The following example²⁴⁷ shows the application of paragraph 35.9(c).

Illustration 4-1: Accounting estimates

On 31 December 20X4, Entity A had a debtor balance of £500. On 31 December 20X4, Entity A was concerned about the credit risk of the debtor and was in discussion with the debtor as to how the debt might be settled. As a consequence, Entity A had made a provision of £250, i.e., for 50% of the balance as at that date. During 20X5, the debtor collapsed and was liquidated.

When Entity A prepares its opening balance sheet as at 1 January 20X5 (the date of transition), it is clear that it will not be able to collect the outstanding debt. However, Entity A does not revise its estimate under its previous financial reporting framework because FRS 102 prohibits retrospective adjustments to accounting estimates on the date of transition.

4.2.2 Post-balance sheet events and correction of errors

Material prior period errors identified at transition and in the comparatives must be retrospectively corrected. [FRS 102.10.21].

4.3 Non-controlling interest

The definition and accounting requirements for non-controlling interest in FRS 102 are discussed in Chapter 8 at 3.7. There are some differences in accounting to IFRS 10.

In measuring non-controlling interest, FRS 102's requirements (in Section 9 *Consolidated and Separate Financial Statements*) to allocate profit or loss and total comprehensive income between non-controlling interest and owners of the parent (see Chapter 6 at 3.5 and Chapter 8 at 3.7): [FRS 102.9.14, FRS 102.9.22]

- For accounting for changes in the parent's ownership interest in a subsidiary that do not result in a loss of control (see Chapter 8 at 3.6.2 and Chapter 8 at 3.6.4) [FRS 102.9.19A, FRS 102.9.19.C, FRS 102.9.19D, FRS 102.9.20A]

And

²⁴⁷ FRC FRS 102 Factsheet 7 Transition to FRS 102 (November 2024).

- For accounting for a loss of control over a subsidiary (see Chapter 8 at 3.6.3) [*FRS 102.9.18A, FRS 102.9.18B, FRS 102.9.19*]

must be applied prospectively from the date of transition to FRS 102 (or from such earlier date as FRS 102 is applied to restate business combinations – see paragraph 35.10(a)). [*FRS 102.35.9(e), FRS 102.35.10(a)*].

The application of the exception is straightforward. It simply states that the accounting in FRS 102 for these matters is applied prospectively from the date of transition (or where pre-transition business combinations are restated in accordance with Section 19 *Business Combinations and Goodwill*, from the earlier date from which business combinations are restated – see 5.2.1 below). [*FRS 102.35.9(e)*]. Of course, changes to assets and liabilities of a subsidiary with a non-controlling interest made at the date of transition will have a consequential effect on non-controlling interest at that date.

Retrospective changes for previous allocations of profit or loss and total comprehensive income (made prior to the date of transition, or that earlier date from which Section 19 is applied) are prohibited. Consequently, where a provision has been made under the entity's previous financial reporting framework against a non-controlling interest debit balance prior to the date of transition (or that earlier date from which Section 19 is applied), this is not reversed on transition to FRS 102. In addition, if that subsidiary subsequently earns profits post transition, any past losses absorbed by the parent are not reversed but the profits are attributed to the parent and non-controlling interest based on existing ownership interests. [*FRS 102.9.14, FRS 102.9.22*]. This situation could apply to a first-time adopter previously reporting under IFRS, which may be reporting non-controlling interest after taking advantage of the transition exemptions in IFRS 1 (when it first adopted IFRS) or on first application of IFRS 10 – which are similar to those in paragraph 35.9(e). [*IFRS 10.C6, IFRS 1.B7*].

The accounting in FRS 102 for a change in ownership of a subsidiary without loss of control is similar to the requirements of IFRS 10. [*IFRS 10.23, IFRS 10.B96*]. However, care needs to be taken where there are transactions involving changes in non-controlling interest subsequent to the date of transition that do not result in loss of control of a subsidiary. Where the non-controlling interest had been provided against (i.e., losses allocated to the parent) as at the date of transition (or as at the earlier date from which business combinations are restated), the parent does not reallocate any of those losses on re-measuring the non-controlling interest for the change in relative ownership. This means that the non-controlling interest is re-measured at the date of the transaction based upon the 'change in their relative interest' and not by reference to a percentage change of net assets. While FRS 102 is not explicit on the accounting required, this approach would be consistent with the approach taken under IFRS.

The accounting for a change in ownership of a subsidiary with loss of control in FRS 102 (see Chapter 8 at 3.6.3) differs to IFRS in a number of respects, notably no reclassification of exchange differences previously recognised in other comprehensive income or remeasurement of any retained interest to fair value (at the date of loss of control). [*IFRS 10.25, IFRS 10.B97-99A, FRS 102.9.18A, FRS 102.9.18B, FRS 102.9.19*]. Transactions in the comparative period (or post the date for which business combinations are restated in accordance with Section 19) may, therefore, need to be restated.

The accounting for non-controlling interest under IFRS and FRS 102 could also differ on a business combination (see Chapter 22 at 3.8). [*IFRS 3.32, IFRS 10.B44, IFRS 10.B45*]. However, this transition exception does not address such GAAP differences. There is an optional transition exemption that addresses business combinations, discussed at 5.2 below.

5 Optional exemptions to retrospective application

5.1 Introduction

Section 35 sets out optional exemptions from the general requirement of full retrospective application of the requirements of FRS 102. [FRS 102.35.10]. While many of these correspond to exemptions in IFRS 1, other exemptions are specific to FRS 102.

The optional exemptions in Section 35 cover the following areas:

- Business combinations, including group reconstructions (see 5.2 below)
- Public benefit entity combinations (see 5.3 below)
- Share-based payment transactions (see 5.4 below)
- Fair value or previous revaluation as deemed cost (see 5.5 below)
- Deemed cost for oil and gas assets (see 5.6 below)
- Individual and separate financial statements (see 5.7 below)
- Development costs (see 5.8 below).
- Borrowing costs (see 5.9 below)
- Decommissioning liabilities included in the cost of property, plant and equipment and right-of-use assets (see 5.10 below)
- Leases (see 5.11 below)
- Revenue from contracts with customers (see 5.12 below)
- Compound financial instruments (see 5.13 below)
- Designation of previously recognised financial instruments (see 5.14 below)
- Assets and liabilities of subsidiaries, associates and joint ventures (see 5.15 below)
- Hedge accounting (see 5.16 below)
- Dormant entities (see 5.17 below)

In addition, FRS 103 includes transition exemptions in relation to insurance contracts (see 5.18 below).

The Periodic Review 2024 removed the exemption in paragraph 35.10(i) to not apply the requirements of paragraphs 34.12I to 34.16A to service concession arrangements (see Chapter 36) that were entered into before the date of transition to FRS 102, and in effect, continue applying the same accounting policies as applied at the date of transition. Therefore, an operator that transitions to FRS 102 after the effective date of Periodic Review 2024 is required to retrospectively apply these requirements as the exemption is no longer available. Paragraph 35.11A of FRS 102 allows an entity to continue to use the exemptions applied at the date of transition to FRS 102 when preparing subsequent financial statements, until such time when the assets and liabilities associated with those transactions, events or arrangements are derecognised. However, when there is subsequently a significant change in the circumstances or conditions associated with transactions, events or arrangements that existed at the date of transition, an entity is required to reassess the appropriateness of applying the exemption in meeting the true and fair view requirement in subsequent financial statements. [FRS 102.35.10(i), FRS 102.35.11A, FRS 102.35.11B].

Despite being located within the optional transition exemptions, the transition provisions for hedge accounting in paragraph 35.10(t)(iv) are mandatory where IFRS 9 or IAS 39 is applied to the recognition and measurement of financial instruments. [FRS 102.35.10(t)(iv)]. In addition, where an entity adopts FRS 102 in its consolidated financial statements later than its subsidiary, associate or joint venture (or a parent adopts FRS 102 in its separate financial statements earlier or later than for its consolidated financial statements), the transition provisions in paragraph 35.10(r) are mandatory. [FRS 102.35.10(r)]. And where a lessee is not eligible to or chooses not to apply the IFRS 16 election, the entity is required to use the transition provision in paragraph 35.10(x) in measuring the lease liability and right-of-use asset. [FRS 102.35.10(x), FRS 102.B20.17].

How we see it

Other than as detailed above, the exemptions are optional, so a first-time adopter can pick and choose the exemption(s) that it wants to apply. There is no hierarchy of exemptions; therefore, when an item is covered by more than one exemption, a first-time adopter has a free choice in determining the order in which it applies the exemptions.

Each of the exemptions is explained further below.

5.2 Business combinations, including group reconstructions

Extract from Section 35

35.10 An entity may use one or more of the following exemptions in preparing its first financial statements that conform to this FRS:

(a) Business combinations, including group reconstructions

A first-time adopter may elect not to apply Section 19 *Business combinations and Goodwill* to business combinations that were effected before the date of transition to this FRS. However, if a first-time adopter restates any business combination to comply with Section 19, it shall restate all later business combinations. If a first-time adopter does not apply Section 19 retrospectively, the first-time adopter shall recognise and measure all its assets and liabilities acquired or assumed in a past business combination at the date of transition to this FRS in accordance with paragraphs 35.7 to 35.9 or, if applicable, with paragraphs 35.10(b) to (y) except for:

- (i) intangible assets other than goodwill - intangible assets subsumed within goodwill shall not be separately recognised; and
- (ii) goodwill - no adjustment is made to the carrying value of goodwill; if goodwill has previously been determined to have an indefinite useful life, it shall be re-assessed to determine its remaining useful life and shall subsequently be measured in accordance with paragraph 19.23.

The business combinations exemption permits a first-time adopter not to restate, in accordance with Section 19, business combinations that occurred prior to its date of transition. Whether or not a first-time adopter elects to restate pre-transition business combinations, it may still need to restate the carrying amounts of the acquired assets and assumed liabilities (see 5.2.3.B and 5.2.3.C below).

The requirements to allocate profit or loss and total comprehensive income between non-controlling interest and owners of the parent; for accounting for changes in the parent's ownership interest in a subsidiary that do not result in a loss of control; and for accounting for a loss of control over a subsidiary must be applied prospectively from the date of transition (or from such earlier date as FRS 102 is applied to restate business combinations). [FRS 102.35.9(e)]. See 4.3 above.

Paragraphs PBE34.75 to 34.86 of FRS 102 contain specific requirements on accounting for public benefit entity combinations, which are discussed at 5.3 below.

Unlike IFRS 1, Section 35 provides no guidance beyond the wording of the transition exemption itself. While there may be other approaches, we consider that Appendix C of IFRS 1 can be helpful in interpreting the transition exemption and will refer to that guidance where appropriate. There are some GAAP differences between IFRS 1 and FRS 102 regarding the business combinations exemption; therefore, some aspects of the guidance in Appendix C are not relevant. This commentary is organised as follows:

- Option to restate business combinations retrospectively (see 5.2.1 below).
 - Scope of the transition exemption (see 5.2.2 below).
 - Application of the transition exemption not to restate business combinations - general (see 5.2.3 below).
 - Restatement of goodwill when not restating business combinations (see 5.2.4 below).
 - Changes in scope of consolidation when not restating business combinations (see 5.2.5 below).
- And
- Example of application of the transition exemption not to restate business combinations (see 5.2.6 below).

The accounting where a first-time adopter opts to restate business combinations occurring before the date of transition retrospectively is addressed at 5.2.1 below, and the accounting where a first-time adopter opts not to restate business combinations occurring before the date of transition retrospectively is addressed at 5.2.2 to 5.2.6 below.

5.2.1 Option to restate business combinations retrospectively

A first-time adopter must account for business combinations occurring after its date of transition under Section 19. The requirements of Section 19 are discussed in Chapter 22. Therefore, any business combination during the comparative period(s) needs to be restated in accordance with FRS 102.

An entity is permitted to elect to apply Section 19 to business combinations occurring before the date of transition, but must then restate any subsequent business combinations under Section 19. In other words, a first-time adopter can choose any date in the past from which it wants to account for all business combinations under Section 19, without restating business combinations that occurred before that date.

How we see it

Although there is no restriction that prevents retrospective application by a first-time adopter of Section 19 to all past business combinations, in our view, a first-time adopter does not restate business combinations under Section 19 that occurred before the date of transition when this would require undue use of hindsight.

If any pre-transition business combinations are restated, the first-time adopter must also apply FRS 102's requirements on the measurement of non-controlling interests from the date of the earliest business combination that is restated (see 4.3 above).

5.2.1.A Considerations on restatement of business combinations

If the exemption from restating pre-transition business combinations is not applied, the requirements of Section 19 (see Chapter 22) would need to be applied retrospectively. This might be an onerous exercise that might require undue use of hindsight. For example, restatement would require:

- Reassessment as to whether the previous financial reporting framework classification of the business combination (as an acquisition by the legal acquirer, reverse acquisition by the legal acquiree, or merger accounting) was appropriate.
- A fair value exercise to be performed, at the date of the business combination, if the purchase method is required. Any adjustments to the carrying amounts of assets and liabilities may also impact deferred tax and non-controlling interest.
- An adjustment to non-controlling interest arising on a business combination, if this had been initially recognised at fair value under IFRS, as permitted as an accounting policy choice on a transaction-by-transaction basis. [IFRS 3.19, IFRS 3.B44, IFRS 3.B45]. This treatment is not permitted under Section 19, which would require the non-controlling interest to be initially recognised at the non-controlling interest's share of the net amount of the identifiable assets, liabilities and contingent liabilities recognised and measured in accordance with Section 19 at the acquisition date (see Chapter 22 at 3.8). [FRS 102.9.13(b), FRS 102.19.14A].
- Remeasurement of consideration at the date of the business combination, to the amounts required under Section 19. In particular, contingent consideration and pre-existing interests are included at fair value at the date of the business combination under IFRS, but this is not the case under Section 19. [IFRS 3.32, IFRS 3.37, IFRS 3.39].

And

- The amounts recognised in the business combination to be restated under Section 19 and, subsequently, to be accounted for under FRS 102.

The application of the purchase method in Section 19 differs in certain respects from acquisition accounting under IFRS 3 *Business Combinations*. See Chapter 22 at 3 for details of application of the purchase method under Section 19. See Chapter 22 at 6 for the summary of GAAP differences.

In particular, retrospective application of Section 19 may result in changes to the recognition of intangible assets compared to IFRS 3. The extent of any differences to IFRS may depend on what policy the entity applies to the recognition of intangible assets under FRS 102. [FRS 102.18.8]. In addition, FRS 102 requires that the expected future economic benefits attributable to the intangible asset are probable and the fair value of the intangible asset is measured reliably whereas under IFRS, the probability recognition and reliable measurement criteria are always considered to be satisfied. [IAS 38.33]. See Chapter 22 at 2.8 and 3.7.3.A.

Section 19 has a general requirement that the acquiree's identifiable assets and liabilities (and contingent liabilities assumed in a business combination) – provided their fair value can be measured reliably – are measured at their acquisition-date fair values (with certain recognition and measurement exceptions). [FRS 102.19.14]. These requirements may differ from those in the entity's previous financial reporting framework. IFRS 3 requires that the identifiable assets and liabilities (and if their fair values can be measured reliably, contingent liabilities) are measured at their acquisition-date fair values in accordance with IFRS 13 *Fair Value Measurement*, but also contains specific exceptions to the recognition and measurement principles. [IFRS 3.10, IFRS 3.18, IFRS 13.5]. If a business combination is restated under Section 19, the adjustments to the fair values of the identifiable assets and liabilities (and contingent

liabilities) at the date of the business combination (including any changes to deferred tax and non-controlling interest) are reflected as an adjustment to goodwill. Therefore, applying Section 19 to the business combination would mean restatement of goodwill arising on the acquisition, adjusted for any subsequent amortisation and impairment.

Where the exemption not to restate business combinations is taken, any adjustments to the assets and liabilities acquired or assumed (including related deferred tax, which is required on the differences between the values recognised for assets (other than goodwill) and liabilities acquired in a business combination and the amounts at which those assets and liabilities will be assessed for tax – see Chapter 31 at 6.6) are reflected in retained earnings (or if appropriate, another category of equity). [FRS 102.35.9]. See 5.2.3.C below. Where the business combination involves a purchase of trade and assets reflected in the individual financial statements of a UK company, recognising additional deferred tax liabilities on fair value adjustments, but not adjusting goodwill, would have an adverse effect on the company's distributable reserves.

Illustration 5-1 at 5.2.6 below illustrates the impact of applying the transition exemption and retrospectively restating the business combination in accordance with Section 19 for a previous IFRS reporter.

5.2.2 Scope of the transition exemption not to restate business combinations

A transaction must be a business combination or a group reconstruction (as defined in FRS 102 – see Chapter 22 at 3.2 and 5.1 respectively) to qualify for the transition exemption; otherwise, it will need to be retrospectively restated subject to the mandatory exceptions and optional exemptions included in Section 35. IFRS does not have a separate accounting concept of a group reconstruction.

How we see it

In practice, some group reconstructions may have qualified as business combinations under common control (as defined in IFRS 3) and either have been accounted as pooling of interests or acquisition accounted (depending on the policy applied by the entity to such transactions under IFRS). Other transactions might not have qualified as business combinations at all under IFRS. So long as the transaction would have met the definition of a group reconstruction under FRS 102, in our view, it will still qualify for the transition exemption.

IFRS 3 has a different and wider definition of a business compared to FRS 102. [IFRS 3.3, IFRS 3 Appendix A, IFRS 3.B7]. See Chapter 22 at 2.3. Some business combinations under IFRS might not be considered business combinations under FRS 102. In such cases, the transition exemption would not apply and retrospective adjustment would appear to be required (if the transaction does not fall within the definition of a group reconstruction).

Unlike IFRS 1, Section 35 does not extend the exemption from applying the principles in Section 19 to acquisitions of associates and interests in joint ventures before the date of transition. [IFRS 1.C5]. These are not business combinations, as defined, and would therefore appear to require retrospective adjustment under FRS 102.

How we see it

An entity may have consolidated a subsidiary in a business combination prior to the date of transition that is a subsidiary required to be excluded from consolidation under FRS 102. Section 35 does not address this particular circumstance. However, in our view, the subsidiary must be excluded from consolidation in accordance with the general requirements of Section 35 to apply the recognition and measurement requirements of FRS 102. Instead, we would expect that the investment in the subsidiary would be accounted in accordance with paragraphs 9.9 to 9.9C of the standard. See 5.2.5.A below and Chapter 8 at 3.4.

5.2.3 Application of the transition exemption when not restating business combinations – general

There are GAAP differences between IFRS 1 Appendix C (which addresses the business combination exemption available under IFRS 1) and Section 35, for example, in respect of the treatment of intangible assets previously subsumed within goodwill (which must not be reinstated as intangible assets under Section 35). Nevertheless, the guidance in IFRS 1 Appendix C can be helpful in interpreting the transition exemption. The commentary below, therefore, draws on IFRS 1 in suggesting approaches that preparers may want to consider.

5.2.3.A Classification of business combination

If a first-time adopter does not restate a business combination, then it would keep the same classification of the business combination (as an acquisition by the legal acquirer, reverse acquisition by the legal acquiree, merger accounting or pooling of interests) as in its financial statements under its previous financial reporting framework. However, if a transaction is restated in accordance with Section 19, the classification of the business combination may change.

5.2.3.B Recognition and derecognition of assets and liabilities

A first-time adopter that applies the transition exemption must recognise all assets and liabilities at the date of transition that were acquired or assumed in a past business combination, other than:

- Financial assets and financial liabilities that fall to be derecognised under the derecognition transition exception in paragraph 35.9(a) (see 4.1 above).
- Assets (including goodwill) and liabilities that were not recognised in the acquirer's consolidated statement of financial position in accordance with its previous financial reporting framework that also would not qualify for recognition as an asset or liability under FRS 102 in the separate (or individual) statement of financial position of the acquiree.

And

- Intangible assets previously subsumed within goodwill.

The entity must exclude items it recognised under its previous financial reporting framework that do not qualify for recognition as an asset or liability under FRS 102 (subject to the derecognition transition exception for financial assets and financial liabilities).

FRS 102 requires an entity to recognise intangible assets separately from goodwill where all of the following conditions are met:

- (a) The recognition criteria in paragraph 18.4 are met.
- (b) The intangible asset arises from contractual or legal rights.

And

- (c) The intangible asset is separable.

However, an entity can choose a policy to recognise additional intangible assets that meet condition (a) and only one of (b) or (c) above. Such a policy must be applied to all intangible assets of the same class and consistently applied to all business combinations. [FRS 102.18.4, FRS 102.18.8]. This policy option broadly replicates the recognition criteria for intangible assets that apply when accounting for a business combination under IFRS. [IAS 38.21, IAS 38.33, IFRS 3.B31]. See Chapter 21 at 3.2.2.A and Chapter 22 at 3.7.3.A.

A previous IFRS or FRS 101 reporter could consider, on transition to FRS 102, to apply an accounting policy of only recognising intangible assets meeting all three conditions (a) to (c) separately from goodwill, but might have recognised intangible assets in a past business combination under IFRS that met (a) and only one of (b) or (c).

How we see it

In our view, a first-time adopter that previously applied IFRS or FRS 101 and which chooses a policy under FRS 102 to recognise separately from goodwill intangible assets meeting all three conditions (a) to (c) in a business combination would be required to derecognise intangible assets where these do not meet this policy. This is because consistent accounting policies must be followed, unless there is an explicit transitional provision to the contrary.

Any resulting change is recognised by adjusting retained earnings (or another category of equity) and not the carrying amount of goodwill. [FRS 102.35.8, FRS 102.35.10(a)].

5.2.3.C Measurement of assets and liabilities

In essence, the approach to recognising and measuring assets and liabilities is to apply FRS 102 retrospectively (subject to the exceptions and exemptions taken at the date of transition), but without revisiting the fair value exercise. This means that where assets and liabilities acquired or assumed in a past business combination were not recognised under the entity's previous financial reporting framework, these should normally be reflected at the amounts that would be recognised in the separate or individual financial statements of the acquiree and no adjustments are made to goodwill. The previous financial reporting framework carrying amounts as at the date of the acquisition are treated as a deemed cost for the purposes of cost-based depreciation and amortisation. This does not preclude the deemed cost exemptions available on transition from being subsequently applied to assets acquired in the business combination that are still held at the date of transition (see 5.5 below).

FRS 102 requires that, where the transition exemption is used, no adjustments are made to the carrying amount of goodwill at the date of transition. [FRS 102.35.10(a)]. However, 5.2.4 below sets out situations where it may be necessary to adjust the carrying amount of goodwill, notwithstanding this prohibition.

Implementation issues arising on measuring assets acquired and liabilities assumed in business combinations include:

(a) Subsequent measurement of assets and liabilities under FRS 102 not based on cost

Where FRS 102 requires subsequent measurement of some assets and liabilities on a basis that is not based on original cost, such as fair value (e.g., certain financial instruments) or on specific measurement bases (e.g., share-based payment or employee benefits), a first-time adopter must measure these assets and liabilities on that basis in its opening FRS 102 statement of financial position, even if they were acquired or assumed in a past business combination. Any resulting change is recognised by adjusting retained earnings (or another category of equity).

(b) Previous financial reporting framework carrying amount as deemed cost

The carrying amounts in accordance with the entity's previous financial reporting framework of assets acquired and liabilities assumed in the business combination, immediately after the business combination, are their deemed cost in accordance with FRS 102 at that date. If FRS 102 requires a cost-based measurement of those assets and liabilities at a later date, that deemed cost is the basis for cost-based depreciation or amortisation from the date of the business combination (i.e., the carrying amounts under the previous financial reporting framework at the date of the business combination are 'grandfathered' as at that date).

A first-time adopter would not use the provisionally determined fair values of assets acquired and liabilities assumed (that were later finalised under its previous financial reporting framework) in applying the business combinations exemption. In any case, goodwill is adjusted retrospectively at the date of transition for the changes to provisional fair values under FRS 101/adopted IFRS. While neither Section 35 nor IFRS 1 explicitly addresses this issue, this is consistent with how the related transition exemption in Appendix C of IFRS 1 has been applied in practice.

By contrast, under its previous financial reporting framework, the entity may have amortised intangible assets or depreciated property, plant and equipment from the date of the business combination. If this amortisation or depreciation is not in compliance with FRS 102 (or indeed the asset was not amortised or depreciated under the entity's previous financial reporting framework, but this is required under FRS 102 – see the discussion on intangible assets at 5.2.4.F below), this is not 'grandfathered' under the business combination exemption. If the amortisation or depreciation methods and rates are not acceptable and the difference has a material impact on the financial statements, a first-time adopter must adjust the accumulated amortisation or depreciation on transition (see 5.5.2 below).

(c) Measurement of items not recognised under the entity's previous financial reporting framework

If an asset acquired or liability assumed in a past business combination was not recognised under the entity's previous financial reporting framework, this does not mean that such items have a deemed cost of zero in the opening FRS 102 statement of financial position. Instead, the acquirer normally recognises and measures those items in its opening statement of financial position on the basis that FRS 102 would require in the statement of financial position of the acquiree. Conversely, if an asset or liability was subsumed in goodwill in accordance with the entity's previous financial reporting framework but would have been recognised separately under Section 19, that asset or liability remains in goodwill unless FRS 102 would require its recognition in the financial statements of the acquiree. However, intangible assets previously subsumed within goodwill under the entity's previous financial reporting framework are not separately recognised. [FRS 102.35.10(a)]. Financial assets and financial liabilities that are derecognised in accordance with the derecognition transition exception (see 4.1 above) are not recognised. [FRS 102.35.9(a)].

(d) Measurement of non-controlling interests and deferred tax

The measurement of non-controlling interests (see also 4.3 above) and deferred tax follows from the measurement of other assets and liabilities. Consequently, deferred tax and non-controlling interests are recalculated after all assets acquired and liabilities assumed have been adjusted under Section 35.

The recognition and measurement of deferred tax is addressed in Section 29, which must be applied retrospectively as no transition exemptions or exceptions apply. In particular, first-time adopters will need to consider what deferred tax would have been recognised at the date of the business combination, as adjusted by subsequent movements in timing differences recognised under Section 29.

Any resulting change in the carrying amount of deferred taxes and non-controlling interest is recognised by adjusting retained earnings or another category of equity.

Some IFRS reporters may have included non-controlling interest at fair value when accounting for the business combination under IFRS 3. [IFRS 3.19, IFRS 3.B44, IFRS 3.B45]. This may often exceed the non-controlling interest based on the proportionate share of the subsidiary's identifiable assets, liabilities (and contingent liabilities) which would be the measurement basis used under FRS 102 at the date of the business combination. [FRS 102.9.13(d), FRS 102.19.14A]. Consequently, some of the goodwill recognised under IFRS would relate to the non-controlling interest.

How we see it

Given that goodwill is not restated where the transition exemption in paragraph 35.10(a) is taken, we believe that it is appropriate that non-controlling interest - which represents the equity in a subsidiary not attributable, directly or indirectly, to its parent - continues to include this attributed goodwill.

5.2.4 Restatement of goodwill when not restating business combinations

Notwithstanding the prohibition in paragraph 35.10(a) from making adjustments to goodwill where past business combinations are not restated, there may be certain situations where an adjustment to goodwill is appropriate. These could include:

- Where there is an indicator that the goodwill may be impaired at the date of transition (see 5.2.4.A below).
- The interaction with FRS 102's requirements to restate goodwill for adjustments to contingent consideration (see 5.2.4.B below).
- A potential conflict with FRS 102's requirements to retranslate goodwill and fair value adjustments relating to a foreign operation. (see 5.2.4.C below).

And

- Changes in the scope of consolidation (see 5.2.5 below).

The transition requirements for negative goodwill (see 5.2.4.D below) and goodwill previously deducted from equity (see 5.2.4.E below) are not explicitly addressed by Section 35, although IFRS 1 Appendix C addresses the latter.

5.2.4.A Impairment of goodwill

Section 35 does not require an impairment review of goodwill to be performed as at the date of transition. However, there are no exemptions in Section 35 from applying Section 27, which requires that an entity must assess at each reporting date whether there is any indication of impairment. FRS 102 prohibits the reversal of impairment losses relating to goodwill. [FRS 102.35.7, FRS 102.27.24, FRS 102.27.28].

For example, an entity may uplift the carrying amount of property, plant and equipment to fair value at the date of transition (by adopting a revaluation policy under FRS 102 or using the deemed cost exemption to state an item of property, plant or equipment at fair value as at the date of transition [FRS 102.35.10(c)] - see 5.5 below). As a consequence, the total carrying amount of the acquired net assets including goodwill might exceed the recoverable amount of the relevant cash-generating unit(s) (or groups of cash-generating unit(s)) to which the goodwill is allocated. Consequently, an impairment of goodwill (and potentially other assets in the cash generating unit(s)) would be recognised in accordance with Section 27. See Chapter 29 at 5.

Section 35 states that no adjustments must be made to the carrying amount of goodwill at the date of transition (or earlier date from which the first-time adopter restates business combinations under Section 19). [FRS 102.35.10(a)].

How we see it

In our view, it would be inappropriate to recognise an impairment loss on the first day of the comparative period of the FRS 102 financial statements when that impairment already existed at the date of transition itself. Therefore, if there is an indicator of impairment at transition, the goodwill must be reviewed for impairment at the date of transition.

Any impairment losses identified at the date of transition would be reflected in retained earnings in accordance with paragraph 35.8, unless the impairment is allocated to revalued assets (such as property, plant and equipment) where the impairment is accounted as a revaluation decrease in accordance with other sections of FRS 102 and reduces a revaluation surplus on that asset included in the revaluation reserve (see Chapter 20 at 3.7 and Chapter 29 at 6). [FRS 102.27.6].

5.2.4.B Transition accounting for contingent consideration

Contingent consideration must be remeasured under the general principles in FRS 102 as there are no exemptions under Section 35. FRS 102 requires that the acquirer includes the estimated amount of contingent consideration (reflecting the time value of money, if material) in the cost of the combination at the acquisition date if the adjustment is probable and can be measured reliably. Subsequent changes to the estimate are also reflected as adjustments to the cost of the business combination (with the unwinding of any discount reflected as a finance cost in profit or loss in the period it arises). [FRS 102.19.12, FRS 102.19.13A, FRS 102.19.13B]. See Chapter 22 at 3.6.2.

The requirements of IFRS for accounting for contingent consideration differ significantly from those in FRS 102. In particular, IFRS 3 requires that contingent consideration classified as equity must not be remeasured and its subsequent settlement must be accounted for within equity. Other contingent consideration is measured at fair value at each reporting date and changes in fair value are recognised in profit or loss. [IFRS 3.39, IFRS 3.40, IFRS 3.58]. Therefore, a previous IFRS or FRS 101 reporter will need to remeasure contingent consideration classified as a liability (or asset) on transition to FRS 102 to reflect the amounts that are probable (and can be measured reliably) rather than the fair value. The situation with contingent consideration classified as equity is more complicated since FRS 102's requirements on contingent consideration arising from a business combination do not distinguish between contingent consideration classified as equity or as a liability.

How we see it

As explained further in Chapter 22 at 3.6.2.C, in our view, contingent consideration classified as equity is remeasured for changes in the number of equity instruments to be issued (and valued using the fair value at the date of exchange, i.e., the date of acquisition), with adjustments reflected in the cost of combination (and hence goodwill). The estimated amount of contingent consideration classified as equity is not remeasured for subsequent changes in the entity's share price.

Consequently, while paragraph 35.10(a) specifies that no adjustments must be made to goodwill (where the transition exemption is used), Section 19 requires goodwill to be adjusted for changes in the amount of estimated contingent consideration. However, the amount of goodwill recognised by a previous IFRS or FRS 101 reporter would not reflect adjustments to the fair value of contingent consideration made subsequent to the acquisition (unless these qualified as measurement period adjustments). [IFRS 3.39, IFRS 3.40, IFRS 3.45, IFRS 3.58]. The question therefore arises as to whether a first-time adopter is permitted to adjust goodwill as at the date of transition to reflect the estimated contingent consideration, measured in accordance with Section 19 at that date.

How we see it

Although a conflict between paragraph 35.10(a) and Section 19 arises, in our view, goodwill is not adjusted as at the date of transition, and therefore any resulting change to the estimated contingent consideration is recognised by adjusting retained earnings (or another category of equity) at that date. This view recognises that paragraph 35.10(a) takes precedence.

This situation differs in certain respects from the situation discussed at 5.2.4.C below with denominating goodwill in a foreign currency as the accounting just changes the 'same' goodwill from being viewed as denominated in the functional currency to a foreign currency (rather than remeasuring the goodwill to a different amount, based on estimated contingent consideration).

The interaction between the requirements on contingent consideration and those on financial instruments is rather complicated. Sections 11 and 12 of FRS 102, where applied to the recognition and measurement of financial instruments, scope out the accounting by the acquirer for contracts for contingent consideration in a business combination – and instead refer to Section 19. [FRS 102.12.3(g)]. Consequently, goodwill must be adjusted prospectively for re-measurements of contingent consideration that are made subsequent to the date of transition.

An entity that chooses to apply IAS 39 (where permitted) or IFRS 9 to the recognition and measurement of financial instruments, applies the scope of the relevant standard to its financial instruments.

[FRS 102.11.2, FRS 102.12.2]. IAS 39 and IFRS 9 specifically address contingent consideration classified as a financial liability that is recognised in a business combination to which IFRS 3 applies. [IAS 39.9(aa), IFRS 9.4.2.1]. However, the requirements on accounting for contingent consideration are found primarily in IFRS 3 and so do not apply to entities reporting under FRS 102. [IFRS 3.39, IFRS 3.40, IFRS 3.58, IFRS 9.4.2.1(e)].

How we see it

In our view, an entity applying IAS 39 (where permitted) or IFRS 9 to the recognition and measurement of financial instruments would also normally apply the requirement in paragraph 19.12 that contingent consideration is recognised where the adjustments to consideration are probable and can be measured reliably, with subsequent adjustments to goodwill.

5.2.4.C Goodwill on a pre-transition business combination that is a foreign operation (where not restated under Section 19)

Section 35 is not explicit on how to treat goodwill relating to an acquisition of a foreign operation in a business combination that is not restated under Section 19.

While paragraph 35.10(a) specifies that no adjustments must be made to goodwill, Section 30 *Foreign Currency Translation* requires goodwill arising on the acquisition of a foreign operation to be translated. [FRS 102.30.23]. Where a conflict between paragraph 35.10(a) and Section 30 arises, management will need to use judgement to determine an appropriate policy, and this could consequently be an area where diversity in practice might arise. A previous IFRS or FRS 101 reporter will in any event be translating foreign currency goodwill; however, there might be elements of goodwill which were regarded as functional currency goodwill (and not retranslated on an ongoing basis) on transition to IFRS or FRS 101. [IAS 21.23, IAS 21.47, IFRS 1.C2, IFRS 1.C3].

How we see it

In our view, paragraph 35.10(a) does not preclude management in regarding the goodwill as foreign currency goodwill and retranslating the goodwill at the date of transition (and thereafter at each reporting period). An alternative view which could meet the requirements of paragraph 35.10(a) to preserve the carrying amount of goodwill (expressed in the functional currency of the reporting entity) and to comply with Section 30, would be taking the functional currency carrying amount of the goodwill at the date of transition, translating it into the underlying currency of the acquired operations at the exchange rate at the date of transition and thereafter regarding the goodwill as foreign currency goodwill to be retranslated at each reporting period. Another alternative view is that the requirement relates to preserving the carrying amount of the goodwill (i.e., in the reporting entity's functional currency); this view takes a literal reading of the transition exemption in paragraph 35.10(a) and considers that this takes precedence over Section 30's requirements.

5.2.4.D Negative goodwill

FRS 102's accounting requirements for negative goodwill which requires this to be recognised on balance sheet (see Chapter 22 at 3.9.3), differ significantly from those in IFRS 3 where the negative goodwill is recognised immediately in profit or loss. [FRS 102.19.24, IFRS 3.34].

The transition exemption in paragraph 35.10(a) addresses 'goodwill', requiring that no adjustment must be made to the carrying value of goodwill. Goodwill is defined as: "Future economic benefits arising from assets that are not capable of being individually identified and separately recognised" rather than simply as a residual (see Chapter 22 at 3.9). Therefore, goodwill is not the same as the "Excess over cost of acquirer's interest in the net fair value of acquiree's identifiable assets, liabilities and contingent liabilities" (negative goodwill). Moreover, negative goodwill is not strictly an asset or liability (as defined) and so arguably does not fall within the requirement to restate the opening financial position. [FRS 102.35.7].

How we see it

In our view, an entity that applies the transition exemption in paragraph 35.10(a) not to restate business combinations does not reinstate negative goodwill that was recognised immediately in profit or loss under IFRS. Moreover, for the reasons explained in Chapter 22 at 3.9.3, it may often be the case that negative goodwill would have been fully amortised by the date of transition had FRS 102 been applied. However, an entity would need to consider carefully whether any accumulated credit in retained earnings represented by negative goodwill is a realised profit in accordance with the guidance in TECH 02/17BL, as this might not always be the case.

5.2.4.E Goodwill previously deducted from equity

There may be historic circumstances where, under the entity's previous financial framework, some goodwill has been eliminated against reserves.

How we see it

In our view, where the exemption not to restate pre-transition business combinations in accordance with Section 19 is taken, the requirement that no adjustment is made to the carrying value of goodwill means that there is no change to the amount of goodwill recognised as an asset (i.e., the goodwill remains eliminated against equity). Effectively under FRS 102, such goodwill does not exist for accounting purposes. FRS 102 does not permit or require reclassification of goodwill previously deducted from equity to profit or loss when the related operation is disposed of or closed.

5.2.4.F Goodwill and intangible asset amortisation

FRS 102 requires that goodwill and intangible assets be amortised on a systematic basis over a finite useful life using an amortisation method that reflects the expected pattern of consumption of economic benefits. A straight-line basis is used if the entity cannot determine that pattern reliably. If an entity is unable to make a reliable estimate of the useful life of goodwill or an intangible asset, the useful life must not exceed ten years. [FRS 102.18.19, FRS 102.18.20, FRS 102.18.21, FRS 102.19.23]. See Chapter 21 at 3.3.3 and Chapter 22 at 3.9.2 for a fuller discussion.

Under IFRS, the acquirer measures goodwill at the amount recognised at the acquisition date less any accumulated impairment losses. [IFRS 3.B63]. Consequently, goodwill is not amortised.

A first-time adopter may also need to consider the following implementation issues:

- (a) Adjustments to goodwill lives where no restatement of business combinations under Section 19
Where an entity is not restating the business combination in accordance with Section 19, paragraph 35.10(a) requires that no adjustment is made to the carrying amount of goodwill. Following the Periodic Review 2024 amendments, the paragraph now clarifies that if the goodwill has previously been determined to have an indefinite useful life, the goodwill must be re-assessed to determine its remaining useful life and is subsequently measured in accordance with paragraph 19.23. [FRS 102.19.23, FRS 102.35.10(a)].
Therefore, an IFRS or FRS 101 reporter is required to reassess the remaining useful life of the goodwill, as at the date of transition and to amortise the goodwill prospectively.
- (b) Restatement of business combinations in accordance with Section 19
Where a first-time adopter restates a business combination in accordance with Section 19 and has previously ascribed a finite useful life to goodwill, any adjustment to that useful life is accounted for prospectively over the remaining revised useful life determined under FRS 102 as a change in estimate (see 4.2 above).

How we see it

Where, however, an indefinite useful life was used under the entity's previous financial reporting framework (as required under IFRS), amortisation must be adjusted for retrospectively from the date of the business combination. This is because this is a change in accounting policy (not a change in estimate) and the requirement in paragraph 35.10(a) that no adjustment must be made to the carrying amount of goodwill does not apply. On transition to FRS 102, however, goodwill and intangible assets must be amortised over a finite useful life. Therefore, in our view, a move from an indefinite useful life to a finite useful life for goodwill is required to be retrospectively effected – such that the goodwill at transition represents the carrying amounts after adjusting for amortisation on the basis of the finite useful life determined under FRS 102.

(c) Intangible assets

There are no special transition requirements for intangible assets (other than goodwill) and therefore FRS 102's requirements are applied retrospectively. [FRS 102.35.7].

Where an entity amortised an intangible asset over a longer finite useful life than ten years under its previous financial reporting framework, it can continue to use that useful life, where it continues to be a reliable estimate of the useful life. In particular, it would be difficult to argue that the useful life of the intangible asset must simply default to a ten year life. Any changes to the useful life would need to be justified by reference to a change in circumstances (unless the previous life was objectively in error) and be recognised prospectively as a change in estimate (see 4.2 above).

How we see it

However, if an entity ascribed an indefinite useful life to an intangible asset under its previous financial reporting framework, in our view, the intangible asset must be amortised retrospectively over its new finite useful life since this is a change in accounting policy (FRS 102 does not permit use of an indefinite useful life).

The above conclusions apply to all intangible assets, whether acquired separately or in a business combination (and do not depend on whether the business combination is restated in accordance with Section 19 or not).

5.2.5 Changes in scope of consolidation

The scope of consolidation under the entity's previous financial reporting framework may differ from the scope of consolidation under FRS 102. Therefore, a first-time adopter might not have consolidated a subsidiary acquired in a past business combination under its previous financial reporting framework or a subsidiary consolidated under its previous financial reporting framework qualifies to be excluded from consolidation under FRS 102.

Adjustments to the carrying amounts of assets and liabilities of subsidiaries may affect non-controlling interest and deferred tax.

5.2.5.A Changes in scope of consolidation compared to the previous financial reporting framework

Section 9 of FRS 102 states that "A subsidiary is an entity that is controlled by the parent." [FRS 102.9.4]. The definition of 'a subsidiary' in Section 9 is generally consistent with (although not identical to) the definition of 'a subsidiary undertaking' included in section 1162 of the CA 2006. However, Section 9 contains additional guidance on 'control' - in relation to currently exercisable options or convertible instruments; where control is exercised through an agent; and Special Purpose Entities - as well as an extended definition of subsidiaries held exclusively for resale (which are excluded from consolidation). [FRS 102.9.4-12, s1162, s1162 (LLP)].

IFRS 10 has a similar definition that: "A subsidiary is an entity that is controlled by another entity". [IFRS 10 Appendix A]. However, IFRS 10 and FRS 102 differ in the wording of the definition of 'control' (and associated guidance) and exclusions from the scope of consolidation. [FRS 102.9.4-6A]. In many cases, both standards lead to the same determination of whether an entity is or is not a subsidiary. However, a first-time adopter must consider Section 9's requirements on control and the exclusions from the scope of consolidation (discussed in Chapter 8 at 3.3 and 3.4) in order to determine whether any changes are required compared to its previous financial reporting framework. [FRS 102.9.4-12].

5.2.5.B Previously unconsolidated subsidiaries

If, under its previous financial reporting framework, an FRS 102 first-time adopter did not consolidate a subsidiary that it is required to consolidate under FRS 102, it must retrospectively apply FRS 102 to the carrying amounts of the assets and liabilities of that subsidiary, subject to the transition exceptions and transition exemptions set out in Section 35. [FRS 102.35.7].

FRS 102 does not explain how a first-time adopter is to consolidate a subsidiary for the first time (whether because the reporting entity did not consider the entity to be a subsidiary under its previous financial reporting framework or did not prepare consolidated financial statements). However, as set out below, the entity needs to apply the requirements of paragraph 35.10(r) (which addresses the accounting for a subsidiary on transition, where a parent becomes a first-time adopter of FRS 102 later than its subsidiary -

see 5.15.2 below) and may want to consider paragraphs IG27 to IG30 of IFRS 1 (which provide further implementation guidance discussed below) to the extent that these do not conflict with FRS 102.

If an entity becomes a first-time adopter later than its subsidiary, the entity, in its consolidated financial statements, measures the assets and liabilities of the subsidiary at the same carrying amounts as in the financial statements of the subsidiary, after adjusting for consolidation adjustments and for the effects of the business combination in which the entity acquired the subsidiary. [FRS 102.35.10(r)]. Where the subsidiary has not previously adopted FRS 102, the reference above to the "same carrying amounts" is to the amounts FRS 102 would require in the statement of financial position of the subsidiary. [IFRS 1.IG27(a)].

The amounts of goodwill, assets and liabilities recognised in respect of the subsidiary will depend on whether it was acquired in a business combination or not, and if it was so acquired, whether the business combination is restated in accordance with Section 19 or not. [FRS 102.35.10(a)].

- (a) Subsidiary acquired in a business combination: entity uses the transition exemption in paragraph 35.10(a) not to *restate* past business combinations

Where the business combination is not restated in accordance with Section 19, paragraph 35.10(a) is applied to accounting for the business combination (see 5.2 generally). Section 35 does not explain how to implement paragraph 35.10(a) where the subsidiary has not been previously consolidated (i.e., no goodwill has been reflected in the consolidated financial statements).

How we see it

The CA 2006 requires the determination of goodwill, as at the date of the acquisition, where a subsidiary undertaking is acquired and accounted for using the acquisition method. Even if consolidated financial statements were not prepared by the entity under its previous financial reporting framework, the amount of the goodwill, assets and liabilities that would have been recognised had the subsidiary been consolidated may be known or determinable (for example, if the amounts were already available for the purposes of group reporting). In our view, this goodwill amount is recognised on transition.

However, it might not always be possible to reliably determine the goodwill. In such circumstances, on the basis that no goodwill was reflected in the entity's financial statements under its previous financial reporting framework, a view could be taken that the transition adjustments to derecognise the cost of investment and recognise the assets and liabilities of the subsidiary may be reflected in retained earnings (or other category of equity), following the general requirements in Section 35.

In some cases, the impracticability exemption in paragraph 35.11 may be relevant to the accounting for the business combination (see 3.4.4 above).

This differs from the requirement in Appendix C4(j) in IFRS 1 to establish a deemed cost of goodwill, being the difference between the carrying amount of the investment and the assets and liabilities of the subsidiary that would be required in the subsidiary's own IFRS financial statements. [IFRS 1.C4(j)]. While pragmatic, this will result in a deemed cost of goodwill which will rarely represent the true goodwill under a previous financial reporting framework, will give a different answer for goodwill depending on the measurement basis used for the investment in the subsidiary in the parent's separate financial statements, and appears to conflict with paragraph 35.10(a)'s requirement that no adjustment is made to the carrying value of goodwill at the date of transition.

Other assets acquired and liabilities assumed since the business combination and still held at the acquirer's date of transition are reported at:

- The carrying amounts that FRS 102 would require in the subsidiary's own statement of financial position.
- Or
- Where the subsidiary has already adopted FRS 102 before its parent, the amounts included in the subsidiary's statement of financial position in its FRS 102 financial statements, after adjusting for consolidation procedures. [FRS 102.35.10(r), IFRS 1.IG27(a), IFRS 1.IG30(a)].

- (b) Subsidiary acquired in a business combination restated under Section 19

Where the previously unconsolidated subsidiary was acquired in a business combination restated under Section 19, the goodwill and fair values of the identifiable net assets recognised at the date of the business combination would be retrospectively restated. The first-time adopter would need to restate either all pre-transition business combinations or all later business combinations (and apply the requirements of FRS 102 in respect of non-controlling interests from the same date). [FRS 102.35.9(e), FRS 102.35.10(a)].

Other assets acquired and liabilities assumed since the business combination and still held at the acquirer's date of transition are reported at:

- The carrying amounts that FRS 102 would require in the subsidiary's own statement of financial position.
- Or
- Where the subsidiary has already adopted FRS 102 before its parent, the amounts included in the subsidiary's statement of financial position in its FRS 102 financial statements after adjusting for consolidation procedures. [FRS 102.35.10(r), IFRS 1.IG27(a), IFRS 1.IG30(a)].

(c) **Subsidiary not acquired in a business combination**

The first-time adopter would adjust the carrying amounts of the subsidiary's assets and liabilities to the amounts that FRS 102 would require in the subsidiary's own statement of financial position (or where the subsidiary has already adopted FRS 102 before its parent, the amounts included in its statement of financial position in its FRS 102 financial statements), after adjusting for consolidation procedures.

[FRS 102.35.10(r), IFRS 1.IG27(a)].

Where the subsidiary was not acquired in a business combination, no goodwill is recognised.

[IFRS 1.IG27(c)]. Instead, any difference between the carrying amounts and the net identifiable assets determined above is treated as an adjustment to retained earnings (or other component of equity, where appropriate) at the date of transition.

5.2.5.C Previously consolidated entities that are not subsidiaries

A first-time adopter may have consolidated an investment under its previous financial reporting framework that does not meet the definition of a subsidiary under FRS 102. In such a case, the entity must first determine the appropriate classification under FRS 102 (for example, as an associate, jointly controlled entity or financial asset) and then apply Section 35's requirements.

The requirements of FRS 102 must be applied retrospectively subject to any transition exceptions and exemptions available and, where applicable, the use of the impracticability exemption available in paragraph 35.11 (see 3.4.4 above). [FRS 102.35.7, FRS 102.35.11].

5.2.6 Business combination - transition example

The following example illustrates a number of the considerations relevant to the treatment of business combinations on transition.

Illustration 5-1: Business combination example

On 31 December 20X4, Entity A purchased Entity B for £1.2m cash consideration (incurring acquisition costs of £10,000) and further contingent cash consideration. The date of transition is 1 January 20X5 and Entity A prepares its first FRS 102 financial statements for the accounting period beginning 1 January 20X6. Entity A prepared its last annual financial statements in accordance with IFRS at 31 December 20X5.

The assets and liabilities acquired at 31 December 20X4 were as follows:

	<i>Book value (and tax base) in B's financial statements</i>	<i>Fair value (IFRS)</i>	<i>Fair value (if not restating under Section 19)</i>	<i>Fair value if restating (Section 19)</i>
	£000	£000	£000	£000
Intangible asset (brand - 5 year life)	-	200	200	200
Intangible asset (customer contract - 5 year life)	-	300	-	-
Investment property	100	300	300	300
Owner-occupied property (20 year life - nil residual value)	100	500	500	500
Inventory	50	70	70	70
Deferred tax (at 25%)	(40)	(320)	(245)	(245)
Net assets acquired	-	1,050	825	825

Consideration - cash	-	1,200	1,200	1,200
Contingent cash consideration		400	350	350
Transaction costs		10	10	10
Goodwill	-	550	550	735
Adjustment to retained earnings (DR/CR))			175	(10)

The entity accounted for the transaction under IFRS applying the acquisition method. The fair values for the identifiable assets and liabilities and the goodwill recognised are shown in the second column in the table above. Goodwill, which is not amortised under IFRS, has not been impaired. The fair value of the contingent consideration liability recognised was £400,000 at the date of the business combination and £600,000 as at 31 December 20X5. Transaction costs of £10,000 were expensed under IFRS.

The transaction meets the definition of a business combination under FRS 102. An income tax rate of 25% applies in all periods and indexation is ignored. The discount rate used to unwind the contingent consideration is 4%. It is assumed there are no tax effects of fair value movements on, or of settlement of contingent consideration (so that no deferred tax arose under IFRS and there is no timing difference under FRS 102).

Under FRS 102, Entity A accounts for the owner-occupied property using the cost model (same as IFRS). The investment property is accounted at fair value through profit or loss (under IFRS, the entity had elected the cost model, but any depreciation was immaterial in the first year of ownership). The fair value of the investment property was £350,000 as at 31 December 20X5. The present value of the amount of contingent consideration that is estimated as probable to be paid (and can be reliably measured) was £350,000 as at the date of the business combination (and date of transition) and £540,000 as at 31 December 20X5.

This example considers the accounting when the business combination is not restated under Section 19 (using the exemption in paragraph 35.10(a)) and when the business combination is restated under Section 19.

Business combination is not restated under Section 19

At the date of transition, Entity A:

- Does not restate the IFRS carrying amount of the owner-occupied property of £500,000. The values ascribed under IFRS are treated as deemed cost at the date of the business combination (which in this case is also the date of transition).
- Derecognises the customer contract intangible asset of £300,000 as at the date of transition as Entity A applies a policy of not recognising additional classes of intangible assets that do not meet all three recognition criteria. [FRS 102.18.8].
- Reduces the deferred tax liability by £75,000 relating to the fair value adjustment to derecognise the customer contract intangible asset. [FRS 102.29.11].
- Remeasures the contingent consideration to £350,000, i.e., a reduction of £50,000 in the liability recognised under IFRS. [FRS 102.19.12].

Entity A does not change the carrying amount of goodwill of £550,000 recognised under IFRS at the date of transition, and adjusts retained earnings by £175,000 debit for the reduction in the intangible asset and deferred tax liability and remeasurement of contingent liability above. Goodwill is assessed as having a remaining life of 15 years. [FRS 102.35.10(a)].

In the comparative period, Entity A makes the following adjustments compared to IFRS:

- An increase of £50,000 in the carrying amount of the investment property (to its fair value at 31 December 20X5) recognising the fair value gain in profit or loss. This property was carried using the cost model under IFRS (with immaterial depreciation in the comparative period). [FRS 102.16.7].
- The contingent consideration liability is remeasured to £540,000 as at 31 December 20X5. There is a consequential increase of £176,000 to the carrying amount of goodwill as at 31 December 20X5, leaving £14,000 (i.e., $0.04 \times £350,000$) unwind of discount in profit or loss. This adjustment to goodwill is made prospectively (rather than restating goodwill at transition). [FRS 102.19.12]. Under IFRS, a fair value movement of £200,000 had been recognised in profit or loss, measuring the contingent consideration liability at £600,000. This is reversed. [IFRS 3.58].
- Goodwill amortisation of £36,667 (i.e., $£550,000/15$), based on the goodwill amount as at transition, is recognised as an expense. [FRS 102.19.23]. Goodwill is not amortised under IFRS. [IFRS 3.B63].
- The reversal of amortisation on the customer contract of £60,000 (i.e., $£300,000/5$) which is recognised as an intangible asset under IFRS but not FRS 102.
- A reduction of £15,000 to deferred tax income (relating to the reversal of deferred tax under IFRS on the customer contract intangible asset amortisation) and an increase in deferred tax expense of £12,500 (relating to the fair value gain on the investment property which was not recognised under IFRS as the cost model was used). [FRS 102.29.6].

Business combination restated under Section 19

Entity A restates the business combination in accordance with Section 19 (as shown in the final column in the table above). Goodwill of £735,000 arising is amortised over 15 years from the date of the business combination. Therefore, the carrying amount of goodwill is increased by £185,000 and the net assets acquired/contingent consideration liability reduced by £175,000 (compared to IFRS) at the date of transition. The difference of £10,000 relates to capitalised transaction costs that are expensed under IFRS (and is reflected in retained earnings).

In the comparative period, Entity A makes the following adjustments compared to IFRS:

- An increase of £50,000 in the carrying amount of the investment property (to its fair value at 31 December 20X5) recognising the fair value gain in profit or loss. This property was carried using the cost model under IFRS (with immaterial depreciation in the comparative period). [FRS 102.16.7].
- The contingent consideration liability is remeasured to £540,000 as at 31 December 20X5. There is a consequential increase of £176,000 to the carrying amount of goodwill as at 31 December 20X5, leaving £14,000 (i.e., $0.04 \times £350,000$) unwind of discount in profit or loss. This adjustment to goodwill is made prospectively (rather than restating goodwill at transition). [FRS 102.19.12]. Under IFRS, a fair value movement of £200,000 had been recognised in profit or loss, measuring the contingent consideration liability at £600,000. This is reversed. [IFRS 3.58].
- Goodwill amortisation of £49,000 (i.e., $£735,000/15$), based on the goodwill amount as at transition, is recognised as an expense. [FRS 102.19.23]. Goodwill is not amortised under IFRS. [IFRS 3.B63].
- The reversal of amortisation on the customer contract of £60,000 (i.e., $£300,000/5$) which is recognised as an intangible asset under IFRS but not FRS 102.
- A reduction of £15,000 to deferred tax income (relating to the reversal of deferred tax under IFRS on the customer contract intangible asset amortisation), and an increase in deferred tax expense of £12,500 (relating to the fair value gain on the investment property which is not recognised under IFRS as the cost model is used). [FRS 102.29.6].

5.3 Public-benefit entity combinations

A public benefit entity is: "An entity whose primary objective is to provide goods or services for the general public, community or social benefit and where any equity is provided with a view to supporting the entity's primary objectives rather than with a view to providing a financial return to equity providers, shareholders or members." [FRS 102 Appendix I].

FRS 102 specifies the accounting for different types of public benefit entity combinations (see Chapter 36 at 6). Entities that are subject to a SORP may find that the relevant SORP contains further guidance specific to transactions in their sector. For example, the *Charities SORP (FRS 102)*, issued by the Charity Commission in England and Wales and the Office of the Scottish Charity Regulator in October 2019, contains guidance on various types of public benefit entity combinations involving charities.²⁴⁸ The *Charities SORP (FRS 102)* will be updated to reflect the Periodic Review 2024 and *Exposure Draft SORP 2026* was issued in March 2025.²⁴⁹

A first-time adopter could elect not to apply paragraphs PBE 34.75 to PBE 34.86 relating to public benefit entity combinations to combinations that were effected before the date of transition to FRS 102. However, if on first-time adoption, a public benefit entity restates any entity combination to comply with this section, it must restate all later entity combinations. [FRS 102.35.10(q)].

Section 35 does not add further guidance. However, entities may want to interpret paragraph 35.10(q) in the same way as the exemption not to restate pre-transition business combinations (including group reconstructions) in paragraph 35.10(a). See 5.2 above.

248 [Charities SORP \(FRS 102\)](#): Accounting and Reporting by Charities: Statement of Recommended Practice applicable to charities preparing their accounts in accordance with the Financial Reporting Standard applicable in the UK and Republic of Ireland (FRS 102) (effective 1 January 2019), Charity Commission and Office of the Scottish Charity Regulator, October 2019.

249 Exposure Draft SORP 2026: Accounting and Reporting by Charities: Statement of Recommended Practice applicable to charities preparing their accounts in accordance with the Financial Reporting Standard applicable in the UK and Republic of Ireland (FRS 102), Charity Commission and Office of the Scottish Charity Regulator at <https://www.charitysorp.org/documents/d/quest/exposure-draft-sorp-2026-1->.

5.4 Share-based payment transactions

A first-time adopter is not required to apply Section 26 *Share-based Payment* to equity instruments (including the equity component of share-based payment transactions previously treated as compound instruments) that were granted before the date of transition to FRS 102, or to liabilities arising from share-based payment transactions that were settled before the date of transition to FRS 102. [FRS 102.35.10(b)].

However, a first-time adopter previously applying IFRS 2 *Share-based Payment* or FRS 101 is required to, in relation to equity instruments (including the equity component of share-based payment transactions previously treated as compound instruments) that were granted before the date of transition to FRS 102, apply either IFRS 2 or Section 26 at the date of transition. [FRS 102.35.10(b)].

How we see it

Most first-time adopters will now be previous IFRS or FRS 101 reporters. In our view, the intention of the transition exemption is simply that an entity previously applying IFRS 2 may complete the accounting for a pre-transition grant using the original grant date fair value and it is not intended that the application of Section 26 of FRS 102 to such grants should necessarily result in a remeasurement. However, there is nothing in paragraph 10(b) of Section 35 to prohibit such a remeasurement (for example, as a result of applying the group allocation arrangements of paragraph 16 of Section 26).

The classification of a share-based payment transaction as equity-settled or cash-settled will often be the same under FRS 102 and IFRS 2 (although the requirements on classification are not identical). If a classification difference does result from adoption of FRS 102, it appears that an entity could continue with the IFRS 2 classification for existing awards, even if new grants would be classified differently under FRS 102.

The transition exemptions impact the ongoing accounting for the share-based awards to which the exemption was applied. See Chapter 28 at 17.

5.5 Fair value or previous revaluation as deemed cost

Extract from Section 35

35.10 An entity may use one or more of the following exemptions in preparing its first financial statements that conform to this FRS:

(a) ...

(c) Fair value as deemed cost

A first-time adopter may elect to measure an:

(i) item of property, plant and equipment (including an investment property transferred to property, plant and equipment in accordance with paragraphs 16.4A(b)); or

(ii) [Deleted]

(iii) intangible asset which meets the recognition criteria and the criteria for revaluation in Section 18 *Intangible Assets other than Goodwill*

on the date of transition to this FRS at its fair value and use that fair value as its deemed cost at that date.

Fair value (see Appendix A) at the date of transition must reflect the conditions that existed at the date of transition. FRS 102 requires that, in the absence of specific guidance in the relevant section of the standard dealing with an item, the guidance in Section 2A of FRS 102 is used in determining fair value. [FRS 102.2A.1-24].

Extract from Section 35

35.10 An entity may use one or more of the following exemptions in preparing its first financial statements that conform to this FRS:

(a) ...

(d) Revaluation as deemed cost

A first-time adopter may elect to use a revaluation determined under its previous financial reporting framework of an:

(i) item of property, plant and equipment (including an investment property transferred to property, plant and equipment in accordance with sub-paragraph 16.4A(b)); or

(ii) [Deleted]

(iii) intangible asset which meets the recognition criteria and the criteria for revaluation in Section 18

at, or before, the date of transition to this FRS as its deemed cost at the revaluation date.

Establishing the historical cost amounts for an asset may be onerous where the requirements differ from the previous financial reporting framework. A previous IFRS or FRS 101 reporter could have used a deemed cost exemption (similar to those in paragraphs 35.10(c) and (d), discussed above) on first-time adoption of IFRS. [IFRS 1.D5, IFRS 1.D6, IFRS 1.D7]. Use of the deemed cost exemption in paragraph 35.10(d) would allow a first-time adopter that revalued the property, plant and equipment under its previous financial reporting framework to retain the revalued amount as a deemed cost at the date of the revaluation when moving to the cost model on adoption of FRS 102. It would also allow first-time adopters to reflect a one-off revaluation to fair value at the date of transition.

Section 35 includes further deemed cost exemptions for:

- Oil and gas properties (see 5.6 below).

And

- Cost of investments in subsidiaries, associates and joint ventures in separate or individual financial statements (see 5.7 below).

5.5.1 Scope of the deemed cost exemption

The exemptions in paragraphs 35.10(c) and (d) are available on an item-by-item basis (so need not be applied consistently to a class of assets).

In practice, these exemptions are likely to be most useful for items of property, plant and equipment, where there are few restrictions to their application. The deemed cost exemption can only be applied to intangible assets that meet the recognition criteria and criteria for revaluation in Section 18, including the existence of an active market. Therefore, the exemption is of limited practical relevance to intangible assets.

5.5.2 Establishing deemed cost at a date other than transition

If the deemed cost of an asset is determined before the date of transition, then an FRS 102-compliant accounting policy needs to be applied to that deemed cost in the intervening period to determine what the carrying amount of the asset is in the opening FRS 102 statement of financial position. This means that a first-time adopter that uses a revaluation determined under its previous financial reporting framework prior to the date of transition will need to start depreciating the item from the date for which the entity established the revaluation (i.e., deemed cost) not from the date of transition to FRS 102.

This requirement is unlikely to give rise to a GAAP difference where an entity previously adopted IFRS provided the depreciation methods, lives and residual values previously applied remain acceptable under FRS 102. This could be an issue with intangible assets in situations where an indefinite life may have been determined under IFRS. [IAS 38.88].

How we see it

In our view, the intangible asset must be amortised retrospectively over its new finite useful life since this is a change in accounting policy (FRS 102 does not permit use of an indefinite useful life). See the discussion at 5.2.4.F above.

Where it is difficult to apply FRS 102's requirements on depreciation retrospectively, an entity can always use a deemed cost equal to fair value at the date of transition if the asset qualifies for deemed cost measurement under paragraph 35.10(c). *[FRS 102.35.10(c)].*

5.5.3 Impairment

As deemed cost is a surrogate for cost from the date of the measurement, any later impairment must be recognised in profit or loss. Moreover, any previous impairment recognised prior to the date that the deemed cost is established cannot be reversed. Section 27 does not permit reversal of impairment of an asset above the carrying amount that would have been determined (net of amortisation or depreciation) had no impairment loss been recognised in prior years (i.e., depreciated cost based on the deemed cost at the date of measurement). Goodwill impairment cannot be reversed. *[FRS 102.27.28, FRS 102.27.29, FRS 102.27.30, FRS 102.27.31].*

5.5.4 Deferred tax

Where a deemed cost is established based on a valuation determined under an entity's previous financial reporting framework, or fair value at transition, the past revaluation on or prior to transition generally represents a timing difference for which deferred tax will need to be recognised in accordance with the requirements of Section 29. Under the alternative accounting rules, any deferred tax relating to amounts credited or debited to the revaluation reserve (relating to the same asset) may also be recognised in the revaluation reserve as an alternative to retained earnings. *[1 Sch 35(3)(b), 1 Sch 35(3)(b)(LLP)].*

If, after transition, the deferred tax is remeasured (e.g., because of a change in tax rate) and the asset concerned was revalued outside profit or loss under its previous financial reporting framework, an entity needs to determine whether the resulting deferred tax income or expense is recognised in, or outside, profit or loss.

FRS 102 requires an entity to present tax expense (income) in the same component of total comprehensive income (i.e., continuing or discontinued operations, and profit or loss or other comprehensive income) or equity as the transaction or other event that resulted in the tax expense (income). *[FRS 102.29.22].*

The essence of the argument for where such tax effects are to be recognised is whether the reference in paragraph 29.22 to 'other comprehensive income' means items recognised in other comprehensive income under FRS 102 or whether it can extend to the treatment under its previous financial reporting framework.

How we see it

In our view, there are arguments for either approach, i.e., to present the deferred tax remeasurement on an asset that is measured at deemed cost under FRS 102 – but that was revalued outside profit or loss under its previous financial reporting framework – in profit or loss or in other comprehensive income, so long as it is applied consistently.

5.5.5 Revaluation reserve

UK companies (and LLPs) preparing statutory accounts are required by the Regulations (and LLP Regulations) to establish or maintain a statutory revaluation reserve under the alternative accounting rules on transition (see 3.4.3.A above) where property, plant and equipment (including investment property rented intragroup, where the cost model is elected – see discussion below) or intangible assets are included at a deemed cost measurement at the date of transition (which exceeds the depreciated historical cost of the item). *[1 Sch 35, 1 Sch 35 (LLP), FRS 102.35.10(d), FRS 102.A3.40B, FRS 102.A3.40C].*

While a subsequent impairment of an asset carried at deemed cost must be reflected in profit or loss, this does not preclude a transfer between revaluation reserve and retained earnings in respect of the impairment loss (where it is less than the amount of revaluation reserve related to that asset). Similarly, any excess depreciation (based on revalued amount compared to the historical cost amount) can also be transferred from the revaluation reserve to retained earnings. *[1 Sch 35(3)(a), 1 Sch 35(3)(a)(LLP)].*

FRS 102 requires investment property normally to be carried at fair value through profit or loss. This makes use of the fair value accounting rules under the Regulations (and LLP Regulations). However, FRS 102 allows an entity to make a policy choice either to account for investment property rented to another group entity at fair value through profit or loss or, by transferring them, in the case of an investment property held by the entity as: (i) the owner, to property, plant and equipment and applying the cost model in accordance with Section 17; or (ii) the lessee, to right-of-use assets and applying the cost model in accordance with Section 20. *[FRS 102.16.1, FRS 102.16.1A, FRS 102.16.4A-4B, FRS 102.16.7].* Adjustments on transition (including the treatment of the revaluation reserve) to investment properties are addressed in 3.4.3.C above.

The illustrative example²⁵⁰ below shows how a first-time adopter applies paragraph 35.10(d) upon transition to FRS 102.

Illustration 5-2: Application of paragraph 35.10(d)

Entity C, a previous IFRS reporter, owns two properties, A and B. Neither Property A nor Property B is an investment property. Entity C has an existing accounting policy to revalue its properties and to fully depreciate them over a useful life of 50 years. Property A was acquired on 31 December 20U1 at a cost of £1,000 and has been revalued on a regular basis; the last time was on 31 December 20X1 (30 years later) when its value was recorded in the financial statements at £100,000 and its remaining useful life was 20 years. There has been no significant change in the value of Property A since that revaluation.

Property B was acquired on 31 December 20X1, at a cost of £50,000. Property B has never been revalued as it was purchased in the same year that the most recent valuation was carried out, and at that time, its cost was the best available evidence of its valuation. There has been no impairment in its value.

On transition to FRS 102 (1 January 20X5), Entity C decides not to continue its policy of revaluation. (It is assumed that Entity C concludes that its estimates of the residual value and useful life of its properties remain appropriate under FRS 102.)

Paragraph 35.10(d) provides an optional exemption from restating the value of the property based on its original cost. Therefore, Entity C has the following two choices in relation to Property A:

- It could elect to use the most recent revaluation from 20X1 (being £100,000) as its deemed cost at that date and no further adjustment is required.
- Or
- It could restate the cost of the property to its original cost of £1,000, adjusting accumulated depreciation accordingly.

If the revalued amount of £100,000 were used as its deemed cost, in order to comply with company law, the difference from the relevant historical cost amount would need to be shown in a revaluation reserve and the excess depreciation, above that calculated on a historical cost basis, would continue to be offset against it. Also, as Property A is not carried at historical cost any other company law disclosures relating to revalued property will be required.

If the property is restated to the original cost of £1,000, the following adjustment would be required:

Dr	Revaluation reserve	£84,660	
Dr	Accumulated depreciation*	£14,340	
	Cr	Property, plant and equipment	£99,000

* This represents three years' depreciation (from 31 December 20X1 to 1 January 20X5) on the revalued amount, being £15,000 in total (£100,000 x 3/20 years remaining), less 33 years' depreciation (from 31 December 20U1 to 1 January 20X1) on the historical cost, being £660 in total (£1,000 x 33/50 years), which is not adjusted for.

No adjustment is required on transition for Property B. The exemption to permit revaluation as deemed cost is available at the level of individual items of property, plant and equipment. Entity C could choose to revalue Property B at the date of transition and use that new valuation as deemed cost. Similarly, as an alternative to using the 20X1 valuation for Property A, Entity C could revalue it at the date of transition (irrespective of whether Property B is revalued at the date of transition).

5.6 Deemed cost for oil and gas assets

A first-time adopter that under its previous financial reporting framework accounted for exploration and development costs for oil and gas properties in the development or production phases, in cost centres that included all properties in a large geographical area is permitted to elect to measure oil and gas assets (which, for the purpose of this transition exemption, comprise only those assets used in the exploration, evaluation, development or production of oil and gas) at the date of transition to FRS 102 on the following basis:

- (i) Exploration and evaluation assets at the amount determined under the entity's previous financial reporting framework.
- (ii) Assets in the development or production phases at the amount determined for the cost centre under the entity's previous financial reporting framework. The entity must allocate this amount to the cost centre's underlying assets *pro rata* using reserve volumes or reserve values as of that date.

250 FRC FRS 102 Factsheet 7 Transition to FRS 102 (November 2024).

The entity must test exploration and evaluation assets and assets in the development and production phases for impairment at the date of transition to FRS 102 in accordance with Section 34 *Specialised Activities* or Section 27 respectively and, if necessary, reduce the amount determined in accordance with (i) or (ii) above. [FRS 102.35.10(j)].

Oil and gas entities might have accounted for exploration and development costs for properties in development or production under their previous financial reporting framework in cost centres that include all properties in a large geographical area, e.g., under the 'full cost accounting method'. However, this method of accounting generally uses a unit of account that is much larger than is acceptable under FRS 102 (or indeed IFRS, which has a similar transition exemption). In practice, as most first-time adopters will have previously applied IFRS or FRS 101, this transition exemption is unlikely to be of relevance to many entities.

Applying FRS 102 fully retrospectively would pose significant problems for such entities because – as the IASB noted in paragraph BC47A of IFRS 1 – it would require amortisation “to be calculated (on a unit of production basis) for each year, using a reserves base that has changed over time because of changes in factors such as geological understanding and prices for oil and gas. In many cases, particularly for older assets, this information may not be available.” Even when such information is available, the effort and cost to determine the opening balances at the date of transition would usually be very high.

To avoid the use of deemed cost resulting in an oil and gas asset being measured at more than its recoverable amount, oil and gas assets are required to be tested for impairment at the date of transition. The deemed cost amounts are reduced to take account of any impairment charge in accordance with Section 34 (for exploration and evaluation assets) (see Chapter 36 at 3) and Section 27 (for assets in the development and production phases) (see Chapter 29). The requirements of Section 34 are based on those in IFRS 6 (with certain adaptations). [FRS 102.34.11]. Section 34 would, therefore, require an entity to determine an accounting policy for allocating exploration and evaluation assets to cash-generating units for impairment purposes. A cash-generating unit or group of cash-generating units (used for exploration and evaluation assets) must be no larger than an operating segment (as defined in the Glossary to FRS 102). [FRS 102.34.11B, IFRS 6.21].

5.7 Individual and separate financial statements

Extract from Section 35

35.10 An entity may use one or more of the following exemptions in preparing its first financial statements that conform to this FRS:

(a) ...

(f) Individual and separate financial statements

When an entity prepares individual or separate financial statements, paragraphs 9.26, 14.4 and 15.9 require the entity to account for its investments in subsidiaries, associates, and jointly controlled entities either at cost less impairment or at fair value.

If a first-time adopter measures such an investment at cost, it shall measure that investment at one of the following amounts in its individual or separate opening statement of financial position, as appropriate, prepared in accordance with this FRS:

- (i) cost determined in accordance with Section 9 *Consolidated and Separate Financial Statements*, Section 14 *Investments in Associates* or Section 15 *Investments in Joint Ventures* at the date of transition; or
- (ii) deemed cost, which shall be the carrying amount at the date of transition as determined under the entity's previous financial reporting framework.

An entity must apply the same accounting policy (i.e., cost, fair value with changes in fair value recognised in comprehensive income (or profit or loss) in accordance with paragraphs 17.15E and 17.15F, or fair value with changes in fair value recognised in profit or loss) to all investments in a single class (for example, investments in subsidiaries that are held as part of an investment portfolio, those that are not so held, associates or jointly controlled entities), but can elect different policies for different classes. [FRS 102.9.26, FRS 102.9.26A, FRS 102.14.4, FRS 102.15.9]. See Chapter 8 at 4.1 and 4.2.

