About this book

UK GAAP 2026 is the fourth edition of the EY publication on UK GAAP following the issuance of new UK GAAP accounting standards, FRSs 100-104, which have applied for accounting periods beginning on or after 1 January 2015. The original publication, New UK GAAP 2015, was published in 2015 and revised editions, UK GAAP 2017 and UK GAAP 2019, were published in 2017 and 2019, respectively. This publication has been fully revised and updated in order to:

- Incorporate the September 2024 editions of FRSs 100-104 and amendments thereon issued as at March 2026 including the Amendments to FRS 102 - *The Financial Reporting Standard applicable in the UK and Republic of Ireland and other FRSs - Periodic review 2024* (published in March 2024) (Periodic Review 2024). The changes made by the Periodic review 2024 are discussed in each relevant chapter.
 - Include changes to legal requirements for UK companies and LLPs introduced since the previous edition.
- And
- Provide further insight on the many issues relating to the practical application of the new UK accounting standards which have arisen since the publication of UK GAAP 2019, based on the extensive experience of the book's authors in dealing with recent day-to-day issues.

This book comprises 39 chapters. Each chapter includes a detailed list of contents and a comparison of UK GAAP to IFRS. The book also contains an index of references to standards and interpretations.

FRS 101 *Reduced Disclosure Framework - Disclosure exemptions from EU-adopted IFRS for qualifying entities* uses the recognition and measurement principles of International Financial Reporting Accounting Standards (IFRS Accounting Standards). In certain circumstances, FRS 102 also refers entities to IFRS Accounting Standards. Detailed guidance on applying IFRS can be found in the latest edition of the EY publication, International GAAP®.

Preface

The Financial Reporting Standards (FRSs 100-105) have applied from accounting periods beginning on or after 1 January 2015 (or, for small entities that choose to apply the small entities regime and micro entities that choose to apply the micro entities regime, accounting periods beginning on or after 1 January 2016), along with the associated accounting requirements of the Companies Act 2006 (CA 2006). FRS 105 is outside of the scope of this publication.

New standards

Since the publication of UK GAAP 2019, further amendments have been made to FRSs 100-104. The most significant of these were as a result of the second periodic review of the standards. When FRS 102 was issued originally in March 2013, the FRC indicated that it would be reviewed every three years. The first periodic review was completed in December 2017 and its requirements were mandatory for accounting periods beginning on or after 1 January 2019.

The second periodic review was issued in 2024 (the Periodic Review 2024) and its requirements, with minor exceptions, are applicable for accounting periods beginning on or after 1 January 2026. In developing the amendments made by the Periodic Review 2024, the FRC considered both major and minor changes to IFRS Accounting Standards, the IASB's proposed changes in developing the third edition of the IFRS for SMEs Accounting Standard, stakeholder feedback in response to the FRC's 2021 request for views and FREDs 82 and 84, along with other developments in corporate reporting. The FRC's intention is that FRS 102 reflects up-to-date IFRS-based solutions, providing high-quality understandable financial reporting to users in line with the FRC's overriding objective to enable users of accounts to receive high-quality understandable financial reporting proportionate to the size and complexity of the entity and users' information needs. The FRC believes that the amendments have been designed to be proportionate to the size and complexity of the entities applying the FRSs.

In our view, the principal changes to FRS 102 which are likely to have the most impact relate to:

- New accounting requirements for revenue in Section 23 of FRS 102, based on the five-step model for revenue recognition from IFRS 15 *Revenue from Contracts with Customers*, with some simplifications. The extent to which this will change an entity's revenue recognition in practice will depend on the nature of its contracts. For some entities, this will result in a material change in revenue recognised.
- New lease accounting requirements in Section 20 of FRS 102 for lessees, based on the on-balance-sheet model from IFRS 16 *Leases*, with some simplifications. This is expected to result in an impact on the financial statements of most entities that are lessees with one or more operating lease.
- Increased disclosure for small entities in the UK applying Section 1A *Small Entities* that the FRC considers are necessary in order to give a true and fair view.
- A revised Section 2 *Concepts and Pervasive Principles*, updated to reflect the IASB's *Conceptual Framework for Financial Reporting*, issued in 2018.
- A new Section 2A *Fair Value Measurement*, replacing the *Appendix: Fair value measurement* to Section 2 and updated to reflect the principles of IFRS 13 *Fair Value Measurement*.
- Amendments made to Section 29 *Income Taxes* to explain how to account for uncertain tax treatments based on the requirements in IFRIC 23 *Uncertainty over Income Tax Treatments*.
- Disclosure requirements introduced in Section 7 *Statement of cash flows* based on the IASB's May 2023 *Supplier Finance Arrangements (Amendments to IAS 7 and IFRS 7)*. Qualifying entities not preparing a cash flow statement are exempt from the supplier finance arrangements disclosure requirements only if equivalent disclosures are included in the consolidated financial statements.

And

- Removal of the option to adopt for the first time the recognition and measurement requirements of IAS 39 *Financial Instruments: Recognition and Measurement* under paragraphs 11.2(b) and 12.2(b) of FRS 102 (unless needed to achieve consistency with group accounting policies), in preparation for the eventual removal of this option. Entities already applying the IAS 39 option are permitted to continue to apply it.

Following consultation, the FRC did not introduce elements of the expected credit loss model of IFRS 9 *Financial Instruments* or the requirements of IFRS 17 *Insurance contracts* into FRS 102 or FRS 103 *Insurance contracts* in the Periodic review 2024. The FRC intends to reconsider the expected credit loss model in due course, taking into account the IASB's third edition of the *IFRS for SMEs Accounting Standard* which was finalised in February 2025. New disclosure requirements were inserted in Section 11 of FRS 102 for entities applying IFRS 9 and therefore applying the expected credit loss model.

It is expected that the FRC is likely to wait for several years' implementation experience before considering alignment of FRS 103 *Insurance contracts* with IFRS 17. As noted in the Basis for Conclusions to FRS 101, conflicts between IFRS 17 and company law have led the FRC to conclude previously that it is not currently possible to apply IFRS 17 in Companies Act accounts (i.e., accounts prepared in accordance with the FRC's FRSs) whilst continuing to maintain compliance with company law.

Since the Periodic Review 2024, in February 2026, the FRC issued *Amendments to FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland and FRS 105 The Financial Reporting Standard applicable to the Micro-entities Regime - Adapted formats*. These amendments, which apply only to entities using the adapted formats, amend the requirements for classifying assets and liabilities as current or non-current and amend the balance sheet and profit and loss account formats to align with IFRS 18 *Presentation and Disclosure in Financial Statements* albeit without the underlying application guidance. These amendments are mandatory for accounting periods beginning on or after 1 January 2027 with early application permitted.

FRS 102 will be subject to the next periodic review in five years (i.e., 2029). However, the FRC will continue to assess emerging issues as they arise and therefore it is possible that there may be amendments issued outside the regular periodic review cycle.

Since the publication of UK GAAP 2019, the FRC has also issued amendments to FRS 101 with the main purpose of accommodating the forthcoming replacement of IAS 1 *Presentation of Financial Statements* with IFRS 18. In addition to retaining the existing disclosure exemptions within IAS 1, now contained in IFRS 18, qualifying entities will be exempt from disclosures in respect of management-defined performance measures and the additional expense disaggregation disclosures. Separately, insurance companies have been prohibited from applying FRS 101 due to the conflict between IFRS 17 and Companies Act accounts mentioned above. Insurance companies must apply either FRS 102 or IFRS accounting standards.

This publication includes our views on the judgemental areas we believe are likely to be most common in practice based on our experience of applying UK GAAP and similar issues encountered in applying IFRS accounting standards. As experience of applying the Periodic Review 2024 amendments evolves, we expect our views will continue to evolve. It is not possible for this publication to cover every aspect of company reporting. For some of the more complicated or less common areas which are not covered by FRS 102 and for which IFRS accounting standards provide relevant guidance, further explanations can be found in the latest edition of the EY publication, *International GAAP®*.

Contributors

We are deeply indebted to many of our colleagues within the UK organisation of EY for their selfless assistance and support in the publication of this book.

Our thanks go particularly to those who reviewed and edited the drafts, most notably:

Overview

This chapter deals with the application of FRS 100 *Application of Financial Reporting Requirements*. The standard applies to entities preparing financial statements in accordance with legislation, regulations or accounting standards applicable in the UK and the Republic of Ireland (i.e., FRSs 101 to 105). [FRS 100.1]. The chapter primarily deals with the September 2024 version of FRS 100, which incorporates the changes made by *Amendments to FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland and other FRSs – Periodic Review 2024*.

What you need to know

- FRS 100 sets out the financial reporting requirements for UK and Republic of Ireland entities. The purpose of this FRS is to establish the financial reporting framework for entities when preparing their financial statements in accordance with the laws and accounting standards that apply in the United Kingdom and the Republic of Ireland.
- FRS 100 sets out the applicability of Statements of Recommended Practice (SORPs).
- FRS 100 includes application guidance on the interpretation of 'equivalence' for the purposes of:
 - The exemption from preparation of consolidated financial statements in section 401 of the Companies Act 2006.
 - The reduced disclosure framework discussed in Chapter 2 for FRS 101 and in Chapter 3 for FRS 102.

1 Introduction

'UK and Irish GAAP' incorporates the following Financial Reporting Standards:

- FRS 100 *Application of Financial Reporting Requirements*
- FRS 101 *Reduced Disclosure Framework: Disclosure exemptions from adopted IFRS for qualifying entities* (see Chapter 2)
- FRS 102 *The Financial Reporting Standard applicable in the UK and Republic of Ireland*
- FRS 103 *Insurance Contracts - Consolidated accounting and reporting requirements for entities in the UK and Republic of Ireland issuing insurance contracts* (see Chapter 38)
- FRS 104 *Interim Financial Reporting* (see Chapter 39)

And

- FRS 105 *The Financial Reporting Standard applicable to the Micro-entities Regime*

The objective of FRS 100 is to set out the applicable financial reporting framework for entities preparing financial statements in accordance with legislation, regulations or accounting standards applicable in the United Kingdom and Republic of Ireland. [FRS 100.1].

The Companies Act 2006 recognises two broad categories of financial reporting frameworks for the preparation of financial statements; UK-adopted international accounting standards or UK and Irish GAAP. UK companies with transferable securities admitted to trading on a regulated market (at the financial year-end) are required by section 403(1) of the Act to prepare their consolidated financial statements using UK-adopted international accounting standards. A list of regulated markets is available online.¹

Entities that are not required by UK company law to prepare financial statements using UK-adopted international accounting standards may be required to do so by other regulatory requirements, such as the AIM Rules or by other agreements (e.g., shareholders' or partnership agreements).

However, other UK companies are permitted to prepare their consolidated and/or individual financial statements as IAS accounts (using UK-adopted international accounting standards) or Companies Act accounts (using 'applicable accounting standards' – see 3.5.1 below), subject to company law restrictions concerning the 'consistency of financial reporting framework' used in the individual accounts of group undertakings and over changes in financial reporting framework from IAS accounts to Companies Act accounts (see 5.1.2 and 5.1.3 below).

The requirements for preparation of financial statements under the Act are addressed at 5 below. Except where otherwise stated, the rest of this chapter will refer to the requirements for UK companies. UK LLPs and other entities preparing financial statements in accordance with Part 15 of the Act are subject to similar requirements, modified as necessary by the regulations that govern the content of their financial statements.

¹ [The Financial Services Register](#)

2 Summary of FRS 100

The following is a summary of FRS 100:

- FRS 100 sets out the application of the financial reporting framework for UK and Republic of Ireland entities (see 3 below). The detailed accounting requirements are included in UK-adopted international accounting standards, FRS 101, FRS 102 and FRS 105, depending on the choice of GAAP made by the entity. FRS 103 applies to financial statements prepared in accordance with FRS 102. FRS 104 applies to interim financial statements and can be applied by entities preparing annual financial statements under FRS 101 or FRS 102. FRS 100 sets out the applicability of SORPs (see 3.6 below).
- FRS 100 sets out the transition arrangements to FRS 101, FRS 102, and FRS 105 (see 4 below).
- FRS 100 includes application guidance on the interpretation of 'equivalence' for the purposes of:
 - The exemption from preparation of consolidated financial statements in section 401 of the Act. This is discussed in Chapter 2 at 2.3 (for FRS 101) and Chapter 8 at 3.1.1 (for FRS 102) but the same requirements apply to IAS accounts.
 - And
 - The reduced disclosure framework discussed in Chapter 2 (for FRS 101) and in Chapter 3 at 3 (for FRS 102) respectively.

3 FRS 100 – Application of financial reporting requirements

The publication of the original versions of FRS 100 to FRS 105 followed a lengthy period of consultation (from 2002 to 2012) on changes to financial reporting in the UK and Republic of Ireland (the 'Future of UK and Irish GAAP').

In developing the standards, the FRC set out an overriding objective to enable users of accounts to receive high-quality understandable financial reporting proportionate to the size and complexity of the entity and users' information needs. [FRS 100.BC.1].

In meeting this objective, the FRC stated that it aims to provide succinct financial reporting standards that: [FRS 100.BC.2]

- Have consistency with global accounting standards through application of an IFRS-based solution unless an alternative clearly better meets the overriding objective.
 - Balance improvement, through reflecting up-to-date thinking and developments in the way businesses operate and the transactions they undertake, with stability.
 - Balance consistent principles for accounting by all UK and Republic of Ireland entities with proportionate and practical solutions based on size, complexity, public interest and users' information needs.
 - Promote efficiency within groups.
- And
- Are cost-effective to apply.

The financial reporting framework set out in FRS 100 is summarised in the diagram below:

Figure 3-1: The UK Financial Reporting Framework

3.1 Scope of FRS 100

The objective of FRS 100 is to set out the applicable financial reporting framework for entities preparing financial statements in accordance with legislation, regulations or accounting standards applicable in the UK and Republic of Ireland. [FRS 100.1].

FRS 100 applies to financial statements intended to give a true and fair view of assets, liabilities, financial position and profit or loss for a period. [FRS 100.2].

FRS 100 to FRS 105 can be applied by an entity that is not a UK or Irish company which is preparing financial statements that are intended to give a true and fair view. However, paragraph A2.20 of Appendix II to FRS 100 states that the FRC sets accounting standards within the framework of the Act and therefore it is the company law requirements that the FRC primarily considered when developing FRS 102, therefore entities preparing financial statements within other legal frameworks will need to satisfy themselves that FRS 102 does not conflict with any relevant legal obligations. See 3.3 below.

3.2 Effective date of Periodic Review 2024

In March 2024 amendments were made to FRS 100 as a result of the *Amendments to FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland and other FRSS – Periodic Review 2024*. The amendments, which are included in the September 2024 version of the standard, are effective for accounting periods beginning on or after 1 January 2026. Early application is permitted, provided that all the amendments are applied at the same time. If an entity applies these amendments before 1 January 2026, it should disclose that fact. [FRS 100.10E].

3.3 Basis of preparation of financial statements

FRS 100 does not address which entities must prepare financial statements but sets out the applicable financial reporting framework for entities presenting financial statements in accordance with legislation, regulations or accounting standards applicable in the UK and Republic of Ireland. [FRS 100.1].

The individual or consolidated financial statements of any entity within the scope of FRS 100 (that is not required by the Act or other legislation or regulations to be prepared in accordance with UK-adopted international accounting standards) must be prepared in accordance with either: [FRS 100.4]

- FRS 105, if the entity is a micro entity eligible to apply that standard and chooses to do so – see 3.3.5 and 5.4 below.
- One of the following if the financial statements are those of an entity that is either not eligible or chooses not to apply FRS 105:
 - Adopted IFRS (see 3.3.2 below)
 - FRS 102 (see 3.3.3 below) and, where applicable, FRS 103 (see Chapter 33)
 - FRS 101 (if the financial statements are individual financial statements of a qualifying entity) (see 3.3.4 below)

The above choices are also available for the individual financial statements of an entity that is required to prepare consolidated financial statements in accordance with UK-adopted international accounting standards. [FRS 100.4, FRS 102.1.3].

An entity's choice of financial reporting framework must be permitted by the legal framework or other regulations or requirements that govern the preparation of the entity's financial statements. Other agreements or arrangements (such as shareholders' agreements, banking agreements) may also restrict the choice of financial reporting framework.

3.3.1 Company law and regulatory requirements governing financial reporting framework

A UK parent company with transferable securities admitted to trading on a UK regulated market at its financial year end must prepare its consolidated financial statements in accordance with UK-adopted international accounting standards. [s403(1)]. The individual financial statements of such a parent company may be either Companies Act individual accounts or IAS individual accounts. [s395(1)].

Although AIM is not a regulated market, the AIM Rules require consolidated accounts for an 'AIM company' (i.e., a company with a class of security admitted to AIM) incorporated in the UK, to be prepared under UK-adopted international accounting standards. However, a UK AIM company that is not a parent company at the end of the relevant financial period may prepare and present its annual accounts either in accordance with UK-adopted international accounting standards or in accordance with the accounting and company legislation and regulations that are applicable to that company due to its country of incorporation which in the UK would include FRS 101 – if a qualifying entity – and FRS 102. While the AIM Rules do not specifically differentiate between consolidated and individual financial statements, many AIM companies incorporated in the UK use UK-adopted international accounting standards in their consolidated financial statements but UK GAAP in their individual financial statements. However, a parent company that only prepares individual financial statements, e.g., it is exempt from preparing consolidated financial statements, must prepare these in accordance with UK-adopted international accounting standards.²

For a UK company, the choice of framework, is subject to the requirements in the Act on a change in financial reporting framework (from IAS accounts to Companies Act accounts) (see 5.1.2 below) and consistency of financial reporting framework in individual accounts of group undertakings (see 5.1.3 below).