Where the cost model is applied, the transition exemption would permit the choice of cost or deemed cost to be applied on an investment-by-investment basis. See 5.7.1 below for specific considerations where cost or deemed cost is used for investments.

The transition exemption allows a first-time adopter to 'grandfather' the carrying amount determined under its previous financial reporting framework at the date of transition as a deemed cost at that date. Unlike the comparable exemption in IFRS 1, [IFRS 1.D14], however, Section 35 does not permit use of deemed cost equal to the fair value at the date of transition (unless that happens to be the previous carrying amount). Investments in subsidiaries, associates and jointly controlled entities in the individual or separate financial statements included at cost or a deemed cost are subject to the impairment requirements of Section 27 (see Chapter 29).

5.7.1 Use of cost or deemed cost for investments – implementation issues

Where a UK company acquires an investment accounted for at cost in a share-for-share exchange, FRS 102 permits the initial cost of the investment to be reported either at its fair value at the date of the transaction or at an amount excluding any reliefs that would have been required to be reflected in share premium but for the existence of merger relief or group reconstruction relief. Hence, it is not necessary to establish a 'deemed cost' on transition where the previous carrying amount was net of such reliefs. [FRS 102.A3.24, FRS 102.A3.24A]. See Chapter 8 at 4.2.1.

Previous IFRS or FRS 101 reporters that measured investments in subsidiaries, associates and joint ventures at fair value or using the equity method in separate financial statements (but now wish to adopt the cost model on transition to FRS 102) might also wish to use the transition exemption. The equity method is not permitted in individual or separate financial statements under FRS 102. [FRS 102.9.26, FRS 102.9.26A, FRS 102.14.4, FRS 102.15.9]. Previous IFRS or FRS 101 reporters that used the cost model under IAS 27 *Separate Financial Statements* might also wish to use the transition exemption where the carrying amount of the investment under IFRS does not represent cost under FRS 102. Examples of such situations include: where a deemed cost was used on transition to IFRS/FRS 101; where the cost of the investment has been reduced by the amount of pre-acquisition dividends in the past; or where IAS 27 specifies the cost of investment in certain group reorganisations. [IAS 27.10, IAS 27.13, IAS 27.14]. Previous IFRS or FRS 101 reporters might also wish to use the transition exemption where the cost of investment reflects past fair value hedge accounting, which is not being continued under FRS 102 and Sections 11 and 12 are applied.

Where a UK company (or LLP) preparing statutory accounts uses a deemed cost at the date of transition that reflects a revaluation under its previous financial reporting framework, this would generally mean that the investment is carried at a revalued amount that makes use of the alternative accounting rules. See 3.4.3 and 3.4.3.A above.

5.8 Development costs

Section 18 provides a choice of policy as to whether to capitalise development costs (meeting the conditions for capitalisation in paragraph 18.8H) or to expense all development costs, to be applied consistently (see Chapter 21 at 2.3). [FRS 102.18.8K].

A first-time adopter choosing to adopt an accounting policy of capitalising development costs is permitted to elect to treat the date of transition to FRS 102 as the date on which capitalisation commences. [FRS 102.35.10(w)].

Additionally, a first-time adopter choosing to adopt an accounting policy of expensing development costs, which had adopted a policy of capitalising development costs under a previous financial reporting framework must not include such capitalised development costs as part of the cost of an asset on transition to FRS 102. [FRS 102.35.8B].

Prior to the amendments made to FRS 102 in the Periodic Review 2024, first time adopters were required to apply Section 18 retrospectively.

Where business combinations are restated in accordance with Section 19, intangible assets (including development costs) must be recognised at their fair values where the recognition criteria in Section 19 (depending on the policy applied – see Chapter 22 at 3.7.3.A) are met, even if a policy of expensing development costs is followed under Section 18.

5.9 Borrowing costs

FRS 102 offers a policy choice of expensing borrowing costs as incurred or of capitalising borrowing costs that are directly attributable to the acquisition, construction or production of a qualifying asset as part of the cost of that asset. Where a capitalisation policy is adopted, this must be applied consistently to a class of qualifying assets (see Chapter 27 at 3.3). [FRS 102.25.2].

An entity choosing to adopt an accounting policy of capitalising borrowing costs as part of the cost of a qualifying asset is permitted to elect to treat the date of transition to FRS 102 as the date on which capitalisation commences. [FRS 102.35.10(o)]. However, if the entity chooses to adopt an accounting policy of expensing borrowing costs under FRS 102, but had adopted a policy of capitalising borrowing costs under a previous financial reporting framework (which is mandatory for a previous IFRS or FRS 101 reporter), it must not include such capitalised borrowing costs as part of the cost of an asset on transition to FRS 102. [FRS 102.35.8A].

First-time adopters applying a capitalisation policy for borrowing costs under Section 25 *Borrowing Costs* can use the transition exemption which offers relief by allowing an entity to commence capitalising borrowing costs arising on qualifying assets from the date of transition. That way these entities can avoid difficult restatement issues, such as determining which assets would have qualified for capitalisation of borrowing costs in past periods, which costs met the definition of borrowing costs and determining the amount of borrowing costs that qualified for capitalisation in past periods.

However, a previous IFRS or FRS 101 reporter would already be capitalising borrowing costs in accordance with IAS 23 *Borrowing Costs*. There are some differences between IAS 23 and Section 25, for example, under IFRS, capitalisation of borrowing costs is mandatory for most qualifying assets and there are differences in how the capitalisation rate is calculated on general borrowings and expenditure on qualifying assets is determined. See Chapter 27 at 2. Also, a previous IFRS or FRS 101 reporter could have used the transition exemption under IFRS 1 and therefore might not have fully retrospectively applied IAS 23. The IFRS 1 transition exemption allowed a first-time adopter to elect to apply IAS 23 from the date of transition (or from an earlier date as permitted by paragraph 28 of IAS 23). [IFRS 1.D23]. Consequently, there could be cases where the amounts capitalised under IAS 23 are not aligned with the amounts required to be capitalised under Section 25 of FRS 102.

How we see it

Unlike the comparable IFRS 1 transition exemption, in our view, the FRS 102 transition exemption does not permit grandfathering of the borrowing cost component included in the carrying amounts of a qualifying asset at the date of transition under a previous financial framework.

Therefore, if the amounts capitalised by a previous IFRS or FRS 101 reporter are materially different from a fully retrospective application of Section 25, an adjustment would be needed on transition to FRS 102. In some cases, the impracticability exemption in paragraph 35.11 could be relevant to the accounting for the capitalised borrowing costs (see 3.4.4 above).

A first-time adopter of IFRS that establishes a deemed cost for an asset (see 5.5 above) cannot capitalise borrowing costs incurred before the measurement date of the deemed cost. [IFRS 1.IG23]. While FRS 102 does not include an explicit statement to this effect, it would generally be appropriate to follow the same treatment under FRS 102 where a deemed cost exemption is used. This would avoid an entity that has recognised an asset at a deemed cost equal to its fair value at a particular date increasing its carrying value to recognise interest capitalised before that date. However, the entity could make use of the transition exemption to commence capitalising borrowing costs from the date of transition in accordance with Section 25.

The illustrative example²⁵¹ below shows a first-time adopter that previously adopted a policy of expensing borrowing costs but chooses to adopt a policy of capitalising borrowing costs upon transition to FRS 102, electing to treat the date of transition to FRS 102 as the date on which capitalisation commences in accordance with paragraph 35.10(o). [FRS 102.35.10(o)].

251 FRC FRS 102 Factsheet 7 Transition to FRS 102 (November 2024).

Illustration 5-3: First-time adopter applying paragraph 35.10(o)

Entity D decided to construct a new building for its own use. Work on the construction commenced during 20X4. Entity D capitalised tangible fixed assets on the basis of cost, in accordance with its previous financial reporting framework, but had not previously constructed any significant assets. As at 31 December 20X4, Entity D had capitalised construction costs of £25,000 and estimated that it still had approximately 9 months of construction work ahead. Entity D had adopted an accounting policy of not capitalising borrowing costs, but if it had, the amount capitalised would have been £300. During 20X5, Entity D completed construction of the building. The total cost to be capitalised in accordance with FRS 102 (excluding borrowing costs) is £90,000. Qualifying borrowing costs calculated in accordance with FRS 102 relating to the project as a whole are £2,500, including the £300 from 20X4.

On transition to FRS 102, Entity D reviews its accounting policies and decides that it will now choose to capitalise borrowing costs in accordance with Section 25. In accordance with paragraph 35.10(o), it chooses to capitalise costs prospectively from 1 January 20X5. As a result, no adjustment is made to the carrying value of the asset at the date of transition (1 January 20X5); the £300 previously written off is not capitalised, but £2,200 of borrowing costs are capitalised during the year ended 31 December 20X5.

5.10 Decommissioning liabilities included in the cost of property, plant and equipment and right-of-use assets

Paragraph 17.10(c) of FRS 102 states that the cost of an item of property, plant and equipment includes the “initial estimate of the costs, recognised and measured in accordance with Section 21 *Provisions and Contingencies*, of dismantling and removing the item and restoring the site on which it is located, the obligation for which an entity incurs either when the item is acquired or as a consequence of having used the item during a particular period for purposes other than to produce inventories during that period.”

A first-time adopter is permitted to elect to measure this component of the cost of an item of property, plant and equipment at the date of transition to FRS 102, rather than on the date(s) when the obligation initially arose. [FRS 102.35.10(i), FRS 102.17.10(c)].

Paragraph 20.47(d) of FRS 102 similarly states that the cost of a right-of-use asset includes an estimate of the costs to be incurred by the lessee, recognised and measured in accordance with Section 21, in dismantling and removing the underlying asset, restoring the site on which it is located or restoring the underlying asset to the condition required by the terms and conditions of the lease – unless those costs are incurred to produce inventories. The lessee incurs the obligation for those costs either at the commencement date or as a consequence of having used the underlying asset during a particular period.

A first-time adopter is permitted to elect to measure this component of the cost of a right-of-use asset at the date of transition to FRS 102, rather than on the date(s) when the obligation initially arose.

[FRS 102.35.10(iA), FRS 102.20.47(d)]

IFRIC 1 *Changes in Existing Decommissioning, Restoration and Similar Liabilities* contains more detailed requirements than Section 21. An entity might want to consider IFRIC 1 in accounting for changes in existing decommissioning, restoration and similar liabilities and the guidance on the related first-time adoption exemption in IFRS 1. [IFRS 1.D21].

The transition exemptions in IFRS 1 provide a pragmatic approach to determining the decommissioning component of the carrying amount of an item of property, plant and equipment or right-of-use asset. Depreciation and impairment losses on the asset can cause differences between the carrying amount of the liability and the amounts included in the carrying amount of the asset. The transition exemption provides an exemption from determining the changes to the carrying amount of the asset that occurred before the date of transition.

Most previous IFRS and FRS 101 reporters would already be following an accounting treatment for decommissioning provisions (and adjustments to the related assets) consistent with FRS 102 and are unlikely to apply the transition exemptions.

See Chapter 24 at 3.11.1 for discussion of decommissioning provisions.

5.11 Leases

Section 35 provides a number of exemptions for a first-time adopter from full retrospective application of Section 20. These apply to first-time adopters that are lessees except for the transition exemption over assessment of whether a contract existing at the date of transition to FRS 102 contains a lease (see 5.11.1 below) which applies to both lessors and lessees.

Lessors, therefore, classify a lease as operating or financing on the basis of circumstances existing at the inception of the lease. Lease classification is only reassessed if there is a lease modification. Changes in estimates (for example, changes in estimates of the useful economic life or the residual value of the underlying asset) or changes in circumstances (e.g., default of the lessee) do not give rise to a new classification of a lease.

The requirements of Section 20 are largely aligned with IFRS. Unlike IFRS, it does not require land and buildings components to be separated (although we would expect entities applying Section 20 to identify and account for land and building components separately – see Chapter 23 at 7.1.2). Paragraph 20.106 of FRS 102 does address how lease payments are recognised where lease payments in an operating lease are structured to increase in line with expected general inflation which differs to IFRS. This would need to be retrospectively adjusted by an IFRS reporter. See Chapter 23 at 11.3 for further details as to the changes for lessors and Chapter 23 at 2 for differences with IFRS.

Most first-time adopters of FRS 102 will be previous IFRS or FRS 101 reporters and are already following an accounting treatment for leases largely consistent with Section 20 of FRS 102. Nevertheless, there are some implementation issues for lessees to consider that are discussed later in this section.

First-time adopters of FRS 102 that are lessees have a choice of:

(a) If the entity previously applied IFRS 16, applying ‘the IFRS 16 election’ (see 5.11.2 below).

Or

(b) Applying the transition arrangements for entities not applying the IFRS 16 election (see 5.11.3 below).

A lessee applying IFRS 16 for the first time was permitted to make an accounting policy choice between fully retrospective application or modified retrospective application (with two measurement options). In the interests of simplicity, FRS 102 requires a lessee (both on transition to the new requirements for ongoing reporters, and for first-time adopters) to apply the modified retrospective approach and set the right-of-use asset equal to the liability (adjusted for any previously recognised prepayment or accrual of lease payments), unless it chooses the IFRS 16 election available to first-time adopters (or the IFRS 16 option available to ongoing reporters – see Chapter 23 at 11.2.1). [FRS 102.B20.17].

The transition balance sheet, therefore, reflects the right-of-use assets and lease liabilities under both approaches (a) and (b) above, and Section 20 is applied in the current and comparative periods. This differs to the transition for ongoing FRS 102 reporters where comparative periods are not restated and retained earnings (or other component of equity) are adjusted at the beginning of the period of initial application (see Chapter 23 at 11.2). [FRS 102.1.47].

Regardless of the approach taken, a first-time adopter that is a lessee must measure a right-of-use asset that meets the definition of investment property, and which will not be transferred to right-of-use assets using the election in paragraph 16.4A(b)(ii), at fair value on the date of transition to FRS 102. See 5.11.4 below.

5.11.1 Assessment of whether a contract contains a lease

A first-time adopter is allowed to assess whether a contract existing at the date of transition to FRS 102 contains a lease by applying paragraphs 15 to 18 of Section 20 of FRS 102 (see Chapter 23 at 4.1) on the basis of facts and circumstances existing at the date of transition to FRS 102, rather than at the commencement date of the lease. [FRS 102.35.10(x)]. While paragraph 35.10(x) refers to the ‘commencement date’ of the lease, paragraph 20.15 requires the entity to assess whether a contract contains a lease at the inception date of the contract (and this date is referred to in the discussion below). [FRS 102.20.15]. This would not have any effect on application.

Since the transition exemption refers to ‘a contract’, there is no requirement to apply the same lease assessment date to all contracts as at the date of transition. Therefore, it would be possible to classify some leases based on the facts and circumstances at the date of transition, and others at the inception of the contract.

This transition exemption allows an entity to avoid the practical difficulties of going back many years by permitting this assessment to be made at the date of transition to FRS 102. In effect, it determines which leases will be accounted under the new requirements in Section 20, and which under other sections of FRS 102. It is not permitted to apply the old leasing model to contracts which are not assessed as leases using this exemption.

Previous IFRS or FRS 101 reporters could have used a similar transition exemption on first-time adoption of IFRS or FRS 101, [IFRS 1.D9], but if that assessment had been made based on facts and circumstances at the date of transition to IFRS (rather than the earlier inception date of the contract), it would be appropriate for a first-time adopter of FRS 102 to consider whether there were changes in the facts and circumstances between the date of transition to IFRS or FRS 101 and the date of transition to FRS 102 that would mean different contracts contained leases (as defined in FRS 102).

The transitional provisions of IFRS 16 allowed ongoing IFRS reporters to apply IFRS 16 to contracts previously identified as leases applying IAS 17 *Leases* and IFRIC 4 *Determining whether an Arrangement contains a Lease* (and not to apply IFRS 16 to contracts not identified as leases under those standards), provided this practical expedient was applied to all of its contracts. [IFRS 16.C3]. Previous IFRS or FRS 101 reporters are likely to make use of the IFRS 16 election (see 5.11.2 below) on transition to FRS 102. It is important to note, however, that the IFRS 16 election is a 'measurement' transitional provision rather than one that permits 'grandfathering' of lease assessments. A first-time adopter under FRS 102 would need to reassess whether its contracts contain a lease (as defined under FRS 102) on the basis of facts and circumstances existing either at the date of transition or at the inception date of the contract. This is regardless of whether it applies the IFRS 16 election or the other transitional provision in paragraph 35.10(x) and irrespective of whether it previously had applied paragraph D9 of IFRS 1 or paragraph C3 of IFRS 16. [FRS 102.35.10(x), FRS 102.35.7].

Illustration 5-4 below demonstrates how a first-time adopter determines whether a contractual arrangement contains a lease.

Illustration 5-4: Determining whether an arrangement contains a lease

Entity A's first FRS 102 financial statements are for a period that ends on 31 December 20X6 and include comparative information for 20X5 only. Its date of transition to FRS 102 is 1 January 20X5.

On 1 January 20X3, Entity A entered into a take-or-pay arrangement to supply gas. On 1 January 20X4, there was a change in the contractual terms of the arrangement.

On 1 January 20X5, Entity A could determine whether the arrangement contains a lease under Section 20 on the basis of facts and circumstances existing on that date. Alternatively, Entity A could apply the criteria in Section 20 on the basis of facts and circumstances existing on 1 January 20X3 but will need to reassess the arrangement on 1 January 20X4 in respect of the changes made on that date. [FRS 102.20.15].

5.11.2 IFRS 16 election

A lessee applying IFRS 16 immediately prior to the date of transition to FRS 102 is permitted to use the lease liability and right-of-use asset calculated under IFRS 16 as the lease liability and right-of-use asset on the date of transition to FRS 102 and to rely on its previous assessment of whether right-of-use assets are impaired at the date of transition to FRS 102, rather than applying Section 27 at that date. A lessee making this election is required to disclose that fact and must apply it to all of its leases. [FRS 102.35.10(x)].

This is an optional transition exemption which is intended to promote efficiency within groups. [FRS 102.B20.7].

Additionally, a first-time adopter that is a lessee must measure a right-of-use asset that meets the definition of investment property, and which will not be transferred to right-of-use assets using the election in FRS 102.16.4A(b)(ii), at fair value on the date of transition to FRS 102. See 5.11.4 below.

5.11.2.A Implementation issues

Previous IFRS and FRS 101 reporters are likely to make use of the IFRS 16 election. It could be onerous to use the transitional arrangements in 5.11.3 below since all leases would need to be remeasured using either the incremental borrowing rate or obtainable borrowing rate at the date of transition to FRS 102.

The IFRS 16 election establishes the opening balances of leases in existence at the date of transition and Section 20 applies to lease accounting thereafter. For example, if there was a post-transition lease modification or a change in index or rate affecting a pre-transition lease, the requirements of Section 20 rather than IFRS 16 would be applied.

While Section 20 is not identical to IFRS 16, many of the differences are optional simplifications which can be avoided if an entity wishes to adopt policies close to its previous accounting under IFRS or FRS 101. However, on applying Section 20, an entity could make use of simplifications for subsequent lease accounting, if applicable. [FRS 102.B20.6].

Where the IFRS 16 election is used, the finance cost used in accounting for the lease going forwards would be based on the rate of interest implicit in the lease or incremental borrowing rate that was already being used for the lease accounting under IFRS 16. If this was not the case, the lease accounting would not unwind by the end of the lease. This does not preclude a lessee using a different choice of discount rate (such as the obtainable borrowing rate) for leases entered into post transition as the choice of discount rate applies on a lease-by-lease basis. [FRS 102.20.49].

Illustration 5-5 below demonstrates how a first-time adopter previously applying IFRS 16 applies paragraph 35.10(x).

Illustration 5-5: Transition example for leases - first-time adopter previously applying IFRS 16

Entity B's first FRS 102 financial statements are for a period that ends on 31 December 20X6. Its date of transition to FRS 102 is 1 January 20X5. Its previous financial reporting framework is IFRS.

On 1 January 20X4, Entity B enters into a 3-year lease of equipment, with the following annual payments payable at the end of each year: £10,000 in year one, £12,000 in year two and £14,000 in year three. For simplicity, there are no other elements to the lease payments (e.g., purchase options, lease incentives from the lessor or initial direct costs). The initial measurement of the right-of-use asset and lease liability is £33,000 (present value of lease payments using an incremental borrowing rate of approximately 4.235%).

On 31 December 20X4, its right-of-use asset and lease liability amounts to £22,000 and £24,398, respectively. Applying IAS 36 *Impairment of Assets*, Entity B concludes that its right-of-use asset is not impaired.

On 1 January 20X5, Entity B elects to apply the IFRS 16 election available under paragraph 35.10(x) of FRS 102. Hence, the opening balances at the date of transition are the carrying amounts of the right-of-use asset and lease liability calculated under IFRS 16. Since Entity B has made this election, it must apply this to all of its leases. Entity B also elects to rely on its previous assessment of whether the right-of-use asset is impaired.

[FRS 102.35.10(x)].

Entity B subsequently measures its right-of-use asset in accordance with paragraph 20.55 to 20.61 and its lease liability in accordance with paragraphs 20.62 to 20.64 of FRS 102.

5.11.3 Transition arrangements for lessees not applying the IFRS 16 election

Where an entity is not eligible to or chooses not to apply the IFRS 16 election, the entity uses the transition exemption to measure the lease liability at the date of transition to FRS 102 at the present value of remaining lease payments, discounted using the lessee's incremental borrowing rate or the lessee's obtainable borrowing rate for each lease at the date of transition to FRS 102. The right-of-use asset must then be measured at an amount equal to the lease liability, adjusted by the amount of any prepaid or accrued lease payments. [FRS 102.35.10(x)].

Additionally, a first-time adopter that is a lessee must measure a right-of-use asset that meets the definition of investment property, and which will not be transferred to right-of-use assets using the election in paragraph 16.4A(b)(ii), at fair value on the date of transition to FRS 102. See 5.11.4 below.

[FRS 102.35.10(x)].

A lessee is allowed to use one or more of the following practical expedients at the date of transition to FRS 102 (applied on a lease-by-lease basis):

- (i) Apply a single discount rate to a portfolio of leases with reasonably similar characteristics (e.g., a similar remaining lease term for a similar class of underlying asset in a similar economic environment).
- (ii) Choose not to recognise a lease liability and right-of-use asset for leases for which the lease term ends within 12 months of the date of transition to FRS 102, or leases for which the underlying asset is of low value (as described in paragraph 20.5). Instead, the entity must account for (and disclose information about) these leases as if they were short-term leases accounted for in accordance with paragraph 20.6.
- (iii) Use hindsight, such as in determining the lease term if the contract contains options to extend or terminate the lease. [FRS 102.35.10(x)].

The above transition exemptions are similar but not identical to those available under IFRS. Under Section 35, like Section 20, an entity is permitted to choose either the incremental borrowing rate or obtainable borrowing rate to discount the lease payments on a lease-by-lease basis. The use of the obtainable borrowing rate is not permitted under IFRS.

5.11.3.A Implementation issues

As noted at 5.11.2 above, previous IFRS and FRS 101 reporters are likely to make use of the IFRS 16 election.

A first-time adopter must consider certain implementation issues as follows:

- As mentioned in Chapter 23 at 11.2.2, Section 1 *Scope* of FRS 102 (which applies to ongoing FRS 102 reporters) does not specify whether the lessee's incremental borrowing rate or obtainable borrowing rate at the date of transition for ongoing reporters should be determined based on the original lease term or the remaining lease term.

Section 35 also does not provide explicit guidance for first-time adopters.

How we see it

We believe that a lessee has an accounting policy choice to use either the original lease term or remaining lease term to determine the incremental borrowing rate or obtainable borrowing rate at the date of transition. The policy chosen needs to be consistently applied and disclosed in the financial statements.

- Although a lessee is allowed to use hindsight, such as in determining the lease term if the contract contains options to extend or terminate the lease, neither Section 35 nor Section 1 provide detailed guidance on the use of hindsight.

How we see it

As explained in Chapter 23 at 11.2.2 for ongoing reporters, we believe that hindsight can be applied only to matters of judgement and estimates and therefore would not apply to matters of fact such as changes to an index or rate. We believe the same view applies to first-time adopters.

- Paragraph 35.10(x) does not specify how to account for onerous leases at the date of transition for a first-time adopter lessee not applying the IFRS 16 election. In most cases, a right-of-use asset and lease liability will now be recognised applying the transitional exemption although there will be situations where this is not the case. It is possible for leases still to give rise to onerous provisions in certain cases (e.g., where the low value exemption or short-term lease exemption is applied to the lease, or where a lease has become onerous before the commencement date of the lease). See Chapter 24 at 3.3.1.A for further discussion of when onerous provisions are recognised. As explained in 3.4.2 above, while FRS 102 does not specifically call for an impairment test of assets other than exploration and evaluation assets at the date of transition to FRS 102, a first-time adopter should be mindful that there are no exemptions from full retrospective application of the requirements set out in Section 27. Therefore, an entity must consider whether there is an indicator of impairment for right-of-use assets at the date of transition that might require an impairment test to be performed.

5.11.4 Investment property

Regardless of the approach taken on transition (see 5.11 above), if the right-of-use asset meets the definition of investment property (see Chapter 19 at 3.1), the entity must measure the right-of-use asset at fair value on the date of transition. This is unless the entity rents investment property to another group entity and the first-time adopter chooses to account for such properties using the cost model rather than at fair value, as permitted by paragraph 16.4A(b)(ii). [FRS 102.16.4A(b)(ii), FRS 102.35.10(x)].

First-time adopters applying IFRS or FRS 101 might have used the cost model as IAS 40 *Investment Property* allows a choice of the cost or fair value model.

Since investment properties are carried at fair value through profit or loss using the fair value accounting rules that apply to UK companies and LLPs, any adjustment to the carrying amount of the investment property (and any related deferred tax) could be reflected in retained earnings on transition. Revaluation gains over historical cost would not usually be realised. The FRC notes that entities measuring investment property at fair value may transfer fair value movements that are not distributable profits to a non-distributable reserve (but are not required to do so) which may assist in identifying profits available for distribution. [FRS 102.A3.28].

Illustration 5-6: Transition example for leases - right-of-use asset that meets the definition of investment property

On 1 January 20X3, Entity A (original lessee/ intermediate lessor), an IFRS reporter, enters into a ten-year lease for 5,000 square metres of office space (the head lease) with Entity B (the head lessor). At commencement of the head lease, Entity A subleases the 5,000 square metres of office space for four years to Entity C (the sublessee).

Having considered the requirements of IFRS 16, Entity A classifies the sublease as operating lease. In accordance with IAS 40, the right-of-use asset meets the definition of investment property. Entity A's accounting policy for its investment property under IFRS is to apply the cost model. This example ignores tax effects (including deferred tax).

As of 31 December 20X4, the right-of-use asset and lease liability related to this lease amounted to £5,888 and £6,210, respectively.

Entity A adopts FRS 102. The date of transition is 1 January 20X5 and Entity A prepares its first FRS 102 financial statements for the accounting period beginning 1 January 20X6.

Entity A has chosen to apply the IFRS 16 election in accordance with FRS 102 paragraph 35.10(x). Therefore, it has used its lease liability calculated under IFRS 16 of £6,210 as the lease liability on date of transition to FRS 102.

The right-of-use asset meets the definition of investment property under Section 16 *Investment Property*. Entity A measures the right-of-use asset at its fair value (excluding lease payments) on the date of transition of £6,000. Entity A recognises a credit to retained earnings of £112 (£6,000 - £5,888) on the date of transition.

5.11.5 Implementation issues

Certain implementation issues that a first-time adopter must consider are discussed below.

- As explained in Chapter 23 at 6.2.1, some lease arrangements may contain a government grant or non-exchange transaction for a public benefit entity, for example when lease payments are significantly below market rents. The lessee is required to account for such incoming resources in accordance with the requirements of Section 24 *Government Grants* (when a lease component contains a government grant) or, for a public benefit entity, paragraphs PBE 34.63-PBE 34.74 (when a lease component contains a non-exchange transaction) by recognising the non-exchange component as a contribution to the cost of the right-of-use asset. The resulting impact is that carrying value of the right-of-use asset will be higher than the contractual lease payments would imply. [FRS 102.20.47(e), FRS 102.B20.16]. In the discussion that follows, reference to incoming resources from a government grant or non-exchange transaction for a public benefit entity, is referred to as a 'non-exchange component'. A related situation arises when an entity receives a monetary government grant, say in the form of cash, in respect of entering into a separate lease contract.

IFRS 16 does not provide specific guidance on accounting for leases containing a non-exchange component. In particular, it does not specifically require an entity to account for the incoming resources as a contribution to the right-of-use asset (together with a separate credit) as FRS 102 now does. Further, there are some differences between the recognition and measurement requirements of IAS 20 *Accounting for Government Grants and Disclosure of Government Assistance* and Section 24 when accounting for a government grant, whether that arises from a non-exchange component in a lease contract with the government as lessor or a separate government grant in respect of a lease. The following discussion covers some of the issues that arise when grants have been accounted for under IFRS in a manner that is different from the requirements of FRS 102:

- Grants previously recognised under IFRS at nominal amount

Section 24 requires grants to be measured at the fair value of the asset received or receivable, unlike IAS 20 which permits non-monetary government grants to be recorded, alternatively, at a nominal amount. [FRS 102.24.5, IAS 20.23].

Where an entity chooses to apply the transition exemption in paragraph 35.10(x) (either applying or not applying the IFRS 16 election) on first time adoption of FRS 102 and has leases that contain non-monetary non-exchange component (e.g., leases at below-market rates) that had previously been recognised at nominal amount under IFRS, paragraph 35.10(x) is silent as to whether the entity would adjust the right-of-use asset to reflect the non-exchange component in the lease. [FRS 102.35.10(x)].

A view that could be taken is that paragraph 35.10(x) does not require the entity to adjust the right-of-use asset calculated under IFRS 16 (where the IFRS 16 election is applied) or the other

transitional exemption to reflect the non-exchange component. [FRS 102.35.10(x)]. However, as there is no exemption in Section 35 relating to the recognition of the non-exchange component under Sections 24, an alternative view is that in order to comply with the requirements of that section, the lessee must, at the date of transition, adjust the right-of-use asset.

How we see it

In our view, lessees have an accounting policy choice of whether or not to adjust the right-of-use asset (determined using the IFRS 16 election or other transitional exemption in paragraph 35.10(x)) in the manner required under Section 20 and Section 24. The policy adopted is applied consistently to all leases containing a non-exchange component.

The discussion above applies similarly to a public benefit entity in receipt of incoming resources from a non-exchange transaction applying Section 20 and Section 34.

- Grants recognised under IFRS which have been deducted from the right-of-use asset
IAS 20 permits government grants to be deducted from the related asset rather than being shown as deferred income. FRS 102 does not permit the deduction of the grant from the related asset. [IAS 20.24, FRS 102.24.5B, FRS 102.24.5G].

Where a first-time adopter that is a lessee previously received a monetary grant in respect of lease contract which is deducted from the right-of-use asset as permitted by paragraph 24 of IAS 20, the right-of-use asset would be presented at an amount lower than would have been calculated under IFRS 16.

Where a first-time adopter applies the IFRS 16 election in paragraph 35.10(x), Section 35 is silent as to whether the first-time adopter would exclude the effect of this netting and present separately the government grant.

How we see it

We believe such an entity must gross up the right-of-use asset for the amount of the grant that was presented net. This is because the IFRS 16 election in paragraph 35.10(x) requires the lessee to use "...the lease liability and right-of-use asset calculated under IFRS 16 ..." The deduction of a government grant from a right-of-use asset in accordance with paragraph 24 of IAS 20 is a presentation matter, and in our view is not a calculation that arose under IFRS 16. Furthermore, paragraph 96 of Section 2 does not permit the offsetting of assets and liabilities unless required or permitted by FRS 102 nor is this permitted by Sections 20 and 24.

The accounting for any non-exchange component would, therefore, follow the requirements of Section 24 (applying the accruals model or performance model under the lessee's existing accounting policy).

Illustration 5-7 below provides an example of how a lessee accounts for a monetary grant deducted from a right of use asset under IFRS.

Illustration 5-7: Monetary grant previously deducted from a right-of-use asset under IFRS

On 1 January 20X3, Entity A, an IFRS reporter, entered into a five-year lease of a property with a lessor. The annual lease payments are £1,000 (paid in advance). Entity A concluded that it cannot readily determine the interest rate implicit in the lease and calculated a right-of-use asset of £4,500*, as at 1 January 20X3, under IFRS 16 using its incremental borrowing rate of 5.56%. The government provided a cash grant of £2,500 to Entity A in relation to the leased property. Entity A's accounting policy under IAS 20 is to deduct the grant in arriving at the carrying amount of the right-of-use asset so that the carrying amount of the right-of-use asset on 1 January 20X3 after netting off is £2,000.

Entity A adopts FRS 102 with a date of transition of 1 January 20X5 and prepares its first FRS 102 financial statements for the accounting period beginning 1 January 20X6. It applies the IFRS 16 election in paragraph 35.10(x). The carrying amount of the right-of-use asset in Entity A's IFRS financial statements immediately before the date of transition is £1,200.†

As stated above, we believe that the entity must exclude the effect of netting off previously made under IFRS. Therefore, on the date of transition, Entity A would recognise the right-of-use asset at the amount calculated under IFRS 16 being £2,700 (grossed up for the grant),** with a related lease liability (unchanged from IFRS) of £2,845.††

Section 24 allows for an accounting policy choice between the accruals model and performance model for government grants (on a class-by-class basis) whereas IAS 20 requires the accruals model to be applied. [FRS 102.24.5B, FRS 102.24.5C]. Entity A, under FRS 102, chooses to apply the accruals model as its accounting policy, and so the grossing up of the grant would result in recognition of deferred income of £1,500[†]. On the date of transition, the journal entry is:

Dr	Right-of-use asset	£1,500	
	Cr	Deferred income	£1,500
*	This is calculated as the present value of £1,000 annual payments made in advance over 5 years using a discount rate of 5.56%.		
**	The carrying amount of the right-of-use asset before deducting the grant calculated under IFRS 16 is £2,700 (£4,500 less £1,800 for two years of depreciation).		
†	Under the accruals model under IFRS or Section 24, grants related to assets, including right-of-use assets, are recognised in income on a systematic basis over the expected useful life of the asset. Therefore, the deferred income recognised under the accruals model is £1,500 (£2,500 less £1,000 for amounts recognised in income over the two years since lease commencement).		
††	This is calculated as the present value of £1,000 annual payments made in advance over 3 years (remaining period) using a discount rate of 5.56%.		
‡	This is £2,000 of initial amount of right-of-use asset after netting off the grant x 3/5 (based on three years remaining of a 5-year lease term).		

- Under IFRS 16, when an entity enters into a sale and leaseback transaction and the transfer of the asset from the seller-lessee to the buyer-lessor qualifies as a sale in accordance with the requirements of IFRS 15 *Revenue from Contracts with Customers*, the seller-lessee is required to measure the right-of-use asset arising from the leaseback at the proportion of the previous carrying amount of the asset that relates to the right of use retained by the seller-lessee. Accordingly, the seller-lessee recognises only the amount of any gain or loss that relates to the rights transferred to the buyer-lessor. [IFRS 16.100(a)]. Under Section 20 however, where an entity enters into a sale and leaseback transaction and the transfer of the asset qualifies as a sale in accordance with Section 23, entities have an accounting policy choice in respect of the measurement of the right-of-use asset and the treatment of any gain to either: [FRS 102.20.123(a)]
 - Measure the right-of-use asset arising from the leaseback at the proportion of the previous carrying amount of the asset that relates to the right of use retained by the seller-lessee. Accordingly, the seller-lessee recognises only the amount of any gain or loss that relates to the rights transferred to the buyer-lessor (a policy aligned to the required approach under IFRS 16 - although IFRS provides more guidance than Section 20 on how this approach might be applied (see Chapter 23 at 9.2.1.A)).
 - Or
 - Measure the right-of-use asset arising from the leaseback at cost in accordance with the general principles of initial measurement in paragraph 46 of Section 20 (the normal initial measurement requirements for right-of-use assets), with any excess of the sale proceeds over the previous carrying amount of the asset deferred, and amortised over the lease term, and any shortfall of the sales proceeds under the carrying amount recognised immediately in profit or loss. This option is not available under IFRS 16 (see Chapter 23 at 2.7).

Any off-market terms arising from the sale and leaseback transaction must be adjusted (see Chapter 23 at 9.2.3). [FRS 102.20.124, FRS 102.20.125].

If a seller-lessee that is a first-time adopter previously applied IFRS or FRS 101, it is likely to apply the IFRS 16 election and therefore use the first option above if it had entered into a sale and leaseback prior to the date of transition to FRS 102.

5.12 Revenue from contracts with customers

As part of the Periodic Review 2024 amendments, the legacy Section 23 *Revenue*, which included revenue recognition requirements based on IAS 11 *Construction Contracts* and IAS 18 *Revenue*, was entirely replaced with a new Section 23, providing a new five-step revenue recognition model based on IFRS 15 for accounting for revenue from contracts with customers. [FRS 102.B23.1].

Section 35 includes the following transition exemptions in relation to Section 23. The requirements of Section 23 are discussed in Chapter 25.

Extract from Section 35

35.10 An entity may use one or more of the following exemptions in preparing its first financial statements that conform to this FRS:

(a) ...

(b) Revenue from Contracts with Customers

A first-time adopter may apply the transitional provisions in paragraph 1.65. If a first-time adopter decides to apply those transitional provisions, it shall also apply paragraph 1.66.

For the purposes of applying paragraph 1.65 in the context of this paragraph:

(i) references to the date of initial application shall be read as to the beginning of the reporting period; and

(ii) a completed contract is a contract for which an entity has transferred all of the goods or services identified in accordance with the entity's previous financial reporting framework.

A first-time adopter shall disclose the information required by paragraph 1.65.

First-time adopters that do not take advantage of the transition exemption in paragraph 35.10(y) would apply the new requirements in Section 23 fully retrospectively, i.e., as if those requirements had applied since the inception of all of its contracts with customers that are presented in the financial statements.

As the transition arrangements available to ongoing FRS 102 reporters do not apply to first-time adopters (unless included in Section 35), a first-time adopter must apply the requirements of Section 23 using the full retrospective method (and cannot use the modified retrospective method set out in paragraph 1.61(a) for ongoing reporters – see Chapter 25 at 12.2.4). However, to ease the potential burden of applying Section 23's requirements fully retrospectively, paragraph 35.10(y) allows a first-time adopter to make use of the same optional practical expedients as set out in paragraph 1.65 (for ongoing FRS 102 reporters).

[FRS 102.1.65, FRS 102.35.10(y)].

Accordingly, a first-time adopter is permitted to use one or more of the following practical expedients when applying Section 23 retrospectively and not to restate for contracts that were completed before the earliest period presented (i.e., the date of transition to FRS 102). [FRS 102.35.10(y)].

Below are the practical expedients in paragraph 1.65 as applied to a first-time adopter: [FRS 102.1.65, FRS 102.35.10(y)]

(a) For completed contracts, an entity need not restate for contracts that:

(i) Begin and end within the same annual reporting period.

Or

(ii) Are completed contracts at the date of transition to FRS 102. [FRS 102.1.65].

(b) For completed contracts that have variable consideration, an entity is allowed to use the transaction price at the date the contract was completed rather than estimating variable consideration amounts in the comparative reporting periods. The FRC's FRS 102 Factsheet 7 *Transition to FRS 102* clarifies that this exemption is available for contracts with variable consideration which are completed by the reporting date (i.e., the end of the first FRS 102 reporting period).²⁵²

(c) For contracts that were modified before the beginning of the reporting period, an entity need not retrospectively restate the contract for those contract modifications in accordance with paragraphs 23.15 and 23.16 (see Chapter 25 at 4.4). Instead, an entity is permitted to reflect the aggregate effect of all of the modifications that occur before the date of transition to FRS 102 or before the beginning of the reporting period when: [FRS 102.23.15, FRS 102.23.16]

(i) Identifying the satisfied and unsatisfied performance obligations.

(ii) Determining the transaction price.

(iii) Allocating the transaction price to the satisfied and unsatisfied performance obligations.

(d) For prior periods presented, an entity need not disclose the quantitative or qualitative explanation of the significance of unsatisfied performance obligations and when they are expected to be satisfied as required by paragraph 23.137 (see Chapter 25 at 11.4.1.D). [FRS 102.23.137].

For the purposes of Section 23, paragraph 35.10(y) defines a 'completed contract' as "a contract for which the entity has transferred all of the goods or services identified in accordance with the entity's previous

252 FRC FRS 102 Factsheet 7 Transition to FRS 102 (November 2024).

financial reporting framework." [FRS 102.35.10(y)]. See 5.12.1 below for discussion of completed contracts. See 5.12.2.D below for the accounting for completed contracts that are not restated under new Section 23. Even where the previous financial reporting framework was IFRS or FRS 101, this practical expedient might be relevant to use.

A first-time adopter is allowed to elect to apply one, some, or all of these expedients. However, if an entity elects to use any of them, it must apply that expedient consistently to all contracts and periods presented and disclose that fact. Section 23, unlike IFRS 15, does not require a qualitative assessment of the estimated effect of applying each of those expedients. [FRS 102.35.10(y), FRS 102.1.66, IFRS 15.C6].

The FRC notes that the practical expedients in paragraph 1.65 (b) and (c) allow greater use of hindsight when estimating variable consideration and evaluating contract modifications than was permitted for ongoing IFRS reporters and first-time adopters of IFRS implementing IFRS 15's requirements for the first time. [FRS 102.B23.9]. The use of hindsight is explained in detail in Chapter 25 at 12.2.3 and 12.2.5.

How we see it

While the practical expedients provide some relief, adoption of Section 23 could be challenging if the first-time adopter has not previously applied adopted IFRS or FRS 101 and first-time adopters will still need to use judgement and make estimates. For example, first-time adopters will need to use judgement in estimating stand-alone selling prices if there has been a wide range of selling prices and when allocating the transaction price to satisfied and unsatisfied performance obligations if there have been several performance obligations or contract modifications over an extended period.

Furthermore, if a first-time adopter applies the practical expedient for contract modifications, it will still have to apply Section 23's contract modification requirements (see Chapter 25 at 4.4) to either: (a) modifications made after the beginning of the earliest period presented (i.e., the date of transition to FRS 102); or (b) modifications made after the beginning of the reporting period.

Illustration 5-8 below demonstrates the practical expedient for contract modifications.

Illustration 5-8: Transition practical expedient for contract modifications

Entity A entered into a contract with a customer to sell equipment for £1 million and provide services for five years for £20,000 annually.

The equipment was delivered on 1 January 20X1 and the service contract commenced at that time. The equipment and the service contract are separate performance obligations.

On 1 July 20X3, the contract was modified to extend the provision of service by two years.

On 1 July 20X4, the contract was further modified to extend the provision of service by three years.

On 1 July 20X5, the contract was further modified to provide an additional piece of equipment for £1 million. The additional equipment will be delivered during 20X6 and is a separate performance obligation.

Entity A adopts FRS 102. The date of transition is 1 January 20X5 and Entity A prepares its first FRS 102 financial statements for the accounting period beginning 1 January 20X6. It applies the practical expedient on contract modifications in accordance with paragraph 1.65(c). [FRS 102.35.10(y), FRS 102.1.65(c)].

Entity A has two options:

- Entity A could elect to reflect the aggregate effect of modifications that occurred before 1 January 20X6 (the beginning of the reporting period). The total transaction price for the modified contract is £2,200,000 [(£1 million (equipment)) + £1 million (equipment) + (10 years × £20,000 (service))], which is allocated to the two products and the service contract based on the relative stand-alone selling price of each performance obligation.
- Entity A could elect to reflect the aggregate effect of modifications that occurred before 1 January 20X5 (the date of transition). In this instance, the total transaction price for the modified contract occurred before 1 January 20X5 is £1,200,000 [£1 million (equipment) + (10 years × £20,000 (service))], which is allocated to the first product and the service contract based on the relative stand-alone selling price of each performance obligation.

Entity A is still required to apply Section 23's contract modification requirements to modifications made after 1 January 20X5. Accordingly, the modification on 1 July 20X5 for an additional piece of equipment is accounted for from that date applying paragraphs 23.13 to 23.16 (see Chapter 25 at 4.4). This approach is the same as IFRS 15. [IFRS 15.C5(a)(ii)].

See Chapter 25 at 7 for discussion on allocating the transaction price to performance obligations. In both cases above, the transaction price allocated to the second piece of equipment and the remaining unperformed services would be recognised when or as they are transferred to the customer.

When adopting Section 23 as part of its transition to FRS 102, a first-time adopter needs to analyse each of its contracts to determine the appropriate timing and pattern of recognition, considering the specific criteria and requirements of the standard. In some instances, this could result in a change in the timing and/or pattern of revenue recognition compared to its previous financial reporting framework. An example of such a change in the timing of revenue recognition would be a contract manufacturer that produces goods designed to a customer's unique specifications where the goods do not have an alternative use. If the manufacturer also has an enforceable right to payment for performance completed to date, the third criterion in Section 23 to recognise revenue over time would be met, [FRS 102.23.81(c)], (see Chapter 25 at 8.1 for further discussion), even though the manufacturer might have recognised revenue at a point in time under its previous financial reporting framework (e.g., based on the number of units produced or units delivered).

Other application issues that could make adopting Section 23 as part of transitioning to FRS 102 difficult and/or time-consuming, include the following:

- A first-time adopter will have to perform an allocation of the transaction price because of changes to the identified deliverables, the transaction price or both. If its previous financial reporting framework required a method that is similar to the requirements in Section 23 or IFRS 15 (which will often be the case for a first-time adopter of FRS 102), this step might be straightforward. Regardless, a first-time adopter is required to determine the stand-alone selling price of each performance obligation as at inception of the contract. Depending on the age of the contract, this information might not be readily available, and the prices could differ significantly from current stand-alone selling prices. While the practical expedients in paragraph 1.65 are clear about when it is acceptable to use hindsight in respect of variable consideration to determine the transaction price (see Chapter 25 at 6.2 for a discussion on variable consideration), the practical expedients are silent on whether the use of hindsight is acceptable for other aspects of the model (e.g., for the purpose of allocating the transaction price) or whether it is acceptable to use current pricing information if that were the only information available.
- Estimating variable consideration for all contracts for prior periods is likely to require significant judgement. The standard is clear that hindsight cannot be used for contracts that are not completed. As a result, entities must make this estimate based only on information that was available at contract inception for contracts that are not completed. Contemporaneous documentation clarifying what information was available to management, and when it was available, is likely to be needed to support these estimates. In addition to estimating variable consideration using the expected value or a most likely amount method, a first-time adopter must make conclusions about whether such variable consideration is subject to the constraint (see Chapter 25 at 6.2.3 for further discussion). In particular, it is important to note that Section 23's requirements on variable consideration differ from those in IFRS 15 (see Chapter 25 at 2.4).

5.12.1 Definition of a completed contract

For the purposes of Section 25, a 'completed contract' is a contract for which the entity has transferred all of the goods or services identified in accordance with the entity's previous financial reporting framework. [FRS 102.35.10(y)(ii)].

Depending on the practical expedients a first-time adopter chooses to apply, it need not apply Section 23 to contracts if it has completed performance before the earliest period presented, i.e., the date of transition to FRS 102, even if it has not yet received the consideration and that consideration is still subject to variability (see further discussion in Chapter 25 at 12.2.1). It also need not apply Section 23 to completed contracts that begin and end within the same annual reporting period (for example, that started and finished in the comparative period).

FRS 102 does not provide guidance on the meaning of 'transferred all of the goods or services.' However, with reference to IFRS 15, the IASB noted in the Basis for Conclusions that the phrase is not meant to imply that an entity would apply the 'transfer of control' notion in IFRS 15 to goods or services that have been identified in accordance with previous financial reporting framework. Rather, it is performance in accordance with the previous financial reporting framework. [IFRS 15.BC441]. For example, if the previous financial reporting framework has similar requirements to legacy revenue requirements in IFRS (i.e., IAS 11, IAS 18 and related Interpretations), legacy Section 23 of FRS 102, in many situations the term 'transferred' would mean 'delivered' within the context of contracts for the sale of goods and 'performed' within the context of contracts for rendering services and construction contracts. In some situations, the entity would use judgement when determining whether it has transferred goods or services to the customer. [IFRS 15.BC445D].

5.12.2 Implementation questions on definition of a completed contract

5.12.2.A Elements in a contract to be considered

When determining whether a contract meets the definition of a completed contract, a first-time adopter must consider all of the elements (or components) in a contract that give rise to revenue in its previous financial reporting framework. It does not consider the elements of a contract that do not result in recognition of revenue when assessing whether a contract is completed.

For example, under its previous financial reporting framework, an entity might have accounted for a financing component (i.e., separating the interest income or expense from the revenue). Doing so effectively splits the contract into a revenue component and a financing component.

How we see it

In our view, the financing component generally would not be considered in determining whether the goods or services have transferred to the customer (i.e., it would generally not affect the assessment of whether the contract meets the definition of a completed contract). In addition, income elements that are not within the scope of Section 23 need not be considered even if they were covered by revenue requirements in the previous financial reporting framework.

None of the following, for example, would be considered when determining whether a contract meets the definition of a completed contract because they are within the scope of Sections 11 and 12, not Section 23:

- Dividends [FRS 102.11.14A, FRS 102.12.9A]
 - Fees integral to the issuance of a financial instrument (see Chapter 13 at 6.2) [FRS 102.11.18]
- Or
- Interest income that is accounted for in accordance with the effective interest method (see Chapter 13 at 6.2) [FRS 102.11.14(a)]

5.12.2.B Identification of a contract under previous financial reporting framework

When determining whether a contract is completed, a first-time adopter considers the requirements of its previous financial reporting framework and not Section 23.

How we see it

In order to determine whether a contract is completed, a first-time adopter needs to determine the boundaries of a contract, including the term of the contract, whether it was combined with other contracts, whether it was modified, etc. That is, a first-time adopter must identify what is the contract in order to assess if it meets the definition of a completed contract as discussed further below.

Section 23 provides detailed requirements to assist entities in identifying a contract, including determining the contract duration. Considering the requirements of Section 23 could lead to different outcomes from the previous financial reporting framework (e.g., an entity might conclude a contract is of a shorter duration than the stated contractual term in certain circumstances under Section 23). See Chapter 25 at 4.2 for further discussion.

If the previous financial reporting framework was IFRS or FRS 101, IFRS 15 provides detailed guidance on the identification of the contract as a starting point for determining the revenue recognition. [IFRS 15.9-16].

While a first-time adopter's previous financial reporting framework might not have provided detailed requirements for identifying the contract, its accounting policies and past practice might be informative in identifying the contract, including determining: (a) what the first-time adopter considered the contract to be (e.g., master supply agreement or individual purchase orders); and (b) the contract duration (i.e., the stated contractual term or a shorter period). Consider the examples in Illustration 5-9 below.

Illustration 5-9: Definition of completed contract: contract duration**Scenario 1**

On 30 June 20X4, Entity B entered into a contract with a customer to provide services for 24 months. The customer was required to pay a fixed monthly fee of £150, which remained constant during the contract term of 24 months, regardless of the time needed to provide the services or the actual usage from the customer each day. The customer could cancel the contract at any time without penalty by giving Entity B one month's notice. Entity B had not received any cancellation notice up to 1 January 20X5 and, based on past experience, Entity B did not expect customers to cancel within the first year. For this contract, Entity B had concluded that the contract duration under its previous financial reporting framework was the stated contractual term of 24 months.

Entity B's accounting policy for these types of contracts under its previous financial reporting framework stated that revenue from providing monthly services to customers was recognised over the service period, on a monthly basis. While not explicitly stated in its accounting policy, Entity B had typically treated the stated contractual term as the duration of the contract (unless the customer cancelled or the contract was modified), and considered this to be the period over which the contractual rights and obligations were enforceable.

Assume that Entity B adopts FRS 102 for the first time for the year ended 31 December 20X6. Entity B uses the practical expedient in paragraph 1.65(a)(ii) not to restate contracts that are completed contracts at the date of transition to FRS 102 (i.e., 1 January 20X5; Entity B presents one comparative period only). [FRS 102.1.65(a)(ii)].

Under Section 23, Entity B is likely to conclude that the contract is a month-to-month contract. However, when determining whether the contract is completed, Entity B only considers the requirements of its previous financial reporting framework. Entity B might have noted that its previous accounting policy did not focus on the identification of contract duration and, therefore, perhaps the contract is neither a 24-month contract nor a month-to-month contract. Entity B had accounted for this type of service contract based on monthly invoicing and, arguably, that accounting treatment is similar to the accounting treatment of a month-to-month contract. However, while not explicitly stated, Entity B had generally viewed the stated contractual term as the period over which the rights and obligations are enforceable.

Furthermore, Entity B cannot cancel the contract with the customer and is obliged to render services for the entire contract period of 24 months, unless a termination notice is provided by the customer which would limit Entity B's obligation to provide services for the next 30 days from the notification date. Since no cancellation notice had been submitted by the customer at least one month before 1 January 20X5, approximately 18 months of services still had to be provided as at the date of transition to FRS 102 (i.e., 1 January 20X5). Therefore, Entity B concludes that the contract does not meet the definition of a completed contract and would need to be transitioned to Section 23.

Scenario 2

Assume the same facts as Scenario 1, with the exception that the customer submitted an early termination notice on 30 November 20X4.

Similar to Scenario 1, the contract duration under previous financial reporting framework would have been the stated contractual term of 24 months. However, in this scenario, the customer has submitted the termination notice on 30 November 20X4. Therefore, Entity B concludes that the term of the contract ceased on 31 December 20X4.

Entity B cannot cancel the contract with the customer and is obliged to render services for the entire contract period of 24 months, unless a termination notice is provided by the customer which limits Entity B's obligation to provide service to the next 30 days from the notification date. Since Entity B had provided all services prior to 31 December 20X4, Entity B concludes that the contract is a completed contract. Entity B continues to apply its previous accounting policy to any remaining consideration still to be recognised.

Scenario 3

Assume the same facts as Scenario 1, with the exception that the customer was required to pay a non-refundable upfront fee of £50 at commencement of the contract (in addition to the monthly fixed fee). The customer can cancel the contract at any time without penalty, with a month's notice period. The customer cancelled the contract on 30 November 20X4.

In its financial statements, Entity B's accounting policy for these types of contracts under its previous financial reporting framework stated that revenues from non-refundable upfront fees were deferred over the average customer retention period. The customer retention period was estimated to be two years, and the deferred revenue was recognised as revenue on a straight-line basis over the next 24 months.

Similar to Scenario 2, the contract duration under its previous financial reporting framework would have been the stated contractual term of 24 months. However, the customer had submitted the termination notice on 30 November 20X4 and, therefore, Entity B concludes that the term of the contract ceases on 31 December 20X4.

Entity B's previous accounting policy for the non-refundable upfront fee referred to recognition of deferred income over the average customer retention period, not the contractual term. The definition of a completed contract is not dependent on all revenue being recognised, but rather on all goods and services being transferred to the customer. Furthermore, the period over which revenue is recognised does not affect the contract duration. As such, recognition of this upfront fee is not relevant in determining whether the contract is a completed contract. All previously contracted services had been provided to the customer up to the date of cancellation. Therefore, the contract is a completed contract.

Entity B continues applying its previous accounting policy to any remaining consideration still to be recognised. However, given that the customer has terminated the contract early, Entity B needs to reassess, in line with the requirements of its previous financial reporting framework, the period over which this remaining revenue arising from the non-refundable upfront fee would be recognised.

5.12.2.C Some or all of the revenue has not been recognised under previous financial reporting framework

If some or all of the revenue has not been recognised under a first-time adopter's previous financial reporting framework, this could possibly prevent the contract from being completed.

How we see it

The definition of a completed contract is not dependent on a first-time adopter having recognised all related revenue. However, the requirements in its previous financial reporting framework with respect to the timing of recognition might provide an indication of whether the goods or services have been transferred.

Illustration 5-10 below discusses a scenario where revenue has not been recognised under a first-time adopter's previous financial reporting framework that was IFRS:

Illustration 5-10: Revenue has not been recognised under previous financial reporting framework

On 31 December 20X4, a first-time adopter, previously applying IFRS, sells a product to a customer for £121 that is payable 24 months after delivery. The customer obtains control of the product at contract inception. The contract permits the customer to return the product within 90 days. The product is new and the entity has no relevant historical evidence of product returns or other available market evidence.

The cash selling price of the product is £100, which represents the amount that the customer would pay upon delivery for the same product sold under otherwise identical terms and conditions as at contract inception. The entity's cost of the product is £80. Assume that the contract appropriately includes a significant financing component under IFRS 15.

The entity does not recognise revenue under IFRS 15 when control of the product transfers to the customer. This is because the existence of the right of return and the lack of relevant historical evidence means that the entity cannot conclude that it is highly probable that a significant reversal in the amount of cumulative revenue recognised will not occur in accordance with paragraphs 56-58 of IFRS 15. Consequently, revenue is recognised after three months, when the right of return lapses (i.e., in 20X5).

On 1 January 20X5, the entity transitions to FRS 102. The entity concludes that the contract is a completed contract under previous financial reporting framework (IFRS). This is because the entity has transferred all of the goods or services identified in accordance with its previous financial reporting framework. Consequently, the revenue to be recognised in 20X5 is to be accounted for under IFRS.

5.12.2.D Accounting for completed contracts excluded from transition

Depending on the practical expedients a first-time adopter applies, it might exclude contracts that meet the definition of a completed contract from the population of contracts to be transitioned to Section 23 (i.e., it would not need to restate those contracts) (see Illustration 5-10 in section 5.12.2.B above).

Section 35 clarifies that if a first-time adopter chooses not to apply Section 23 to completed contracts, it must continue to account for the completed contracts in accordance with its accounting policies based on its previous financial reporting framework. [FRS 102.35.10(y), FRS 102.1.65(a)(ii)].

A first-time adopter that previously reported under IFRS or FRS 101 (and, therefore, applied IFRS 15) also needs to consider if it has contracts that were 'completed contracts' when it first adopted IFRS 15 to which it is still applying legacy accounting standards (e.g., IAS 18). In these cases, the first-time adopter continues to apply the legacy accounting standards for those contracts.

In addition, use of the practical expedient not to restate completed contracts would still allow a previous IFRS or FRS 101 reporter to make use of simplifications in Section 23 compared to IFRS 15 when accounting for its ongoing contracts, without restating completed contracts on the same basis. For example, it would be possible for a first-time-adopter not to adjust payments received in advance for the effects of the time value of money on contracts that are not completed contracts by the reporting date, [FRS 102.23.59, FRS 102.35.10(y)], even if a significant financing component was previously identified in accordance with IFRS 15 on these contracts and on similar contracts which have not been restated because they are completed contracts.

5.12.3 Transition issues where a previous IFRS or FRS 101 reporter applies Section 23

The only transition provisions in Section 35 and paragraph 1.65 relating to revenue recognition address completed contracts (see 5.12, 5.12.1 and 5.12.2 above) and contract modifications that occurred before the beginning of the reporting period (see 5.12 above). [FRS 102.35.10(y), FRS 102.1.65].

Entities will therefore need to apply the full retrospective method to contracts that are not completed contracts at the date of transition. A previous IFRS or FRS 101 reporter is not expected to have many transition adjustments given the alignment of the new Section 23 with IFRS 15. However, as there are some differences between IFRS 15 and Section 23 (see Chapter 25 at 2), entities will need to consider the following transition issues:

- **Constraining estimates of variable consideration**

Section 23 requires an entity to include in the transaction price the estimate of variable consideration to the extent that it is highly probable that the entity will be entitled to the cumulative amount of revenue recognised when the uncertainty associated with the variable consideration is subsequently resolved. [FRS 102.23.46]. Under IFRS 15, however, the entity recognises some or all of the estimated variable consideration to the extent that it is highly probable that a significant reversal of the amount of cumulative revenue recognised will not occur when the variable consideration is subsequently resolved. [IFRS 15.56, IFRS 15.57]. Accordingly, unlike IFRS 15 that requires an entity to consider both the likelihood and the magnitude of the revenue reversal to apply the constraint, the assessment under Section 23 only requires consideration of likelihood. Consequently, unless the estimated variable consideration is nil, earlier recognition of some variable consideration might be expected under IFRS 15 compared to Section 23 in certain instances.

- **Time value of money**

A key difference between Section 23 and IFRS 15 relates to advance payments received from customers. Section 23 does not require (but offers a policy choice) to adjust the promised amount of consideration for the effects of the time value of money and recognise the resulting interest expense. [FRS 102.23.59]. See further discussion in Chapter 25 at 6.5.2. However, under IFRS 15, there is no such policy choice or exemption from accounting for the effects of a significant financing component arising from advance payments. [IFRS 15.60].

IFRS 15 includes examples of several situations which do not provide the customer or the entity with a significant benefit of financing, and therefore, no adjustment for financing component is required. [IFRS 15.62]. However, Section 23 does not provide similar guidance.

- **Application of residual approach when estimating stand-alone selling prices and allocation of a discount or variable consideration**

In applying the residual approach when estimating stand-alone selling prices and when allocating discount or variable consideration to performance obligations, IFRS 15 is more prescriptive than Section 23. [IFRS 15.79(c), IFRS 15.83, IFRS 15.85, IFRS 15.86, FRS 102.23.70(c), FRS 102.23.74, FRS 102.BC.B23.9]. See Chapter 25 at 2.3 and 2.4 for further information.

- **Capitalisation of costs to obtain a contract**

Under IFRS 15, an entity recognises as an asset the incremental costs of obtaining a contract with a customer if the entity expects to recover those costs. [IFRS 15.91]. Unlike IFRS 15, Section 23 allows an accounting policy choice on whether to expense or capitalise incremental costs to obtain a contract with a customer that the entity expects to recover. [FRS 102.23.113]. See Chapter 25 at 10.3.1 for further information.

In certain areas (such as the treatment of bill and hold arrangements, uninstalled materials when using the input method to measure progress based on cost incurred, non-cash consideration, and situations where consideration payable to the customer exceeds the fair value of goods the distinct goods or services received), Section 23 does not provide specific guidance. In these situations, according to the hierarchy outlined in Section 10, an entity may refer to the accounting treatments adopted under IFRS 15.

Illustration 5-11 below demonstrates examples related to revenue on transition:

Illustration 5-11: Revenue from contracts with customers - transition example

Entity A is a first-time adopter. The date of transition is 1 January 20X5 and Entity A prepares its first FRS 102 financial statements for the accounting period beginning 1 January 20X6. Its previous financial reporting framework is IFRS. It entered into the following contracts with its customers:

Contract 1

On 1 July 20X4, Entity A entered into a contract to provide a certain service to Customer X. The contract's terms and conditions include a fixed fee of £500, plus variable consideration for a performance bonus related to the timing of Entity A completing the work. Based on Entity A's historical experience, the bonus amounts and associated probabilities for achieving each bonus are, as follows:

Bonus Amount	Probability of outcome
-	15%
£50	40%
£100	45%

Assume that Entity A, while applying IFRS 15, determined that using the expected value method would better predict the amount of consideration to which it will be entitled than using the most likely amount method. Under that method, Entity A estimated variable consideration of £65 $[(0 \times 15\%) + (£50 \times 40\%) + (£100 \times 45\%)]$. Having considered the effect of applying the constraint on variable consideration (i.e., none of the factors in IFRS 15.57 or any other factors indicate a likelihood of a significant revenue reversal), Entity A concluded that £65 is the appropriate estimate of variable consideration to include in the transaction price. The total transaction price is, therefore, £565.

Assume, Entity A estimates that it will complete the work by 31 December 20X5. It recognises revenue over time using output method. On 31 December 20X4, it recognised revenue of £113 (assume that it has completed 20% of work).

The contract was completed on 30 November 20X5. Entity A receives the bonus amounting to £100.

Entity A adopts FRS 102. Entity A concludes that the contract is not a completed contract as of 1 January 20X5, but it is a completed contract as of 1 January 20X6.

Entity A could choose to apply the full retrospective method to this contract (without electing any practical expedient). Entity A then assesses the variable consideration and determines that, as of the date of transition, it is not highly probable that it will be entitled to the cumulative amount of revenue recognised when the uncertainty associated with the variable consideration is subsequently resolved in accordance with paragraph 23.46, and as a result, concludes that the total transaction price is £500 and adjusts its retained earnings at the date of transition equal to a decrease of £13 $[£113 - (£500 \times 20\%)]$.

Alternatively, Entity A could choose to apply the transition exemption in paragraph 35.10(y) by applying the practical expedient in paragraph 1.65(b). Entity A then uses the transaction price at the date the contract was completed which is £600 $(£500 + £100 \text{ bonus})$ rather than estimating the variable consideration. Entity A adjusts its retained earnings at the date of transition equal to a credit of £7 $[(£600 \times 20\%) - £113]$. As a reminder, for any of the practical expedients in paragraph 1.65 that an entity uses, the entity would apply that expedient consistently to all contracts and periods presented (see 5.12 above).

Contract 2

On 31 December 20X4, Entity A entered into a contract with Customer Y to sell an asset. Control of the asset will transfer to the customer in two years (i.e., the performance obligation will be satisfied at a point in time). The contract includes two alternative payment options: payment of £500 in two years when the customer obtains control of the asset or payment of £400 when the contract is signed. The customer elects to pay £400 when the contract is signed.

While applying IFRS 15, the entity concluded that the contract contains a significant financing component because of the length of time between when the customer pays for the asset and when the entity transfers the asset to the customer, as well as the prevailing interest rates in the market. The interest rate implicit in the transaction is 11.8 per cent, which is the interest rate necessary to make the two alternative payment options economically equivalent. The entity evaluated the rate and concluded that it is commensurate with the rate that would be reflected in a separate financing transaction between the entity and its customer at contract inception. Therefore, the entity recorded the contract liability at £400 and accreted interest at 11.8 per cent

thereafter. On 31 December 20X5, it recorded an interest expense of £47 with a corresponding credit to contract liability.

Entity A adopts FRS 102. Entity A concludes that the contract is not a completed contract as of 1 January 20X5. Therefore, it must apply the full retrospective method to this contract. Entity A assesses that the payment is received in advance. The entity's accounting policy, under FRS 102, is to not recognise the effects of the time value of money for payments received in advance in accordance with paragraph 23.59. Therefore, the entity accounts for the contract liability at £400 as at 1 January 20X5 (the date of transition) but derecognises the interest expense of £47 recognised in 20X5 (the comparative period).

5.13 Compound financial instruments

FRS 102 requires an entity to split a convertible debt or similar compound financial instrument (that, from the issuer's perspective, contains both a liability and equity component) into its liability and equity components at the date of issue. A first-time adopter need not separate those two components if the liability component is not outstanding at the date of transition to FRS 102. [FRS 102.22.13, FRS 102.35.10(g), FRS 102 Appendix I].

If the liability component of a compound financial instrument is no longer outstanding, a full retrospective application of Section 22 would involve identifying two components, one representing the original equity component and the other representing the cumulative interest or fair value movements on the liability component (depending on whether accounted at amortised cost or at fair value through profit or loss), both of which are accounted for in equity (see Chapter 12 at 4.5.3).

This transition exemption appears to be of limited practical effect as Section 22 merely requires that the proceeds be allocated between the liability and equity component, and that the allocation between the liability and equity component is not revised in later periods. [FRS 102.22.13, FRS 102.22.14]. Section 22 does not mandate that the equity component must be credited to a separate component in equity nor does it prohibit a subsequent transfer within equity. The increase in equity arising on an issue of shares is presented in the statement of financial position as determined by applicable laws. [FRS 102.22.10].

5.14 Designation of previously recognised financial instruments

An entity is permitted to designate, as at the date of transition to FRS 102, any financial asset or financial liability at fair value through profit or loss provided the asset or liability meets the criteria in paragraph 11.14(b) at that date. [FRS 102.35.10(s)].

Debt instruments (that meet the conditions in paragraph 11.8(b) or paragraph 11.8(bA) of FRS 102 to qualify as basic financial instruments) and commitments to receive a loan and to make a loan to another entity (that meet the conditions in paragraph 11.8(c) of FRS 102 to qualify as basic financial instruments) are permitted, upon their initial recognition, to be designated by the entity as at fair value through profit or loss, if the conditions in paragraph 11.14(b) of FRS 102 are met. The conditions in paragraph 11.14(b) for designation at fair value through profit or loss comprise 'elimination or significant reduction of an accounting mismatch' or 'a group of debt instruments or financial assets and debt instruments is managed and its performance evaluated on a fair value basis'. [FRS 102.11.14(b)]. These are described further in Chapter 13 at 6.4.

Examples of debt instruments include accounts, notes and loans receivable and payable. [FRS 102.11.8(b), FRS 102.11.8(bA)]. Consequently, the term 'debt instruments' includes both financial assets and financial liabilities.

The transition exemption allows a first-time adopter to make the designation as of its date of transition.

How we see it

In our view, this designation can be made retrospectively, providing it is made before the date of approval of the first FRS 102 financial statements.

5.15 Assets and liabilities of subsidiaries, associates and joint ventures

Within groups, some subsidiaries, associates and joint ventures could have a different date of transition to FRS 102 from the parent, investor or venturer. As this could result in permanent differences between the FRS 102 figures in a subsidiary's own financial statements and those it reports to its parent, FRS 102 includes a special exemption regarding the assets and liabilities of subsidiaries, associates and joint ventures.

Paragraph 35.10(r) contains detailed guidance on the approach to be adopted when a parent adopts FRS 102 before its subsidiary (see 5.15.1 below) and also on when a subsidiary adopts FRS 102 before its parent (see 5.15.2 below).

These provisions also apply when FRS 102 is adopted at different dates by:

- An associate and the entity that has significant influence over it (i.e., the investor in the associate).
Or
- A joint venture and the entity that has joint control over it (i.e., the venturer in the joint venture).

In the discussion that follows, 'parent' includes an investor in an associate or a venturer in a joint venture, and 'subsidiary' includes an associate or a joint venture. References to consolidation adjustments are to be read as including similar adjustments made when applying equity accounting. Paragraph 35.10(r) also addresses the requirements for a parent that adopts FRS 102 at different dates for the purposes of its consolidated and its separate financial statements (see 5.15.4 below).

5.15.1 Subsidiary becomes a first-time adopter later than its parent

Extract from Section 35

35.10 An entity may use one or more of the following exemptions in preparing its first financial statements that conform to this FRS:

(a) ...

(r) Assets and liabilities of subsidiaries, associates and joint ventures

If a subsidiary becomes a first-time adopter later than its parent, the subsidiary shall in its financial statements measure its assets and liabilities at either:

- (i) the carrying amounts that would be included in the parent's consolidated financial statements, based on the parent's date of transition to this FRS, if no adjustments were made for consolidation procedures and for the effects of the business combination in which the parent acquired the subsidiary; or
- (ii) the carrying amounts required by the rest of this FRS, based on the subsidiary's date of transition to this FRS. These carrying amounts could differ from those described in (i) when:
 - (a) the exemptions in this FRS result in measurements that depend on the date of transition to this FRS; or
 - (b) the accounting policies used in the subsidiary's financial statements differ from those in the consolidated financial statements. For example, the subsidiary may use as its accounting policy the cost model in Section 17 *Property, Plant and Equipment*, whereas the group may use the revaluation model.

A similar election is available to an associate or joint venture that becomes a first-time adopter later than an entity that has significant influence or joint control over it.

...

A subsidiary that becomes a first-time adopter later than its parent therefore has the option to measure its assets and liabilities at the carrying amounts included in the parent's consolidated financial statements, if no adjustments were made for consolidation procedures and for the effects of the business combination in which the parent acquired the subsidiary. [FRS 102.35(r)(i)]. If a subsidiary does not take advantage of the exemption, it applies Section 35, based on its own date of transition to FRS 102 and would prepare its own FRS 102 financial statements, completely ignoring the Section 35 elections that its parent used when it adopted FRS 102 for its consolidated financial statements. [FRS 102.35(r)(ii)].

How we see it

FRS 102 does not elaborate on exactly what constitutes 'consolidation procedures', for the purposes of paragraph 35.10(r)(i) but, in our view, these would encompass adjustments required in order to harmonise a subsidiary's accounting policies with those of the group, as well as purely 'mechanical' consolidation adjustments such as the elimination of intragroup balances, profits and losses.

The following Illustration, which is adapted from an example included in IFRS 1, which has a comparable transition exemption, [IFRS 1.D16], shows how an entity applies these requirements. [IFRS 1.IG Example 8].

Illustration 5-12: Parent adopts FRS 102 before subsidiary*Background*

Entity A presented its first FRS 102 consolidated financial statements in 20X6 (having transitioned from IFRS in its group accounts in advance of moving its subsidiaries from FRS 101 to FRS 102). Subsidiary B, wholly owned by Entity A (its parent) since formation, prepares information under FRS 102 for internal consolidation purposes from that date, but Subsidiary B does not present its first FRS 102 financial statements until 20X8.

Application of requirements

If Subsidiary B applies option (i) in paragraph 35.10(r), the carrying amounts of its assets and liabilities are the same in both its opening FRS 102 statement of financial position at 1 January 20X7 and Entity A's consolidated statement of financial position (except for adjustments for consolidation procedures) and are based on Entity A's date of transition to FRS 102.

Alternatively, Subsidiary B may apply option (ii) in paragraph 35.10(r), and measure all its assets or liabilities based on its own date of transition to FRS 102 (1 January 20X7). However, the fact that Subsidiary B becomes a first-time adopter in 20X8 does not change the carrying amounts of its assets and liabilities in Entity A's consolidated financial statements.

Under option (i), the numbers in a subsidiary's FRS 102 financial statements would be as close to those used by its parent as possible. However, differences other than those arising from business combinations (and consolidation adjustments) will still exist in many cases, for example:

- A subsidiary may have hedged an exposure by entering into a transaction with a fellow subsidiary. Such a transaction could qualify for hedge accounting in the subsidiary's own financial statements but not in the parent's consolidated financial statements.

Or

- A pension plan may have to be classified as a defined contribution plan from the subsidiary's point of view, but is accounted for as a defined benefit plan in the parent's consolidated financial statements.