² [Aim Rules for Companies - 1 January 2021](#)

For the purposes of the Act, only statutory accounts prepared in accordance with UK-adopted international accounting standards are IAS accounts, whereas statutory accounts prepared in accordance with FRS 102, FRS 101, or FRS 105 are Companies Act accounts. [s395(1), s403(2)].

UK charitable companies are not permitted to prepare IAS accounts under the Act, [s395(2), s403(3)], and charities are not permitted to apply FRS 101 (as they are excluded from its definition of a qualifying entity). [FRS 100 Appendix I, FRS 101 Appendix IJ]. UK charitable companies preparing financial statements under the Act must, therefore, apply FRS 102. Other charities in the UK preparing financial statements under charities legislation must also apply FRS 102.³

FRS 101, FRS 102 and FRS 105 may also be used by entities preparing financial statements intended to give a true and fair view, but which are not subject to the Act. Entities preparing such financial statements intended to give a true and fair view within other legal frameworks will need to satisfy themselves that the standard being applied does not conflict with any relevant legal obligations. [FRS 100.A2.20, FRS 102.A3.41]. Where an entity is subject to a SORP, the relevant SORP will provide more details on the relevant legislation. [FRS 100.A2.2, FRS 102.A3.I.2].

3.3.2 Adopted IFRS

Adopted IFRS - IFRSs that have been adopted in the relevant jurisdiction. In the UK, this refers to UK-adopted international accounting standards. [s474].

3.3.3 FRS 102 - The Financial Reporting Standard applicable in the UK and Republic of Ireland

FRS 102 is a single financial reporting standard that applies to the financial statements of entities that are not applying UK-adopted international accounting standards, FRS 101 or FRS 105, adoption of which was first mandated for periods beginning on or after 1 January 2016,

In March 2024 amendments were made to FRS 102 as a result of the Periodic Review 2024. An entity shall apply the amendments, as set out in *Amendments to FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland and other FRSs - Periodic Review 2024*, for accounting periods beginning on or after 1 January 2026.

FRS 102 is arranged into the following sections:

- Section 1 addresses scope
 - Section 1A addresses small entities
 - Sections 2 to 33 each address a separate accounting topic
 - Section 34 addresses specialised activities
- And
- Section 35 addresses transition

There is a reduced disclosure framework available for qualifying entities (see 3.4 below) in their individual financial statements and also a separate disclosure framework for small entities (see Chapter 5).

Small entities can apply Section 1A of FRS 102, which requires small entities to apply the recognition and measurement requirements of FRS 102 in full. However, the presentation and disclosure requirements of Section 1A are based on those of the Act and the Small Companies Regulations for companies that are subject to the small companies regime.

The application of the small entities regime in Section 1A is not mandatory and an entity can instead apply FRS 102 in full. The small entities regime of FRS 102 is discussed in Chapter 5.

Any amendments to FRS 102 to reflect major changes in IFRS will be considered by the FRC on a case-by-case basis, including the appropriate timing. In addition, FRS 102 will be subject to periodic reviews reflecting stakeholder feedback, minor changes in IFRS and the IFRS for SMEs and other issues. These periodic reviews are likely to take place every four to five years, to allow time for experience of the most recent edition of FRS 102 to develop before seeking stakeholder feedback. However, the FRC will continue to assess emerging issues as they arise to determine whether action needs to be taken. When necessary this will include issuing amendments to standards outside regular review cycles. [FRS 102.BC.A.44, FRS 102.BC.A.45].

³ [Charities SORP 2026 - October 2025](#)

3.3.4 FRS 101 - Reduced Disclosure Framework

FRS 101 sets out a framework which addresses the financial reporting requirements and disclosure exemptions for the individual financial statements of qualifying entities (see 3.4 below) that otherwise apply the recognition, measurement and disclosure requirements of standards and interpretations issued by the International Accounting Standards Board (IASB) that have been adopted in the UK (IFRS accounting standards as adopted by the UK).

An entity reporting under FRS 101 complies with UK-adopted international accounting standards except as modified by the standard. FRS 101 contains various recognition and measurement modifications to UK-adopted international accounting standards, primarily to ensure compliance with UK company law.

The FRC reviews FRS 101 annually to ensure that the reduced disclosure framework continues to be effective in providing disclosure reductions for qualifying entities when compared with UK-adopted international accounting standards. [FRS 101.BC10].

See Chapter 2 for further guidance on FRS 101.

3.3.5 FRS 105 - The Financial Reporting Standard applicable to the Micro-entities Regime

An entity that chooses to prepare its financial statements in accordance with the micro-entities regime as set out in *The Small Companies (Micro-entities' Accounts) Regulations 2013 (SI 2013/3008)* is required to apply FRS 105.

The recognition and measurement requirements of FRS 105 are based on those in FRS 102 (but with significant simplifications) and its presentation and disclosure requirements are consistent with the micro-entity provisions (in UK company and LLP law).

FRS 105 is outside the scope of this publication.

3.3.6 Considerations on choice of financial reporting framework

Entities will need to carefully consider their choice of financial reporting framework, based on their individual circumstances.

Factors influencing the choice of financial reporting framework might include:

- Whether the entity is a member of a group, and if so, what GAAP is used for group reporting. In particular, subsidiaries of groups reporting under IFRS or in multinational groups may prefer to apply IFRS, FRS 101 or *IFRS 19 Subsidiaries without Public Accountability* (effective for annual periods beginning on or after 1 January 2027) rather than FRS 102.
- The level of disclosures required in the financial statements:
 - FRS 101 and FRS 102 financial statements prepared by a UK company are Companies Act accounts and therefore must comply with the requirements of the Act and all applicable schedules of the Regulations (as well as accounting standards) - see 5.7 below. Financial statements prepared under UK-adopted international accounting standards do not need to comply with Schedules 1, 2 or 3 to the Regulations but must comply with the extensive disclosure requirements in IFRS.
 - The level of disclosure also depends on whether the entity is a qualifying entity and can make use of a reduced disclosure framework (under FRS 101 or FRS 102) in its individual financial statements (see 3.4 below). While FRS 102 has fewer disclosures than IFRS, the level of disclosure required may sometimes not be significantly different from FRS 101, but this will depend on the entity's individual circumstances.
- Stability of the financial reporting framework (in general, there are more frequent changes to IFRS than to FRS 102).
 - The implications of new IFRSs; including IFRS 18 *Presentation and Disclosure in Financial Statements* which will replace IAS 1 *Presentation of financial statements* for annual periods beginning on or after 1 January 2027, and other expected changes that will be implemented or expected to be finalised in future periods.
- IFRS provides detailed and sometimes complex guidance, whereas the requirements in FRS 102 are much shorter (but lack the same level of application guidance as in IFRS, and are likely to involve increased application of management judgement in applying the standard).

And

- The implications of different GAAPs for distributable profits (see 4.5 below) and taxation, in particular cash tax. This will also depend on the interaction with tax legislation, and whether tax elections are made.

3.4 Reduced disclosure framework

Both FRS 101 and FRS 102 provide for a reduced disclosure framework for qualifying entities in individual financial statements.

A 'qualifying entity' is a member of a group (i.e., a parent or subsidiary) where the parent of that group prepares publicly available consolidated financial statements which are intended to give a true and fair view (of the assets, liabilities, financial position and profit or loss) and that member is included in the consolidation. [FRS 100 Appendix I, FRS 101 Appendix I, FRS 102 Appendix I]. The term 'included in the consolidation' has the meaning set out in section 474(1) of the Act, i.e., that the qualifying entity is consolidated in the financial statements by full (and not proportional) consolidation. Note that under FRS 101, a charity cannot be a qualifying entity. [FRS 101 Appendix I].

The disclosure exemptions available in FRS 102 are more limited than in FRS 101, which provides a reduced disclosure framework for qualifying entities under UK-adopted international accounting standards. This reflects the fact that FRS 102 (as a starting point) has much simpler disclosures than UK-adopted international accounting standards. Under the reduced disclosure framework in both standards, there are fewer disclosure exemptions available for the individual financial statements of financial institutions.

Certain disclosures require 'equivalent' disclosures to be included in the publicly available consolidated financial statements of the parent in which the qualifying entity is consolidated (i.e., of the parent referred to in the definition of qualifying entity). FRS 100 provides guidance on the concept of 'equivalence' for these purposes. [FRS 100.AG5, FRS 100.AG6].

Chapter 2 includes further discussion of the reduced disclosure framework under FRS 101 and Chapter 3 discusses further the reduced disclosure framework under FRS 102, including the detailed requirements for its use, the definitions of 'qualifying entity' and 'financial institution', the disclosure exemptions available, and guidance on 'equivalence' for the purpose of the reduced disclosure framework.

IFRS 19 is effective for annual periods beginning on or after 1 January 2027 with earlier adoption permitted. The standard allows eligible entities that prepare IAS accounts to elect to apply reduced disclosure requirements while still applying the recognition, measurement and presentation requirements in other IFRS accounting standards. (See Chapter 2 at 1.2.2).

3.5 Statement of compliance

FRS 100 requires that an entity preparing its financial statements in accordance with FRS 101 or FRS 102 (and where applicable, FRS 103) includes a statement of compliance in the notes to the financial statements in accordance with the requirements of the relevant standard. [FRS 100.9, FRS 101.10, FRS 102.3.3, FRS 103.1.12]. See Chapter 2 at 1.3 (for FRS 101 financial statements), Chapter 6 at 3.8 (for FRS 102 financial statements), and Chapter 5 at 11.2.5 and 11.3 (for small entities under FRS 102) for further details.

Financial statements should not be described as complying with FRS 101 or FRS 102, unless they comply with all of the requirements of the relevant standard. Indeed, FRS 102 includes an explicit requirement to this effect. [FRS 102.3.3].

3.5.1 Related Companies Act 2006 requirements

Where the directors of a large or medium-sized company (i.e., a company not subject to the micro-entity provisions or the small companies regime – see 5.4 and 5.5 below) prepare Companies Act individual or group accounts (such as those prepared under FRS 101 and FRS 102), the notes to the accounts must include a statement including the particulars of any material departure from those standards and the reasons for the departure. Large companies must also provide a statement as to whether the accounts have been prepared in accordance with applicable accounting standards. [Regulations 4(2)(a), 1 Sch 45].

'Applicable accounting standards' means statements of standard accounting practice issued by the FRC (and SSAPs, FRSs issued by the Accounting Standard Board and UITF Abstracts, until withdrawn).⁴ Therefore, FRS 100 to FRS 103 (and FRS 105 for companies applying the micro-entity provisions only) are 'applicable accounting standards'.⁵

Where the directors of a company prepare IAS individual or IAS group accounts (see 5.1 below), the notes to the accounts must include a statement that the accounts have been prepared in accordance with UK-adopted international accounting standards. [s397, s406, s474].

3.6 Statements of Recommended Practice (SORPs)

References to a SORP are to an extant Statement of Recommended Practice developed in accordance with the FRC's *Policy on Developing Statements of Recommended Practice (SORPs)*. SORPs recommend accounting practices for specialised industries or sectors. They supplement accounting standards and other legal and regulatory requirements in the light of the special factors prevailing or transactions undertaken in a particular industry or sector. [FRS 100 Appendix I].

The overview sections of the FRC's Policy on Developing Statements of Recommended Practice (SORPs) explains SORPs may only be developed and issued by 'SORP-making bodies', being bodies recognised by the FRC for the purpose of producing the SORP for a particular industry or sector. SORP-making bodies have a responsibility to act in the public interest when developing, maintaining and issuing SORPs. To be recognised as a SORP-making body, a particular industry or sectoral body must meet criteria set by the FRC and must agree to develop SORPs in accordance with the FRC's Policy on Developing Statements of Recommended Practice (SORPs).

SORPs recommend particular accounting treatments and disclosures with the aim of narrowing areas of difference and variety between comparable entities. Compliance with a SORP that has been generally accepted by an industry or sector leads to enhanced comparability between the financial statements of entities in that industry or sector. Comparability is further enhanced if users are made aware of the extent to which an entity complies with a SORP, and the reasons for any departures. [FRS 100.7].

FRS 100 states that if an entity's financial statements are prepared in accordance with FRS 102, SORPs apply in the circumstances set out in those SORPs. [FRS 100.5].

The application of SORPs under FRS 102 is discussed in Chapter 3 at 2.3.

When a SORP applies, an entity, other than a small entity in the Republic of Ireland applying the small entities regime in FRS 102 (i.e., Section 1A of FRS 102), must state in the financial statements the title of the SORP and whether the financial statements have been prepared in accordance with the SORP's provisions currently in effect. The provisions of a SORP cease to have effect, for example, to the extent they conflict with a more recent financial reporting standard. [FRS 100.6].

Paragraph 12 of the FRC's Policy on Developing Statements of Recommended Practice (SORPs) explains that SORPs should be developed in line with current accounting standards and best practice. A SORP's provisions cannot override provisions of the law, regulatory requirements or accounting standards. When a more recently issued accounting standard or change in legislation leads to conflict with the provisions of an existing SORP, the relevant provisions of the SORP cease to have effect. The SORP-making body is responsible for updating the relevant provisions of the SORP on a timely basis to bring them in line with new legislation or accounting standards, or to withdraw them, as appropriate.

Where an entity departs from the SORP's provisions, it must give a brief description of how the financial statements depart from the recommended practice set out in the SORP, which must include: [FRS 100.6]

- For any treatment that is not in accordance with the SORP, the reasons why the treatment adopted is judged more appropriate to the entity's particular circumstances.
- And

4 s464, The Statutory Auditors (Amendment of Companies Act 2006 and Delegation of Functions etc.) Order 2012 (SI 2012/1741).

5 The Accounting Standards (Prescribed Bodies) (United States of America and Japan) Regulations 2015 (SI 2015/1675) permits companies with securities registered with the SEC or publicly traded on specified Japanese exchanges (but that do not have securities admitted to trading on an (EEA) regulated market) to prepare consolidated financial statements (but not individual financial statements) using US GAAP or JGAAP. Therefore, in these circumstances, US GAAP and JGAAP are applicable accounting standards. Such consolidated financial statements would also be Companies Act accounts. These Regulations, which replace a similar Statutory Instrument, come into force on 1 October 2015 and apply for financial years beginning on or after 1 January 2015. However, the dispensation applies only in respect of the group financial statements of a parent company for the first 4 financial years following incorporation of that company. It ceases to have effect on 30 September 2022.

- Brief details of any disclosures recommended by the SORP that have not been provided, together with the reasons why not.

The effect of a departure from a SORP need not be quantified, except in those rare cases where such quantification is necessary for the entity's financial statements to give a true and fair view. [FRS 100.7].

Entities whose financial statements do not fall within the scope of a SORP may, if the SORP is otherwise relevant to them, nevertheless choose to comply with the SORP's recommendations when preparing financial statements, providing that the SORP does not conflict with the requirements of the framework adopted. Where this is the case, entities are encouraged to disclose this fact. [FRS 100.8]. FRS 100, therefore, does not require an entity preparing its financial statements in accordance with FRS 101, or UK-adopted international accounting standards, to disclose whether it has applied the relevant SORP.

3.6.1 Status of SORPs

Certain SORPs were withdrawn on implementation of the new UK and Irish GAAP framework. Other SORPs have been updated to conform with FRS 102.

The following SORPs have been updated to conform with FRS 102:

- *Authorised funds (October 2025)*
- *Charities (October 2025)*
- *Further and higher education (November 2025)*
- Financial reports of pension funds (2018, with updated edition expected in 2026)
- Investment trust companies and venture capital trusts (July 2022, with updated edition expected in 2026)
- *Limited Liability Partnerships (November 2025)*
- *Registered Social Housing Providers* (September 2014, with updated edition expected in 2026)

See Chapter 3 at 2.3 for further details on the application of SORPs.

4 Transition

FRS 100 sets out the requirements for transition to FRS 101, FRS 102 and FRS 105.

On first-time application of FRS 100 or when an entity changes its basis of preparation of its financial statements within the requirements of FRS 100, it should apply the transitional arrangements relevant to its circumstances as explained at 4.2 to 4.4 below.

There is no requirement to change the GAAP applied by a UK parent and its UK subsidiaries at the same time. However, the Act sets out restrictions over changes in financial reporting framework (in both individual and group accounts) and over consistency of financial reporting framework in individual accounts of group undertakings (see 5.1.2 and 5.1.3 below).

4.1 Transition to UK-adopted international accounting standards

An entity transitioning to UK-adopted international accounting standards must apply the transitional requirements of IFRS 1 *First-time Adoption of International Financial Reporting Standards*, as adopted by the UK. [FRS 100.11(a)].

An entity's first IFRS financial statements (to which IFRS 1 must be applied) are the first annual financial statements in which the entity applies UK-adopted international accounting standards, by an explicit and unreserved statement in those financial statements of compliance with UK-adopted international accounting standards. [IFRS 1.2, IFRS 1.3]

An entity that has applied UK-adopted international accounting standards in a previous reporting period, but whose most recent previous annual financial statements did not contain an explicit and unreserved statement of compliance with UK-adopted international accounting standards must either apply IFRS 1 or else apply UK-adopted international accounting standards retrospectively in accordance with IAS 8 *Accounting Policies, Changes in Accounting Estimates and Errors* as if the entity had never stopped applying IFRSs. [IFRS 1.4A].

The requirements of IFRS 1 are discussed in the EY publication, International GAAP®.