The transition exemption will rarely succeed in achieving more than a moderate reduction of the number of reconciling differences between a subsidiary's own reporting and the numbers used by its parent.

How we see it

Importantly, the choice of option (i) prevents the subsidiary from electing to apply all the other voluntary exemptions offered by Section 35, since the parent had already made the choices for the group at its date of adoption. Therefore, use of option (i) might not be appropriate for a subsidiary that prefers to use a different exemption, e.g., fair value as deemed cost for property, plant and equipment. However, in our view, application of option (i) would allow the subsidiary to adopt a new edition of FRS 102 that becomes effective during any of the periods presented in the same manner it was adopted by the parent.

Illustration 5-13 below explains the interaction between option (i) and the business combination exemption applied by its parent.

Illustration 5-13: Interaction between option (i) and the business combination exemption applied by its parent

Entity D has been a subsidiary of Entity C since 20X0. Entity E was acquired by Entity D in 20X2 and Entity D accounted for the acquisition under its previous financial reporting framework. Entity C transitioned from previous financial reporting framework to FRS 102 with a date of transition of 1 January 20X3 and decided to apply the exemption in paragraph 35.10(a) to this acquisition. Entity D adopted FRS 102 from its date of transition of 1 January 20X6 and chose to apply option (i) in paragraph 35.10(r).

Can Entity D apply Section 19 retrospectively to the acquisition of Entity E in its first FRS 102 financial statements?

How we see it

In our view, Entity D cannot apply Section 19 to the acquisition of Entity E because, applying option (i) in paragraph 35.10(r) of FRS 102, a subsidiary which becomes a first-time adopter later than its parent measures its assets and liabilities at the carrying amounts that would be included in the parent's consolidated financial statements, based on the parent's date of transition to FRS 102. Therefore, Entity D cannot apply Section 19 retrospectively, meeting the primary objective of using the option (i) election in keeping one set of books.

A subsidiary might become a first-time adopter later than its parent, because it previously prepared a reporting package under FRS 102 for consolidation purposes, but did not present a full set of financial statements under FRS 102. Adjustments made centrally to an unpublished reporting package are not considered to be corrections of errors for the purposes of the disclosure requirements in FRS 102. However, a subsidiary is not permitted to ignore misstatements that are immaterial to the consolidated financial statements of its parent but material to its own financial statements. [IFRS 1.IG31].

How we see it

If a subsidiary was acquired after the parent's date of transition to FRS 102, then it cannot apply option (i) because there are no carrying amounts included in the parent's consolidated financial statements, based on the parent's date of transition. Therefore, the subsidiary is unable to use the carrying amounts recognised in the group accounts when it was acquired, since push-down of the group's purchase accounting values is not allowed in the subsidiary's financial statements.

Unlike the comparable IFRS 1 transition exemption, FRS 102 does not explicitly address the situation where a subsidiary that is excluded from consolidation under FRS 102 (and is measured at fair value, either through profit or loss or through other comprehensive income – see Chapter 8 at 3.4) adopts FRS 102 after its parent adopts FRS 102 in its consolidated financial statements.

However, it would make sense for a subsidiary excluded from consolidation to apply option (ii), i.e., to use the carrying amounts of assets and liabilities based on its own date of transition.

Implementation difficulties in applying option (i) might arise if the parent and its subsidiary have different financial years, as explained below.

How we see it

Application of option (i) is more difficult when a parent and its subsidiary have different financial years. In that case, Section 35 would seem to require the carrying amounts of the subsidiary's assets and liabilities under FRS 102 to be based on the parent's date of transition to FRS 102, which might not even coincide with an interim reporting date of the subsidiary; the same applies to any joint venture or associate.

The exemption is also available to associates and joint ventures. This means that in many cases an associate or joint venture that wants to apply option (i) will need to choose which shareholder it considers its investor or venturer for FRS 102 purposes and determine the FRS 102 carrying amount of its assets and liabilities by reference to that investor's or venturer's date of transition to FRS 102.

5.15.2 Parent becomes a first-time adopter later than its subsidiary

Extract from Section 35

35.10 An entity may use one or more of the following exemptions in preparing its first financial statements that conform to this FRS:

- (a) ...
- (r) Assets and liabilities of subsidiaries, associates and joint ventures

...

However, if an entity becomes a first-time adopter later than its subsidiary (or associate or joint venture) the entity shall, in its consolidated financial statements, measure the assets and liabilities of the subsidiary (or associate or joint venture) at the same carrying amounts as in the financial statements of the subsidiary (or associate or joint venture), after adjusting for consolidation (and equity accounting) adjustments and for the effects of the business combination in which the entity acquired the subsidiary (or transaction in which it acquired the associate or joint venture). Similarly, if a parent becomes a first-time adopter for its separate financial statements earlier or later than for its consolidated financial statements, it shall measure its assets and liabilities at the same amounts in both financial statements, except for consolidation adjustments.

While located within the transition exemptions, paragraph 35.10(r) does not offer a choice between different accounting alternatives. The parent itself must use the FRS 102 measurements already used in the subsidiary's financial statements, adjusted as appropriate for consolidation procedures and the effects of the business combination in which the parent acquired the subsidiary.

This does not preclude the parent from adjusting the subsidiary's assets and liabilities for a different accounting policy (e.g., cost or revaluation for accounting for property, plant and equipment) but does, however, limit the choice of exemptions (e.g., the deemed cost exemption) with respect to the subsidiary in the consolidated financial statements at the date of transition.

The following Illustration, which is adapted from an example included in IFRS 1, which has a comparable transition exemption, [IFRS 1.D17], shows how an entity applies these requirements. [IFRS 1 IG Example 9].

Illustration 5-14: Subsidiary adopts FRS 102 before parent

Entity C presents its first consolidated FRS 102 financial statements for the accounting period ending 31 December 20X6. Subsidiary D, wholly owned by Entity C since formation (so not acquired in a business combination), presented its first FRS 102 financial statements in 20X4 (as it had been incorporated that year and chose to adopt FRS 102 early). Until 20X6, Subsidiary D prepared information for internal consolidation purposes under Entity C's previous financial reporting framework.

The carrying amounts of Subsidiary D's assets and liabilities at 1 January 20X5 (the date of transition for Entity C) are the same in both Entity C's opening FRS 102 consolidated statement of financial position and Subsidiary D's own financial statements (except for adjustments for consolidation procedures) and are based on Subsidiary D's date of transition to FRS 102. The fact that Entity C becomes a first-time adopter in 20X6 does not change those carrying amounts.

How we see it

When a subsidiary adopts FRS 102 before its parent, this will limit the parent's ability to choose first-time adoption exemptions in Section 35 freely as related to that subsidiary, as shown in the Illustration below.

Illustration 5-15: Limited ability to choose first-time adoption exemptions

Entity E presents its first consolidated FRS 102 financial statements for the accounting period ending 31 December 20X6 and its date of transition is 1 January 20X5. Subsidiary F adopted FRS 102 in 20X2 and its date of transition was 1 December 20X0:

- (a) *Subsidiary F and Entity E both account for their property, plant and equipment at historical cost under Section 17.*

Upon first-time adoption, Entity E may only adjust the carrying amounts of Subsidiary F's assets and liabilities for the effects of consolidation and business combinations. Entity E can therefore not apply the exemption to use fair value as deemed cost of Subsidiary F's property, plant and equipment as at its own date of transition (1 January 20X5).

- (b) *Subsidiary F accounts for its property, plant and equipment at revalued amounts under Section 17, while Entity E accounts for its property, plant and equipment at historical cost under Section 17.*

Entity E would not be allowed to apply the exemption to use fair value as deemed cost of Subsidiary F's property, plant and equipment at its own date of transition because paragraph 35.10(r) would only permit adjustments for the effects of consolidation and business combinations. Although a consolidation adjustment would be necessary, this would only be to adjust Subsidiary F's revalued amounts to figures based on historical cost.

5.15.3 Implementation guidance

The Implementation Guidance in IFRS 1 (which discusses the equivalent paragraphs in IFRS 1 to paragraph 35.10(r) in FRS 102) notes the following issues, which have been adapted for the context of an FRS 102 first-time adopter. [IFRS 1.D16, IFRS 1.D17].

Use of the transition exemption in paragraph 35.10(r) does not override the following requirements of Section 35: [IFRS 1.IG30]

- The parent's election to use the business combinations exemption in paragraph 35.10(a) (see 5.2 above), which applies to assets and liabilities of a subsidiary acquired in a business combination that occurred before the parent's date of transition to FRS 102. However, the rules summarised at 5.15.2 above (parent adopting FRS 102 after subsidiary) apply to assets and liabilities acquired and assumed by the subsidiary after the business combination and still held and owned by it at the parent's date of transition to FRS 102.

- To apply the requirements in Section 35 in measuring all assets and liabilities for which the provisions summarised in paragraph 35.10(r) regarding different parent and subsidiary adoption dates are not relevant (e.g., the use of the exemption to measure assets and liabilities at the carrying amounts in the parent's consolidated financial statements does not affect the restrictions in paragraph 35.9(c) concerning changing valuation assumptions or estimates made at the same dates under the first-time adopter's previous financial reporting framework (see 4.2 above))

And

- A first-time adopter must give all the disclosures required by Section 35 as of its own date of transition. See 6 below.

5.15.4 Adoption of FRS 102 on different dates in separate and consolidated financial statements

Sometimes, an entity becomes an FRS 102 first-time adopter for its separate financial statements at a different date than for its consolidated financial statements. Such a situation could arise for example where the parent takes advantage of an exemption from preparing consolidated financial statements. Subsequently, if the parent ceases to be entitled to the exemption or chooses not to use it, the parent could apply FRS 102 in its consolidated financial statements.

Another example might be if a parent prepares IFRS consolidated financial statements but applies FRS 102 in its separate financial statements. The parent might subsequently decide to prepare FRS 102 consolidated financial statements instead of IFRS consolidated financial statements, for example, following a delisting or change in ownership.

If a parent becomes a first-time adopter for its separate financial statements earlier or later than for its consolidated financial statements, it must measure its assets and liabilities at the same amounts in both financial statements, except for consolidation adjustments. [FRS 102.35.10(r)].

How we see it

The requirement is merely that the 'same amounts', except for consolidation adjustments, be used for the measurement of the assets and liabilities in both sets of financial statements, without being explicit as to which set of financial statements is used as the benchmark. However, we believe that it is clear from the context that the intention is that the measurement basis used in whichever set of financial statements first comply with FRS 102 must also be used when FRS 102 is subsequently adopted in the other set.

For a UK company (or LLP) preparing statutory accounts, the Regulations (and LLP Regulations) require that any differences in accounting rules between the parent company's individual accounts and its group accounts for the financial year be disclosed in a note to the group accounts, with reasons for the difference given. [6 Sch 4, 3 Sch 4 (LLP)]. However, application of paragraph 35.10(r) would mean that, in most cases, no differences would arise.

5.16 Hedge accounting

As noted at 4.1.1 above, an FRS 102 reporter has an accounting policy choice of applying the following to the recognition and measurement of financial instruments: [FRS 102.11.2, FRS 102.12.2]

(a) Section 11 and Section 12 of FRS 102.

(b) IAS 39 (as adopted in the relevant jurisdiction) and as the standard applies prior to the application of IFRS 9 (referred to as 'IAS 39' below).

Or

(c) IFRS 9 (as adopted in the relevant jurisdiction) and IAS 39 (as amended following the publication of IFRS 9) (together referred to as 'IFRS 9' below).

See Chapter 13 at 3.

However, following the Periodic Review 2024 amendments, a first-time adopter is only permitted to choose to apply IAS 39 (i.e., option (b) above) if this would make the entity's accounting policy choice consistent with those adopted in the consolidated financial statements in which the entity is included. [FRS 102.35.8C].

Section 12, IAS 39, and IFRS 9 all require derivatives to be recognised at fair value and all distinguish three types of hedging relationship between a hedging instrument and hedged item – cash flow hedges, fair value hedges, and hedges of a net investment in a foreign operation. The hedge accounting requirements of

Section 12 are discussed in Chapter 14, while IFRS 9 is discussed in the most recent version of EY's publication, International GAAP® (which also addresses the main differences between IAS 39 and IFRS 9). Section 12, IAS 39, and IFRS 9 also all require the designation and documentation of hedging relationships, but the detailed requirements for hedge accounting differ. For example, the ongoing eligibility criteria for hedge accounting in Section 12 are more relaxed compared to both IAS 39 and IFRS 9. However, in all cases, ineffectiveness must still be measured and recognised in profit or loss where appropriate, and the criteria for hedge accounting need to be assessed and continue to be met.

There are specific transition provisions regarding hedge accounting depending on whether the FRS 102 reporter applies Section 12 (see 5.16.2 below), [FRS 102.35.10(t)(i)-(iii)], or IAS 39 or IFRS 9 (see 5.16.3 below), [FRS 102.35.10(t)(iv)], to the recognition and measurement of financial instruments. The transition provisions are the same regardless of the previous financial reporting framework applied to financial instruments, although the consequences of applying the transition provisions will depend on the nature of any hedge accounting undertaken under the previous financial reporting framework. Section 35 sets out various hedge accounting exemptions for entities applying Section 12 under FRS 102, but its requirements for entities applying IAS 39 or IFRS 9 under FRS 102 (which are based on IFRS 1's requirements, with certain concessions over the timing of completing designation and documentation of hedging relationships) are mandatory.

An FRS 102 first-time adopter (whatever policy choice is applied to the recognition and measurement of financial instruments) will need to:

- Recognise derivatives at fair value and eliminate any deferred gains and losses arising or synthetic accounting from hedge accounting under its previous financial reporting framework (except where permitted by the transition provisions), as required by the general rules on transition to FRS 102 (see 3.4 above). [FRS 102.12.3, FRS 102.12.7, FRS 102.12.8, FRS 102.35.7(a)-(b)]. Such adjustments are reflected in retained earnings (or, if appropriate, another component of equity). [FRS 102.35.8].
- Reflect hedging relationships in the opening statement of financial position (where required or permitted by the transitional provisions). The transition provisions, which differ depending on whether Sections 11 and 12, or IFRS 9/IAS 39 are applied, explain the adjustments required (see 5.16.2 and 5.16.3 below respectively).
- With fair value hedges, adjustments to the carrying amounts of assets and liabilities are reflected in retained earnings (or, if appropriate, another component of equity). With cash flow hedges, adjustments are generally reflected in a cash flow hedge reserve although the situation is more complicated. For example, under Sections 11 and 12, if an entity chooses not to reflect an existing or past hedging relationship in the opening statement of financial position, the adjustments to back out the previous hedge accounting are reflected in retained earnings (or, if appropriate, another component of equity). [FRS 102.35.8]. See 5.16.2.C and 5.16.2.D below (for Section 12) and 5.16.3 below (for IAS 39 and IFRS 9) for discussion of the adjustments made on transition for existing and past hedging relationships. Under IFRS 9, 'costs of hedging' adjustments are reflected in a separate component of equity (see 3.4.5.C above). [IFRS 9.6.5.15, IFRS 9.6.5.16].
- Designate and document hedging relationships (required where hedge accounting is to be applied, under all the standards) in accordance with the requirements of the accounting policy choice followed under FRS 102. The transition provisions, however, include a relief over the timing of when such designation and documentation is completed (whatever accounting policy choice is applied to the recognition and measurement of financial instruments). [FRS 102.35.10(t)(i), (iii)-(iv)].

And

- Consider the subsequent accounting for hedging relationships reflected in the opening statement of financial position, in accordance with the accounting policy choice followed under FRS 102.

Previous IFRS and FRS 101 reporters would already measure derivatives at fair value. [IFRS 9.4.1.4, IFRS 9.4.2.1(a)]. However, IAS 39 and IFRS 9 (the latter in respect of financial liabilities only) may require separation of certain embedded derivatives. [IAS 39.10-12, IFRS 9.4.3.1-7]. Sections 11 and 12 do not permit separation of embedded derivatives. Therefore, if a previous IFRS or FRS 101 reporter applies Sections 11 and 12 as an accounting policy choice under transition to FRS 102, financial instruments containing embedded derivatives will be measured as a hybrid instrument and it will not be possible to designate an embedded derivative as a hedging instrument (as it will no longer be separated).

Given that hedge accounting under Section 12 is simpler than under IFRS, situations could arise where an economic hedging relationship was not hedge accounted for by a previous IFRS or FRS 101 reporter or the hedging relationship failed the detailed conditions in IFRS 9 (or IAS 39, where applied) for hedge accounting, but hedge accounting would be possible under Section 12. For a first-time adopter where Section 12 is applied, the transition provisions (see 5.16.2.A below) would allow, but not require, such

existing hedging relationships to be reflected in the opening statement of financial position on transition to FRS 102 (see 5.16.2.D below). Where IAS 39 or IFRS 9 is applied as an accounting policy choice under FRS 102, a new hedging relationship not previously identified would not be reflected in the opening statement of financial position (see 5.16.3 below). This is because retrospective designation prior to the date of transition is not permitted.

There is a relief available in respect of the timing of designation and documentation of a hedging relationship available for the first FRS 102 financial statements where Section 12, IAS 39, or IFRS 9 are followed (see 5.16.2.A and 5.16.3 below). Once an entity ceases to be a first-time adopter (i.e., in subsequent FRS 102 financial statements), the usual requirements on designation and documentation of a hedging relationship apply, regardless of which accounting policy choice is followed for the recognition and measurement of financial instruments.

5.16.1 Reporter previously applied IAS 39 or IFRS 9 to hedge accounting

As there is no change in the hedge accounting requirements, it is not expected that transition adjustments will generally be required where an entity previously applying IAS 39 or IFRS 9 to hedge accounting chooses to apply the same accounting policy choice to the recognition and measurement of financial instruments under FRS 102. See 3.4.5 above and 5.16.3 below. Some IFRS or FRS 101 reporters may have continued to apply the hedge accounting requirements in IAS 39, when they adopted IFRS 9, as permitted under the transitional provisions in that standard. [IFRS 9.7.2.1].

How we see it

As explained in 3.4.5.A above, we believe that an entity already applying IFRS 9 and applying IAS 39 to its hedges can continue to adopt this accounting policy on transition to FRS 102.

Adjustments might arise where an entity previously applying IAS 39 or IFRS 9 makes a different accounting policy choice under FRS 102. Given the restrictions on a first-time adopter applying IAS 39 as a policy choice (see 5.16 above), [FRS 102.35.8C], this discussion focuses on a change in policy from IAS 39 (hedge accounting) to Section 12 or IFRS 9, or from IFRS 9 to Section 12. See 5.16.1.A below for some examples of areas that may give rise to adjustments to hedge accounting.

Entities will, however, need to ensure that all hedge relationships meet the qualifying conditions for hedge accounting which differ depending on the accounting policy followed. See Chapter 14 and the most recent version of EY's publication, International GAAP®.

Implementation issues, including accounting for rebalancing of hedge relationships and 'costs of hedging', when an entity moves from IAS 39 to IFRS 9 are discussed at 3.4.5.C above. See the most recent version of EY's publication, International GAAP® for further discussion of rebalancing and 'costs of hedging'.

5.16.1.A Key differences on hedge accounting between Section 12, IAS 39 and IFRS 9

An entity previously applying IAS 39 (to hedge accounting) or IFRS 9 that chooses to apply a different accounting policy choice to the recognition and measurement of financial instruments on transition to FRS 102 will need to consider both the different transition provisions and the ongoing requirements for hedge accounting. An appreciation of the differences between Section 12, IAS 39 and IFRS 9 would be important when determining which accounting policy choice to make and assessing what, if any, adjustments are required.

Some key differences between Section 12, IAS 39 and IFRS 9 which may give rise to adjustments when applying a different accounting policy choice under FRS 102 include:

- More hedging relationships could be eligible under Section 12 or IFRS 9 (compared to IAS 39) so new relationships could be designated, where the specified conditions are met. An example is that Section 12 and IFRS 9 both permit the identification of a separately identifiable and reliably measurable risk component of a non-financial hedged item. [FRS 102.12.16, FRS.102.12.16C, IFRS 9.6.3.1, IFRS 9 6.3.7, IFRS 9.B6.3.8]. See Chapter 14 at 4.2.2 and the most recent version of EY's publication, International GAAP®.
- Section 12 has simpler requirements than the hedge accounting requirements of IAS 39 or IFRS 9. For example, in determining whether the qualifying conditions for hedge accounting continue to apply, [FRS 102.12.18, FRS 102.12.18A], Section 12 has no retrospective effectiveness assessment and only has a simple prospective one.
- However, there can be some situations for which Section 12 is more restrictive, in particular compared to IFRS 9. For example, Section 12 requires that if a group of items (including components of items) are designated as the hedged item in a hedge relationship, those items must consist of items that are

individually eligible hedged items, share the same risk and cannot contain offsetting positions, and be managed together on a group basis for risk management purposes. [FRS 102.12.16, FRS 102.12.16B]. IFRS 9 does not have the same restrictions in all circumstances, although for risk management purposes, the items in the group must also be individually eligible hedged items and managed together on a group basis. [IFRS 9.6.6.1]. Therefore, more complex hedging relationships can be found under IFRS 9. IFRS 9 would permit a cash flow hedge of a net position attributable to foreign exchange risk (for example, because of forecast foreign purchases and sales) where certain conditions are met, [IFRS 9.6.6.1(c)]. This would not be permitted under Section 12. See Chapter 14 at 4.2.3.

- Where the intrinsic value of the option or the spot risk element of a foreign currency contract is designated as the hedging instrument, the fair value movements on the time value of the option (or on the forward element of the forward contract) are recognised in profit or loss under Section 12 and IAS 39 (as these fall outside the hedging relationship). [FRS 102.12.17A(c), IAS 39.74]. This differs from IFRS 9, which requires that the fair value movements on the time value of an option are initially recognised as 'costs of hedging' in other comprehensive income. IFRS 9 also allows (but does not require) an entity to elect on a hedge-by-hedge basis a similar accounting for the 'costs of hedging' (as applied to the time value of the option) for the forward element of a foreign currency contract. [IFRS 9.6.5.15, IFRS 9.6.5.16]. This accounting will reduce profit and loss volatility compared to Section 12 and IAS 39. See Chapter 14 at 4.3 and the most recent version of EY's publication, International GAAP®.

Section 12 (and IAS 39) do not allow for separation of foreign currency basis spreads when designating a hedging relationship. [FRS 102.12.17A, IAS 39.74]. This is permitted by IFRS 9 which also allows (but does not require) an entity to elect on a hedge-by-hedge basis to account for the 'costs of hedging' in the same way as for time value of options. [IFRS 9.6.5.16]. See the most recent version of EY's publication, International GAAP®.

An entity applying IFRS 9 might be required to rebalance the hedge ratio on transition (and on an ongoing basis), with an adjustment in profit or loss. [IFRS 9.6.4.1(c)(iii), IFRS 9.6.5.5]. See the most recent version of EY's publication, International GAAP®. This is not the case if applying Section 12 or IAS 39 hedge accounting, as rebalancing is not a feature of Section 12 or IAS 39. As a consequence, some hedges may show more ongoing ineffectiveness under Section 12 or IAS 39 compared to IFRS 9, but the hedge accounting will be simpler.

IFRS 9 does not permit an entity to voluntarily discontinue a hedge relationship prospectively whereas an entity may document an election to do so under Section 12 or IAS 39 hedge accounting, providing more flexibility over subsequent accounting for hedging relationships. [FRS 102.12.25, IFRS 9.6.5.6]. See Chapter 14 at 4.10 and the most recent version of EY's publication, International GAAP®.

An entity applying Section 12 on transition to FRS 102 has a choice of whether to reflect existing or past hedging relationships meeting specified conditions in the opening statement of financial position (see 5.16.2 below). [FRS 102.35.10(xi)-(ii)]. This flexibility is not available when applying IAS 39 or IFRS 9 on transition to FRS 102 (see 5.16.3 below). As discussed at 5.16.2.B below, the choices made on transition will impact the future results.

It is not the intention of this discussion to provide a list of all the differences in the hedge accounting requirements of Section 12, IAS 39, and IFRS 9. See the most recent version of EY's publication, International GAAP® for a summary of differences between hedge accounting under IAS 39 and IFRS 9. See also Chapter 14 at 2 for differences between hedge accounting in Section 12 and IFRS.

5.16.2 Transition exemptions - FRS 102 reporter applying Section 12 to the recognition and measurement of financial instruments

The transition exemptions for hedge accounting under Section 12 are set out at 5.16.2.A below. Implementation issues in applying the exemptions are discussed at 5.16.2.B to 5.16.2.E.

5.16.2.A Optional exemption - hedge accounting

Section 35 includes the following exemptions in relation to hedge accounting when the entity chooses to apply Sections 11 and 12 in the recognition and measurement of financial instruments.

Extract from Section 35

35.10 An entity may use one or more of the following exemptions in preparing its first financial statements that conform to this FRS:

(a) ...

(t) Hedge accounting

(i) A hedging relationship existing on the date of transition

A first-time adopter may choose to apply hedge accounting to a hedging relationship of a type described in paragraph 12.19 which exists on the date of transition between a hedging instrument and a hedged item, provided the conditions of paragraphs 12.18(a) to (c) are met on the date of transition to this FRS and the conditions of paragraphs 12.18(d) and (e) are met no later than the date the first financial statements that comply with this FRS are authorised for issue. This choice applies to each hedging relationship existing on the date of transition.

Hedge accounting as set out in Section 12 *Other Financial Instruments* of this FRS may commence from a date no earlier than the conditions of paragraphs 12.18(a) to (c) are met. In a fair value hedge the cumulative hedging gain or loss on the hedged item from the date hedge accounting commenced to the date of transition, shall be recognised in retained earnings (or if appropriate, another category of equity). In a cash flow hedge and net investment hedge, the lower of the following (in absolute amounts) shall be recognised in equity (in respect of cash flow hedges in the cash flow hedge reserve):

(a) the cumulative gain or loss on the hedging instrument from the date hedge accounting commenced to the date of transition; and

(b) the cumulative change in fair value (ie the present value of the cumulative change of expected future cash flows) on the hedged item from the date hedge accounting commenced to the date of transition.

(ii) A hedging relationship that ceased to exist before the date of transition because the hedging instrument has expired, was sold, terminated or exercised prior to the date of transition

A first-time adopter may elect not to adjust the carrying amount of an asset or liability for previous financial reporting framework effects of a hedging relationship that has ceased to exist.

A first-time adopter may elect to account for amounts deferred in equity in a cash flow hedge under a previous financial reporting framework, as described in paragraph 12.23(d) from the date of transition. Any amounts deferred in equity in relation to a hedge of a net investment in a foreign operation under a previous financial reporting framework shall not be reclassified to profit or loss on disposal or partial disposal of the foreign operation.

(iii) A hedging relationship that commenced after the date of transition

A first-time adopter may elect to apply hedge accounting to a hedging relationship of a type described in paragraph 12.19 that commenced after the date of transition between a hedging instrument and a hedged item, starting from the date the conditions of paragraphs 12.18(a) to (c) are met, provided that the conditions of paragraphs 12.18(d) and (e) are met no later than the date the first financial statements that comply with this FRS are authorised for issue.

The choice applies to each hedging relationship that commenced after the date of transition.

(iv) ...

5.16.2.B General comments where Section 12 is applied to hedge accounting

The elections described at 5.16.2.A above provide considerable flexibility for an entity applying Section 12 to begin, cease, or continue hedge accounting on transition to FRS 102. These allow entities to apply a degree of hindsight in deciding whether or not to apply hedge accounting, since they provide a relief on the timing of completing hedge documentation for both existing hedging relationships at the date of transition (see 5.16.2.D below) and those entered into after the date of transition. In the Basis of Conclusions to FRS 102, it is stated that: "The FRC was mindful of this possible exploitation of the transitional arrangements, nevertheless, on balance, it believed that in the interests of the majority of entities, especially entities that have not applied hedge accounting before, flexibility should take precedence over restrictions aimed at preventing abuse." [FRS 102.BC.B11.63].

However, once a hedge accounting relationship has been documented in line with paragraphs 12.18(d) and (e) (conditions on hedge documentation), any subsequent election to discontinue the hedge accounting must be documented and takes effect prospectively. [FRS 102.12.25].

The transition provision distinguishes between the situation where a hedging relationship exists or does not exist on the date of transition. The hedging relationship exists where there is a cash flow hedge, fair value hedge or hedge of a net investment of a foreign operation, and the hedging instrument and hedged item both exist at the date of transition. A hedging relationship, therefore, does not exist where the hedging instrument is terminated (even if there is still a hedged item).

The transition provision permits but does not require an entity to reflect existing hedging relationships meeting the specified conditions in the opening statement of financial position (see 5.16.2.A above and 5.16.2.D below). This choice is available on a hedge-by-hedge basis.

How we see it

While the transition provision is not explicit on this matter, we also consider that an entity can choose whether or not to reflect certain past hedging relationships in the opening statement of financial position on a hedge-by-hedge basis (see 5.16.2.A above and 5.16.2.C below).

Where the elections to apply hedge accounting are not taken, FRS 102's requirements are retrospectively applied and the hedge accounting adjustments made under an entity's previous financial reporting framework would therefore need to be eliminated to retained earnings (or other category of equity) on transition. [FRS 102.35.7, FRS 102.35.8].

The way in which an entity accounts for past and existing hedging relationships on transition will, to a large extent, dictate the effect on its ongoing FRS 102 financial statements. For example, an entity's future results will, for a cash flow hedge, be different depending on whether the entity decides to reflect an existing hedging relationship in the opening statement of financial position (by establishing a cash flow hedge reserve) or not. Amounts accumulated in a cash flow hedge reserve at the date of transition will be reclassified from equity to profit or loss at a later date (or, for a hedge of a forecast transaction for a non-financial asset or non-financial liability, adjust the initial cost or carrying amount of the asset or liability). However, if a previous IFRS or FRS 101 reporter does not reflect a hedging relationship recognised under IFRS, it will transfer the cash flow hedge reserve previously recognised at the date of transition directly to retained earnings (and there would be no subsequent reclassification from equity).

Similarly, an entity's future results would be affected depending on whether a past or an existing fair value hedge is reflected in the opening statement of financial position or not. For short-term hedges (e.g., of anticipated sales and inventory purchases) these effects are likely to work their way out of the FRS 102 financial statements relatively quickly. However, for some hedges (e.g., hedges of long-term borrowings) an entity's results may be affected for many years. See further discussion of the choices available at 5.16.2.C and 5.16.2.D below.

5.16.2.C Accounting for past hedging relationships

Where the conditions in the transition provision in paragraph 35.10(t)(ii) (see 5.16.2.A above) are met, the entity could choose to reflect a past hedging relationship in the opening statement of financial position. [FRS 102.35.10(t)(ii)].

The transition provision sets out optional exemptions that apply to a hedging relationship that ceased to exist before the date of transition because the hedging instrument has expired, was sold, terminated or exercised prior to the date of transition. Therefore, the transition provision does not address situations where the hedging relationship still existed on transition, but for which hedge accounting had ceased prior to transition (e.g., the designation of the hedge was revoked (if IAS 39 was applied to hedge accounting),

the hedge ceased to be effective, or the forecasted transaction in a cash flow hedge ceased to be highly probable but was still expected to occur). Such situations are addressed at 5.16.2.D below.

Certain implementation issues associated with the transition provision on past relationships are discussed below:

- (a) A first-time adopter could elect not to adjust the carrying amount of an asset or liability for previous financial reporting framework effects of a hedging instrument that has ceased to exist.

[FRS 102.35.10(t)(ii)].

Therefore, where hedging gains (losses) from a hedge of a forecast purchase or committed purchase of inventory or property, plant and equipment have been included in the carrying amount of the asset before the date of transition, there is no requirement to adjust the carrying amount of the asset to eliminate the effects of hedging gains (losses) as at the date of transition.

Also, if an entity previously applying IAS 39 or IFRS 9 hedge accounting had applied fair value hedge accounting for a fixed to floating interest rate swap (now terminated) hedging a fixed rate loan (that still exists), no change is needed to the hedge accounting adjustments made to the loan, as at the date of transition.

How we see it

Section 35 does not spell out the subsequent accounting. In our view, this establishes a deemed carrying amount for the item and no further adjustments to the carrying amount for ongoing hedging gains and losses are made from the date of transition. However, as for a discontinuance, we consider that any adjustment to the carrying amount (arising from fair value hedge accounting) of a hedged financial instrument carried at amortised cost using the effective interest method must be amortised to profit and loss. This requirement is similar to the corresponding requirements in IAS 39 and IFRS 9.

- (b) Not all past hedging relationships are permitted to be reflected in the opening statement of financial position, even if the hedged item still exists.
- (c) A first-time adopter could elect to account for amounts deferred in equity in a cash flow hedge under a previous financial reporting framework, as described in paragraph 12.23(d) (which sets out the subsequent accounting for amounts accumulated in the cash flow hedge reserve) from the date of transition. [FRS 102.35.10(t)(ii)].

This is consistent with the ongoing requirements for discontinued cash flow hedges in Section 12 (see Chapter 14 at 4.10). This situation is likely to arise where the first-time adopter previously applied IAS 39 or IFRS 9 hedge accounting, for example:

- Where a floating to fixed interest rate swap (now terminated) hedged a floating rate loan (that still exists), the amounts deferred in equity in the cash flow hedge would not change as at the date of transition (where this election is taken). Instead, the deferred amounts are subsequently reclassified to profit or loss, as required by paragraph 12.23(d). If the hedged future cash flows are no longer expected to occur as at the date of transition, the deferred amounts in equity need to be reclassified immediately to retained earnings as at that date. [FRS 102.12.25A]. This election, in effect, allows the existing treatment on discontinuation previously followed under IAS 39 or IFRS 9 to endure.
- Where gains and losses were deferred in equity in relation to a cash flow hedge of a forecast transaction that subsequently resulted in the recognition of a non-financial asset or a non-financial liability (e.g., a purchase of a non-financial asset such as property, plant and equipment or inventory).

How we see it

The transition provision refers to paragraph 12.23(d), which requires inclusion of the associated gains and losses previously recognised through other comprehensive income in the initial cost or other carrying amount of the asset or liability (this treatment, often referred to as a 'basis adjustment', was also available by choice in IAS 39 and is required under IFRS 9 hedge accounting). Therefore, it appears that a first-time adopter that has already recognised the non-financial asset or liability prior to the date of transition would need to retrospectively adjust its carrying amount on transition to reflect the equivalent of a basis adjustment in order to comply with paragraph 12.23(d), if this treatment had not been followed under its previous financial reporting framework.

- (d) The transition provision clarifies that amounts deferred in equity in relation to a hedge of a net investment in a foreign operation under an entity's previous financial reporting framework are not reclassified to profit or loss on disposal or partial disposal of the foreign operation (consistent with the requirements of paragraph 12.24 of FRS 102 (see Chapter 14 at 4.9), but different to the requirements of IFRS). [FRS 102.12.24, IAS 21.48, IAS 21.48A, IAS 21.48B].

The transition provision does not spell out the accounting treatment where an entity does not take up the elections it permits for now ceased hedging relationships. However, entities that elect not to apply the FRS 102 hedge accounting requirements must comply with the applicable measurement requirements for assets and liabilities set out elsewhere in FRS 102 from the date of transition. [FRS 102.BC.B11.64].

How we see it

In our view, if the first-time adopter chose not to apply these exemptions, this means that the old hedge accounting would be reversed and the previously hedged items would need to be held in the opening FRS 102 statement of financial position at the appropriate carrying amount on application of FRS 102 without regard to any previous hedge accounting (with an adjustment to retained earnings or, if appropriate, another category of equity). Similarly, the amounts relating to a cash flow hedge that were previously deferred in a cash flow hedge reserve would be reclassified to retained earnings or, if appropriate, another category of equity.

5.16.2.D Hedging relationships existing at the date of transition

The exemption for existing hedging relationships in paragraph 35.10(t)(i) (see 5.16.A above) applies to hedging relationships of a type described in paragraph 12.19 (i.e., a cash flow hedge, fair value hedge, or hedge of a net investment in a foreign operation, see Chapter 14 at 4.6), meeting the eligibility and documentation conditions for hedge accounting required by the transition provision. See Chapter 14 at 4.2 to 4.4.

It is clear from the context that a hedging relationship can only exist at the date of transition if there is both an eligible hedged item and hedging instrument at that date. If the hedging instrument has ceased to exist before the date of transition, the transition provision on past hedging relationships may apply (see 5.16.2.C above).

A first-time adopter has two possibilities for hedging relationships existing at the date of transition:

- (a) Choose not to (or is not permitted to) hedge account

This applies if the conditions in (b) below are met (but the entity chooses not to hedge account) or if the conditions in (b) below are not met.

Or

- (b) Choose to apply hedge accounting

Where one of the three permitted types of hedging relationship exists at the date of transition, the first-time adopter is permitted to choose to apply hedge accounting provided:

- The conditions in paragraphs 12.18(a) to (c) (i.e., the existence of an economic relationship between an eligible hedging instrument and eligible hedged item, where the hedging relationship is consistent with the entity's risk management objectives for undertaking hedges – see Chapter 14 at 4.4) are met on the date of transition.
- And
- The conditions of paragraphs 12.18(d) and (e) (i.e., documentation of the hedging relationship and the determination, and documentation of causes of ineffectiveness – see Chapter 14 at 4.4.4) are met not later than the date the first FRS 102 financial statements are authorised for issue.

This choice applies to each hedging relationship existing on the date of transition. [FRS 102.35.10(t)(i)].

Because Section 12 does not have the same requirements as IAS 39 for ongoing effectiveness tests, this means that even if hedge accounting under IAS 39 ceased because the hedge relationship failed the effectiveness test (but the entity continued with the hedge economically), arguably hedge accounting could be reinstated in the opening FRS 102 statement of financial position, where the above conditions are met. However, if hedge accounting ceased because a forecasted transaction in a cash flow hedge was no longer highly probable, the hedging relationship would not meet the criteria in paragraph 12.18(a) and hedge accounting could not be reinstated.

Where the entity does not re-establish hedge accounting for an existing hedging relationship or the conditions to apply hedge accounting on transition are not met, the question arises as to whether the entity can continue to reflect the hedge accounting under its previous financial reporting framework for the

discontinued hedge in the statement of financial position and apply Section 12's requirements for discontinuance of hedge accounting prospectively from the date of transition (which would generally result in similar accounting to that already applied under IAS 39 or IFRS 9). Entities that elect not to apply the FRS 102 hedge accounting requirements have to comply with the applicable measurement requirements for assets and liabilities set out elsewhere in FRS 102 from the date of transition. [FRS 102.BC.B11.64].

How we see it

Where the elections to reflect the hedge accounting in the opening statement of financial position have not been taken, the FRC presumably intended that FRS 102 is applied retrospectively to the measurement of the hedged item and hedging instrument, without any regard to the hedge accounting provisions. The hedging relationship is not reflected in the opening FRS 102 statement of financial position and the hedge accounting adjustments under the previous financial reporting framework are eliminated to retained earnings (or, if appropriate, another component of equity) at the date of transition.

Hedge accounting as set out in Section 12 may commence from a date no earlier than the conditions of paragraphs 12.18(a) to (c) are met. [FRS 102.35.10(t)(i)].

How we see it

This would appear to allow first-time adopters some flexibility over choosing when hedge accounting commences from. If hedge accounting commences at the date of transition, there will be no amounts deferred in equity for a cash flow hedge or hedge of net investment in a foreign operation, and no adjustments made to the carrying amount of the hedged item for a fair value hedge. If hedge accounting commences from the date of inception of the hedging relationship, this is likely to avoid the ineffectiveness that might result where the hedging instrument has a non-zero fair value at the commencement of hedge accounting.

The choice whether or not to hedge account for existing hedging relationships meeting the above conditions is available whatever the entity's previous financial reporting framework and also whether or not the entity previously applied hedge accounting to that existing relationship. The nature of the adjustments required, however, might well depend on what previous accounting was followed. Where an entity previously applying IAS 39 or IFRS 9 chooses to continue to hedge account for a hedging relationship permitted under Section 12, there might often be no adjustment required on transition but differences may occur, for example:

- Section 12 does not allow for rebalancing a hedging relationship (as required under IFRS 9); and where this has occurred, it is possible that differences in the level of ineffectiveness may occur from the date at which the hedging relationship is established under Section 12.
- The accounting for the 'costs of hedging' where the entity designates the time value of options or the spot risk of forward currency contracts in a hedging relationship under Section 12 differs, or could differ, from that followed under IFRS 9. See 5.16.1.A above.

Where an entity chooses to apply hedge accounting to a hedging relationship existing at the date of transition, the transition provisions (see 5.16.2.A above) describe how a fair value hedge, cash flow hedge or net investment hedge must be reflected at the date of transition.

How we see it

The intention here appears to be to reflect the same adjustments as at the date of transition, as if hedge accounting under FRS 102 had been applied from the date chosen to commence hedge accounting, using the transition exemption. Therefore, in accordance with paragraph 12.23(d), the effects of reclassifications required from the cash flow hedge reserve where the hedged item would have affected profit or loss in prior periods (had hedge accounting under FRS 102 been applied) would be reflected in retained earnings at the date of transition. See Chapter 14 at 4.7 to 4.9.

For a UK company (or an LLP) preparing statutory accounts in accordance with FRS 102, the fair value accounting rules in the Regulations (and LLP Regulations) require that the cash flow hedge reserve is included in the statutory fair value reserve. [1 Sch 40-41, 1 Sch 40-41 (LLP)].

5.16.2.E Subsequent accounting for existing hedging relationships

Where an existing hedging relationship is reflected in the opening FRS 102 statement of financial position, [FRS 102.35.10(t)(i)], (see 5.16.2.A and 5.16.2.D above) or a hedging relationship that commences after the date of transition is hedge accounted, [FRS 102.35.10(t)(iii)], (see 5.16.2.A above), an entity could either:

- Continue hedge accounting

This would apply where the hedging relationship continues to comply with the conditions for hedge accounting in Section 12 (and meets the documentation requirements set out in the transition provisions). [FRS 102.12.18]

Or

- Discontinue hedge accounting prospectively

This would apply where an entity subsequently elects to discontinue hedge accounting; the hedging instrument has expired, is sold or terminated; or the conditions for hedge accounting cease to be met. [FRS 102.12.25]

The entity accounts for the continuance or discontinuance of hedge accounting in accordance with Section 12 (see Chapter 14).

5.16.3 Transition provisions - FRS 102 reporter applying IAS 39 or IFRS 9 (not Sections 11 and 12) to the recognition and measurement of financial instruments

5.16.3.A Mandatory requirement - hedge accounting

The transition provisions for hedge accounting relating to a first-time adopter choosing to apply IAS 39 or IFRS 9 to the recognition and measurement of financial instruments are set out in paragraph 35.10(t)(iv) of FRS 102.

How we see it

While positioned within the list of transition exemptions in Section 35, the wording of the transition provision in paragraph 35.10(t)(iv) means that it sets out mandatory requirements where IAS 39 or IFRS 9 is applied to hedge accounting. This differs to the situation where a first-time adopter applies Section 12, where there is a choice whether or not to apply the transition exemptions for hedge accounting (see 5.16.2 above).

Most FRS 102 reporters will have previously applied IFRS or FRS 101. As explained at 3.4.5.A above, adjustments are not generally expected to be required at the date of transition where IFRS 9 is applied as a policy choice to the recognition and measurement of financial instruments under FRS 102. As noted in that section, we believe that an entity already applying IFRS 9 and applying IAS 39 to the accounting for its hedges can continue to adopt this policy on transition to FRS 102. Considerations where an entity previously applied IAS 39 to the accounting for hedges under its previous financial framework but chooses to apply IFRS 9 (including its hedge accounting provisions) under FRS 102 are discussed at 3.4.5.C above.

Extract from Section 35

35.10 An entity may use one or more of the following exemptions in preparing its first financial statements that conform to this FRS:

(a) ...

(t) Hedge accounting

(i) ...

(iv) Entities taking the accounting policy choice under paragraphs 11.2(b) or (c) or paragraphs 12.2(b) or (c) to apply IAS 39 *Financial Instruments: Recognition and Measurement* or IFRS 9 *Financial Instruments*

A first-time adopter adopting an accounting policy set out in paragraphs 11.2(b) or (c) or paragraphs 12.2(b) or (c) shall not apply the transitional provisions of paragraphs (i) to (iii) above. Such a first time adopter shall apply the transitional requirements applicable to hedge accounting in IFRS 1 *First-time adoption of International Financial Reporting Standards*, paragraphs B4 to B6, except that the designation and documentation of a hedging relationship may be completed after the date of transition, and no later than the

date the first financial statements that comply with this FRS are authorised for issue, if the hedging relationship is to qualify for hedge accounting from the date of transition.

A first-time adopter adopting an accounting policy set out in paragraphs 11.2(b) or (c) or paragraphs 12.2(b) or (c) that has entered into a hedging relationship as described in IAS 39 or IFRS 9 in the period between the date of transition and the reporting date for the first financial statements that comply with this FRS may elect to apply hedge accounting prospectively from the date all qualifying conditions for hedge accounting in IAS 39 or IFRS 9 are met, except that an entity shall complete the formal designation and documentation of a hedging relationship no later than the date the first financial statements that comply with this FRS are authorised for issue.

The requirements under IFRS 9 for designation and documentation of hedging relationships and the ongoing requirements for hedge accounting where the qualifying conditions are met (and for discontinuance of hedging relationships, where the qualifying conditions are not met) are discussed in the most recent version of EY's publication, International GAAP® (which also addresses the main differences between IAS 39 and IFRS 9).

The concession on timing of completion of the designation and documentation of the hedging relationship is discussed at 5.16.3.C below.

5.16.3.B Requirements of paragraphs B4 to B6 of IFRS 1

The requirements of paragraphs B4 to B6 of IFRS 1 (which are applied subject to the concession over the timing of completion of the designation and documentation of the hedging relationship) are as follows. The *Annual Improvements to IFRS Accounting Standards - Volume 11* issued in July 2024 by the IASB made amendments to clarify the requirements of paragraphs B4 to B6 of IFRS 1 which are reflected in the discussion below.

As required by IAS 39 or IFRS 9, at the date of transition, an entity must: [IFRS 1.B4]

- Measure all derivatives at fair value.
- And
- Eliminate all deferred losses and gains arising on derivatives that were reported in accordance with previous GAAP as if they were assets and liabilities.

An entity must not reflect in its opening statement of financial position a hedging relationship of a type that does not qualify for hedge accounting (under the relevant IFRS that is followed). [IFRS 1.B5]. Entities can only designate one of three types of hedging relationships - a fair value hedge, a cash flow hedge or a hedge of a net investment in a foreign operation. For hedges of foreign currency risk of a firm commitment, an entity could designate either a fair value hedge or a cash flow hedge. [IAS 39.86, IAS.39.87, IFRS 9.6.5.2, IFRS 9.6.5.3, IFRS 9.6.5.4].

Paragraph B5 gives various examples of ineligible types of hedging relationships (which differ depending on whether IAS 39 or IFRS 9 is applied). The requirements on eligible types of hedging relationships for IFRS 9 (which are set out in paragraph 6.4.1(a) of IFRS 9) are discussed further in the most recent version of EY's publication, International GAAP® (which also addresses the main differences between IAS 39 and IFRS 9). [IFRS 1.B5, IFRS 9.6.4.1(a)].

If before the date of transition, an entity had designated a hedging relationship that was of an eligible type for hedge accounting, but the hedging relationship does not meet all the conditions for hedge accounting in IAS 39 (or qualifying criteria in paragraphs 6.4.1(b)-(c) of IFRS 9), the entity must apply paragraphs 91 and 101 of IAS 39 (or paragraphs 6.5.6 and 6.5.7 of IFRS 9) to discontinue hedge accounting prospectively immediately after transition. Transactions entered into before the date of transition to IFRS must not be retrospectively designated as hedges. [IFRS 1.B6].

How we see it

While paragraphs B4 to B6 now refer only to IFRS 9, in the context of their application under Section 35, our view is that these are to be read to include references to IAS 39 as this standard remains available for use under FRS 102.

The implementation guidance in IFRS 1 on accounting for cash flow hedges, fair value hedges and net investment hedges is not referred to by the transition provision. [FRS 102.35.10(xiv)]. However, most first-time adopters of FRS 102 will have applied IFRS or FRS 101 in their last set of financial statements.

How we see it

For a previous IFRS or FRS 101 reporter, paragraphs B4 to B6 of IFRS 1 are expected to provide sufficient guidance.

The most recent version of EY's publication, International GAAP® provides further guidance on IFRS 1's transition requirements for hedge accounting.

5.16.3.C Concession on designation and documentation of hedging instruments

A hedging relationship not specifically identified under an entity's previous financial reporting framework could meet the conditions for hedge accounting under IAS 39 or IFRS 9 as at the date of transition to FRS 102 or at a later date (except that the entity completes the designation and documentation of the hedging relationship after the date of transition but before the date of approval of the financial statements).

How we see it

In such circumstances, we consider that the transition provisions would allow hedge accounting prospectively from the date of transition (or from that later date) but that the hedging relationship must not be reflected in the opening FRS 102 statement of financial position. In essence, whereas IFRS 1 would have required the designation and documentation to be in place by the date of transition in order to hedge account prospectively from the date of transition for such a relationship, the transition provision in FRS 102 extends the deadline for completing the designation and documentation to the date of authorisation of the financial statements.

As the designation and documentation of hedging relationships (which will include how effectiveness is to be assessed) are only required to be completed by the date of authorisation of the first FRS 102 financial statements, the first-time adopter must likewise have more time to perform the effectiveness assessments required. Under IFRS 9, the entity must continue to assess the ongoing effectiveness requirements, whereas both retrospective and prospective effectiveness tests are required under IAS 39. Clearly, these effectiveness tests will need to be completed and satisfied at the latest by the date of authorisation of the first FRS 102 financial statements.

This concession over the timing of completion of designation and documentation is optional. Therefore, an entity could still account for a hedging relationship from the date all the requirements (including designation and documentation) for hedge accounting are met.

However, this concession might still be helpful to a previous IFRS or FRS 101 reporter that applied IAS 39 to hedge accounting in its most recent IFRS financial statements and instead applies IFRS 9's hedge accounting provisions on first-time adoption of FRS 102 (particularly where the documentation needs to be improved to meet IFRS 9's requirements).

5.17 Dormant entities

A company within the Companies Act definition of a dormant company (section 1169 of the CA 2006), or an LLP within the definition of a dormant LLP as set out in *The Limited Liability Partnerships (Accounts and Audit) (Application of Companies Act 2006) Regulations 2008* (SI 2008/1911), is permitted to elect to retain its accounting policies for reported assets, liabilities and equity at the date of transition to FRS 102 until there is any change to those balances or the company undertakes any new transactions, that would cause the company to cease to be dormant within the Act's definition, or the LLP to cease to be dormant under the definition in SI 2008/1911. [FRS 102.35.10(m)]. Hence, so long as a company or LLP remains dormant, it can retain its accounting policies under its previous financial reporting framework.

Without this transition exemption, dormant companies and LLPs would be required to assess whether there are changes to the existing accounting under FRS 102 compared to its previous financial reporting framework. A change in accounting could lead to the company or LLP ceasing to be dormant. For UK companies and LLPs, this could impact on the requirements to prepare and file statutory accounts (as exemptions are available to qualifying dormant subsidiary companies/LLPs supported by a statutory guarantee from a UK parent) and on the availability of audit exemptions. [s394A-s394C, s448A-s448C, s480-s481, s394A (LLP)-s394C (LLP), s448A (LLP)-s448C (LLP), s480 (LLP)-s481 (LLP)].

Dormant entities must, like all FRS 102 reporters, give a complete and unreserved statement of compliance with FRS 102. [FRS 102.3.3].

Where there is potential to become non-dormant in the future, a dormant company/LLP might consider whether it is beneficial to take (and accordingly state use of) other exemptions which would not affect its dormant status under the CA 2006. An example of this would be the election to use deemed cost on transition in relation to the cost of investments in subsidiaries, associates and jointly controlled entities – see 5.7 above. [FRS 102.35.10(f)]. This is because, if the company/LLP becomes non-dormant in the future and can no longer retain its existing accounting policies, it will no longer be a first-time adopter (and so cannot make use of new exemptions at that time). However, in many cases, dormant companies/LLPs might have simple affairs and other transition exemptions might not be relevant.

How we see it

While the exemption does not explicitly state this, we consider that the wording of the exemption, in particular its references to accounting policies at the date of transition, more closely supports the view that the exemption is only available to companies and LLPs that are dormant at the date of transition (until such time as they cease to be dormant) rather than being available to companies and LLPs that become dormant during the period prior to the first reporting period in which FRS 102 is applied.

5.18 Insurance contracts

As noted in Chapter 38, FRS 103 is a transaction-based standard applying to FRS 102 reporters falling within its scope.

An entity applying both FRS 102 and FRS 103 together at the first time (i.e., a first-time adopter of FRS 102) must apply both Section 35 and the transitional provisions set out in Section 6 of FRS 103.

[FRS 103.6.1, FRS 103.62].

An entity applying FRS 103 for the first time need not disclose information about claims development that occurred earlier than five years before the end of the first financial year in which it applies FRS 103. Furthermore, if it is impracticable, when an entity first applies FRS 103, to prepare information about claims development that occurred before the beginning of the earliest period for which an entity presents full comparative information that complies with FRS 103, the entity must disclose that fact. [FRS 103.6.3, FRS 103.4.8(b)(iii)].

If an insurer changes its accounting policies for insurance liabilities, it is permitted, but not required, to reclassify some or all of its financial assets as a financial asset at fair value through profit or loss provided those assets meet the criteria in paragraph 11.14(b) of FRS 102 (or the relevant requirements of either IAS 39 (as adopted in the relevant jurisdiction) – where this policy choice is allowed (see 3.4.1 and 4.1.1 above) – or IFRS 9 (as adopted in the relevant jurisdiction), depending on the policy choice made) at that date. This reclassification is permitted if an insurer changes accounting policies when it first applies FRS 103 and if it makes a subsequent policy change permitted by paragraph 2.3 of FRS 103. The reclassification is a change in policy to which Section 10 of FRS 102 applies. [FRS 103.6.4].

When preparing financial statements at the date of transition, an insurer whose previous financial reporting framework was adopted IFRS, or included an approach and methodology for accounting for insurance contracts that is equivalent to adopted IFRS, must disregard its existing accounting policies for insurance contracts and apply FRS 103 as if it were setting accounting policies in relation to insurance contracts for the first time (see paragraph 1.5 of FRS 103). [FRS 103.6.5, FRS 103.1.5, FRS 103.2.3].

These transitional provisions also apply when an entity already applying FRS 102 first applies FRS 103 and are discussed in more detail in Chapter 38. [FRS 103.6.1].

6 Presentation and disclosure

Section 35 does not exempt a first-time adopter from any of the presentation and disclosure requirements in other sections of FRS 102.

6.1 Comparative information

An entity's first FRS 102 financial statements are required to be a complete set of financial statements and therefore must include at least two statements of financial position, two statements of comprehensive income, two separate income statements (if presented), two statements of cash flows (unless exempt) and two statements of changes in equity and related notes, including comparative information. [FRS 102.3.17, FRS 102.3.20, FRS 102.7.1A, FRS 102.7.1B, FRS 102.35.5]. Where permitted by the standard, two statements of income and retained earnings may be included in place of the statements of comprehensive income and statements of changes in equity. [FRS 102.3.18, FRS 102.6.4]. An opening statement of financial position at the date of transition is not required. [FRS 102.35.7].

Small entities are not required to present a cash flow statement. [FRS 102.7.1B], and small entities applying Section 1A are required to present at least two statements of financial position, two income statements and related notes, including comparative information. [FRS 102.1A.8]. In addition, a small entity applying Section 1A of FRS 102 may need to present a statement of comprehensive income when it recognises gains or losses in other comprehensive income and/or a statement of changes in equity (or, where appropriate, a statement of income and retained earnings) when it has changes in equity other than profit or loss. [FRS 102.1A.9]. See Chapter 5 at 3.3.3.

Except where FRS 102 permits or requires otherwise, comparative information in respect of the preceding period is required for all amounts presented in the financial statements, as well as for narrative and descriptive information when it is relevant to an understanding of the current period's financial statements. [FRS 102.3.14, FRS 102.35.6]. An entity is permitted to present comparative information for more than one preceding period.

FRS 103 provides certain disclosure reliefs for information on claims development (see 5.18 above). [FRS 103.6.3].

6.2 Explanation of transition to FRS 102

A first-time adopter is required to explain how the transition from its previous financial reporting framework to FRS 102 affected its reported financial position, and financial performance. [FRS 102.35.12]. FRS 102 does not require an explanation of how the transition affected cash flows.

Following the Periodic Review 2024 amendments, the standard now requires an entity to state which, if any, of the transitional exemptions described in paragraph 35.10 has been adopted on transition to FRS 102, and provide explanation of material changes to its reported financial position that are not presented in the reconciliation required by paragraph 35.13 (see 6.3 below). [FRS 102.35.12A, FRS 102.35.12B].

If a first-time adopter did not present financial statements for previous periods this fact must be disclosed in its first financial statements that conform to FRS 102. [FRS 102.35.15]. For example, entities might not have prepared consolidated financial statements under their previous financial reporting framework and newly incorporated entities might never have prepared financial statements at all. In such cases, an explanation of how the transition to FRS 102 affects the entity's financial position and performance cannot be presented because relevant comparative information under the entity's previous financial reporting framework does not exist.

If it is impracticable for an entity to make one or more of the adjustments required by paragraph 35.7 at the date of transition (see 3.4 above), the entity must apply paragraphs 35.7 to 35.10 (i.e., retrospective application of FRS 102, subject to the transition exceptions and exemptions) for such adjustments in the earliest period for which it is practicable. The entity must identify which amounts in the financial statements have not been restated. If it is impracticable for an entity to provide any disclosures required by FRS 102 for any period before the period in which it prepares its first FRS 102 financial statements, it must disclose the omission. [FRS 102.35.11]. See 3.4.4 above for discussion of the meaning of 'impracticable'.

If it is not practical on first-time adoption to apply a particular requirement of paragraph 18 of IFRS 6 (impairment of exploration and evaluation assets) to previous comparative amounts an entity must disclose that fact. [FRS 102.34.11C].

6.3 Disclosure of reconciliations

A first-time adopter is required to present in its first financial statements prepared using FRS 102: [FRS 102.35.13(b), FRS 102.35.13(c)]

- Reconciliations of its equity determined in accordance with its previous financial reporting framework to its equity determined in accordance with FRS 102 at:
 - The date of transition to FRS 102.
 - And
 - The end of the latest period presented in the entity's most recent annual financial statements determined in accordance with its previous financial reporting framework.
- And
- A reconciliation of the profit or loss determined in accordance with its previous financial reporting framework for the latest period in the entity's most recent annual financial statements to its profit or loss determined in accordance with FRS 102 for the same period.

First-time adopters must also describe the nature of each change in accounting policy. [FRS 102.35.13(a)]. As noted at 6.2 above, the transition exemptions, if any, applied must also be stated. [FRS 102.35.12A].

If the entity becomes aware of errors made under its previous financial reporting framework, the reconciliations must, to the extent practicable, distinguish the correction of those errors from changes in accounting policies. [FRS 102.35.14]. This means that the adoption of FRS 102 must not be used to mask the error.

FRS 102 does not specify the format of the reconciliations of equity or profit or loss. In FRS 102 Factsheet 7 *Transition to FRS 102*, the FRC give two example layouts (in both cases, with supporting notes explaining the adjustments):

- A line-by-line reconciliation of the statement of financial position at the date of transition and at the end of the comparative period, and of the profit or loss account for the comparative period.
- Or
- A reconciliation of total equity at the date of transition and at the end of the comparative period, and of the total profit or loss for the comparative period.

How we see it

A line-by-line reconciliation may be particularly appropriate when a first-time adopter needs to make transition adjustments that affect a significant number of line items in the primary financial statements. If the adjustments are less pervasive, a straightforward reconciliation of equity and profit or loss may be able to provide an equally effective explanation.

Following the Periodic Review 2024, an entity must also provide an explanation of material changes to its reported financial position that are not presented in the reconciliation, explaining whether the changes identified arose from errors or changes in accounting policy. [FRS 102.35.12B].

How we see it

This requirement would mean, for example, that material presentational changes to the statement of financial position need to be explained. While Section 35 does not explicitly require an explanation to be given of presentational changes to the profit and loss account, certain statutory disclosures referred to below may be relevant in this regard.

A UK company (or LLP) will also need to comply with any requirements of the Regulations (or LLP Regulations), for example, the requirements of paragraph 7(2) to disclose any adjustment made to corresponding amounts or to give particulars of the non-comparability, [1 Sch 7(2), 1 Sch 7(2)(LLP)], in respect of corresponding amounts that have been adjusted or are not comparable (see Chapter 6 at 2.4.1). In most cases, the reconciliations required by Section 35 combined with an adequate explanation of the transition adjustments and how these relate to the restated figures are likely to provide sufficient information to meet these requirements. However, this statutory disclosure requirement needs to be borne in mind by entities when explaining the transition.

Moreover, the particulars of, and reason for any change of formats (e.g., moving from the statutory to adapted formats on transition, say, from FRS 101 to FRS 102) would need to be explained in the notes to the financial statements. [1 Sch 2(2), 1 Sch 2(2)(LLP)]. See Chapter 6 at 3.3.

How we see it

In our view, a first-time adopter must include all disclosures required by Section 35 within its first FRS 102 financial statements and not cross-refer to any previously reported information. Any additional voluntary information regarding the conversion to FRS 102 that was previously published but that is not specifically required by Section 35 need not be repeated in the first FRS 102 financial statements.

6.4 Repeat application of FRS 102

An entity that has applied FRS 102 in a previous reporting period but not in its most recent annual financial statements, as described in paragraph 35.2 (see 3.1.2 above), must disclose: *[FRS 102.35.12C]*

- The reason it stopped applying FRS 102.
 - The reason it is resuming the application of FRS 102.
- And
- Whether it has applied Section 35 or has applied FRS 102 retrospectively in accordance with Section 10 of FRS 102.

This disclosure is therefore only required in the accounting period in which the entity reapplies FRS 102.

6.5 Interim financial statements

FRS 102 does not address the presentation of interim financial reports; it merely requires that an entity that prepares such reports must describe the basis for preparing and presenting the information. FRS 104 *Interim Financial Reporting* sets out a basis for the preparation and presentation of interim financial reports that an FRS 102 reporter may apply. *[FRS 102.3.25]*.

FRS 104 is not a mandatory standard to apply. Issuers subject to the Disclosure and Transparency Rules that are not required to prepare consolidated financial statements and choose to report under FRS 102 may give a responsibility statement that the condensed set of financial statements has been prepared in accordance with FRS 104. However, we would generally expect FRS 104 to be applied where interim financial statements are prepared by an FRS 102 reporter. See Chapter 39 at 2.2 for further discussion of the scope of FRS 104.

FRS 104 (rather than Section 35) addresses the disclosures concerning transition required in interim financial reports applying FRS 102 that cover part of the first financial reporting period. *[FRS 104.16B]*. See Chapter 39 at 11. Where changes to accounting policies or the use of exemptions are made between the first FRS 102 interim financial report and the first FRS 102 financial statements, neither FRS 104 nor Section 35 require disclosure of these changes (including an update to the reconciliations) in the annual financial statements. This disclosure is, however, required by an IFRS reporter. *[IFRS 1.27A]*.

How we see it

We would encourage disclosure of changes to accounting policies made between the first FRS 102 interim report and the first FRS 102 financial statements, where material, as relevant information in the first FRS 102 financial statements.

Appendix A – Defined terms

Extract from FRS 102

Appendix I

Glossary

adopted IFRS	IFRS Accounting Standards that have been adopted in the relevant jurisdiction. In the UK, this refers to UK-adopted international accounting standards. In the Republic of Ireland, this refers to EU-adopted IFRS.
carrying amount	The amount at which an asset, a liability or equity is recognised in the statement of financial position.
date of transition	The beginning of the earliest period for which an entity presents full comparative information in a given standard in its first financial statements that comply with that standard.
deemed cost	An amount used as a surrogate for cost or depreciated cost at a given date. Subsequent depreciation or amortisation assumes that the entity had initially recognised the asset or liability at the given date and that its cost was equal to the deemed cost.
fair value	The price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. In the absence of any specific guidance provided in the relevant section of this FRS, the guidance in Section 2A <i>Fair Value Measurement</i> shall be used in determining fair value.
first-time adopter of this FRS	An entity that presents its first annual financial statements that conform to this FRS, regardless of whether its previous financial reporting framework was adopted IFRS or another set of accounting standards.
reporting date	The end of the latest period covered by financial statements or by an interim financial report.
reporting period	The period covered by financial statements or by an interim financial report.

Overview

FRS 103 *Insurance Contracts* is relevant to entities applying FRS 102 *The Financial Reporting Standard applicable in the UK and Republic of Ireland* and addresses the accounting for insurance contracts (including reinsurance contracts) that an entity issues and reinsurance contracts that it holds, including financial instruments that an entity issues with a discretionary participation feature (DPF).

FRS 103 is a transaction-based standard that applies to insurance and non-insurance entities that issue contracts which meet the definition of an insurance contract, regardless of whether the entity is an insurer for legal or supervisory purposes. FRS 103 generally permits entities to continue with their existing accounting policies for insurance contracts; however, an entity that has previously applied IFRS 17 *Insurance Contracts* cannot carry forward the accounting principles from IFRS 17 and must instead apply FRS 103 as if it were setting accounting policies in relation to insurance contracts for the first time.

The requirements in FRS 103 are based in part on IFRS 4 *Insurance Contracts*. However, IFRS 4 did not set specific requirements for the underlying recognition and measurement of insurance contracts, which reflects the fact that it was an interim standard issued by the IASB to facilitate harmonisation between jurisdictions pending completion of the second phase of its insurance contracts project (i.e., IFRS 17). Therefore, in developing FRS 103, the text of IFRS 4 was supplemented with some of the existing requirements and practice in accounting for insurance contracts in the UK and Republic of Ireland.

The *Large and Medium-sized Companies and Groups (Accounts and Reports) Regulations 2008* (SI 2008/410) require the individual financial statements of an insurance company to comply with Schedule 3 to the Regulations; however, a company that issues insurance contracts which is not an insurance company is not required to prepare its individual financial statements in accordance with Schedule 3 to the Regulations.

What you need to know

- An entity that applies FRS 102 must apply FRS 103 to insurance contracts (including reinsurance contracts) that it issues and reinsurance contracts that it holds, and to financial instruments that the entity issues with a DPF.
- FRS 103, accompanied by non-mandatory Implementation Guidance, is based on the International Accounting Standard Board's (IASB) standard IFRS 4, the requirements of FRS 27 *Life Assurance* and aspects of the Association of British Insurers' Statement of Recommended Practice on Accounting for Insurance Business (the ABI SORP).
- FRS 103 permits insurers to continue applying their existing accounting policies for insurance contracts on transition; except when the insurer's previous financial reporting framework was adopted IFRS or included insurance contract accounting equivalent to adopted IFRS, in which case the insurer must apply FRS 103 as if it were setting accounting policies regarding insurance contracts for the first time.

1 Introduction

An entity that applies FRS 102, whether or not it is an 'insurance company', must apply FRS 103 to insurance contracts (including reinsurance contracts) that it issues and reinsurance contracts that it holds, and to financial instruments that the entity issues with a DPF. [FRS 103.BC2].

FRS 103 (and the accompanying non-mandatory Implementation Guidance) consolidates pre-existing financial reporting requirements and guidance for insurance contracts. The requirements (and the guidance in the accompanying non-mandatory Implementation Guidance) are based on the IASB's IFRS 4 *Insurance Contracts* extant in 2013 (except to the extent that it was amended by IFRS 13 *Fair Value Measurement*), the requirements of FRS 27 (prior to it being withdrawn by FRS 103) and elements of the ABI SORP (published in December 2005 and amended in December 2006 prior to it being withdrawn by FRS 103). [FRS 103.BC1]. FRS 103 has since been updated for changes in the UK regulatory framework and as part of the Periodic Review 2024 for the amendments made to IFRS 4 by IFRS 13 which are now reflected in FRS 103 (see 1.1 below).

FRS 103, generally, allows entities to continue with their previous accounting practices for insurance contracts but permits entities the same flexibility to make improvements (subject to legal and regulatory requirements) as entities in the UK and Republic of Ireland applying EU-adopted IFRS or FRS 101.

[FRS 103.BC16, FRS 103.BC17].

1.1 Updates to FRS 103

FRS 103 was issued originally in March 2014 and effective for accounting periods beginning on or after 1 January 2015. Revised versions were issued in February 2017, March 2018, January 2022 and September 2024. This chapter reflects the September 2024 version of FRS 103. The main changes made to FRS 103 since the March 2018 version are as follows:

- December 2020 amendments to reflect changes in UK company law following the UK exit from the European Union. [FRS 103.1.11C].
- March 2024 amendments as set out in the *Amendments to FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland and other FRSS - Periodic Review 2024*, which incorporates the new definition of fair value introduced as part of Section 2A Fair Value Measurement of FRS 102, these are consistent with the consequential amendments made to IFRS 4, which FRS 103 is partly based, as a result of the introduction of IFRS 13. [FRS 103.BC59]. The amendments are effective for periods beginning on or after 1 January 2026, except for the amendments to Section 6 *Transition of FRS 103*, which must be applied for periods beginning on or after 1 January 2024. Early application of the amendments other than those in Section 6 of FRS 103 is permitted, provided that all those other amendments are applied at the same time. [FRS 103.1.11D].

1.2 FRS 103 and IFRS 17 Insurance Contracts

IFRS 17 was issued by the IASB in May 2017, amended in June 2020 and December 2021, and effective for accounting periods beginning on or after 1 January 2023. IFRS 17 establishes principles for the recognition, measurement, presentation and disclosure of insurance contracts issued, reinsurance contracts held and investment contracts with discretionary participation features issued. IFRS 17 replaced IFRS 4 (upon which FRS 103 is based).

It is stated in the Basis for Conclusions that the FRC will review the requirements of FRS 103 in the light of IFRS 17 but that the timing of this review is yet to be determined. [FRS 103.BC57]. The FRC did not consider whether and how to align FRS 103 with IFRS 17 as part of their Periodic Review 2024²⁵³. The Basis for Conclusions states that the FRC is likely to wait for several years' implementation experience before considering alignment of FRS 103 with IFRS 17. Further, as noted in the Basis for Conclusions to FRS 101, conflicts between IFRS 17 and company law have led the FRC to conclude previously that it is not currently possible to apply IFRS 17 in Companies Act accounts (i.e., accounts prepared in accordance with the FRC's FRSSs) whilst continuing to maintain compliance with company law. [FRS 103.BC57A].

²⁵³ [FRC revises UK and Ireland accounting standards](#), FRC, March 2024

Section 6 of FRS 103 requires an insurer that previously applied IFRS, or an equivalent financial reporting framework, and subsequently transitions to FRS 103 for the first time, to disregard its existing accounting policies for insurance contracts. The provisions in FRS 103 for an insurer largely to continue with its existing accounting policies for insurance contracts on transition were not intended to provide a mechanism for importing accounting principles from IFRS 17. Such an insurer must instead apply FRS 103 as if it were setting accounting policies in relation to insurance contracts for the first time (see 3.3 below).

[FRS 103.BC57B].

1.3 Entities applying FRS 103 for the first time

New entrants to the insurance market would not have existing accounting policies for insurance contracts. Therefore, to provide these new entrants with the same benchmark accounting policies and the same flexibility to make improvements, new entrants must first consider the sections of FRS 103 (which is based on the requirements of FRS 27 and the ABI SORP (see 1 above)) as a means of establishing current practice before considering whether to 'improve' those benchmark accounting policies. [FRS 103.BC18].

Furthermore, to maintain a consistent starting point for insurers in selecting their accounting policies for insurance contracts for the first time, the Basis for Conclusions observes that existing entities are not required to change their accounting policies, although the change in regulatory regime may be a trigger for some entities to 'improve' their accounting policies, to make them more consistent with the Solvency II regulatory framework (see 9 below). [FRS 103.BC53].

Entities that are setting accounting policies for long-term insurance business, or other financial instruments with discretionary participation features, for the first time, must either: [FRS 103.1.5]

- First consider the requirements of Section 3 of FRS 103 *Recognition and Measurement: Requirements for entities with long-term insurance business*, the Regulations and any relevant parts of FRS 102, as a benchmark before assessing whether to set accounting policies that differ from those benchmark policies in accordance with paragraph 2.3 of FRS 103.

Or

- Establish accounting policies that are based on the rules under the Solvency II Directive for the recognition and measurement of technical provisions, and any relevant requirements of FRS 103, the Regulations and FRS 102. In doing so, an entity must make appropriate adjustments to the Solvency II rules to ensure that the accounting policies result in information that is relevant and reliable. This is consistent with the requirements of the Regulations for the computation of the long-term business provision to have due regard to the actuarial principles of Solvency II (see 8.4.4 below).

Entities setting accounting policies for general insurance business for the first time appear to be excluded from this guidance although these entities could still follow this guidance in the absence of any other requirements.

1.4 Non-insurance transactions and balances

Recognition, measurement and disclosure of non-insurance transactions and balances of an insurer are accounted for in accordance with FRS 102 and are discussed in the relevant chapters of this publication.

1.5 Implementation guidance accompanying FRS 103

FRS 103 is accompanied by non-mandatory implementation guidance. The Implementation Guidance is not part of, and does not carry the authority of, an accounting standard. It provides guidance on applying:

[FRS 103.1.4]

- The requirements of FRS 103.
- The requirements or principles of FRS 102 by entities with general insurance business or long-term insurance business.

And

- The requirements of Schedule 3 to the Regulations.

The Implementation Guidance has been developed from material that was previously included in either FRS 27 or the ABI SORP. Paragraphs that have been sourced from the ABI SORP, and to a lesser extent those from FRS 27, have been revised where required, for example to reflect new legislative requirements or for consistency with FRS 102. Each section of the Implementation Guidance specifies the requirements to which it relates. [FRS 103.IG.Overview (iii)].

A number of the sections of FRS 102 exclude insurance contracts from their scope. However, FRS 102 requires entities developing accounting policies for transactions, other events or conditions not specifically addressed in FRS 102 (or another FRS) to consider the applicability of the requirements and guidance in FRS 102 (or another FRS) dealing with similar or related issues. Therefore, where relevant, the Implementation Guidance includes guidance on the application of certain principles of FRS 102 to insurance contracts, even though insurance contracts may not be within the scope of those sections. This is consistent with setting accounting policies in accordance with the principles of FRS 102 and FRS 103.

[FRS 103.IG.Overview (ii)].

2 Comparison between FRS 103 and IFRS 17

FRS 103 and IFRS 17 both address the accounting for insurance contracts but differ significantly in terms of measurement, recognition and disclosure. As discussed at 1 above, FRS 103 is based largely on IFRS 4 and consolidates pre-existing financial reporting requirements and guidance for insurance contracts. IFRS 4 did not prescribe detailed measurement and recognition requirements for insurance contracts but, instead, allowed entities to use a wide variety of accounting practices for insurance contracts, that reflected national accounting requirements and variations of those requirements. Similarly, FRS 103 allows entities to continue using their existing accounting policies for insurance contracts, except when the entity has previously applied IFRS 17, with some modifications to ensure compliance with UK Company Law.

IFRS 17 superseded IFRS 4 and became effective for accounting periods beginning on or after 1 January 2023. Unlike IFRS 4, IFRS 17 does not contain transitional provisions that 'grandfather' conclusions under previous GAAP. Instead IFRS 17 requires the same recognition and measurement model for insurance contracts instead of diverse local practices and represents a fundamental change for insurers.

IFRS 17 applies a current value approach to measuring insurance contracts and recognises profit as services are provided. The general model in IFRS 17 requires insurance contract liabilities to be measured using discounted probability-weighted current estimates of future cash flows, a risk adjustment for non-financial risk and a contractual service margin representing the profit expected from fulfilling the contracts. IFRS 17 also has specific modifications to the general model including a simplified measurement approach, the premium allocation approach intended for short-term contracts, and an adaptation of the general model, the variable fee approach for contracts with a DPF. There are also modifications to the basic measurement rules for reinsurance contracts held, which must be accounted for separately from the underlying insurance contracts issued.

IFRS 17 is a complex standard that covers the accounting for a wide range of contracts that insurers and non-insurers issue and provides detailed guidance on many areas (such as contract boundaries, contract aggregation for measurement purposes, modifications of contracts and business combination accounting) on which IFRS 4 was silent. The transition requirements must be applied retrospectively unless impractical and in which case IFRS 17 addresses how insurers deal with impracticability by requiring two alternative approaches to fully retrospective application, a modified retrospective approach and a fair value approach.

IFRS 17 represents a major overhaul, introducing a detailed measurement model based on current estimates, risk adjustments and contractual service margins. It requires regular remeasurement and detailed aggregation of insurance contracts, and it aims to provide more transparent and comparable information globally across entities. In contrast, FRS 103 maintains continuity with existing practices, allowing entities to use their established accounting policies with minor modifications. IFRS 17 presents a more dynamic and standardised approach.

2.1 Insurance contracts with discretionary participation features

FRS 103 states that an entity can only recognise a DPF in an insurance contract as equity if permitted by the Regulations. [FRS 103.2.30(b)]. However, the Regulations require that the fund for appropriations (FFA) is classified as a liability (see 8.2.10 below). Therefore, there is no option to classify the DPF in UK insurance contracts as equity.

Under IFRS 17, entities must make a best estimate of the liability due to policyholders (both current and future) under the contracts and amounts attributable to shareholders are part of shareholders' equity.

2.2 Financial instruments with discretionary participation features

Financial instruments with discretionary participation features are scoped out of Section 11 *Basic Financial Instruments* and Section 12 *Other Financial Instrument Issues* of FRS 102. However, FRS 103 requires some disclosures to be made in respect of those contracts that are set out in Section 11 of FRS 102.

IFRS 17 applies to investment contracts with discretionary participation features that the entity issues, provided that it also issues insurance contracts; however, where an entity issues contracts with discretionary participation features but does not issue any insurance contracts, those contracts would fall within the scope of IAS 32 and IFRS 9.

2.3 Accounting for financial instruments

Under FRS 102, as an alternative to applying the recognition and measurement requirements of Sections 11 and 12 for financial instruments, the recognition and measurement requirements of IAS 39 *Financial Instruments: Recognition and Measurement* or IFRS 9 are available as an accounting policy choice. However, a change introduced by the Periodic Review 2024 means that entities are no longer permitted to change their accounting policy from applying Section 11 and Section 12 or a combination of IFRS 9 and IAS 39 to applying IAS 39, except to make their policies consistent with the consolidated financial statements in which the entity is included. [FRS 102.11.2, FRS 102.12.2].

2.4 Disclosure differences

There are many disclosure differences between IFRS 17 and FRS 103.

Disclosures required by FRS 103 are discussed at 11 below. In addition, insurers are required by Schedule 3 to the Regulations to make various additional disclosures in respect of insurance contracts which do not apply to IFRS reporters.

3 The objectives, scope of and transition to FRS 103

3.1 The objectives of FRS 103

In developing the requirements of financial reporting standards, including FRS 103, the overriding objective is to enable users of accounts to receive high-quality understandable financial reporting proportionate to the size and complexity of the entity and users' information needs. *[FRS 103.BC3]*.

The FRC notes that FRS 103:

- Provides a financial reporting framework for entities with insurance contracts that allows them to generally continue with their existing policies whilst consolidating and modernising the relevant accounting requirements. *[FRS 103.BC5]*.
- Is deregulatory in some areas (e.g., by permitting entities to improve their accounting policies and by including best practice guidance that allows entities some flexibility in complying with the disclosure principles). *[FRS 103.BC5]*.
- Was supplemented with the text of IFRS 4 by some of the existing requirements and practice in accounting for insurance contracts in the UK and Republic of Ireland and, as a result, much of FRS 27 has been incorporated into FRS 103 or the accompanying Implementation Guidance, along with elements of the ABI SORP and company law applicable to insurance companies. *[FRS 103.BC7, FRS 103.BC8]*.
- Consolidates all relevant, existing accounting requirements and guidance applicable to entities with insurance contracts, other than company law and the requirements of the PRA handbook, which is consistent with the FRC's general approach to setting accounting standards and eliminates unnecessary duplication. *[FRS 103.BC9]*.

In summary, FRS 103:

- Allows entities, generally, to continue with their existing accounting policies for insurance contracts including the appropriate measurement of long-term insurance business, whilst permitting limited improvements to accounting by insurers.
- Requires disclosure that:
 - Identifies and explains the amounts in an insurer's financial statements arising from the insurance contracts (including reinsurance contracts) it issues and reinsurance contracts that it holds.
 - Relates to the financial strength of entities carrying on long-term insurance business.
 - Helps users of those financial statements understand the amount, timing and uncertainty of future cash flows from those insurance contracts.

3.2 The scope of FRS 103

3.2.1 Key definitions

Extract from FRS 103

Appendix I**Glossary**

Cedant	The policyholder under a reinsurance contract.
discretionary participation feature	A contractual right to receive, as a supplement to guaranteed benefits, additional benefits: (a) that are likely to be a significant portion of the total contractual benefits; (b) whose amount or timing is contractually at the discretion of the issuer; and (c) that are contractually based on: (i) the performance of a specified pool of contracts or a specified type of contract; (ii) realised and/or unrealised investment returns on a specified pool of assets held by the issuer; or (iii) the profit or loss of the company, fund or other entity that issues the contract.
financial guarantee contract	A contract that requires the issuer to make specified payments to reimburse the holder for a loss it incurs because a specified debtor fails to make payment when due in accordance with the original or modified terms of a debt instrument.
guaranteed benefits	Payments or other benefits to which a particular policyholder or investor has an unconditional right that is not subject to the contractual discretion of the issuer.
insurance contract	A contract under which one party (the insurer) accepts significant insurance risk from another party (the policyholder) by agreeing to compensate the policyholder if a specified uncertain future event (the insured event) adversely affects the policyholder. (See Appendix II for guidance on this definition.)
insurance liability	An insurer's net contractual obligations under an insurance contract.
insurance risk	Risk, other than financial risk, transferred from the holder of a contract to the issuer.
insured event	An uncertain future event that is covered by an insurance contract and creates insurance risk.
insurer	The party that has an obligation under an insurance contract to compensate a policyholder if an insured event occurs.
policyholder	A party that has a right to compensation under an insurance contract if an insured event occurs.
reinsurance assets	A cedant's net contractual rights under a reinsurance contract.
reinsurance contract	An insurance contract issued by one insurer (the reinsurer) to compensate another insurer (the cedant) for losses on one or more contracts issued by the cedant. Retrocession is the reinsurance outwards of risks previously accepted by an insurer as reinsurance inwards. The recipient is known as the retrocessionaire.
reinsurer	The party that has an obligation under a reinsurance contract to compensate a cedant if an insured event occurs.

3.2.2 Transactions within the scope of FRS 103

FRS 103 applies to financial statements prepared by an entity that applies FRS 102 and that are intended to give a true and fair view of a reporting entity's financial position and profit or loss (or income and expenditure) for a period. [FRS 103.1.1].

Unless specifically excluded from its scope (see 3.2.3 below) an entity that applies FRS 102 must apply FRS 103 to: [FRS 103.1.2]

- Insurance contracts (including reinsurance contracts) that it issues and reinsurance contracts that it holds.
- And
- Financial instruments (other than insurance contracts) that it issues with a DPF (see 7.2 below).

FRS 103 applies to entities as follows: [FRS 103.1.3]

Extract from FRS 103

- 1.3** This FRS applies to entities with insurance contracts and financial instruments with discretionary participation features within the scope of paragraph 1.2 as follows:
- (a) Section 1 *Scope*, Section 2 *Accounting Policies, Recognition and Measurement*, Section 4 *Disclosure* and Section 6 *Transition to this FRS* apply to all entities applying this FRS.
 - (b) Section 3 *Recognition and Measurement: Requirements for entities with long-term insurance business* and Section 5 *Disclosure: Additional requirements for with-profits business* only apply to entities with long-term insurance business.
 - (c) Appendix II *Definition of an insurance contract* applies to all entities.
- The Regulations (or other legal framework that applies to the entity) may set out requirements in addition to those within this FRS.

It can be seen from this that FRS 103 applies to insurance contracts and not just to entities that specialise in issuing insurance contracts. It is a transaction-based standard. Consequently, non-insurance entities will be within its scope if they issue contracts that meet the definition of an insurance contract.

FRS 103 describes any entity that issues an insurance contract as an insurer whether or not the entity is regarded as an insurer for legal or supervisory purposes. [FRS 103.1.9].

Section 11 and Section 12 of FRS 102 contain scope exemptions for insurance and reinsurance contracts issued by an entity and for reinsurance contracts held by an entity and for financial instruments issued by an entity with a DPF (see 7 below). [FRS 102.11.7(f), FRS 102.11.7(g), FRS 102.12.3(d), FRS 102.12.3(j)]. Financial instruments that do not meet the definition of an insurance contract and do not contain a DPF are within the scope of either Section 11 or Section 12 of FRS 102. This will be the case even if they have the legal form of an insurance contract. [FRS 103.1.8]. These contracts are commonly referred to as 'investment contracts'.

The following table illustrates the standards applying.

Type of contract	Recognition and Measurement	Disclosure
Insurance contract issued (both with and without a DPF)	FRS 103	FRS 103
Reinsurance contract held and issued	FRS 103	FRS 103
Investment contract with a DPF	FRS 103	FRS 103
Investment contract without a DPF	Section 11 or Section 12 of FRS 102	Section 11 or Section 12 of FRS 102

A reinsurance contract is a type of insurance contract and therefore all references in FRS 103 to insurance contracts apply equally to reinsurance contracts. [FRS 103.1.10].

Since insurance contracts and investment contracts with a DPF are scoped out of Sections 11 and 12 of FRS 102, FRS 103 applies to all the assets and liabilities arising from these contracts, which include:

- Insurance and reinsurance receivables owed by the policyholder direct to the insurer
- Insurance receivables owed by an intermediary to an insurer on behalf of the policyholder where the intermediary is acting in a fiduciary capacity (discussed at 3.2.2.A below)

- Insurance claims agreed with the policyholder and payable
- Insurance contract policy liabilities
- Claims handling cost provisions
- The present value of acquired in-force business (discussed at 10.1 below)
- Deferred or unearned premium reserves
- Reinsurance assets (i.e., expected reinsurance recoveries in respect of claims incurred)
- Deferred acquisition costs
- Liabilities related to discretionary participation features

Receivables due from intermediaries to insurers that have a financing character and balances due from intermediaries not acting in a fiduciary capacity, for example loans to intermediaries repayable from commissions earned, are outside the scope of FRS 103 as these do not arise from insurance contracts.

3.2.2.A Amounts receivable from an intermediary

When a policyholder has paid premiums to an intermediary, and the intermediary has not remitted the premiums to the insurer, it is not initially obvious whether the resulting premium receivable would be within the scope of FRS 103 or Sections 11 and 12 of FRS 102. IFRS accounting standards permit an accounting policy choice to apply either IFRS 17 or IFRS 9 to amounts receivable from an intermediary when a policyholder has discharged its obligation to an insurer. Schedule 3 requires debtors arising out of insurance operations to be split between those due from policyholders and those due from intermediaries (see 8.2.5 below). However, Schedule 3 does not specify whether the balances due from intermediaries are within the scope of FRS 103 or Sections 11 and 12 of FRS 102.

How we see it

When a policyholder has paid premiums to an intermediary and the payment by the policyholder discharges the policyholder's obligation under the insurance contract, an insurer could refer to Section 10 *Accounting Policies, Estimates and Errors* of FRS 102 and use the hierarchy to develop an accounting policy due to the lack of specific guidance in FRS 103. However, when a policyholder has paid premiums to an intermediary but has not discharged its obligation to an insurer until the intermediary has remitted the premiums to the insurer, the premium receivable remains in the scope of FRS 103.

3.2.3 Transactions not within the scope of FRS 103

FRS 103 applies only to accounting for insurance contracts and financial instruments with a DPF. The recognition, measurement and disclosure requirements for all other assets held and liabilities assumed by an insurer are contained in FRS 102. In particular, the recognition, measurement and disclosure requirements for financial assets held and financial liabilities assumed are contained in Sections 11, 12 and Section 34 *Specialised Activities* of FRS 102. [FRS 103.1.6].

FRS 103 describes transactions to which FRS 103 is not applied. These primarily relate to transactions covered by sections of FRS 102 that could potentially meet the definition of an insurance contract. These transactions are discussed below.

3.2.3.A Product warranties

Product warranties issued directly by a manufacturer, dealer or retailer are outside the scope of FRS 103. These are accounted for under Section 21 *Provisions and Contingencies* and Section 23 *Revenue from Contracts with Customers* of FRS 102. [FRS 103.1.7(a)]. Without this exemption many product warranties would have been in the scope of FRS 103 as these would normally meet the definition of an insurance contract.

However, a product warranty is within the scope of FRS 103 if it is not issued by a manufacturer, dealer or retailer in connection with the sale of its goods or services to a customer.

Other types of warranty are not specifically excluded from the scope of FRS 103. For example, a warranty given by a vendor to the purchaser of a business, such as in respect of contingent liabilities related to unagreed tax computations of the acquired entity, is an example of a transaction that may also fall within the scope of this standard. However, since FRS 103 does not prescribe a specific accounting treatment, issuers of such warranties are likely to be able to apply their existing accounting policies although they would be subject to the disclosure requirements in FRS 103.

3.2.3.B Assets and liabilities arising from employment benefit plans

Employers' assets and liabilities under employee benefit plans and retirement benefit obligations reported by defined benefit retirement plans are excluded from the scope of FRS 103. These are accounted for under Section 26 *Share-based Payment*, Section 28 *Employee Benefits*, and Section 34 of FRS 102.

[FRS 103.1.7(b)].

Many defined benefit pension plans and similar post-employment benefits meet the definition of an insurance contract because the payments to pensioners are contingent on uncertain future events, such as the continuing survival of current or retired employees. Without this exception these would have been within the scope of FRS 103.

3.2.3.C Contingent rights and obligations related to non-financial items

Contractual rights or contractual obligations that are contingent on the future use of, or right to use, a non-financial item (for example, some licence fees, royalties, variable and other contingent lease payments and similar items) are excluded from the scope of FRS 103, as well as a lessee's residual value guarantee embedded in a finance lease. These are accounted for under Section 18 *Intangible Assets other than Goodwill*, Section 20 *Leases* and Section 23 of FRS 102. [FRS 103.1.7(c)].

3.2.3.D Financial guarantee contracts

Financial guarantee contracts are excluded from the scope of FRS 103 unless the issuer has previously asserted explicitly that it regards such contracts as insurance contracts and has used accounting applicable to insurance contracts, in which case the issuer may elect to apply either Section 21 of FRS 102 or FRS 103 to these financial guarantee contracts. The issuer may make that election on a contract-by-contract basis, but the election for each contract is irrevocable. [FRS 103.1.7(d)].

When an insurer elects to use FRS 103 to account for its financial guarantee contracts, its accounting policy defaults to its previous GAAP for such contracts (subject to any limitations discussed at 9 below) unless subsequently modified as permitted by FRS 103 (see 9 below).

FRS 103 does not elaborate on the phrase 'previously asserted explicitly'. However, under the FRS 102 hierarchy in Section 10, insurers could look to the guidance in IAS 39 or IFRS 9 which states that assertions that an issuer regards contracts as insurance contracts are typically found throughout the issuer's communications with customers and regulators, contracts, business documentation and financial statements. Furthermore, insurance contracts are often subject to accounting requirements that are distinct from the requirements for other types of transaction, such as contracts issued by banks or commercial companies. In such cases, an issuer's financial statements typically include a statement that the issuer has used those accounting requirements. [IAS 39.AG4A, IFRS 9.B2.6]. Therefore, it is likely that insurers that have previously issued financial guarantee contracts and accounted for them under an insurance accounting and regulatory framework will meet these criteria. It is unlikely that an entity not subject to an insurance accounting and regulatory framework, or existing insurers that had not previously issued financial guarantee contracts, would meet these criteria because they would not have previously made the necessary assertions.

3.2.3.E Contingent consideration payable or receivable in a business combination

Contingent consideration payable or receivable in a business combination is outside the scope of FRS 103. This is accounted for under Section 19 *Business Combinations and Goodwill* of FRS 102 (see Chapter 19 at 2.5.2 and Chapter 19 at 3.6) [FRS 103.1.7(e)].

3.2.3.F Direct insurance contracts in which the entity is the policyholder

Accounting by policyholders of direct insurance contracts (i.e., those that are not reinsurance contracts) is excluded from the scope of FRS 103. However, holders of reinsurance contracts (cedants) must apply FRS 103. [FRS 103.1.7(f)].

FRS 102 does contain some guidance on accounting for rights under insurance contracts held. In particular, Section 21 of FRS 102 addresses accounting for reimbursements from insurers of expenditure required to settle a provision and permits recognition of the reimbursement as a separate asset only when it is virtually certain that the entity will receive the reimbursement on settlement of the obligation. [FRS 102.21.9]. In addition, Section 17 *Property, Plant and Equipment* of FRS 102 addresses accounting for compensation from third parties for items of property, plant and equipment that are impaired, lost or given up and states that such compensation must be included in profit or loss only when the compensation is virtually certain. [FRS 102.17.25]. However, for all other aspects of accounting for insurance contracts held, a policyholder is required to develop its accounting policies applying Section 10 of FRS 102 which sets out a hierarchy of guidance to use (see Chapter 9 at 3.1).

3.2.4 The product classification process

Insurers need to determine which transactions are within the scope of FRS 103 and which transactions are not within its scope. Therefore, one of the main procedures required of insurers, when applying FRS 103 for the first time, is to conduct a product classification review.

The assessment of the appropriate classification for a contract will include an assessment of whether the contract contains significant insurance risk (discussed at 4.6 below), and whether the contract contains embedded derivatives (discussed at 5 below), deposit components (discussed at 6 below) or discretionary participation features (discussed at 7 below).

The diagram below illustrates a product classification decision tree.

3.3 Transition to FRS 103

Section 35 *Transition to this FRS* of FRS 102 also applies to a first-time adopter of FRS 103 (see Chapter 37). [FRS 103.6.2].

FRS 103 contains no exemption or transitional relief from the basic requirement of Section 35 of FRS 102, which requires that transition is applied retrospectively.

However, in applying paragraph 4.8(b)(iii) of FRS 103, an entity need not disclose information about claims development (see 11.3.5 below) that occurred earlier than five years before the end of the first financial year in which it applies the standard. Furthermore, if it is impracticable, when an entity first applies FRS 103, to prepare information about claims development that occurred before the beginning of the earliest period for which an entity presents full comparative information that complies with FRS 103, the entity must disclose that fact. [FRS 103.6.3].

FRS 103 specifically permits an insurer to change its accounting policies for insurance contracts on adoption of FRS 103. [FRS 103.2.3]. Such a change must be applied retrospectively and the change must satisfy the criteria of FRS 103 for accounting policy changes (see 9 below). In addition, FRS 103 observes that one basis for changing accounting policies might be to enable them to be more consistent with the rules under the Solvency II Directive for the recognition and measurement of technical provisions. In doing so, an entity must make appropriate adjustments to the Solvency II rules to meet the requirements of paragraph 2.3 of FRS 103. [FRS 103.2.3A]. If an insurer changes its accounting policies for insurance liabilities, it is permitted, but not required, to reclassify some or all of its financial assets as a financial asset at fair value through profit or loss provided those assets meet the criteria in paragraph 11.14(b) of FRS 102 (or if the entity has made the accounting policy choice under paragraphs 11.2(b) or (c) or paragraphs 12.2(b) or (c) of FRS 102 to apply the recognition and measurement provisions of either IAS 39 or IFRS 9, the relevant requirements of IAS 39 or IFRS 9, as applicable) at that date. This reclassification is permitted if an insurer changes accounting policies when it first applies FRS 103 and if it makes a subsequent policy change permitted by paragraph 2.3 of FRS 103. The reclassification is a change in accounting policy to which Section 10 of FRS 102 applies. [FRS 103.6.4].

When an insurer, whose previous financial reporting framework was IFRS, or included an approach and methodology for accounting for insurance contracts that is equivalent to IFRS, prepares financial statements at the date of transition to FRS 103, that entity must disregard its existing accounting policies for insurance contracts and apply FRS 103 as if it were setting accounting policies in relation to insurance contracts for the first time (see 1.3 above). [FRS 103.6.5]. This clause is intended to prevent insurers applying IFRS 17 as a grandfathered accounting policy within FRS 103.

4 The definition of an insurance contract

4.1 The definition

FRS 103 defines an insurance contract as follows. *[FRS 103 Appendix I]*.

Extract from FRS 103

Appendix I Glossary

insurance contract

A contract under which one party (the insurer) accepts significant insurance risk from another party (the policyholder) by agreeing to compensate the policyholder if a specified uncertain future event (the insured event) adversely affects the policyholder. (See Appendix II for guidance on this definition.)

This definition determines which contracts are within the scope of FRS 103 rather than within the scope of FRS 102.

Contracts which have the legal form of insurance contracts are not necessarily insurance contracts under FRS 103. Conversely, contracts which may not legally be insurance contracts can be insurance contracts under FRS 103.

This section discusses the definition of an insurance contract in more detail and addresses the following issues:

- The term 'uncertain future event' (see 4.2 below)
- Payments in kind (see 4.3 below)
- The distinction between insurance risk and other risks (see 4.4 below)
- Examples of insurance contracts (see 4.5 below)
- Significant insurance risk (see 4.6 below)
- Changes in the level of insurance risk (see 4.7 below)

4.2 Uncertain future event

The uncertainty (or risk) present in an insurance contract is explained in FRS 103 as follows. *[FRS 103.A2.2]*.

Extract from FRS 103

Appendix II Definition of an insurance contract

Uncertain future event

- A2.2 Uncertainty (or risk) is the essence of an insurance contract. Accordingly, at least one of the following is uncertain at the inception of an insurance contract:
- (a) whether an insured event will occur;
 - (b) when it will occur; or
 - (c) how much the insurer will need to pay if it occurs.

In some insurance contracts, the insured event is discovery of the loss during the term of the contract, even if the loss arises from an event that occurred before the inception of the contract. In other insurance contracts, the insured event is an event occurring during the term of the contract, even if the resulting loss is discovered after the end of the contract term. *[FRS 103.A2.3]*.

Some insurance contracts cover events that have already occurred but whose financial effect is still uncertain (i.e., retroactive contracts). An example is a reinsurance contract that covers a direct insurer against adverse development of claims already reported by their policyholders. In such contracts, the insured event is the discovery of the ultimate cost of those claims. *[FRS 103.A2.4]*.

4.3 Payments in kind

Insurance contracts that require or permit payments to be made in kind are treated the same way as contracts where payment is made directly to the policyholder. For example, some insurers replace a stolen article directly rather than compensating the policyholder. Others use their own employees, such as medical staff, to provide services covered by the contract. *[FRS 103.A2.5]*.

4.3.1 Service contracts

Some fixed-fee service contracts in which the level of service depends on an uncertain event may meet the definition of an insurance contract. However, in the UK, these are not regulated as insurance contracts. For example, a service provider could enter into a maintenance contract in which it agrees to repair specified equipment after a malfunction. The fixed service fee is based on the expected number of malfunctions but it is uncertain whether a particular machine will break down. The malfunction of the equipment adversely affects the owner and the contract compensates the owner (in kind, rather than cash). Similarly, a contract for car breakdown services in which the provider agrees, for a fixed annual fee, to provide roadside assistance or tow the car to a nearby garage could meet the definition of an insurance contract even if the provider does not agree to carry out repairs or replace parts. *[FRS 103.A2.6]*.

In respect of the type of service contracts described above, their inclusion seems an unintended consequence of the definition of an insurance contract. However, the FRC considers that applying FRS 103 to these contracts is likely to be no more burdensome than applying FRS 102 if such contracts were outside the scope of FRS 103, since:

- There are unlikely to be material liabilities for malfunctions and breakdowns that have already occurred.
- If the service provider applied accounting policies consistent with Section 23 of FRS 102, this would be acceptable either as an existing accounting policy or, possibly, an improvement of existing policies unless they involve practices prohibited by paragraph 2.13 of FRS 103 (see 9 below).
- If FRS 103 did not apply to the contracts, the service provider would apply Section 21 of FRS 102 to determine whether its contracts were onerous. *[FRS 103.A2.7]*.

4.4 The distinction between insurance risk and financial risk

The definition of an insurance contract refers to 'insurance risk' which is defined as "risk, other than financial risk, transferred from the holder of a contract to the issuer." *[FRS 103 Appendix I]*.

A contract that exposes the reporting entity to financial risk without significant insurance risk is not an insurance contract. *[FRS 103.A2.8]*. 'Financial risk' is defined as "the risk of a possible future change in one or more of a specified interest rate, financial instrument price, commodity price, foreign exchange rate, index of prices or rates, credit rating or credit index or other variable, provided in the case of a non-financial variable that the variable is not specific to a party to the contract." *[FRS 103 Appendix I]*.

An example of a non-financial variable that is not specific to a party to the contract is an index of earthquake losses in a particular region or an index of temperature in a particular city. An example of a non-financial variable that is specific to a party to the contract is the occurrence or non-occurrence of a fire that damages or destroys an asset of that party.

The risk of changes in the fair value of a non-financial asset is not a financial risk if the fair value reflects not only changes in the market prices for such assets (a financial variable) but also the condition of a specific non-financial asset held by a party to the contract (a non-financial variable). For example, if a guarantee of the residual value of a specific car exposes the guarantor to the risk of changes in that car's condition, that risk is insurance risk. *[FRS 103.A2.9]*. This is illustrated by the following example.

Illustration 4-1: Residual value insurance

Entity A issues a contract to Entity B that provides a guarantee of the fair value at the future date of an aircraft (a non-financial asset) held by B. A is not the lessee of the aircraft (residual value guarantees given by a lessee under a lease are within the scope of Section 20 of FRS 102).

This is an insurance contract (unless changes in the condition of the asset have an insignificant effect on its value). The risk of changes in the fair value of the aircraft is not a financial risk because the fair value reflects not only changes in market prices for similar aircraft but also the condition of the specific asset held.

[IFRS 4.IG2.E1.15].

However, if the contract compensated B only for changes in market prices and not for changes in the condition of B's asset, the contract would be a derivative and within the scope of Section 12 of FRS 102.

Some contracts expose the issuer to financial risk in addition to significant insurance risk. For example, many life insurance contracts guarantee both a minimum rate of return to policyholders, which creates financial risk, and promise death benefits that in some cases significantly exceed the policyholder's account balance, which creates insurance risk in the form of mortality risk. Such contracts are insurance contracts. [FRS 103.A2.10].

Contracts where an insured event triggers the payment of an amount linked to a price index are insurance contracts provided the payment that is contingent on the insured event is significant. This is illustrated by the following example.

Illustration 4.2: Contract with life contingent annuity linked to price index

Entity A issues a life-contingent annuity the value of which is linked to a cost of living index.

The contract is an insurance contract because the payment is triggered by an uncertain future event, the survival of the annuitant. The link to the price index is an embedded derivative, but it also transfers insurance risk because the number of payments to which the index applies depends on the survival of the annuitant. If the insurance risk transferred is significant, the embedded derivative meets the definition of an insurance contract in which case it is not separated from the host contract (see 5 below for a discussion of derivatives embedded within insurance contracts. [FRS 103.A2.11].

The definition of insurance risk refers to a risk that the insurer accepts from the policyholder. In other words, insurance risk is a pre-existing risk transferred from the policyholder to the insurer. Thus, a new risk created by the contract is not insurance risk. [FRS 103.A2.12]. Examples of new risks created by an insurance contract that are not insurance risk, include:

- The loss of the ability to charge the policyholder for future investment management fees, for example if the ability to collect fees ceases if the policyholder of an investment-linked life insurance contract dies (this loss does not reflect insurance risk).
- The waiver on death of charges that would be made on cancellation or surrender of the contract (because the contract brought these charges into existence and therefore they do not compensate the policyholder for a pre-existing risk).
- A payment conditional on an event that does not cause a significant loss to the holder of the contract.
- Possible reinsurance recoveries (accounted for separately).
- The original policy premium (but not additional premiums payable in the event of claims experience).

For a contract to be an insurance contract the insured event must have an adverse effect on the policyholder. [FRS 103.A2.13]. In other words, there must be an insurable interest. Without the notion of insurable interest, the definition of an insurance contract would have encompassed gambling.

The adverse effect on the policyholder is not limited to an amount equal to the financial impact of the adverse event. So, the definition includes 'new for old' coverage that replaces a damaged or lost asset with a new asset. Similarly, the definition does not limit payment under a term life insurance contract to the financial loss suffered by a deceased's dependents nor does it preclude the payment of predetermined amounts to quantify the loss caused by a death or accident. [FRS 103.A2.13].

A contract that requires a payment if a specified uncertain event occurs which does not require an adverse effect on the policyholder as a precondition for payment is not an insurance contract. Such contracts are not insurance contracts even if the holder uses the contract to mitigate an underlying risk exposure. For example, if the holder uses a derivative to hedge an underlying non-financial variable that is correlated with the cash flows from an asset of the entity, the derivative is not an insurance contract because payment is not conditional on whether the holder is adversely affected by a reduction in the cash flows of the asset. Conversely, the definition of an insurance contract refers to an uncertain event for which an adverse effect on the policyholder is a contractual precondition for payment. This contractual precondition does not require the insurer to investigate whether the uncertain event actually caused an adverse effect, but permits the insurer to deny payment if it is not satisfied that the event caused an adverse effect.

[FRS 103.A2.14].

The following Illustration explains the concept of insurable interest.

Illustration 4-3: Reinsurance contract with 'original loss warranty' clause

Entity A agrees to provide reinsurance cover to airline insurer B for £5m against losses suffered. The claims are subject to an original loss warranty of £50m meaning that only losses suffered by B up to £5m from events exceeding a cost of £50m in total can be recovered under the contract. This is an insurance contract as B can only recover its own losses arising from those events.

If the contract allowed B to claim up to £5m every time there was an event with a cost exceeding £50m regardless of whether B had suffered a loss from that event then this would not be an insurance contract because there would be no insurable interest in this arrangement.

4.4.1 Lapse, persistency and expense risk

Lapse or persistency risk (the risk that the policyholder will cancel the contract earlier or later than the issuer had expected in pricing the contract) is not insurance risk because, although this can have an adverse effect on the issuer, the cancellation is not contingent on an uncertain future event that adversely affects the policyholder. [FRS 103.A2.15].

Similarly, expense risk (the risk of unexpected increases in the administrative costs incurred by the issuer associated with the serving of a contract, rather than the costs associated with insured events) is not insurance risk because an unexpected increase in expenses does not adversely affect the policyholder. [FRS 103.A2.15].

Therefore, a contract that exposes the issuer to lapse risk, persistency risk or expense risk is not an insurance contract unless it also exposes the issuer to significant insurance risk. [FRS 103.A2.16].

4.4.2 Insurance of non-insurance risks

If the issuer of a contract which does not contain significant insurance risk mitigates the risk of that contract by using a second contract to transfer part of that first contract's risk to another party, this second contract exposes that other party to insurance risk. This is because the policyholder of the second contract (the issuer of the first contract) is subject to an uncertain event that adversely affects it and thus it meets the definition of an insurance contract. [FRS 103.A2.16]. This is illustrated by the following example.

Illustration 4-4: Insurance of non-insurance risks

Entity A agrees to compensate Entity B for losses on one or more contracts issued by Entity B that do not transfer significant insurance risk. The contract issued by Entity A to compensate Entity B is a direct insurance contract if it transfers significant insurance risk from Entity B to Entity A. Entity B is a policyholder of an insurance contract issued by Entity A and not the holder of a reinsurance contract. FRS 103 does not apply if the entity is the holder of an insurance contract that is not a reinsurance contract (see 3.2.3.F above).

4.4.3 Self insurance, pooling of insurance risk by insurance mutuals, and intragroup insurance contracts

An insurer can accept significant insurance risk from a policyholder only if the insurer is an entity separate from the policyholder. [FRS 103.A2.17].

Therefore, 'self insurance', such as a self-insured deductible where the insured cannot claim for losses below the excess limit of an insurance policy, is not insurance risk because there is no insurance contract. Accounting for self insurance and related provisions is covered by Section 21 of FRS 102 which requires that a provision is recognised only if there is a present obligation as a result of a past event, it is probable that an outflow of resources will occur, and a reliable estimate can be determined. [FRS 102.21.4].

A mutual insurer (as defined in the PRA Rulebook) accepts risk from each policyholder and pools that risk. Although policyholders bear the pooled risk collectively in their capacity as owners, the mutual has still accepted the risk that is the essence of an insurance contract and therefore FRS 103 applies to those contracts. [FRS 103.A2.17].

When there are insurance contracts between entities in the same group, these would be eliminated in the consolidated financial statements as required by Section 9 *Consolidated and Separate Financial Statements* of FRS 102. [FRS 102.9.15]. If any intragroup insurance contract is reinsured with a third party that is not part of the group, this third party reinsurance contract must be accounted for as a direct insurance contract in the consolidated financial statements of a non-insurer because the intragroup contract will be eliminated on consolidation. This residual direct insurance contract (i.e., the policy with the third party) is outside the scope of FRS 103 from the viewpoint of the consolidated financial statements of a non-insurer because policyholder accounting is excluded from the standard as discussed at 3.2.3.F above.

4.5 Examples of insurance and non-insurance contracts

FRS 103 provides various examples of insurance and non-insurance contracts.

4.5.1 Examples of insurance contracts

The following are examples of contracts that are insurance contracts, if the transfer of insurance risk is significant: [FRS 103.A2.18]

- (a) Insurance against theft or damage to property.
- (b) Insurance against product liability, professional liability, civil liability or legal expenses.
- (c) Life insurance and prepaid funeral plans (although death is certain, it is uncertain when death will occur or, for some types of life insurance, whether death will occur within the period covered by the insurance contract).
- (d) Life-contingent annuities and pensions (contracts that provide compensation for the uncertain future event - the survival of the annuitant or pensioner - to assist the annuitant or pensioner in maintaining a given standard of living, which would otherwise be adversely affected by his or her survival).
- (e) Disability and medical cover.
- (f) Surety bonds, fidelity bonds, performance bonds and bid bonds (contracts that provide compensation if another party fails to perform a contractual obligation, for example an obligation to construct a building).
- (g) Credit insurance that provides for specified payments to be made to reimburse the holder for a loss it incurs because a specified debtor fails to make payment when due under the original or modified terms of a debt instrument. These contracts could have various legal forms, such as that of a guarantee, some types of letter of credit, a credit derivative default contract or an insurance contract. Although these contracts meet the definition of an insurance contract, they also meet the definition of a financial guarantee contract and are within the scope of Section 21 of FRS 102 and not FRS 103 unless the issuer has previously asserted explicitly that it regards such contracts as insurance contracts and has used accounting applicable to such contracts (see 3.2.3.D above).
- (h) Product warranties issued by another party for goods sold by a manufacturer, dealer or retailer are within the scope of FRS 103. However, as discussed at 3.2.3.A above, product warranties issued directly by a manufacturer, dealer or retailer are outside the scope of FRS 103.
- (i) Title insurance (insurance against the discovery of defects in title to land that were not apparent when the contract was written), in which case, the insured event is the discovery of a defect in the title, not the defect itself.
- (j) Travel assistance (compensation in cash or in kind to policyholders for losses suffered while they are travelling).
- (k) Catastrophe bonds that provide for reduced payments of principal, interest or both if a specified event adversely affects the issuer of the bond (unless the specified event does not create significant insurance risk, for example if the event is a change in interest rate or a foreign exchange rate).
- (l) Insurance swaps and other contracts that require a payment based on changes in climatic, geological and other physical variables that are specific to a party to the contract.

And

- (m) Reinsurance contracts.

These examples are not intended to be an exhaustive list.

4.5.2 Examples of transactions that are not insurance contracts

The following are examples of transactions that are not insurance contracts: *[FRS 103.A2.19]*

- (a) Investment contracts that have the legal form of an insurance contract but do not expose the insurer to significant insurance risk, for example life insurance contracts in which the issuer bears no significant mortality risk.
- (b) Contracts that have the legal form of insurance, but pass all significant risk back to the policyholder through non-cancellable and enforceable mechanisms that adjust future payments by the policyholder as a direct result of insured losses, for example some financial reinsurance contracts or some group contracts.
- (c) Self insurance in which the risk, that could have been covered by insurance, is retained. There is no insurance contract because there is no agreement with another party (see 4.4.3 above).
- (d) Contracts (such as gambling contracts) that require a payment if a specified uncertain future event occurs, but do not require, as a contractual precondition for payment, that the event adversely affects the policyholder. However, this does not preclude the specification of a predetermined payout to quantify the loss caused by a specified event such as a death or an accident (see 4.4 above).
- (e) Derivatives that expose one party to financial risk but not insurance risk, because they require that party to make payment based solely on changes in one or more of a specified interest rate, financial instrument price, commodity price, foreign exchange rate, index of prices or rates, credit rating or credit index or other variable, provided in the case of a non-financial variable that the variable is not specific to a party to the contract.
- (f) A credit-related guarantee (or letter of credit, credit derivative default contract or credit insurance contract) that requires payments even if the holder has not incurred a loss on the failure of a debtor to make payments when due.
- (g) Contracts that require a payment based on a climatic, geological or other physical variable that is not specific to a party to the contract. These are commonly described as weather derivatives and are accounted for under Sections 11 and 12 of FRS 102.

And

- (h) Catastrophe bonds that provide for reduced payments of principal, interest or both, based on a climatic, geological or other physical variable that is not specific to a party to the contract.

If the contracts described at (a) to (h) above create financial assets or financial liabilities, they are within the scope of Sections 11 and 12 of FRS 102. Among other things, this means that the parties to the contract use what is sometimes referred to as deposit accounting, which involves the following:

- One party recognises the consideration received as a financial liability, rather than as revenue.
 - The other party recognises the consideration paid as a financial asset, rather than as an expense.
- [FRS 103.A2.20].*

If the contracts described at (a) to (h) above do not create financial assets or financial liabilities, Section 23 of FRS 102 applies. Under Section 23 of FRS 102, revenue is recognised when (or as) the entity satisfies a performance obligation in an amount that reflects the consideration to which the entity expects to be entitled. *[FRS 103.A2.21].*

When the consideration for a contract meeting the definition of an investment contract comprises both a fee for the origination and an ongoing charge for the provision of (e.g., investment management) services, the insurer must evaluate whether to account for the origination as a separate performance obligation in accordance with paragraphs 17 to 25 of Section 23 of FRS 102 (see Chapter 25 at 5). Otherwise, the fee is included in the transaction price for the contract and is recognised as revenue when those services are provided. *[FRS 103.A2.23].*

The cost of obtaining an investment management contract may be recognised as an asset if it meets the criteria in paragraph 113 of Section 23 of FRS 102 (see Chapter 25 at 2.5 and Chapter 25 at 10.3.1). In which case, the asset is amortised in accordance with the pattern of transfer and revenue recognition of the services to which the asset relates. *[FRS 103.A2.24].*

4.6 Significant insurance risk

A contract is an insurance contract only if it transfers 'significant insurance risk'. *[FRS 103.A2.25].*

Insurance risk is 'significant' if, and only if, an insured event could cause an insurer to pay significant additional benefits in any scenario, excluding scenarios that lack commercial substance (i.e., have no discernible effect on the economics of the transaction). *[FRS 103.A2.26].*

If significant additional benefits would be payable in scenarios that have commercial substance, this condition may be met even if the insured event is extremely unlikely or even if the expected (i.e., probability-weighted) present value of contingent cash flows is a small proportion of the expected present value of all the remaining contractual cash flows. [FRS 103.A2.26]. From this, we consider the intention was to make it easier, not more difficult, for contracts regarded as insurance contracts under the entity's previous accounting policies to be insurance contracts under FRS 103.

FRS 103 does not prohibit insurance contract accounting if there are restrictions on the timing of payments or receipts, provided there is significant insurance risk, although clearly the existence of restrictions on the timing of payments may mean that the policy does not transfer significant insurance risk.

4.6.1 The meaning of 'significant'

No quantitative guidance supports the determination of 'significant' in FRS 103. This is consistent with IFRS 4 and IFRS 17. The absence of quantitative guidance was a deliberate decision made by the IASB when drafting IFRS 17 because the IASB considered that if quantitative guidance was provided it would create an arbitrary dividing line that would result in different accounting treatments for similar transactions that fall marginally on different sides of that line, and would therefore create opportunities for accounting arbitrage. [IFRS 17.BC78].

IFRS 4 contained an illustrative example which implied that insured benefits must be greater than 101% of the benefits payable if the insured event did not occur, for there to be insurance risk in an insurance contract. [IFRS 4.IG2.E1.3]. It was not stated how much greater than 101% the insured benefits must be to meet the IFRS 4 definition of 'significant'. There is no equivalent example included in IFRS 17.

This Illustration is based on an example in IFRS 4.

Illustration 4-5: Significant insurance risk

Entity A issues a unit-linked contract that pays benefits linked to the fair value of a pool of assets. The benefit is 100% of the unit value on surrender or maturity and 101% of the unit value on death.

In this situation the implementation guidance states that if the insurance component (the additional death benefit of 1%) is not unbundled then the whole contract is an investment contract. The insurance component in this arrangement is insignificant in relation to the whole contract and so would not meet the definition of an insurance contract in IFRS 4. [IFRS 4.IG2.E1.3].

Some jurisdictions have their own guidance as to what constitutes significant insurance risk. However, as with IFRS 4 and IFRS 17, other jurisdictions offer no quantitative guidance. Some US GAAP practitioners apply a guideline that a reasonable possibility of a significant loss is at least a 10% probability of a loss of at least 10% of premium. [IFRS 17.BC77]. It is not disputed in the Basis for Conclusions that a 10% probability of a loss of at least 10% of premium results in a transfer of significant insurance risk. Indeed, the words 'extremely unlikely' and 'a small proportion' (see 4.6 above) suggests that the IASB envisages that significant insurance risk could exist at a lower threshold than a 10% probability of a loss of at least 10% of premium.

How we see it

The lack of a quantitative definition means that insurers must apply their own judgement as to what constitutes significant insurance risk. The practical impact of the lack of guidance means that insurers must apply their own criteria to what constitutes significant insurance risk and there may be diversity in practice as to what these dividing lines are, at least at the margins.

There is no specific requirement under FRS 103 for insurers to disclose any thresholds used in determining whether a contract has transferred significant insurance risk. However, Section 8 *Notes to the Financial Statements* of FRS 102 requires an entity to disclose the judgements that management has made in the process of applying the entity's accounting policies that have the most significant effect on the amounts recognised in the financial statements.

4.6.2 The level at which significant insurance risk is assessed

Significant insurance risk must be assessed by individual contract, rather than by blocks of contracts or by reference to materiality to the financial statements. Therefore, insurance risk may be significant even if there is a minimal probability of material losses for a whole book of contracts. The purpose of this is to make it easier to classify a contract as an insurance contract. [FRS 103.A2.28].

"However, if a relatively homogeneous book of small contracts is known to consist of contracts that all transfer insurance risk, an insurer need not examine each contract within that book to identify a few non-derivative contracts that transfer insignificant insurance risk." [FRS 103.A2.28].

Multiple, mutually linked contracts entered into with a single counterparty (or contracts that are otherwise interdependent) are considered a single contract for the purposes of assessing whether significant insurance risk is transferred. [FRS 103.A2.28fn4]. This requirement is intended to prevent entities entering into contracts that individually transfer significant insurance risk but collectively do not and accounting for part(s) of what is effectively a single arrangement as (an) insurance contract(s).

If an insurance contract is unbundled (see 6 below) into a deposit component and an insurance component, the significance of insurance risk transferred is assessed by reference only to the insurance component. The significance of insurance risk transferred by an embedded derivative is assessed by reference only to the embedded derivative (see 5 below). [FRS 103.A2.31].

4.6.3 Significant additional benefits

The 'significant additional benefits' mentioned in the definition of 'significant insurance risk' refer to amounts that exceed those that would be payable if no insured event occurred (see 4.6 above). These additional amounts include claims handling and claims assessment costs, but exclude: [FRS 103.A2.27]

- (a) The loss of the ability to charge the policyholder for future services, for example where the ability to collect fees from a policyholder for performing future investment management services ceases if the policyholder of an investment-linked life insurance contract dies. This economic loss does not reflect insurance risk and the future investment management fees are not relevant in assessing how much insurance risk is transferred by a contract.
- (b) The waiver on death of charges that would be made on cancellation or surrender (i.e., to cease paying premiums such that the insurance contracts ceases to have effect) of the contract. The contract brought these charges into existence and therefore the waiver of them does not compensate the policyholder for a pre-existing risk. Hence, they are not relevant in determining how much insurance risk is transferred by a contract.
- (c) A payment conditional on an event that does not cause a significant loss to the holder of the contract, for example where the issuer must pay one million currency units if an asset suffers physical damage causing an insignificant economic loss of one currency unit to the holder. The holder in this case has transferred to the insurer the insignificant insurance risk of losing one currency unit. However, at the same time the contract creates non-insurance risk that the issuer will need to pay 999,999 additional currency units if the specified event occurs.
- (d) Possible reinsurance recoveries, that the insurer will account for separately.

It follows from this that if a contract pays a death benefit exceeding the amount payable on survival (excluding waivers under (b) above), the contract is an insurance contract unless the additional death benefit is insignificant (judged by reference to the contract rather than to an entire book of contracts). Similarly, an annuity contract that pays out regular sums for the rest of a policyholder's life is an insurance contract, unless the aggregate life-contingent payments are insignificant. [FRS 103.A2.29]. In this case, the insurer could suffer a significant loss on an individual contract if the annuitant survives longer than expected.

Additional benefits could include a requirement to pay benefits earlier than expected if the insured event occurs earlier, provided the payment is not adjusted for the time value of money. An example could be whole life insurance cover that provides a fixed death benefit whenever a policyholder dies. Whilst it is certain that the policyholder will die, the timing of death is uncertain and the insurer will suffer a loss on individual contracts when policyholders die early, even if there is no overall expected loss on the whole book of contracts. [FRS 103.A2.30].

4.7 Changes in the level of insurance risk

It is implicit within FRS 103 that an assessment of whether a contract transfers significant insurance risk must be made at the inception of a contract. Further, a contract that qualifies as an insurance contract at inception remains an insurance contract until all rights and obligations are extinguished or expire. [FRS 103.A2.33]. This applies even if circumstances have changed such that insurance contingent rights and obligations have expired.

Conversely, contracts that do not transfer insurance risk at inception could become insurance contracts if they transfer insurance risk at a later time. Consider the following Illustration based on an example in

Appendix II of FRS 103, of a contract where the transfer of insurance risk only occurs after a period of time. [FRS 103.A2.32].

Illustration 4-6: Deferred annuity with policyholder election

Entity A issues a deferred annuity contract which provides a specified investment return to the policyholder and includes an option for the policyholder to use the proceeds of the investment on maturity to buy a life-contingent annuity at the same rates that Entity A charges other new annuitants at the time the policyholder exercises that option.

This is not an insurance contract at inception because it does not contain significant insurance risk. Entity A remains free to price the annuity on a basis that reflects the insurance risk that will be transferred to it at that time. Such a contract transfers insurance risk to the issuer only after the option is exercised. Consequently, the cash flows that would occur on the exercise of the option fall outside the boundary of the contract and before exercise there are no insurance cash flows within the boundary of the contract. Consequently, on inception, the contract is a financial instrument within the scope of IFRS 9.

However, if the contract specifies the annuity rates (or a basis other than market rates for setting the annuity rates), the contract transfers insurance risk to Entity A (the issuer) on issuance because Entity A is exposed to the risk that the annuity rates will be unfavourable when the policyholder exercises the option. In that case, the cash flows that would occur when the option is exercised are within the boundary of the contract.

FRS 103 imposes no limitations on when contracts can be assessed for significant insurance risk. The recognition of contracts as insurance contracts occurs based on changing facts and circumstances, although there is no guidance on accounting for the recognition/derecognition.

5 Embedded derivatives

FRS 103 requires an insurer to determine whether it has any separable embedded derivatives and, if the separable embedded derivative is not an insurance contract, the insurer must separate the embedded derivative from its host contract and account for it in accordance with Sections 11 and 12 of FRS 102 as if it were a financial instrument. [FRS 103.2.20].

This also applies when an entity has made the accounting policy choice under paragraphs 11.2(b) or (c), or paragraphs 12.2(b) or (c) of FRS 102 to apply the recognition and measurement provisions of either IAS 39 or IFRS 9, and the disclosure requirements of Section 11 of FRS 102, as applicable. For an entity that is a financial institution (e.g., all insurers) the disclosure requirements of paragraphs 34.17 to 34.33 of FRS 102 also apply to any separable embedded derivatives. [FRS 103.2.20].

Entities that apply FRS 103 will also apply FRS 102. Sections 11 and 12 of FRS 102 do not require entities to identify separable embedded derivatives but instead, as a simplification from IFRS, require a contract with certain non-typical features to be accounted for at fair value through profit or loss. It was considered whether a similar approach applies to insurance contracts, but the FRC decided that for insurance contracts more relevant information will be provided to users if separable embedded derivatives are recognised and measured separately from the host contract (unless the embedded derivative is itself an insurance contract). [FRS 103.BC23].

FRS 103 defines a derivative, and an embedded derivative as follows. [FRS 103 Appendix I].

Extract from FRS 103

Appendix I

Glossary

derivative

A financial instrument or other contract with all three of the following characteristics:

- (a) its value changes in response to the change in a specified interest rate, financial instrument price, commodity price, foreign exchange rate, index of prices or rates, credit rating or credit index, or other variable (sometimes called the 'underlying'), provided in the case of a non-financial variable that the variable is not specific to a party to the contract;
- (b) it requires no initial net investment or an initial net investment that is smaller than would be required for other types of contracts that would be expected to have a similar response to changes in market factors; and
- (c) it is settled at a future date.

embedded derivative

A component of a hybrid (combined) instrument that also includes a non-derivative host contract - with the effect that some of the cash flows of the combined instrument vary in a way similar to a stand-alone derivative. A derivative that is attached to a financial instrument but is contractually transferable independently of that instrument, or has a different counterparty from that instrument, is not an embedded derivative, but a separate financial instrument.

The following are examples of embedded derivatives that can be found in insurance contracts:

- Benefits, such as death benefits, linked to equity prices or an equity index.
- Options to take life-contingent annuities at guaranteed rates.
- Guarantees of minimum interest rates in determining surrender or maturity values.
- Guarantees of minimum annuity payments where the annuity payments are linked to investment returns or asset prices.
- A put option for the policyholder to surrender a contract. These can be specified in a schedule, based on the fair value of a pool of interest-bearing securities or based on an equity or commodity price index.
- An option to receive a persistency bonus (an enhancement to policyholder benefits for policies that remain in-force for a certain period).

- An industry loss warranty where the loss trigger is an industry loss as opposed to an entity specific loss.
- A catastrophe trigger where a trigger is defined as a financial variable such as a drop in a designated stock market.
- An inflation index affecting policy deductibles.
- Contracts where the currency of claims settlement differs from the currency of loss.
- Contracts with fixed foreign currency rates.

FRS 103 defines a separable embedded derivative as follows. [FRS 103 Appendix I].

Extract from FRS 103

Appendix I

Glossary

separable embedded derivative

An embedded derivative where:

- (a) the economic characteristics and risks of the embedded derivative are not closely related to the economic characteristics and risks of the host contract;
- (b) a separate instrument with the same terms as the embedded derivative would meet the definition of a derivative; and
- (c) the hybrid (combined) instrument is not measured at fair value with changes in fair value recognised in profit or loss.

The guidance in IAS 39 *Financial Instruments: Recognition and Measurement* and IFRS 4 *Insurance Contracts* shall be used in determining whether an embedded derivative is separable.

FRS 103 provides no further guidance on separable embedded derivatives but refers to 'the guidance in IAS 39 and IFRS 4' to determine whether an embedded derivative is separable. [FRS 103 Appendix I]. However, the embedded derivative is only separable if it is not itself an insurance contract, which means that derivatives embedded within insurance contracts do not have to be separated if the policyholder benefits from the derivative only when the insured event occurs.

As an exception to the requirements described above, an insurer need not separate, and measure at fair value, a policyholder's option to surrender an insurance contract for a fixed amount (or for an amount based on a fixed amount and an interest rate), even if the exercise price differs from the carrying amount of the host insurance liability. However, the requirements to separate embedded derivatives if the derivative is separable, described above, do apply to a put option or cash surrender option embedded in an insurance contract if the surrender value varies in response to the change in a financial variable (such as an equity or commodity price or index), or a non-financial variable that is not specific to a party to the contract. Furthermore, those requirements also apply if the holder's ability to exercise a put option or cash surrender option is triggered by a change in such a variable (for example, a put option that can be exercised if a stock market index reaches a specified level). [FRS 103.2.21]. This applies equally to options to surrender a financial instrument containing a discretionary participation feature. [FRS 103.2.22].

5.1 Unit-linked features

Both IAS 39 and IFRS 9 state that a unit-linked feature (i.e., a contractual term that requires payments denominated in units of an internal or external investment fund) embedded in a host insurance contract (or financial instrument) is considered to be closely related to the host contract if the unit-denominated payments are measured at current unit values that reflect the fair values of the assets of the fund.

[IAS 39.AG33(g), IFRS 9.B4.3.8(g)].

IAS 39 and IFRS 9 also consider that unit-linked investment liabilities are normally regarded as puttable instruments that can be put back to the issuer at any time for cash equal to a proportionate share of the net asset value of an entity (i.e., they are not closely related). Nevertheless, the effect of separating an embedded derivative and accounting for each component is to measure the hybrid contract at the redemption amount that is payable at the end of the reporting period if the unit holders had exercised their right to put the instrument back to the issuer. [IAS 39.AG32, IFRS 9.B4.3.7]. This seems somewhat to contradict the fact that the unit-linked feature is regarded as closely related (which means no separation of the feature is required) but the accounting treatment is substantially the same.

6 Unbundling of deposit components

Some insurance contracts contain both an insurance component and a 'deposit component'. [FRS 103.2.23]. Indeed, virtually all insurance contracts have an implicit or explicit deposit component, because the policyholder is generally required to pay premiums before the period of the risk and therefore the time value of money is likely to be one factor that insurers consider in pricing contracts.

FRS 103 defines a deposit component as follows. [FRS 103 Appendix I].

Extract from FRS 103

Appendix I

Glossary

deposit component

A contractual component that is not accounted for as a derivative under Sections 11 *Basic Financial Instruments* and 12 *Other Financial Instrument Issues* of FRS 102 and would be within the scope of FRS 102 if it were a separate instrument.

FRS 103 requires an insurer to 'unbundle' those insurance and deposit components in certain circumstances, [FRS 103.2.23], which is explained as accounting for the components of a contract as if they were separate contracts. [FRS 103 Appendix I]. In other circumstances unbundling is either allowed (but not required) or is prohibited.

Unbundling has the following accounting consequences: [FRS 103.2.25]

(a) The insurance component is measured as an insurance contract under FRS 103.

And

(b) The deposit component is measured under Sections 11 or 12 of FRS 102 (or, if the entity has made the accounting policy choice under paragraphs 11.2(b) or (c), or paragraphs 12.2(b) or (c) of FRS 102 to apply the recognition and measurement provisions of either IAS 39 or IFRS 9, the disclosure requirements of Sections 11 and 12 of FRS 102 and the recognition and measurement provisions of IAS 39 or IFRS 9 as applicable).

FRS 103 does not state what happens to the amounts received for the deposit component. These would not be recognised as revenue, but as changes in the deposit liability. Premiums for the insurance component are typically recognised as written premiums. A portion of any transaction costs incurred at inception is allocated to the deposit component if this allocation has a material effect.

Unbundling is required only if both the following conditions are met: [FRS 103.2.23(a)]

(a) The insurer can measure the deposit component (including any embedded surrender options) separately (i.e., without considering the insurance component).

And

(b) The insurer's accounting policies do not otherwise require it to recognise all the obligations and rights arising from the deposit component.

Unbundling is permitted, but not required, if the insurer can measure the deposit component separately as in (a) above but its accounting policies require it to recognise all the obligations and rights arising from the deposit component. This is regardless of the basis used to measure those rights and obligations.

[FRS 103.2.23(b)].

Unbundling is prohibited when an insurer cannot measure the deposit component separately.

[FRS 103.2.23(c)].

FRS 103 describes an example of a case when an insurer's accounting policies do not require it to recognise all obligations arising from a deposit component. This is where a cedant receives compensation for losses from a reinsurer, but the contract obliges the cedant to repay the compensation in future years. That obligation arises from a deposit component. If the cedant's accounting policies would otherwise permit it to recognise the compensation as income without recognising the resulting obligation, unbundling is required. [FRS 103.2.24]. In practice, unbundling is unlikely to apply to UK entities because previous UK GAAP required an insurer to recognise all obligations arising from an insurance contract including deposit components.

6.1 Unbundling illustration

The implementation guidance accompanying IFRS 4 provided an illustration of the unbundling of the deposit component of a reinsurance contract which is reproduced in full below. [IFRS 4.IG5.E3].

Illustration 6-1: Unbundling a deposit component of a reinsurance contract

Background

A reinsurance contract has the following features:

- (a) The cedant pays premiums of £10 every year for five years.
- (b) An experience account is established equal to 90% of the cumulative premiums (including the additional premiums discussed in (c) below) less 90% of the cumulative claims.
- (c) If the balance in the experience account is negative (i.e., cumulative claims exceed cumulative premiums), the cedant pays an additional premium equal to the experience account balance divided by the number of years left to run on the contract.
- (d) At the end of the contract, if the experience account balance is positive (i.e., cumulative premiums exceed cumulative claims), it is refunded to the cedant; if the balance is negative, the cedant pays the balance to the reinsurer as an additional premium.
- (e) Neither party can cancel the contract before maturity.
- (f) The maximum loss that the reinsurer is required to pay in any period is £200.

The contract is an insurance contract because it transfers significant risk to the reinsurer. For example, in case 2 discussed below, the reinsurer is required to pay additional benefits with a present value, in year 1, of £35, which is clearly significant in relation to the contract.

The following discussion addresses the accounting by the reinsurer. Similar principles apply to the accounting by the cedant.

Application of requirements: case 1 - no claims

If there are no claims, the cedant will receive £45 in year 5 (90% of the cumulative premiums of £50). In substance, the cedant has made a loan, which the reinsurer will repay in one instalment of £45 in year 5.

If the reinsurer's accounting policies require it to recognise its contractual liability to repay the loan to the cedant, unbundling is permitted but not required. However, if the reinsurer's accounting policies would not require it to recognise the liability to repay the loan, the reinsurer is required to unbundle the contract.

If the reinsurer is required, or elects, to unbundle the contract, it does so as follows: Each payment by the cedant has two components: a loan advance (deposit component) and a payment for insurance cover (insurance component). Applying IAS 39 or IFRS 9 to the deposit component, the reinsurer is required to measure it initially at fair value. Fair value could be determined by discounting the future cash flows from the deposit component. Assume that an appropriate discount rate is 10% and that the insurance cover is equal in each year, so that the payment for insurance cover is the same in each year. Each payment of £10 by the cedant is then made up of a loan advance of £6.7 and an insurance premium of £3.3.

The reinsurer accounts for the insurance component in the same way it accounts for a separate insurance contract with an annual premium of £3.3.

The movements in the loan are shown below.

Year	Opening balance	Interest at 10%	Advance (repayment)	Closing balance
	£	£	£	£
0	0.00	0.00	6.70	6.70
1	6.70	0.67	6.70	14.07
2	14.07	1.41	6.70	22.18
3	22.18	2.21	6.70	31.09
4	31.09	3.11	6.70	40.90
5	40.90	4.10	(45.00)	0.00
Total		11.50	(11.50)	

Application of requirements: case 2 - claim of £150 in year 1

Consider now what happens if the reinsurer pays a claim of £150 in year 1. The changes in the experience account, and the resulting additional premiums, are as follows:

Year	Premium	Additional premium	Total premium	Cumulative premium	Claims	Cumulative claims	Cumulative premiums less claims	Experience account
	£	£	£	£	£	£	£	£
0	10	0	10	10	0	0	10	9
1	10	0	10	20	(150)	(150)	(130)	(117)
2	10	39	49	69	0	(150)	(81)	(73)
3	10	36	46	115	0	(150)	(35)	(31)
4	10	31	41	156	0	(150)	6	6
Total		106	156		(150)			

Incremental cash flows because of the claim in year 1

The claim in year 1 leads to the following incremental cash flows, compared with case 1:

Year	Additional premium	Claims	Refund in case 2	Refund in case 1	Net incremental cash flow	Present value at 10%
	£	£	£	£	£	£
0	0	0			0	0
1	0	(150)			(150)	(150)
2	39	0			39	35
3	36	0			36	30
4	31	0			31	23
5	0	0	(6)	(45)	39	27
Total	106	(150)	(6)	(45)	(5)	(35)

The incremental cash flows have a present value, in year 1, of £35 (assuming a discount rate of 10% is appropriate). Applying paragraphs 10 to 12 of IFRS 4, the cedant unbundles the contract and applies IAS 39 or IFRS 9 to this deposit component (unless the cedant already recognises its contractual obligation to repay the deposit component to the reinsurer). If this were not done, the cedant might recognise the £150 received in year 1 as income and the incremental payments in years 2-5 as expenses. However, in substance, the reinsurer has paid a claim of £35 and made a loan of £115 (£150 less £35) that will be repaid in instalments.

The following table shows the changes in the loan balance. The table assumes that the original loan shown in case 1 and the new loan shown in case 2 meet the criteria for offsetting in IAS 32. Amounts shown in the table are rounded.

Loan to (from) the reinsurer

Year	Opening balance	Interest at 10%	Payments per original schedule	Additional payments in case 2	Closing balance
	£	£	£	£	£
0	-	-	6	-	6
1	6	1	7	(115)	(101)
2	(101)	(10)	7	39	(65)
3	(65)	(7)	7	36	(29)
4	(29)	(3)	6	31	5
5	5	1	(45)	39	0
Total		(18)	(12)	30	

Although the example refers to 'in year' the calculations indicate that most of the cash flows occur at the end of each year. The present value table showing the incremental cash flows resulting from the claim 'in year 1' appear to show the present values at the end of year 1.

6.2 Practical difficulties

How we see it

In unbundling a contract, the principal difficulty is identifying the initial fair value of any deposit component. In the IFRS 4 illustration at 6.1 above, a discount rate is provided but in practice contracts may not have a stated discount rate. The issuer and the cedant will therefore have to determine an appropriate discount rate in order to calculate the fair value of the deposit component. The IFRS 4 illustration at 6.1 above is also unclear as to whether the discount rate is a risk adjusted rate. Fair value measurement would require an adjustment for credit risk.

However, the potential burden on insurers is reduced by the fact that the FRC has limited the requirement to unbundle to only those contracts where the rights and obligations arising from the deposit component are not recognised under insurance accounting.

Some examples of clauses within insurance contracts that might indicate the need for unbundling are:

- 'Funds withheld' clauses where part or all of the premium is never paid to the reinsurer or claims are never received.
- 'No claims bonus', 'profit commission' or 'claims experience' clauses which guarantee that the cedant will receive a refund of some of the premium.
- 'Experience accounts' used to measure the profitability of the contract. These are often segregated from other funds and contain interest adjustments that may accrue to the benefit of the policyholder.
- 'Finite' clauses that limit maximum losses or create a 'corridor' of losses not reinsured under a contract.
- Contracts that link the eventual premium to the level of claims.
- Commutation clauses whose terms guarantee that either party will receive a refund of amounts paid under the contract.
- Contracts of unusual size where the economic benefits to either party are not obviously apparent.

How we see it

The unbundling requirements in FRS 103 do not specifically address the issue of contracts artificially separated through the use of side letters, the separate components of which are considered together. However, FRS 103 does state that linked contracts entered into with a single counterparty (or contracts that are otherwise interdependent) form a single contract, for the purposes of assessing whether significant insurance risk is transferred, although the standard is silent on linked transactions with different counterparties (see 4.6.2 above).

7 Discretionary participation features

FRS 103 defines a discretionary participation feature (DPF) as follows. [FRS 103 Appendix I].

Extract from FRS 103

Appendix I

Glossary

discretionary participation feature	A contractual right to receive, as a supplement to guaranteed benefits, additional benefits: (a) that are likely to be a significant portion of the total contractual benefits; (b) whose amount or timing is contractually at the discretion of the issuer; and (c) that are contractually based on: (i) the performance of a specified pool of contracts or a specified type of contract; (ii) realised and/or unrealised investment returns on a specified pool of assets held by the issuer; or (iii) the profit or loss of the company, fund or other entity that issues the contract.

Guaranteed benefits are payments or other benefits to which the policyholder or investor has an unconditional right that is not subject to the contractual discretion of the issuer. [FRS 103 Appendix I].

Guaranteed benefits are always accounted for as liabilities. Similarly, a guaranteed element is an obligation to pay guaranteed benefits, included in a contract that contains a DPF. [FRS 103 Appendix I].

An example of a discretionary participation feature common in the UK is a bonus added to a policyholder account at the discretion of the insurer. Bonuses are normally based on the investment return generated by the underlying assets but sometimes include allowance for profits made on other contracts.

The following Illustration is an example of a contract with a DPF.

Illustration 7-1: Unitised with-profits policy

Premiums paid by the policyholder are used to purchase units in a 'with-profits' fund at the current unit price. The insurer guarantees that each unit added to the fund will have a minimum value which is the bid price of the unit. This is the guaranteed amount. In addition, the insurer may add two types of bonus to the with-profits units. These are a regular bonus, which may be added daily as a permanent increase to the guaranteed amount, and a final bonus that may be added on top of those guaranteed amounts when the with-profits units are cashed in. Levels of regular and final bonuses are adjusted twice per year. Both regular and final bonuses are discretionary amounts and are generally set based on expected future returns generated by the funds.

DPF can appear in both insurance contracts and investment contracts. However, to qualify as a DPF, the discretionary benefits must be likely to be a 'significant' portion of the total contractual benefits. FRS 103 does not quantify what is meant by 'significant', but it could be interpreted in the same sense as in the definition of an insurance contract (see 4.6.1 above).

How we see it

The lack of a quantitative definition of 'significant' means that insurers must apply their own judgement as to what this constitutes. The practical impact of the lack of guidance means that insurers must apply their own criteria as to what constitutes a significant portion of the total contractual benefits for the contract to qualify as a DPF, and there may be diversity in practice.

Even though there is no specific requirement under FRS 103 for insurers to disclose any thresholds used in determining 'significant', Section 8 of FRS 102 requires an entity to disclose the judgements that management has made in the process of applying the entity's accounting policies that have the most significant effect on the amounts recognised in the financial statements.

With contracts that have discretionary features, the issuer has discretion over the amount and/or timing of distributions to policyholders although that discretion may be subject to some contractual constraints (including related legal and regulatory constraints) and competitive constraints. Distributions are typically made to policyholders whose contracts are still in force when the distribution is made. Thus, in many cases, a change in the timing of a distribution, apart from the change in the value over time, means that a different generation of policyholders might benefit.

The main accounting question is whether the discretionary surplus or fund for future appropriations (i.e., the balance sheet item required by Schedule 3 to the Regulations to comprise all funds the allocation of which, either to policyholders or shareholders, has not been determined by the end of the reporting date), [FRS 103 Appendix I], is a liability or a component of equity. The Regulations require that the fund for future appropriations (FFA) is classified as a liability and disclosed separately on the balance sheet (see 11.4 below). Once the allocation of the FFA has been determined (i.e., by a bonus declaration), the shareholder's share of that allocation is recognised in profit or loss.

7.1 Discretionary participation features in insurance contracts

FRS 103 requires that any guaranteed element within an insurance contract with a DPF is recognised as a liability. In theory, insurers have an option as to whether to present a DPF either as a liability or as a separate component of equity. However, an insurer can classify a DPF as equity only where this is permitted by the Regulations and the Regulations do not generally permit an equity classification for unallocated funds arising from contracts with a DPF (see 7 above).

The following requirements apply: [FRS 103.2.30(a), FRS 103.2.30(b)]

- When the guaranteed element is not recognised separately from the DPF, the whole contract must be classified as a liability.
- When the DPF is recognised separately from the guaranteed element, the DPF can be classified as either a liability or as a separate component of equity (where this is permitted by the Regulations which it does not). FRS 103 does not specify how an insurer determines whether the DPF is a liability or equity. The insurer may split the DPF into liability and equity components but must use a consistent accounting policy for such a split.
- A DPF cannot be classified as an intermediate category that is neither liability nor equity.

An insurer may recognise all premiums received from a contract with a DPF as revenue without separating any portion that relates to any equity component. [FRS 103.2.30(c)]. The use of the word 'may' means that an insurer can classify some of the DPF as equity but continue to record all of the contract premiums as income. Subsequent changes in the measurement of the guaranteed element and in the portion of the DPF classified as a liability must be recognised in profit or loss. If part or all of the DPF is classified in equity, that portion of profit or loss may be attributable to that feature (in the same way that a portion may be attributable to a non-controlling interest). Where legislation permits the discretionary participation feature to be classified as a component of equity, the issuer must recognise the portion of profit or loss attributable to any equity component of a DPF as an allocation of profit or loss, not as expense or income.

[FRS 103.2.30(c)].

FRS 103 also requires that an issuer of a contract with a DPF:

- Must, if it has made an accounting policy choice in accordance with paragraphs 11.2(b) or (c) or paragraphs 12.2(b) or (c) of FRS 102 to apply the recognition and measurement provisions of either IAS 39 or IFRS 9, and the contract contains an embedded derivative within the scope of IAS 39 or IFRS 9, apply IAS 39 and IFRS 9 to that embedded derivative. [FRS 103.2.30(d)].
- Must continue its existing accounting policies for such contracts, unless it changes those accounting policies in a way that complies with FRS 103 (subject to the constraints noted above and those discussed at 9 below). [FRS 103.2.30(e)].

7.2 Discretionary participation features in financial instruments

As discussed at 3.2.2 above, a financial instrument containing a DPF is also within the scope of FRS 103, not Sections 11 and 12 of FRS 102, and issuers of these contracts are permitted to continue applying their existing accounting policies to these rather than apply the rules in Sections 11 and 12 of FRS 102.

The requirements discussed at 7.1 above therefore apply equally to financial instruments that contain a DPF. However, in addition:

- If the issuer classifies the entire DPF as a liability, it must apply the liability adequacy test discussed at 8.8 below to the whole contract, i.e., to both the guaranteed element and the DPF. The issuer need not determine separately the amount that would result from applying IAS 39, IFRS 9 or Sections 11 and 12 of FRS 102 (depending on the accounting policy choice) to the guaranteed element. [FRS 103.2.31(a)].
- If the issuer classifies part or all of the DPF of that instrument as a separate component of equity, the liability recognised for the whole contract must not be less than the amount that would result from applying IAS 39, IFRS 9 or Sections 11 and 12 of FRS 102 (depending on the accounting policy choice) to the guaranteed element. That amount must include the intrinsic value of an option to surrender the contract but need not include its time value if FRS 103 exempts that option from fair value measurement (see 5 above). The issuer need not disclose the amount that would result from applying IAS 39, IFRS 9 or Sections 11 and 12 of FRS 102 (depending on the accounting policy choice) to the guaranteed element, nor need present the guaranteed amount separately. Furthermore, it need not determine the guaranteed amount if the total liability recognised for whole contract is clearly higher. [FRS 103.2.31(b)].
- Although these contracts are financial instruments, the issuer may continue to recognise all premiums (including the premiums from the guaranteed element) as revenue and recognise as an expense the resulting increase in the carrying amount of the liability. [FRS 103.2.31(c)].
- Although these contracts are financial instruments, an issuer must disclose the total interest expense recognised in profit or loss but need not calculate such interest expense using the effective interest method. [FRS 103.2.31(d)].