4.2 Transition to FRS 101

A qualifying entity can transition to FRS 101 from either UK-adopted international accounting standards or another form of UK or Irish GAAP. In this context, another form of UK or Irish GAAP means FRS 102 or FRS 105. The transition requirements differ depending on whether or not the qualifying entity is applying UK-adopted international accounting standards prior to the date of transition. [FRS 100.11(b), FRS 100.12, FRS 100.13]. The transition requirements to FRS 101 are explained in Chapter 2 at 3.

4.3 Transition to FRS 102

A first-time adopter of FRS 102 is an entity that presents its first annual financial statements that conform to FRS 102, regardless of whether its previous financial reporting framework was UK-adopted international accounting standards, FRS 101, FRS 105, another set of GAAP such as its national accounting standards, or another framework such as the local income tax basis. [FRS 102.35.1, FRS 102 Appendix I]. An entity transitioning to FRS 102 must apply the transitional arrangements set out in Section 35 of that standard. [FRS 100.11(c), FRS 102.35.1].

FRS 102 also addresses the situation where an entity has previously applied FRS 102 and then applies a different GAAP for a period before re-applying FRS 102. An entity that adopted FRS 102 in a previous reporting period but whose most recent annual financial statements did not contain an explicit and unreserved statement of compliance with FRS 102 must either apply Section 35 or else apply FRS 102 retrospectively in accordance with Section 10 *Accounting Policies, Changes in Estimates and Errors*, as if the entity had never stopped applying the standard. [FRS 102.35.2].

An entity applying FRS 102 is required to apply FRS 103 to insurance contracts (including reinsurance contracts) that the entity issues and reinsurance contracts that the entity holds, and to financial instruments with a discretionary participation feature) that the entity issues. See Chapter 33 for a discussion of the requirements of paragraph 5.4 of FRS 103.

4.4 Transition to FRS 105

A first-time adopter of FRS 105 is an entity that presents its first annual financial statements that conform to FRS 105, regardless of its previous financial reporting framework. [FRS 105 Appendix I]. In practice, most first-time adopters of FRS 105 are likely to have previously applied Section 1A of FRS 102. An entity transitioning to FRS 105 must apply the transitional arrangements set out in Section 28 *Transition to this FRS* of FRS 105. [FRS 100.11(d), FRS 105.28.3].

As noted in 3.3.5 above, the application of FRS 105 is outside the scope of this publication.

4.5 Impact of transition on distributable profits

There may be circumstances where a conversion to FRS 101, FRS 102, FRS 105 or UK-adopted international accounting standards eliminates an entity's realised profits or even turns those realised profits into a realised loss. TECH 02/17BL - *Guidance on realised and distributable profits under the Companies Act 2006*, issued by the ICAEW and ICAS, states that the change in the treatment of a retained profit or loss as realised (or unrealised) as a result of a change in the law or in accounting standards or interpretations would not render unlawful a distribution already made out of realised profits determined by reference to 'relevant accounts' which had been prepared in accordance with principles accepted at the time that the accounts are prepared (subject to the considerations below). This is because the Act defines realised profits and realised losses for determining the lawfulness of a distribution as "such profits or losses of the company as fall to be treated as realised in accordance with principles generally accepted at the time when the accounts are prepared, with respect to the determination for accounting purposes of realised profits or losses". [s853(4), TECH 02/17BL.3.283.29].

The effects of the introduction of a new accounting standard or of the adoption of IFRSs (or FRS 101, FRS 102 or FRS 105) become relevant to the application of the common law capital maintenance rule only in relation to distributions accounted for in periods in which the change will first be recognised in the accounts. This means that a change in accounting policy known to be adopted in a financial year needs to be taken into account in determining the dividend to be approved by shareholders in that year. Therefore, for example, an entity converting to a new financial reporting framework (FRS 101, FRS 102, FRS 105, or UK-adopted international accounting standards) in 2026 must have regard to the effect of adoption of the new financial reporting framework in respect of all dividends payable in 2026, including any final dividends in respect of 2025, even though the 'relevant accounts' may still be those for 2025 prepared under another GAAP. These considerations apply to all dividends whether in respect of shares classified as equity or as debt (or partly equity or debt). [TECH 02/17BL.3.30, TECH 02/17BL.3.31, TECH 02/17BL.3.32, TECH 02/17BL.3.33]

There is no requirement to prepare statutory 'interim accounts' under sections 836(2) and 838 of the Act (and delivered to the Registrar if the company is a public company) if a proposed distribution can be justified by reference to the relevant accounts. However, under common law, a company cannot lawfully make a distribution out of capital and the directors may therefore consider preparing non-statutory 'interim accounts' using the new financial framework to ascertain that there are sufficient distributable profits and, if the company is a public company, that the net asset restriction in section 831 of the Act is not breached. [TECH 02/17BL.3.35]. In some cases, however, the directors may be satisfied that no material adjustments arise from transition to the new financial framework (and therefore that there are sufficient distributable profits) without preparing such 'interim accounts'. Statutory 'interim accounts' would be required if transition to a new financial reporting framework increases distributable profits and the directors wish to make a distribution not justified by reference to the relevant accounts. [TECH 02/17BL.3.3435, 37].

TECH 02/17BL states that if the directors have not yet decided whether to adopt UK-adopted international accounting standards, say, for the current financial year, the company's accounting policies are those that it has previously applied until a decision is made to change them. Therefore, in applying the above, it is not necessary to have regard to possible changes of policy that are being considered but have not yet been agreed. [TECH 02/17BL.3.36].

Distributable profits are discussed more generally at 5.8 below.

5 Companies Act 2006

5.1 Basis of preparation of financial statements

The directors of almost every company must prepare individual accounts for the company for each financial year (see 5.2 below), the only exception is for certain dormant subsidiary undertakings, the criteria for which are set out in sections 394A to C. [s394]. The directors of a parent company must prepare group accounts, unless there is an exemption available from preparation of group accounts (see 5.3 below). Directors must not approve accounts unless they are satisfied that they give a true and fair view of the assets, liabilities, financial position and profit or loss of the company and in the case of group accounts, of the undertakings included in the consolidation as a whole, so far as concerns members of the company. [s393].

5.1.1 Choice of IAS accounts and Companies Act accounts under the Act

A company's individual accounts may be prepared:

- In accordance with the Act using FRS 101, FRS 102 or FRS 105 - these are called Companies Act accounts.
- Or
- In accordance with UK-adopted international accounting standards - these are called IAS accounts. [s395(1)].

See 5.2 below for the requirements for IAS accounts and Companies Act accounts.

There are constraints on a company's ability to choose which of these two frameworks to use. In particular, there are restrictions on a company changing its financial reporting framework and requirements for consistency of financial reporting framework within the individual accounts of group undertakings (see 5.1.2 and 5.1.3 below respectively).

The group accounts of a parent company whose securities are, on its balance sheet date, admitted to trading on a UK regulated market are required to be prepared in accordance with UK-adopted international accounting standards. [s403(1)].

The group accounts of other companies may be prepared:

- In accordance with section 404 (Companies Act group accounts).
- Or
- In accordance with UK-adopted international accounting standards (IAS group accounts). [s403(2)].

Group accounts are also subject to the restrictions on changes of financial reporting framework (see 5.1.2 below).

The individual and any group accounts of a company that is a charity must be Companies Act accounts. [s395(2), s403(3)].

5.1.2 Restrictions on changes of financial reporting framework

Under the Act, a company which wishes to change from preparing IAS individual accounts to preparing Companies Act individual accounts (such as financial statements prepared under FRS 101, FRS 102 or FRS 105) may do so only:

- If there is a relevant change of circumstance (see below).
- Or
- If the company has not changed to Companies Act individual accounts in the period of five years preceding the first day of that financial year. In calculating the five-year period, no account is taken of a change made due to a relevant change of circumstance. [s395(3), s395(4), s395(5)].

The same requirements apply where a company wishes to change from preparing IAS group accounts to preparing Companies Act group accounts, except that the references to individual accounts above are to group accounts. [s403(4), s403(5), s403(6)].

These requirements enable the members of a group where the parent and subsidiary undertakings prepare IAS individual accounts to instead prepare FRS 101 financial statements or even FRS 102 financial statements (as these are both Companies Act individual accounts) where the above criteria are met.

A relevant change of circumstance in respect of individual accounts occurs if, at any time during or after the first financial year in which the directors of a company prepare IAS individual accounts:

- The company becomes a subsidiary undertaking of another undertaking that does not prepare IAS individual accounts.
 - The company ceases to be a subsidiary undertaking.
 - The company ceases to be a company with securities admitted to trading on a UK regulated market.
- Or

- A parent undertaking of the company ceases to be an undertaking with securities admitted to trading on a UK regulated market. [s395(4)].

A relevant change of circumstance for the purposes of group accounts occurs if, at any time during or after the first financial year in which the directors of a parent company prepare IAS group accounts:

- The company becomes a subsidiary undertaking of another undertaking that does not prepare IAS group accounts.
 - The company ceases to be a company with securities admitted to trading on a UK regulated market.
- Or

- A parent undertaking of the company ceases to be an undertaking with securities admitted to trading on a UK regulated market. [s403(5)].

Section 395's requirements in respect of individual accounts and section 403's requirements in respect of group accounts operate independently of each other. Therefore, a company could be permitted to move from IAS accounts to Companies Act accounts in its individual accounts, while continuing to prepare IAS group accounts.

Paragraph 9.18 of *Guidance for UK Companies on Accounting and Reporting: Requirements under the Companies Act 2006 and the application of the IAS regulation* a document published in June 2008 by the then Department of Business, Enterprise and Regulatory Reform ('BERR') noted that the first example of a relevant change in circumstance in the lists above is "intended to deal with situations where a subsidiary undertaking is sold by a group generally using IAS, to another group or entity not generally using IAS. It is not intended that companies switch between accounting regimes on the basis of an internal group restructuring."

The restriction is 'one-way' i.e., it applies only when changing from IAS accounts to Companies Act accounts. There is no equivalent restriction on a company or group changing from Companies Act accounts to IAS accounts, although other factors might preclude such changes, for example the requirements considered at 5.1.3 below.

The Act does not restrict any changes being made between FRS 101, FRS 102 or FRS 105 since these are all Companies Act accounts.

5.1.3 Consistency of financial reporting framework in individual accounts of group undertakings

The Act requires that the directors of a UK parent company must secure that the individual accounts of the parent company and of each of its subsidiary undertakings are prepared under the same financial reporting framework, be that IAS accounts or Companies Act accounts, except to the extent that in the directors' opinion there are 'good reasons' for not doing so. [s407(1)]. However, this requirement does not apply:

- Where the UK parent company does not prepare group accounts under the Act. [s407(2)].
- To accounts of subsidiary undertakings not required to be prepared under Part 15 of the Act [s407(3)] (e.g., accounts of a foreign subsidiary undertaking).
- To accounts of any subsidiary undertakings that are charities, [s407(4)], (therefore charities and non-charities within a group are not required to use the same financial reporting framework in their accounts). Charities are not permitted to prepare either IAS group or IAS individual accounts. [s395(2), s403(3)].

Additionally, a parent company that prepares both consolidated and separate financial statements under UK-adopted international accounting standards (i.e., IAS group accounts and IAS individual accounts) is not required to ensure that its subsidiary undertakings all prepare IAS individual accounts. However, it must ensure that its subsidiary undertakings use the same financial reporting framework in their individual accounts (i.e., all prepare IAS accounts or all prepare Companies Act accounts) unless there are 'good reasons' for not doing so. [s407(5)].

Although not explicitly stated by FRS 100, there appears to be no requirement that all subsidiary undertakings in a group must use the same GAAP for their Companies Act individual accounts. Some could use, for example, FRS 101, and others could use FRS 102 since all are Companies Act individual accounts and therefore part of the same financial reporting framework. This approach would comply with the statutory requirements of section 407. However, groups that use a 'mix' of GAAP in the individual financial statements may be challenged by HMRC, particularly if this results in tax arbitrage. Examples of 'good reasons' for not preparing all individual accounts within a group using the same financial reporting framework were contained in the June 2008 BERR document mentioned at 6.1.2 above. Paragraph 9.17 of the Guidance noted that this provision is intended to provide a degree of flexibility where there are genuine (including cost/benefit) grounds for using different accounting frameworks within a group of companies and identified the following examples:

- A group using IAS acquired a subsidiary undertaking that had not been using IAS; in the first year of acquisition, it might not be practical for the newly acquired company to switch to IAS straight away.
- The group contains subsidiary undertakings that are themselves publicly traded, in which case market pressures or regulatory requirements to use IAS might come into play, without necessarily justifying a switch to IAS by the non-publicly traded subsidiaries.
- A subsidiary undertaking or the parent were planning to apply for a listing and so might wish to convert to IAS in advance, but the rest of the group was not planning to apply for a listing.
- The group contains minor or dormant subsidiaries where the costs of switching accounting framework would outweigh the benefits.

The key point is that the directors of the parent company must be able to justify any inconsistency to shareholders, regulators or other interested parties.

5.2 Companies Act requirements for the annual report and accounts

Part 15 of the Act sets out the requirements for the annual report and accounts for UK companies.

The company's 'annual accounts' are the company's individual accounts for that year and any group accounts prepared by the company for that year.

Section 408 permits a parent company preparing group accounts (whether as IAS group accounts or Companies Act group accounts) to omit the individual profit and loss account from the annual accounts, where the conditions for this exemption are met (see 5.3.2 below). [s471(1)].

References in Part 15 to the annual accounts (or to a balance sheet or profit and loss account) include notes to the accounts giving information required by any provision of the Act or UK-adopted international accounting standards where that is required or allowed by any such provision to be given in a note to the company's accounts. [s472].

The principal requirements in the Act for annual accounts are set out at 5.2.1 below and for the annual report at 6.2.2 below. While this chapter focuses on the disclosure requirements for UK companies, LLPs and other types of entities other than companies are also subject to similar statutory requirements. Reference should be made to the legislation that applies to such entities.

The Listing Rules, Disclosure and Transparency Rules or rules of the relevant securities market may require additional information beyond that required by the Act (and related regulations) to be included in the annual report. For example, a company listed on the London Stock Exchange in either the commercial companies category or the closed-ended investment funds category must state how they have applied the Principles set out in the UK Corporate Governance Code in a manner that would enable shareholders to evaluate how the Principles have been applied.⁶ It is beyond the scope of this publication to cover such regulatory requirements.

⁶ Listing Rules, FCA, paras. 9.8.6(5), (6).

5.2.1 Companies Act requirements for annual accounts

5.2.1.A Companies Act accounts

Companies Act individual accounts and Companies Act group accounts are prepared in accordance with sections 396 and 404 of the Act respectively. Companies Act accounts comprise:

- A balance sheet as at the last day of the financial year that gives a true and fair view of the state of affairs of the company (and in respect of group accounts, of the parent company and its subsidiary undertakings included in the consolidation as a whole, so far as concerns members of the company) as at the end of the financial year.
And
- A profit and loss account that gives a true and fair view of the profit or loss of the company (and in respect of group accounts, of the parent company and its subsidiary undertakings included in the consolidation as a whole, so far as concerns members of the company) for the financial year. [s396(1), s396(2), s404(1), s404(2)].

The accounts must comply with regulations as to the form and content of the company balance sheet and profit and loss account (and in respect of group accounts, of the consolidated balance sheet and consolidated profit and loss account) and additional information provided by way of notes to the accounts. [s396(3), s404(3)].

These regulations are principally *The Large and Medium-sized Companies and Groups (Accounts and Reports) Regulations 2008* (Regulations), as amended. Companies subject to the small companies regime (see 6.5 below) are entitled to apply *The Small Companies and Groups (Accounts and Directors' Report) Regulations 2008* (Small Companies Regulations), as amended.

If compliance with the Regulations and any other provisions made by or under the Act as to the matters to be included in the accounts or notes to those accounts would not be sufficient to give a true and fair view, the necessary additional information must be given in the accounts or notes to the. [s396(4), s404(4)]. If in special circumstances, compliance with any of those provisions is inconsistent with the requirement to give a true and fair view, the directors must depart from that provision to the extent necessary to give a true and fair view. Particulars of any such departure, the reasons for it and its effect must be given in a note to the accounts. [s396(5), s404(5)]. See Chapter 6 at 9.2 for further discussion of the 'true and fair override' provided for in the Act and FRS 102's requirements for a true and fair view.

5.2.1.B IAS accounts

Where the directors prepare IAS individual and/or IAS group accounts, they must state in the notes to those accounts that they have been prepared in accordance with UK-adopted international accounting standards. [s397(2), s406(2), s474].

5.2.1.C General - Companies Act accounts and IAS accounts

The Act requires two types of disclosures for a UK company:

- Those required by the Regulations (or other applicable regulations, as discussed below) for an entity preparing Companies Act accounts but not for an entity preparing IAS accounts (see 5.7.1 below).
And
- Those required for both IAS accounts and Companies Act accounts (see 5.7.2 below).

The Act distinguishes between companies that are micro-entities (see 5.4 below), companies subject to the small companies regime (see 5.5 below), and medium-sized companies (see 5.6 below). These categories of company are all based on meeting certain size criteria and not being excluded from the applicable regime. These companies benefit from a lighter disclosure regime in their financial statements than for large companies, i.e., the default category of companies that are not medium-sized companies, subject to the small companies regime or the micro-entities regime.

Certain disclosure exemptions are available to companies preparing IAS accounts or Companies Act accounts, whereas others are only available to companies preparing Companies Act accounts. Companies subject to the small companies regime are entitled to follow the Small Companies Regulations and companies subject to the micro-entities regime are entitled to follow the Micro-entities Regulations (in each case rather than the Regulations).

The Act also distinguishes between quoted and unquoted companies. While there is no difference in the disclosures required in the financial statements by the Act and the Regulations for quoted and unquoted companies, there are significant additional disclosures for quoted companies in the annual report. There are also disclosures only required to be given by companies with securities admitted to trading on a UK regulated market.