7.3 Practical issues

7.3.1 Negative DPF

Cumulative unallocated realised and unrealised returns on investments backing insurance and investment contracts with a DPF may become negative and result in an unallocated amount that is negative (a cumulative unallocated loss).

When the balance on the FFA of a with-profits fund is negative, an entity must explain the nature of the negative balance, the circumstances in which it arose and why no action to eliminate it was considered necessary. [FRS 103.5.5].

7.3.2 Contracts with switching features

Some contracts may contain options for the counterparty to switch between terms that would, *prima facie*, result in classification as an investment contract without DPF features (accounted for under Sections 11 and 12 of FRS 102) and terms that would result in a classification as an investment contract with DPF features (accounted for under FRS 103).

How we see it

The fact that the switch option would make such contracts investment contracts with a DPF means that the issuer must continuously be able to demonstrate that the DPF feature still exists and also be able to demonstrate actual switching in order to classify these contracts as investment contracts with a DPF under FRS 103.

8 Presentation, recognition and measurement of insurance contracts

8.1 Overall requirements for the presentation of the statement of financial position and statement of comprehensive income by insurers

Section 4 *Statement of Financial Position* and Section 5 *Statement of Comprehensive Income and Income Statement* of FRS 102 require that both the Statement of Financial Position and Statement of Comprehensive Income of an entity applying FRS 102 complies with the general rules and formats of the applicable Schedule to the Regulations. [FRS 102.4.2, FRS 102.5.5].

These rules apply to all entities complying with FRS 102 regardless as to whether they are required to comply with the Companies Act 2006 ('CA 2006'). Entities that do not report under the CA 2006 must comply with the Regulations (or, where applicable, the LLP Regulations) where referred to in Sections 4 and 5 of FRS 102, except to the extent that these requirements are not permitted by any statutory framework under which such entities report. [FRS 102.4.1, FRS 102.5.1]. The Note on legal requirements to FRS 103 observes that entities preparing financial statements within other legal frameworks will need to satisfy themselves that FRS 103 does not conflict with any relevant legal obligations. [FRS 103.A3.3]. The Regulations require that the individual accounts of an insurance company prepared under Section 396 of the CA 2006 must comply with Schedule 3 to the Regulations ('Schedule 3'). A parent company of an insurance group preparing Companies Act group accounts must do so in accordance with the provisions of Part 1 of Schedule 6 as modified by Part 3 of that Schedule (which, in summary, substitutes references to Schedule 1 of the Regulations for references to Schedule 3 to the Regulations).

There is no ability for an insurance entity or group to prepare financial statements using 'adapted formats' (see Chapter 6 at 3); the statutory format must be used. In addition, an insurance entity would not qualify as a small entity eligible to apply Section 1A *Small Entities* of FRS 102 as insurance companies and companies that carry on insurance market activities are excluded from the small companies regime (see Chapter 5 at 2.2.3).

A company that issues insurance contracts which is not an insurance company is not required to prepare its individual accounts in accordance with Schedule 3 to the Regulations. That entity will prepare its individual accounts in accordance with another applicable Schedule (usually Schedule 1 unless it is a banking company). A UK friendly society within the scope of the Friendly Societies Act 1992 and which elects to comply with FRS 102 and FRS 103 is required to prepare financial statements in accordance with The Friendly Societies (Accounts and Related Provisions) Regulations 1994 (SI 1994/1983). These regulations requires an income and expenditure account and balance sheet account format that is virtually identical to Schedule 3.

Insurance accounting practices under previous UK GAAP had separate recognition and measurement models for general insurance and life (long-term) insurance. Similarly, Schedule 3 to the Regulations requires separate income statements for general and long-term insurance business as well as separate balance sheet line items.

Schedule 3 to the Regulations does not address the presentation of either the statement of changes in equity or the statement of cash flows. Insurers must therefore follow the requirements of FRS 102 for these primary statements (see Chapter 6 at 6 and Chapter 7).

8.1.1 Definition of an insurance company in UK law

An insurance company is defined by the CA 2006 as: [s1165(3)]

- An authorised insurance company
- Or
- Any other person (whether incorporated or not) who:
 - Carries on insurance market activity
 - Or
 - May effect or carry out contracts of insurance under which the benefits provided by that person are exclusively or primarily benefits in kind in the event of accident to or breakdown of a vehicle

An authorised insurance company means a person (whether incorporated or not) who has permission under Part 4A of the Financial Services and Markets Act (2000) (c.8) to effect or carry out contracts of insurance. [s1165(2)]. Insurance market activity has the meaning given in section 316(3) of the Financial Services and Markets Act 2000, [s1165(7)], and refers to those engaging in insurance activity in the Lloyd's insurance market.

An insurance group is a group where the parent company is an insurance company, or where: [s1165(5)]

- The parent company's principal subsidiary undertakings are wholly or mainly insurance companies
And
- The parent company does not itself carry on any material business apart from the acquisition, management and disposal of interests in subsidiary undertakings

A parent company's principal subsidiary undertakings are the subsidiary undertakings of the company whose results or financial position would principally affect the figures shown in the group accounts and the management of interests in subsidiary undertakings includes the provision of services to such undertakings. [s1165(6)].

When a group contains a mixture of insurance subsidiaries and non-insurance subsidiaries, judgement may need to be exercised to determine which subsidiaries are those whose results or financial position principally affect the figures in the group financial statements and therefore whether the group is an insurance group preparing consolidated financial statements under Schedule 3 to the Regulations or a non-insurance group preparing financial statements under either Schedule 1 or Schedule 2 to the Regulations. The presentation and disclosure requirements of Schedule 1 are discussed in Chapter 6.

8.2 Statement of financial position under Schedule 3

As discussed at 8.1 above, an insurance entity is required by FRS 102 to prepare its individual balance sheet in accordance with Part 1 'General Rules and Formats' of Schedule 3 to the Regulations. An insurance group is required to prepare its consolidated balance sheet in accordance with the provisions of Part 1 of Schedule 6 to the Regulations as modified by Part 3 of that Schedule.

How we see it

This requirement means that an insurance entity that does not report under the Companies Act 2006 (e.g., a non-UK entity or a UK friendly society preparing financial statements under SI 1994/1983) must follow the formats, including the related notes to the formats, to the extent it does not conflict with its own statutory framework, but does not need to give the other disclosures in the notes to the accounts required by Schedule 3 to the Regulations.

As discussed at 8.1 above, insurance entities and groups are not permitted to use 'adapted' formats; the statutory format must be used.

All applicable items denoted by a letter or a Roman number in the statutory Schedule 3 balance sheet format must be shown on the face of the statement of financial position. All applicable items denoted by an Arabic number, except for items concerning technical provisions and the reinsurers' share thereof, may be shown either on the face of the statement of financial position or in the notes thereto. The minimum line items that must be presented on the face of the statement of financial position are illustrated in Figure 8-1 below:

Figure 8-1 Individual statement of financial position (UK insurance company)

ASSETS

- A** Called up share capital not paid
- B** Intangible assets
- C** Investments
 - I Land and buildings
 - II Investments in group undertakings and participating interests
 - III Other financial investments
 - IV Deposits with ceding undertakings
- D** Assets held to cover linked liabilities

- Da Reinsurers' share of technical provisions**
- E Debtors**
 - I Debtors arising out of direct insurance operations
 - II Debtors arising out of reinsurance operations
 - III Other debtors
 - IV Called up share capital not paid
- F Other assets**
 - I Tangible assets
 - II Stocks
 - III Cash at bank and in hand
 - IV Own shares
 - V Other
- G Prepayments and accrued income**
 - I Accrued interest and rent
 - II Deferred acquisition costs
 - III Other prepayments and accrued income

LIABILITIES

- A Capital and reserves**
 - I Called up share capital or equivalent funds
 - II Share premium account
 - III Revaluation reserve
 - IV Reserves
 - V Profit and loss account
- B Subordinated liabilities**
- Ba Fund for future appropriations**
- C Technical provisions**
- D Technical provision for linked liabilities**
- E Provisions for other risks**
- F Deposits received from reinsurers**
- G Creditors**
 - I Creditors arising out of direct insurance operations
 - II Creditors arising out of reinsurance operations
 - III Debenture loans
 - IV Amounts owed to credit institutions
 - V Other creditors including taxation and social security
- H Accruals and deferred income**

The following discussion relates to the Schedule 3 statement of financial position (or balance sheet) format only. The Schedule 3 balance sheet includes sub-headings, denoted with an Arabic number, which have not been shown in Figure 8-1 above. The main modifications required for the group balance sheet format are the identification of non-controlling interest and the replacement of the sub-heading 'Participating interests' (see 8.2.2 below) by 'Interests in associated undertakings' and 'Other participating interests'.

The individual line items in the balance sheet format are discussed at 8.2.1 to 8.2.15 below. The rest of this section addresses the general requirements of the Schedule 3 format.

Schedule 3 requires that every balance sheet of a company must show the items listed above in the balance sheet format adopted. The items must also be shown in the order and under the headings and sub-headings given in the particular format used, but the letters or numbers assigned to that item in the format do not need to be given (and are not in practice). The items listed in the formats need to be read together with the notes to the formats, which may also permit alternative positions for any particular items. [3 Sch 1]. The relevant notes to the balance sheet formats are discussed for each line item at 8.2.1 to 8.2.15 below. These notes must be presented in the order in which, where relevant, the items to which they relate are presented in the balance sheet and in the profit and loss account. [3 Sch 60(2)].

Where the special nature of the company's business requires it, the company's directors must adapt the arrangement, headings and sub-headings otherwise required in respect of items given an Arabic number in the balance sheet (or profit or loss account) format used. The directors may combine items to which Arabic numbers are given in the formats if their individual amounts are not material to assessing the state of affairs (or profit or loss) of the company for the financial year in question or the combination facilitates that assessment. In the latter case, the individual amounts of any items combined must be disclosed in a note to the accounts. [3 Sch 3, 3 Sch 4].

Schedule 3 allows any item to be shown in the company's balance sheet in greater detail than required by the particular format used. The balance sheet may include an item representing or covering the amount of any asset or liability not otherwise covered by any of the items listed in the format used, but preliminary expenses, the expenses of, and commission on, any issue of shares or debentures, and the costs of research must not be treated as assets in the balance sheet. [3 Sch 2]. FRS 102 requires additional line items, headings and subtotals to be added where relevant to an understanding of the entity's financial position. [FRS 102.4.3]. When additional detail is provided on the face of the balance sheet, it is usual to provide a subtotal for the heading.

For every item shown in the balance sheet, the corresponding amount for the immediately preceding financial year (i.e., the comparative) must also be shown. Where that corresponding amount is not comparable with the amount to be shown for the item in question in the current financial year, the corresponding amount may be adjusted, and particulars of the non-comparability and of any adjustment must be disclosed in a note to the accounts. [3 Sch 5].

Amounts in respect of items representing assets must not be set off against amounts in respect of items representing liabilities and *vice versa* subject to the provisions of Schedule 3. [3 Sch 6].

The company's directors must, in determining how amounts are presented within items in the balance sheet, have regard to the substance of the reported transaction or arrangement, in accordance with generally accepted accounting principles or practice. [3 Sch 8]. In addition, when an asset or liability relates to more than one item in the balance sheet, the relationship of such asset or liability to the relevant item must be disclosed either under those items or in the notes to the accounts. [3 Sch 8A].

The provisions of Schedule 3 which relate to long-term business apply, with necessary modifications, to business which consists of effecting or carrying out relevant contracts of general business which:

- Is transacted exclusively or principally according to the technical principles of long-term business.
- And
- Is a significant amount of the business of the company. [3 Sch 7(1)].

For this purpose, a contract of general insurance is a relevant contract if the risk insured against relates to accident or sickness (this must be read with certain sections and schedules of the Financial Services and Markets Act 2000). [3 Sch 7(2)].

8.2.1 Intangible assets

Figure 8-2 Analysis of intangible assets

B	Intangible assets
1	Development costs
2	Concessions, patents, licences, trade marks and similar rights and assets
3	Goodwill
4	Payments on account

Intangible assets are not defined in the CA 2006 but Note (2) to the Schedule 3 balance sheet format states that amounts are only included in the balance sheet as concessions, patents, licences, trademarks and similar rights and assets if either the assets were acquired for valuable consideration and are not required to be shown under goodwill, or the assets in question were created by the company itself. However, entities preparing FRS 102 financial statements must apply the more restrictive requirements of the standard. Note (3) to the Schedule 3 balance sheet format states that goodwill can only be included to the extent that the goodwill was acquired for valuable consideration.

Schedule 3 does not address the presentation of negative goodwill. However, FRS 102 requires that negative goodwill is disclosed immediately below positive goodwill, with a subtotal of the net amount of the positive goodwill and the negative goodwill. [FRS 102.19.24(b)].

8.2.2 Investments in group undertakings and participating interests

Figure 8-3 Analysis of investments in group undertakings and participating interests

C	Investments
II	Investments in group undertakings and participating interests
1	Shares in group undertakings
2	Debt securities issued by, and loans to, group undertakings
3	Participating interests†
4	Debt securities issued by, and loans to, undertakings in which the company has a participating interest

† In group accounts, this line item is replaced by two items: 'Interests in associated undertakings' and 'other participating interests'

A 'participating interest' means an interest held by, or on behalf of, an undertaking in the shares of another undertaking which it holds on a long-term basis for the purpose of securing a contribution to its activities by the exercise of control or influence arising from or related to that interest. In the context of the balance sheet formats, 'participating interest' does not include an interest in a group undertaking. A holding of 20% or more of the shares of the undertaking is presumed to be a participating interest unless the contrary is shown. An interest in shares of another undertaking includes an interest which is convertible into an interest in shares and an option to acquire shares or any such interest, even if the shares are unissued until the conversion or exercise of the option. [10 Sch 11].

For investments in subsidiaries, associates and jointly controlled entities in separate and individual financial statements, neither the current accounting rules, fair value accounting rules nor the alternative accounting rules of Schedule 3 permit the use of cost less impairment. Consequently, an investor can account for these only at fair value with changes in fair value recognised in other comprehensive income (except for reversals of a revaluation decrease recognised in profit or loss or a revaluation decrease which exceeds accumulated revaluation gains recognised in equity which are recognised in profit or loss) or at fair value with changes in fair value recognised in profit or loss. [FRS 102.9.26].

8.2.3 Other financial investments

Figure 8-4 Analysis of other financial investments

C	Investments
III	Other financial investments
1	Shares and other variable-yield securities and units in unit trusts
2	Debt securities and other fixed-income securities
3	Participation in investment pools
4	Loans secured by mortgages
5	Other loans
6	Deposits with credit institutions
7	Other

Note (5) to the Schedule 3 balance sheet format states that debt-securities and other fixed-income securities is to comprise transferable debt securities and any other transferable fixed-income securities issued by credit institutions, other undertakings or public bodies, in so far as they are not covered within investments in group undertakings and participating interests.

Note (6) to the Schedule 3 balance sheet format states that participation in investment pools is to comprise shares held by the company in joint investments constituted by several undertakings or pension funds, the management of which has been entrusted to one of those undertakings or to one of those pension funds.

Note (7) to the Schedule 3 balance sheet format states that loans to policyholders for which the policy is the main security are to be included in 'other loans' and their amount must be disclosed in a note to the accounts. Loans secured by mortgage are to be shown as such even where they are also secured by insurance policies. Where the amount of 'other loans' not secured by policies is material, an appropriate breakdown must be given in the notes to the accounts.

Note (8) to the Schedule 3 balance sheet format states that deposits with credit institutions must comprise sums the withdrawal of which is subject to a time restriction. Sums deposited with no restriction must be shown under 'Cash at bank and in hand' even if they bear interest.

8.2.4 Reinsurers' share of technical provisions

Figure 8-5 Analysis of reinsurers' share of technical provisions

Da	Reinsurers' share of technical provisions
1	Provision for unearned premiums
2	Long-term business provision
3	Claims outstanding
4	Provisions for bonuses and rebates
5	Other technical provisions
6	Technical provisions for unit-linked liabilities

Note (12) to the Schedule 3 balance sheet format states that the reinsurance amounts are to comprise the actual or estimated amounts which, under contractual reinsurance arrangements, are deducted from the gross amount of technical provisions.

8.2.5 Debtors

Debtors arising out of direct insurance operations must be split between those due from policyholders and those due from intermediaries.

Note (13) to the Schedule 3 balance sheet format states that amounts owed by group undertakings and undertakings in which the company has a participating interest must be shown separately as sub-assets of the relevant asset class.

8.2.6 Other assets

Figure 8-6 Analysis of other assets

F	Other assets
I	Tangible fixed assets
1	Plant and machinery
2	Fittings, fixtures, tools and equipment
3	Payments on account (other than deposits paid on land and buildings) and assets (other than buildings) in the course of construction
II	Stocks
1	Raw materials and consumables
2	Work in progress
3	Finished goods and goods for resale

- 4 Payments on account
- III Cash at bank and in hand
- IV Own shares
- V Other

Tangible fixed assets would include property, plant and equipment, as defined in FRS 102.

The items reported under stocks will generally correspond with inventories under FRS 102.

[FRS 102 Appendix I].

The Regulations do not define cash at bank and in hand. This line item would include bank deposits with notice or maturity periods. Such bank deposits may or may not meet FRS 102's definition of 'cash' (i.e., cash on hand and demand deposits) or 'cash equivalents' (i.e., short-term, highly liquid investments that are readily convertible to known amounts of cash and that are subject to an insignificant risk of changes in value). [FRS 102.7.2]. See Chapter 7 at 3.2 for the definition of cash and cash equivalents.

While 'own shares' have an asset line heading in the Schedule 3 balance sheet format, FRS 102 requires investments in own shares to be treated as treasury shares and deducted from equity. [FRS 102.22.16]. Consequently, this line item will not be used under FRS 102.

Note (15) to the Schedule 3 balance sheet format states that 'other' is to comprise assets which are not covered by the other items and where such assets are material, they must be disclosed in a note to the accounts.

8.2.7 Prepayments and accrued income (including deferred acquisition costs)

Note (17) to the Schedule 3 balance sheet format states that deferred acquisition costs arising in general business must be stated separately from those arising in long-term business. In the case of general business, the amount of any deferred acquisition costs must be established on a basis consistent with that used for unearned premiums. See 8.5.7 below.

8.2.8 Capital and reserves

Every balance sheet of a company which carries on long-term business must show separately as an additional item the aggregate of any amounts included in capital and reserves which are not required to be treated as realised profits under section 843 of the CA 2006. [3 Sch 11(1)].

Called up share capital in relation to a company means so much of its share capital as equals the aggregate amounts of the calls made on its shares (whether or not those calls have been paid) together with any share capital paid up without being called, and any share capital to be paid on a specified future date under the articles, the terms of allotment of the relevant shares or any other arrangements for payment of those shares. [s547].

The share premium account is a statutory reserve that arises on the issue of share capital. It is beyond the scope of this publication to explain the rules governing share premium in detail but a summary explaining how the share premium arises and can be applied or reduced is contained in Chapter 6 at 4.3.12.B.

The revaluation reserve arises where an asset is carried at valuation using the alternative accounting rules in the Regulations. [3 Sch 29].

Figure 8-7 below shows the analysis required in respect of reserves.

Figure 8-7 Analysis of reserves

A Capital and reserves	
IV	Reserves
1	Capital redemption reserve
2	Reserve for own shares
3	Reserves provided for by articles of association
4	Other reserves

The capital redemption reserve is a statutory reserve which is established when the shares of a limited company are redeemed or purchased wholly or partly out of the company's profits, or where treasury shares are cancelled. It is beyond the scope of this chapter to explain the rules governing redemptions/purchases of shares, treasury shares and the capital redemption reserve.

The reserve for own shares is used where the company purchases its own shares to be held by an employee share ownership plan ('ESOP') that is treated as an extension of the sponsoring entity or where shares are held as treasury shares. [FRS 102.9.33, FRS 102.9.33A, FRS 102.9.34, FRS 102.9.35, FRS 102.9.36, FRS 102.9.37, FRS 102.22.16].

Where the Articles of Association specifically provide for reserves to be established, the line item 'Reserves provided for by articles of association' is used.

8.2.9 Subordinated liabilities

Note (18) to the Schedule 3 balance sheet format states that subordinated liabilities comprise all liabilities in respect of which there is a contractual obligation that, in the event of winding up of bankruptcy, they are to be repaid only after the claims of other creditors have been met (whether or not they are represented by certificates).

8.2.10 Fund for future appropriations ('FFA')

Note (19) to the Schedule 3 balance sheet format states that the FFA is to comprise all funds the allocation of which either to policyholders or shareholders has not been determined by the end of the financial year. Transfers to and from the FFA must be shown in the profit and loss line item, 'Transfers to or from the fund for future appropriations'.

The Implementation Guidance to FRS 103 states that where there is reasonable certainty over the allocation to policyholders or owners of all items recognised in the technical account for long-term business, it is inappropriate to establish an FFA. However, certain long-term business funds of:

- Proprietary insurers are established in such a way that allocation between equity and policyholders' liabilities is not clear cut.

And

- Mutual insurers are established in such a way that allocation between disclosed surplus and policyholders' liabilities is not clear cut.

And

- Therefore, it is appropriate to establish an FFA. [FRS 103.IG2.50].

Where an FFA is established, the notes to the financial statements must indicate the reasons for its use and the nature of the funds involved (see 11.4 below). [FRS 103.IG2.51].

8.2.11 Technical provisions

Figure 8-8 Analysis of technical provisions

C	Technical provisions
1	Provision for unearned premiums
2	Long-term business provision
3	Claims outstanding
4	Provisions for bonuses and rebates
5	Equalisation provision
6	Other technical provisions

The Schedule 3 balance sheet format permits the reinsurers' share of technical provisions to be shown either separately within liabilities or under assets item Da. However, FRS 103 prohibits the offsetting of reinsurance assets against the related insurance liabilities (see 8.10 below) and therefore the reinsurers' share of technical provisions must be shown as an asset.

Note (20) to the Schedule 3 balance sheet format states that the provision for unearned premiums for long-term business may be included in the long-term business provision rather than within unearned premiums.

Note (21) to the Schedule 3 balance sheet format states that the long-term business provision is to comprise the actuarially estimated value of the company's liabilities including bonuses already declared and after deducting the actuarial value of future premiums. It must also include claims incurred but not reported plus the estimated costs of settling such claims.

Note (22) to the Schedule 3 balance sheet format states that claims outstanding is to comprise the estimated ultimate cost to the company of settling all claims arising from events which have occurred up to the end of the financial year (including, in the case of general business, claims incurred but not reported) less amounts already paid in respect of such claims.

Note (23) to the Schedule 3 balance sheet format states that provisions for bonuses and rebates is to comprise amounts intended for policyholders or contract beneficiaries by way of bonuses and rebates to the extent that such amounts have not been credited to policyholders or contract beneficiaries or included in liabilities item Ba or in liabilities item C2.

Note (24) to the Schedule 3 balance sheet format states that equalisation provisions are those required to be maintained in respect of general business by the company in accordance with the rules made by the Financial Conduct Authority or the Prudential Regulation Authority ('PRA') under Part 10 of the Financial Services and Markets Act 2000. They also comprise any amounts required to be set aside by a company to equalise fluctuations in loss ratios in future years or to provide for special risks in accordance with Council Directive 87/343/EEC. Since the implementation of the Solvency II Directive, effective from 1 January 2016, the UK (and EU) regulatory framework does not permit equalisation or catastrophe provisions.

Note (25) to the Schedule 3 balance sheet format states that other technical provisions are to include the provision for unexpired risks (see 8.5.5 below). Where the provision for unexpired risks is significant, it must be disclosed separately under the respective sections presenting the gross provision for unexpired risks and the reinsurers' share.

8.2.12 Technical provisions for linked liabilities

Note (26) to the Schedule 3 balance sheet format states that this comprises technical provisions constituted to cover liabilities relating to investment in the context of long-term policies under which the benefits payable to policyholders are wholly or partly determined by reference to the value of, or the income from, property of any description (whether or not specified in the contract), or by reference to fluctuations in, or in an index of, the value of property of any description (whether or not so specified). 'Property' in this context means any type of asset. Any additional technical provisions constituted to cover death risks, operating expenses or other risk (such as benefits payable at the maturity date or guarantee surrender values) must be included in the long-term business provision.

This item must also comprise technical provisions representing the obligations of a tontine's organiser in relation to its members.

The Implementation Guidance to FRS 103 states that the relevant provision for any contract must not be less than the element of any surrender or transfer value which is calculated by reference to the relevant fund or funds or index. [FRS 103.IG2.47]. The net assets held to cover linked liabilities at the reporting date may differ from the technical provisions for linked liabilities. However, the reasons for any significant mismatching must be disclosed. [FRS 103.IG2.48].

Where the technical provision for linked liabilities has regard to the timing of the tax obligation, the effect of this must be excluded from the determination of deferred tax. [FRS 103.IG2.49].

8.2.13 Provisions for other risks

Figure 8-9 Analysis of provisions for other risks

E	Provisions for other risks
1	Provisions for pensions and similar obligations
2	Provisions for taxation
3	Other provisions

8.2.14 Deposits received from reinsurers

Note (27) to the Schedule 3 balance sheet format states that this item is to comprise amounts deposited by or withheld from other insurance undertakings under reinsurance contracts. These amounts must not be merged with other amounts owed to or by those other undertakings. Where the company ceded insurance and has received, as a deposit, securities which have been transferred to its ownership, this item is to comprise the amount owned by the company by virtue of the deposit.

8.2.15 Creditors

Note (28) to the Schedule 3 balance sheet format states that amounts owed to group undertakings and undertakings in which the company has a participating interest must be shown separately as sub-items.

Note (29) to the Schedule 3 balance sheet format states that the amount of any convertible debenture loans must be shown separately.

8.3 Statement of comprehensive income under Schedule 3

FRS 102 requires an entity to present its total comprehensive income for a period either: *[FRS 102.5.2]*

- In a single statement of comprehensive income which presents all items of income and expense (and includes a subtotal for profit or loss).
- Or
- In two statements - an income statement (referred to as the profit and loss account in Schedule 3 to the Regulations) and a statement of comprehensive income, in which case the income statement presents all items of income and expense recognised in the period except those that are recognised in total comprehensive income outside of profit or loss as permitted or required by FRS 102.

These requirements apply both to consolidated and individual financial statements.

However, UK companies (and LLPs) preparing group accounts in accordance with the CA 2006 can take advantage of the exemption in section 408 of the CA 2006 (where the conditions are met) not to present the individual profit and loss account and certain related notes. *[s408, s472(2), Regulations 3(2)]*. See Chapter 1 at 5.3.2. This exemption does not extend to individual financial statements prepared under other statutory frameworks, unless permitted by these statutory frameworks.

A change from the single-statement approach to the two-statement approach, or *vice versa*, is a retrospective change in accounting policy to which Section 10 applies. *[FRS 102.5.3]*. See Chapter 9 at 3.3.

A Schedule 3 profit and loss account or income statement comprises both a technical account and a non-technical account. There are separate technical accounts for general business and long-term business. Therefore, composite insurers (i.e., those that underwrite both general and long-term business) will present a three-part profit and loss account comprising a technical account-general business, a technical account-long-term business and a non-technical account. As discussed at 8.1 above, insurance entities and groups are not permitted to use 'adapted' profit or loss formats; the statutory format must be used.

Extract from FRS 102

Appendix I

Glossary

other comprehensive income	Items of income and expense (including reclassification adjustments) that are not recognised in profit or loss as required or permitted by this FRS or by law.

Profit or loss is the default category; all comprehensive income is part of profit or loss unless FRS 102 permits or requires otherwise. Schedule 3 does not address the format or content of other comprehensive income which is discussed at 8.3.13 below.

Figure 8-10 Format of the Technical account - General business

I	Technical account - General business
1	Earned premiums, net of reinsurance

11	Extraordinary income
12	Extraordinary charges
13	Extraordinary profit or loss
14	Tax on extraordinary profit or loss
15	Other taxes not shown under the preceding items
16	Profit or loss for the financial year

8.3.1 Gross written premiums

Note (1) to the Schedule 3 profit and loss format states that gross premiums written is to comprise all amounts during the financial year in respect of insurance contracts entered into regardless of the fact that such amounts may relate in whole or in part to a later financial year and must include:

- Premiums yet to be determined, where the premium calculation can be done only at the end of the year.
- Single premiums, including annuity premiums, and in long-term business, single premiums resulting from bonus and rebate provisions in so far as they must be considered as premiums under the terms of the contract.

- Additional premiums in the case of half-yearly, quarterly or monthly payments and additional payments from policyholders for expenses borne by the company.
- In the case of co-insurance, the company's portion of total premiums.
- Reinsurance premiums due from ceding and retroceding undertakings, including portfolio entries.

The above must be shown after deductions of cancellations and portfolio withdrawals credited to ceding and retroceding undertakings.

In addition, gross premiums written must not include the amounts of taxes or duties levied with premiums.

8.3.2 Outwards reinsurance premiums

Note (2) to the Schedule 3 profit and loss format states that outwards reinsurance premiums must comprise all premiums paid or payable in respect of outwards reinsurance contracts entered into by the company. Portfolio entries payable on the conclusion or amendment of outwards reinsurance contracts must be added. Portfolio withdrawals receivables must be deducted.

8.3.3 Changes in the provision for unearned premiums, net of reinsurance

Note (3) to the Schedule 3 profit and loss format states that in the case of long-term business, the change in unearned premiums may be included either in this line item or within changes in other technical provisions.

8.3.4 Claims incurred, net of reinsurance

Note (4) to the Schedule 3 profit and loss format states that this is to comprise all payments made in the financial year with the addition of the provision for claims (but after deducting the provision for claims for the preceding financial year).

The amounts must include annuities, surrenders, entries and withdrawals of loss provisions to and from ceding insurance undertakings and reinsurers and external and internal claims management costs and charges for claims incurred but not reported. Sums recoverable on the basis of salvage and subrogation must be deducted.

Where the difference between the loss provision at the beginning of the year and the payments made during the year on account of claims incurred in previous years and the loss provision shown at the end of the year for such outstanding claims is material, it must be shown in the notes to the accounts, broken down by category and amount.

8.3.5 Bonuses and rebates, net of reinsurance

Note (5) to the Schedule 3 profit and loss format states that bonuses comprise all amounts chargeable for the financial year which are paid or payable to policyholders and other insured parties or provided for their benefit, including amounts used to increase technical provisions or applied to the reduction of future premiums, to the extent that such amounts represent an allocation of surplus or profit arising on business as a whole or a section of business, after deduction of amounts provided in previous years which are no longer required. Rebates are to comprise such amounts to the extent that they represent a partial refund of premiums resulting from the experience of individual contracts.

Where material, the amount charged for bonuses and that charged for rebates must be disclosed separately in the notes to the accounts.

8.3.6 Acquisition costs

Note (6) to the Schedule 3 profit and loss format states that acquisition costs comprise costs arising from the conclusion of insurance contracts. They must cover both direct costs, such as acquisition commissions or the cost of drawing up the insurance document or including the insurance contract in the portfolio, and indirect costs, such as the advertising costs or the administrative expenses connected with the processing of proposals and the issuing of policies. In the case of long-term business, policy renewal commissions must be included within administrative expenses.

8.3.7 Administrative expenses

Note (7) to the Schedule 3 profit and loss format states that administrative expenses must include the costs arising from premium collection, portfolio administration, handling of bonuses and rebates and inward and outward reinsurance. In particular, they must include staff costs and depreciation provisions in respect of office furniture and equipment in so far as these need not be shown under acquisition costs, claims incurred or investment charges.

8.3.8 Investment income, expenses and charges

Note (8) to the Schedule 3 profit and loss format states that investment income, expenses and charges must, to the extent that they arise in the long-term technical fund, be disclosed in the long-term technical account. Other investment income, expenses and charges must either be disclosed in the non-technical account or attributed between the appropriate technical and non-technical accounts. Where the company makes such an attribution it must disclose the basis for it in the notes to the accounts. See 8.7 below.

8.3.9 Unrealised gains and losses on investments

Note (9) to the Schedule 3 profit and loss format states that in the case of investments attributed to the long-term fund, the difference between the valuation of the investments and their purchase price or, if they have previously been valued, their valuation as at the last balance sheet date, may be disclosed (in whole or in part) under either item 3 (unrealised gains on investments) or item 10 (unrealised losses on investments), as the case may be, of the long-term technical account, and in the case of investments shown as assets held to cover linked liabilities must also be disclosed.

In the case of other investments, the difference between the valuation of investments and their purchase price or, if they have previously been valued, their valuation as at the last balance sheet date, may be disclosed (in whole or in part) under items 3a (unrealised gains on investments) or 5a (unrealised losses on investments), as the case may require, of the non-technical account.

8.3.10 Allocated investment return

Note (10) to the Schedule 3 profit and loss format states that the investment return allocated initially to one part of the profit and loss account (see 8.3.8 above) may be transferred to another part of the profit and loss account. See 8.7 below.

One reason that such a transfer might be made is so that, for example, a long-term insurer could recognise investment return in the life technical account on a longer-term rate of return basis.

Where part of the investment return allocated initially to the non-technical account is transferred to the general business technical account, any transfer must be deducted from item 6 in the non-technical account and added to item 2 of the technical account - general business.

Where part of the investment return allocated initially to the long-term business account is transferred to the non-technical account, the transfer to the non-technical account must be deducted from item 12 of the long-term business account and added to item 4 of the non-technical account.

The reasons for such transfers (which may consist of a reference to any relevant statutory requirement) and the basis on which they are made must be disclosed in the notes to the accounts. See 11.7 below.

8.3.11 Exchange gains or losses

Exchange differences required to be included within profit or loss under Section 30 *Foreign Currency Translation* of FRS 102 must be dealt with through the non-technical account except for long-term insurance business where exchange differences must be recognised in the technical account for long-term business. Exchange differences taken to other comprehensive income arising from translating results and financial position into a different presentational currency, [FRS 102.30.18(c)], can, where appropriate, in the case of long-term business, be recognised in the FFA. [FRS 103.2.32].

8.3.12 Employee benefits

The net interest on the net defined benefit liability during the reporting period, [FRS 102.28.23(b)], must be recognised, as appropriate, in the technical account for long-term business or the non-technical account. [FRS 103.2.33].

As an exception to the requirement in paragraph 28.23(d) of FRS 102 to remeasure the net defined benefit liability in other comprehensive income, the remeasurement of the net defined benefit liability which is not attributable to owners must be treated as an amount, the allocation of which, either to policyholders or to owners, has not been determined by the reporting date (i.e., reported within the FFA). It must be included as a separate line in the technical account for long-term insurance business immediately above the line for transfer to or from the FFA and reflected in that transfer. The impact must be disclosed separately in the notes to the financial statements. [FRS 103.2.34].

8.3.13 Other comprehensive income

As discussed at 8.3 above, Schedule 3 to the Regulations does not address the presentation of other comprehensive income. Illustrative examples of the presentation of other comprehensive income are in Chapter 6 at 5.5.2.

Other comprehensive income means items of income and expense (including reclassification adjustments), that are not recognised in profit or loss as required or permitted by FRS 102. [FRS 102 Appendix I]. Therefore, profit or loss is the default category; all comprehensive income is part of profit or loss unless FRS 102 permits or requires otherwise.

FRS 102 requires the following items to be included in other comprehensive income:

- Changes in revaluation surplus relating to property, plant and equipment, [FRS 102.17.15E, FRS 102.17.15F], and intangible assets. [FRS 102.18.18G, FRS 102.18.18H]. See Chapter 15 at 3.7.3 and Chapter 16 at 3.3.2.C
 - Actuarial gains and losses, and the return on plan assets excluding amounts included in net interest on the net defined benefit liability (known collectively as 'remeasurements' of the net defined benefit liability) on defined benefit plans. [FRS 102.28.23(d), FRS 102.28.25]. See Chapter 30 at 3.5.10.B
 - Exchange gains and losses arising from translating the financial statements of a foreign operation (including in consolidated financial statements, exchange differences on a monetary item that forms part of the net investment in the foreign operation). However, under FRS 102, cumulative exchange differences accumulated in equity are not reclassified to profit and loss on disposal of a net investment in a foreign operation. [FRS 102.9.18A, FRS 102.30.13].
 - The effective portion of fair value gains and losses on hedging instruments in a cash flow hedge or a hedge of the foreign exchange risk in a net investment in a foreign operation. The amounts taken to equity in respect of the hedge of the foreign exchange risk in a net investment in a foreign operation are not reclassified to profit or loss on disposal or partial disposal of the foreign operation. [FRS 102.12.23, FRS 102.12.24, FRS 102.12.25A]. See Chapter 13 at 6 and Chapter 13 at 7
 - Fair value gains and losses through other comprehensive income for an investor that is not a parent measuring its interests in jointly controlled entities, [FRS 102.15.9(c), FRS 102.15.14, FRS 102.15.15, FRS 102.15.15A], and investments in associates in its individual financial statements. [FRS 102.14.4(c), FRS 102.14.9, FRS 102.14.10, FRS 102.14.10A]. See Chapter 18 at 3.5.2 and Chapter 17 at 3.2.4
 - Fair value gains and losses through other comprehensive income for investments in subsidiaries, associates and jointly controlled entities used by the parent in its separate financial statements or in consolidated financial statements for certain excluded subsidiaries. [FRS 102.9.26(b), FRS 102.9.26A, FRS 102.9.9, FRS 102.9.9A, FRS 102.9.9B, FRS 102.9.9C(b)]. See Chapter 8 at 3.4 and Chapter 8 at 4.2
- And
- Any unrealised gain arising on an exchange of business or non-monetary assets for an interest in a subsidiary, jointly controlled entity or associate. [FRS 102.9.31(c)]. See Chapter 8 at 3.8.

Of the above items, only the amounts taken to other comprehensive income in relation to cash flow hedges may be reclassified to profit or loss in a subsequent period under FRS 102.

Where the entity applies the recognition and measurement requirements of IAS 39 or IFRS 9 to financial instruments, further items are reported in other comprehensive income (see Chapter 13).

In addition, Schedule 3 to the Regulations restricts when unrealised profits can be reported in the profit and loss account. [3 Sch 18(a)]. Consequently, certain unrealised profits may be required to be reported in other comprehensive income rather than in profit or loss. Whether profits are available for distribution must be determined in accordance with applicable law. Technical Release 02/17BL *Guidance on realised and distributable profits under the Companies Act 2006* ('TECH 02/17BL') provides guidance on the determination of the profits available for distribution (under the CA 2006). [FRS 102.A3.29].

8.4 Recognition and measurement requirements for long-term insurance business

Extract from FRS 103

Appendix I

Glossary

long-term insurance business	Insurance contracts (including reinsurance) falling within one of the classes of insurance specified in Part II of Schedule 1 to the Financial Services and Markets Act 2000 (Regulated Activities) Order 2001 (SI 2001/544).

Section 3 of FRS 103 contains recognition and measurement requirements for entities applying FRS 103 that are carrying out long-term insurance business. These requirements are set out as follows:

- Paragraphs 3.3 to 3.9 and 3.16 to 3.18 apply to all long-term insurance business.
- And
- Paragraphs 3.10 to 3.15 apply to with-profits business and with-profits funds, to which the PRA realistic capital regime (as set out in section 1.3 of the Prudential sourcebook for insurers ('INSPRU') as at 31 December 2015) was being applied, either voluntarily or compulsorily, prior to 1 January 2016. *[FRS 103.3.1].*

The requirements set out in Section 3 provide the benchmark for setting accounting policies for long-term insurance business as at 1 January 2015 (i.e., the date from which FRS 103 replaced previous UK GAAP). Entities are permitted to change their accounting policies in accordance with paragraph 2.3 of FRS 103 (see 9 below). Entities that are setting accounting policies for the first time may apply this benchmark or are permitted to set alternative policies (see 1.3 above). *[FRS 103.3.1A].*

The requirements in Section 3 are based on those contained previously in FRS 27 and the ABI SORP. FRS 103 does not explain why the FRC felt that these requirements needed to be embedded into the standard, when no general insurance accounting requirements are embedded into the standard, but the reason seems to be to ensure that life insurers are directed towards continuing to comply with the requirements of FRS 27 in respect of with-profits business.

Notwithstanding these requirements, an entity is permitted to change its accounting policies away from the requirements if certain criteria are satisfied (see 9 below). When an entity's new accounting policies are not consistent with these requirements, those requirements that are not consistent with the entity's accounting policies need not be applied. *[FRS 103.3.2].*

The recognition and measurement requirements are discussed below as follows:

- Gross premiums written (see 8.4.1 below)
- Claims recognition (see 8.4.2 below)
- Deferred acquisition costs (see 8.4.3 below)
- Measurement of insurance liabilities and related assets (see 8.4.4 below)
- And
- Value of in-force life assurance business held by parents that are not insurers (see 8.4.5 below)

8.4.1 Gross premiums written and reinsurance outwards premiums

Premiums, including those for inwards reinsurance, must be recognised when due for payment. When the amount due is not known, for example with certain pensions business, estimates must be used. *[FRS 103.3.3].* An insurer must not accrue for future premiums receivable under a contract. This is because such premiums are included within the calculation of the insurance liability (see 8.4.4 below). FRS 103 does not elaborate as to how estimates must be made when the amount due is not known.

For linked business (i.e., business where the benefits payable to policyholders are wholly or partly to be determined by reference to the value of, or the income from, property of any description or by reference to fluctuations in, or an index of, the value of property of any description), the due date for payment may be taken as the date when the liability is established. *[FRS 103.3.3].*

Reinsurance outwards premiums must be recognised when paid or payable. *[FRS 103.3.4].*

8.4.2 Claims recognition

Claims payable on maturity must be recognised when the claims become due for payment and claims payable on death must be recognised on notification. *[FRS 103.3.5]*.

Where a claim is payable and the policy or contract remains in force, the relevant instalments must be recognised when due for payment. The recognition of the claim in the technical account for long-term business and the calculation of the long-term business provision and/or the provision for linked liabilities, must be treated consistently, as appropriate. *[FRS 103.3.5]*.

Surrenders must be included within claims incurred and recognised either when paid or at the earlier date on which, following notification, the policy ceases to be included within the calculation of the long-term business provision and/or the provision for linked liabilities. *[FRS 103.3.6]*.

8.4.3 Deferred acquisition costs

Extract from FRS 103

Appendix I

Glossary

acquisition costs

Costs arising from the conclusion of insurance contracts including direct costs and indirect costs connected with the processing of proposals and the issuing of policies.

Further details are set out in note 6 of the Notes on the Profit and Loss Account format in Schedule 3 to the Regulations.

Direct costs from the conclusion of insurance contracts include acquisition commissions or the cost of drawing up the insurance document or including the insurance contract in the portfolio. Indirect costs include advertising costs or the administrative expenses connected with the processing of proposals and the issuing of policies. *[3 Sch P&L Note 6]*.

FRS 103 does not permit acquisition costs to be deferred for with-profit funds. *[FRS 103.3.10]*. This prohibition applies to with-profits business and with-profit funds to which the PRA realistic capital regime (as set out in section 1.3 of INSPRU as at 31 December 2015) was being applied, either voluntarily or compulsorily, prior to 1 January 2016. *[FRS 103.3.1(b)]*.

For other long-term insurance business, acquisition costs can be deferred except to the extent that: *[FRS 103.3.7]*

- The costs in question have already been recovered (for example where the design of the policy provides for the recovery of costs as incurred).
 - The net present value of margins within insurance contracts is not expected to be sufficient to cover deferred acquisition costs after providing for contractual liabilities to policyholders and expenses.
- And
- The receipt of future premiums or the achievement of future margins is insufficiently certain based on estimates of future expected discontinuance rates or other experience.

Advertising costs can only be deferred where they are directly attributable to the acquisition of new business. *[FRS 103.3.8]*.

FRS 103 does not specify a particular method for the amortisation of deferred acquisition costs. However, the costs that are carried forward must be amortised over a period no longer than the one in which, net of any related deferred tax provision, they are expected to be recoverable out of margins on related insurance contracts in force at the reporting date, and in a similar profile to those margins. *[FRS 103.3.9]*.

How we see it

The amortisation of deferred acquisition costs based on profit margins arising from the related insurance business is an appropriate amortisation methodology.

8.4.4 Measurement of insurance liabilities and related assets

Schedule 3 requires that technical provisions must at all times be sufficient to cover any liabilities arising out of insurance contracts as far as can reasonably be foreseen. [3 Sch 49].

Schedule 3 requires that the long-term business provision must in principle be computed separately for each long-term contract, save that statistical or mathematical methods may be used where they may be expected to give approximately the same results as individual calculations. [3 Sch 52(1)].

There is also a requirement that the computation of the long-term business provision must be made annually by a Fellow of the Institute or Faculty of Actuaries with due regard to generally accepted actuarial principles and on the basis of recognised actuarial methods. [3 Sch 52(3)].

8.4.4.A Measurement of non-profit insurance liabilities

FRS 103 states that the established accounting treatment for long-term insurance business is to measure liabilities for policyholder benefits under the modified statutory solvency basis ('MSSB'). [FRS 103.3.11].

The MSSB is the basis for determining insurance liabilities which is the statutory solvency basis adjusted:

- To defer new business acquisition costs incurred where the benefit of such costs will be obtained in subsequent reporting periods (see 8.4.3 above).

And

- To treat investment, resilience and similar reserves, or reserves held in respect of general contingencies or the specific contingency that the fund will be closed to new business, where such items are held in respect of long-term insurance business, as reserves rather than provisions. These are included, as appropriate, within shareholders' capital and reserves or the FFA. [FRS 103 Appendix I].

The statutory solvency basis is the basis of determination of insurance liabilities in accordance with rule 1 of the Prudential Sourcebook for Insurers ('INSPRU') as at 31 December 2015. [FRS 103 Appendix I].

The Implementation Guidance to FRS 103 provides guidance in relation to the requirement of the Regulations (see 8.4.4 above) to compute insurance liabilities. The Implementation Guidance states that the gross premium method must be used for every class of insurance business except those for which the net premium method is used in the related regulatory returns, but policyholder liabilities of overseas subsidiaries may be computed on a local basis, subject to Part 3 of Schedule 6 to the Regulations. Where the valuation is performed using a net premium method, bonuses must be included in the long-term business provision only if they have vested or have been declared as a result of the current valuation. [FRS 103.IG2.39, FRS 103.IG2.40].

Glossary

gross premium method

A form of actuarial valuation of liabilities arising under long-term insurance contracts where the premiums brought into account are the full amounts receivable under the contract. The method includes explicit estimates of cash flows for:

- (a) premiums, adjusted for renewals and lapses;
- (b) expected claims and for with-profits business future regular but not occasional or terminal bonuses;
- (c) costs of maintaining contracts; and
- (d) future renewal expenses.

Cash flows are discounted at the valuation interest rate. The methodology may be set out in the relevant regulatory framework. The discount rate is based on the expected return on the assets deemed to back the liabilities. This will be adjusted to reflect any further risks although, under this method, most of the key risks will be reflected in the modelling of the cash flows. For linked business, allowance may be made for the purchase of future units required by the contract terms and credit is taken for future charges permitted under those terms.

net premium method

An actuarial valuation of liabilities arising under long-term insurance contracts where the premium brought into account at any valuation date is that which, on the valuation assumptions regarding interest, mortality and disability, will exactly provide for the benefits guaranteed. A variation of the net premium method involves zillmerisation. The detailed methodology for UK companies is included in regulations contained in the PRA Rulebook as at 31 December 2015.

The Implementation Guidance to FRS 103 states that, in determining the long-term business provision, and the technical provision for linked liabilities, no policy must have an overall negative provision except as allowed by PRA rules, or a provision which is less than any guaranteed surrender or transfer value.

[FRS 103.IG2.41].

The Implementation Guidance also states that the long-term business provision may be calculated on a basis used for regulatory reporting subject to appropriate adjustments including the reversal of any reduction in policyholder liabilities where these liabilities already implicitly take account of a pension fund surplus through future expense assumptions which reflect lower expected contributions. [FRS 103.IG2.42].

Investment reserves (realised and unrealised investment gains and exchange gains), surpluses carried forward, resilience and similar reserves, contingency and closed fund reserves which may be included in the statutory liabilities for solvency purposes under the PRA rules, must be considered to assess the extent to which they must be included in the long-term business provision. [FRS 103.IG2.52].

The Implementation Guidance clarifies that, where the long-term business provision has been determined on an actuarial basis that, in assessing the future net cash flows, having regard to the timing of tax relief where assumed expenses exceed attributable income, such tax relief must be excluded from the determination of deferred tax. [FRS 103.IG2.44].

8.4.4.B Measurement of with-profits-liabilities and related assets

FRS 103 requires that (unless an entity has changed its accounting policies) with-profit-funds are required to use the realistic value of liabilities as the basis for the estimated value of the liabilities to be included in the financial statements. [FRS 103.3.11].

The realistic values of liabilities is that element of the amount defined by rule 1.3.40 of INSPRU as at 31 December 2015, excluding current liabilities falling within the definition set out in rule 1.3.190 of INSPRU as at 31 December 2015 that are recognised separately in the statement of financial position.

[FRS 103 Appendix I].

Extract from FRS 103

Measurement of with-profits liabilities and related assets**3.12** For with-profits funds:

- (a) liabilities to policyholders arising from with-profits business shall be stated at the amount of the realistic value of liabilities adjusted to exclude the shareholders' share of projected future bonuses;
- (b) reinsurance recoveries that are recognised shall be measured on a basis that is consistent with the value of the policyholder liabilities to which the reinsurance applies;
- (c) an amount may be recognised for the present value of future profits on non-participating business written in a with-profits fund if the determination of the realistic value of liabilities in that with-profits fund takes account, directly or indirectly, of this value;
- (d) where a with-profits life fund has an interest in a subsidiary or associate and the determination of the realistic value of liabilities to with-profits policyholders takes account of a value of that interest at an amount in excess of the net amounts included in the entity's consolidated accounts, an amount may be recognised representing this excess; and
- (e) adjustments to reflect the consequential tax effects of (a) to (d) above shall be made.

Adjustments from the MSSB necessary to meet the above requirements, including the recognition of an amount in accordance with paragraph 3.12(c) or 3.12(d), shall be included in profit or loss. An amount equal and opposite to the net amount of these adjustments shall be transferred to or from the fund for future appropriations (FFA) and also included in profit or loss.

[FRS 103.3.12]

According to the Implementation Guidance, the shareholder's share of projected future bonuses excluded in accordance with (a) above must be calculated as the value of future transfers to shareholders using market consistent financial assumptions and assuming that transfers take place at a level consistent with those assumptions used to calculate the realistic value of liabilities. When an explicit assumption is not required in order to calculate the liabilities then continuation of the current profit-sharing arrangements must be assumed unless the entity has plans to change this approach. Non-economic assumptions must be consistent with those used in determining the realistic value of liabilities. The amount deducted for the shareholder's share of project future bonuses must be taken to the FFA. If shareholders' transfers have been included as part of the realistic value of liabilities (or otherwise included in liabilities) then the amount of such transfers must be taken out of liabilities and included in the FFA, together with any related tax liability. If shareholder transfers have not been set up as part of the realistic value of liabilities or elsewhere, no adjustment is required. [FRS 103.IG1.2].

In determining the realistic value of liabilities, a with-profits fund may take account of the value of future profits expected to arise from any non-participating business that forms part of the with profits fund - sometimes referred to as the value of in-force life assurance business ('VIF'). An entity is permitted to recognise the VIF if that business has been taken into account in measuring the liability because excluding it whilst recognising the realistic value of liabilities in full and valuing the non-statutory participating liabilities on a statutory basis would give rise to an inconsistency in the fund's net assets. The VIF can be recognised even though there is not a direct link between the value of the assets and the amount of the liabilities. Where there is not a direct link between the value of the business and the amount of the realistic liabilities, but the value is taken into account in determining these liabilities, it is appropriate to recognise the total value of the business. Although not separately identifiable, any excess amount over the realistic liabilities will be taken to the FFA. [FRS 103.IG1.3].

The amount recognised under (c) and (d) above may be regarded either as an additional asset, representing the value of future cash flows from the related insurance business or as an adjustment to the measurement of liabilities and the FFA, being the deduction from these items of the obligation to transfer an unrecognised asset or other source of value. FRS 103 requires entities to present this as an adjustment to liabilities, unless this would not be in compliance with the statutory requirements that apply to the entity, in which case the amount is permitted to be recognised as an asset. [FRS 103.IG1.5].

The VIF recognised within assets as described above is determined as the discounted value of future profits expected to arise from the policies, taking into account liabilities relating to the policies measured on the statutory solvency basis. This includes adjustments made onto an MSSB for the purposes of the financial statements (for example, to adjust liabilities to exclude certain additional reserves included in the liabilities when measured on the statutory solvency basis, or where future income needed in the VIF covers deferred acquisition costs included in the statement of financial position). A corresponding adjustment to the value of in-force policies will need to be made in order to ensure a consistent valuation. *[FRS 103.IG1.6]*.

Where with-profits policyholders are entitled to a share of the profits on non-participating business it would generally be expected that the determination of the realistic liabilities would take account directly or indirectly, of the value of future profits on this business. *[FRS 103.IG1.4]*. FRS 103 permits recognition of a VIF asset when the determination of the realistic value of liabilities takes account of this value. It would not be appropriate to recognise this release of capital requirements within the VIF asset presented in the accounts because the MSSB liabilities do not include an allowance for capital. Therefore, the amount of the VIF asset must be adjusted accordingly. *[FRS 103.IG1.7]*. Some contracts written within a with-profits fund may not satisfy FRS 103's definition of an insurance contract or contain a discretionary participation feature. These contracts are therefore accounted within the appropriate section of FRS 102. The VIF recognised for such contracts must be adjusted to reflect the difference in profit recognition bases between the basis used to determine the VIF taken into account in determining the realistic value of liabilities and the profit recognition profile determined by the appropriate section of FRS 102. *[FRS 103.IG1.8]*.

In the case of a mutual, an FFA or retained surplus account is maintained that represents amounts that have not yet been allocated to specific policyholders. For such entities, the adjustments required above will be offset within profit or loss by a transfer directly to or from this FFA or retained surplus account, with the result that overall profit or loss for the year will be unchanged. *[FRS 103.3.13]*.

The realistic value of liabilities must exclude the amount which represents the shareholders' share of future bonuses. Similar adjustments must be made if other amounts due to shareholders would otherwise be included in the realistic value of liabilities. *[FRS 103.3.14]*.

An entity is permitted to recognise the excess of the market value of a subsidiary over the net amounts included in the consolidated financial statements as a deduction from the sub-total of the FFA and liabilities to policyholders in the same way as the VIF described in paragraph IG1.3 of the Implementation Guidance. *[FRS 103.3.15]*. The Implementation Guidance explains that this situation could arise where the subsidiary or associate writes non-participating business and the value of the subsidiary or associate recognised incorporates the VIF of non-participating business written in the subsidiary or associate. The value of the subsidiary or associate is reduced by the subsidiary's or associate's capital requirement as noted in rule 1.3.33(3) of INSPRU as at 31 December 2015. When preparing both consolidated and non-consolidated accounts, the excess value that may be recognised must therefore be taken as the excess before the deduction of the subsidiary or associate's capital requirement. *[FRS 103.IG1.9]*.

Where the amounts on a 'realistic' basis are different from the amounts on the MSSB, a corresponding amount is transferred to or from the FFA, so that there is no effect on equity. The potential shareholders' share corresponding to additional bonuses to policyholders that have been included in the policyholders' liability must be accounted for in the FFA. Since the FFA is presented as a liability, there will generally be no change in the profit for the reporting period except where the adjustments result in a negative balance on the FFA and the entity determines that this negative balance must result in a deduction from equity through profit or loss. *[FRS 103.IG1.10]*.

Where there are options and guarantees relating to policyholders these are required to be measured either at fair value or at an amount estimated using a market-consistent stochastic model. *[FRS 103.IG1.11]*. The Implementation Guidance states that for all entities with long-term business, the best basis for measuring policyholders' options and guarantees is one that includes their time value. Any deterministic approach to valuation of a policy with a guarantee or optionality feature will generally fail to deal appropriately with the time value of an option. Therefore, stochastic modelling techniques must be used to evaluate the range of potential outcomes unless a market value for the option is available. The regulatory framework includes a requirement to value options and guarantees on this basis. For liabilities of businesses not falling within the scope of paragraph 3.1(b) of FRS 103, entities are encouraged, but not required, to adopt these valuation techniques. Where options are not valued on this basis additional disclosures are required (see 11.5.2 below). *[FRS 103.IG1.12]*.

The Implementation Guidance further states that in determining the value of guarantees and options under the regulatory framework, the entity must take into account, under each scenario in the market-consistent stochastic modelling, management actions it anticipates would be taken in response to variations in market variables. Such actions must be realistically capable of being implemented within the timescale assumed in the scenario analysis and be consistent with the entity's published principles and practices of financial

managements ('PPFM'). Examples of such management actions include changing the balance of the investment portfolio between debt instruments and equity, varying the amount charged to policyholders or varying its bonus policy. [FRS 103.IG1.13].

8.4.5 Value of in-force life assurance business held by parents that are not insurers

Banking and other non-insurance entities with insurance subsidiaries sometimes account for the insurance business in their consolidated financial statements on an embedded value or similar basis under which, in addition to the value of the retained surplus in the insurance subsidiary, an asset is recognised for the VIF. The continuation of such a practice is permitted only if the valuation policy is amended, if necessary, to exclude from the measurement of the value of the future profit to shareholders any value attributable to future investment margins. [FRS 103.3.16].

No value must be attributed to in-force long-term insurance business other than:

- In accordance with the requirements above and at 8.4.4.B
- Or
- Amounts recognised as an intangible asset as part of the allocation of fair values under acquisition accounting as discussed at 10 below [FRS 103.3.17]

When the value attributable to a VIF asset recognised by a banking or other non-insurance entity in respect of its insurance subsidiaries in the consolidated financial statements includes an amount in relation to non-participating business written in a with-profits fund or an interest of a with-profits fund in a subsidiary or associate an adjustment must be made to eliminate any double-counting of the same VIF. [FRS 103.3.18].

8.5 Recognition and measurement requirements for general insurance business

Extract from FRS 103

Appendix I

Glossary

general insurance business

Insurance contracts (including reinsurance) falling within one of the classes of insurance specified in Part I of Schedule 1 to the Financial Services and Markets Act 2000 (Regulated Activities) Order 2001 (SI 2001/544).

Unlike for long-term business, FRS 103 does not contain any recognition and measurement requirements for general business. However, the Implementation Guidance provides guidance on applying the principles of FRS 102 and FRS 103, as well as guidance on implementing certain requirements of Schedule 3 to the Regulations (e.g., in respect of discounting) to general insurance business as follows:

- Gross written premiums (see 8.5.1 below)
- Portfolio premiums and claims (see 8.5.2 below)
- Claims provisions (see 8.5.3 below)
- Discounting of claims provisions (see 8.5.4 below)
- Unexpired risks provision (see 8.5.5 below)
- Equalisation reserves (see 8.5.6 below)
- And
- Deferred acquisition costs (see 8.5.7 below)

8.5.1 Written and earned premiums

The Implementation Guidance states that underwriting results must be determined on an annual basis, notwithstanding that this will normally require some estimation to be made at the reporting date, particularly with regard to outstanding claims. [FRS 103.IG2.1].

Written premiums must comprise the total premiums receivable for the whole period of cover provided by the contracts entered into during the reporting period, regardless of whether these are wholly due for payment in the reporting period, together with any adjustments arising in the reporting period to such premiums receivable in respect of business written in prior reporting periods. [FRS 103.IG2.2].

The Implementation guidance further states that regardless of the method by which commission is remitted (e.g., by an intermediary), premiums must be grossed up for the commission, if necessary, on an estimated basis, as this correctly reflects the contractual arrangements in force. This also applies where the premiums are determined by an intermediary. Where, however, policies are issued to intermediaries on a wholesale basis and the intermediaries are themselves responsible for setting the final amount payable by the insured without reference to the insurer, the written premium will normally comprise the premium payable to the insurer and grossing up will be inappropriate unless it reflects the contractual position. [FRS 103.IG2.3].

Written premiums must include an estimate for pipeline premiums (i.e., premiums written but not reported to the undertaking by the reporting date) relating only to those underlying contracts of insurance where the period of cover has commenced prior to the reporting date. [FRS 103.IG2.4]. Under some policies written premiums may be adjusted retrospectively in the light of claims experience or where the risk covered cannot be assessed accurately at the commencement of cover. Where written premiums are subject to an increase retrospectively, recognition of potential increases must be deferred until the additional amount can be ascertained with reasonable certainty. Where written premiums are subject to a reduction, a remeasurement taking account of such a reduction must be made as soon as the entity has an obligation to the policyholder. [FRS 103.IG2.6].

Where an insurer has offered renewal and is therefore contractually liable to pay claims if renewal is subsequently confirmed by the policyholder, it must recognise the renewal premium in income, subject to making a provision for anticipated lapses and the necessary proportion of unearned premiums.

[FRS 103.IG2.5].

Additional or return premiums must be treated as a remeasurement of the initial premium. Where a claims event causes a reinstatement premium to be paid, the recognition of the reinstatement premium and the effect on the initial premium must reflect the respective incidence of risk attaching to those premiums in determining under the annual accounting basis that proportion earned and unearned at the reporting date.

[FRS 103.IG2.7].

Written premiums must be recognised as earned premiums over the period of the policy having regard to the incidence of risk. Time apportionment of the premium is normally appropriate if the incidence of risk is the same throughout the period of cover. If there is a marked unevenness in the incidence of risk over the period of cover, a basis which reflects the profile of risk must be used. The proportion of the written premiums relating to the unexpired period of these policies must be carried forward as an unearned premiums provision at the reporting date. [FRS 103.IG2.8].

Schedule 3 requires that the provision for unearned premiums must in principle be calculated separately for each insurance contract, save that statistical methods (and in particular proportional and flat rate methods) may be used where they may be expected to give approximately the same results as individual calculations. Where the pattern of risk varies over the life of a contract, this must be taken into account in calculation methods. [3 Sch 50].

8.5.2 Portfolio premiums and claims

Extract from FRS 103

Appendix I

Glossary

portfolio premiums	Amounts payable by one insurer to another in consideration for a contract whereby the latter agrees to assume responsibility for the claims arising on a portfolio of in-force business written by the former from a future date until the expiry of the policies.
portfolio claims	Amounts payable by one insurer to another in consideration for a contract whereby the latter agrees to assume responsibility for the unpaid claims incurred by the former prior to a date specified in the contract.

A portfolio transfer is different from reinsurance where the reinsurer agrees to pay losses suffered by the reinsured rather than assuming responsibility for the losses.

The Implementation Guidance states that portfolio premiums payable must be included within premiums for reinsurance outwards in the transferor's financial statements but deferred to subsequent reporting periods as appropriate in respect of any unexpired period of risk at the reporting date. In the transferee's financial statements, they must be included within written premiums with any amount unearned at the reporting date being carried forward in the unearned premiums provision. [FRS 103.IG2.29].

Portfolio claims transfers must be recognised in the transferor's financial statements as payments in settlement of the claims transferred in accordance with the requirements of (note 4) to the profit and loss account (see 8.3.4 above). [FRS 103.IG2.30]. Similarly, the consideration receivable by the transferee undertaking must be credited to claims payable in the statement of financial position. [FRS 103.IG2.31]. Any claims portfolio transfers, which materially affect the transferee undertaking's exposure to risk, must be disclosed in the notes to the financial statements. [FRS 103.IG2.32].

8.5.3 Claims provisions

Schedule 3 requires that technical provisions must at all times be sufficient to cover any liabilities arising out of insurance contracts as far as can reasonably be foreseen. [3 Sch 49].

A provision must in principle be computed separately for each claim on the basis of the costs still expected to arise, although statistical methods may be used if they result in an adequate provision having regard to the nature of the risks. The provision must also allow for claims incurred but not reported by the balance sheet date, the amount of the allowance being determined having regard to past experience as to the number and magnitude of claims reported after previous balance sheet dates. All claims settlement costs (whether direct or indirect) must be included in the calculation of the provision. [3 Sch 53(1), 3 Sch 53(2), 3 Sch 53(3), FRS 103.IG2.9].

Recoverable amounts arising out of salvage or subrogation must be estimated on a prudent basis and either deducted from the provision for claims outstanding (in which case if the amounts are material they must be shown in the notes to the accounts) or shown as assets. [3 Sch 53(4)]. Once potential recoveries qualify for recognition as separate assets (e.g., property, plant and equipment) they must be accounted for as such under the appropriate section of FRS 102.

In determining the estimate of the amount required to settle the obligation at the reporting date, the Implementation Guidance states that, in relation to an entity's existing accounting policies, the level of claims provisions must continue to be set such that no adverse run-off deviation is anticipated. When estimating the amount required to settle the obligation at the reporting date, consideration must be given to the probability and magnitude of future experience being more adverse than previously assumed. An entity must not introduce this practice when changing its existing accounting policies or developing a new accounting policy. [FRS 103.IG2.10].

The Implementation Guidance further states that provision must be made at the reporting date for all claims handling expenses to cover the anticipated future costs of negotiating and settling incurred claims, whether reported or not, up to the reporting date. Separate provisions must be assessed for each category of business. [FRS 103.IG2.11]. When determining the provision for claims handling expenses, unless clear evidence is available to the contrary, it must be assumed that the activity of the claims handling department will remain at its current level and therefore that the contribution to its costs from future new business will remain at the same level. [FRS 103.IG2.12]. The provision for claims handling expenses must be included within the provision for claims outstanding but do not need separate disclosure. Claims handling expenses incurred must be included within claims incurred in the technical account for general business. [FRS 103.IG2.13].

8.5.4 Discounting of claims provisions

Schedule 3 prohibits implicit discounting or deductions from general insurance claims provisions. [3 Sch 53(7)].

Schedule 3 permits explicit discounting of general insurance claims subject to conditions. These conditions are: [3 Sch 54]

- The expected average interval between the date for settlement of the claims being discounted and the accounting date must be at least four years.
- The discounting or deductions must be effected on a recognised prudential basis.
- When calculating the total cost of settling claims, the company must take account of all factors that could cause increases in that cost.

- The company must have adequate data at its disposal to construct a reliable model of the rate of claims settlements.
And
- The rate of interest used for discounting must not exceed a rate prudently estimated to be earned by assets of the company which are appropriate in magnitude and nature to cover the provisions for claims being discounted during the period necessary for the payment of such claims and must not exceed either a rate justified by the performance of such assets over the preceding five years or a rate justified by the performance of such assets during the year preceding the balance sheet date.

The Implementation Guidance to FRS 103 states that the four-year test described above must be applied by reference to the end of each reporting period in respect of all claims outstanding at that date, and not just once in the accounting period in which the claims were incurred. [FRS 103.IG2.14]. The calculation of the average interval must be weighted on the basis of expected claims before any deduction for reinsurance. [FRS 103.IG2.16].

When applied, explicit discounting must typically be adopted by reference to categories of claims (with similar characteristics but not solely by length of settlement pattern), rather than to individual claims. [FRS 103.IG2.15].

In considering if there is adequate data available to construct a reliable model of the rate of claims settlement, the principal factors to be considered are the amount of future claims settlements, the timing of future cash flows and the discount rate. Procedures must be undertaken to assess the accuracy of the claims settlement pattern predicted by the model in prior periods. Adjustments must be made to the current model, as appropriate, to reflect the out-turn and conclusions of analyses in the previous period. Cash flows must be modelled gross and net of reinsurance as reinsurance recoveries may arise later than the related claims payments. [FRS 103.IG2.17].

To determine an appropriate discount rate, an entity must consider the returns achieved over the period in question to the extent that this is relevant to the future. [FRS 103.IG2.18].

The effect of the unwinding of discounted claims provisions during a reporting period must be disregarded when determining if material adverse run-off deviations have occurred that require disclosure under (Note 4) of the Notes to the Profit and Loss Account format in Schedule 3 to the Regulations (see 8.3.4 above). [FRS 103.IG2.19].

Any unwinding of the discount on general insurance business claims provisions in a reporting period must be recorded under the investment income or gains headings in the corresponding sections of the income statement (referred to as the profit and loss account in the CA 2006). Where material, a separate disclosure must then be provided to indicate the amount of the investment return associated with the unwinding of the discount. [FRS 103.IG2.20].

8.5.5 Unexpired risks provision

The Regulations require that the provision for unexpired risks must be computed on the basis of claims and administrative expenses likely to arise after the end of the financial year from contracts concluded before that date, in so far as their estimate value exceeds the provision for unearned premiums and any premiums receivable under those contracts. [3 Sch 51].

The Implementation Guidance below helps apply the requirements of paragraphs 2.14 to 2.19 of FRS 103 and the principles of FRS 102 Section 21 and Section 32 *Events after the End of the Reporting Period* to general insurance contracts.

When the estimated value of claims and expenses attributable to the unexpired periods of policies in force at the reporting date exceeds the unearned premiums provision in relation to such policies after deduction of any deferred acquisition costs, an unexpired risks provision must be established. If material, this provision must be disclosed separately either in the statement of financial position or in the notes to the financial statements. [FRS 103.IG2.21].

The assessment of whether an unexpired risks provision is necessary must be made for each grouping of business which is managed together. Any unexpired risks surpluses and deficits within that grouping must be offset in that assessment. [FRS 103.IG2.22]. For this purpose, business must only be regarded as 'managed together' where no constraints exist on the ability to use assets in relation to such business to meet any of the associated liabilities and either:

- There are significant common characteristics, which are relevant to the assessment of risk and setting of premiums for the business lines in question.
Or

- The lines of business are written together as separate parts of the same insurance contracts.

[FRS 103.IG2.23].

For delegated authorities (i.e., where the insurer is unable to influence the terms on which policies are issued) a provision must be established at the reporting date for any anticipated losses arising on policies issued in the period after the reporting date which the delegated authority entered into before that date.

[FRS 103.IG2.24].

The determination of whether an unexpired risks provision is required, and if so its amount, must be based on information available at the reporting date. This assessment may include evidence of relevant previous claims experience on similar contracts adjusted for known differences, events not expected to recur and, where appropriate, the normal level of seasonal claims if the previous reporting period was not typical in this respect. However, the assessment must not take into account any new claims events occurring after the reporting date, as these are non-adjusting events. In accordance with paragraph 32.10 of FRS 102, exceptional claims events occurring subsequent to the end of the reporting period but before the financial statements are authorised for issue must be disclosed in the notes to the financial statements along with an estimate of their financial effect. Where there is uncertainty regarding future events, in accordance with paragraph 2.9 of FRS 102, an insurer must apply a degree of caution in the exercise of the judgements needed in making the estimates required such that liabilities are not understated. [FRS 103.IG2.25].

When calculating the best estimate of the amount required to settle future claims related to the unexpired periods of risk on policies in force at the reporting date, the future investment return arising on investments supporting the unearned premiums provision and the unexpired risks provision may be taken into account. For this calculation, the deferred acquisition costs must be deducted from the unearned premiums provision. The investment return will be based on the expected earnings from the investments held until the future claims are settled. [FRS 103.IG2.26].

Deferred acquisition costs must not be written off, either fully or partially, to profit or loss as being irrecoverable for the purpose of reducing or eliminating the need for an unexpired risks provision.

[FRS 103.IG2.27].

In accordance with the Schedule 3 balance sheet format, the gross amount for unexpired risk provisions must be presented under the liabilities item C.6. 'Other technical provisions', with the reinsurers' share presented under the assets item Da.5. 'Other technical provisions'.

8.5.6 Equalisation and catastrophe provisions

An entity is allowed to recognise a liability for possible future claims only if permitted by the regulatory framework that applies to the entity. However, following the implementation of the Solvency II Directive, with effect from 1 January 2016 the UK regulatory framework does not permit equalisation or catastrophe provisions.

Where an entity has equalisation or catastrophe provisions (e.g., in an overseas subsidiary where these are permitted by the local regulatory framework) the presentation of such liabilities must follow the requirements of the legal framework that applies to the entity. [FRS 103.2.13(a)]. For disclosure requirements see 11.2.1.A below.

8.5.7 Deferred acquisition costs

The Implementation Guidance for applying the requirements of Note (17) to the balance sheet (see 8.2.7 above) states that acquisition costs must be deferred in line with the unearned premiums provision. The proportion of acquisition costs to be deferred will be the same proportion of the total acquisition costs as the ratio of unearned premiums to gross written premiums for the class of business in question. For this purpose, acquisition expenses must be allocated to classes of business. Where this is not possible for reinsurance business inwards an estimate must be made. [FRS 103.IG2.34].

Advertising costs must not be deferred unless they are directly attributable to the acquisition of new business. [FRS 103.IG2.35].

Related reinsurance commissions deferred must not be netted against deferred acquisition costs but must be shown as liabilities in the statement of financial position. [FRS 103.IG2.36].

8.6 Insurance business in run-off

Where a decision has been made to cease underwriting the whole, or a material category, of the insurance business, that business does not constitute a discontinued operation under Section 5 of FRS 102.

[FRS 103.IG2.37].

Notwithstanding the above, a decision to cease underwriting the whole, or a material category, of insurance business may be a restructuring to which Section 21 of FRS 102 applies.

8.7 Allocation of investment return between technical and non-technical accounts

As required by note 10 to the profit and loss account (see 8.3.10 above) for long-term business, the investment return (which includes movements in realised and unrealised investment gains and losses) and related tax charges on assets representing reserves which are held within the long-term fund for solvency purposes under the PRA rules, must first be allocated to the long-term business technical account.

[FRS 103.IG2.53]. General business investment return must either be presented in the non-technical account or allocated between the technical and non-technical account. [FRS 103.IG2.53].

FRS 103 allows, but does not mandate, a presentation format that helps users of the financial statements identify operating profit or loss based on the longer-term rate of investment return. This return may be recorded within the general business and long-term business technical accounts and may also be disclosed separately as part of the total operating profit. [FRS 103.IG2.64].