The Act requires that both group and individual Companies Act and IAS accounts give disclosures to explain the status of a company. A company must state: [s396(A1), s397(1), s404(A1), s406(1)]

- The part of the United Kingdom in which the company is registered
 - The company's registered number
 - Whether the company is a public or private company and whether it is limited by shares or by guarantee
 - The address of the company's registered office
- And
- Where appropriate, the fact that the company is being wound-up

A company's annual accounts must be approved by the board of directors and signed on behalf of the board by a director of the company, with the signature included on the company's balance sheet. [s414(1)].

5.2.1.D Interaction of the Small Companies Regulations with FRS 101 and FRS 102

FRS 101 and FRS 102 (unless Section 1A is applied) do not permit the use of the formats included in the Small Companies Regulations (see 5.5 below). [FRS 101.5(b), FRS 101.AG1(h), FRS 101.AG1(i), FRS 102.4.2, FRS 102.5.5, FRS 102.5.7]. A small entity applying FRS 102 is not required to comply with the requirements of Section 4 *Statement of Financial Position*, Section 5 *Statement of Comprehensive Income and Income Statement*, Section 6 *Statement of Changes in Equity and Statement of Income and Retained Earnings* and Section 7 *Statement of Cash Flows*. [FRS 102.1A.7A]. However, a small entity that applies Section 1A of FRS 102 must present a statement of financial position and profit or loss in accordance with the requirements set out in Part 1 of Schedule 1 to the Small Companies Regulations or Part 1 of Schedule 1 to the Small LLP Regulations (except to the extent that these requirements are not permitted by any statutory framework under which such entities report). [FRS 102.1A.4, FRS 102.1A.12, FRS 102.1A.14].

How we see it

In our view, a company subject to the small companies regime which chooses to apply FRS 101, or which chooses to apply FRS 102 without applying Section 1A, is not precluded from taking advantage of other exemptions applicable to companies subject to the small companies regime. See Chapter 2 at 2.2 and Chapter 3 at 4.1.1.

5.2.2 Companies Act requirements for annual reports

The content of the annual report depends principally on whether the company is an unquoted company or a quoted company.

A quoted company means a company whose equity share capital:

- Has been included in the Official List (as defined in section 103(1) of the Financial Services and Markets Act 2000) in accordance with the provisions of Part 6 of the Financial Services and Markets Act 2000.
- Or
- Is officially listed in an EEA State.
- Or
- Is admitted to dealing on either the New York Stock Exchange or the exchange known as Nasdaq.

A company is a quoted company in relation to a financial year if it is a quoted company immediately before the end of the accounting reference period (defined in section 391 of the Act) by reference to which that financial year was determined. An unquoted company means a company that is not a quoted company. [s385(1), s385(2), s385(3)].

The content of the annual reports and accounts of an unquoted and a quoted company are as follows:

- An unquoted company's annual accounts and reports comprise its annual accounts, strategic report (if required), directors' report (unless a micro-entity), any separate corporate governance statement and the auditor's report (unless the company is exempt from audit).
- And

- A quoted company's annual accounts and reports comprise its annual accounts, directors' remuneration report, strategic report, directors' report, any separate corporate governance statement, and the auditor's report.

Where the company is a parent company preparing group accounts, the directors' and strategic reports must be consolidated reports (i.e., a 'group directors' report' and 'group strategic report') relating to the undertakings included in the consolidation. These group reports may, when appropriate, give greater emphasis to the matters that are significant to the undertakings included in the consolidation. [s414A, s414B, s414C, s414D, s415, s416, s417, s418, s419].

In addition, companies with more than 500 employees that are traded companies, banking companies, authorised insurance companies and companies carrying on insurance market activity are required to comply with the Non-financial Reporting Regulations and must prepare a non-financial information statement within the strategic report. However, there are some scope exceptions. The information should be provided on a consolidated basis for groups. [s414CA, s414CB].

Entities are encouraged to meet the requirements of the non-financial information statement through a title and a series of cross-references, so as to maintain the coherence of the strategic report. Entities are discouraged from replicating information located elsewhere in the strategic report in the non-financial information statement.⁷

Small and medium-sized companies are entitled to certain exemptions. Companies with securities admitted to a regulated market must make statutory corporate governance disclosures in the annual report and quoted companies have extended disclosures. These include the Takeovers Directive disclosures required in the directors' report for companies with securities carrying voting rights admitted to trading on a regulated market at the financial year end. [7 Sch 13]. For large private companies, *The Companies (Miscellaneous Reporting) Regulations 2018* introduce a requirement to include disclosures of their corporate governance arrangements in the Directors' Report. AIM Rule 26 also requires that from 28 September 2018, AIM companies must provide details (on a website) explaining how they comply with, and where they depart from, a chosen 'recognised' corporate governance code.

A company's strategic report (if any), directors' report, directors' remuneration report (if any), and separate corporate governance statement (if any) must be approved by the board of directors and signed on behalf of the board by a director or the secretary of the company. [s414D(1), s419(1), s419A, s422(1)].

It is beyond the scope of this publication to set out the content of the directors' report, strategic report, directors' remuneration report or corporate governance statement.

5.3 Preparation of consolidated financial statements

The Act requires a UK company that is a parent company at its financial year end, to prepare group accounts (i.e., consolidated financial statements) unless otherwise exempt. [s399]. A company that is exempt from the requirement to prepare group accounts may still do so. [s399(4)].

A company that is subject to the small companies regime (or would be subject to the small companies regime except for it being a public company) is not required to prepare group accounts, but may do so. This exemption from preparing group accounts does not apply if the company is a member of a group which, at any time during the financial year, has an undertaking as a member which is established under the law of any part of the United Kingdom, has to prepare its accounts in accordance with the requirements of section 399 of the Act, and is an undertaking:

- Whose transferable securities are admitted to trading on a UK regulated market.
- Which is a credit institution within the meaning given by Article 4(1)(1) of Regulation (EU) No. 575/2013 of the European Parliament and of the Council, which is a CRR firm within the meaning of Article 4(1)(2A) of that Regulation.

Or

- Which would be an insurance undertaking within the meaning given by Article 2(1) of Council Directive 91/674/EEC of the European Parliament and of the Council on the annual accounts of insurance undertakings were the United Kingdom a member State). [s399(2), s399(2A), s399(2B)].

The other exemptions in the Act relating to the preparation of group accounts comprise:

- Section 400 - parent company is a majority or wholly owned subsidiary undertaking whose immediate parent undertaking is established under the law of any part of the United Kingdom (see Chapter 8 at 3.1.1.A).

⁷ Guidance on the Strategic Report, Financial Reporting Council, July 2018, para. 7B.84.

- Section 401 – parent company is a majority or wholly owned subsidiary undertaking whose parent undertaking is not established under the law of any part of the United Kingdom, and which is consolidated in group accounts of a larger group drawn up by a parent undertaking. Those accounts and, where appropriate, the group's annual report, must be drawn up in a manner equivalent to consolidated accounts and consolidated reports drawn up in accordance with the Act, in accordance with UK-adopted international accounting standards or in accordance with accounting standards which are equivalent to UK-adopted international accounting standards. (see Chapter 8 at 3.1.1.B).

And

- Section 402 – parent company, none of whose subsidiary undertakings need be included in the consolidation (see Chapter 8 at 3.1.1.E). [s399(3)].

FRS 102 has been developed to be consistent with the requirements for group accounts (and exemptions) included in Part 15 of the Act. Consequently, the detailed conditions for the above exemptions from preparing group accounts under the Act are discussed further in Chapter 8 at 3.1.1 and Chapter 5 at 6.2.

The application guidance to FRS 100 explains the use of equivalence in the context of the exemption from preparing consolidated financial statements under section 401. This is discussed in Chapter 2 at 2.1.6 in the context of entities applying FRS 101 and Chapter 8 at 3.1.1.C for entities applying FRS 102.

5.3.1 Requirements of accounting standards to prepare consolidated financial statements

FRS 100 does not address the requirements for preparing consolidated financial statements (nor do FRS 101 or FRS 105, since these standards only address individual financial statements).

UK-adopted international accounting standards and FRS 102 both include requirements setting out which entities should prepare consolidated financial statements, and how they should be prepared. Their requirements need to be read in conjunction with the requirements of the relevant statutory framework for preparation of the entity's financial statements.

FRS 102 requires an entity, that is a parent at its year end, to present consolidated financial statements in which it consolidates all its investments in subsidiaries in accordance with the standard (except those permitted or required to be excluded from consolidation) unless it is exempt from the requirement to prepare consolidated financial statements provided in the standard. [FRS 102.9.3]. As noted above, FRS 102's requirements to prepare group accounts (and exemptions) are consistent with the requirements of the Act. A small entity that is a parent entity is not required to prepare consolidated financial statements under Section 1A of FRS 102 (see Chapter 5 at 3.2). [FRS 102.1A.21].

5.3.2 Exemption from publishing the individual profit and loss account where group accounts are prepared

Where a company prepares group accounts in accordance with the Act:

- The company's individual profit and loss account need not contain the information specified in paragraphs 65 to 69 of Schedule 1 to the Regulations (specified information supplementing the profit and loss account).

And

- The company's individual profit and loss account must be approved by the directors in accordance with section 414(1) but may be omitted from the company's annual accounts.

This exemption is conditional on the company's individual balance sheet showing the company's profit or loss for the financial year (determined in accordance with the Act) and the use of this exemption being disclosed in the annual accounts. [s408, Regulations 3(2)].

Illustration 6-1: Example of a s408 exemption statement

Basis of preparation

The group accounts consolidate the financial statements of ABC Limited (the company) and all its subsidiary undertakings drawn up to 31 December each year. No individual profit and loss account is presented for ABC Limited as permitted by section 408 of the Companies Act 2006.

[...]

Parent company balance sheet

The profit for the financial year of the company is £130,000 (20X0: £111,000).

The exemption is available for both Companies Act and IAS group accounts. The exemption in the Act relates only to the profit and loss account and by virtue of section 472(2), to the notes to the profit and loss account.⁸

5.4 Micro-entities regime

The voluntary regime for companies that are micro-entities was introduced into UK companies legislation by *The Small Companies (Micro-Entities' Accounts) Regulations 2013* (SI 2013/3008) (Micro-entities Regulations) for companies filing their accounts on or after 1 December 2013. These regulations implemented the provisions of the EU Accounting Directive, which sets out certain minimum requirements for micro-entities, into UK company law.

The Limited Liability Partnerships, Partnerships and Groups (Accounts and Audit) Regulations 2016 (SI 2016/575), issued in May 2016, extended the scope of the micro-entities regime to LLPs and qualifying partnerships for accounting periods beginning on or after 1 January 2016.

In response to the introduction of the Micro-entities Regulations the FRC issued FRS 105 (see 3.3.5 above).

A company or an LLP or qualifying partnership can only use the micro-entity provisions if it meets the size criteria and is not excluded from being treated as a micro-entity. The size criteria operate in the same way as for the small companies regime (see 5.5 below and Chapter 5 at 4.3).

The micro-entity provisions are not available to overseas companies and other entities. The Explanatory Note to the Micro-entities Regulations confirms that the regime is only available to companies formed and registered (or treated as formed and registered) under the Act.

The qualifying conditions for UK entities are met in a year in which the entity satisfies two or more of the following requirements: [s384A(4)-(7)]

- Turnover must not exceed £1,000,000
- Balance sheet total (gross assets) must not exceed £500,000
- And
- The number of employees must not exceed 10.

The turnover and balance sheet total thresholds were updated to the above for accounting periods beginning on or after 6 April 2025, the previous thresholds being £632,000 and £316,000 respectively.

In the case of an entity which is a parent entity, the entity qualifies as a micro-entity in relation to a financial year only if the entity qualifies as a micro-entity in relation to that year and the group headed by the entity qualifies as a small group. [s384A(8)].

The micro-entity provisions do not apply to an entity's accounts for a particular financial year if at any time within that year the entity: [s384B(1)]

- Was a company excluded from the small companies regime, or small LLPs regime, by section 384
- Would have been an investment undertaking as defined in Article 2(14) of the EU Accounting Directive (Directive 2013/34/EU)
- Would have been a financial holding undertaking as defined in Article 2(15) of that Directive were the United Kingdom a member State
- Was a credit institution as defined in Article 4 of Directive 2006/48/EC (other than one referred to in Article 2 of that directive)
- Would have been an insurance undertaking as defined in Article 2(1) of Directive 91/674/EEC
- Or
- Was a charity

The micro-entity provisions also do not apply in relation to an entity's accounts for a financial year if the entity is a parent company which prepares group accounts for that year as permitted by section 399(4), or is not a parent entity but its accounts are included in consolidated group accounts for that year. [s384B(2)].

FRS 105 is outside the scope of this publication.

⁸ June 2008 BERR document *Guidance for UK Companies on Accounting and Reporting: Requirements under the Companies Act 2006 and the application of the IAS regulation*

5.5 Small companies

There are two sets of exemptions available for small companies:

- The small companies regime - which applies to the preparation and/or filing of the financial statements.
And
- The small companies exemption - which applies to the preparation and/or filing of the strategic report and directors' report.

The small companies regime and small companies exemption under the Companies Act are discussed in Chapter 5 at 12. This discussion is relevant to companies preparing Companies Act accounts (such as those prepared in accordance with FRS 101 and FRS 102) and IAS accounts (in accordance with UK-adopted international accounting standards).

Chapter 5 also addresses the requirements in Section 1A of FRS 102 for entities subject to the small entities regime.

5.6 Medium-sized companies and groups

Medium-sized companies and groups must apply the Regulations in preparing their annual reports and accounts. A medium-sized company may take advantage of certain disclosure exemptions in its annual reports and accounts for a financial year in which the company qualifies as medium-sized and is not an excluded company. [s465, s466, s467].

There is no requirement for the annual reports and accounts of a medium-sized company to state any use of the disclosure exemptions.

5.6.1 Qualification as medium-sized company

The medium-sized companies regime works in the same way as the small companies regime (described in Chapter 3 at 4.1.2). The size criteria and excluded companies are detailed below.

5.6.1.A Size criteria for medium-sized companies and groups

A company qualifies as medium-sized in relation to its first financial year if the qualifying conditions are met in that year. [s465(1)]. A company qualifies as medium-sized in relation to a subsequent financial year if the qualifying conditions are met in that year. [s465(2)]. In relation to a subsequent financial year, where on its balance sheet date a company meets or ceases to meet the qualifying conditions, then that will affect its qualification as a medium-sized company only if it occurs in two consecutive years. [s465(2)].

Where the company itself is a parent undertaking, then it only qualifies as medium-sized if the group that it heads qualifies as a medium-sized group. This is the case whether or not group accounts are prepared. A group qualifies as medium-sized in relation to its first financial year if the qualifying conditions (as set out below) are met in that year. In relation to a subsequent financial year, where on its balance sheet date a group meets or ceases to meet the qualifying conditions, then that will affect its qualification as a medium-sized company only if it occurs in two consecutive years. [s466].

The qualifying conditions for a medium-sized company are met in a year in which the company satisfies two or more of the following requirements: [s465]

- Turnover must not exceed £54 million
 - Balance sheet total (total assets) must not exceed £27 million
- And

- The number of employees must not exceed 250

The turnover and balance sheet total thresholds were updated to the above for accounting periods beginning on or after 6 April 2025, the previous thresholds being £36 million and £18 million respectively.

The qualifying conditions for a medium-sized group are met in a year in which the group headed by the company satisfies two or more of the following requirements: [s466]

- Turnover must not exceed £54 million net (or £64 million gross)
 - Balance sheet total must not exceed £27 million net (or £32 million gross)
- And
- The number of employees must not exceed 250

The turnover and balance sheet total thresholds were updated to the above for accounting periods beginning on or after 6 April 2025, the previous thresholds being £36 million (or £43.2 million gross) and £18 million (or £21.6 million gross) respectively.

In the case of a group, the aggregate figures for the above limits are ascertained by aggregating the relevant figures determined in accordance with section 466 for each member of that group. The figures used for each subsidiary undertaking are those included in its individual accounts for the relevant financial year. That is, where its financial year is coterminous with that of the parent company, the financial year that ends at the same date as the parent company, or where its financial year is not coterminous, the financial year ending last before the end of the financial year of the parent company. If those figures are not obtainable without disproportionate expense or undue delay, the latest available figures are used.

The turnover and balance sheet total criteria may be satisfied on either the gross or net of consolidation adjustments basis. For Companies Act accounts (such as FRS 102 financial statements), the consolidation adjustments are determined in accordance with regulations made under section 404, i.e., the Regulations. For IAS accounts, the consolidation adjustments are determined in accordance with UK-adopted international accounting standards. It is permissible to satisfy one condition on the 'net' basis and the other on the 'gross' basis. [s466(4), s466(5), s466(6), s466(7)].

5.6.1.B Companies excluded from being treated as medium-sized

A company is not entitled to take advantage of any of the provisions available for companies qualifying as medium-sized if it was at any time within the financial year to which the accounts relate:

- A public company
 - A company that has permission under Part 4 of the Financial Services and Markets Act 2000 to carry on a regulated activity
 - A company that carries on an insurance market activity
 - A company that is a scheme funder of a Master Trust scheme within the meanings given by section 39(1) of the Pension Schemes Act 2017 or 39(1) of the Pension Schemes Act (Northern Ireland) 2021
 - An e-money issuer
- Or
- A member of an ineligible group [s467(1)]

A group is ineligible if any of its members is:

- A traded company
 - A body corporate (other than a company) whose shares are admitted to trading on a UK regulated market
 - A person (other than a small company) who has permission under Part 4A of the Financial Services and Markets Act 2000 to carry on a regulated activity
 - An e-money issuer
 - A small company that is an authorised insurance company, banking company, a MiFID investment firm or a UCITS management company
 - A person who carries on an insurance market activity
- Or
- A scheme funder of a Master Trust scheme within the meanings given by section 39(1) of the Pension Schemes Act 2017 or 39(1) of the Pensions Schemes Act (Northern Ireland) 2021 [s467(2)]

A company is a small company for the purposes of section 467(2) if it qualified as small in relation to its last financial year ending on or before the end of the financial years to which the accounts relate. [s467(3)].