When investment return is allocated, it must be on one of the following bases:

- The longer-term rate of return basis (see 8.7.1 to 8.7.3 below).
- Or
- An allocation of the actual investment return on investments supporting the general insurance technical provisions and associated equity must be made from the non-technical account to the technical account for general business. [FRS 103.IG2.65].

The allocation of investment return from the technical account for long-term business to the non-technical account must be such that the investment return remaining in the technical account for long-term business on investments directly attributable to owners reflects the longer-term rate of return on these investments. [FRS 103.IG2.67]. The allocation may be of a negative amount which increases rather than decreases the amount of investment return included in the long-term business technical account. [FRS 103.IG2.69]. The allocation must be included in the long-term business technical account and the non-technical account before any attributable tax. The tax attributable to the allocated investment return must be deducted from the tax attributable to long-term business and added to the tax on profit or loss on ordinary activities.

[FRS 103.IG2.70].

The allocation from the non-technical account to the technical account for general business must be based on the longer-term rate of investment return on investments that supports the general insurance technical provisions and all the relevant equity. [FRS 103.IG2.68]. Where it is necessary for the purpose of reflecting the longer-term rate of investment return in the technical account for general business, the allocation to the technical account may exceed the actual investment return of the reporting period on the corresponding investments. [FRS 103.IG2.69].

To ensure consistent treatment for an entity transacting both general and long-term insurance business:

- Where the longer-term rate of return basis is used, it must be applied to both the general and long-term insurance business.
- And
- Where an allocation of the actual investment return on investments supporting the general business technical provisions and associated equity is made from the non-technical account to the technical account for general business, no allocation of investment return must be made from the technical account for long-term business to the non-technical account. [FRS 103.IG2.66].

Guidance is provided on applying the requirements above as follows:

- Equities and property (see 8.7.1 below)
- Fixed-income securities (see 8.7.2 below)
- Derivatives (see 8.7.3 below)
- And
- Attributing tax to the transfer to the non-technical account (see 8.7.4 below)

8.7.1 The longer-term rate of return for equities and properties

The longer-term investment return on equities and properties must be determined using one of the following methods: [FRS 103.IG2.72]

- Grossing-up actual income earned for each asset class by a factor representing the longer term rate of investment return divided by an assumed long-term dividend or rental yield (based on the assumption that income will reflect the mix of assets held during the reporting period). Adjustments will be required for special factors which may distort the underlying yields of the portfolio such as (in the case of equities), special or stock dividends and share buy-backs.

Or

- Applying the longer-term rate of return to investible assets held during the period (taking account of new money invested and changes in portfolio mix) by reference to the quarterly or monthly weighted average of each group of assets after excluding the effect of short-term market movements.

The longer-term rate of return must be determined separately for equities and property and for each material currency in which relevant investments are held. [FRS 103.IG2.73]. Considering the entity's investment policy, the longer-term rate of investment return must reflect a combination of historical experience and current market expectations for each geographical area and each category of investments. The selected rates must be best estimates based on historical market real rates of return and current inflation expectations, taking into account to the following factors, where appropriate: [FRS 103.IG2.74]

- Comparison of the business's actual returns and market returns over the previous five years or such longer period as may be appropriate.
- Longer term rates of return currently used in the business for other purposes, for example, product pricing, with-profits bonus policy, and pensions funding.
- The rate used for the purpose of achieved profits method reporting.
- Consensus economic and investment market forecasts of investment returns.

And

- Any political and economic factors which may influence current returns.

Rates of return must be set with a view to ensuring that longer term returns credited to operating results do not consistently exceed or fall below actual returns being earned. Any decline in the longer-term return expectations must be recognised immediately by reducing the assumed rate of return. Rates used must be reviewed at least on an annual basis although frequent changes are not anticipated. [FRS 103.IG2.75].

8.7.2 The longer-term rate of return for fixed income securities

The longer-term investment return on fixed income securities may be determined using one of the following methods: [FRS 103.IG2.76]

- A redemption yield calculated so that any excess of the purchase price over the amount repayable on maturity is recognised in profit or loss by instalments so that it is written off by the time that the security is redeemed.

Or

- Amortised cost with realised gains and losses subject to continuing amortisation over the remaining period to the maturity date.

The Implementation Guidance explains that the longer-term return may be based on interest earned where the net effect of amortisation would be immaterial. In the case of irredeemable fixed interest securities and short-term assets, the allocated longer-term rate of investment return must be the interest income receivable in respect of the reporting period. [FRS 103.IG2.76].

8.7.3 The longer-term rate of return for derivatives

The Implementation Guidance states that where derivatives have a material effect and are used to adjust exposure to the various classes of instruments, the calculation of the longer-term rate of return for equities and properties must be adjusted to reflect the underlying economic exposure. [FRS 103.IG2.77].

8.7.4 Attributing tax to the transfer to the non-technical account

The Implementation Guidance notes that taxable profits for UK entities with long-term insurance business are derived from pre-tax profits reported in the financial statements. The tax expense (income) must be allocated to the same account (technical or non-technical) as the transaction or other event that resulted in the tax expense (income) making the transfer from (to) the long-term business technical account net of tax. There is therefore a requirement for the tax attributable to the transfer to be brought into account in arriving at profit before tax in the non-technical account. [FRS 103.IG2.79].

Entities must determine the amount to be brought into account in the non-technical account in respect of the transfer from (to) the long-term business technical account using a method which is consistent with the approach in paragraph 29.22 of FRS 102 which requires tax to be presented in the same component of total comprehensive income as the transaction or other event that resulted in the tax expense or income. This must fairly represent that part of the tax expense (income) in the long-term business technical account which is based on pre-tax accounting profits or on timing differences in the recognition of such profits for accounting and tax purposes. [FRS 103.IG2.80].

The reconciliation of the tax expense included in profit or loss to the profit or loss on ordinary activities before tax multiplied by the applicable tax rate required by paragraph 29.27(b) of FRS 102 applies only to the tax expense (income) that appears in the non-technical account. [FRS 103.IG2.81].

8.8 Liability adequacy testing

FRS 103 requires an insurer to assess at the end of each reporting period whether its recognised insurance liabilities are adequate, using current estimates of future cash flows under its insurance contracts. If that assessment shows that the carrying amount of its insurance liabilities (less related deferred acquisition costs and related intangible assets, such as those acquired in a business combination or portfolio transfer and discussed at 10 below) is inadequate in the light of the estimated future cash flows, the entire deficiency must be recognised in profit or loss. [FRS 103.2.13(b), FRS 103.2.14].

The purpose of this requirement is to prevent material liabilities being unrecorded.

8.8.1 Using a liability adequacy test under existing accounting policies

FRS 103 does not impose additional requirements if the insurer's liability adequacy test meets the specified minimum requirements. The minimum requirements are the following: [FRS 103.2.15]

- The test considers current estimates of all contractual cash flows, and of related cash flows such as claims handling costs, as well as cash flows resulting from embedded options and guarantees.

And

- If the test shows that the liability is inadequate, the entire deficiency is recognised in profit or loss.

If the insurer's liability adequacy test meets these requirements, then the test must be applied at the level of aggregation specified in that test. [FRS 103.2.17].

The standard does not specify:

- What criteria in the liability adequacy test determine when existing contracts end and future contracts start.
- At what level of aggregation the test must be performed.
- Whether or how the cash flows are discounted to reflect the time value of money or adjusted for risk and uncertainty.
- Whether the test considers both the time value and intrinsic value of embedded options and guarantees.
- Whether additional losses recognised because of the test are recognised by reducing the carrying amount of deferred acquisition costs or by increasing the carrying amount of the related insurance liabilities.

Or

- Whether the liability adequacy test can be performed net of expected related reinsurance recoveries.

How we see it

For UK general business, applying the requirements for the unexpired risks provision (see 8.5.5 above) would normally satisfy the criteria above. For UK long-term business, the measurement requirements described at 8.4.4 above would normally satisfy the criteria above.

8.8.2 Using the liability adequacy test specified in FRS 103

If an insurer's accounting policies do not require a liability adequacy test that meets the minimum criteria discussed in 8.8.1 above, it must: *[FRS 103.2.16]*

- (a) Determine the carrying amount of the relevant insurance liabilities less the carrying amount of:
 - (i) Any related deferred acquisition costs.
 - And
 - (ii) Any related intangible assets such as those acquired in a business combination or portfolio transfer. However, related reinsurance assets are not considered because an insurer assesses impairment for them separately (see 8.11 below).
- (b) Determine whether the carrying amount described in (a) is less than the carrying amount that would be required if the relevant insurance liabilities were within the scope of Section 21 of FRS 102. If it is less, the entire difference must be recognised in profit or loss and the carrying amount of the related deferred acquisition costs or related intangible assets must be reduced or the carrying amount of the relevant insurance liabilities must be increased.

This test must be performed at the level of a portfolio of contracts that are subject to broadly similar risks and managed together as a single portfolio. *[FRS 103.2.17]*. Future investment margins must be reflected in the calculation if, and only if, the carrying amounts of the liabilities and any related deferred acquisition costs and intangible assets also reflect those margins. *[FRS 103.2.18]*.

Section 21 of FRS 102 requires an amount to be recognised as a provision that is the best estimate of the expenditure required to settle the present obligation. This is the amount that an entity would rationally pay to settle the obligation at the balance sheet date or transfer it to a third party at that time. *[FRS 102.21.7]*.

Section 21's requirements are potentially more prescriptive and onerous than those applying if an insurer has an existing liability adequacy test which meets the minimum FRS 103 criteria discussed at 8.8.1 above.

8.8.3 Interaction between the liability adequacy test and shadow accounting

FRS 103 does not address the interaction between the liability adequacy test (LAT) and shadow accounting (discussed at 9.5 below). The liability adequacy test requires all deficiencies to be recognised in profit or loss whereas shadow accounting permits certain losses to be recognised in other comprehensive income if they are directly affected by movements in assets which were recognised in other comprehensive income.

How we see it

An entity can apply shadow accounting to offset an increase in insurance liabilities to the extent that the increase is caused directly by market interest rate movements that lead to changes in the value of investments that are recognised directly in other comprehensive income. Although FRS 103 does not specify the priority of shadow accounting over the LAT, because the LAT is to be applied as a final test to the amount recognised under the insurer's accounting policies, it follows that shadow accounting has to be applied first.

8.9 Insurance liability derecognition

An insurance liability, or a part of such a liability, can be removed from the balance sheet (derecognised) when, and only when, it is extinguished i.e., when the obligation specified in the contract is discharged, cancelled or expires. *[FRS 103.2.13(c)]*. This requirement is identical to that contained in Section 11 of FRS 102 for the derecognition of financial liabilities. *[FRS 102.11.36]*.

Accordingly, insurance liabilities must not normally be derecognised as a result of entering into a reinsurance contract because this does not usually discharge the insurer's liability to the policyholder. This applies even if the insurer has delegated all claims settlement authority to the reinsurer or if a claim has been fully reinsured.

In respect of a structured settlement arrangement falling within one of the cases referred to in sections 731 to 734 of the Income Tax (Trading and Other Income) Act 2005 where either; (a) an annuity is purchased by a general insurance undertaking under which the structured settlement beneficiary is the annuitant; or (b) an annuity previously purchased by a general insurance undertaking for its own account to fund the periodic payments under a structured settlement agreement is assigned to the structured settlement beneficiary, the general insurance company will normally remain liable to the policyholder should the annuity provider fail. An annuity, paid by an annuity provider, which exactly matches the amount and timing of this liability must be recognised as an asset and measured at the same amount as the related obligation. *[FRS 103.IG2.33]*.

Derecognition must be distinguished from remeasurement. The carrying amounts of many insurance liabilities are estimates and an insurer must re-estimate its claims liabilities, and hence change their carrying amounts, if that is required by its accounting policies. However, in certain situations, the distinction between the two concepts can be blurred, for example where there is a dispute or other uncertainty over the contractual terms of an insurance policy.

How we see it

FRS 103 contains no guidance on when or whether a modification of an insurance contract might cause derecognition of that contract. This will be a matter of judgement based on facts and circumstances. However, under the GAAP hierarchy in paragraph 10.5 of FRS 102, insurers must consider the applicability of guidance elsewhere in FRS 102, such as guidance on circumstances when a modification of a financial liability might cause that liability to be derecognised.

8.10 Offsetting of insurance and related reinsurance contracts

FRS 103 prohibits offsetting of: *[FRS 103.2.13(d)]*

- Reinsurance assets against the related insurance liabilities.
- Or
- Income or expense from reinsurance contracts against the expense or income from the related insurance contracts.

Offsetting of insurance and related reinsurance contracts is prohibited because a cedant normally has no legal right to offset amounts due from a reinsurer against amounts due to the related underlying policyholder. As a result, balances due from reinsurers must be shown as assets in the balance sheet, whereas the related insurance liabilities must be shown as liabilities. Because of the relationship between the two, some insurers provide linked disclosures in the notes to their financial statements.

This prohibition broadly aligns the offsetting criteria for insurance assets and liabilities with those required for financial assets and financial liabilities under FRS 102, which requires that financial assets and financial liabilities can only be offset where an entity: *[FRS 102.11.38A]*

- Has a legally enforceable right to set-off the recognised amounts.
- And
- Intends to settle on a net basis, or to realise both the asset and settle the liability simultaneously.

The FRS 103 requirements, however, appear to be less flexible than those in Section 11 of FRS 102 in that they provide no circumstances in which offsetting can be acceptable. So, for example, 'pass through' contracts that provide for reinsurers to pay claims direct to the underlying policyholder would still have to be shown gross in the balance sheet. Section 11 of FRS 102 also does not address offsetting in the income statement.

8.11 Impairment of reinsurance assets

A reinsurance asset is impaired if, and only if:

- There is objective evidence, as a result of an event that occurred after initial recognition of the asset, that the cedant may not receive all amounts due to it under the terms of the contract.
- And
- That event has a reliably measurable impact on the amounts that the cedant will receive from the reinsurer.

Where a reinsurance asset is impaired, its carrying amount must be reduced accordingly and the impairment loss recognised in profit or loss. *[FRS 102.2.13(e), FRS 103.2.19]*.

FRS 103 does not provide any specific indicators of impairment relating to reinsurance assets. However, both Section 11 of FRS 102 and IAS 39 use an incurred loss impairment model for financial assets, and both provide various indicators of impairment for financial assets, such as the significant financial difficulty of the obligor and a breach of contract, such as a default in interest or principal payments. *[FRS 102.11.22, IAS 39.59]*.

How we see it

In the absence of impairment indicators in FRS 103, an insurer could refer to Section 10 of FRS 102 and use the hierarchy to refer to impairment indicators for financial instruments as a guide to determining whether reinsurance assets are impaired.

IFRS 9 (as permitted by paragraphs 11.2(b) and 12.2(b) of FRS 102) uses an expected loss model rather than an incurred loss model. However, adoption of IFRS 9 does not result in any consequential amendments to FRS 103 in respect of impairment of reinsurance assets. Therefore, even if IFRS 9 is applied for recognition and measurement of financial assets, insurers must continue to use an incurred loss impairment model for reinsurance assets notwithstanding the fact that an expected loss model will be used for financial assets within the scope of IFRS 9.

8.12 Reporting foreign exchange transactions in the functional currency

Paragraph 30.9 of FRS 102 states that, at the end of each reporting period, an entity must translate foreign currency monetary items using the closing rate and non-monetary items using the exchange rate at the date of the transaction or the date when fair value was determined (for non-monetary items measured at fair value). For the purposes of applying the requirements of Section 30 of FRS 102 an entity must treat all assets and liabilities arising from an insurance contract as monetary items. [FRS 103.2.26].

The Basis for Conclusions states that the purpose of this requirement is to avoid accounting mismatches caused in the income statement. This mismatch would have arisen because some foreign currency assets and liabilities related to insurance contracts which are not monetary items (e.g., deferred acquisition costs and unearned premiums) would otherwise have been recognised at historic exchange rates whereas insurance assets and liabilities that are monetary items (e.g., claims liabilities) are retranslated at each reporting date. [FRS 103.BC24, FRS 103.BC25].

8.13 Accounting policy matters not specifically addressed by FRS 103

8.13.1 Derecognition of insurance and reinsurance assets

FRS 103 does not address the derecognition of insurance or reinsurance assets. Although not carried over to FRS 103, the Basis of Conclusions of IFRS 4 states that the IASB could identify no reason why the derecognition criteria for insurance assets must differ from those for financial assets accounted for under IAS 39 (IFRS 9). [IFRS 4.BC105].

How we see it

It would seem reasonable under Section 10 of FRS 102 for insurers to use the hierarchy to apply the derecognition criteria for financial assets in Section 11 of FRS 102 (or IAS 39 or IFRS 9 if applied) to insurance and reinsurance assets.

8.13.2 Impairment of insurance assets

FRS 103 does not specify the impairment model to be used for receivables arising under insurance contracts that are not reinsurance assets (discussed at 8.11 above). An example of these would be premium receivables from policyholders. Insurers must therefore apply their existing accounting policies for determining impairment provisions for these assets, although an impairment model similar to that required by the applicable model being applied for financial assets (depending on accounting policy choice for recognition and measurement) would appear to be appropriate. As FRS 103 does not mandate an impairment model for insurance assets, there is no prohibition on an entity applying the recognition and measurement criteria of IFRS 9 (as permitted by Sections 11 and 12 of FRS 102) from using an expected loss impairment model for insurance assets.

8.13.3 Gains and losses on buying reinsurance

FRS 103 does not restrict the recognition of gains on entering into reinsurance contracts but instead requires specific disclosure of the gains and losses that arise (see 11.2.2 below).

Insurers are therefore permitted to continue applying their existing accounting policies to gains and losses on the purchase of reinsurance contracts and are also permitted to change those accounting policies according to the criteria discussed at 9 below.

8.13.4 Policy loans

Some insurance contracts permit the policyholder to obtain a loan from the insurer with the insurance contract acting as collateral for the loan. FRS 103 is silent on whether an insurer must treat such loans as a prepayment of the insurance liability or as a separate financial asset. Consequently, insurers can either present these loans either as separate assets or as a reduction of the related insurance liability depending on previous GAAP requirements.

8.13.5 Investments held in a fiduciary capacity

Insurers often make investments on behalf of policyholders as well as on behalf of shareholders. In some cases, this can result in the insurer holding an interest in an entity which, either on its own, or when combined with the interest of the policyholder, gives the insurer control of that entity (as defined by Section 9 of FRS 102).

9 Changes in accounting policies

As discussed at 3.3 above, an entity is permitted by FRS 103 to change its existing accounting policies upon adoption of FRS 103. In addition, an insurer may change its accounting policies at any time and there is no requirement for an insurer to continue to use the recognition and measurement requirements for long-term insurance business (see 8.4 above) or the implementation guidance contained in respect of recognition and measurement of general insurance business (see 8.5 above).

However, an insurer may change its accounting policies for insurance contracts if, and only if, the change makes the financial statements more relevant to the economic decision-making needs of users and no less reliable, or more reliable and no less relevant to those needs. An insurer must judge relevance and reliability by the criteria in paragraph 10.4 of FRS 102 (see Chapter 9 at 3.3) and the qualitative characteristics of information in financial statements set out in Section 2 *Concepts and Pervasive Principles* of FRS 102. [FRS 103.2.3].

FRS 103 observes that one basis for changing accounting policies might be to enable them to be more consistent with the rules for the recognition and measurement of technical provisions in the PRA Rulebook, which transposes the Solvency II Directive. In doing so an entity must make appropriate adjustments to the rules to meet the requirements of paragraph 2.3 of FRS 103. [FRS 103.2.3A]. This is consistent with the requirements of the Regulations for the computation of the long-term business provision to have due regard to generally accepted actuarial principles (see 8.4.4 above).

These conditions for changing accounting policies described above apply both to changes made by an insurer that already applies FRS 103 and to changes made by an insurer adopting FRS 103 for the first time. [FRS 103.2.2].

FRS 103 exempts an insurer from applying paragraphs 10.4 to 10.6 of FRS 102, which explain how management uses its judgement in developing an accounting policy if no FRS applies specifically to a transaction, other event or condition, to insurance contracts issued and reinsurance contracts held, including related acquisition costs and intangible assets. [FRS 103.2.12]. However, to justify changing its accounting policies for insurance contracts, an insurer must show that the change brings its financial statements closer to meeting the criteria in paragraph 10.4 of FRS 102, but the change need not achieve full compliance with those criteria. [FRS 103.2.4]. The following specific issues are discussed below:

- Continuation of existing practices (see 9.1 below)
 - Current market interest rates (see 9.2 below)
 - Prudence (see 9.3 below)
 - Future investment margins (see 9.4 below)
 - Shadow accounting (see 9.5 below)
- And
- Redesignation of financial assets (see 9.6 below)

There is often a fine line between changing an accounting policy and changing an accounting estimate and insurers must refer to the guidance in Section 10 (see Chapter 9 at 3.4) on this matter. When it is difficult to distinguish a change in accounting policy from a change in accounting estimate, the change is treated as a change in accounting estimate. [FRS 102.10.15].

9.1 Continuation of existing practices

An insurer may continue the following practices but the introduction of any of them after FRS 103 has been adopted is not permitted because it does not satisfy paragraph 10.8(b) of FRS 102 (i.e., it does not provide reliable and more relevant information). [FRS 103.2.6].

9.1.1 Measuring insurance liabilities on an undiscounted basis

An insurer is only permitted to change its accounting policies to measure insurance liabilities on an undiscounted basis if otherwise required by Schedule 3 to the Regulations (or other legal framework that applies to the entity). [FRS 103.2.6(a)].

Schedule 3 to Regulations permits explicit discounting for general insurance business only subject to certain conditions (see 8.5.4 above).

9.1.2 Measuring contractual rights to future investment management fees in excess of their fair value

It is not uncommon to find insurance contracts that give the insurer an entitlement to receive a periodic investment management fee. In the FRC's opinion, these rights must not be measured at an amount that exceeds fair value as implied by a comparison with current fees charged by other market participants for similar services. The assumption is that the fair value at inception of such contractual rights will equal the origination costs paid to acquire the contract, unless future investment management fees and related costs are out of line with market comparables. [FRS 103.2.6(b)].

9.1.3 Introducing non-uniform accounting policies for the insurance contracts of subsidiaries

FRS 102 requires consolidated financial statements to be prepared using uniform accounting policies for like transactions. [FRS 102.9.17]. However, under previous UK GAAP, some insurers consolidated subsidiaries using accounting policies for the measurement of the subsidiaries' insurance contracts (and related deferred acquisition costs and intangible assets) which were different from those of the parent and were, instead, in accordance with the relevant local GAAP applying in each jurisdiction.

The use of non-uniform accounting policies in consolidated financial statements reduces the relevance and reliability of financial statements and is not permitted by FRS 102. However, prohibiting this practice in FRS 103 would have made FRS 103 more onerous than IFRS 4, the standard on which FRS 103 is largely based. Therefore, an insurer is permitted to continue using non-uniform accounting policies for insurance contracts (and related deferred acquisition costs and intangible assets, if any) and change those policies only if the change does not make the accounting policies more diverse and also satisfies any other requirements in FRS 103. [FRS 103.2.6(c)].

There is one exception to this requirement which is discussed at 9.2 below.

9.2 Current market interest rates

An insurer is permitted, but not required, to change its accounting policies so that it remeasures designated insurance liabilities (including related deferred acquisition costs and related intangible assets) to reflect current market interest rates. Any changes in these rates would need to be recognised in profit or loss. At that time, it may also introduce accounting policies that require other current estimates and assumptions for the designated liabilities. An insurer may change its accounting policies for designated liabilities without applying those policies consistently to all similar liabilities as Section 10 of FRS 102 would otherwise require. If an insurer designates liabilities for this election, it must apply current market interest rates (and, if applicable, the other current estimates and assumptions) consistently in all periods to all those liabilities until they are extinguished. [FRS 103.2.5].

This concession was included in IFRS 4 to allow insurance contracts measured at locked-in interest rates to move, in whole or in part, towards the use of current interest rates. For UK life insurers, the concession is largely irrelevant because existing accounting practices already require the use of current interest rates. However, the concession may be useful if an insurer wants to change its accounting policies for overseas contracts that may be valued using local accounting practices that do not require the use of current market interest rates (see 9.1.3 above).

9.3 Prudence

Extract from FRS 102

Appendix I

Glossary

prudence	The exercise of caution when making judgements under conditions of uncertainty. The exercise of prudence means that assets and income are not overstated and liabilities and expenses are not understated. Equally, the exercise of prudence does not allow for the understatement of assets or income or the overstatement of liabilities or expenses.

Under previous UK GAAP, insurers sometimes measured insurance liabilities on what was intended to be a highly prudent basis required for regulatory purposes. FRS 103 does not define how much prudence is 'sufficient' and therefore does not require the elimination of 'excessive prudence'. As a result, insurers are not required under FRS 103 to change their accounting policies to eliminate excessive prudence. However, if an insurer already measures its insurance contracts with sufficient prudence, it must not introduce additional prudence. [FRS 103.2.7].

The liability adequacy test requirements discussed at 8.8 above address the converse issue of understated insurance liabilities.

9.4 Future investment margins

An insurer need not change its accounting policies for insurance contracts to eliminate the recognition of future investment margins (which may occur under some forms of embedded value accounting). However, FRS 103 imposes a rebuttable presumption that an insurer's financial statements will become less relevant and reliable if it introduces an accounting policy that reflects future investment margins in the measurement of insurance contracts, unless those margins directly affect the contractual payments.

Two examples of accounting policies that reflect those margins are:

- Using a discount rate that reflects the estimated return on the insurer's assets.
- And
- Projecting the returns on those assets at an estimated rate of return, discounting those projected returns at a different rate and including the rate in the measurement of the liability. [FRS 103.2.8].

Such accounting policies are used in US GAAP and in embedded value methodologies. The European Insurance CFO Forum European Embedded Value (EEV) Principles state that the value of future cash flows from in-force covered business is the present value of future shareholder cash flows projected to emerge from the assets backing the liabilities of the in-force covered business reduced by the value of financial options and guarantees.²⁵⁴ The EEV methodology is considered to be an indirect method of measuring the insurance liability because the measurement of the liability is derived from the related asset. In contrast, direct methods measure the liability by discounting future cash flows arising from the book of insurance contracts only. If the same assumptions are made in both direct and indirect methods, they can produce the same results.

By replicating this requirement from IFRS 4, the FRC repeats the concern of the IASB that insurers might take advantage of the lack of specific accounting guidance for insurance contracts in FRS 103 as an opportunity to change their accounting policies to an embedded value basis on the grounds that this was more relevant and no less reliable, or more reliable and no less relevant than their existing accounting policies (possibly prepared on an 'excessively prudent' regulatory basis). The IASB's view is that the cash flows arising from an asset are irrelevant for the measurement of a liability unless those cash flows affect (a) the cash flows arising from the liability or (b) the credit characteristics of the liability. [IFRS 4.BC141, IFRS 4.BC142, IFRS 4.BC143, IFRS 4.BC144].

²⁵⁴ European Embedded Value Principles, European Insurance CFO Forum, May 2004, p.3.

It is possible for insurers to introduce accounting policies that involve the use of asset-based discount rates for liabilities if they can overcome the rebuttable presumption described above. The rebuttable presumption can be overcome, provided it is permitted by the Regulations, if, and only if, the other components of a change in accounting policies increase the relevance and reliability of its financial statements sufficiently to outweigh the decrease in relevance and reliability caused by the inclusion of future investment margins. This is likely to be most relevant for a non-UK insurer using, for example, existing accounting policies for insurance contracts that include excessively prudent assumptions set at inception, a discount rate prescribed by a regulator without direct reference to market conditions, and which ignore some embedded options and guarantees. In that situation, the insurer might make its financial statements more relevant and no less reliable by switching to a comprehensive investor-oriented basis of accounting that is widely used and involves:

- Current estimates and assumptions.
 - A reasonable (but not excessively prudent) adjustment to reflect risk and uncertainty.
 - Measurements that reflect both the intrinsic value and time value of embedded options and guarantees.
- And
- A current market discount rate, even if that discount rate reflects the estimated return on the insurer's assets. [FRS 103.2.9].

In some measurement approaches, the discount rate is used to determine the present value of a future profit margin, which is then attributed to different periods using a formula. In those approaches, the discount rate affects the measurement of the liability only indirectly. In particular, the use of a less appropriate discount rate has a limited or no effect on the measurement of the liability at inception. Conversely, in other approaches, the discount rate determines the measurement of the liability directly. In the latter case, because the introduction of an asset-based discount rate has a more significant effect, it is considered to be highly unlikely that an insurer could overcome the rebuttable presumption described above. [FRS 103.2.10].

Wording in the Basis for Conclusion to IFRS 4 (not carried forward into FRS 103) states that the IASB believes that in most applications of embedded value the discount rate determines the measurement of the liability directly and therefore it is highly unlikely that an insurer could overcome the rebuttable presumption described above if it wanted to change its accounting policies for insurance contracts to an embedded value basis. [IFRS 4.BC144].

9.5 Shadow accounting

FRS 103 permits, but does not require, an insurer to change its accounting policies so that a recognised but unrealised gain or loss on an asset affects the related insurance liabilities in the same way that a realised gain or loss does. In other words, a measurement adjustment to an insurance liability (or deferred acquisition cost or intangible asset) arising from the remeasurement of an asset would be recognised in other comprehensive income if, and only if, the unrealised gains or losses on the asset are also recognised in other comprehensive income. This relief is known as 'shadow accounting'. Application of shadow accounting is always voluntary and in practice it is also applied selectively. [FRS 103.2.11].

'Shadow accounting', ensures that all gains and losses on investments affect the measurement of the insurance assets and liabilities in the same way, regardless of whether they are realised or unrealised and regardless of whether the unrealised investment gains and losses are recognised in profit or loss or in other comprehensive income using a revaluation reserve. In particular, the relief permits certain gains or losses arising from remeasuring insurance contracts to be recognised in other comprehensive income whereas FRS 103 otherwise requires all gains and losses arising from insurance contracts to be recognised in profit or loss. Normally, this change in accounting policy would be adopted upon transition to FRS 103.

Recognition of movements in insurance liabilities (or deferred acquisition costs or intangible assets) in other comprehensive income only applies when unrealised gains on assets are recognised in other comprehensive income such as for available-for-sale investments accounted for under IAS 39 (when the IAS 39 recognition and measurement option is applied as permitted by paragraphs 11.2(b) and 12.2(b) respectively of FRS 102) or fair value through other comprehensive income for debt instruments under IFRS 9 or property, plant and equipment accounted for using the revaluation model under Section 17 of FRS 102.

Shadow accounting is not applicable for liabilities arising from investment contracts accounted for under Sections 11 and 12 of FRS 102. Further, shadow accounting must not be used if the measurement of an insurance liability is not driven by realised gains and losses on assets held, for example if the insurance liabilities are measured using a discount rate that reflects a current market rate but that measurement does not depend directly on the carrying amount of any assets held.

FRS 103 does not specifically address the interaction between shadow accounting and the liability adequacy test.

How we see it

In our view, shadow accounting is applied before the liability adequacy test and the implications of this are discussed at 8.8.3 above.

9.6 Redesignation of financial assets

When an insurer changes its accounting policies for insurance liabilities, it is permitted, but not required, to reclassify some or all of its financial assets at fair value through profit or loss provided those assets meet the criteria in paragraph 11.14(b) of FRS 102 (or if the entity has made the accounting policy choice under paragraphs 11.2(b) or (c), or paragraphs 12.2(b) or (c) of FRS 102 to apply the recognition and measurement provisions of either IAS 39 or IFRS 9, as applicable) at the reporting date. [FRS 103.6.4].

This reclassification is permitted if an insurer changes its accounting policies when it first applies FRS 103 and also if it makes a subsequent policy change for accounting for insurance contracts permitted by FRS 103. This reclassification is a change in accounting policy and the requirements of Section 10 of FRS 102 apply i.e., it must be performed retrospectively unless impracticable. [FRS 103.6.4].

This concession cannot be used to reclassify financial assets out of the fair value through profit or loss category.

10 Insurance contracts acquired in business combinations and portfolio transfers

10.1 Expanded presentation of insurance contracts

Section 19 of FRS 102 requires assets and liabilities acquired or assumed in a business combination to be measured at fair value. [FRS 102.19.14]. Insurance contracts are not exempt from these requirements and FRS 103 explicitly confirms that insurance liabilities assumed and insurance assets acquired in a business combination must be measured at fair value at the acquisition date. [FRS 103.2.27].

However, an insurer is permitted, but not required, to use an expanded presentation that splits the fair value of acquired insurance contracts into two components:

- (a) A liability measured in accordance with the acquirer's accounting policies for insurance contracts that it issues.
- And
- (b) An intangible asset, representing the difference between (i) the fair value of the contractual insurance rights acquired and insurance obligations assumed and (ii) the amount described in (a). As an exception to Section 18 of FRS 102, the subsequent measurement of this asset must be consistent with the measurement of the related insurance liabilities. [FRS 103.2.27(a), FRS 103.2.27(b)].

Technically, this FRS 103 intangible asset has no intrinsic value that can be actuarially calculated. It is no more than the balancing number between the purchase price allocated to the insurance liability and the amount recorded for the insurance liability by the purchaser under the purchaser's existing GAAP. The more prudent (higher) the basis of liability measurement, the higher the value of the intangible.

Life insurers have variously described this intangible asset as the 'present value of in-force business' (PVIF), 'present value of future profits' (PVFP or PVP) or 'value of business acquired' (VOBA). Similar principles apply in non-life insurance, for example if claims liabilities are not discounted.

An insurer acquiring a portfolio of insurance contracts (separate from a business combination) may also use the expanded presentation described above. [FRS 103.2.28].

An illustration of how a business combination might be accounted for using the expanded presentation is given below.

Illustration 10-1: Business combination under FRS 103

Insurance entity A purchases an insurance business owned by Entity B for £10 million. Under A's existing accounting policies for insurance contracts the carrying value of the insurance contract liabilities held by B is £8 million. Entity A estimates the fair value of the insurance contract liabilities to be £6 million. The fair value of other net assets acquired, including intangible assets, after recognising any additional deferred tax, is £13 million. The tax rate is 25%.

This gives rise to the following journal entry to record the acquisition of B in A's consolidated financial statements:

	DR	CR
	£m	£m
Cash		10.0
Present value of in-force business (PVIF) intangible (£8m less £6m)	2.0	
Carrying value of insurance liabilities (A's existing accounting policies)		8.0
Goodwill	3.5	
Other net assets acquired	13.0	
Deferred taxation on PVIF (25% × £2m)		0.5

The intangible asset described at (b) above is excluded from the scope of both Section 18 and Section 27 *Impairment of Assets* of FRS 102. Instead, FRS 103 requires its subsequent measurement to be consistent with the measurement of the related insurance liabilities. [FRS 103.2.27(a), FRS 103.2.27(b)]. As a result, it is generally amortised over the estimated life of the acquired insurance contracts. This intangible asset is included within the scope of the liability adequacy test discussed at 8.8 above which acts as a quasi-impairment test on its carrying amount.

Although the VIF asset is outside the scope of Section 18 of FRS 102 for measurement purposes, an entity underwriting long-term insurance business is still required to provide the disclosures set out in paragraphs 18.27 and 18.28(a) of FRS 102 in relation to the VIF asset. [FRS 103.IG2.54].

The Implementation Guidance states that, in respect of long-term business, when a group reconstruction occurs and the new group carries on substantially the same insurance business as the group which it replaces (for example where a demutualisation is effected through the establishment of a proprietary company to acquire the business of an existing mutual insurer), any VIF which would be regarded as internally-generated under the former group structure must continue to be treated as such in the new group. [FRS 103.IG2.55].

Investment contracts within the scope of Sections 11 and 12 of FRS 102 are required to be measured at fair value when acquired in a business combination.

Section 19 of FRS 102 is silent as to whether there must be a reassessment of the classification of contracts previously classified as insurance contracts under FRS 103 which are acquired as part of a business combination. In contrast, IFRS 3 *Business Combinations* requires a group of insurance contracts acquired in a business combination to be measured at the acquisition date under IFRS 17. [IFRS 3.31A]. IFRS 17 requires contracts acquired in a business combination within the scope of IFRS 3 to be treated as if the entity had entered into the contracts on the date of the transaction and not the date the acquiree entered into the contracts (i.e., insurance risk for acquired contracts is reassessed as at the date of the business combination). [IFRS 17.B93].

How we see it

In our view, since neither FRS 102 or FRS 103 provide specific guidance as to whether there must be a reassessment of insurance risk for contracts acquired in a business combination, an insurer must develop an accounting policy in accordance with Section 10 of FRS 102 (see Chapter 9) to determine whether there must be a reassessment of the classification of insurance contracts acquired in a business combination at the acquisition date.

10.1.1 Practical issues

10.1.1.A The difference between a business combination and a portfolio transfer

Extract from FRS 102

Appendix I

Glossary

business

An integrated set of activities and assets conducted and managed for the purpose of providing:

- (a) a return to investors; or
- (b) lower costs or other economic benefits directly and proportionately to policyholders or participants.

A business generally consists of inputs, processes applied to those inputs, and resulting outputs that are, or will be, used to generate revenues. If goodwill is present in a transferred set of activities and assets, the transferred set shall be presumed to be a business.

When an entity acquires a portfolio of insurance contracts it must determine whether that acquisition meets the definition of a business. When it is considered that a business is acquired, goodwill may need to be recognised as may deferred tax liabilities in respect of any acquired intangible assets. For a portfolio transfer that does not represent a business combination, neither goodwill nor deferred tax must be recognised.

The determination of whether a portfolio of contracts or a business has been acquired will be a matter of judgement based on the facts and circumstances. Acquisitions of contracts that also include the acquisition of underwriting systems and/or the related organised workforce are more likely to meet the definition of a business than merely the acquisition of individual or multiple contracts.

Rights to issue or renew contracts in the future (as opposed to existing insurance contracts) are separate intangible assets and the accounting for the acquisition of such rights is discussed at 10.2 below.

10.1.1.B Fair value of an insurer's liabilities

FRS 103 does not prescribe a method for determining the fair value of insurance liabilities. However, the definition of fair value in FRS 103 is the same as that of FRS 102 and therefore any calculation of fair value must be consistent with FRS 102's valuation principles.

Deferred acquisition costs (DAC) are generally considered to have no value in a business combination and are usually subsumed into the PVIF intangible. The fair value of any unearned premium reserve will include any unearned profit element as well as the present value of the claims obligation in respect of the unexpired policy period at the acquisition date which is likely to be different from the value under existing accounting policies.

10.1.1.C Deferred taxation

Section 29 *Income Tax* of FRS 102 requires deferred tax to be recognised in respect of timing differences arising in business combinations, for example if the amount that can be assessed for tax of the asset or liability is based on cost when the carrying amount is fair value. FRS 103 contains no exemption from these requirements. Therefore, deferred tax will often arise on timing differences created by the recognition of insurance contracts at their fair value or on the related intangible asset. The deferred tax adjusts the amount of goodwill recognised as illustrated in Illustration 10-1 at 10.1 above. [FRS 102.29.11].

10.1.1.D Negative intangible assets

There are situations where the presentation described at 10.1 above will result in the creation of a negative intangible asset. This could arise, for example, where the acquirer's existing accounting policies are such that the contractual liabilities acquired are measured at an amount less than their fair value although this is likely to raise questions about whether the carrying value of the liabilities is adequate (see 8.8 above). FRS 102 and FRS 103 are silent on the subject of negative intangible assets but there appears to be no prohibition on their recognition.

10.2 Customer lists and relationships not connected to contractual insurance rights and obligations

The requirements discussed at 10.1 above do not apply to customer lists and customer relationships reflecting the expectation of future contracts that are not part of the contractual insurance rights and contractual insurance obligations existing at the date of the business combination or portfolio transfer. [FRS 103.2.29]. Sections 18 and 27 of FRS 102 apply to such assets.

11 Disclosure

FRS 103 requires that an entity whose financial statements comply with FRS 103 must, in addition to the statement of compliance made in accordance with FRS 102, make an explicit and unreserved statement of compliance with FRS 103 in the notes to the financial statements. [FRS 103.1.12].

The disclosure principles outlined in FRS 103 require entities to disclose the amounts recognised in the financial statements, and the risks and uncertainties related with those balances. These provisions are complementary to the disclosure requirements of Section 11 and the Financial Institutions sub-section of Section 34 of FRS 102. [FRS 103.BC30].

The disclosures are set out in Section 4 *Disclosure* and Section 5 *Disclosure: Additional requirements for with-profits business* of FRS 103 with additional guidance on Companies Act and capital disclosures contained in the Implementation Guidance. Additionally, Schedule 3 to the Regulations contains other disclosures required by insurance entities that are not mentioned by FRS 103. The disclosures required by FRS 103 are in addition to the disclosure requirements of FRS 102. [FRS 103.4.1]. Disclosures required by FRS 102 and the Regulations in respect of non-insurance balances and transactions are discussed in the relevant chapters of this publication.

Section 4 of FRS 103 repeats the disclosure requirements of IFRS 4. These requirements are relatively high-level and contain little specific detail. For example, reconciliations of changes in insurance liabilities, reinsurance assets and, if any, related deferred acquisition costs are required but no details about the line items those reconciliations must contain are specified. By comparison, sections of FRS 102 such as Section 17, provide details of items required to be included in similar reconciliations for other balance sheet amounts.

The equivalent disclosure requirements of IFRS 4 were supplemented by seventy-one paragraphs of related implementation guidance which explained how insurers may or might apply the standard. None of this IFRS 4 implementation guidance is included in FRS 103. However, insurers are recommended to refer to the IFRS 4 Implementation Guidance in considering how best to apply the disclosures required by Section 4 of FRS 103. According to this guidance, an insurer must decide in the light of its circumstances how much emphasis to place on different aspects of the requirements and how information must be aggregated to display the overall picture without combining information that has materially different characteristics. Insurers must strike a balance so that important information is not obscured either by the inclusion of a large amount of insignificant detail or by the aggregation of items that have materially different characteristics. To satisfy the requirements of the standard an insurer would not typically need to disclose all the information suggested in the guidance. [IFRS 4.IG12].

Section 5 of FRS 103 contains additional disclosure requirements for with-profits business. These requirements are not in IFRS 4.

The Implementation Guidance to FRS 103 contains guidance explaining how to apply disclosures required by Schedule 3 to the Regulations as well as suggested disclosures for entities with long-term business necessary for providing capital disclosures in accordance with paragraph 34.31 of FRS 102. The Implementation Guidance does not carry the authority of an accounting standard and is not regarded as mandatory.

11.1 Disclosure of significant accounting policies

In accordance with paragraph 8.5 of FRS 102, an entity must disclose, in the summary of significant accounting policies, in relation to both insurance contracts and financial instruments that it issues with a discretionary participation feature: [FRS 103.4.2]

- The measurement basis (or bases) used.
- And
- The other accounting policies used that are relevant to an understanding of the financial statements.

Schedule 3 to the Regulations also requires disclosure of the accounting policies adopted in determining the amounts included in the balance sheet and profit and loss account (including such policies with respect to the depreciation and diminution in value of assets). [3 Sch 61].

The IFRS 4 Implementation Guidance suggested that an insurer might need to address the treatment of some or all of the following accounting policies: [IFRS 4.IG17]

- Premiums (including the treatment of unearned premiums, renewals and lapses, premiums collected by agents and brokers but not passed on and premium taxes or other levies on premiums).
- Fees or other charges made to policyholders.

- Acquisition costs (including a description of their nature).
- Claims incurred (both reported and unreported), claims handling costs (including a description of their nature) and liability adequacy tests (including a description of the cash flows included in the test, whether and how the cash flows are discounted and the treatment of embedded options and guarantees in those tests. Disclosure of whether insurance liabilities are discounted might be given together with an explanation of the methodology used.
- The objective of methods used to adjust insurance liabilities for risk and uncertainty (for example, in terms of a level of assurance or level of sufficiency), the nature of those models, and the source of information used in those models.
- Embedded options and guarantees including a description of whether:
 - The measurement of insurance liabilities reflects the intrinsic value and time value of these items.
 - And
 - Their measurement is consistent with observed current market prices.
- Discretionary participation features (including an explanation of how the insurer classifies those features between liabilities and components of equity) and other features that permit policyholders to share in investment performance.
- Salvage, subrogation or other recoveries from third parties.
- Reinsurance held.
- Underwriting pools, coinsurance and guarantee fund arrangements.
- Insurance contracts acquired in business combinations and portfolio transfers, and the treatment of related intangible assets.
- And
- The judgements, apart from those involving estimations, management has made in the process of applying the accounting policies that have the most significant effect on the amounts recognised in the financial statements. The classification of a DPF is an example of an accounting policy that might have a significant effect.

If the financial statements disclose supplementary information, for example embedded value information, that is not prepared on the basis used for other measurements in the financial statements, it would be appropriate to explain the basis of preparation. Disclosures about embedded value methodology might include information similar to that described above, as well as disclosure of whether, and how, embedded values are affected by estimated returns from assets and by locked-in capital and how those effects are estimated. [IFRS 4.IG18].

If non-uniform accounting policies for the insurance liabilities of subsidiaries are adopted, it might be necessary to disaggregate the disclosures about the amounts reported to give meaningful information about amounts determined using different accounting policies.

11.2 Explanation of recognised amounts from insurance contracts

An insurer must identify and explain the amounts in its financial statements arising from insurance contracts. [FRS 103.4.4].

To comply with this principle an insurer must disclose: [FRS 103.4.5]

- (a) The recognised assets, liabilities, income and expense (and cash flows if its statement of cash flows is presented using the direct method) arising from insurance contracts. Furthermore, if the insurer is a cedant, it must disclose:
 - (i) gains or losses recognised in profit or loss on buying reinsurance.
 - And
 - (ii) if gains and losses on buying reinsurance are deferred and amortised, the amortisation for the period and the amounts remaining unamortised at the beginning and the end of the period.
 - (b) The process used to determine the assumptions that have the greatest effect on the measurement of the recognised amounts described in (a). When practicable, quantified disclosure of these assumptions must be given.
 - (c) The effect of changes in assumptions used to measure insurance assets and insurance liabilities, showing separately the effect of each change that has a material effect on the financial statements.
- And

- (d) Reconciliations of changes in insurance liabilities, reinsurance assets and, if any, related deferred acquisitions costs.

Each of these requirements is discussed in turn at 11.2.1 to 11.2.5 below.

11.2.1 Recognised assets, liabilities, income and expense

As discussed at 8 above, the presentation of the balance sheet and profit and loss account for insurance entities is mandated by Schedule 3 to the Regulations. Details of the presentation requirements are discussed at 8.2 and 8.3 above.

Those UK entities that underwrite insurance contracts that are not insurance entities will usually prepare financial statements under Schedule 1 to the Regulations. The Schedule 1 formats do not cater for insurance balances and therefore those entities will have to use judgement in deciding how to sub-analyse the Schedule 1 line items in order to provide separate disclosure of insurance assets, liabilities, income and expense, if material.

Schedule 3 to the Regulations requires the disclosure of the total amount of commissions for direct business which includes acquisition, renewal, collection and portfolio management. For this purpose, commission must exclude payments made to employees of the undertaking. [FRS 103.4.6].

In respect of deferred acquisition costs, Schedule 3 to the Regulations requires disclosure of: [3 Sch BS Note 17(c)-(e)]

- How the deferral of acquisition costs has been treated (unless otherwise expressly stated in the accounts).
And
- Where such costs are included as a deduction from the provision for unearned premiums, the amount of such deduction.
Or
- Where the actuarial method used in the calculation of the provisions within the long-term business provision has made allowance for explicit recognition of such costs, the amount of the cost so recognised.

Section 11 of FRS 102 requires an entity to disclose the carrying amount of financial assets pledged as collateral for liabilities or contingent liabilities and any terms and conditions relating to assets pledged as collateral. [FRS 102.11.46]. In complying with this requirement, it might be necessary to disclose segregation requirements that are intended to protect policyholders by restricting the use of some of the insurer's assets.

11.2.1.A Equalisation provisions

The Implementation guidance to FRS 103 states that, as guidance for applying the requirements of note 24 of the Notes to the balance sheet format in Schedule 3, disclosure must be made when an equalisation reserve has been established in accordance with the PRA Rulebook. When equalisation reserves are established, an entity must disclose the following in the notes to the financial statements: [FRS 103.IG2.28]

- That the amounts provided are not liabilities because they are in addition to the provisions required to meet the anticipated ultimate cost of settlement of outstanding claims at the reporting date.
- Notwithstanding this, they are required by Schedule 3 to the Regulations to be included within technical provisions.
And
- The impact of the equalisation reserves on equity and the effect of movements in the reserves on the profit or loss for the reporting period.

As discussed at 8.5.6 above, following the implementation of the Solvency II Directive the UK regulatory framework does not permit equalisation or catastrophe provisions.

11.2.1.B Discounting of general insurance provisions

When general insurance provisions are discounted, the Regulations require the following disclosures: [3 Sch 54(2)]

- The total amount of gross provisions before discounting or deductions.
- The categories of claims which are discounted or from which deductions have been made.
And

- For each category of claims, the methods used, in particular the discount rates used and the criteria adopted for estimating the period that will elapse before the claims are settled.

In addition, the Implementation Guidance suggests that separate disclosure must be made, where material, of the amount of any investment return that corresponds to the unwinding of the discount. [FRS 103.IG2.20].

11.2.2 Gains or losses on buying reinsurance

A cedant is required to provide specific disclosure about gains or losses on buying reinsurance as discussed at 8.13.3 and 11.2 above. In addition, if gains and losses on buying reinsurance are deferred and amortised, disclosure is required of the amortisation for the period and the amounts remaining unamortised at the beginning and end of the period. [FRS 103.4.5(a)(i), FRS 103.4.5(a)(ii)].

11.2.3 Processes used to determine significant assumptions

As noted at 11.2 above, FRS 103 requires disclosure of the process used to determine the assumptions that have the greatest effect on the measurement of the recognised amounts. Where practicable, quantified disclosure of these assumptions must also be given. [FRS 103.4.5(b)].

FRS 103 does not prescribe specific assumptions that must be disclosed. However, the Regulations require disclosure of the principal assumptions used in making the long-term business provision. [3 Sch 52(2)]. In order to comply with that requirement, the Implementation Guidance to FRS 103 states that an entity must disclose for each principal category of business the more significant assumptions relating to the following: [FRS 103.IG2.43]

- Premiums
- Persistency
- Mortality and morbidity
- Interest rates
- The discount rates used with, if relevant, an explanation of the basis of reflecting risk margins
- And
- If applicable, any other significant factors

The Implementation Guidance to IFRS 4 stated that the description of the process used to describe assumptions might include a summary of the most significant of the following: [IFRS 4.IG32]

- The objective of the assumptions, for example, whether the assumptions are intended to be neutral estimates of the most likely or expected outcome ('best estimates') or to provide a given level of assurance or level of sufficiency. If they are intended to provide a quantitative or qualitative level of assurance that level could be disclosed.
- The source of data used as inputs for the assumptions that have the greatest effect, for example, whether the inputs are internal, external or a mixture of the two. For data derived from detailed studies that are not carried out annually, the criteria used to determine when the studies are updated and the date of the latest update could be disclosed.
- The extent to which the assumptions are consistent with observable market prices or other published information.
- A description of how past experience, current conditions and other relevant benchmarks are taken into account in developing estimates and assumptions. If a relationship would normally be expected between past experience and future results, the reasons for using assumptions that differ from past experience and an indication of the extent of the difference could be explained.
- A description of how assumptions about future trends, such as changes in mortality, healthcare costs or litigation awards were developed.
- An explanation of how correlations between different assumptions are identified.
- The policy in making allocations or distributions for contracts with discretionary participation features. In addition, the related assumptions that are reflected in the financial statements, the nature and extent of any significant uncertainty about the relative interests of policyholders and shareholders in the unallocated surplus associated with those contracts, and the effect on the financial statements of any changes during the period in that policy or those assumptions could be disclosed.
- And
- The nature and extent of uncertainties affecting specific assumptions.

11.2.4 The effects of changes in assumptions

As noted at 11.2 above, FRS 103 requires disclosure of the effects of changes in assumptions used to measure insurance assets and insurance liabilities, showing separately the effect of each change that has a material impact on the financial statements. [FRS 103.4.5(c)]. This requirement is consistent with Section 10 of FRS 102 which requires disclosure of the nature and amount of a change in an accounting estimate. [FRS 102.10.18].

Additionally, the Regulations specifically require that, where the difference between the loss provision made at the beginning of the year for outstanding claims incurred in previous years and the payments made during the year on account of claims incurred in previous years and the loss provision shown at the end of the year for outstanding claims is material, it must be shown in the notes to the accounts broken down by category and amount. [3 Sch P&L Note 4]. The effect of unwinding discounted claims provisions must be disregarded in considering whether material adverse run-off deviations have occurred. [FRS 103.IG2.19].

Assumptions are often interdependent. When this is the case, any analysis of changes by assumption may depend on the order in which the analysis is performed and may be arbitrary to some extent. Not surprisingly, FRS 103 does not specify a rigid format or content for this analysis. This allows insurers to analyse the changes in a way that meets the objective of the disclosure requirement and is appropriate for their particular circumstances. If practicable, the impact of changes in different assumptions might be disclosed separately, particularly if changes in those assumptions have an adverse effect and others have a beneficial effect. The impact of interdependencies between assumptions and the resulting limitations of any analysis of the effect of changes in assumption might also be described.

The Implementation Guidance to IFRS 4 stated that the effects of changes in assumptions both before and after reinsurance held might be disclosed, especially if a significant change in the nature or extent of an entity's reinsurance programme is expected or if an analysis before reinsurance is relevant for an analysis of the credit risk arising from reinsurance held. [IFRS 4.IG36].

11.2.5 Reconciliations of changes in insurance assets and liabilities

As noted at 11.2 above, FRS 103 requires reconciliations of changes in insurance liabilities, reinsurance assets and, if any, related deferred acquisition costs, although it does not prescribe the line items that must appear in the reconciliations. [FRS 103.4.5(d)].

The Implementation Guidance to IFRS 4 stated that for insurance liabilities the changes might include: [IFRS 4.IG37]

- The carrying amount at the beginning and end of the period
- Additional insurance liabilities arising during the period
- Cash paid
- Income and expense included in profit or loss
- Liabilities acquired from, or transferred to, other insurers
- And
- Net exchange differences arising on the translation of the financial statements into a different presentation currency, and on the translation of a foreign operation into the presentation currency of the reporting entity

A reconciliation of deferred acquisition costs might include: [IFRS 4.IG39]

- The carrying amount at the beginning and end of the period
- The amounts incurred during the period
- The amortisation for the period
- Impairment losses recognised during the period
- And
- Other changes categorised by cause and type

An insurer may have intangible assets related to insurance contracts acquired in a business combination or portfolio transfer. FRS 103 does not require any disclosures for intangible assets in addition to those required by Section 18 of FRS 102.

11.3 Nature and extent of risks arising from insurance contracts

FRS 103 requires that an insurer disclose information to enable the users of the financial statements to evaluate the nature and extent of risks arising from insurance contracts. [FRS 103.4.7].

To comply with this principle, an insurer must disclose: [FRS 103.4.8]

- Its objectives, policies and processes for managing risks arising from insurance contracts and the methods used to manage those risks.
- Information about insurance risk (both before and after risk mitigation by reinsurance), including information about:
 - Sensitivity to insurance risk.
 - Concentrations of insurance risk, including a description of how management determines concentrations and a description of the shared characteristic that identifies each concentration (e.g., type of insured event, geographical area or currency).

And

 - Actual claims compared with previous estimates (i.e., claims development). This disclosure has to go back to the period when the earliest material claim arose for which there is still uncertainty about the amount and timing of the claims payments, but need not go back more than ten years. Information about claims for which uncertainty about the amount and timing of claims payments is typically resolved within one year need not be disclosed.
- Information about credit risk, liquidity risk and market risk that, as a financial institution, Section 34 of FRS 102 would require if insurance contracts were within the scope of Sections 11 and 12 of FRS 102. However:
 - An insurer need not provide the maturity analyses required by paragraph 34.28 of FRS 102 if it discloses information about the estimated timing of the net cash outflows resulting from recognised insurance liabilities instead. This may take the form of an analysis, by estimated timing, of the amounts recognised in the statement of financial position rather than gross undiscounted cash flows.

And

 - If an alternative method to manage sensitivity to market conditions, such as an embedded value analysis is used, an insurer may use that sensitivity analysis to meet the requirement in paragraph 34.39 of FRS 102. Such an insurer must also provide the disclosure required by paragraph 34.30 of FRS 102.

And

- Information about exposures to market risk arising from embedded derivatives contained in a host insurance contract if the insurer is not required to, and does not, measure the embedded derivatives at fair value.

The Implementation Guidance to IFRS 4 stated that these disclosure requirements are based on two foundations: [IFRS 4.IG41]

- There must be a balance between quantitative and qualitative disclosures, enabling users to understand the nature of risk exposures and their potential impact.
- And
- Disclosures must be consistent with how management perceives its activities and risks, and the objectives, policies and processes that management uses to manage those risks so that they:
 - Generate information that has more predictive value than information based on assumptions and methods that management does not use, for example, in considering the insurer's ability to react to adverse situations.

And

 - Are more effective in adapting to the continuing change in risk measurement and management techniques and developments in the external environment over time.

In developing disclosures to satisfy the requirements, the Implementation guidance to IFRS 4 stated that it might be useful to group insurance contracts into broad classes appropriate for the nature of the information to be disclosed, taking into account matters such as the risks covered, the characteristics of the contracts and the measurement basis applied. These broad classes may correspond to classes established for legal or regulatory purposes, but IFRS 4 did not require this. [IFRS 4.IG42].

In identifying broad classes for separate disclosure, it is useful to consider how best to indicate the level of uncertainty associated with the risks underwritten, so as to inform users whether outcomes are likely to be within a wider or a narrower range. For example, an insurer might disclose information about exposures where there are significant amounts of provisions for claims incurred but not reported (IBNR) or where outcomes and risks are unusually difficult to assess, e.g., for asbestos-related claims. [IFRS 4.IG45].

The disclosures required are discussed in more detail below.

11.3.1 Objectives, policies and processes for managing insurance contract risks

As noted at 11.3 above, FRS 103 requires an insurer to disclose its objectives, policies and processes for managing risks arising from insurance contracts and the methods used to manage those risks.

[FRS 103.4.8(a)].

No further guidance is provided by FRS 103. However, the Implementation Guidance to IFRS 4 suggested that such disclosure provides an additional perspective that complements information about contracts outstanding at a particular time and might include information about: [IFRS 4.IG48]

- The structure and organisation of the entity's risk management function(s), including a discussion of independence and accountability.
- The scope and nature of its risk reporting or measurement systems, such as internal risk measurement models, sensitivity analyses, scenario analysis, and stress testing, and how these are integrated into the entity's operating activities. Useful disclosure might include a summary description of the approach used, associated assumptions and parameters (including confidence intervals, computation frequencies and historical observation periods) and strengths and limitations of the approach.
- The processes for accepting, measuring, monitoring and controlling insurance risks and the entity's underwriting strategy to ensure that there are appropriate risk classification and premium levels.
- The extent to which insurance risks are assessed and managed on an entity-wide basis.
- The methods employed to limit or transfer insurance risk exposures and avoid undue concentrations of risk, such as retention limits, inclusion of options in contracts, and reinsurance.
- Asset and liability management (ALM) techniques.

And

- The processes for managing, monitoring and controlling commitments received (or given) to accept (or contribute) additional debt or equity capital when specified events occur.

It might be useful to provide disclosures both for individual types of risks insured and overall. They might include a combination of narrative descriptions and specific quantified data, as appropriate to the nature of the contracts and their relative significance to the insurer.

11.3.2 Insurance risk - general matters

As noted at 11.3 above, FRS 103 requires disclosure about insurance risk (both before and after risk mitigation by reinsurance). [FRS 103.4.8(b)].

The Implementation Guidance to IFRS 4 suggested that disclosures made to satisfy this requirement might build on the following foundations: [IFRS 4.IG51]

- Information about insurance risk might be consistent with (though less detailed than) the information provided internally to the entity's key management personnel so that users can assess the entity's financial position, performance and cash flows 'through the eyes of management'.
- Information about risk exposures might report exposures both gross and net of reinsurance (or other risk mitigating elements, such as catastrophe bonds issued or policyholder participation features). This is especially relevant if a significant change in the nature or extent of an entity's reinsurance programme is expected or if an analysis before reinsurance is relevant for an analysis of the credit risk arising from reinsurance held.
- In reporting quantitative information about insurance risk, disclosure of the methods used, the strengths and limitations of those methods, the assumptions made, and the effect of reinsurance, policyholder participation and other mitigating elements might be useful.
- Risk might be classified according to more than one dimension. For example, life insurers might classify contracts by both the level of mortality risk and the level of investment risk. It may sometimes be useful to display this information in a matrix format.

And

- If risk exposures at the reporting date are unrepresentative of exposures during the period, it might be useful to disclose that fact.

The following disclosures required by FRS 103 might also be relevant:

- The sensitivity of profit or loss and equity to changes in variables that have a material effect on them (see 11.3.3 below)
 - Concentrations of insurance risk (see 11.3.4 below)
- And
- The development of prior year insurance liabilities (see 11.3.5 below)

The Implementation Guidance to IFRS 4 also suggested that disclosures about insurance risk might also include: *[IFRS 4.IG51A]*

- Information about the nature of the risk covered, with a brief summary description of the class (such as annuities, pensions, other life insurance, motor, property and liability).
 - information about the general nature of participation features whereby policyholders share in the performance (and related risks) of individual contracts or pools of contracts or entities. This might include the general nature of any formula for the participation and the extent of any discretion held by the insurer.
- And
- Information about the terms of any obligation or contingent obligation for the insurer to contribute to government or other guarantee funds established by law.

11.3.3 Insurance risk - sensitivity information

As noted at 11.3 above, IFRS 4 required disclosures about sensitivity to insurance risk. *[FRS 103.4.8(b)(xi)]*.

To comply with this requirement, disclosure is required of either: *[FRS 103.4.9]*

- A sensitivity analysis that shows how profit or loss and equity would have been affected had changes in the relevant risk variable that were reasonably possible at the end of the reporting period occurred; the methods and assumptions used in preparing that sensitivity analysis; and any changes from the previous period in the methods and assumptions used. However, if an alternative method is used to manage sensitivity to market conditions, such as an embedded value analysis, it may meet this requirement by disclosing that alternative sensitivity analysis and the disclosures required by paragraph 34.30 of FRS 102.
- Or
- Qualitative information about sensitivity, and information about those terms and conditions of insurance contracts that have a material effect on the amount, timing and uncertainty of future cash flows.

Quantitative disclosures may be provided for some insurance risks and qualitative information about sensitivity and information about terms and conditions for other insurance risks.

The Implementation Guidance to IFRS 4 stated that insurers must avoid giving a misleading sensitivity analysis if there are significant non-linearities in sensitivities to variables that have a material effect. For example, if a change of 1% in a variable has a negligible effect, but a change of 1.1% has a material effect, it might be misleading to disclose the effect of a 1% change without further explanation. *[IFRS 4.IG53]*. Further, if a quantitative sensitivity analysis is disclosed and that sensitivity analysis does not reflect significant correlations between key variables, the effect of those correlations may need to be explained. *[IFRS 4.IG53A]*.

11.3.4 Insurance risk - concentrations of risk

As noted at 11.3 above, FRS 103 requires disclosure of concentrations of insurance risk, including a description of how management determines concentrations and a description of the shared characteristic that identifies each type of concentration (e.g., type of insured event, geographical area, or currency). *[FRS 103.4.8(b)(xii)]*.

The Implementation guidance to IFRS 4 stated that such concentrations could arise from, for example: *[IFRS 4.IG55]*

- A single insurance contract, or a small number of related contracts, for example when an insurance contract covers low-frequency, high-severity risks such as earthquakes.
- Single incidents that expose an insurer to risk under several different types of insurance contract. For example, a major terrorist incident could create exposure under life insurance contracts, property insurance contracts, business interruption and civil liability.
- Exposure to unexpected changes in trends, for example unexpected changes in human mortality or in policyholder behaviour.

- Exposure to possible major changes in financial market conditions that could cause options held by policyholders to come into the money. For example, when interest rates decline significantly, interest rate and annuity guarantees may result in significant losses.
- Significant litigation or legislative risks that could cause a large single loss, or have a pervasive effect on many contracts.
- Correlations and interdependencies between different risks.
- Significant non-linearities, such as stop-loss or excess of loss features, especially if a key variable is close to a level that triggers a material change in future cash flows.

And

- Geographical and sectoral concentrations.

Disclosure of concentrations of insurance risk might include a description of the shared characteristic that identifies each concentration and an indication of the possible exposure, both before and after reinsurance held, associated with all insurance liabilities sharing that characteristic. [IFRS 4.IG56].

Disclosure about the historical performance of low-frequency, high-severity risks might be one way to help users assess cash flow uncertainty associated with those risks. For example, an insurance contract may cover an earthquake that is expected to happen, on average, once every 50 years. If the earthquake occurs during the current reporting period the insurer will report a large loss. If the earthquake does not occur during the current reporting period the insurer will report a profit. Without adequate disclosure of long-term historical performance, it could be misleading to report 49 years of large profits, followed by one large loss, because users may misinterpret the insurer's long-term ability to generate cash flows over the complete cycle of 50 years. Therefore, describing the extent of the exposure to risks of this kind and the estimated frequency of losses might be useful. If circumstances have not changed significantly, disclosure of the insurer's experience with this exposure may be one way to convey information about estimated frequencies. [IFRS 4.IG57]. However, there is no specific requirement to disclose a probable maximum loss (PML) in the event of a catastrophe because there is no widely agreed definition of PML. [IFRS 4.BC222].

11.3.5 Insurance risk - claims development information

As noted at 11.3 above, FRS 103 requires disclosure of actual claims compared with previous estimates (i.e., claims development). The disclosure about claims development must go back to the period when the earliest material claim arose for which there is still uncertainty about the amount and the timing of the claims payments but need not go back more than ten years. Disclosure need not be provided for claims for which uncertainty about claims payments is typically resolved within one year. [FRS 103.4.8(b)(iii)].

As discussed at 3.3 above, transitional relief is available for this disclosure requirement.

The requirement applies to all insurers, not only to property and casualty insurers. In practice, however, life insurers have not made these disclosures under FRS 103. This is because the Implementation Guidance to IFRS 4 suggested that, because insurers need not disclose the information for claims for which uncertainty about the amount and timing of payments is typically resolved within a year, it is unlikely that many life insurers will need to give the disclosure. Additionally, the claims development disclosure must not normally be needed for annuity contracts because each periodic payment is regarded as a separate claim about which there is no uncertainty. [IFRS 4.BC220, IFRS 4.IG60].

The Implementation Guidance to IFRS 4 suggested that it might also be informative to reconcile the claims development information to amounts reported in the balance sheet and disclose unusual claims expenses or developments separately, allowing users to identify the underlying trends in performance. [IFRS 4.IG59].

FRS 103, like IFRS 4, is silent as to whether development information must be provided on both a gross basis and a net basis. If the effect of reinsurance is significant it would seem appropriate to provide such information both gross and net of reinsurance.

FRS 103 (and IFRS 4) is also silent as to the presentation of:

- Exchange differences associated with insurance liabilities arising on retranslation
 - Claims liabilities acquired in a business combination or portfolio transfer
- And
- Claims liabilities disposed of in a business combination or portfolio transfer

As FRS 103 is silent on these matters, a variety of treatments would appear to be permissible provided they are adequately explained to the users of the financial statements and consistently applied in each reporting period. For example, exchange rates could be fixed at the date the claims are incurred, the original reporting period dates or amounts could be retranslated at each reporting date. Claims liabilities acquired in a business combination or portfolio transfer could be reallocated to the prior reporting periods in which they were originally incurred by the acquiree or all liabilities could be allocated to the reporting period in which the acquisition/portfolio transfer occurred.

An illustrative example of one possible format for presenting claims development is reproduced below. This example presents claims development information by accident year. Other formats are permitted, including for example, presenting information by underwriting year or reporting period rather than underwriting year. In the interests of brevity, this illustrative example provides only five years of data although the standard itself requires ten (subject to the transitional relief upon first-time adoption). The effect of reinsurance is ignored. Given the long tail nature of many non-life insurance claims liabilities, it is likely that many non-life insurers will still have claims outstanding at the reporting date that are more than ten years old and which will need to be included in a reconciliation of the development table to the balance sheet.

Illustration 11-1: Illustrative disclosure of claims development

This example illustrates a possible format for a claims development table for a general insurer. The top half of the table shows how the insurer's estimates of total claims for each accident year develop over time. For example, at the end of 2X22, the insurer estimated that it would pay claims of £680 for insured events relating to insurance contracts underwritten in 2X22. By the end of 2X23, the insurer had revised the estimate of cumulative claims (both those paid and those still to be paid) to £673.

The lower half of the table reconciles the cumulative claims to the amount appearing in the balance sheet. First, the cumulative payments are deducted to give the cumulative unpaid claims for each year on an undiscounted basis. Second, if the claims liabilities are discounted, the effect of discounting is deducted to give the carrying amount in the balance sheet.

Accident year	2X22	2X23	2X24	2X25	2X26	Total
	£	£	£	£	£	£
Estimate of cumulative claims:						
At end of underwriting year	680	790	823	920	968	
One year later	673	785	840	903		
Two years later	692	776	845			
Three years later	697	771				
Four years later	702					
Estimate of cumulative claims	702	771	845	903	968	
Cumulative payments	(702)	(689)	(570)	(350)	(217)	
Balance recognised in the balance sheet	-	82	275	553	751	1,661

11.3.6 Credit risk, liquidity risk and market risk disclosures

As noted at 11.3 above, FRS 103 requires disclosure of information about credit risk, liquidity risk and market risk that, as a financial institution, Section 34 of FRS 102 would require if insurance contracts were within the scope of Sections 11 and 12 of FRS 102. [FRS 103.4.8(c)].

Such disclosure must include: [FRS 102.34.24]

- The exposures to risk and how they arise
- The objectives, policies and processes for managing the risk and the methods used to measure the risk
- And
- Any changes in risk exposures, objectives, policies and processes from the previous period

The Implementation Guidance to IFRS 4 suggested that, to be informative, the disclosure about credit risk, liquidity risk and market risk might include: [IFRS 4.IG64]

- Information about the extent to which features such as policyholder participation features might mitigate or compound those risks.
 - A summary of significant guarantees, and of the levels at which guarantees of market prices or interest rates are likely to alter cash flows.
- And
- The basis for determining investment returns credited to policyholders, such as whether the returns are fixed, based contractually on the return of specified assets or partly or wholly subject to the insurer's discretion.

11.3.6.A Credit risk disclosures

Extract from FRS 102

Appendix I

Glossary

credit risk	The risk that one party to a financial instrument will cause a financial loss for the other party by failing to discharge an obligation.

For a reinsurance contract, credit risk includes the risk that the insurer incurs a financial loss because a reinsurer defaults on its obligations under the contract. Furthermore, disputes with reinsurers could lead to impairments of the cedant's reinsurance assets. The risk of such disputes may have an effect similar to credit risk. Thus, similar disclosure might be relevant. Balances due from agents or brokers may also be subject to credit risk.

The specific disclosure requirements about credit risk in Section 34 of FRS 102 are: [FRS 102.34.25, FRS 102.34.26, FRS 102.34.27]

- (a) The amount representing the maximum exposure to credit risk at the reporting date without taking account of any collateral held or other credit enhancements. Disclosure is not required for instruments whose carrying amount best represents the maximum exposure to credit risk.
- (b) In respect of the amount above, a description of the collateral held as security and other credit enhancements and the extent to which these mitigate credit risk.
- (c) The amount by which any related credit derivatives or similar instruments mitigate that maximum exposure to risk.
- (d) Information about the credit quality of financial assets that are neither past due nor impaired.
- (e) For each class of financial assets:
 - (i) An analysis of the age of those that are past due at the reporting date but not impaired.

And

 - (ii) An analysis of those that are individually determined to be impaired as at the reporting date, including the factors considered in determining that they are impaired.
- (f) When a financial institution obtains financial or non-financial assets during the period by taking possession of collateral it holds as security or calling on other credit enhancements (e.g., guarantees) and such assets meet the recognition criteria in other sections of FRS 102, disclosure is required of:
 - (i) The nature and carrying amount of the assets obtained.

And

 - (ii) When the assets are not readily convertible into cash, the entity's policies for disposing of such assets or for using them in its operations.

The disclosures in (a) to (e) above are to be given by class of financial instrument. [FRS 102.34.25-26].

11.3.6.B Liquidity risk disclosures

Extract from FRS 102

Appendix I

Glossary

liquidity risk	The risk that an entity will encounter difficulty in meeting obligations associated with financial liabilities that are settled by delivering cash or another financial asset.

The specific disclosure requirement about liquidity risk in Section 34 of FRS 102 is for a maturity analysis for financial liabilities that shows the remaining contractual maturities at undiscounted amounts separated between derivative and non-derivative liabilities. *[FRS 102.34.28]*.

Although the maturity analysis is required of undiscounted contractual maturities, an insurer need not present this analysis if, instead, it discloses information about the estimated timing of the net cash outflows resulting from recognised insurance liabilities. This may take the form of an analysis, by estimated timing, of the amounts recognised in the balance sheet. *[FRS 103.4.8(c)(i)]*.

The reason for this concession is to avoid insurers having to disclose detailed cash flow estimates for insurance liabilities that are not required for measurement purposes.

This concession is not available for investment contracts that do not contain a DPF. These contracts are within the scope of Section 34 of FRS 102 and not FRS 103. Consequently, a maturity analysis of contractual undiscounted amounts is required for these liabilities.

The Implementation Guidance to IFRS 4 suggests that an insurer might need to disclose a summary narrative description of how the cash flows in the maturity analysis (or analysis by estimated timing) could change if policyholders exercised lapse or surrender options in different ways. If lapse behaviour is likely to be sensitive to interest rates, that fact might be disclosed as well as whether the disclosures about market risk (see 11.3.6.C below) reflect that interdependence. *[IFRS 4.IG65C]*.