References to a 'company' above is to a company formed and registered (or treated as formed and registered) under the Act. This means a company formed and registered under the Act, or prior to 1 October 2009 under the Companies Act 1985, Companies (Northern Ireland) Order 1986 or former Companies Acts (i.e., an 'existing company' for the purposes of that Act and Order). [s1].

A public company means a company limited by shares or limited by guarantee and having a share capital (a) whose certificate of incorporation states that it is a public company and (b) in relation to which the requirements of the Act or former Companies Acts as to registration or re-registration as a public company have been complied with on or after the relevant date, being 22 December 1980 in Great Britain and 1 July 1983 in Northern Ireland. [s4]. Therefore, a public company means a UK-incorporated company that is a 'plc' or 'PLC' rather than a publicly traded company.

A traded company means a company any of whose transferable securities are admitted to trading on a UK regulated market. [s474].

An authorised insurance company is defined in section 1165(2), a banking company in section 1164(2)-(3) and insurance market activity in section 1165(7). See Chapter 6 at 4.2.2 and 4.2.3.

The terms e-money issuer, MiFID investment firm, regulated activity, and UCITS management company are defined in section 474 of the Act. The term 'e-money issuer' means an electronic money institution within the meaning of *The Electronic Money Regulations 2011* (SI 2011/99) or a person who has permission under Part 4A of the Financial Services and Markets Act 2008 (c 8) to carry on the activity of issuing electronic money within the meaning of article 9B of the Financial Services and Markets Act 2000 (Regulated Activities) Order 2001 (SI 20101/544). [s474].

A body corporate includes a body incorporated outside the UK but does not include (a) a corporation sole or (b) a partnership that, whether or not a legal person, is not regarded as a body corporate under the law by which it is governed. [s1173(1)]. Therefore, a body corporate would include an overseas company or a UK LLP.

5.6.2 Disclosure exemptions available for medium-sized companies

The disclosure exemptions for medium-sized companies include:

- No requirement for Companies Act individual accounts to disclose the information required by paragraph 45 (the statement that the accounts have been prepared in accordance with applicable accounting standards, giving particulars and reasons for any material departures from these standards) or paragraph 72 (related party disclosures) of Schedule 1 to the Regulations (see 4.6.1 above). [Regulations 4(2A), Regulations 4(2B)].
- And
- No requirement to disclose auditor's remuneration in respect of non-audit services. Like companies subject to the small companies regime, only remuneration for the auditing of the annual accounts receivable by the company's auditor (but not the associates of the auditor) is required to be disclosed. [s494].⁹ TECH 01/22 FRF - *Disclosure of auditor information* - provides guidance on disclosure of auditor remuneration.

Medium-sized entities preparing financial statements in accordance with FRS 101 or FRS 102 must still give the disclosures required by accounting standards, e.g., medium-sized companies still need to give the related party disclosures required by accounting standards.

5.7 Disclosures

The Act (particularly Part 15), the Regulations and other statutory instruments include disclosure requirements which apply to Companies Act accounts and IAS accounts. As discussed at 6.7.1 below, only some parts of the Regulations apply to IAS accounts. See 6.7.2 for a list of Companies Act disclosures applicable to both IAS accounts and Companies Act accounts.

The disclosure exemptions for companies subject to the small companies regime in the Act and the Small Companies Regulations are addressed in Chapter 5.

5.7.1 Disclosures required by the Regulations

The Regulations contain the following schedules:

- Schedule 1 (Companies Act individual accounts - companies other than banking and insurance companies)
- Schedule 2 (Companies Act individual accounts: banking companies)
- Schedule 3 (Companies Act individual accounts: insurance companies)
- Schedule 4 (Information about related undertakings - Companies Act or IAS accounts)
- Schedule 5 (Information about directors' benefits: remuneration - Companies Act or IAS accounts)
- Schedule 6 (Companies Act group accounts)
- Schedule 7 (Matters to be dealt with in directors' report)
- Schedule 8 (Directors' remuneration report - quoted companies)

⁹ The Companies (Disclosure of Auditor Remuneration and Liability Limitation Agreements) Regulations 2008 (SI 2008/489), para. 4.

- Schedule 9 (Definition of 'provisions')
- And
- Schedule 10 (General interpretation)

A company preparing IAS individual accounts in accordance with section 397 (or IAS group accounts in accordance with section 406) does not apply Schedules 1 to 3, or Schedule 6 to the Regulations.

A company preparing Companies Act accounts must comply with all the requirements of the Regulations, including Schedules 1 to 3 (as applicable) and, where group accounts are prepared, Schedule 6.

Schedules 1 to 3 include the formats for the profit and loss account and balance sheet, recognition and measurement principles, and disclosure requirements. Schedule 1 applies to all companies (other than banking companies and insurance companies), Schedule 2 to banking companies and groups, and Schedule 3 to insurance companies and groups. See Chapter 6 at 4.2.2 and 4.2.3 for definitions of banking and insurance companies and groups respectively.

The Regulations require various disclosures to be given in the financial statements. In particular, Parts 3 of Schedules 1 to 3 for Companies Act accounts require certain disclosures to be made in the notes to the financial statements if not given in the primary statements. The relevant paragraphs are as follows:

- Schedule 1 paragraphs 42 to 72B
- Schedule 2 paragraphs 52 to 92B
- Schedule 3 paragraphs 60 to 90B
- And
- Schedule 6 various paragraphs

Although some of these disclosure requirements are replicated in UK-adopted international accounting standards, others are not. Entities that move to FRS 101 or FRS 102 from UK-adopted international accounting standards are required to provide the additional statutory disclosures for Companies Act accounts and should consider carefully the impact of these new requirements against the benefits of the reduced disclosures under those standards.

5.7.2 Companies Act disclosure requirements applicable to both IAS accounts and Companies Act accounts

Companies preparing IAS accounts or Companies Act accounts are subject to the following disclosure requirements:

- Section 396(A1) and 397(1) - information about the status of the company where individual accounts are prepared.
- Section 404(A1) and 406(1) - information about the status of the company where group accounts are prepared
- Section 409 (and Schedule 4 to the Regulations) - information about related undertakings.
- Section 410A - off-balance sheet arrangements (unless subject to the small companies regime). See Chapter 6 at 8.7.
- Section 411 - employee numbers and costs (unless subject to the small companies regime). See Chapter 6 at 8.6.
- Section 412 (and Schedule 5 and paragraph 22A of Schedule 6 to the Regulations) - directors' benefits: remuneration.
- Section 413 - directors' benefits: advances, credits and guarantees. See Chapter 6 at 8.8.
- Section 414A-D - strategic report (including the non-financial information statement report disclosures required by section 414CA-CB for certain large public interest entities). The FRC's *Guidance on the Strategic Report* (June 2018) provides best practice guidance. This is intended to be persuasive rather than have mandatory force.
- Section 236, sections 415 to 419 (and Schedule 7 to the Regulations) - directors' report.
- Sections 420 to 421 (and Schedule 8 to the Regulations) - directors' remuneration report (quoted companies only). The GC 100 and Investor Group's *Directors' Remuneration Report Guidance 2016* (see 6.2.2 above), provides best practice guidance on the directors' remuneration report prepared by quoted companies.

- Section 494 (and *Companies (Disclosure of Auditor Remuneration and Liability Limitation Agreements) Regulations 2008*) - services provided by auditor and associates and related remuneration.

Medium-sized companies are only required to disclose remuneration for the audit of the annual accounts receivable by the company's auditor (but not the associates of the auditor) and are not required to disclose remuneration for non-audit services. [s494].¹⁰

- TECH 01/22 FRF provides guidance on disclosure of auditor remuneration.

In addition, other disclosure requirements may apply depending on individual circumstances such as the disclosures required for a parent taking advantage of the exemption from preparing consolidated accounts under either sections 400 or 401 of the Act.

5.8 Distributable profits

The determination of realised profits and losses and of profits available for distribution is governed by UK common law and statutory provisions. [TECH 02/17BL.2.1]. The ICAEW issued TECH 02/17BL - *Guidance on realised and distributable profits under the Companies Act 2006* - in April 2017. The purpose of the guidance is to identify, interpret and apply the principles relating to the determination of realised profits and losses for the purposes of making distributions under the Companies Act. [TECH 02/17BL.1.1].

A company may make a distribution only out of profits available for that purpose. A company's distributable profits are its accumulated realised profits (so far as not previously distributed or capitalised) less its accumulated realised losses (so far as not previously written off in a reduction or reorganisation of its share capital). Realised losses cannot be offset against unrealised profits. [TECH 02/17BL.2.7]. A further restriction is placed on public companies, which may only make a distribution if, after giving effect to such distribution, the amount of its net assets (as defined in section 831) is not less than the aggregate of its called up share capital and undistributable reserves (see section 831(4) for a list of undistributable reserves) as shown in the relevant accounts. [s831].

Paragraph 13(a) of Schedule 1 to the Regulations (and its equivalents in Schedules 2 and 3 and the LLP Regulations) require that only profits realised at the balance sheet date are included in the profit or loss account. [FRS 101 Appendix II A2.12, FRS 102 Appendix A3.25]. Consequently, profits that are not realised should normally be included in other comprehensive income rather than profit or loss in financial statements prepared under FRS 101 and FRS 102. Paragraph 40(2) of Schedule 1 to the Regulations (and its equivalents in Schedules 2 and 3 and the LLP Regulations) require that movements in the fair value of financial instruments, investment properties or living animals and plants are recognised in the profit and loss account notwithstanding the usual restrictions allowing only realised profits and losses to be included in the profit and loss account. Therefore, paragraph 40 of Schedule 1 overrides paragraph 13(a) of Schedule 1 and such fair value gains can be recognised in profit and loss under FRS 101 and FRS 102.

[FRS 101 Appendix II A2.14, FRS 102 Appendix III A3.27].

The legal appendices to FRS 101 and FRS 102 both state that entities measuring investment properties, living animals or plants, or financial instruments at fair value may transfer such amounts to a separate non-distributable reserve instead of carrying them forward in retained earnings but are not required to do so. The FRC suggests that presenting fair value movements that are not distributable profits in a separate reserve may assist with the identification of profits available for that purpose. [FRS 101 Appendix II A2.15, FRS 102 Appendix III A3.28].

Discussed below are some of the key terms and principles set out in TECH 02/17BL.

5.8.1 Realised profits

Profit is realised, as a matter of generally accepted accounting practice, where it arises from: [TECH 02/17BL.3.9]

- (a) A transaction where the consideration received by the company is 'qualifying consideration' (see 5.8.2 below).
- (b) An event which results in 'qualifying consideration' being received by the company in circumstances where no consideration is given by the company.
- (c) The recognition in the financial statements of a change in fair value, in those cases where fair value has been determined in accordance with measurement guidance in the relevant accounting standards or company law, and to the extent that the change recognised is readily convertible to cash.

¹⁰ SI 2008/489, para. 4.

- (d) The translation of:
- (i) A monetary asset which comprises qualifying consideration
 - Or
 - (ii) A liability
- denominated in a foreign currency.
- (e) The reversal of a loss previously regarded as realised.
- (f) A profit previously regarded as unrealised (such as amounts taken to a revaluation reserve, merger reserve, or other similar reserve) becoming realised as a result of:
- (i) Consideration previously received by the company becoming 'qualifying consideration'.
 - (ii) The related asset being disposed of in a transaction where the consideration received by the company is 'qualifying consideration'.
 - (iii) A realised loss being recognised on the scrapping or disposal of the related asset.
 - (iv) A realised loss being recognised on the write-down for depreciation, amortisation, diminution in value or impairment of the related asset.
 - (v) The distribution in kind of the asset to which the unrealised profit relates.
 - (vi) The receipt of a dividend in the form of qualifying consideration when no profit is recognised because the dividend is deducted from the book value of the investment to which the unrealised profit relates.

In which case the appropriate proportion of the related unrealised profit becomes a realised profit.

Or

- (g) The remeasurement of a liability, to the extent that the change recognised is readily convertible to cash.

If the write down in (f)(iv) above is subsequently reversed, an equal amount of profit should be regarded as becoming unrealised. In other words, the amount of profit regarded as becoming realised is equal to the cumulative amount of any write down treated as a realised loss.

In addition to those instances of realised profit included in the definition of realised profit set out above, the following would also constitute a realised profit per the guidance in TECH 02/17BL: [TECH 02/17BL.3.14]

- The receipt or accrual of investment or other income receivable in the form of qualifying consideration.
 - A gain arising on a return of capital on an investment where the return is in the form of qualifying consideration.
 - A gift (such as a 'capital contribution') received in the form of qualifying consideration. However, this does not apply when the legal form of the transaction is a loan even though it is accounted for as a capital contribution (see paragraph 6.20 of the TECH 02/17BL guidance regarding the proceeds of issue of convertible debt and paragraph 9.53 of the TECH 02/17BL guidance regarding intra-group off-market loans).
 - The release of a provision for a liability or loss which was treated as a realised loss.
- Or
- The reversal of a write-down or provision for diminution in value or impairment of an asset which was treated as a realised loss.

5.8.2 Qualifying consideration

Qualifying consideration comprises: [TECH 02/17BL.3.11]

- (a) Cash
 - (b) An asset that is readily convertible to cash
 - (c) The release, or the settlement or assumption by another party, of all or part of a liability of the company
 - (d) An amount receivable in any of the above forms of consideration where:
 - (i) The debtor is capable of settling the receivable within a reasonable period of time
 - (ii) There is a reasonable certainty that the debtor will be capable of settling when called upon to do so

And

 - (iii) there is an expectation that the receivable will be settled
- Or

- (e) An amount receivable from a shareholder where and to the extent that:
- (i) The company intends to make a distribution to the shareholder of an amount equal to or less than its receivable from that shareholder
 - (ii) The company intends to settle such distribution by off-setting against the amount receivable (in whole or in part)
- And
- (iii) Within the meaning of paragraph 3.5 and 3.5A of the TECH 02/17BL guidance, (i) and (ii) are linked.

5.8.3 Realised losses

Losses should be regarded as realised losses except to the extent that the law, accounting standards or the guidance in TECH 02/17BL provide otherwise. [TECH 02/17BL.3.10].

Realised losses will include: [TECH 02/17BL.3.15]

- A cost or an expense (other than one charged to the share premium account) which results in a reduction in recorded net assets.
 - B loss arising on the sale or other disposal or scrapping of an asset.
 - The writing down, or providing for the depreciation, amortisation, diminution in value or impairment, of an asset (except in the circumstances set out in paragraphs 2.33 and 2.36 of the TECH 02/17BL guidance).
 - The creation of, or increase in a provision for a liability or loss (other than deferred tax arising in the circumstances discussed in paragraph 3.17 of the TECH 02/17BL guidance) which results in an overall reduction in recorded net assets.
 - A gift made by the company (or the release of all or part of a debt due to that company or the assumption of a liability by the company) to the extent that it results in an overall reduction in recorded net assets.
- And
- A loss arising from fair value accounting where profits on remeasurement of the same asset or liability would be treated as realised profits.

5.8.4 Disclosure of distributable profits

Except for companies authorised to carry on long-term insurance business (e.g., life insurers), there is no requirement under UK law or accounting standards for financial statements to distinguish between realised and unrealised profits or between distributable profits and non-distributable profits. However, companies should maintain sufficient records to enable them to distinguish between those profits that are available for distribution and those which are not. [TECH 02/17BL.2.25].

For companies authorised to carry on long-term insurance business, Schedule 3 to the Regulations requires that every balance sheet of such a company must show separately as an additional item the aggregate of any capital and reserves which are not required to be treated as realised profits under section 843 of the Act. [3 Sch 11(1)].

For companies authorised to carry on long-term insurance business in accordance with Article 14 of the Solvency 2 Directive, the realised profit or loss of the company in respect of which its relevant accounts are prepared is the amount calculated by a given formula. [s833A]. In summary, this formula is the company's net assets as calculated by the Solvency 2 Directive less share capital, share premium, any capital redemption reserve and any other reserve that the company is prohibited from distributing.

For companies that are not required to comply with the Solvency 2 Directive, realised profits or losses are determined using the normal UK common law and statutory requirements (see 5.8 above).

5.8.5 Impact of transition on distributable profits

Certain impacts on distributable profits on transition to FRS 101 and FRS 102 are discussed at 4.5 above.

6 Financial Reporting Council (FRC) and accounting standard setting

This section discusses the role of the FRC in accounting standard setting and draws on information concerning the FRC structure that is included on the FRC website.

6.1 Accounting standards setting

Accounting standards are statements of standard accounting practice issued by such body or bodies prescribed by regulations. [s464(1)]. Prior to 2 July 2012, this body was the Accounting Standards Board and from 2 July 2012, the Financial Reporting Council.¹¹ New accounting standards, or amendments to or withdrawal of existing accounting standards must be approved by the FRC Board. The FRC Board is supported by two governance committees (Audit & Risk Committee, People Committee), one regulatory committee (Conduct Committee) and an Advisory Panel

The FRC's objective in setting accounting standards is to enable users of accounts to receive high quality, understandable financial reporting proportionate to the size and complexity of the entity and users' information needs. [Foreword.8]. The FRC collaborates with accounting standard setters from other countries and the IASB to influence the development of international accounting standards and to ensure that its standards are developed with due regard for international developments.

The FRC Advisory Panel, which comprises subject matter specialists (including practising professionals) is responsible, *inter alia*, for advising the FRC Board on maintaining an effective framework of UK codes and standards for Corporate Governance, Stewardship, Accounting, Auditing and Assurance, and Actuarial technical standards.

The FRC's Codes & Standards activities include setting and maintaining Codes, Standards, Statement of Practice and Guidance in accordance with its *Framework for developing standards, statements of practice, codes and guidance*.¹²

The following principles will guide FRC decisions about when to introduce, amend or withdraw a code, standard, guidance or other similar material. The FRC will only consider making a change where it is satisfied that:

- There is a clearly defined issue relevant to the FRC's mission and responsibilities
- The change is the most appropriate way to address the issue
- One or more of the following conditions is met:
 - A change is necessary to comply or align with a legal requirement
 - A change is required in the light of developments in international standards or in UK or European regulation
 - The risks to the public interest of not acting are significant, for example, a risk of systemic and/or market failure
 - It is possible to eliminate or significantly simplify a current requirement
 - It is necessary to clarify a current requirement
 - It is possible to create significant additional benefits in the public interest
- Or
- A change is necessary to underpin the effectiveness of the FRC's enforcement and disciplinary activities
- The anticipated benefits of the change outweigh the costs

11 The Accounting Standards (Prescribed Bodies) (United States of America and Japan) Regulations 2015 extend the prescribed bodies for issuing accounting standards to include the FASB and the Accounting Standards Board of Japan for group accounts of parent companies with securities registered with the Securities Exchange Commission of the United States of America and specified Japanese exchanges respectively, with the restrictions set out in the statutory instrument.

12 [Framework and Process for the Development of Standards, Codes and Guidance](#)

6.2 Scope and authority of accounting standards

The *Foreword to Accounting Standards*, last updated in January 2022, explains the authority, scope and application of accounting standards, known as Financial Reporting Standards (FRSs) issued by the FRC.

Accounting standards are applicable to the financial statements of a reporting entity that are required to give a true and fair view of its financial position at the reporting date; and of its profit or loss (or income and expenditure) for the reporting period. (See Chapter 6 at 9.2). *[Foreword.4]*.

Accounting standards developed by the FRC are designated Financial Reporting Standards (FRSs). The FRC may issue FRSs that relate to other aspects of financial reporting, but which are not accounting standards. Each FRS will indicate its status, i.e., that it is an accounting standard or, if not, the circumstances in which it may be applied. *[Foreword.9, Foreword.10, Foreword.11]*. FRS 100 to FRS 103 and FRS 105 (but not FRS 104) are accounting standards for the purpose of company law.

Where exposure drafts are issued for comment and are subject to revision, until it is finalised as an accounting standard the requirements of any existing accounting standard that would be affected by proposals in the exposure draft remain in force. *[Foreword.13]*.

6.3 UK GAAP

UK GAAP is a wider concept than accounting standards. For example, UK GAAP can include:

- SORPs (where an entity is within the scope of a SORP – see 3.6 above).
- Other pronouncements issued by the FRC or its predecessor bodies (such as FREDs or best practice Reporting Statements) – providing these do not conflict with an extant accounting standard.
- Pronouncements by authoritative bodies, such as Technical Releases issued by the Institute of Chartered Accountants in England and Wales and/or the Institute of Chartered Accountants in Scotland (examples include TECH 02/17BL).

And

- Generally accepted accounting practice where areas are not covered by specific accounting standards. This could include reference to the requirements of other bodies of GAAP where it addresses an issue, but does not conflict with accounting standards. For example, FRS 102 permits but does not require management to refer to the requirements of UK-adopted international accounting standards dealing with similar and related issues in developing and applying a reliable and relevant accounting policy. *[FRS 102.10.6]*. Generally accepted accounting practice can also include established industry practice in accounting for transactions.

In addition, an entity must comply with any legal or regulatory requirements applicable to its annual report and financial statements, including the overall requirement for directors of a company to prepare accounts that give a true and fair view.

Appendix A - Defined terms

Extract from FRS 100 Appendix 1 Glossary

Definitions

Accounting Directive	Directive 2013/34/EU of the European Parliament and of the Council of 26 June 2013
Act	The Companies Act 2006
adopted IFRS	IFRS Accounting Standards that have been adopted in the relevant jurisdiction. In the UK, this refers to UK-adopted international accounting standards In the Republic of Ireland, this refers to EU-adopted IFRS
date of transition	The beginning of the earliest period for which an entity presents full comparative information under a given standard in its first financial statements that comply with that standard.
EU-adopted IFRS	IFRS Accounting Standards that have been adopted in the European Union in accordance with EU Regulation 1606/2002.
FRS 101	FRS 101 Reduced Disclosure Framework
FRS 102	FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland
FRS 103	FRS 103 Insurance Contracts
FRS 104	FRS 104 Interim Financial Reporting
FRS 105	FRS 105 The Financial Reporting Standard applicable to the Micro-entities Regime
IAS / IFRS Accounting Standards	IFRS® Accounting Standards issued by the International Accounting Standards Board (IASB). They comprise: (a) International Financial Reporting Standards; (b) IAS® Standards; (c) IFRIC® Interpretations developed by the IFRS Interpretations Committee; and (d) SIC® Interpretations developed by the former Standing Interpretations Committee.
IAS Regulation	EU Regulation 1606/2002
individual financial statements	The accounts that are required to be prepared by an entity in accordance with the Act or relevant legislation, for example: (a) 'individual accounts', as set out in section 394 of the Act; (b) 'statement of accounts', as set out in section 132 of the Charities Act 2011; or (c) 'individual accounts', as set out in section 72A of the Building Societies Act 1986. Separate financial statements are included in the meaning of this term
micro-entity	A micro-entity is: (a) a company meeting the definition of a micro-entity as set out in section 384A of the Act ¹⁷ , and not prevented from applying the micro-entity provisions by section 384B of the Act; (b) an LLP which qualifies as a micro-entity and is not prevented from applying the micro-entity provisions in accordance with Regulation 5A of the Limited Liability Partnerships (Accounts and

Extract from FRS 100 Appendix 1 Glossary

	Audit) (Application of Companies Act 2006) Regulations 2008 (SI 2008/1911); or (c) A qualifying partnership that would meet the definition of a micro-entity as set out in section 384A of the Act, and not be prevented from applying the micro-entity provisions by section 384B of the Act, if the partnership were a company.
qualifying entity (for the purposes of FRS 100 and FRS 101)	A member of a group where the parent of that group prepares publicly available consolidated financial statements which are intended to give a true and fair view (of the assets, liabilities, financial position and profit or loss) and that member is included in the consolidation¹⁸. The following are not qualifying entities: (a) charities; (b) entities that are both required to apply Schedule 3 to the Regulations and have contracts that are within the scope of IFRS 17 Insurance Contracts; and (c) entities that are not companies but are both required to apply requirements similar to those in Schedule 3 to the Regulations¹⁹ and have contracts that are within the scope of IFRS 17.
small entity	A small entity is: (a) a company meeting the definition of a small company as set out in section 382 or 383 of the Act and not excluded from the small companies regime by section 384; (b) an LLP qualifying as small and not excluded from the small LLPs regime, as set out in LLP Regulations; or (c) any other entity that would have met the criteria in (a) had it been a company incorporated under company law.
Statement of Recommended Practice (SORP)	An extant Statement of Recommended Practice developed in accordance with Policy on Developing Statements of Recommended Practice (SORPs). SORPs recommend accounting practices for specialised industries or sectors. They supplement accounting standards and other legal and regulatory requirements in the light of the special factors prevailing or transactions undertaken in a particular industry or sector.
UK-adopted international accounting standards	IAS that have been adopted for use within the UK in accordance with the International Accounting Standards and European Public Limited Liability Company (Amendment etc.) (EU Exit) Regulations 2019 (SI 2019/685).

6.2	'Equivalent' disclosures	87
6.3	Disclosures required by the Regulations for certain financial instruments (and other assets) which may be held at fair value	88

6.4	Disclosure exemptions for financial institutions	89
7	Additional Companies Act disclosures	91
7.1	Existing Companies Act disclosures in the financial statements for adopted IFRS and UK GAAP reporters that also apply under FRS 101	91
7.2	Disclosures required by the Regulations and the LLP Regulations in FRS 101 financial statements but not required under adopted IFRS	91
8.	Future changes to IFRS and their impact on FRS 101	95
	Appendix A - Defined terms	96
	Appendix B - Index of Illustrations	97

Overview

FRS 101 *Reduced Disclosure Framework* is a UK accounting standard providing an optional reduced disclosure framework. It outlines the financial reporting requirements and exemptions from disclosures for the individual financial statements of subsidiaries and ultimate parent companies that otherwise apply the recognition, measurement, and disclosure requirements of adopted IFRS.

Disclosure exemptions are available to a qualifying entity, as defined in the glossary to this FRS, for its individual financial statements. A qualifying entity which is required to prepare consolidated financial statements cannot apply FRS 101 in its consolidated financial statements. A qualifying entity is permitted to apply the reduced disclosure framework, irrespective of the financial reporting framework used in the group's consolidated financial statements.

An entity applying FRS 101 must prepare a balance sheet and profit and loss account in accordance with *The Large and Medium-sized Companies and Groups (Accounts and Reports) Regulations 2008* (SI 2008/410) or, where applicable, *The Large and Medium-sized Limited Liability Partnerships (Accounts) Regulations 2008*. UK companies (other than banking or insurance companies) and LLPs may either apply statutory formats or adapted formats.

What you need to know

- FRS 101 is an optional UK accounting standard which permits qualifying entities to apply the recognition and measurement requirements of adopted IFRS but with significantly reduced disclosures.
- Qualifying entities are those which produce separate (or individual financial statements) and are members of a group which prepares publicly available financial statements in which the reporting entity is consolidated. FRS 101 cannot be used in consolidated financial statements.
- An entity using FRS 101 can take advantage of various disclosure exemptions from adopted IFRS, including the requirement to prepare a cash flow statement and disclosures related to financial instruments. Some disclosure exemptions are conditional on equivalent disclosures being made in the consolidated financial statements of the reporting entity's parent.
- An entity defined as a 'financial institution' has fewer disclosure exemptions than entities that are not financial institutions.
- As FRS 101 financial statements are Companies Act financial statements, they are subject to disclosures required by the Regulations as well as other disclosures required by the Companies Act or other related regulations. These disclosures are in addition to those required by adopted IFRS. In addition, there are several conflicts between the recognition and measurement rules of adopted IFRS and those required by the Regulations. Consequently, entities applying FRS 101 apply a modified version of adopted IFRS designed to eliminate these limited recognition, measurement and presentational differences.
- An entity that is both required to apply Schedule 3 of the Regulations (or requirements similar to those in Schedule 3 of the Regulations) and has contracts that are within the scope of IFRS 17 *Insurance Contracts*, cannot apply FRS 101. Those entities must apply either adopted IFRS or FRS 102.
- Amendments to FRS 101 Reduced Disclosure Framework - 2024/25 Cycle made amendments in relation to developments in IFRS Accounting Standards, in particular new standard, IFRS 18 *Presentation and Disclosure in Financial Statements*. IFRS 18 is applicable for accounting periods beginning on or after 1 January 2027, but can be early adopted when endorsed for use in the UK.

1 Introduction

This chapter deals only with the application of FRS 101 *Reduced Disclosure Framework: Disclosure exemptions from adopted IFRS for qualifying entities* as issued in September 2024. References made to FRS 101 throughout this chapter are to the September 2024 edition of the standard unless otherwise indicated.

FRS 101 sets out an optional framework which addresses the financial reporting requirements and disclosure exemptions for the individual financial statements of subsidiaries and parents that otherwise apply the recognition, measurement and disclosure requirements of standards and interpretations issued by the International Accounting Standards Board (IASB) that have been adopted in the relevant jurisdiction ('adopted IFRS').

To use the framework in FRS 101, an entity needs to be a 'qualifying entity', i.e., a parent or subsidiary which is included in publicly available consolidated financial statements of its parent which are intended to give a true and fair view.

An entity preparing financial statements in accordance with FRS 101 ('FRS 101 financial statements') complies with adopted IFRS except as modified in accordance with FRS 101. This chapter does not discuss adopted IFRS, which is covered in the EY publication, International GAAP®. The FRC's overriding objective is to enable users of accounts to receive high-quality, understandable financial reporting proportionate to the size and complexity of the entity and the users' information needs. In other words, the objective of FRS 101 is to enable the financial statements of subsidiaries and parents to be prepared under the recognition and measurement rules of adopted IFRS, without the need for some of the copious disclosures which are perceived to act as a barrier to those entities preparing those financial statements under adopted IFRS.

An entity using the reduced disclosure framework of FRS 101 is unable to make the explicit and unreserved statement that its financial statements comply with adopted IFRS. This is because an accounting framework that allows such reduced disclosures cannot be described as adopted IFRS. UK companies that prepare FRS 101 financial statements in accordance with Part 15 of the Companies Act 2006 ('CA 2006') prepare Companies Act individual accounts as defined in s395(1)(a) of the CA 2006. This means that FRS 101 financial statements are subject to different Companies Act requirements from financial statements prepared under adopted IFRS (which are IAS accounts prepared under s395(1)(b) of the CA 2006). In particular, FRS 101 financial statements prepared by a UK company must comply with Schedule 1, Schedule 2 (if a banking company) or Schedule 3 (if an insurance company) to *The Large and Medium-sized Companies and Groups (Accounts and Reports) Regulations 2008* (SI 2008/410), as amended ('the Regulations'). Schedules 1-3 of the Regulations do not apply to IAS accounts. LLPs and certain other entities also prepare financial statements in accordance with Part 15 of the CA 2006 and are subject to similar requirements. Generally, this chapter refers to UK companies and the Regulations. The requirements for LLPs and *The Large and Medium-sized Limited Liability Partnerships (Accounts) Regulations 2008*, as amended ('the LLP Regulations') are similar, although there are some minor differences.

This chapter discusses FRS 101 only as it applies to UK companies, LLPs and other entities preparing financial statements under Part 15 of CA 2006. However, FRS 101 may also be applied by non-UK entities currently applying IFRS as issued by the IASB, or another GAAP, although this may depend on local legislation (or regulatory or other requirements).

1.1 Summary of FRS 101

Application of FRS 101 can be summarised as follows:

- Adoption of FRS 101 is voluntary, being one of several accounting standards available for financial reporting in the UK and Republic of Ireland (see Chapter 1).
- FRS 101 can only be applied in individual financial statements (see 2 below).
- FRS 101 can only be applied by a 'qualifying entity' (see 2.1 below).
- Entities can transition to FRS 101 from IFRS or another GAAP (usually this other GAAP will be FRS 102) (see 3 below).
- Entities using FRS 101 apply the recognition and measurement principles of adopted IFRS, as amended by FRS 101 (see 4 below).

- Entities using FRS 101 must prepare a balance sheet and profit and loss account (either as a separate income statement or as a section of the statement of comprehensive income) in accordance with the Regulations or, where applicable, the LLP Regulations. UK companies (other than banking or insurance companies) and LLPs may either apply statutory formats or adapted formats (which are based on adopted IFRS) (see 5 below).
- Entities using FRS 101 can take advantage of various disclosure exemptions from adopted IFRS. Entities defined as 'financial institutions' have fewer available exemptions than entities that are not financial institutions. Some of these disclosure exemptions are conditional on equivalent disclosures being included in the publicly available consolidated financial statements of the group in which the entity is consolidated, and which are intended to give a true and fair view (see 6 below).
And
- In addition to IFRS disclosures, entities using FRS 101 must comply with any legal requirements relating to financial statements, e.g., disclosures required by the CA 2006 and the Regulations, if subject to those requirements (see 7 below).

1.2 Effective date of FRS 101

FRS 101 was issued originally on 22 November 2012. Consolidated versions of the standard incorporating subsequent amendments were subsequently issued in August 2014, September 2015, March 2018, January 2022 and September 2024. This chapter reflects the September 2024 version of FRS 101. The changes made to FRS 101 since the March 2018 version are discussed at 1.2.1 below.

FRS 101 has been available for use for accounting periods beginning on or after 1 January 2015. Early application was permitted but was required to be disclosed. [FRS 101.11].

The September 2024 version of FRS 101 is effective for accounting periods beginning on or after 1 January 2026. Early application of the September 2024 version of FRS 101 for accounting periods beginning prior to 1 January 2026 is permitted provided that all amendments made to this FRS by the *Amendments to FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland and other FRSs - Periodic Review 2024* (Periodic Review 2024) are applied at the same time. If an entity applies the Periodic Review 2024 for an accounting period beginning before 1 January 2026 it must disclose that fact. [FRS 101.18].

Since FRS 101 is based on adopted IFRS, any disclosure exemptions referring to a specific requirement of IFRS are effective only once the IFRS has been adopted and is first applied by the entity. [FRS 101.1, FRS 101.8].

The FRC reviews FRS 101 annually to ensure that the reduced disclosure framework maintains consistency with adopted IFRS. In addition, limited amendments have been made to FRS 101 (compared to adopted IFRS) for compliance with the CA 2006 and the Regulations.