11.3.6.C Market risk disclosures

Extract from FRS 102

Appendix I

Glossary

market risk	The risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices. Market risk comprises three types of risk: currency risk, interest rate risk and other price risk. Interest rate risk - the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates. Currency risk - the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in foreign exchange rates. Other price risk - the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices (other than those arising from interest rate risk or currency risk), whether those changes are caused by factors specific to the financial instrument or its issuer, or factors affecting all similar financial instruments traded in the market.

The specific disclosure requirements about market risk in Section 34 of FRS 102 are: *[FRS 102.34.29]*

- A sensitivity analysis for each type of market risk (e.g., interest rate risk, currency risk, other price risk) to which there is exposure at the reporting date, showing the impact on profit or loss and equity.
- And
- Details of the methods and assumptions used in preparing that sensitivity analysis.

If a financial institution prepares a sensitivity analysis, such as value-at risk, that reflects interdependencies between risk variables (e.g., interest rates and exchange rates) and uses it to manage financial risks, it may use that sensitivity analysis instead. *[FRS 102.34.30]*. Similarly, if an insurer uses an alternative method to manage sensitivity to market conditions, such as an embedded value analysis, it may use that sensitivity analysis to meet the requirements of paragraph 34.29 of FRS 102. *[FRS 103.4.8(c)(ii)]*.

Because two approaches are permitted, an insurer might wish to use different approaches for different classes of business.

Where the sensitivity analysis disclosed is not representative of the risk inherent in the instrument (for example because the year-end exposure does not reflect the exposure during the year), it would be informative to disclose that fact together with the reasons the sensitivity analyses are unrepresentative.

An insurer might be able to take action to reduce the effect of changes in market conditions. For example, it may have discretion to change surrender values or maturity benefits, or to vary the amount or timing of policyholder benefits arising from discretionary participation features. There is no requirement for entities to consider the potential effect of future management actions that may offset the effect of the disclosed changes in any relevant risk variable. However, disclosure is required of the methods and assumptions used to prepare any sensitivity analysis. To comply with this requirement, disclosure of the extent of available management actions and their effect on the sensitivity analysis might be useful to readers of the financial statements.

Many life insurance contract liabilities are backed by matching assets. In these circumstances giving isolated disclosures about the variability of, say, interest rates on the valuation of the liabilities without linking this to the impact on the assets could be misleading to users of the financial statements. In these circumstances it may be useful to provide information as to the linkage of market risk sensitivities.

11.3.7 Exposures to market risk from embedded derivatives

As noted at 11.3 above, disclosure is required if there are exposures to market risk arising from embedded derivatives contained in a host insurance contract if the insurer is not required to, and does not, measure the embedded derivatives at fair value. [FRS 103.4.8(d)].

Fair value measurement is not required for derivatives embedded in an insurance contract if the embedded derivative is itself an insurance contract (see 5 above). Examples of these include guaranteed annuity options and guaranteed minimum death benefits as illustrated below.

Illustration 11-2: Contract containing a guaranteed annuity option

An insurer issues a contract under which the policyholder pays a fixed monthly premium for thirty years. At maturity, the policyholder can elect to take either (a) a lump sum equal to the accumulated investment value or (b) a lifetime annuity at a rate guaranteed at inception (i.e., when the contract started). This is an example of a contract containing a guaranteed annuity option.

For policyholders electing to receive the annuity, the insurer could suffer a significant loss if interest rates decline substantially or if the policyholder lives much longer than the average. The insurer is exposed to both market risk and significant insurance risk (mortality risk) and the transfer of insurance risk occurs at inception of the contract because the insurer fixed the price for mortality risk at that date. Therefore, the contract is an insurance contract from inception. Moreover, the embedded guaranteed annuity option itself meets the definition of an insurance contract, and so separation is not required.

Illustration 11-3: Contract containing minimum guaranteed death benefits

An insurer issues a contract under which the policyholder pays a monthly premium for 30 years. Most of the premiums are invested in a mutual fund. The rest is used to buy life cover and to cover expenses. On maturity or surrender, the insurer pays the value of the mutual fund units at that date. On death before final maturity, the insurer pays the greater of (a) the current unit value and (b) a fixed amount. This is an example of a contract containing minimum guaranteed death benefits. It is an insurance contract because the insurer is exposed to significant insurance risk as the fixed amount payable on death before maturity could be greater than the unit value.

It could be viewed as a hybrid contract comprising (a) a mutual fund investment and (b) an embedded life insurance contract that pays a death benefit equal to the fixed amount less the current unit value (but zero if the current unit value is more than the fixed amount).

Both of the examples of embedded derivatives above meet the definition of an insurance contract where the insurance risk is deemed significant. However, in both cases, market risk or interest rate risk may be much more significant than the mortality risk. So, if interest rates or equity markets fall substantially, these guarantees would have significant value. Given the long-term nature of the guarantees and the size of the exposures, an insurer might face extremely large losses in certain scenarios. Therefore, particular emphasis on disclosures about such exposures might be required.

The Implementation Guidance to IFRS 4 stated that, to be informative, disclosures about such exposures may include: [IFRS 4.IG70]

- The sensitivity analysis discussed at 11.3.6.C above.
 - Information about the levels where these exposures start to have a material effect on the insurer's cash flows.
- And
- The fair value of the embedded derivative, although this is not a required disclosure.

11.4 Additional disclosures required by FRS 103 for with-profits business

Section 5 of FRS 103 requires additional disclosures for with-profits business written by life insurers. These replicate disclosures required under previous UK GAAP by FRS 27. However, when an entity has changed in accounting policies (see 9 above) and the new accounting policies are no longer consistent with policies on which the disclosure requirements of Section 5 are based, those requirements that are no longer consistent with the entity's accounting policies need not be applied. [FRS 103.5.2].

The following presentation and disclosure requirements apply:

- The FFA must be disclosed separately in the statement of financial position and not combined with technical provisions or other liabilities. Entities that consolidate interests in an entity carrying on long-term insurance business on a basis that combines the FFA and technical provisions into a single amount of liabilities to policyholders are required to show those elements separately. [FRS 103.5.4].
- And
- Where the balance on the FFA of a with-profits fund is negative, for whatever reason, disclosure is required explaining the nature of the negative balance, the circumstances in which it arose, and why no action to eliminate it has been considered necessary. [FRS 103.5.5].

In addition, amounts recognised for the present value of future profits on non-participating business written in a with-profits fund or for the excess of the realistic value of an interest in a subsidiary or associate over the net amounts included in the entity's consolidated accounts must be presented in one of the following ways: [FRS 103.5.3]

- Where it is possible to apportion the amount recognised between an amount relating to liabilities to policyholders and amount relating to the FFA, these portions must be presented in the statement of financial position as a deduction in arriving at the amount of the liabilities to policyholders and FFA respectively.
- Or
- Where it is not possible to make a reasonably approximate apportionment of the amount recognised, the amount must be presented in the statement of financial position as a separate item deducted from a sub-total of liabilities to policyholders and the FFA.
- Or
- Where the presentation above does not comply with the statutory requirements for balance sheet presentation applying to the entity, the amount recognised must be recognised as an asset.

Additionally, the Implementation Guidance to FRS 103 states that:

- Where an FFA is established, the notes to the financial statements must indicate the reasons for its use and the nature of the funds involved. *[FRS 103.IG2.51]*.
- For each significant class of with-profits insurance business, the insurer must disclose the extent to which the basis of preparation of the long-term business provision incorporates allowance for future bonuses. For example, it must be stated (if it is the case) that explicit provision is made only for vested bonuses (including those vesting following the current valuation) and that no provision is made for future regular or terminal bonuses. If practical, insurers must disclose the amount that has been included explicitly in the long-term business provision in relation to future bonuses provided this can be done without undue cost or effort. If the valuation method makes implicit allowance for future bonuses by adjusting the discount rate used or by another methods, this fact must be stated together with a broad description of the means by which such allowance is made. *[FRS 103.IG2.45]*.

And

- The aggregate of the bonuses added to policies in the reporting period must be disclosed in the notes to the financial statements. *[FRS 103.IG2.46]*.

11.5 Capital disclosures for entities with long-term insurance business

As financial institutions, insurers are required to make capital disclosures in accordance with paragraphs 34.31 to 34.32 of FRS 102.

The non-mandatory Implementation Guidance to FRS 103 contains best practice guidance for providing capital disclosures for entities with long-term insurance business. The suggested disclosures are those required previously under UK GAAP by FRS 27. They go far beyond the minimum requirements of paragraphs 34.31 to 34.32 of FRS 102. It is stated in the Basis for Conclusions that the disclosures provide entities with some flexibility over how to meet the requirements of FRS 102 but does not anticipate a reduction in the usefulness of the information disclosed compared to FRS 27. *[FRS 103.BC36]*.

No best practice guidance on capital disclosures is provided for entities with general insurance business on the grounds that this was not required under previous UK GAAP and therefore its introduction would be unduly onerous in the context of an accounting standard that consolidates existing practice, pending future developments relating to the accounting and regulatory environment for insurers. *[FRS 103.BC37]*.

The non-mandatory implementation guidance is analysed as follows:

- Capital statement (see 11.5.1 below)
- Disclosures relating to liabilities and capital (see 11.5.2 below)

And

- Movements in capital (see 11.5.3 below)

11.5.1 Capital statement

An entity must present a statement detailing its total regulatory capital resources relating to long-term insurance business. The statement must show, for each section of that business as defined below:

[FRS 103.IG3.1]

- Equity (or in the case of a mutual, the equivalent, often described as disclosed surplus)
- Adjustments to restate these amounts in accordance with regulatory requirements
- Each additional component of capital included for regulatory purposes, including capital retained within a life fund whether attributable to shareholders, policyholders or not yet allocated between shareholders and policyholders

And

- The total capital available to meet regulatory capital requirements

Available capital will consist of several distinct elements, each disclosed individually, including:

[FRS 103.IG3.2]

- Equity as included in the published statement of financial position, represented by surplus held within a life fund or by assets held separately from those of the fund itself.
- Amounts that are wholly attributable to owners, but held within a life fund and where the distribution out of the fund is restricted by regulatory or other considerations.

- Surplus held in life funds that has yet to be attributed or allocated between owners and policyholders (in the case of a mutual all such surplus is attributable to policyholders but is not treated as a liability).
And
- Qualifying debt capital, whether issued by the life entity itself or by another entity within the group.

The capital statement must show as separate sections: *[FRS 103.IG3.3]*

- Each UK with-profits life fund that is material to the group.
And
- The entity's other long-term insurance business, showing the extent to which the various components of capital are subject to constraints such that they are available to meet requirements in only part of the entity's business, or are available to meet risks and regulatory capital requirements in all parts of the business.

The Implementation Guidance observes that the capital statement aims to detail the entity's the financial strength and analyse the nature of its capital, and constraints over the availability of the capital to meet risks and regulatory requirements. It is important that sources of capital are shown separately and the extent to which the capital in each section is subject to constraint in its availability to meet requirements in other parts of the entity. Such constraints can arise for any of the following reasons: *[FRS 103.IG3.4]*

- Ownership - the capital may be subject to specific ownership considerations (for example, the FFA of a UK (or Republic of Ireland) with-profits fund, for which the allocation between policyholders and shareholders has not been determined).
- Regulatory - local regulatory limitations may require the maintenance of solvency margins in particular funds or countries.

Or

- Financial - the availability of capital in certain cases can be restricted due to the imposition of taxes or other financial penalty in the event of the capital being required to be redeployed across the group.

The aggregate amount of regulatory capital resources included in the capital statement must be reconciled to equity, FFA and other amounts shown in the entity's statement of financial position. Each component of capital must show the amount related to the entity's business separate from long-term insurance business. If such other business is significant, an explanation must be provided regarding how this capital can be used to meet the requirements of the life assurance business. *[FRS 103.IG3.5]*.

While the detailed requirements apply to long-term insurance business, entities must include information on other parts of the business, along with consolidation adjustments, in order to demonstrate how the aggregated capital attributed to the long-term insurance business reconciles to the total shown in the consolidated statement of financial position, and the extent to which capital outside the long-term insurance business may be made available to meet the capital requirements of the long-term insurance business. This reconciliation applies to each different type of capital shown in the capital statement. *[FRS 103.IG3.6]*.

Where the entity is a subsidiary, narrative supporting the capital statement must explain the extent to which the subsidiary's capital can be transferred to a parent or fellow subsidiaries, or the extent to which it is required to be retained within the subsidiary. *[FRS 103.IG3.7]*.

Entities with life assurance liabilities must reconcile their regulatory capital resources to their shareholders' funds. Adjustments to reconcile the capital shown in the statement of financial position to the amount for regulatory purposes may include the following: *[FRS 103.IG3.8]*

- The difference between provisions measured on the realistic basis and the regulatory basis.
- The inclusion in capital of the FFA.
- The exclusion from capital of the shareholders' share of accrued bonus.
- The exclusion of goodwill and other intangible assets, such as an amount attributed to the acquired value of in-force life assurance business (VIF).

And

- Changes to the valuation of assets and the exclusion of certain non-admissible assets for regulatory purposes, for example any regulatory adjustment to a pension fund deficit that is recognised as a liability.

Disclosure of these adjustments must clearly depict the capital position from a regulatory perspective and its relationship to the equity shown in the consolidated statement of financial position.

Where the amount of a capital instrument that qualifies for inclusion as regulatory capital is restricted (e.g., when only a limited percentage of total regulatory capital may be composed of debt) the entire amount of the instrument must be included, with a separate deduction for the amount in excess of the restriction.

[FRS 103.IG3.9].

Any formal intra-group arrangements to provide capital to particular funds or business units, including intra-group loans and contingent arrangements, must be disclosed. Where the entity is a subsidiary, similar arrangements between the entity and a parent or fellow subsidiary, must also be disclosed. [FRS 103.IG3.10].

Separate disclosing each class of capital is important for understanding the business's funding and how future losses would be absorbed or new business financed. Regulatory capital can include both equity and a surplus within the fund. Such surplus may either be entirely attributable to owners, or remain unallocated as part of the FFA. In a mutual fund, all surplus is attributable to policyholders. Debt instruments qualifying as capital may also be issued from the fund itself, or may form part of the owners' equity outside the life fund; a debt instrument issued by the fund to the owners may effectively transfer capital from the owners to the fund. [FRS 103.IG3.11].

Intra-group arrangements must be included in the regulatory capital of a section only where they are subject to formal arrangements. [FRS 103.IG3.12].

11.5.2 Disclosures relating to liabilities and capital

The capital statement must be supported by the following disclosures: [FRS 103.IG3.13]

- Narrative or quantified information on the regulatory capital requirements applying to each section of the business shown in the capital statement, and on the capital targets set by management for that section.
 - Narrative disclosure of the basis of determining regulatory capital and the corresponding regulatory capital requirements, and any major inconsistencies in this basis between the different sections of the business.
 - Narrative disclosure showing the sensitivity of regulatory liabilities (including options and guarantees), and the components of total capital, to changes in market conditions, key assumptions and other variables, as well as future management actions in response to changes in market conditions.
- And
- Narrative disclosure of the entity's capital management policies and objectives, and its approach to managing the risks that would affect the capital position.

The Implementation Guidance considers that these disclosures are important to the user's ability to understand the management of capital by the entity, its financial adaptability in changing circumstances, and the resources available to each group of policyholders.

In relation to liabilities arising from long-term insurance business, the entity must include the following additional information: [FRS 103.IG3.14]

- The process used to determine the assumptions that have the greatest effect on the measurement of liabilities including options and guarantees and, where practicable, quantified disclosure of those assumptions.
 - Those terms and conditions of options and guarantees relating to long-term insurance contracts that could in aggregate have a material effect on the amount, timing and uncertainty of the entity's future cash flows.
- And
- Information about exposures to interest rate risk or market risk under options and guarantees if the entity does not measure these at fair value or at an amount estimated using a market-consistent stochastic model.

To comply with the last bullet point above, an insurer must disclose: [FRS 103.IG3.18]

- (a) A description of the nature and extent of the options and guarantees.
 - (b) The basis of measurement for the amount at which these options and guarantees are stated, and the amount included, if any, for the additional payment that may arise in excess of the amounts expected to be paid if the policies did not include the option or guarantee feature.
 - (c) The main variables that determine the amount payable under the option or guarantee.
- And
- (d) Information on the potential effects of adverse changes in those market conditions that affect the entity's obligations under options and guarantees.

The requirement of paragraph (d) above may be met by disclosing: *[FRS 103.IG3.19]*

- For options and guarantees that would result in additional payments to policyholders if current asset values and market rates continued unchanged (i.e., those that are 'in the money' for the policyholder), an indication of the change in these amounts if the variables moved adversely by a stated amount.

And

- For options and guarantees that would result in additional payments to policyholders only if there was an adverse change in current asset values and market rates (i.e., those that are 'out of the money' for the policyholder):

- An indication of the change in these variables, from current levels, which would cause material amounts to become payable under the options and guarantees.

And

- An indication of the amount that would result from a specified adverse change in these variables from the levels at which amounts first become payable under the options and guarantees.

The above disclosures may be made in aggregate for classes of options and guarantees that do not differ materially, or which are not individually material.

The Implementation Guidance states that although it is important to explain all movements in liabilities and capital during the period that are material to the group, this does not imply that the impact of each change in assumption needs to be shown separately. Where there is a common cause for the change of assumption the impacts can be grouped together. As an example, the impact of changes in investment return attributable to changing market circumstances does not need to be broken down between the various classes of investment. *[FRS 103.IG3.15]*.

The description of the process would include the objective (whether a best-estimate or a given level of assurance is intended); the sources of data; whether assumptions are consistent with observable market data or other published information; how past experience, current conditions and future trends are taken into account; correlations between different assumptions; management's policy for future bonuses; and the nature and extent of uncertainties affecting the assumptions. *[FRS 103.IG3.16]*.

Options and guarantees are features of life assurance contracts that: (a) confer potentially valuable guarantees underlying the level or nature of policyholder benefits; or (b) are options to change these benefits exercisable at the discretion of the policyholder. For the purposes of FRS 103, the term is used to refer only to those options and guarantees whose potential value is affected by the behaviour of financial variables, and not to potential changes in policyholder benefits arising solely from insurance risk (including mortality and morbidity), or from changes in the entity's creditworthiness. It includes a financial guarantee or option that applies if a policy lapses, but does not include the option to surrender or allow a policy to lapse. *[FRS 103.IG3.17]*.

The capital statement must show the amount of policyholder liabilities attributed to each section of the business shown in the statement, analysed between: *[FRS 103.IG3.20]*

- With-profits business
- Linked business
- Other long-term insurance business

And

- Insurance business accounted for as financial instruments in accordance with the requirements of Sections 11 and 12 of FRS 102

The total of these policyholder liabilities must be the amounts shown in the entity's statement of financial position.

11.5.3 Movements in capital

An entity must include a reconciliation of the movements in the total amount of available capital for long-term insurance business shown in the capital statement from the comparative amounts at the end of the previous reporting period. This disclosure must cover individually each UK (or Republic of Ireland) life fund that is separately shown in the capital statement required under 11.5.1 above, and other long-term insurance business in aggregate. *[FRS 103.IG3.21]*.

This disclosure must set out in tabular form the effect of changes resulting from: *[FRS 103.IG3.22]*

- Changes in assumptions used to measure liabilities from long-term insurance business, showing separately the effect of each change in an assumption that has had a material effect on the group
- Changes in management policy
- Changes in regulatory requirements and similar external developments

And

- New business and other factors (for example changing market prices affecting assets and liabilities, surrenders, lapses and maturities), describing any material items

Changes in management policy above refers to significant changes in the management of the fund such as changes in investment policy or changes in the use of the inherited estate. Where management actions are clearly directly related to changes in assumptions or other factors it will be appropriate to show the net impact, but the narrative must discuss the constituent factors. An example might be the combined effect of a reduced level of bonuses assumed as a result of a reduction in the assumed level of future investment return and a reduction in investment returns earned in the period. *[FRS 103.IG3.23]*.

11.6 Segmental disclosures required by Schedule 3

FRS 102 does not require segmental disclosures except for entities whose debt and equity instruments are publicly traded, or those in the process of filing financial statements with a securities commission or other regulatory organisation for the purpose of issuing any class of instruments in a public market. Those entities (as well as any entities choosing to provide segmental information voluntarily) must apply IFRS 8 *Operating Segments*. *[FRS 102.1.5]*.

However, UK insurance entities preparing individual financial and separate statements under Schedule 3 to the Regulations must make the segmental disclosures required by the Regulations.

Separate disclosures are required for general and long-term business as shown at 11.6.1 and 11.6.2 below. Entities preparing consolidated financial statements are not required to give the disclosures required by 11.6.1 and 11.6.2 below in respect of the group profit and loss account. *[6 Sch 40(6)]*.

11.6.1 Segmental disclosures for general business required in individual and separate financial statements

A company must disclose: *[3 Sch 85(1)]*

- Gross premiums written
- Gross premiums earned
- Gross claims incurred
- Gross operating expenses

And

- The reinsurance balance

The 'reinsurance balance' means the aggregate total of all those items included in the technical account for general business which relate to reinsurance outwards transactions including items recorded as reinsurance commissions and profit participation. *[FRS 103.IG2.62]*.

These amounts must be broken down between: *[3 Sch 85(2)]*

- Direct insurance
- And
- Reinsurance acceptances (if reinsurance acceptances amount to 10% or more of the gross premiums written)

Where the amount of gross premiums written in direct insurance for each group exceeds €10 million, the amounts in respect of direct insurance must be further broken down into the following groups of classes: *[3 Sch 85(3)]*

- Accident and health
- Motor (third party liability)
- Motor (other classes)
- Marine, aviation and transport
- Fire and other damage to property

- Third-party liability
- Credit and suretyship
- Legal expenses
- Assistance
- And
- Miscellaneous

The entity must, in any event, disclose the amounts relating to the three largest groups of classes in its business. [3 Sch 85(4)].

Total gross direct insurance premiums must also be split by the following categories if any one exceeds 5% of total gross premiums resulting from contracts concluded by the company in: [3 Sch 87]

- In the country in which its head office is located
- And
- In other countries

There must also be disclosed the total amount of commissions for direct insurance business accounted for in the financial year, including acquisition, renewal collection and portfolio management commissions.

[3 Sch 88].

11.6.2 Segmental disclosures for long-term business required in individual and separate financial statements

A company must disclose: [3 Sch 86]

- Gross premiums written, broken down between those written by way of direct insurance and those written by reinsurance
- And
- The reinsurance balance

Gross premiums written by way of direct insurance must be further broken down, when it exceeds 10% of the gross premiums written or (as the case may be) of the gross premiums written by way of direct insurance, between:

- Individual premiums and premiums under group contracts
- Periodic premiums and single premiums
- And
- Premiums from non-participating contracts, premiums from participating contracts and premiums from contracts where the investment risk is borne by policyholder

The 'reinsurance balance' means the aggregate total of all those items included in the technical account for long-term which relate to reinsurance outwards transactions including items recorded as reinsurance commissions and profit participation. [FRS 103.IG2.62].

Single premium contracts are those contracts under which there is no expectation of continuing premiums being paid at regular intervals. Additional single premiums paid in respect of existing individual contracts must be included. Regular premium contracts must include those contracts under which the premiums are payable at regular intervals during the policy year, including repeated or recurrent single premiums where the level of premiums is defined. [FRS 103.IG2.56].

The Implementation Guidance to FRS 103 states that new annual and single premiums must be disclosed separately in the financial statements together with an explanation of the basis adopted for recognising premiums as either annual or single premiums. New annual premiums must be shown as the premiums payable in a full year (i.e., annual premium equivalent). Department for Work and Pensions rebates received on certain pensions contracts must be treated as single premiums. [FRS 103.IG2.57]. Internal transfers between products where open market options are available must be counted as new business. If no open market exists, the transfer must not be treated as new business. [FRS 103.IG2.58].

Total gross direct insurance premiums must also be split by the following categories if any one exceeds 5% of total gross premiums resulting from contracts concluded by the company in: [3 Sch 87]

- In the country in which its head office is located
- And
- In other countries

There must also be disclosed the total amount of commissions for direct insurance business accounted for in the financial year, including acquisition, renewal collection and portfolio management commissions.

[3 Sch 88].

11.7 Disclosures in respect of the allocated investment return

Schedule 3 to the Regulations requires that, when an entity makes a transfer of investment return from one part of the profit and loss account to another (e.g., non-technical account to technical account), the reasons for such a transfer and the bases on which it is made must be disclosed in the notes to the financial statements. [3 Sch P&L Note 8, 3 Sch P&L Note10].

The Implementation Guidance to FRS 103 recommends the following disclosures where the technical results show a longer term rate of investment return: [FRS 103.IG2.71]

- The methodology used to determine the longer-term rate of return for each investment category.
 - For each investment category and material currency, both the longer-term rates of return and, if applicable, the long-term dividend and rental yields used to calculate the grossing-up factor for equities and property.
 - A comparison over a longer-term (at least five years) of the actual return achieved with the return allocated using the longer-term rate of return analysed between returns relating to general business, long-term business and other.
- And
- The sensitivity of the longer-term rate of return to a 1% decrease and a 1% increase in the longer-term rate of investment return.

11.8 Disclosure of distributable profits by life insurers

Schedule 3 to the Regulations requires that every balance sheet of a company which carries on long-term business must show separately as an additional item the aggregate of any capital and reserves which are not required to be treated as realised profits under section 843 of the CA 2006. [3 Sch 11(1)].

For companies authorised to carry on long-term insurance business in accordance with Article 14 of the Solvency II Directive, the realised profit or loss of the company in respect of which its relevant accounts are prepared is the amount calculated by a given formula. [s833A]. It is beyond the scope of this chapter to discuss the formula in detail but, in summary, it is the company's net assets as calculated by the Solvency II Directive less various deductions which include:

- Any defined benefit pension surplus (net of related deferred tax)
 - The value of shares in a qualifying investment subsidiary which exceeds the consideration paid (net of related deferred tax)
 - Excess assets held in a ring-fenced fund (net of related deferred tax)
 - The excess of the value of any portfolio of assets assigned to cover the best estimate of life insurance or reinsurance obligations where the company has permission to disapply or modify its rules on accordance with section 138BA of the Financial Services and Markets Act 2000, to apply a matching adjustment to a relevant risk-free interest rate term structure to calculate the best estimate of a portfolio of life insurance or reinsurance obligations
 - Paid-in ordinary share capital together with any related share premium account
 - Paid in preference shares which are not liabilities together with any related share premium account
 - Any capital redemption reserve
- And
- Any other reserve that the company is prohibited from distributing

For companies that are not required to comply with the Solvency II Directive, realised profits or losses are determined using the normal UK common law and statutory requirements (see Chapter 1 at 5.8).

In addition, a company which carries on long-term business must show separately, in the balance sheet or in the notes, the total amount of assets representing the long-term fund valued in accordance with the provisions of Schedule 3. [3 Sch 11(2)].

Appendix A - Defined terms

Extract from FRS 103

Appendix I

Glossary

This appendix is an integral part of this FRS.

acquisition costs	Costs arising from the conclusion of insurance contracts including direct costs and indirect costs connected with the processing of proposals and the issuing of policies. Further details are set out in note 6 of the Notes on the Profit and Loss Account format in Schedule 3 to the Regulations.
adopted IFRS	IFRS Accounting Standards that have been adopted in the relevant jurisdiction. In the UK, this refers to UK-adopted international accounting standards. In the Republic of Ireland, this refers to EU-adopted IFRS.
bonuses	Amounts allocated to policyholders under with-profits contracts whose existence but not size is specified in the contract. Bonuses may be regular, occasional or terminal
catastrophe provision	Amount recognised over reporting periods between catastrophe events to provide contingency against future catastrophe claims
category of business	Groupings of general insurance business with similar characteristics (such as patterns of risk, claims incurrence and settlement patterns, and setting of premiums).
cedant	The policyholder under a reinsurance contract.
claim	The amount payable under an insurance contract arising from the occurrence of an insured event.
claims incurred	A claim is incurred when the event giving rise to the claim occurs. Claims incurred include paid claims and movements in outstanding claims.
claims outstanding	In relation to general insurance business: The amounts provided to cover the estimated ultimate cost of settling claims arising out of events which have occurred by the reporting date, including incurred but not reported (IBNR) claims and claims handling expenses, less amounts already paid in respect of those claims. In relation to long-term insurance business: The amounts provided to cover the estimated ultimate cost of settling claims arising out of events, which have been notified by the reporting date being the sums due to beneficiaries together with claims handling expenses, less amounts already paid in respect of those claims.
deferred acquisition costs	Costs arising from the conclusion of insurance contracts that are incurred during a reporting period but which relate to a subsequent reporting period and are carried forward to subsequent reporting periods. In relation to general insurance business: Costs relating to the unexpired period of risk of contracts in force at the reporting date. In relation to long-term insurance business: Costs relating to contracts in-force at the reporting date in the expectation that they will be recoverable out of future margins within insurance contracts after providing for contractual liabilities.
deposit component	A contractual component that is not accounted for as a derivative under Sections 11 <i>Basic Financial Instruments</i> and 12 <i>Other Financial Instrument Issues</i> of FRS 102 and would be within the scope of FRS 102 if it were a separate instrument.
derivative	A financial instrument or other contract with all three of the following characteristics:

	(a) its value changes in response to the change in a specified interest rate, financial instrument price, commodity price, foreign exchange rate, index of prices or rates, credit rating or credit index, or other variable (sometimes called the 'underlying'), provided in the case of a non-financial variable that the variable is not specific to a party to the contract; (b) it requires no initial net investment or an initial net investment that is smaller than would be required for other types of contracts that would be expected to have a similar response to changes in market factors; and (c) it is settled at a future date.
deterministic approach	A method which calculates the value of a policy under a defined scenario and a single set of assumptions.
discounting	The reduction to present value at a given date of future cash flows at an assumed date by the application of an appropriate discount factor reflecting the time value of money.
discretionary participation feature	A contractual right to receive, as a supplement to guaranteed benefits, additional benefits: (a) that are likely to be a significant portion of the total contractual benefits; (b) whose amount or timing is contractually at the discretion of the issuer; and (c) that are contractually based on: (i) the performance of a specified pool of contracts or a specified type of contract; (ii) realised and/or unrealised investment returns on a specified pool of assets held by the issuer; or (iii) the profit or loss of the company, fund or other entity that issues the contract.
earned premium	For general insurance business, earned premium is the proportion of written premiums (including where relevant those of previous reporting periods) attributable to the risks borne by the insurer during the reporting period.
embedded derivative	A component of a hybrid (combined) instrument that also includes a non-derivative host contract - with the effect that some of the cash flows of the combined instrument vary in a way similar to a stand-alone derivative. A derivative that is attached to a financial instrument but is contractually transferable independently of that instrument, or has a different counterparty from that instrument, is not an embedded derivative, but a separate financial instrument.
embedded value	A measure of the consolidated value of shareholder's interests in the business, calculated as free surplus plus required capital plus the value of in-force life assurance business (VIF). Different approaches are adopted in terms of methodology and valuation basis, with most entities tending to adopt either the CFO Forum's EEV or MCEV principles.
EU-adopted IFRS	IFRS Accounting Standards that have been adopted in the European Union in accordance with EU Regulation 1606/2002.
financial guarantee contract	A contract that requires the issuer to make specified payments to reimburse the holder for a loss it incurs because a specified debtor fails to make payment when due in accordance with the original or modified terms of a debt instrument.
financial reinsurance	Where a reinsurance contract is intended, either in whole or in part, to mitigate the requirement to establish prudent provisions, and/or to provide an element of financing, the identifiable elements of the contract which do not transfer significant insurance risk are considered to be financial reinsurance.
fund for future appropriation (FFA)	The balance sheet item required by Schedule 3 to the Regulations to comprise all funds the allocation of which, either to policyholders or to shareholders, has not been determined by the end of the reporting period.

general insurance business	Insurance contracts (including reinsurance) falling within one of the classes of insurance specified in Part I of Schedule 1 to the Financial Services and Markets Act 2000 (Regulated Activities) Order 2001 (SI 2001/544).
gross premium method	A form of actuarial valuation of liabilities arising under long-term insurance contracts where the premiums brought into account are the full amounts receivable under the contract. The method includes explicit estimates of cash flows for: (a) premiums, adjusted for renewals and lapses; (b) expected claims and for with-profits business future regular but not occasional or terminal bonuses; (c) costs of maintaining contracts; and (d) future renewal expenses. Cash flows are discounted at the valuation interest rate. The methodology may be set out in the relevant regulatory framework. The discount rate is based on the expected return on the assets deemed to back the liabilities. This will be adjusted to reflect any further risks although, under this method, most of the key risks will be reflected in the modelling of the cash flows. For linked business, allowance may be made for the purchase of future units required by the contract terms and credit is taken for future charges permitted under those terms.
guaranteed benefits	Payments or other benefits to which a particular policyholder or investor has an unconditional right that is not subject to the contractual discretion of the issuer.
insurance asset	An insurer's net contractual rights under an insurance contract.
insurance contract	A contract under which one party (the insurer) accepts significant insurance risk from another party (the policyholder) by agreeing to compensate the policyholder if a specified uncertain future event (the insured event) adversely affects the policyholder. (See Appendix II for guidance on this definition.)
insurance liability	An insurer's net contractual obligations under an insurance contract.
insurance risk	Risk, other than financial risk, transferred from the holder of a contract to the issuer.
insured event	An uncertain future event that is covered by an insurance contract and creates insurance risk.
insurer	The party that has an obligation under an insurance contract to compensate a policyholder if an insured event occurs.
intangible asset	An identifiable non-monetary asset without physical substance. Such an asset is identifiable when: (a) it is separable, ie capable of being separated or divided from the entity and sold, transferred, licensed, rented or exchanged, either individually or together with a related contract, asset or liability; or (b) it arises from contractual or other legal rights, regardless of whether those rights are transferable or separable from the entity or from other rights and obligations.
investment contract	Contract that has the legal form of an insurance contract but does not expose the insurer to significant insurance risk, for example life insurance contracts in which the insurer bears no significant mortality risk.
investment return	Comprises all investment income, realised investment gains and losses and movements in unrealised investment gains and losses. It also includes investment expenses and charges and, if appropriate, interest payable.
liability adequacy test	An assessment of whether the carrying amount of an insurance liability needs to be increased (or the carrying amount of related deferred acquisition costs or related intangible assets decreased), based on a review of future cash flows.

linked business	Long-term insurance business where the benefits payable to policyholders are wholly or partly to be determined by reference to the value of, or the income from, property of any description or by reference to fluctuations in, or in an index of, the value of property of any description.
longer term rate of investment return	An estimate of the long-term trend investment return for the relevant category of investments having regard to past performance, current trends and future expectations.
long-term insurance business	Insurance contracts (including reinsurance) falling within one of the classes of insurance specified in Part II of Schedule 1 to the Financial Services and Markets Act 2000 (Regulated Activities) Order 2001 (SI 2001/544).
modified statutory solvency basis (MSSB)	The basis for determining insurance liabilities which is the statutory solvency basis adjusted for the following items: (a) to defer new business acquisition costs incurred where the benefit of such costs will be obtained in subsequent reporting periods; and (b) to treat investment, resilience and similar reserves, or reserves held in respect of general contingencies or the specific contingency that the fund will be closed to new business, where such items are held in respect of long-term insurance business, as reserves rather than provisions. These are included, as appropriate, within shareholders' capital and reserves or the fund for future appropriations (FFA).
net premium method	An actuarial valuation of liabilities arising under long-term insurance contracts where the premium brought into account at any valuation date is that which, on the valuation assumptions regarding interest, mortality and disability, will exactly provide for the benefits guaranteed. A variation of the net premium method involves zillmerisation. The detailed methodology for UK companies is included in regulations contained in the PRA Rulebook as at 31 December 2015.
non-technical account	The section of the income statement (referred to as the profit and loss account in the Act) prescribed by Part 1 of Schedule 3 to the Regulations in addition to the technical accounts for general and long-term insurance business.
options and guarantees	Features of life assurance contracts that: (a) confer potentially valuable guarantees underlying the level or nature of policyholder benefits; or (b) are options to change these benefits exercisable at the discretion of the policyholder. For the purposes of this FRS, the term is used to refer only to those options and guarantees whose potential value is affected by the behaviour of financial variables.
pipeline premiums	Premiums written but not reported to the undertaking by the reporting date.
policyholder	A party that has a right to compensation under an insurance contract if an insured event occurs.
portfolio claims	Amounts payable by one insurer to another in consideration for a contract whereby the latter agrees to assume responsibility for the unpaid claims incurred by the former prior to a date specified in the contract.
portfolio premiums	Amounts payable by one insurer to another in consideration for a contract whereby the latter agrees to assume responsibility for the claims arising on a portfolio of in-force business written by the former from a future date until the expiry of the policies.
portfolio transfer	The bulk transfer of contracts or risks to another entity.
principles and practices of financial management (PPFM)	The statement that the Financial Conduct Authority requires each with-profits life fund to make available to its policyholders containing, inter alia, a description of the fund's investment management and bonus distribution policies.

Prudential Regulation Authority (PRA)	The division of the Bank of England responsible for the prudential regulation and supervision of banks, building societies, credit unions, insurers and major investment firms in the UK.
Prudential sourcebook for insurers (INSPRU)	The section of the PRA Rulebook detailing the prudential rules for insurers, including capital requirements, credit, market and liquidity risk for periods ending before 1 January 2016.
reinsurance assets	A cedant's net contractual rights under a reinsurance contract.
reinsurance contract	An insurance contract issued by one insurer (the reinsurer) to compensate another insurer (the cedant) for losses on one or more contracts issued by the cedant. Retrocession is the reinsurance outwards of risks previously accepted by an insurer as reinsurance inwards. The recipient is known as the retrocessionaire.
reinsurer	The party that has an obligation under a reinsurance contract to compensate a cedant if an insured event occurs.
run-off deviation	For general insurance business, the difference (before any reduction in respect of discounting) between: (a) the provisions made at the beginning of the reporting period for outstanding claims incurred in previous reporting periods; and (b) the payments made during the reporting period on account of claims incurred in previous reporting periods and the claims provision at the end of the reporting period for such outstanding claims.
separable embedded derivative	An embedded derivative where: (a) the economic characteristics and risks of the embedded derivative are not closely related to the economic characteristics and risks of the host contract; (b) a separate instrument with the same terms as the embedded derivative would meet the definition of a derivative; and (c) the hybrid (combined) instrument is not measured at fair value with changes in fair value recognised in profit or loss. The guidance in IAS 39 <i>Financial Instruments: Recognition and Measurement</i> and IFRS 4 <i>Insurance Contracts</i> shall be used in determining whether an embedded derivative is separable.
significant insurance risk	An insured event or risk which could cause an insurer to pay significant additional benefits in any scenario, excluding scenarios that lack commercial substance.
Solvency II Directive	Directive 2009/138/EC of the European Parliament and of the Council of 25 November 2009 on the taking-up and pursuit of the business of Insurance and Reinsurance (Solvency II), as amended, and as implemented in the United Kingdom and Republic of Ireland.
statutory solvency basis	The basis of determination of insurance liabilities in accordance with rule 1 of INSPRU as at 31 December 2015.
structured settlement	An arrangement by consent between the parties concerned or under a Court Order whereby damages in the form of a lump sum are replaced by a smaller lump sum and a series of periodic payments. These are also referred to as Periodic Payment Orders or PPOs.
surrender	To cease paying premiums such that the insurance contract ceases to have effect.
surrender option	The option to surrender an insurance contract in return for some form of reduced claim.

technical account	In relation to general insurance business: The section of the income statement (referred to as the profit and loss account in the Act) for recording insurance business within the classes specified in Part I of Schedule 1 to the Regulated Activities Order which must be prepared in accordance with the format prescribed in Part I of Schedule 3 to the Regulations. In relation to long-term insurance business: The section of the income statement (referred to as the profit and loss account in the Act) for recording insurance business within the classes specified in Part II of Schedule 1 to the Regulated Activities Order, which must be prepared in accordance with the format prescribed in Part I of Schedule 3 to the Regulations.
unbundle	To account for the components of a contract as if they were separate contracts.
unearned premiums provision	For general insurance business, the proportion of written premiums relating to periods of risk after the reporting date, which are deferred to subsequent reporting periods.
unexpired risks provision	The excess of the estimated value of claims and expenses likely to arise after the end of the reporting period from contracts concluded before that date, insofar as their estimated value exceeds the provision for unearned premiums (after deduction of any acquisition costs deferred), and any premiums receivable under those contracts.
value of in-force life assurance business (VIF)	The net present value of the shareholders' interest in the expected after tax cash flows from long-term insurance business, on the assumption that all assets backing the business will be distributed over time to in-force policyholders and/or shareholders. The calculation of VIF should allow for uncertainties associated with the assessment of future cash flows, as well as for the time value of money. VIF includes both the shareholders' interest which is expected to arise in the form of cash flows over the lifetime of current in-force contracts and the interest in the surplus assets which, in practice, is not expected to be distributed over this period.
with-profits business	Long-term insurance business which provides benefits through eligibility to participate in discretionary distributions based on profits arising from the insurer's business or from a particular part of the insurer's business. A with-profits contract is an example of a contract with a discretionary participation feature.
written premiums	In relation to general insurance business: Premiums, which an insurer is contractually entitled to receive from the insured in relation to contracts of insurance. These are premiums on contracts entered into during the reporting period and adjustments arising in the reporting period to premiums receivable in respect of contracts entered into in previous reporting periods. In relation to long-term insurance business: Premiums to which the insurer is contractually entitled becoming due for payment in the reporting period.
zillmerisation	A variation of the net premium method which increases the future premiums valued to take account of acquisition costs incurred.

Chapter 39 FRS 104 - Interim financial reporting

Contents

Overview	2149
1 Introduction	2150
2 Objective and scope of FRS 104	2151
2.1 Objective	2151
2.2 Scope	2151
2.2.1 Issuers required to comply with the Disclosure Guidance and Transparency Rules (DTR)	2151
2.2.2 Unlisted entities and entities not subject to the DTR	2152
3 Form and content of an interim financial report under FRS 104	2153
3.1 Complete set of interim financial statements	2153
3.2 Condensed interim financial statements	2153
3.3 Requirements for complete and condensed interim financial information	2156
3.4 Management commentary	2157
4 Disclosures in condensed financial statements	2158
4.1 Significant events and transactions	2158
4.1.1 Relevance of other standards in condensed financial statements	2159
4.2 Other disclosures required by FRS 104	2159
4.2.1 Disclosure relating to business combinations	2160
4.2.2 Disclosures relating to disposals, discontinued operations and restructurings	2160
4.2.3 Location of the specified disclosures in an interim financial report	2160
4.3 Segment information	2160
4.4 Fair value disclosures for financial instruments	2161
4.5 Disclosure of compliance with FRS 104	2161
5 Entities reporting under FRS 101	2162
5.1 Disclosure of significant events and transactions	2162
5.2 Business combinations	2162
5.3 Financial instruments	2162
6 Periods for which interim financial statements are required to be presented	2164
6.1 Other comparative information	2166
6.2 Change in financial year-end	2167
7 Materiality	2168
8 Recognition and measurement	2169

8.1	Same accounting policies as in annual financial statements	2169
8.1.1	Measurement on a year-to-date basis	2169
8.1.2	New accounting pronouncements and other changes in accounting policies	2170
8.1.2.A	Accounting policy changes becoming mandatory during the current year	2170
8.1.2.B	Voluntary changes of accounting policy	2170
8.1.3	Change in going concern assumption	2171
8.1.4	Voluntary changes in presentation	2172
8.2	Seasonal businesses	2172
8.2.1	Revenues received seasonally, cyclically or occasionally	2172
8.2.2	Costs incurred unevenly during the year	2172
9	Examples of the recognition and measurement principles	2173
9.1	Property, plant and equipment and intangible assets	2173
9.1.1	Depreciation and amortisation	2173
9.1.2	Impairment of assets	2173
9.1.3	Recognition of intangible assets	2173
9.1.4	Capitalisation of borrowing costs	2173
9.2	Employee benefits	2174
9.2.1	Employer payroll taxes and insurance contributions	2174
9.2.2	Year-end bonuses	2174
9.2.3	Pensions	2175
9.2.4	Vacations, holidays and other short-term paid absences	2175
9.3	Inventories and cost of sales	2175
9.3.1	Inventories	2175
9.3.2	Contractual or anticipated purchase price changes	2175
9.3.3	Interim period manufacturing cost variances	2175
9.4	Taxation	2176
9.4.1	Measuring interim income tax expense	2176
9.4.2	Changes in the effective tax rate during the year	2178
9.4.2.A	Enacted changes for the current year that apply after the interim reporting date	2178
9.4.2.B	Changes to previously reported estimated income tax rates for the current year	2178
9.4.2.C	Enacted changes applying only to subsequent years	2179
9.4.3	Difference in financial year and tax year	2180
9.4.4	Tax loss and tax credit carrybacks and carryforwards	2180
9.4.5	Tax credits	2182
9.4.6	Pillar Two Income Taxes	2183
9.5	Foreign currency translation	2183
9.5.1	Foreign currency translation gains and losses	2183
9.5.2	Interim financial reporting in hyperinflationary economies	2183
9.6	Provisions, contingencies and accruals for other costs	2184
9.6.1	Provisions	2184
9.6.2	Other planned but irregularly occurring costs	2184
9.6.3	Major planned periodic maintenance or overhaul	2184
9.6.4	Variable lease payments	2184
9.6.5	Levies charged by public authorities	2184
9.7	Earnings per share	2185

10 Use of estimates	2186
11 First-time presentation of interim reports complying with FRS 104	2188
12 Periodic Review 2024	2189
13 Summary of GAAP differences	2190
Appendix A - Defined terms	2191
Appendix B - Index of Illustrations	2192

Overview

This chapter deals with the requirements of FRS 104 *Interim Financial Reporting*. In addition, the chapter also provides guidance on the overall recognition and measurement principles in interim financial reports. This FRS describes the minimum content of an interim financial report and the principles for recognition and measurement in complete or condensed financial statements for an interim period. The FRS does not require an entity to prepare an interim financial report, rather, FRS 104 applies if an entity is required by laws or regulations or voluntarily chooses to prepare interim financial reports it may voluntarily choose to apply this FRS.

What you need to know

- FRS 104 provides guidance on the form and content of interim financial statements.
- FRS 104 specifies the periods, including comparative information, for which interim financial reports must be presented.
- The overall principle on measurement is based on a year-to-date approach. This includes guidance on the application of year-to-date approach on specific areas.
- FRS 104 requires significant transactions and events and other information to be disclosed in interim financial statements.

1 Introduction

FRS 104 was issued originally in March 2015. A revised version was issued in March 2018, to update the edition issued in March 2015 for the following:

- Amendments to FRS 102 Triennial review 2017 *Incremental improvements and clarifications (Triennial review 2017)* issued in December 2017.
- The replacement of Appendix III: Significant differences between FRS 104 and IAS 34 *Interim Financial Reporting* with a Basis for Conclusions.

And

- Some minor typographical and presentational corrections.

This chapter reflects the amendments to FRS 102 published in March 2024 *The Financial Reporting Standard applicable in the UK and Republic of Ireland and other FRSS - Periodic Review 2024*. These are consequential minor amendments to FRS 104 effective for interim periods beginning on or after 1 January 2026 (with early adoption permitted if all the amendments to the accounting standards are early applied at the same time). If an entity applies these amendments before 1 January 2026, it must disclose that fact.

[FRS 104.56D].

FRS 104 does not require any entity to prepare an interim report, nor does it change the extent to which laws or regulations may require the preparation of such a report. FRS 104 is intended for use in the preparation of interim reports by entities that prepare financial statements in accordance with UK GAAP. In particular, it is intended for use by entities which apply FRS 102 *The Financial Reporting Standard applicable in the UK and Republic of Ireland*. Most of this chapter therefore deals with the use of FRS 104 by FRS 102 preparers. However, entities which apply FRS 101 *Reduced Disclosure Framework* when preparing their annual financial statements may also use FRS 104 when preparing their interim financial reports.

FRS 104 is based on the equivalent international accounting standard IAS 34, but with some minor adjustments and the omission of certain paragraphs which deal with presentational aspects of IAS 34 or paragraphs of IAS 34 which include disclosures not required in the annual financial statements of entities reporting under FRS 102. These amendments are summarised in the Basis for Conclusions. [FRS 104.BC10].

2 Objective and scope of FRS 104

2.1 Objective

FRS 104 sets out content, recognition and measurement principles for interim financial reports. *[FRS 104.1A]*. It notes that “timely and reliable interim financial reporting can improve the ability of investors, creditors, and others to understand an entity’s capacity to generate earnings and cash flows and its financial condition and liquidity”. *[FRS 104.1]*.

2.2 Scope

FRS 104 is intended for use by entities that prepare annual financial statements in accordance with FRS 102. If an entity prepares its annual financial statements under FRS 101 and applies FRS 104, it must replace references to FRS 102 in FRS 104 with the equivalent requirements in adopted IFRS, as amended by paragraph AG1 of FRS 101. *[FRS 104.2A]*.

This chapter is written primarily for entities that prepare their annual financial statements in accordance with FRS 102. However, a discussion on the application of FRS 104 to FRS 101 reporters is included at 5 below.

FRS 104, in itself, does not require an entity to prepare interim financial reports and does not mandate, how often, or how soon after the end of an interim period an interim financial report should be issued. Where an entity is required by laws or regulations or voluntarily chooses to prepare interim financial reports it may voluntarily choose to apply FRS 104. *[FRS 104.2]*. Therefore, entities need to consider if there are any applicable laws and regulations which require them to prepare interim financial statements. For example, UK issuers not using adopted IFRS that publish half-yearly reports which include a statement that a condensed set of financial statements has been prepared in accordance with FRS 104, must apply the standard. *[FRS 104.3A]*. See 2.2.1 below.

In practice, we expect a limited number of entities (primarily investment trusts and venture capital trusts) will be required to apply FRS 104. However, for entities which prepare annual financial statements under FRS 101 or FRS 102, FRS 104 may be applied voluntarily for interim reporting purposes.

2.2.1 Issuers required to comply with the Disclosure Guidance and Transparency Rules (DTR)

Issuers of securities that are required to publish half-yearly financial reports in accordance with the Disclosure Guidance and Transparency Rules (DTR) must include a responsibility statement in the report. In accordance with paragraph 4.2.10.R of the DTR, a person making the responsibility statement will satisfy the requirement to confirm that the condensed set of financial statements gives a true and fair view of the assets, liabilities, financial position and profit or loss of the issuer (or the undertakings included in the consolidation as a whole) by including a statement that the condensed set of financial statements has been prepared in accordance with either:

- IAS 34.
- Or
- For UK issuers not using UK-adopted international accounting standards, FRS 104 issued by the FRC. *[FRS 104.A4.3]*.

The application of FRS 104 is conditional upon the person making the responsibility statement having reasonable grounds to be satisfied that the condensed set of financial statements prepared under FRS 104 is not misleading. *[FRS 104.A4.4]*.

In accordance with the DTR, an issuer that is required to prepare consolidated accounts must prepare the condensed set of financial statements in accordance with IAS 34 and the requirements set out in FRS 104 do not apply to these issuers. *[FRS 104.A4.5]*. An issuer that is not required to prepare consolidated accounts must, as a minimum, apply the content and preparation requirements set out in paragraph 4.2.5.R of the DTR. The content and preparation requirements of FRS 104 are consistent with those set out in the DTR, although they are more prescriptive and detailed. *[FRS 104.A4.6]*.

2.2.2 Unlisted entities and entities not subject to the DTR

While not in the scope of the DTR, unlisted entities or entities with securities admitted to trading on an exchange not subject to the DTR may prepare and present interim financial statements. In those circumstances, there may be no requirement to follow a particular standard on interim financial reporting. However, we would expect that where annual financial statements are prepared under either FRS 101 or FRS 102 that the interim financial statements would be prepared under FRS 104.

3 Form and content of an interim financial report under FRS 104

FRS 104 does not prohibit or discourage an entity from:

- Publishing a complete set of financial statements (as described in Section 3 *Financial Statement Presentation* of FRS 102) in its interim financial report, rather than condensed financial statements and selected explanatory notes.
- Or
- Including in condensed interim financial statements more than the components and selected explanatory notes as set out in paragraph 8 of FRS 104.

The recognition and measurement guidance in the standard, together with the note disclosures required by the standard, apply to both complete and condensed financial statements presented for an interim period.

[FRS 104.7].

3.1 Complete set of interim financial statements

If an entity publishes a complete set of financial statements in its interim financial report, the form and content of those statements must conform to the requirements of Section 3 of FRS 102. [FRS 104.9]. A complete set of financial statements must include the following components: [FRS 102.3.17]

- A statement of financial position as at the reporting date.
- A statement of comprehensive income for the reporting period to be presented either as:
 - A single statement of comprehensive income for the reporting period, displaying all items of income and expense recognised during the period including those items recognised in determining profit or loss (which is a subtotal in the statement of comprehensive income) and items of other comprehensive income.
 - Or
 - A separate income statement and a separate statement of comprehensive income. In this case, the statement of comprehensive income begins with profit or loss and then displays the items of other comprehensive income.
- A statement of changes in equity for the reporting period.
- A statement of cash flows for the reporting period.

And

- Notes comprising material accounting policy information and other explanatory information.

The presentational requirements of Section 3 of FRS 102 are discussed in Chapter 6. In addition, the entity must make the disclosures specifically required by FRS 104 for interim financial reports (see 4 below) as well as those required by FRS 102. [FRS 104.7].

An entity that will not present a statement of cash flows in its next annual financial statements is not required to include that statement in its interim financial report. [FRS 104.9].

3.2 Condensed interim financial statements

In the interest of timeliness, cost, and avoiding repetition of previously reported information, an entity might be required or elect to give less information at interim dates as compared with its annual financial statements. [FRS 104.6]. FRS 104 defines the minimum components of an interim report, as including condensed financial statements and selected explanatory notes, as follows: [FRS 104.6, FRS 104.8]

- A condensed statement of financial position.
- A single condensed statement of comprehensive income or a separate condensed income statement and a separate condensed statement of comprehensive income.
- A condensed statement of changes in equity.
- A condensed statement of cash flows.

And

- Selected explanatory notes.

Other titles for the statements can be used, as long as they are not misleading. [FRS 104.8E].

An entity that will not present a statement of cash flows in its next annual financial statements is not required to include that statement in its interim financial report. [FRS 104.8F].

FRS 104 requires entities to confirm that the same accounting policies and methods of computation are followed in the interim financial statements as compared to their most recent annual financial statements or, if those policies or methods have changed, to describe the nature and effect of the change (see 8.1.2 below). Accordingly, an entity would only depart from the presentation applied in its most recent annual financial statements if it has determined that the format will change in its next annual financial statements. [FRS 104.8D].

The condensed income statement and condensed statement of comprehensive income referred to at (b) above must be presented using the same basis as the entity's most recent annual financial statements. Accordingly, if an entity presents a separate income statement in its annual financial statements, then it must also present a separate income statement in the interim financial report. Similarly, if a single statement of comprehensive income is presented in the annual financial statements, the same format is adopted in the interim financial report. [FRS 104.8A].

Where the only changes to equity arise from profit or loss, payment of dividends, corrections of prior period errors or changes in accounting policies, an entity may have presented a single statement of income and retained earnings in place of the statement of comprehensive income and statement of changes in equity in its most recent annual financial statements under FRS 102. If that continues to be the case during any of the periods for which the interim financial statements are required to be presented, the entity may continue to present a single condensed statement of income and retained earnings. [FRS 104.8B].

Similarly, where an entity in its most recent annual financial statements has presented only an income statement or a statement of comprehensive income in which the bottom line is labelled profit or loss (by virtue of there being no items of other comprehensive income), that entity is permitted to use the same basis of presentation in its interim financial statements if there are no items of other comprehensive income in any of the periods for which the interim financial statements are being presented. [FRS 104.8C].

As a minimum, the condensed financial statements must include each of the headings and subtotals that were included in the entity's last annual financial statements and the selected explanatory notes as required by FRS 104 (see 4 below). [FRS 104.10].

A strict interpretation of this minimum requirement could mean that, for example, an entity is only required to present non-current assets, current assets, etc., in an interim statement of financial position. However, one of the purposes of an interim report is to help the users of the financial statements to understand the changes in financial position and performance of the entity since the end of the last annual reporting period. [FRS 104.15]. To that end, FRS 104 also requires additional line items or notes to be included if their omission makes the condensed interim financial statements misleading. [FRS 104.10]. In addition, the overriding goal of FRS 104 is to ensure that the interim report includes all information relevant to understanding the entity's financial position and the performance during the interim period. [FRS 104.25]. FRS 104 defines relevance as the quality of information that would influence the economic decisions of users by helping them evaluate past, present or future events or confirming, or correcting, their past evaluations. [FRS 104 Appendix I]. Therefore, judgement is required to determine which line items provide relevant information for decision-makers and are presented accordingly.

Inclusion of all of the line items from the annual financial statements will often be most appropriate to help users of the interim financial statements understand the changes since the previous year-end. Nonetheless, entities may aggregate line items used in the annual financial statements, if doing so does not render the information misleading or prevent users of the interim financial statements from performing meaningful trend analysis.

The following Illustration shows one possible way in which an entity might choose to combine line items presented separately in the annual financial statements when preparing a condensed set of interim financial statements for an individual set of accounts prepared under Format 1 of Schedule 1 to the Regulations. However, such presentation is at the discretion of management, based on facts and circumstances, including materiality (as discussed at 7 below), regulatory environment, and the overarching goal of FRS 104 to provide relevant information. [FRS 104.25]. Accordingly, other presentations may also be appropriate.

Illustration 3-1: Presenting the same headings and sub-totals in condensed interim financial statements

A statement of changes in equity and statement of cash flows are not presented in this example.

3.3 Requirements for complete and condensed interim financial information

The general principles for preparing annual financial statements are equally applicable to interim financial statements. These principles include fair presentation, going concern, materiality and aggregation. See Chapter 6 at 8.

Furthermore, irrespective of whether an entity provides complete or condensed financial statements for an interim period, basic and diluted earnings per share must be presented for an interim period when earnings per share (EPS) information has been presented in the entity’s most recent annual financial statements. [FRS 104.11]. Such information must be given on the face of the statement that presents components of profit or loss for an interim period. [FRS 104.11A].

Although not explicitly required by FRS 104, most entities consider it necessary to disclose the date on which the interim financial statements are authorised for issue as it may help users to understand the context of any disclosure of events after the interim reporting date. [FRS 102.32.9, FRS 102.32.3].

3.4 Management commentary

A management commentary is not explicitly required by FRS 104, however we would expect one to be included by entities in their interim financial reports along with the interim financial statements.

FRS 104 allows information required under the standard to be presented outside the interim financial statements, i.e., in other parts of interim financial report. [FRS 104.15B, FRS 104.16AJ]. Thus, some of the required disclosures may be included in a management commentary (see 4.2.1 below). The standard itself does not establish specific requirements for the content of a management commentary beyond what must be contained in (or cross-referred from) the interim financial statements.

4 Disclosures in condensed financial statements

FRS 104 contains a number of disclosure principles:

- Entities must provide information about events and transactions in the interim period that are significant to an understanding of the changes in financial position and performance since the end of the last annual reporting period. In this context it is not necessary to provide relatively insignificant updates to information reported in the last annual financial statements (see 4.1 below). *[FRS 104.15, FRS 104.15A]*.
- In addition to information explaining significant changes since the last annual reporting period, certain 'minimum' disclosures are required to be given, if not disclosed elsewhere in the interim financial report (see 4.2 below). *[FRS 104.16A]*.
- The materiality assessment for disclosure is based on the interim period alone to ensure all information provided is relevant to understanding of the entity's financial position and its performance during the interim period (further discussed at 7 below). *[FRS 104.25]*.

Overall, applying these disclosure principles requires the exercise of judgement by the entity regarding what information is material or relevant. The practice of interim reporting confirms that entities take advantage of that room for judgement, both for disclosures provided in the notes to the interim financial statements and outside.

4.1 Significant events and transactions

FRS 104 presumes that users of an entity's interim financial report also have access to its most recent annual financial report. *[FRS 104.15A]*. On that basis, an interim financial report should explain events and transactions that are significant to an understanding of the changes in financial position and performance of the entity since the previous annual reporting period and provide an update to the relevant information included in the financial statements of the previous year. *[FRS 104.15, FRS 104.15C]*. The inclusion of only selected explanatory notes is consistent with the purpose of an interim financial report, to update the latest complete set of annual financial statements. Accordingly, condensed financial statements avoid repeating previously reported information and focus on new activities, events, and circumstances. *[FRS 104.6]*.

Disclosure of the following events and transactions in interim financial reports, if they are significant, is required: *[FRS 104.15B]*

- Write-down of inventories to net realisable value and the reversal of such a write-down.
- Recognition of a loss from the impairment of financial assets, property, plant, and equipment, intangible assets, or other assets, and the reversal of such an impairment loss.
- Reversal of any provisions for the costs of restructuring.
- Acquisitions and disposals of items of property, plant and equipment.
- Commitments for the purchase of property, plant and equipment.
- Litigation settlements.
- Corrections of prior period errors.
- Changes in the business or economic circumstances that affect the fair value of the entity's financial assets and financial liabilities, where those assets or liabilities are measured at fair value.
- Any loan default or breach of a loan agreement that is not remedied on or before the end of the reporting period.
- Related party transactions, unless the transaction was entered into between two or more members of a group, provided that any subsidiary which is a party to the transaction is wholly owned by such a member.

And

- Changes in contingent liabilities or contingent assets.

FRS 104 states that the above list of events and transactions is not exhaustive and the interim financial report should explain any additional events and transactions that are significant to an understanding of changes in the entity's financial position and performance. *[FRS 104.15, FRS 104.15B]*. Therefore, when information changes significantly (for example, the values of non-financial assets and liabilities that are measured at fair value), an entity should provide disclosure regarding such change, in addition to the requirements listed above, and the disclosure should be sufficiently detailed to explain the nature of the change and any changes in estimates. This would apply, for example, if:

- The range of reasonably possible changes in key assumptions has significantly changed since the end of the last annual reporting period. If this is the case an update of relevant sensitivity disclosures may be required.

Or

- The values of non-financial assets and liabilities that are measured at fair value change significantly.

The considerations in the preceding paragraph related to the disclosure of information about significant changes including the examples related to key assumptions and sensitivity is also relevant when an entity prepares its first interim financial statements adopting a new accounting pronouncement as discussed in 8.1.2.A below.

The disclosures suggested by paragraph 15B can be given either in the notes to the interim financial statements or, if disclosed elsewhere in the interim financial report, cross-referred to the disclosure in the notes to the interim financial statements. [FRS 104.15B].

4.1.1 Relevance of other standards in condensed financial statements

Whilst FRS 102 specifies disclosures required in a complete set of financial statements, if an entity's interim financial report includes only condensed financial statements as described in FRS 104, then the disclosures required by those other standards are not mandatory. However, if disclosure is considered to be necessary in the context of an interim report, FRS 102 provides guidance on the appropriate disclosures for many of these items. [FRS 104.15C]. For example, in meeting the requirements of (g) at 4.1 above to disclose the impact of corrections of prior period errors, the requirements of Section 10 *Accounting Policies, Estimates and Errors* would be relevant (see Chapter 9 at 3.6).

4.2 Other disclosures required by FRS 104

In addition to disclosing significant events and transactions as discussed at 4.1 above, FRS 104 requires an entity to include the following information either in the notes to its interim financial statements or, if disclosed elsewhere in the interim financial report, cross-referred from the notes: [FRS 104.16A]

- A statement that the same accounting policies and methods of computation are followed in the interim financial statements as in the most recent annual financial statements or, if those policies or methods have been changed, a description of the nature and effect of the change.
- Explanatory comments about the seasonality or cyclicity of interim operations.
- The nature and amount of items affecting assets, liabilities, equity, profit or loss, or cash flows that are unusual because of their nature, size, or incidence.
- The nature and amount of changes in estimates of amounts reported in prior interim periods of the current financial year or changes in estimates of amounts reported in prior financial years.
- Issues, repurchases, and repayments of debt and equity securities.
- Dividends paid (aggregate or per share) separately for ordinary shares and other shares.
- Certain segment disclosures as discussed at 4.3 below; but only if the entity has presented segment information in accordance with IFRS 8 *Operating Segments* in its most recent annual financial statements.
- Events after the interim period that are not reflected in the financial statements for the interim period.
- The effect of changes in the composition of the entity during the interim period, including business combinations, obtaining or losing control of subsidiaries and long-term investments, restructurings, and discontinued operations. For business combinations, the entity must disclose the information required by paragraphs 19.25 and 19.25A of FRS 102 (see Chapter 22 at 4).

And

- For financial instruments, certain disclosures in respect of financial instruments measured at fair value and as required by paragraphs 11.43, 11.48A(e) and 34.22 of FRS 102; but only if the entity would be required to make the disclosure in the annual financial statements, as discussed at 4.4 below.

This information is normally reported on a financial year-to-date basis (see 8 below). [FRS 104.16A].

4.2.1 Disclosure relating to business combinations

For business combinations that occurred during the reporting period which, individually, are not material, FRS 102 allows the disclosure of revenue and profit or loss to date to be given in aggregate.

[FRS 102.19.25A]. However, materiality is assessed for the interim period, which implies that FRS 104 may require more detailed disclosures on business combinations that are material to an interim period even if they could be aggregated for disclosure purposes in the annual financial statements prepared under FRS 102.

4.2.2 Disclosures relating to disposals, discontinued operations and restructurings

If an entity has operations that are discontinued or disposed of during an interim period, these operations must be presented separately in the condensed interim statement of comprehensive income following the principles set out in Section 5 *Statement of Comprehensive Income and Income Statement*.

An entity contemplating a significant restructuring that will have an impact on its composition should follow the guidance in Section 21 *Provisions and Contingencies* for the recognition of any restructuring cost, [FRS 102.21.11C], and Section 28 *Employee Benefits* for the recognition of any termination benefits. [FRS 102.28.31]. In subsequent interim periods any significant changes, including reversals, to restructuring provisions will require disclosure. [FRS 104.15B(c)].

4.2.3 Location of the specified disclosures in an interim financial report

FRS 104 defines an “interim financial report” as “a financial report containing either a complete set of financial statements or a set of condensed financial statements for an interim period”. [FRS 104 Appendix I]. Therefore, since an interim financial report contains the interim financial statements, it is clear that these are two different concepts. Accordingly, an entity is not required to disclose the information listed at 4.1 and 4.2 above in the interim financial statements themselves, as long as a cross reference is provided from the financial statements to the location of the information included in another part of the interim financial report. [FRS 104.15B, FRS 104.16A].

4.3 Segment information

If an entity has presented segment information in accordance with IFRS 8 in its most recent annual financial statements, certain segment disclosures are required in its interim financial report.

An entity applying IFRS 8 in its most recent annual financial statements must include the following information in its interim financial report about its reportable segments: [FRS 104.16A(g)]

- Revenues from external customers (if included in the measure of segment profit or loss reviewed by or otherwise regularly provided to the chief operating decision maker).
 - Intersegment revenues (if included in the measure of segment profit or loss reviewed by or otherwise regularly provided to the chief operating decision maker).
 - A measure of segment profit or loss.
 - A measure of total assets and liabilities for a particular reportable segment if such amounts are regularly provided to the chief operating decision maker and if there has been a material change from the amount disclosed in the last annual financial statements for that reportable segment.
 - A description of differences in the basis of segmentation or in the basis of measurement of segment profit or loss from the last annual financial statements.
- And
- A reconciliation of the total profit or loss for reportable segments to the entity’s profit or loss before income taxes and discontinued operations. However, if an entity allocates such items as income taxes to arrive at segment profit or loss, the reconciliation can be to the entity’s profit or loss after those items. The entity should separately identify and describe all material reconciling items.

4.4 Fair value disclosures for financial instruments

If an entity would be required to make equivalent disclosures in its annual financial statements, FRS 104 requires that an entity must include the following in its interim financial report in order to help users evaluate the significance of financial instruments measured at fair value: *[FRS 104.16A(j)]*

- For all financial assets and financial liabilities measured at fair value, the entity must disclose the basis for determining fair value, e.g., quoted market price in an active market or a valuation technique. When a valuation technique is used, the entity must disclose the assumptions applied in determining fair value for each class of financial assets or financial liabilities. For example, if applicable, an entity discloses information about the assumptions relating to prepayment rates, rates of estimated credit losses, and interest rates or discount rates. *[FRS 102.11.43]*. See Chapter 15 at 4.1.2.B.
- For financial instruments at fair value through profit or loss that are not held as part of a trading portfolio and are not derivatives, any difference between the fair value at initial recognition and the amount that would be determined at that date using a valuation technique, the aggregate difference yet to be recognised in profit or loss at the beginning and end of the period, and a reconciliation of the changes in the balance of this difference. *[FRS 102.11.48A(e)]*. See Chapter 15 at 4.1.2.H.
- A financial institution must disclose for each class of financial instrument held at fair value in the statement of financial position, an analysis of the level in the fair value hierarchy (as set out in paragraph 11.27) into which the fair value measurements are categorised. *[FRS 102.34.22]*. The inclusion of the above disclosure requirements among the items required by the standard which are to be given “in addition to disclosing significant events and transactions”, *[FRS 104.16A]*, distinguishes it from the items listed at 4.1 above, which are required to update information presented in the most recent annual financial report. *[FRS 104.15]*. Therefore, disclosure of the above information is required for each interim reporting period, subject only to a materiality assessment in relation to that interim report, i.e., an entity could consider it unnecessary to disclose the above information on the grounds that it is not relevant to an understanding of its financial position and performance in that specific interim period. *[FRS 104.25]*. In making that judgement care would need to be taken to ensure any omitted information would not make the interim financial report incomplete and therefore misleading.

An entity may also consider meeting the disclosure requirement through cross-reference to the information disclosed in other parts of the interim report as discussed at 4.2.3 above.

4.5 Disclosure of compliance with FRS 104

If an interim financial report complies with the requirements of FRS 104, this fact must be disclosed. Furthermore, an entity that makes a statement of compliance with FRS 104 must comply with all of its provisions. FRS 104 does not need to be applied to immaterial items. *[FRS 104.3, FRS 104.19]*.

5 Entities reporting under FRS 101

As noted at 2 above, FRS 104 is intended for use by entities that prepare annual financial statements in accordance with FRS 102. However, it can also be used by entities that report under FRS 101, and in those circumstances, references included in FRS 104 to FRS 102 should be read as references to the equivalent requirements in adopted IFRS as amended by paragraph AG1 of FRS 101. [FRS 104.2A].

The references to FRS 102 fall into three main categories:

- Disclosure of significant events and transactions (see 5.1 below).
- Business combinations (see 5.2 below).
- And
- Financial instruments (see 5.3 below).

While there are references to FRS 102 in other paragraphs of FRS 104, we do not expect that these will give rise to any significant differences in the application of FRS 104 between FRS 101 and FRS 102 reporters. These references are in financial statement presentation, materiality, recognition and changes in accounting policy. [FRS 104.7, FRS 104.8B, FRS 104.9, FRS 104.16B, FRS 104.24, FRS 104.31, FRS 104.30, FRS 104.33, FRS 104.43].

In respect of changes in accounting policies, see 8.1.2 below.

5.1 Disclosure of significant events and transactions

As discussed at 4.1 above, FRS 104 requires entities to include, in their interim financial statements, an explanation of events and transactions that are significant to an understanding of changes in the financial position and performance of the entity since the end of the previous reporting period. FRS 104 sets out a non-exhaustive list of the types of transactions and events entities might include. [FRS 104.15, FRS 104.15B].

FRS 104 refers to individual sections of FRS 102 for guidance on disclosure requirements for many of the items on the list referred to above. [FRS 104.15C]. For entities reporting under FRS 101, this reference should be amended to the relevant standard under adopted IFRS as amended by FRS 101. For example, for guidance on the disclosure requirements in respect of the acquisitions and disposals of items of property, plant and equipment, entities should refer to IAS 16 *Property, Plant and Equipment* rather than Section 17 *Property, Plant and Equipment* of FRS 102. For further discussion on any significant differences in disclosure between the relevant section of FRS 102 and the equivalent standard under adopted IFRS, refer to the key differences section of the relevant chapter in this publication.

5.2 Business combinations

Paragraph 16A(i) of FRS 104 requires entities to include in their interim financial statements details of the effect of changes in the composition of the entity during the interim period including business combinations, obtaining or losing control of subsidiaries and long-term investments, restructurings and discontinued operations. In particular, entities are required to disclose the information set out in paragraphs 25 and 25A of FRS 102 Section 19 *Business Combinations and Goodwill* (see Chapter 22 at 4.1). For FRS 101 reporters we believe the equivalent requirements under adopted IFRS are those set out in paragraph 16A(i) of IAS 34, which cross-refer to the requirements in paragraphs 59-63 and B64-67 of IFRS 3 *Business Combinations*.

5.3 Financial instruments

FRS 104 requires entities to include in their interim financial statements disclosures that help users to evaluate the significance of financial instruments measured at fair value. [FRS 104.16A(j)]. In particular, entities are required to give the disclosures set out in paragraphs 43 and 48A(e) of Section 11 *Basic Financial Instruments* and paragraph 22 of Section 34 *Specialised Activities*.

For FRS 101 reporters we believe the equivalent requirements under adopted IFRS are those set out in paragraphs 91-93(h), 94-96, 98 and 99 of IFRS 13 *Fair Value Measurement* and paragraphs 25, 26 and 28-30 of IFRS 7 *Financial Instruments: Disclosures*.

The IFRS 13 disclosures detailed above will only be required if an entity has financial instruments which (after initial recognition) are measured at fair value on a recurring or non-recurring basis.

FRS 101 allows qualifying entities that are not financial institutions (see Chapter 2 at 2.1 and Appendix I for the definitions of a qualifying entity and a financial institution, respectively) to take advantage of exemptions to disclose information required by IFRS 7 and paragraphs 91 to 99 of IFRS 13 in their annual financial statements, provided that equivalent disclosures are included in the consolidated financial statement of the group in which the entity is consolidated. If such disclosure exemptions are reasonably expected to be taken by the qualifying entity when preparing its annual financial statements, there is no requirement to disclose such information in the entity's interim financial report.