1.2.1 Amendments to FRS 101 incorporated into the September 2024 edition

The September 2024 edition of FRS 101 updates the edition of FRS 101 issued in January 2022 for all amendments to the standard issued between those dates. The amendments are as follows:

- *Amendments to Basis for Conclusions FRS 101 Reduced Disclosure Framework - 2021/2022 cycle* issued in May 2022. The Basis for Conclusions was amended to reflect that no amendments were made to FRS 101 after the 2021/22 annual review of FRS 101.
- *Amendments to Basis for Conclusions FRS 101 Reduced Disclosure Framework - 2022/23* issued in May 2023. The Basis for Conclusions was amended to reflect the adoption and endorsement status of IFRS Accounting Standards and that no amendments were made to FRS 101 after the 2022/23 annual review of FRS 101.
- *Amendments to FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland and other FRS 101 Reduced Disclosure Framework - International tax reform - Pillar Two model rules* issued in July 2023. The amendments provide disclosure exemptions in relation to certain Pillar Two model rules disclosures within IAS 12 Income Taxes, when an entity is included in the consolidated financial statements of the group in which equivalent disclosures are included (see 6.1.13 below). [FRS 101.8(iZA)].
- Amendments made by the Periodic Review 2024 issued in March 2024. These amendments apply for accounting periods beginning on or after 1 January 2026. Early application is permitted (but this must be disclosed) for accounting periods beginning prior to 1 January 2026 provided all amendments made by the Periodic Review 2024 are applied at the same time.

- Amendments to FRS 101 Reduced Disclosure Framework - 2023/2024 cycle issued in September 2024, which:
 - Provides a disclosure exemption in relation to presenting certain comparative information in respect of IFRS 16 *Leases* (see 6.1.9 below). [FRS 101.8(f)(i)].
 - Introduces a conditional exemption in respect of certain disclosures about supplier finance arrangements in respect of IAS 7 *Statement of Cash Flows* (see 6.1.11 below). [FRS 101.8(h)(i), FRS 101.8(h)(ii)].
- And
 - Clarifies that under UK-adopted international accounting standards, a liability is classified as current when, at the end of the reporting period, an entity does not have the right to defer settlement of the liability for at least twelve months after the reporting period. [FRS 101.A2.9B(c)].
- There are also some minor typographical, presentational or editorial corrections.

1.2.2 Amendments to FRS 101 issued in May 2025

Amendments to *FRS 101 Reduced Disclosure Framework - 2024/25 Cycle* made amendments to FRS 101 in relation to developments in IFRS Accounting Standards, in particular new standards, IFRS 18 and IFRS 19 *Subsidiaries without Public Accountability: Disclosures*. The amendments that have arisen from IFRS 18 replacing IAS 1, are effective from when a qualifying entity applies the standard. IFRS 18 is applicable for accounting periods beginning on or after 1 January 2027 but can be early adopted, only when endorsed for use in the UK. All other amendments are effective from May 2025.

The key amendments include:

- The following disclosure exemptions from adopted IFRS as a result of IFRS 18 replacing IAS 1:
 - Maintaining extant exemptions from disclosure requirements in IAS 1 that have been transferred to the new standard IFRS 18 (see 6.1 below).
 - Exemptions from new IFRS 18 disclosures for (see 6.1.10B below):
 - Management-defined performance measures
 - Additional expense disaggregation information
- Preventing a qualifying entity using FRS 101 from applying IFRS 19. This means that an entity that wishes to use IFRS 19 must apply adopted IFRS and not FRS 101. Both standards allow reduced disclosures, however the IASB's approach to the development of IFRS 19 was different to the FRC's approach to the development of FRS 101, therefore creating significant differences between the two standards.
- Introducing an exemption to present reconciliations of items of 'fixed assets' for prior periods for qualifying entities disclosing the reconciliations in accordance with paragraph 51 of Schedule 1 of the Regulations (see 6.1A below).
- Amending IFRS 5 to require the analysis of discontinued operations into its component parts to be shown on the face of the statement of comprehensive income in a discontinued operations category in a separate column and also present a total column (i.e., the sum of continuing and discontinued operations) (see 5.4 below).

The FRC has not proposed additional disclosure exemptions to FRS 101 for disclosures where an exemption is provided under IFRS 19 but not FRS 101. The FRC intend to consider more broadly in due course how the overall level of disclosure required under FRS 101 compares with the overall level of disclosure required under IFRS 19.

1.3 Statement of compliance with FRS 101

A set of financial statements prepared in accordance with FRS 101 must contain a statement in the notes to the financial statements that "These financial statements were prepared in accordance with Financial Reporting Standard 101 Reduced Disclosure Framework". Since the standard does not comply with all of the requirements of adopted IFRS, financial statements prepared in accordance with FRS 101 must not contain the unreserved statement of compliance referred to in adopted IFRS. [FRS 101.10].

The Regulations require a large and medium-sized UK company (except a medium-sized company preparing individual accounts) preparing Companies Act accounts to state in the notes to the accounts whether the accounts have been prepared in accordance with applicable accounting standards, giving particulars of any material departure from those standards and the reasons for it. [1 Sch 45]. Financial statements prepared in accordance with FRS 101 are prepared in accordance with applicable accounting standards (which are defined in section 464 of CA 2006), [s464], and therefore this statement would be required. See Chapter 1 at 3.5.1.

2 Scope of FRS 101

Extract from FRS 101

Scope

- 2 This FRS may be applied to the individual financial statements of a **qualifying entity**, as defined in the glossary, that are intended to give a true and fair view of the assets, liabilities, financial position and profit or loss for a period. [FRS 101.2]

Individual financial statements to which FRS 101 applies are accounts that are required to be prepared by an entity in accordance with the CA 2006 or relevant legislation, for example: individual accounts as set out in section 394 of the CA 2006 or as set out in section 72A of the Building Societies Act 1986. Separate financial statements, as defined by IAS 27 *Separate Financial Statements*, are included in the meaning of the term individual financial statements. [FRS 101 Appendix I].

This means that FRS 101 can only be used in:

- Individual financial statements of subsidiaries.
- Separate financial statements of an intermediate parent which does not prepare consolidated financial statements.

And

- Separate financial statements of a parent which does prepare consolidated financial statements.

However, an entity applying FRS 101 must be included in a set of publicly available consolidated financial statements intended to give a true and fair view (see 2.1.6 below).

A parent company that prepares consolidated financial statements, but applies FRS 101 in its separate financial statements, can also use the exemption in the CA 2006 from presenting a profit and loss account and related notes in its individual financial statements, as well as taking advantage of the reduced disclosures from adopted IFRS. [s408].

FRS 101 cannot be applied in consolidated financial statements even if the entity preparing consolidated financial statements, is a qualifying entity. [FRS 101.3].

FRS 101 financial statements are not prepared in accordance with adopted IFRS. A qualifying entity must ensure it complies with any relevant legal requirements applicable to it. Individual financial statements prepared by UK companies in accordance with FRS 101 are Companies Act accounts rather than IAS accounts as set out in section 395(1) of the CA 2006. Accordingly, UK companies that apply FRS 101 must comply with the requirements of the CA 2006 and any relevant regulations such as the Regulations.

[FRS 101.4A]. The presentation requirements of relevant regulations applying to UK entities, including the requirements of the Regulations (which cover rules on recognition and measurement, the formats for the balance sheet and profit and loss account, and notes disclosures) are discussed in Chapter 6.

In order to ensure that FRS 101 financial statements comply with the CA 2006 and the Regulations, some limited recognition, measurement and presentational changes have been made in FRS 101 to adopted IFRS. The amendments necessary to remove conflicts between adopted IFRS, the CA 2006 and the Regulations are set out in paragraph AG1 of the Application Guidance to FRS 101. The standard emphasises that, for the avoidance of doubt, the Application Guidance is an integral part of the standard and is applicable to any qualifying entity applying FRS 101, not just to UK companies. [FRS 101.5(b)]. These amendments are discussed at 4 and 5 below.

FRS 101 does not permit use of the formats for the balance sheet and profit and loss account included in Part 1 'General Rules and Formats' of *The Small Companies and Groups (Accounts and Directors' Report) Regulations 2008* (SI 2008/409) ('the Small Companies Regulations'). This chapter does not generally refer to the Small Companies and Small LLP Regulations.

How we see it

Companies subject to the small companies' regime can still apply FRS 101, and, in doing so, are not prevented from taking advantage of other Companies Act exemptions applicable to companies subject to the small companies' regime. Likewise, medium-sized entities applying FRS 101 can still take advantage of applicable Companies Act disclosure exemptions for medium-sized entities.

An entity that is both required to apply Schedule 3 of the Regulations (or requirements similar to those in Schedule 3 of the Regulations) and has contracts that are within the scope of IFRS 17 cannot apply FRS 101 (see 4.8 below).

While the discussion above refers to UK companies, there are similar requirements for LLPs (see 4.11 below).

2.1 Definition of a qualifying entity

Extract from FRS 101

Appendix I

Glossary

qualifying entity (for the purposes of this FRS)	A member of a group where the parent of that group prepares publicly available consolidated financial statements which are intended to give a true and fair view (of the assets, liabilities, financial position and profit or loss) and that member is included in the consolidation⁶. The following are not qualifying entities: (a) charities; (b) entities that are both required to apply Schedule 3 to the Regulations and have contracts that are within the scope of IFRS 17 <i>Insurance Contracts</i>; and (c) entities that are not companies but are both required to apply requirements similar to those in Schedule 3 to the Regulations⁷ and have contracts that are within the scope of IFRS 17.

The phrase ‘requirements similar to those in Schedule 3 of the Regulations’ is referenced to the following:

- Schedules 1 and 2 to The Friendly Societies (Accounts and Related Provisions) Regulations 1994 (SI 1994/1983)
 - Schedule 1 to the *Insurance Accounts Directive (Lloyd’s Syndicate and Aggregate Accounts) Regulations 2008* (SI 2008/1950)
 - *Syndicate Accounting Byelaw* (No 8 of 2005)
- And
- *The Insurance Accounts Directive (Miscellaneous Insurance Undertakings) Regulations 2008* (SI 2008/565)

How we see it

There is no requirement in the definition of a qualifying entity that a qualifying entity is a member of the group in which it is consolidated for its entire reporting period. There is also no requirement that the financial statements of the qualifying entity and the consolidated financial statements of the parent of that group (which may be the reporting entity itself) must be coterminous or have reporting dates within a particular timeframe. In our view, the use of the present tense in the definition above implies that the intention is only that the qualifying entity (where it does not prepare its own consolidated financial statements) is a subsidiary of the parent at its reporting date. This interpretation is consistent with UK Company Law which requires that an entity which is a parent at the end of a financial year must prepare group accounts unless it is exempted from the requirement.

The phrase “included in the consolidation” is referenced to section 474(1) of the CA 2006 which states that this means that “the undertaking is included in the accounts by the method of full (and not proportional) consolidation, and references to an undertaking excluded from consolidation shall be construed accordingly”. Therefore, entities that are not fully consolidated in the consolidated financial statements, such as subsidiaries of investment entities which are accounted for at fair value through profit or loss where required by IFRS 10 *Consolidated Financial Statements*, cannot use FRS 101. Associates and joint ventures are not qualifying entities since they are not members of a group (see 2.1.2 below).

There is no requirement for the consolidated financial statements in which the qualifying entity is included to be prepared under adopted IFRS nor that the parent that prepares the consolidated financial statements

is a UK entity. However, the consolidated financial statements must be intended to give a true and fair view (see 2.1.6 below).

2.1.1 Reporting date of the consolidated financial statements of the parent

FRS 101 is silent on whether the reporting date and period of those consolidated financial statements has to be identical to that of the qualifying entity. In contrast, both sections 400 and 401 of the CA 2006 require that the exemption from preparing group accounts for a parent company that is a subsidiary undertaking is conditional on the inclusion of the company in the consolidated financial statements of a parent undertaking with the same reporting date or with an earlier reporting date in the same financial year. The company must also deliver the audited consolidated financial statements and annual report of the parent undertaking to the registrar within the period for filing its accounts and reports for the financial year.

2.1.2 Definition of group and subsidiary

The definition of a qualifying entity contains a footnote that refers to section 474(1) of the CA 2006 which defines a “group” as “a parent undertaking and its subsidiary undertakings”. Adopted IFRS defines a group as “a parent and its subsidiaries”. [IFRS 10 Appendix A, s474(1)].

Adopted IFRS defines a parent as “an entity that controls one or more entities” and a subsidiary as “an entity that is controlled by another entity”. [IFRS 10 Appendix A].

The CA 2006 states that an undertaking is a parent undertaking in relation to another undertaking, a subsidiary undertaking, if:

- It holds a majority of the voting rights in the undertaking.
- It is a member of the undertaking and has the right to appoint or remove a majority of its board of directors.
- It has the right to exercise a dominant influence over the undertaking by virtue of provisions in the undertaking’s articles or by virtue of a control contract.

Or

- It is a member of the undertaking and controls alone, pursuant to an agreement with other shareholders or members, a majority of the voting rights in the undertaking.

An undertaking must also be treated as a member for the purposes above if any of its subsidiary undertakings is a member of that undertaking or if any shares in that other undertaking are held by a person acting on behalf of the undertaking or any of its subsidiary undertakings.

An undertaking is also a parent undertaking in relation to another undertaking, a subsidiary undertaking, if it has the power to exercise, or actually exercises, dominant influence or control over it, or it and the subsidiary undertaking are managed on a unified basis.

A parent undertaking is treated as the parent undertaking of undertakings in relation to which any of its subsidiary undertakings are, or are to be treated as, parent undertakings; and references to its subsidiary undertakings must be construed accordingly. [s1162(1), s1162(2), s1162(3), s1162(4), s1162(5)]. Schedule 7 to the CA 2006 provides interpretation and references to “shares” in section 1162 and in Schedule 7 are to “allotted shares”. [s1162(6), s1162(7)].

These differences in definition make it possible for an entity to be a subsidiary undertaking under the CA 2006 but not under adopted IFRS. For example an entity in which a parent owns a majority of the voting rights but does not have control over the subsidiary (as defined in adopted IFRS). However, the key issue for the application of FRS 101 is whether the subsidiary is included in the consolidation of the parent’s consolidated financial statements. A company that meets the definition of a subsidiary undertaking under the CA 2006 but is not included in the consolidation of the consolidated financial statements of its parent cannot apply FRS 101.

2.1.3 Publicly available consolidated financial statements

How we see it

By ‘publicly available’, FRS 101 requires that the consolidated financial statements can be accessed by the public as the use of the disclosure exemptions set out in the standard is conditional on a disclosure by the qualifying entity indicating from where those consolidated financial statements can be obtained (see 2.2 below). This does not mean that the consolidated financial statements must be filed with a regulator.

Therefore, for example, consolidated financial statements of a UK company that have not been filed with the Registrar of Companies, at the date the subsidiary's FRS 101 financial statements are approved, must be publicly available via some other medium.

2.1.4 Non-UK qualifying entities

There is no requirement that a qualifying entity is a UK entity. Non-UK entities can apply FRS 101 in their individual or separate financial statements subject to meeting the criteria for the use of the standard (see 2.2 below) and provided FRS 101 is allowed for use in their own jurisdiction.

2.1.5 Non-controlling interests

There is no ownership threshold for a subsidiary to apply FRS 101. Therefore, a qualifying entity can apply FRS 101 even if its parent holds less than a majority of the voting rights, provided it is a subsidiary undertaking.

There is no requirement for a qualifying entity to notify its shareholders about the proposed use of the disclosure exemptions and shareholders with non-controlling interests do not have a right to object to the use of FRS 101. The FRC consider that it is not cost-effective in practice to give such rights to shareholders and sufficient information exists for non-controlling shareholders to understand the effects of the reduced disclosure framework. [FRS 101.BC27].

2.1.6 Intended to give a true and fair view

In the definition of a qualifying entity (see 2.1 above), the consolidated financial statements in which the qualifying entity is included are not required to give an explicit true and fair view of the assets, liabilities, financial position and profit or loss. Rather, they are '*intended to give a true and fair view*' (our emphasis). This means that the consolidated financial statements in which the qualifying entity is consolidated need not contain an explicit opinion that they give a 'true and fair view' but, in substance, they must be intended to give such a view. The FRC guidance - *True and Fair* - issued in June 2014 states that 'Fair presentation under IFRS is equivalent to a true and fair view'.¹³

A UK parent company that wishes to claim an exemption from preparing group accounts under either section 400 or section 401 of the CA 2006 must be a subsidiary included in the consolidated accounts for a larger group. Those consolidated accounts (and where appropriate, the group's annual report) must be drawn up and audited: [s400(2)(b), s401(2)(b), s401(2)(c)]

- In accordance with the requirements of Part 15 of CA 2006 if the undertaking is a company, or the legal requirement which apply to the drawing up of consolidated accounts for the undertaking if that undertaking is not a company. (for section 400).
 - In a manner equivalent to consolidated accounts and consolidated reports so drawn up (for section 401).
 - In accordance with UK-adopted international standards (for sections 400 and 401).
- Or
- in accordance with accounting standards which are equivalent to such international accounting standards, as determined pursuant to Commission Regulation (EC) No. 1569/2007 (for section 401).

There are similar requirements for a parent LLP but for section 401, there is no reference to the basis on which the consolidated reports are drawn up. [s400(2)(b)(LLP), s401(2)(b)(LLP)].

How we see it

A set of consolidated financial statements that would meet the above criteria (i.e., the consolidated financial statements drawn up are in accordance with or in a manner equivalent to Part 15 of CA 2006, or in accordance with UK-adopted international standards or accounting standards which are equivalent to such international accounting standards as determined by the mechanism established by the EU Commission) is intended to give a true and fair view.

The Application Guidance to FRS 100 *Application of Financial Reporting Requirements* states that consolidated financial statements of a higher parent will meet the test of equivalence if they are intended to give a true and fair view and:

¹³ *True and Fair*, FRC, June 2014.