6 Periods for which interim financial statements are required to be presented

Irrespective of whether an entity presents condensed or complete interim financial statements, the components of its interim financial reports must include information for the following periods: [FRS 104.20]

- A statement of financial position as of the end of the current interim period and a comparative statement of financial position as of the end of the immediately preceding financial year.
- A statement of profit or loss and other comprehensive income for the current interim period and, if different, cumulatively for the current financial year-to-date, with comparative statements of profit or loss and other comprehensive income for the comparable interim periods (current and, if different, year-to-date) of the immediately preceding financial year.
- A statement of changes in equity cumulatively for the current financial year-to-date period, with a comparative statement for the comparable year-to-date period of the immediately preceding financial year.

And

- A statement of cash flows cumulatively for the current financial year-to-date, with a comparative statement for the comparable year-to-date period of the immediately preceding financial year.

The requirement in (d) does not apply to entities that will not present a statement of cash flows in their next annual financial statements.

An interim financial report must present for each period either a single statement of 'profit or loss and other comprehensive income', or separate statements of 'profit or loss' and 'comprehensive income', consistent with the basis of preparation applied in its most recent annual financial statements. Accordingly, if the entity presents a separate statement for items of profit or loss in its annual financial statements, it must present a separate condensed statement of profit or loss in the interim financial report. [FRS 104.8A]. If an entity's business is highly seasonal, then the standard encourages reporting additional financial information for the twelve months up to the end of the interim period, and comparative information for the prior twelve-month period, in addition to the financial statements for the periods set out above. [FRS 104.21].

An entity that presents a single condensed statement of income and retained earnings in place of the statement of comprehensive income and statement of changes in equity must present a single condensed statement of income and retained earnings for the periods for which interim financial statements are required to be presented. [FRS 104.20A].

An entity that presents an income statement, or a statement of comprehensive income in which the 'bottom line' is labelled 'profit or loss' must present an income statement or a statement of comprehensive income on that basis for the periods for which interim financial statements are required to be presented.

[FRS 104.20B].

The Illustrations below show the periods that an entity is required and encouraged to disclose under FRS 104. [FRS 104 Appendix II].

Illustration 6-1: Entity publishes interim financial reports half-yearly

If an entity's financial year ends on 31 December (calendar year), it should present the following financial statements (condensed or complete) in its half-yearly interim financial report as of 30 June 20X6:

Half-yearly interim report	End of the current interim period	End of the comparative interim period	Immediately preceding year-end
	30/6/20X6	30/6/20X5	31/12/20X5
Statement of financial position	●		●
Statement(s) of profit or loss and other comprehensive income			
- Current period and year-to-date (6 months) ending	●	●	
- 12 months ending	○	○	
Statement of changes in equity			
- Year-to date (6 months) ending	●	●	
- 12 months ending	○	○	
Statement of cash flows			
- Year-to-date (6 months) ending	●	●	
- 12 months ending	○	○	
● Required ○ Disclosure encouraged if the entity's business is highly seasonal			

If an entity publishes a separate interim financial report for the final interim period (i.e., second half of its financial year), it presents the following financial statements (condensed or complete) in its second half-yearly interim financial report as of 31 December 20X6:

Second half-yearly interim report	End of the current interim period	End of the comparative interim period
	31/12/20X6	31/12/20X5
Statement of financial position	•	•
Statement(s) of profit or loss and other comprehensive income		
- Current period (6 months) ending	•	•
- Year-to-date (12 months) ending	•	•
Statement of changes in equity		
- Year-to-date (12 months) ending	•	•
Statement of cash flows		
- Year-to-date (12 months) ending	•	•
• Required		

Illustration 6-2: Entity publishes interim financial reports quarterly

If an entity's financial year ends on 31 December (calendar year), it should present the following financial statements (condensed or complete) in its quarterly interim financial reports for 20X6:

First quarter interim report	End of the current interim period	End of the comparative interim period	Immediately preceding year-end
	31/3/20X6	31/3/20X5	31/12/20X5
Statement of financial position	•		•
Statement(s) of profit or loss and other comprehensive income			
- Current period and year-to-date (3 months) ending	•	•	
- 12 months ending	○	○	
Statement of changes in equity			
- Year-to-date (3 months) ending	•	•	
- 12 months ending	○	○	
Statement of cash flows			
- Year-to-date (3 months) ending	•	•	
- 12 months ending	○	○	
• Required ○ Disclosure encouraged if the entity's business is highly seasonal			
Second quarter interim report	End of the current interim period	End of the comparative interim period	Immediately preceding year-end
	30/6/20X6	30/6/20X5	31/12/20X5
Statement of financial position	•		•
Statement(s) of profit or loss and other comprehensive income			
- Current period (3 months) ending	•	•	
- Year-to-date (6 months) ending	•	•	
- 12 months ending	○	○	
Statement of changes in equity			
- Year-to-date (6 months) ending	•	•	
- 12 months ending	○	○	
Statement of cash flows			
- Year-to-date (6 months) ending	•	•	
- 12 months ending	○	○	
• Required ○ Disclosure encouraged if the entity's business is highly seasonal			

Third quarter interim report	End of the current interim period	End of the comparative interim period	Immediately preceding year-end
	30/9/20X6	30/9/20X5	31/12/20X5
Statement of financial position	•		•
Statement(s) of profit or loss and other comprehensive income			
- Current period (3 months) ending	•	•	
- Year-to-date (9 months) ending	•	•	
- 12 months ending	○	○	
Statement of changes in equity			
- Year-to-date (9 months) ending	•	•	
- 12 months ending	○	○	
Statement of cash flows			
- Year-to-date (9 months) ending	•	•	
- 12 months ending	○	○	
• Required ○ Disclosure encouraged if the entity's business is highly seasonal			
If an entity publishes a separate interim financial report for the final interim period (i.e., fourth quarter of its financial year), it presents the following financial statements (condensed or complete) in its fourth quarter interim financial report as of 31 December 20X6:			
Fourth quarter interim report	End of the current interim period	End of the comparative interim period	
	31/12/20X6	31/12/20X5	
Statement of financial position	•	•	
Statement(s) of profit or loss and other comprehensive income			
- Current period (3 months) ending	•	•	
- Year-to-date (12 months) ending	•	•	
Statement of changes in equity			
- Year-to-date (12 months) ending	•	•	
Statement of cash flows			
- Year-to-date (12 months) ending	•	•	
• Required			

6.1 Other comparative information

For entities presenting condensed financial statements under FRS 104, there is no explicit requirement that comparative information be presented in the explanatory notes. Nevertheless, where an explanatory note is required by the standard (such as for inventory write-downs, impairment provisions, segment revenues etc.) or otherwise determined to be needed to provide useful information about changes in the financial position and performance of the entity since the end of the last annual reporting period, [FRS 104.15], it would be appropriate to provide information for each period presented. However, in certain cases it would be unnecessary to provide comparative information where this repeats information that was reported in the notes to the most recent annual financial statements. [FRS 104.15A]. For example, it would only be necessary to provide information about business combinations in a comparative period when there is a revision of previously disclosed fair values. See Chapter 22 at 4.1.

For entities presenting complete financial statements, whilst FRS 104 sets out the periods for which components of the interim report are included, it is less clear how these rules interact with the requirement in FRS 102 to report comparative information for all amounts in the financial statements unless permitted or required otherwise by FRS 102. [FRS 102.3.14].

How we see it

In our view, a complete set of interim financial statements must include comparative disclosures for all amounts presented, unless permitted or required otherwise by FRS 102.

6.2 Change in financial year-end

The requirement in FRS 104 to present a comparative statement of profit or loss and other comprehensive income “for the comparable interim period (current and, if different, year-to-date) of the immediately preceding financial year”, [FRS 104.20], can give rise to diversity in practice in the case of an entity that changes its annual financial reporting date. For example, an entity changing its reporting date from 31 December to 31 March would change its half-yearly reporting date from 30 June to 30 September and therefore present its first half-yearly report after its new annual reporting date for the six-month period from 1 April to 30 September. A ‘comparable’ comparative interim period in this scenario could be taken to mean the six months ended 30 September in the prior year, as illustrated in Illustration 6-3 below.

[FRS 104.20].

Illustration 6-3: Entity changes financial year-end

If an entity changes its financial year-end from 31 December (calendar year) to 31 March and first reflects the change in its annual financial statements for the period ended 31 March 20X6. It determines that the requirement for comparable comparative information in FRS 104 requires it to present the following financial statements (condensed or complete) in its half-yearly interim financial report for the six months ending 30 September 20X6:

Half-yearly interim report	End of the current interim period	End of the comparable interim period	Immediately preceding year-end
	30/9/20X6	30/9/20X5	31/03/20X6
Statement of financial position	•		•
Statement(s) of profit or loss and other comprehensive income			
- Current period and year-to-date (6 months) ending	•	•	
- 12 months ending	○	○	
Statement of changes in equity			
- Year-to date (6 months) ending	•	•	
- 12 months ending	○	○	
Statement of cash flows			
- Year-to-date (6 months) ending	•	•	
- 12 months ending	○	○	
• Required ○ Disclosure encouraged if the entity’s business is highly seasonal			

The entity in the example above does not show information for the half-year ended 30 June 20X5 as the comparative period, notwithstanding the fact that this period would have been the reporting date for the last published half-yearly report.

How we see it

However, given the lack of clarity in FRS 104 as to the meaning of ‘comparable’ in the case where the current financial year runs for a period that is different to ‘the immediately preceding financial year’, other interpretations are possible.

7 Materiality

In making judgements on recognition, measurement, classification, or disclosures in interim financial reports, the overriding goal in FRS 104 is to ensure that an interim financial report includes all information relevant to understanding an entity's financial position and performance during the interim period.

[FRS 104.25]. The standard draws from Section 2 *Concepts and Pervasive Principles* of FRS 102 which defines an item as material if its omission or misstatement could influence the economic decisions of users of the financial statements but does not contain quantitative guidance on materiality. [FRS 102.2.11]. See Chapter 4 at 3.3.1.B. FRS 104 requires materiality to be assessed based on the interim period financial data.

[FRS 104.23].

Materiality is an entity-specific aspect of relevance that depends on the nature or magnitude of information, or both. An entity assesses whether information, either individually or in combination with other information, is material in the context of its financial statements taken as a whole. [FRS 104.24].

Therefore, decisions on the recognition and disclosure of unusual items, changes in accounting policies or estimates, and errors are based on materiality in relation to the interim period figures to determine whether non-disclosure is misleading. [FRS 104.25].

Neither the previous year's financial statements nor any expectations of the financial position at the current year-end are relevant in assessing materiality for interim reporting. However, the standard adds that interim measurements may rely on estimates to a greater extent than measurements of annual financial data. [FRS 104.23].

8 Recognition and measurement

The recognition and measurement requirements in FRS 104 arise mainly from the requirement to report the entity's financial position as at the interim reporting date but also require certain estimates and measurements to take into account the expected financial position of the entity at year-end, where those measures are determined on an annual basis (as in the case of income taxes). Many preparers misinterpret this approach as representing some form of hybrid of the discrete and integral methods to interim financial reporting. This could cause confusion in application.

In requiring the year-to-date to be treated as a discrete period, FRS 104 prohibits the recognition or deferral of revenues and costs for interim reporting purposes unless such recognition or deferral is appropriate at year-end. As with a set of annual financial statements complying with FRS 102, FRS 104 requires changes in estimates and judgements reported in previous interim periods to be revised prospectively, whereas changes in accounting policies and corrections of material prior period errors are required to be recognised by prior period adjustment. However, FRS 104 allows looking beyond the interim reporting period, for example in estimating the tax rate to be applied on earnings for the period, when a year-to-date approach does not.

The recognition and measurement requirements of FRS 104 apply regardless of whether an entity presents a complete or condensed set of financial statements for an interim period, [FRS 104.7], and are discussed below.

8.1 Same accounting policies as in annual financial statements

The principles for recognising assets, liabilities, income and expenses for interim periods are the same as in the annual financial statements. [FRS 104.29]. Accordingly, an entity uses the same accounting policies in its interim financial statements as in its most recent annual financial statements, adjusted for accounting policy changes that will be reflected in the next annual financial statements. [FRS 104.28]. However, FRS 104 also states that the frequency of an entity's reporting (annual, half-yearly or quarterly) does not affect the measurement of its annual results. To achieve that objective, measurements for interim reporting purposes are on a year-to-date basis. [FRS 104.28A].

8.1.1 Measurement on a year-to-date basis

Measurement on a year-to-date basis acknowledges that an interim period is a part of a full year and allows adjustments to estimates of amounts reported in prior interim periods of the current year. [FRS 104.29, FRS 104.34].

The principles for recognition and the definitions of assets, liabilities, income and expenses for interim periods are the same as in the annual financial statements. [FRS 104.29, FRS 104.31]. Therefore, for assets, the same tests of future economic benefits apply at interim dates as at year-end. Costs that, by their nature, do not qualify as assets at year-end, do not qualify for recognition at interim dates either. Similarly, a liability at the end of an interim reporting period must represent an existing obligation at that date, just as it must at the end of an annual reporting period. [FRS 104.32]. An essential characteristic of income and expenses is that the related inflows and outflows of assets and liabilities have already occurred. If those inflows or outflows have occurred, the related income and expense are recognised, otherwise they are not recognised. [FRS 104.33].

FRS 104 lists several circumstances that illustrate these principles:

- Inventory write-downs, impairments, or provisions for restructurings are recognised and measured on the same basis as at a year-end. Later changes in the original estimate are recognised in the subsequent interim period, either by recognising additional accruals or reversals of the previously recognised amount. [FRS 104.30(a)].
- Costs that do not meet the definition of an asset at the end of an interim period are not deferred in the statement of financial position, either to await information on whether it meets the definition of an asset, or to smooth earnings over interim periods within a year. [FRS 104.30(b)]. For example, costs incurred in acquiring an intangible asset before the recognition criteria in FRS 102 are met are expensed under Section 18 *Intangible Assets other than Goodwill*. Only those costs incurred after the recognition criteria are met can be recognised as an asset; there is no reinstatement as an asset in a later period of costs previously expensed because the recognition criteria were not met at that time. [FRS 102.18.17].

And

- Income tax expense is “recognised in each interim period based on the best estimate of the weighted-average annual income tax rate expected for the full financial year, using the tax rates and laws that have been enacted or substantively enacted at the end of an interim reporting period. Amounts accrued for income tax expense in one interim period may have to be adjusted in a subsequent interim period of that financial year if the estimate of the annual income tax rate changes”. [FRS 104.30(c)].

8.1.2 New accounting pronouncements and other changes in accounting policies

As noted at 8.1 above, an entity uses the same accounting policies in its interim financial statements as in its most recent annual financial statements, adjusted for accounting policy changes that will be reflected in the next annual financial statements. [FRS 104.28].

FRS 104 requires that a change in accounting policy, other than where the transition rules are specified by FRS 102, must be reflected by: [FRS 104.43]

- Restating the financial statements of prior interim periods of the current year and the comparable interim periods of any prior financial years that will be restated in the annual financial statements under Section 10 of FRS 102.
- Or
- When it is impracticable to determine the cumulative effect at the beginning of the year of applying a new accounting policy to all prior periods, adjusting the financial statements of prior interim periods of the current year and comparable interim periods of prior years to apply the new accounting policy prospectively from the earliest date practicable.

Therefore, regardless of when in a financial year an entity decides to adopt a new accounting policy, it has to be applied from the beginning of the current year. [FRS 104.44]. For example, if an entity that reports on a quarterly basis decides in its third quarter to change an accounting policy, it must restate the information presented in earlier quarterly financial reports to reflect the new policy as if it had been applied from the start of the annual reporting period. Disclosures regarding the restatement can be presented on the face of the financial statements or disclosed in the notes to the financial statements.

8.1.2.A Accounting policy changes becoming mandatory during the current year

One objective of the year-to-date approach, described at 8.1.2 above, is to ensure that a single accounting policy is applied to a particular class of transactions throughout an entire financial year. [FRS 104.44]. To allow accounting policy changes to be reflected as of an interim date would mean applying different accounting policies to a particular class of transactions within a single year. This would make interim allocation difficult, obscure operating results, and complicate analysis and understandability of the interim period information. [FRS 104.45].

Accordingly, when preparing interim financial information, consideration is given to which amendments to FRSs are mandatory in the next (current year) annual financial statements. The entity generally adopts these amendments in all interim periods during that year.

While FRS 104 generally prohibits an entity from reflecting the adoption of a new accounting policy as of an interim date, it makes an exception for those accounting policy changes for which FRS 102 specifically requires transition during the financial year. [FRS 104.43].

The disclosure requirements with respect to amendments which are effective for the entity's next annual financial statements, but which do not contain specific disclosure requirements under FRS 104, are not clear. In some cases, it might be determined that an understanding of an amendment is material to an understanding of the entity, in which case the entity discloses this fact, as well as information relevant to assessing the possible impact of the amendment on the entity's financial statements. [FRS 102.10.13]. In other cases, an entity might conclude that a particular amendment is not material to an understanding of its interim financial report, and thus not disclose information about the issuance of the amendment, or its possible impact on the entity.

8.1.2.B Voluntary changes of accounting policy

An entity can also elect at any time during a year to apply an amendment to an FRS before it becomes mandatory or otherwise decide to change an accounting policy voluntarily. However, before voluntarily changing an accounting policy, consideration must be given to the interaction of the requirements of Sections 2 and 10 of FRS 102 which only permit an entity to change an accounting policy if the information results in information that is 'reliable and more relevant' to the users of the financial statements. [FRS 102.10.8(b)].

After concluding that a voluntary change in accounting policy is permitted and appropriate, its effect is generally reflected in the first interim report the entity presents after the date on which the entity changed its policy. The entity generally restates amounts reported in earlier interim periods as far back as is practicable. [FRS 104.44]. One exception to this principle of retrospective adjustment of earlier interim periods is when an entity changes from the cost model to the revaluation model under Section 17 or Section 18. These are not changes in accounting policy that are covered by FRS 102 in the usual manner, but instead are required to be treated as a revaluation in the period. [FRS 102.10.10A]. This means that the revaluation is accounted for prospectively using the fair value at the date of the revaluation. [FRS 102.17.15B, FRS 102.18.18B]. Therefore, the general requirements of FRS 104 do not override the specific requirements of Section 10 of FRS 102 to treat such changes prospectively.

However, to avoid using two differing accounting policies for a particular class of assets in a single financial year, consideration should be given to changing from the cost model to the revaluation model at the beginning of the financial year. Otherwise, an entity will end up depreciating based on cost for some interim periods and based on the revalued amounts for later interim periods.

8.1.3 Change in going concern assumption

Another situation in which an entity applies different accounting policies in its interim financial statements as compared to its most recent annual financial statements is when the going concern assumption is no longer appropriate.

Although FRS 104 does not specifically address the issue of going concern, the general requirements of Section 3 of FRS 102 apply to both a complete set and to condensed interim financial statements. Section 3 states that when preparing financial statements, management assesses an entity's ability to continue as a going concern, and that the financial statements are prepared on a going concern basis unless management either intends to liquidate the entity or cease trading or has no realistic alternative but to do so. [FRS 102.3.8]. The going concern assessment is discussed in more detail in Chapter 6 at 8.3.

Under Section 3, the going concern assessment is made based on all available information about the future, which at a minimum is twelve months from the 'date when the financial statements are authorised for issue'. [FRS 102.3.8]. Therefore, with respect to interim reporting under FRS 104, the minimum period for management's assessment is also at least twelve months from the date when the interim report is authorised for issue; it is not limited, for example, to one year from the authorisation date of the most recent annual financial statements. [FRS 104.4A].

Illustration 8-1: Going concern assessment

An entity's financial year-end is 31 December (calendar year) and its annual financial statements as of 31 December 20X4 are prepared on a going concern basis. In assessing the going concern assumption as at 31 December 20X4 management considered all future available information through to 31 December 20X5. In preparing its quarterly interim financial statements (condensed or complete) as at 31 March 20X5, management must evaluate all future available information to at least 31 March 20X6.

If any material uncertainties related to events or conditions that cast significant doubt upon the entity's ability to continue as a going concern, the entity must disclose those uncertainties. If an entity does not prepare its interim financial statements on a going concern basis, it must disclose: [FRS 104.4B]

- The fact there are material uncertainties.
- The basis on which the interim financial statements are prepared.
- And
- The reason why the entity is not regarded as a going concern.

8.1.4 Voluntary changes in presentation

In some cases, the presentation of the interim financial statements might be changed from that used in prior interim reporting periods. However, before changing the presentation used in its interim report from that of previous periods, management should consider the interaction of the requirements of FRS 104 to include in a set of condensed financial statements the same headings and sub-totals as the most recent annual financial statements, [FRS 104.10], and to apply the same accounting policies as the most recent or the next annual financial report, [FRS 104.28], and the requirements of Section 3 of FRS 102 as they will relate to those next annual financial statements. Section 3 requires an entity to retain the presentation and classification of items in the financial statements, unless it is apparent following a significant change in the nature of operations or a review of the financial statements that another presentation is more appropriate, or unless the change is required by FRS 102, or another applicable FRS. [FRS 102.3.11].

If a presentation is changed, the entity must also reclassify comparative amounts for both earlier interim periods of the current financial year and comparable periods in prior years. [FRS 104.43(a)]. In such cases, an entity must disclose the nature of the reclassifications, the amount of each item (or class of items) that is reclassified, and the reason for the reclassification. [FRS 102.3.12].

8.2 Seasonal businesses

Some entities do not earn revenues or incur expenses evenly throughout the year, for example, agricultural businesses, holiday companies, domestic fuel suppliers, or retailers who experience peak demand at Christmas. The financial year-end is often chosen to fit their annual operating cycle, which means that an individual interim period would give little indication of annual performance and financial position.

An extreme application of the integral approach would suggest that they must predict their annual results and contrive to report half of that in the half-year interim financial statements. However, this approach does not portray the reality of their business in individual interim periods, and is, therefore, not permitted under the year-to-date approach adopted in FRS 104. [FRS 104.28A].

8.2.1 Revenues received seasonally, cyclically or occasionally

FRS 104 prohibits the recognition or deferral of revenues that are received seasonally, cyclically or occasionally at an interim date, if recognition or deferral would not be appropriate at year-end. [FRS 104.37]. Examples of such revenues include dividend revenue, royalties, government grants, and seasonal revenues of retailers; such revenues are recognised when they occur. [FRS 104.38].

FRS 104 also requires an entity to explain the seasonality or cyclicity of its business and the effect on interim reporting. [FRS 104.16A(b)]. If businesses are highly seasonal, FRS 104 encourages reporting of additional information for the twelve months up to the end of the interim period and comparatives for the prior twelve-month period (see 6 above). [FRS 104.21].

8.2.2 Costs incurred unevenly during the year

FRS 104 prohibits the recognition or deferral of costs for interim reporting purposes if recognition or deferral of that type of cost is inappropriate at year-end, [FRS 104.39], which is based on the principle that assets and liabilities are recognised and measured using the same criteria as at the year-end. [FRS 104.29, FRS 104.31]. This principle prevents smoothing of costs in seasonal businesses. Furthermore, the recognition of assets or liabilities at the interim date would not be appropriate if they would not qualify for recognition at the end of an annual reporting period.

For direct costs, this approach has limited consequences, as the timing of recognising these costs and the related revenues is usually similar. However, for indirect costs, the consequences may be greater, depending on which section of FRS 102 an entity follows.

For example, manufacturing entities that use fixed production overhead absorption rates recognise an asset in respect of attributable overheads based on the normal capacity of the production facilities in accordance with Section 13 *Inventories*. Any variances and unallocated overheads are expensed. [FRS 102.13.9].

9 Examples of the recognition and measurement principles

Appendix II of FRS 104 provides several examples that illustrate the recognition and measurement principles in interim financial reports. [FRS 104.40].

9.1 Property, plant and equipment and intangible assets

9.1.1 Depreciation and amortisation

Depreciation and amortisation for an interim period is based only on assets owned during that interim period and does not consider asset acquisitions or disposals planned for later in the year. [FRS 104.A2.26].

An entity applying a straight-line method of depreciation (amortisation) does not allocate the depreciation (amortisation) charge between interim periods based on the level of activity. However, under Sections 17 and 18, an entity may use a 'unit of production' method of depreciation, which results in a charge based on the expected use or output (see Chapter 20 at 3.6.5.C and Chapter 21 at 3.3.3.B). An entity can only apply this method if it most closely reflects the expected pattern of consumption of the future economic benefits embodied in the asset. The chosen method must be applied consistently from period to period unless there is a change in the expected pattern of consumption of those future economic benefits. Therefore, an entity cannot apply a straight-line method of depreciation (amortisation) in its annual financial statements, while allocating the depreciation (amortisation) charge to interim periods using a 'unit of production' based approach.

9.1.2 Impairment of assets

Section 27 *Impairment of Assets* of FRS 102 requires an entity to recognise an impairment loss if the recoverable amount of an asset declines below its carrying amount. [FRS 104.A2.37]. An entity must apply the same impairment testing, recognition, and reversal criteria at an interim date as it would at year-end. [FRS 104.A2.38].

However, FRS 104 states that an entity is not required to perform a detailed impairment calculation at the end of each interim period. Rather, an entity must perform a review for indications of significant impairment since the most recent year-end to determine whether such a calculation is needed. [FRS 104.A2.38]. Nevertheless, an entity is not exempt from performing impairment tests at the end of its interim periods. For example, an entity that recognised an impairment charge in the immediately preceding year, may find that it needs to update its impairment calculations at the end of subsequent interim periods because impairment indicators remain.

9.1.3 Recognition of intangible assets

An entity must apply the same definitions and recognition criteria for intangible assets, as set out in Section 18 of FRS 102, in an interim period as in an annual period. Therefore, costs incurred before the recognition criteria are met must be recognised as an expense. [FRS 104.A2.10]. Expenditures on intangibles that are initially expensed cannot be reinstated and recognised as part of the cost of an intangible asset subsequently (e.g., in a later interim period). [FRS 102.18.17]. Furthermore, 'deferring' costs as assets in an interim period in the hope that the recognition criteria will be met later in the year is not permitted. Only costs incurred after the specific point in time at which the criteria are met must be recognised as part of the cost of an intangible asset. [FRS 104.A2.10].

9.1.4 Capitalisation of borrowing costs

As discussed in Chapter 27 an entity may adopt a policy of capitalising borrowing costs that are directly attributable to the acquisition, construction or production of a qualifying asset as part of the cost of that asset. Where an entity adopts a policy of capitalisation of borrowing costs, it must be applied consistently to a class of qualifying assets. Where an entity does not adopt a policy of capitalising borrowing costs, all borrowing costs must be recognised as an expense in profit or loss in the period in which they are incurred. [FRS 102.25.2]. When the asset is funded out of general borrowings, by applying a capitalisation rate equal to the weighted average of the finance costs attributable to actual borrowings outstanding during the period. [FRS 102.25.2C]. For interim financial reporting, measurement must be on a year-to-date basis, [FRS 104.28A], regardless of how often the entity issues interim reports during a year. For example, an entity that issues quarterly interim reports would have to revise its estimated capitalisation rate in successive quarters during the same year for changes in actual year-to-date borrowings and finance costs. The cumulative effect of changes in the estimated capitalisation rate must be recognised in the current quarter (as a change in estimate) and not retrospectively. [FRS 104.35]. In such situations entities must consider the requirement in paragraph 16A(d) of FRS 104 (see 8.1.1 above) to disclose the nature and amount of changes in estimates of amounts reported in prior interim periods of the current financial year.

9.2 Employee benefits

9.2.1 Employer payroll taxes and insurance contributions

If employer payroll taxes or contributions to government-sponsored insurance funds are assessed on an annual basis, the employer's related expense must be recognised in interim periods using an estimated average annual effective rate, even if it does not reflect the timing of payments. A common example is an employer payroll tax or insurance contribution subject to a certain maximum level of earnings per employee. Higher income employees would reach the maximum income before year-end, and the employer would make no further payments for the remainder of the year. [FRS 104.A21.3].

9.2.2 Year-end bonuses

The nature of year-end bonuses varies widely. Some bonus schemes only require continued employment whereas others require certain performance criteria to be attained on a monthly, quarterly, or annual basis. Payment of bonuses may be purely discretionary, contractual or based on years of historical precedent.

[FRS 104.A2.7]. A bonus is recognised for interim reporting if, and only if: [FRS 104.A2.8]

- The entity has a present legal or constructive obligation to make such payments as a result of past events.
- And
- A reliable estimate of the obligation can be made.

A present obligation exists only when an entity has no realistic alternative but to make the payments.

[FRS 102.21.6]. Section 28 of FRS 102 gives guidance on accounting for profit sharing and bonus plans (see Chapter 30 at 3.2).

In recognising a bonus at an interim reporting date, an entity must consider the facts and circumstances under which the bonus is payable and determine an accounting policy that recognises an expense reflecting the obligation on the basis of the services received to date. Several possible accounting policies are shown in Illustration 9-1 below.

Illustration 9-1: Measuring interim bonus expense

An entity pays an annual performance bonus if earnings exceed £10 million, under which 5% of any earnings in excess over £10 million will be paid up to a maximum of £500,000. Earnings for the six months ended 30 June 20X6 are £7 million, and the entity expects earnings for the full year ended 31 December 20X6 to be £16 million.

The following table shows various accounting policies and the expense recognised thereunder in the interim financial statements for the six months ended 30 June 20X6.

	Expense (£)
Method 1 - constructive obligation exists when earnings target is met	Nil
Method 2 - assume earnings for remainder of year will be same	200,000
Method 3 - proportionate recognition based on full-year estimate	131,250
Method 4 - one-half recognition based on full-year estimate	150,000

Method 1 is generally not appropriate, as this method attributes the entire bonus to the latter portion of the year, whereas employees provided services during the first six months to towards earning the bonus.

Likewise, Method 2 is generally not appropriate, as the expense of £200,000 $[(£14 \text{ million} - £10 \text{ million}) \times 5\%]$ assumes that the employees will continue to provide services in the latter half of the year to achieve the bonus target, but does not attribute any services to that period.

In contrast to Methods 1 and 2, Method 3 illustrates an accounting policy whereby an estimate is made of the full-year expense and attributed to the period based on the proportion of that bonus for which employees have provided service at 30 June 20X6. The amount recognised is calculated as $(£7 \text{ million} \div £16 \text{ million}) \times [5\% \times (£16 \text{ million} - £10 \text{ million})]$.

Similar to Method 3, Method 4 also takes the approach of recognising an expense based on the full year estimate, but allocates that full-year estimate equally to each period (which is similar to the approach used for share-based payment transactions). The amount recognised is calculated as $[50\% \times 5\% \times (£16 \text{ million} - £10 \text{ million})]$.

In addition to Methods 3 and 4, which might be appropriate, depending on the facts and circumstances, an entity might determine another basis on which to recognise bonus that considers both the constructive obligation that exists as of 30 June 20X6, and the services performed to date, which is also appropriate.

9.2.3 Pensions

Section 28 requires an entity to determine the present value of defined benefit obligations and the fair value of plan assets at the end of the reporting period. While Section 28 does not require an entity to involve a professionally qualified actuary in the measurement of the obligations, nor to undertake a comprehensive annual actuarial valuation, we expect that in practice most entities will do so.

For interim reporting purposes, the defined benefit obligation can often be reliably measured by extrapolation of the latest actuarial valuation adjusted for changes in employee demographics such as number of employees and salary levels. *[FRS 104.A2.42]*.

If there are significant changes to pension arrangements during the interim period (such as changes resulting from a material business combination and disposals, or from a major redundancy programme) then entities may wish to consider whether they should obtain a new actuarial valuation of scheme liabilities. Similarly, if there are significant market fluctuations, such as those arising from changes in corporate bond markets, the validity of the assumptions in the last actuarial estimate, such as the discount rate applied to scheme liabilities, must be reviewed and revised as appropriate.

Fair Market values of plan assets as at the interim reporting date should be available without recourse to an actuary and in normal circumstances, companies will not necessarily go through the full process of measuring pension liabilities at interim reporting dates but rather will look to establish a process to assess the impact of any changes in underlying parameters (e.g., through extrapolation). As with all estimates, the appropriateness in the circumstances should be considered.

9.2.4 Vacations, holidays and other short-term paid absences

Section 28 distinguishes between accumulating and non-accumulating paid absences. *[FRS 102.28.67]*.

Accumulating paid absences are those that are carried forward and can be used in future periods if the current period's entitlement is not used in full. Section 28 requires an entity to measure the expected cost of an obligation for accumulating paid absences at the amount the entity expects to pay as a result of the unused entitlement that has accumulated at the end of the reporting period (see Chapter 30 at 3.2).

FRS 104 requires the same principle to be applied at the end of interim reporting periods. Conversely, an entity must not recognise an expense or liability for non-accumulating paid absences at the end of an interim reporting period, just as it would not recognise any at the end of an annual reporting period.

[FRS 104.A2.12].

9.3 Inventories and cost of sales

9.3.1 Inventories

The recognition and measurement principles of Section 13 are applied in the same way for interim financial reporting as for annual reporting purposes. At the end of any financial reporting period an entity would determine inventory quantities, costs and net realisable values. However, FRS 104 does comment that to save cost and time, entities often use estimates to measure inventories at interim dates to a greater extent than at annual reporting dates. *[FRS 104.A2.27]*.

Net realisable values are determined using selling prices and costs to complete and dispose at the end of the interim period. A write-down is reversed in a subsequent interim period only if it would be appropriate to do so at year-end. See Chapter 16 at 3.3.2. *[FRS 104.A2.28]*.

9.3.2 Contractual or anticipated purchase price changes

Both the payer and the recipient of volume rebates, or discounts and other contractual changes in the prices of raw materials, labour, or other purchased goods and services should anticipate these items in interim periods if it is probable that these have been earned or will take effect. However, discretionary rebates and discounts are not anticipated because the resulting asset or liability would not meet the recognition criteria in FRS 102. *[FRS 104.A2.25]*.

9.3.3 Interim period manufacturing cost variances

Price, efficiency, spending and volume variances of a manufacturing entity must be recognised in profit or loss at interim reporting dates to the same extent that those variances are recognised at year-end. It is not appropriate to defer variances expected to be absorbed by year-end, which could result in reporting inventory at the interim date at more or less than its actual cost. *[FRS 104.A2.30]*. See 8.2.2 above for a discussion on this topic as it applies to costs incurred by service providers.

9.4 Taxation

Taxation is one of the most difficult areas of interim financial reporting, primarily because FRS 104 does not clearly distinguish between current income tax and deferred tax, referring only to 'income tax expense'. This causes tension between the approach for determining the expense and the asset or liability in the statement of financial position. In addition, the standard's provisions combine terminology, suggesting an integral approach with guidance requiring a year-to-date basis to be applied. The integral method is used in determining the effective income tax rate for the whole year, but that rate is applied to year-to-date profit in the interim financial statements. In addition, under a year-to-date basis, the estimated rate is based on tax rates and laws that are enacted or substantively enacted by the end of the interim period. Changes in legislation expected to occur before the end of the current year are not recognised in preparing the interim financial report. The assets and liabilities in the statement of financial position, at least for deferred taxes, are derived solely from a year-to-date approach, but sometimes the requirements of the standard are unclear, as discussed below.

9.4.1 Measuring interim income tax expense

FRS 104 states that income tax expense must be accrued using the tax rate applicable to expected total annual earnings, by applying the estimated weighted-average annual effective income tax rate to pre-tax income for the interim period. [FRS 104.A2.14]. However, this is not the same as estimating the total tax expense for the year and allocating a proportion of that to the interim period (even though it might sometimes appear that way), as demonstrated in the discussion below.

Because taxes are assessed on an annual basis, using the integral approach to determine the annual effective income tax rate and applying it to year-to-date actual earnings is consistent with the basic concept in FRS 104, that the same recognition and measurement principles apply in interim financial reports as in annual financial statements. [FRS 104.A2.15].

In estimating the weighted-average annual income tax rate, an entity must reflect a blend of any progressive tax rate structure expected to be applicable to the full year's earnings, including changes in income tax rates scheduled to take effect later in the year that are enacted or substantively enacted as at the end of the interim period. [FRS 104.A2.15]. This situation is shown in Illustration 9-2 below which is based on the example in paragraph 17 of Appendix II to FRS 104. [FRS 104.A2.17].

Illustration 9-2: Measuring interim income tax expense

An entity reporting quarterly expects to earn £10,000 pre-tax each quarter and operates in a jurisdiction with a tax rate of 20% on the first £20,000 of annual earnings and 30% on all additional earnings. Actual earnings match expectations. The following table shows the income tax expense reported each quarter:

(All values in £)	Pre-tax earnings	Effective tax rate	Tax expense
First quarter	10,000	25%	2,500
Second quarter	10,000	25%	2,500
Third quarter	10,000	25%	2,500
Fourth quarter	10,000	25%	2,500
Annual	40,000		10,000

£10,000 of tax is expected to be payable for the full year on £40,000 of pre-tax income (£20,000 @ 20% + £20,000 @ 30%), implying an average annual effective income tax rate of 25% (£10,000/£40,000).

In the above example, it might look as if the interim income tax expense is calculated by dividing the total expected tax expense for the year (£10,000) by the number of interim reporting periods (4). However, this is only the case in this example because profits are earned evenly over each quarter. The expense is actually calculated by determining the effective annual income tax rate and multiplying that rate to year-to-date earnings, as shown in Illustration 9-3 below which is based on the example in paragraph 18 of Appendix II to FRS 104. [FRS 104.A2.18].

Illustration 9-3: Measuring interim income tax expense - quarterly losses

An entity reports quarterly, earns £15,000 pre-tax profit in the first quarter but expects to incur losses of £5,000 in each of the three remaining quarters (thus having zero income for the year), and operates in a jurisdiction in which its estimated average annual income tax rate is 20%. The following table shows the income tax expense reported each quarter:

(All values in £)	Pre-tax earnings	Effective tax rate	Tax expense
First quarter	15,000	20%	3,000
Second quarter	(5,000)	20%	(1,000)
Third quarter	(5,000)	20%	(1,000)
Fourth quarter	(5,000)	20%	(1,000)
Annual	0		0

The above example shows how an expense is recognised in periods reporting a profit and a credit is recognised when a loss is incurred. This result is very different from allocating a proportion of the expected total income tax expense for the year, which in this case is zero.

If an entity operates in a number of tax jurisdictions, or where different income tax rates apply to different categories of income (such as capital gains or income earned in particular industries), the standard requires that to the extent practicable, an entity: [FRS 104.A21.16]

- Estimates the average annual effective income tax rate for each taxing jurisdiction separately and applies it individually to the interim period pre-tax income of each jurisdiction.

And

- Applies different income tax rates to each individual category of interim period pre-tax income.

This means that the entity must perform the analysis shown in Illustration 9-3 above for each tax jurisdiction and arrive at an interim tax charge by applying the tax rate for each jurisdiction to actual earnings from each jurisdiction in the interim period. However, the standard recognises that, whilst desirable, such a degree of precision may not be achievable in all cases and allows using a weighted-average rate across jurisdictions or across categories of income, if such rate approximates the effect of using rates that are more specific. [FRS 104.A2.16].

Illustration 9-4: Measuring interim tax expense - many jurisdictions

An entity operates in 3 countries, each with its own tax rates and laws. In order to determine the interim tax expense, the entity determines the effective annual income tax rate for each jurisdiction and applies those rates to the actual earnings in each jurisdiction, as follows:

(All values in £)	Country A	Country B	Country C	Total
Expected annual tax rate	25%	40%	20%	
Expected annual earnings	300,000	250,000	200,000	750,000
Expected annual tax expense	75,000	100,000	40,000	215,000
Actual half-year earnings	140,000	80,000	150,000	370,000
Interim tax expense	35,000	32,000	30,000	97,000

By performing a separate analysis for each jurisdiction, the entity determines an interim tax expense of £97,000, giving an effective average tax rate of 26.2% ($£97,000 \div £370,000$). Had the entity used a weighted-average rate across jurisdictions, using the expected annual earnings, it would have determined an effective tax rate of 28.7% ($£215,000 \div £750,000$), resulting in a tax expense for the interim period of £106,190 ($£370,000 @ 28.7\%$). Whether the difference of over £9,000 lies within the range for a reasonable approximation is a matter of judgement.

9.4.2 Changes in the effective tax rate during the year

9.4.2.A Enacted changes for the current year that apply after the interim reporting date

As noted above, the estimated income tax rate applied in the interim financial report must reflect changes that are enacted or substantively enacted as at the end of the interim reporting period, but scheduled to take effect later in the year. [FRS 104.A2.15]. Tax rates can be regarded as substantively enacted when the remaining stages of the enactment process historically have not affected the outcome and are unlikely to do so. In particular, a UK tax rate is regarded as having been substantively enacted if it is included in:

[FRS 104 Appendix I]

- A Bill that has been passed by the House of Commons and is awaiting only passage through the House of Lords and Royal Assent.
- Or
- A resolution having statutory effect that has been passed under the Provisional Collection of Taxes Act 1968.

A Republic of Ireland tax rate can be regarded as having been substantively enacted if it is included in a Bill that has been passed by the Dáil.

For example, assume that the 30% tax rate (on earnings above £20,000) in Illustration 9-2 was substantively enacted as at the second quarter reporting date and applicable before year-end. In that case, the estimated income tax rate for interim reporting would be the same as the estimated average annual effective income tax rate computed in that example (i.e., 25%) after considering the higher rate, even though the entity's earnings are not above the required threshold at the half-year.

If legislation is enacted only after the end of the interim reporting period but before the date of authorisation for issue of the interim financial report, its effect is disclosed as a non-adjusting event.

[FRS 102.32.11(h)]. This is consistent with the requirement under Section 32 *Events after the End of the Reporting Period* of FRS 102 estimates of tax rates and related assets or liabilities are not revised in these circumstances. [FRS 102.32.6].

9.4.2.B Changes to previously reported estimated income tax rates for the current year

FRS 104 requires an entity to re-estimate at the end of each interim reporting period the estimated average annual income tax rate on a year-to-date basis. [FRS 104.A2.15]. Accordingly, the amounts accrued for income tax expense in one interim period may have to be adjusted in a subsequent interim period if that estimate changes. [FRS 104.30(c)]. FRS 104 requires disclosure in interim financial statements of material changes in estimates of amounts reported in prior interim periods of the current financial year or changes in estimates of amounts reported in prior financial years. [FRS 104.16A(d)].

Accordingly, just as the integral approach does not necessarily result in a constant tax charge in each interim reporting period, it also does not result in a constant effective tax rate when circumstances change.

Illustration 9-5: Changes in the effective tax rate during the year

Taking the fact pattern in Illustration 9-2 above, an entity reporting quarterly expects to earn £10,000 pre-tax each quarter; from the start of the third quarter the higher rate of tax on earnings over £20,000 increases from 30% to 40%. Actual earnings continue to match expectations. The following table shows the income tax expense reported in each quarter:

(All values in £)	Period pre-tax earnings	Pre-tax earnings: year to date	Effective tax rate	Tax expense: year to date	Period tax expense
First quarter †	10,000	10,000	25%	2,500	2,500
Second quarter †	10,000	20,000	25%	5,000	2,500
Third quarter	10,000	30,000	30%	9,000	4,000
Fourth quarter	10,000	40,000	30%	12,000	3,000
Annual	40,000				12,000

† As previously reported from Illustration 9-2 using an effective tax rate of 25%.

The increase in the tax rate means that £12,000 of tax is expected to be payable for the full year on £40,000 of pre-tax income (£20,000 @ 20% + £20,000 @ 40%), implying an average annual effective income tax rate of 30% (£12,000/£40,000). With cumulative pre-tax earnings of £30,000 as at the end of the third quarter, the estimated tax liability is £9,000, requiring a tax expense of £4,000 (£9,000 - £2,500 - £2,500) to be recognised during that quarter. In the final quarter, earnings of £10,000 result in a tax charge of £3,000, using the revised effective rate of 30%.

9.4.2.C Enacted changes applying only to subsequent years

In many cases, tax legislation is enacted that takes effect not only after the interim reporting date but also after year-end. Such circumstances are not addressed explicitly in the standard. As FRS 104 does not clearly distinguish between current income tax and deferred tax, combined with the different approaches taken in determining the expense recognised in profit or loss compared to the statement of financial position, these issues can lead to confusion in this situation.

On the one hand, the standard states that the estimated income tax rate for the interim period includes enacted or substantively enacted changes scheduled to take effect later in the year. [FRS 104.A2.15]. This implies that the effect of changes that do not take effect in the current year is ignored in determining the appropriate rate for current tax. On the other hand, FRS 104 also requires that the principles for recognising assets, liabilities, income and expenses for interim periods are the same as in the annual financial statements. [FRS 104.29]. In annual financial statements, deferred tax is measured at the tax rates expected to apply to the period when the asset is realised or the liability is settled, based on tax rates (and tax laws) enacted or substantively enacted by the end of the reporting period, as required by FRS 102. [FRS 102.29.12]. Therefore, an entity must recognise the effect of a change applying to future periods if this change is enacted by the end of the interim reporting period.

These two requirements seem to be mutually incompatible. FRS 104 makes sense only in the context of calculating the effective 'current' tax rate on income earned in the period. Once a deferred tax asset or liability is recognised, it must be measured under Section 29 *Income Tax*. Therefore, an entity must recognise an enacted change applying to future years in measuring deferred tax assets and liabilities as at the end of the interim reporting period. One way to treat the cumulative effect to date of this remeasurement is to recognise it in full, by a credit to profit or loss or to other comprehensive income, depending on the nature of the temporary difference being remeasured, in the period during which the tax legislation is enacted, in a similar way to the treatment shown in Illustration 9-5 above, and as shown in Illustration 9-6 below.

Illustration 9-6: Enacted changes to tax rates applying after the current year

An entity reporting half-yearly operates in a jurisdiction subject to a tax rate of 30%. Legislation is enacted during the first half of the current year, which reduces the tax rate to 28% on income earned from the beginning of the entity's next financial year. Based on a gross temporary difference of £1,000, the entity reported a deferred tax liability in its most recent annual financial statements of £300 (£1,000 @ 30%). Of this temporary difference, £200 is expected to reverse in the second half of the current year and £800 in the next financial year. Assuming that no new temporary differences arise in the current period, what is the deferred tax balance at the interim reporting date?

Whilst the entity uses an effective tax rate of 30% to determine the tax expense relating to income earned in the period, it should use a rate of 28% to measure those temporary differences expected to reverse in the next financial year. Accordingly, the deferred tax liability at the half-year reporting date is £284 (£200 @ 30% + £800 @ 28%).

Alternatively, if the effective *current* tax rate is not distinguished from the measurement of deferred tax, it could be argued that FRS 104 allows the reduction in the deferred tax liability of £16 (£300 - £284) to be included in the estimate of the effective income tax rate for the year. Approach 2 in Illustration 9-9 below applies this argument.

How we see it

In our view, because FRS 104 does not distinguish between current and deferred taxes, either approach would be acceptable provided that it is applied consistently.

9.4.3 Difference in financial year and tax year

If an entity's financial year and the income tax year differ, the income tax expense for the interim periods of that financial year must be measured using separate weighted-average estimated effective tax rates for each of the income tax years applied to the portion of pre-tax income earned in each of those income tax years. [FRS 104.A2.19]. In other words, an entity must compute a weighted-average estimated effective tax rate for each income tax year, rather than for its financial year.

Illustration 9-7: Difference in financial year and tax year

An entity's financial year ends 30 June and it reports quarterly. Its taxable year ends 31 December. For the financial year that begins 1 July 20X5 and ends 30 June 20X6, the entity earns 10,000 pre-tax each quarter. The estimated average annual income tax rate is 30% in the income tax year to 31 December 20X5 and 40% in the year to 31 December 20X6.

Quarter ending (All values in £)	Pre-tax earnings	Effective tax rate	Tax expense
30 September 20X5	10,000	30%	3,000
31 December 20X5	10,000	30%	3,000
31 March 20X6	10,000	40%	4,000
30 June 20X6	10,000	40%	4,000
Annual	40,000		14,000

9.4.4 Tax loss and tax credit carrybacks and carryforwards

FRS 104 repeats the requirement in Section 29 of FRS 102 that for carryforwards of unused tax losses, a deferred tax asset must only be recognised to the extent that it is probable that they will be recovered against the reversal of deferred tax liabilities or other future taxable profits. [FRS 104.A2.23]. In assessing whether future taxable profit is available, the criteria in Section 29 are applied at the interim date. If these criteria are met as at the end of the interim period, the effect of the tax loss carryforwards is included in the estimated average annual effective income tax rate.

Illustration 9-8: Tax loss carryforwards expected to be recovered in the current year

An entity that reports quarterly has unutilised operating losses of £10,000 for income tax purposes at the start of the current financial year for which a deferred tax asset has not been recognised. The entity earns £10,000 in the first quarter of the current year and expects to earn £10,000 in each of the three remaining quarters. Excluding the effect of utilising losses carried forward, the estimated average annual income tax rate is 40%. Including the carryforward, the estimated average annual income tax rate is 30%. Accordingly, tax expense is determined by applying the 30% rate to earnings each quarter as follows:

(All values in £)	Pre-tax earnings	Effective tax rate	Tax expense
First quarter	10,000	30%	3,000
Second quarter	10,000	30%	3,000
Third quarter	10,000	30%	3,000
Fourth quarter	10,000	30%	3,000
Annual	40,000		12,000

This result is consistent with the general approach for measuring income tax expense in the interim report, in that any entitlement for relief from current tax due to carried forward losses is determined on an annual basis. Accordingly, its effect is included in the estimate of the average annual income tax rate and not, for example, by allocating all of the unutilised losses against the earnings of the first quarter to give an income tax expense of zero in the first quarter and £4,000 thereafter.

In contrast, the year-to-date approach of FRS 104 means that the benefits of a tax loss carryback are recognised in the interim period in which the related tax loss occurs, [FRS 104.A2.22], and are not included in the assessment of the estimated average annual tax rate, as shown in Illustration 9-3 above. This approach is consistent with Section 29 of FRS 102 which requires the benefit of a tax loss that can be carried back to recover current tax already incurred in a previous period to be recognised as an asset. [FRS 102.29.4]. Therefore, a corresponding reduction of tax expense or increase of tax income is also recognised.

[FRS 104.A2.22].

Where previously unrecognised tax losses are expected to be utilised in full in the current year, it seems intuitive to recognise the recovery of those carried forward losses in the estimate of the average annual tax rate, as shown in Illustration 9-7 above. However, where the level of previously unrecognised tax losses exceeds expected taxable profits for the current year, a deferred tax asset will be recognised for the carried forward losses that are now expected to be utilised, albeit in future years.

The examples in FRS 104 do not show how such a deferred tax asset is created in the interim financial report.

How we see it

In our view, both approaches above are acceptable, where tax loss carryforwards exceed expected profits in the current year as shown in Illustration 9-9 below.

Illustration 9-9: Tax loss carry forwards in excess of current year expected profits

An entity that reports half-yearly has unutilised operating losses of £75,000 for income tax purposes at the start of the current financial year for which no deferred tax asset has been recognised. At the end of its first interim period, the entity reports a profit before tax of £25,000 and expects to earn a profit of £20,000 before tax in the second half of the year. The entity reassesses the likelihood of generating sufficient profits to utilise its carried forward tax losses and determines that the FRS 102 recognition criteria for a deferred tax asset are satisfied for the full amount of £75,000. Excluding the effect of utilising losses carried forward, the estimated average annual income tax rate is the same as the enacted or substantially enacted rate of 40%.

As at the end of the current financial year the entity expects to have unutilised losses of £30,000 (£75,000 carried forward less current year pre-tax profits of £45,000). Using the enacted rate of 40%, a deferred tax asset of £12,000 is recognised at year-end. How is this deferred tax asset recognised in the interim reporting periods?

Approach 1

Under the first approach, the effective tax rate for the effect of the change in the assessment of recoverability of the unused tax losses carried forward to future periods that existed at the beginning of the current financial year is not adjusted. The estimate of the average annual effective tax rate includes only those carried forward losses expected to be utilised in the current financial year and a separate deferred tax asset is recognised for those carried forward losses now expected to be utilised in future annual reporting periods.

In the fact pattern above, using £45,000 of the carried forward tax losses gives an average effective annual tax rate of nil, as follows:

Estimation of the annual effective tax rate - Approach 1

(All values in £)

Expected annual tax expense before utilising losses carried forward (45,000 @ 40%)	18,000
Tax benefit of utilising carried forward tax losses (45,000 @ 40%)	(18,000)
Expected annual tax expense before the effect of losses carried forward to future annual periods	0
Expected annual effective tax rate	0%
Effect of tax losses carried forward to future periods (75,000 - 45,000 @ 40%)	(12,000)
Tax income to be recognised in the interim period	(12,000)

The remaining tax losses give rise to a deferred tax asset of £12,000, which is recognised in full at the half-year, to give reported profits after tax as follows:

(All values in £)	First half-year	Second half-year	Annual
Profit before income tax	25,000	20,000	45,000
Income tax (expense)/credit			
- at expected annual effective rate	0	0	0
- recognition of deferred tax asset	12,000	0	12,000
Net profit after tax	37,000	20,000	57,000

Approach 2

Under the second approach, the effective tax rate for the effect of the change in the assessment of recoverability of the unused tax losses carried forward to future periods that existed at the beginning of the current financial year is adjusted. The estimate of the average annual effective tax rate reflects the expected recovery of all the previously unutilised tax losses from the beginning of the period in which the assessment of recoverability changed. In the fact pattern above, recognition of the unutilised tax losses gives an average effective annual tax rate of -26.67%, as follows:

Estimation of the annual effective tax rate - Approach 2

(All values in £)

Expected annual tax expense before utilising losses carried forward (45,000 @ 40%)	18,000
Tax benefit of recognising unutilised tax losses (75,000 @ 40%)	(30,000)
Expected annual tax credit after recognising unutilised tax losses	(12,000)
Expected annual effective tax rate (-12,000 ÷ 45,000)	-26.67%

This approach results in reported profits after tax as follows:

(All values in £)	First half-year	Second half-year	Annual
Profit before income tax	25,000	20,000	45,000
Income tax (expense)/credit			
- at expected annual effective rate	6,667	5,333	12,000
Net profit after tax	31,667	25,333	57,000

Approach 1 is consistent with the requirements of Section 29 as it results in recognising the full expected deferred tax asset as soon as it becomes “probable that they will be recovered against the reversal of deferred tax liabilities or other future taxable profits”. [FRS 102.29.7].

How we see it

However, given that FRS 104 does not specifically address this situation, and is unclear about whether the effective tax rate reflects changes in the assessment of the recoverability of carried forward tax losses, we also believe that Approach 2 is acceptable.

9.4.5 Tax credits

FRS 104 also discusses in more detail the treatment of tax credits which may, for example, be based on amounts of capital expenditures, exports, or research and development expenditures. Such benefits are usually granted and calculated on an annual basis under tax laws and regulations and therefore are reflected in the estimated annual effective income tax rate used in the interim report. However, if tax benefits relate to a one-time event, they are excluded from the estimate of the annual rate and deducted separately from income tax expense in that interim period, in the same way that special tax rates applicable to particular categories of income are not blended into a single effective annual tax rate. Occasionally, some tax credits are more akin to a government grant, which are recognised in the interim period in which they arise. [FRS 104.A2.21]. Similar considerations arise in determining the extent to which the existence of non-taxable income or non-deductible expenditure must be incorporated into the estimate of the weighted-average annual income tax rate expected for the full financial year. This requires the exercise of judgement.

9.4.6 Pillar Two Income Taxes

Governments around the world are introducing local legislation to implement the Base Erosion and Profit Shifting (BEPS) Pillar Two Model Rules published by the Organisation for Economic Co-operation and Development (OECD). The Pillar Two model rules apply to multinational enterprises (MNEs) with revenue in excess of EUR 750 million per their consolidated financial statements. These rules introduce new taxing mechanisms under which MNEs would pay a minimum level of tax. In July 2023, the FRC issued *Amendments to FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland* and *FRS 101 Reduced Disclosure Framework - International tax reform - Pillar Two model rules*. These are similar to; *Amendments to IAS 12 International Tax Reform - Pillar Two Model Rules* issued by the IASB. Pillar Two income taxes and the related amendments to FRS 102 are discussed in Chapter 31 at 3.7.

The amendments have introduced the following disclosure requirements that are applicable to interim financial statements:

- (a) To disclose that the entity has applied the exception to recognising and disclosing information about deferred tax assets and liabilities related to Pillar Two income taxes. [FRS 102.29.12A].
- (b) To disclose separately its current tax expense/(income) relating to Pillar Two income tax. [FRS 102.29.26].
- (c) In periods in which Pillar Two legislation is enacted or substantively enacted but not yet in effect, to disclose known or reasonably estimable information that helps users of financial statements understand the entity's exposure to Pillar Two income taxes arising from that legislation. [FRS 102.29.28].
And
- (d) To meet the disclosure requirement in (c) above, an entity must disclose 'qualitative and quantitative information about its exposure to Pillar Two income taxes at the end of the reporting period'. [FRS 102.29.29].

FRS 104 was not consequentially amended to reflect the new requirements introduced in section 29 of FRS 102. Accordingly, the general principles and requirements in FRS 104, in respect of condensed interim financial statements (see 3.2 above), must be applied and disclosure given where relevant.

9.5 Foreign currency translation

9.5.1 Foreign currency translation gains and losses

An entity measures foreign currency translation gains and losses for interim financial reporting using the same principles that Section 30 *Foreign Currency Translation* of FRS 102 requires at year-end (see Chapter 32). [FRS 104.A2.31]. An entity must use the actual average and closing foreign exchange rates for the interim period (i.e., it may not anticipate changes in foreign exchange rates for the remainder of the current year in translating at an interim date). [FRS 104.A2.32]. When Section 30 requires translation adjustments to be recognised as income or expense in the period in which they arise, the same approach must be used in the interim report. An entity must not defer some foreign currency translation adjustments at an interim date, even if it expects the adjustment to reverse before year-end. [FRS 104.A2.33].

9.5.2 Interim financial reporting in hyperinflationary economies

Interim financial reports in hyperinflationary economies are prepared using the same principles as at year-end. [FRS 104.A2.34]. Section 31 *Hyperinflation* of FRS 102 requires that the financial statements of an entity that reports in the currency of a hyperinflationary economy be stated in terms of the measuring unit current at the end of the reporting period, and the gain or loss on the net monetary position be included in profit or loss. In addition, comparative financial data reported for prior periods must be restated to the current measuring unit (see Chapter 33). [FRS 104.A2.35]. As shown in Illustration 6-1 and Illustration 6-2 above, FRS 104 requires an interim report to contain many components, which are all restated to the current measuring unit at every interim reporting date.

The measuring unit used is that as of the end of the interim period, with the resulting gain or loss on the net monetary position included in that period's net income. An entity cannot annualise the recognition of gains or losses or estimate an annual inflation rate in preparing an interim financial report in a hyperinflationary economy. [FRS 104.A2.36].

While it is highly unlikely for a UK company to have the functional currency of a hyperinflationary economy, a UK based group may prepare consolidated financial statements under FRS 102 with a subsidiary that operates in, and has a functional currency of, a country subject to hyperinflation.

9.6 Provisions, contingencies and accruals for other costs

9.6.1 Provisions

FRS 104 requires an entity to apply the same criteria for recognising and measuring a provision at an interim date as it would at year-end. [FRS 104.A2.6]. Hence, an entity must recognise a provision when it has no realistic alternative but to transfer economic benefits because of an event that has created a legal or constructive obligation. [FRS 104.A2.5]. FRS 104 emphasises that the existence or non-existence of an obligation to transfer benefits is a question of fact and does not depend on the length of the reporting period. [FRS 104.A2.6].

The obligation is adjusted upward or downward at each interim reporting date, if the entity's best estimate of the amount of the obligation changes. The standard states that any corresponding loss or gain should normally be recognised in profit or loss. [FRS 104.A2.5]. However, an entity applying IFRIC 1 *Changes in Existing Decommissioning, Restoration and Similar Liabilities* under the hierarchy in Section 10 (see Chapter 9 at 2.1) might instead need to adjust the carrying amount of the corresponding asset rather than recognise a gain or loss.

9.6.2 Other planned but irregularly occurring costs

Many entities budget for costs that they expect to incur irregularly during the year, such as advertising campaigns, employee training and charitable contributions. Even though these costs are planned and expected to recur annually, they tend to be discretionary in nature. Therefore, it is generally not appropriate to recognise an obligation at the end of an interim financial reporting period for such costs that are not yet incurred, as they do not meet the definition of a liability. [FRS 104.A2.13].

As discussed at 8.2.2 above, FRS 104 prohibits the recognition or deferral of costs incurred unevenly throughout the year at the interim date if recognition or deferral would be inappropriate at year-end. [FRS 104.39]. Accordingly, such costs must be recognised as they are incurred.

9.6.3 Major planned periodic maintenance or overhaul

The cost of periodic maintenance, a planned major overhaul, or other seasonal expenditures expected to occur after the interim reporting date cannot be recognised for interim reporting purposes unless an event before the end of the interim period causes the entity to have a legal or constructive obligation. The mere intention or necessity to incur expenditures in the future is not sufficient to recognise an obligation as at the interim reporting date. [FRS 104.A2.4]. Similarly, an entity may not defer and amortise such costs if they are incurred early in the year, but do not satisfy the criteria for recognition as an asset as at the interim reporting date.

9.6.4 Variable lease payments

Variable lease payments based on sales can create legal or constructive obligations that are recognised as liabilities. If a lease includes variable payments based on achieving a certain level of annual sales (or annual use of the asset), an obligation can arise in an interim period before the required level of annual sales (or usage) is achieved. If the entity expects to achieve the required level of annual sales (or usage), it must recognise a liability as it has no realistic alternative but to make the future lease payment. [FRS 104.A2.9]. See Chapter 23 at 5.5.1 for further discussion on variable lease payments.

9.6.5 Levies charged by public authorities

When governments or other public authorities impose levies on entities in relation to their activities, as opposed to income taxes, it is not always clear when the liability to pay a levy arises and a provision should be recognised. As there is no specific guidance on accounting for such provisions under FRS 102, entities may, under the hierarchy set out in Section 10, refer to the guidance in IFRIC 21 *Levies* in formulating an appropriate accounting policy for these obligations. See Chapter 24 at 3.11.5 for further discussion on levies charges.

9.7 Earnings per share

As noted at 3.3 above, FRS 104 requires that where an entity has presented EPS information in accordance with IAS 33 *Earnings per Share* (as adopted in the relevant jurisdiction) in its most recent annual financial statements, then it will present basic and diluted EPS in its interim financial statements. [FRS 104.11]. EPS in an interim period is computed in the same way as for annual periods. However, IAS 33 does not allow diluted EPS of a prior period to be restated for subsequent changes in the assumptions used in those EPS calculations. [IAS 33.65]. This approach might be perceived as inconsistent to the year-to-date approach which should be followed for computing EPS for an interim period. For example, if an entity, reporting quarterly, computes diluted EPS in its first quarter financial statements, it cannot restate the reported diluted EPS subsequently for any changes in the assumptions used. However, following a year-to-date approach, the entity must consider the revised assumptions to compute the diluted EPS for the six months in its second quarter financial statements, which, in this case would not be the sum of its diluted EPS for first quarter and the second quarter.

10 Use of estimates

FRS 104 requires that the measurement procedures followed in an interim financial report must be designed to ensure that the resulting information is reliable and that all material financial information that is relevant to an understanding of the financial position or performance of the entity is appropriately disclosed. Whilst estimation is necessary in both interim and annual financial statements, the standard recognises that preparing interim financial reports generally requires greater use of estimation methods than at year-end. [FRS 104.41]. Consequently, the measurement of assets and liabilities at an interim date may involve less use of outside experts in determining amounts for items such as provisions, contingencies, pensions or non-current assets revalued at fair values. Reliable measurement of such amounts may simply involve updating the previously reported year-end position. The procedures may be less rigorous than those at year-end. The Illustration below is based on Appendix II to FRS 104. [FRS 104.A2.39, FRS 104.A2.40, FRS 104.A2.41, FRS 104.A2.42, FRS 104.A2.43, FRS 104.A2.44, FRS 104.A2.45, FRS 104.A2.46, FRS 104.A2.47].

Illustration 10-1: Use of estimates

Inventories	Full stock-taking and valuation procedures may not be required for inventories at interim dates, although it may be done at year-end. It may be sufficient to make estimates at interim dates based on sales margins.
Classifications of current and non-current assets and liabilities	Entities may do a more thorough investigation for classifying assets and liabilities as due within one year or after more than one year (or an equivalent classification between current and non-current assets and liabilities) at annual reporting dates than at interim dates.
Provisions	Determining the appropriate provision (such as a provision for warranties, environmental costs, and site restoration costs) may be complex and often costly and time-consuming. Entities sometimes engage outside experts to assist in the annual calculations. Making similar estimates at interim dates often entails updating of the prior annual provision rather than the engaging of outside experts to do a new calculation.
Pensions	Section 28 of FRS 102 requires an entity to determine the present value of defined benefit obligations and the fair value of plan assets at the end of each reporting period. Section 28 does not require an entity to involve a professionally qualified actuary in measurement of the obligations, nor does it require an annual comprehensive actuarial valuation. As discussed at 9.2.3 above, market values of plan assets as at the interim reporting date should be available without recourse to an actuary, and reliable measurement of defined benefit obligations for interim reporting purposes can often be extrapolated from the latest actuarial valuation adjusted for changes in employee demographics such as number of employees and salary levels.
Income taxes	Entities may calculate income tax expense and deferred income tax liability at annual dates by applying the tax rate for each individual jurisdiction to measures of income for each jurisdiction. Paragraph A2.16 of Appendix II (see 9.4.1 above) acknowledges that while that degree of precision is desirable at interim reporting dates as well, it may not be achievable in all cases, and a weighted-average of rates across jurisdictions or across categories of income is used if it is a reasonable approximation of the effect of using more specific rates.
Contingencies	The measurement of contingencies may involve the opinions of legal experts or other advisers. Formal reports from independent experts are sometimes obtained for contingencies. Such opinions about litigation, claims, assessments, and other contingencies and uncertainties may or may not also be needed at interim dates.
Revaluations and fair value accounting	Section 17 of FRS 102 allows an entity to choose as its accounting policy the revaluation model whereby items of property, plant and equipment are revalued to fair value. Similarly, Section 16 of FRS 102 <i>Investment Property</i> requires an entity to measure the fair value of investment property. For those measurements, an entity that relies on professionally qualified valuers at annual reporting dates is not required to rely on them at interim reporting dates.

Specialised industries	Because of complexity, costliness, and time, interim period measurements in specialised industries might be less precise than at year-end. An example is calculation of insurance reserves by insurance companies.

Although an entity is not required to use professionally qualified valuers at interim reporting dates, and may only update the previous year-end position, the entity is required to recognise impairments in the appropriate interim period (see 9.1.2 above).

11 First-time presentation of interim reports complying with FRS 104

FRS 104 defines “interim period” as a financial reporting period shorter than a full financial year, [FRS 104 Appendix I], and requires the format of condensed financial statements for an interim period to include each of the headings and subtotals that were included in the entity’s most recent annual financial statements. [FRS 104.10].

However, FRS 104 provides no guidance for an entity that chooses to issue condensed interim financial statements before it has prepared a set of FRS 102 compliant annual financial statements. This situation will arise in the entity’s first year of existence. Whilst FRS 104 does not prohibit the entity from preparing a condensed set of interim financial statements, it does not specify how an entity would interpret the minimum disclosure requirements of FRS 104 when there are no annual financial statements to refer to.

The entity should consider making additional disclosures to recognise that a user of this first set of interim financial statements does not have the access otherwise assumed to the most recent annual financial report of the entity. Accordingly, the explanation of significant events and transactions and changes in financial position in the period must be more detailed than the update normally expected in FRS 104. [FRS 104.15]. In the absence of any specific regulatory requirements to which the entity is subject, the following are examples of additional considerations that would apply:

- Since it is not possible to make a statement that the same accounting policies and methods of computation have been applied, [FRS 104.16A(a)], the entity must disclose all those accounting policies and methods of computation in the same level of detail as it would in a set of annual financial statements. When the entity issues interim reports on a quarterly basis, the first quarter interim report should provide the abovementioned details; subsequent quarterly reports could refer to the details included in the first quarter report.
 - Similarly, the disclosure of the nature and amount of changes in estimates of amounts reported in prior periods will have to go into more detail than just the changes normally required to be disclosed. [FRS 104.16A(d)].
 - More extensive disclosure than simply the changes since the last report date will be required for contingent liabilities and contingent assets. [FRS 104.15B(m)].
- And
- In the absence of a complete set of annual financial statements complying with FRS 102, the entity should include each of the headings and subtotals in the condensed financial statements that it would expect to include in its first financial statements prepared under FRS 102.

Entities that have transitioned from another financial reporting framework to FRS 102 and have not yet published FRS 102 annual financial statements are required to make additional disclosures when presenting interim reports in accordance with FRS 104: [FRS 104.16B]

- A description of the nature of each change in accounting policy.
- A reconciliation of its equity determined in accordance with its previous financial reporting framework to its equity determined in accordance with the new financial reporting framework for the following dates:
 - The date of transition to the new financial reporting framework.

And

 - At the end of the comparable year to date period of the immediately preceding financial year.

And
- A reconciliation of profit or loss determined in accordance with its previous financial reporting framework for the comparable interim period (current and if different year-to-date) of the immediately preceding financial year.

If an entity becomes aware of errors made under its previous financial reporting framework, the reconciliations above must, to the extent practicable, distinguish the correction of those errors from changes in accounting policies. For an entity converting to FRS 102 in their next annual financial statements, the requirements of Section 35 *Transition to this FRS* - must be applied. Those requirements, which include the reconciliations above, are discussed in Chapter 37.

12 Periodic Review 2024

FRS 104 was amended as a result of the periodic review in 2024. The amendments to this standard are applicable for interim periods beginning on or after 1 January 2026. Early application is permitted provided that all amendments are applied at the same time, and that fact is disclosed. [FRS 104.56D].

13 Summary of GAAP differences

FRS 104 reporting requirements are mainly based on IAS 34 as it's not an accounting standard²⁵⁵. Both standards require that an entity must disclose any events or transactions which are significant to an understanding of the changes in an entity's financial position or performance (see 4.1 above). However, certain requirements from FRS 104, such as paragraphs 15B(j), 15B(k) and 16A(k) were removed as similar disclosures are not required by FRS 102 in the annual financial statements.

²⁵⁵ Footnote 1 to FRS 104.

Appendix A - Defined terms

Appendix I to FRS 104 contains a number of terms. Below are those that are specific to Interim financial reporting.

Extracts from FRS 104	
Appendix I Glossary	
interim financial report	A financial report containing either a complete set of financial statements or a set of condensed financial statements for an interim period.
interim period	A financial reporting period shorter than a full financial year.

Appendix B - Index of Illustrations

Illustration 3-1:	Presenting the same headings and sub-totals in condensed interim financial statements	2155
Illustration 6-1:	Entity publishes interim financial reports half-yearly	2164
Illustration 6-2:	Entity publishes interim financial reports quarterly	2165
Illustration 6-3:	Entity changes financial year-end	2167
Illustration 8-1:	Going concern assessment	2171
Illustration 9-1:	Measuring interim bonus expense	2174
Illustration 9-2:	Measuring interim income tax expense	2176
Illustration 9-3:	Measuring interim income tax expense - quarterly losses	2177
Illustration 9-4:	Measuring interim tax expense - many jurisdictions	2177
Illustration 9-5:	Changes in the effective tax rate during the year	2178
Illustration 9-6:	Enacted changes to tax rates applying after the current year	2179
Illustration 9-7:	Difference in financial year and tax year	2180
Illustration 9-8:	Tax loss carryforwards expected to be recovered in the current year	2180
Illustration 9-9:	Tax loss carry forwards in excess of current year expected profits	2181
Illustration 10-1:	Use of estimates	2186

EY | Building a better working world

EY is building a better working world by creating new value for clients, people, society and the planet, while building trust in capital markets. Enabled by data, AI and advanced technology, EY teams help clients shape the future with confidence and develop answers for the most pressing issues of today and tomorrow.

EY teams work across a full spectrum of services in assurance, consulting, tax, strategy and transactions. Fueled by sector insights, a globally connected, multi-disciplinary network and diverse ecosystem partners, EY teams can provide services in more than 150 countries and territories.

All in to shape the future with confidence.

EY refers to the global organization, and may refer to one or more, of the member firms of Ernst & Young Global Limited, each of which is a separate legal entity. Ernst & Young Global Limited, a UK company limited by guarantee, does not provide services to clients. Information about how EY collects and uses personal data and a description of the rights individuals have under data protection legislation are available via ey.com/privacy. EY member firms do not practice law where prohibited by local laws. For more information about our organization, please visit ey.com.

UK GAAP 2026 Overview

UK GAAP provides a comprehensive guide to interpreting and implementing UK accounting standards, particularly:

- FRS 100: Application of Financial Reporting Requirements
- FRS 101: Reduced Disclosure Framework - Disclosure exemptions from EU-adopted IFRS for qualifying entities
- FRS 102: The Financial Reporting Standard applicable in the UK and Republic of Ireland
- FRS 103: Insurance Contracts
- FRS 104: Interim Financial Reporting

This book is an essential tool for anyone applying, auditing, interpreting, regulating, studying or teaching those accounting standards. Written by the financial reporting professionals from the Financial Reporting Group of EY, this book provides a clear explanation of the UK GAAP accounting requirements which apply in 2026 and will prove invaluable in implementing these requirements. It also addresses the requirements of the UK Companies Act and relevant statutory instruments, as well as practical worked examples.

Also available is the EY publication International GAAP® that provides a comprehensive guide to interpreting International Financial Reporting Standards (IFRS). This covers the many interpretations, practices and solutions which have been developed based on our work with clients, and discussions with regulators, standard-setters and other professionals. We believe that International GAAP® plays an important role in ensuring consistent application of IFRS accounting standards and helping address emerging issues.