- Are prepared in accordance with FRS 102.

Or

- Are prepared using other GAAPs which are closely related to IFRS Accounting Standards, subject to consideration of the effect of any differences from UK-adopted international accounting standards.

Consolidated financial statements of the higher parent prepared in any other manner must be assessed for equivalence with Part 15 of CA 2006 based on the particular facts, including the similarities to and differences from the requirements of Part 15 of CA 2006. [FRS 100.AG14].

The UK government has recognised equivalence to UK-adopted international accounting standards of the following GAAPs, which include those GAAPs previously recognised by the European Commission as equivalent to EU-adopted IFRS: [FRS 100.AG9]

- GAAP of Canada
- GAAP of the People's Republic of China
- GAAP of Japan
- GAAP of the Republic of Korea
- GAAP of the United States of America
- EU-adopted IFRS
- IFRS as issued by the IASB

The concept of equivalence for the purposes of section 401 is discussed further in Chapter 8 at 3.1.1.C.

In theory, there is no reason why consolidated financial statements of a parent prepared under a GAAP that is not 'equivalent' to Part 15 of CA 2006 cannot be used provided those consolidated financial statements in which the entity is included are publicly available and are intended to give a true and fair view.

In addition, as set out above, a number of the disclosure exemptions from adopted IFRS in FRS 101 are conditional on 'equivalent' disclosures being made in those consolidated financial statements in which the qualifying entity is included. Where the equivalent disclosure is not made, the relevant disclosure exemptions cannot be applied in the qualifying entity's financial statements prepared under FRS 101 (see 6.2 below). A GAAP that is not 'equivalent' to Part 15 of CA 2006 is less likely to have those 'equivalent' disclosures.

One issue not addressed by FRS 101 is the impact of a qualified audit opinion on the parent's consolidated financial statements on a qualifying entity's ability to use FRS 101. A Queen's Counsel's opinion obtained by the FRC in 2008 stated that "the scope for arguing that financial statements which do not comply with relevant accounting standards nevertheless give a true and fair view, or a fair presentation, is very limited".¹⁴

2.2 Use of the disclosure exemptions

The use of the disclosure exemptions in FRS 101 (see 6 below) is conditional on all of the following criteria being met: [FRS 101.5]

- The reporting entity must not apply IFRS 19.
- The reporting entity applies, as its financial reporting framework, the recognition, measurement and disclosure requirements of adopted IFRS but makes those amendments to adopted IFRS as required by the Application Guidance to FRS 101 that are necessary in order to comply with the CA 2006 and the Regulations. This is because financial statements prepared under FRS 101 are Companies Act individual accounts as defined in section 395(1) of the CA 2006 but the Application Guidance applies to any qualifying entity applying FRS 101, including those that are not companies (see 4 and 5 below).
- The reporting entity discloses in the notes to its financial statements a brief narrative summary of the disclosure exemptions adopted.
- The reporting entity discloses the name of the parent of the group in whose consolidated financial statements its financial statements are consolidated (i.e., the parent identified in the definition of a 'qualifying entity') and from where those financial statements may be obtained.

A qualifying entity which is a financial institution is entitled to more limited disclosure exemptions (see 6.4 below).

¹⁴ The Financial Reporting Council: The True and Fair Requirement Revised - Opinion, Martin Moore QC, May 2008, para. 4(F).

2.3 The impact of section 400 and section 401 of the CA 2006 on FRS 101

FRS 101 does not override either section 400 or section 401 of the CA 2006. Section 400 exempts a UK parent company from preparing consolidated accounts if it is a subsidiary undertaking (whose immediate parent undertaking is established under the law of any part of the UK) and is included in the consolidated accounts of a larger group drawn up to the same date, or to an earlier date in the same financial year, by a parent undertaking established under the law of any part of the UK. Section 401 exempts a UK parent company from preparing consolidated accounts if it is a subsidiary undertaking of a parent undertaking not established under the law of any part of the UK and the company and all of its subsidiary undertakings are included in the consolidated accounts of a larger group drawn up to the same date, or to an earlier date in the same financial year, by a parent undertaking. The exemptions from preparing consolidated accounts in both sections 400 and 401 are subject to various conditions including 'equivalence' (in respect of section 401, which is discussed at 2.1.6 above). The detailed conditions for the above exemptions from preparing group accounts under the CA 2006 are discussed further in Chapter 8 at 3.1.1.

If a UK parent company does not meet all of the conditions set out in either section 400 or section 401 (and is not otherwise exempt under the CA 2006) then it must prepare consolidated financial statements. Such consolidated financial statements cannot be prepared under FRS 101. However, the parent entity could still prepare its individual financial statements under FRS 101.

2.4 Interim financial statements

FRS 101 does not address the preparation of interim financial statements. However, entities applying FRS 101 to annual financial statements may use FRS 104 *Interim Financial Reporting* as a basis for their interim financial reports. FRS 104 is discussed in Chapter 39.

3 Transition to FRS 101

An entity can transition to FRS 101 from either adopted IFRS or another form of GAAP (e.g., another form of UK GAAP). In this context, another form of UK GAAP currently means either FRS 102 or FRS 105 *The Financial Reporting Standard applicable to the Micro-entities Regime*.

FRS 101 is adopted in the first accounting period for which a reporting entity makes a statement of compliance with the standard (see 1.3 above). The date of transition is the beginning of the earliest period for which an entity presents full comparative information under a given standard in its first financial statements that comply with that standard. [FRS 100 Appendix I]. For example, the date of transition is 1 January 20X5 for an entity with a 31 December year-end adopting FRS 101 for the first time in its 20X6 financial statements. [FRS 100 Appendix I].

3.1 Companies Act restrictions on changes to FRS 101

Under the CA 2006, a company that wishes to change from preparing IAS individual accounts to preparing individual accounts under FRS 101 may do so either:

- If there is a 'relevant change of circumstance' as defined in section 395(4) of the CA 2006.
- Or
- For financial years ending on or after 1 October 2012, for a reason other than a relevant change of circumstance, once in a five-year period. [FRS 100.A2.14].

There is no restriction on the number of times an entity can move from Companies Act accounts to IAS accounts or *vice versa*. Theoretically, an entity could 'flip' from IAS accounts to FRS 101 and back again several times without a 'relevant change in circumstance' provided such flips are done no more than once every five years and provided that the entity is also complying with the requirements of the CA 2006 such as those relating to consistency of financial reporting within groups (see 3.2 below).

There are no Companies Act restrictions on a change from FRS 102 or FRS 105 to FRS 101 and back again or *vice versa* since these are all Companies Act accounts.

3.2 Consistency of financial statements within the group

The CA 2006 requires that the directors of a UK parent company secure that the individual accounts of the parent company and of each of its subsidiary undertakings are prepared under the same financial reporting framework, be it IAS accounts or Companies Act accounts, except to the extent that in the directors' opinion there are good reasons for not doing so. [s407(1)]. However, this rule does not apply:

- If the parent company does not prepare group accounts. [s407(2)].
- If the accounts of the subsidiary undertaking are not required to be prepared under Part 15 of the CA 2006 (for example, foreign subsidiary undertakings). [s407(3)].
- Or
- To any subsidiary undertakings that are charities (charities and non-charities within a group are not required to use the same accounting framework). [s407(4)]. This is because charities are not permitted to prepare either IAS group or individual accounts. [s395(2), s403(3)].

Additionally, a UK parent company that prepares both consolidated and separate financial statements under adopted IFRS (i.e., IAS group accounts and IAS individual accounts) is not required to ensure that its subsidiary undertakings all prepare IAS individual accounts. However, it must ensure that each of its subsidiary undertakings use the same accounting framework in their individual accounts unless there are good reasons for not doing so. [s407(5)].

Therefore, a group that decides to use FRS 101 for any of its UK subsidiary undertakings, must ensure, unless there are good reasons for not doing so, that all its UK subsidiary undertakings prepare Companies Act individual accounts (i.e., the same financial reporting framework). This requirement only applies to subsidiary undertakings in scope of the section 407 consistency requirements.

Although not explicitly stated by FRS 100, there appears to be no requirement that all UK subsidiary undertakings in a group must use FRS 101 for their Companies Act individual accounts. Some subsidiary undertakings could also use FRS 102, since these are all Companies Act individual accounts and therefore, they are all under the same financial reporting framework. However, while this approach would comply with the statutory requirements, groups that use a 'mix' of GAAP in the individual financial statements may be challenged by HMRC, particularly if this results in tax arbitrage.

Examples of 'good reasons' for not preparing all individual accounts within a group using the same reporting framework are contained in the document *Guidance for UK Companies on Accounting and Reporting: Requirements under the Companies Act 2006 and the application of the IAS Regulation* issued by the Department for Business Enterprise and Regulatory Reform (BERR) in June 2008.

3.3 Transition from adopted IFRS to FRS 101

In substance, the transition requirements for entities that have been applying adopted IFRS prior to conversion to FRS 101 treat the qualifying entity as not having changed its financial reporting framework. Disclosure is required only where changes are made on transition. [FRS 100.12, FRS 101.7A]. FRS 101 modifies adopted IFRS in certain respects, in order to comply with the Companies Act and the Regulations.

A qualifying entity that is applying adopted IFRS prior to the date of transition to FRS 101 will be preparing Companies Act individual accounts in accordance with s395(1)(a) of the CA 2006 (rather than IAS individual accounts in accordance with s395(1)(b) of the CA 2006) post-transition. It therefore must consider whether amendments are required to comply with paragraph 5(b) of FRS 101 - see 4 and 5 below - but it does not reapply the provisions of IFRS 1. Where amendments in accordance with paragraph 5(b) of FRS 101 are required, the entity must determine whether the amendments have a material effect on the first FRS 101 financial statements presented. [FRS 100.12]. Details of measurement differences between adopted IFRS and FRS 101 which might result in a material effect on the financial statements are discussed at 4 below.

Where there is no material effect of such changes, the qualifying entity must disclose that it has undergone transition to FRS 101 and give a brief narrative of the disclosure exemptions taken for all periods presented in the financial statements. [FRS 100.12(a)].

Where there is a material effect caused by such changes, the qualifying entity's first FRS 101 financial statements must include: [FRS 100.12(b)]

- A description of the nature of each material change in accounting policy.
 - Reconciliations of its equity determined in accordance with adopted IFRS to its equity determined in accordance with FRS 101 for both the date of transition to FRS 101 and for the end of the latest period presented in the entity's most recent annual financial statements prepared in accordance with adopted IFRS.
- And
- A reconciliation of the profit or loss determined in accordance with adopted IFRS to its profit or loss determined in accordance with FRS 101 for the latest period presented in the entity's most recent annual financial statements prepared in accordance with adopted IFRS.

This means that, for an entity adopting FRS 101 for the first time in its annual financial statements ending on 31 December 20X6 (and presenting one comparative period), reconciliations will be required of:

- Equity as at 1 January 20X5 and 31 December 20X5.
- And
- Profit or loss for the year ended 31 December 20X5.

There is no requirement for a transition balance sheet to be prepared. [FRS 100.12, FRS 101.7A].

Amendments with a material effect must be applied retrospectively on transition unless impracticable. When it is impracticable to apply the amendments retrospectively, the qualifying entity must apply the amendment to the earliest period for which it is practicable to do so and it must identify the data presented for prior periods that are not comparable with the data for the period in which it prepares its first financial statements that conform to FRS 101. [FRS 100.13]. 'Impracticable' is defined in IAS 8 *Accounting Policies, Changes in Accounting Estimates and Errors*.

Paragraph 5(b) of FRS 101 cross-refers to Application Guidance 1 to the standard (which forms an integral part of the standard) that includes presentational as well as recognition and measurement modifications to adopted IFRS required when applying the standard. The transitional rules contain no explicit requirement to disclose material presentational changes such as the use of balance sheet and profit and loss formats in accordance with the Regulations (especially where statutory rather than adapted formats are used).

How we see it

We recommend that entities explain any material presentational changes compared to adopted IFRS arising from adoption of FRS 101 in order to assist readers' understanding of the financial statements.

3.4 Transition from another version of UK GAAP or another GAAP to FRS 101

In substance, the transition requirements treat conversion to FRS 101 from another version of UK GAAP (currently FRS 102 or FRS 105) or another GAAP as a full first-time conversion to adopted IFRS (as modified by FRS 101).

A qualifying entity that transitions to FRS 101 must, unless it is applying adopted IFRS prior to the date of transition (see 3.3 above), apply the requirements of paragraphs 6 to 33 of IFRS 1 (as adopted in the relevant jurisdiction) including the relevant appendices, except for the requirement of paragraphs 6 and 21 to present an opening statement of financial position at the date of transition. References to IFRS Accounting Standards in IFRS 1 are interpreted to mean adopted IFRS as amended in accordance with paragraph 5(b) of FRS 101. [FRS 100.11(b)]. This means that all of the recognition, measurement and disclosure rules for an IFRS first-time adopter apply (except for the requirement to present an opening statement of financial position) to the extent they do not conflict with adopted IFRS as amended by paragraph 5(b) of FRS 101. First-time adoption of IFRS is discussed in the EY publication, International GAAP®

IFRS 1 sets out specific requirements for where a subsidiary becomes a first-time adopter later than its parent ('the D16 election') or where a parent becomes a first-time adopter later than its subsidiary, or a parent becomes a first-time adopter in its separate financial statements earlier or later than in its consolidated financial statements ('the D17 requirements'). [IFRS 1. Appendix D.16, IFRS 1. Appendix D.17]. These requirements are both amended by FRS 101 as described at 3.4.1 and 3.4.2 below.

3.4.1 The D16 election

FRS 101 amends the D16 election to: [FRS 101.AG1(a)]

- Remove the sentence stating that the election to use the carrying amounts that would be included in the parent's consolidated financial statements, based on the parent's transition to IFRSs, is not available to a subsidiary of an investment entity that is required to be measured at fair value through profit or loss.
And
- Add a sentence stating that "A qualifying entity that applies this provision must ensure that its assets and liabilities are measured in accordance with company law".

The purpose of the second amendment is to restrict the application of the D16 election to situations where the measurement of assets and liabilities in the subsidiary's or parent's individual financial statements based on consolidated financial statements would comply with Company Law. FRS 101 financial statements must comply with the measurement requirements of the CA 2006 which may be inconsistent with those of adopted IFRS applied in the consolidated financial statements. [FRS 101 Appendix II. Table 1].

The FRC does not explain the first amendment although an entity which is not consolidated by its parent cannot apply FRS 101 (see 2.1 above).

3.4.2 The D17 requirements

FRS 101 amends the D17 requirements by adding a sentence stating that "A qualifying entity that applies this provision must ensure that its assets and liabilities are measured in accordance with company law". [FRS 101.AG1(b)].

FRS 101 also amends the D17 requirements to remove the sentence "Notwithstanding this requirement, a non-investment entity parent shall not apply the exception to consolidation that is used by any investment entity subsidiaries". However, this sentence is not relevant to FRS 101 financial statements, which are not consolidated financial statements.

3.5 The impact of transition on realised profits

There may be circumstances where a conversion to FRS 101 eliminates a qualifying entity's realised profits or turns those realised profits into a realised loss. TECH 02/17BL *Guidance on Realised and Distributable Profits under the Companies Act 2006* issued by the Institute of Chartered Accountants in England and Wales (ICAEW) and the Institute of Chartered Accountants of Scotland (ICAS), (TECH 02/17BL) states that the change in the treatment of a retained profit or loss as realised (or unrealised) as a result of a change in the law or in accounting standards or interpretations would not render unlawful a distribution already made out of realised profits determined by reference to 'relevant accounts' which had been prepared in

accordance with generally acceptable accounting principles applicable to those accounts. This is because the CA 2006 defines realised profits or losses for determining the lawfulness of a distribution as “such profits and losses of the company as fall to be treated as realised in accordance with principles generally accepted at the time when the accounts are prepared, with respect to the determination for accounting purposes of realised profits or losses”. [TECH 02/17BL.3.28, TECH 02/17BL.3.29].

The effects of the introduction of a new accounting standard or of the adoption of IFRS become relevant to the application of the common law capital maintenance rule only in relation to distributions accounted for in periods in which the change will first be recognised in the accounts. This means that a change in accounting policy known to be adopted in a financial year needs to be taken into account in determining the dividend to be approved by shareholders in that year. Therefore, for example, an entity converting to FRS 101 in 20X6 must have regard to the effect of adoption of FRS 101 in respect of all dividends payable in 20X6 (including any final dividends in respect of 20X5) even though the ‘relevant accounts’ may still be those for 20X5 prepared under another GAAP. [TECH 02/17BL.3.30, TECH 02/17BL.3.31, TECH 02/17BL.3.32, TECH 02/17BL.3.33, TECH 02/17BL.3.34, TECH 02/17BL.3.35, TECH 02/17BL.3.36, TECH 02/17BL.3.37].

Statutory ‘interim accounts’ are required to be prepared under sections 836(2) and 838 of the CA 2006 (and delivered to the Registrar if the company is a public company) if a proposed distribution cannot be justified by reference to the relevant accounts. See Chapter 1 at 4.5 for further discussion.

4 Measurement differences between FRS 101 and adopted IFRS

As noted at 2 above, entities applying FRS 101 use adopted IFRS as amended by the standard in order to comply with the CA 2006 and the Regulations. This is because financial statements prepared under FRS 101 are Companies Act individual accounts and not IAS individual accounts. There are several conflicts between the recognition and measurement rules of adopted IFRS and those required by the Regulations. Consequently, entities applying FRS 101 apply a modified version of adopted IFRS designed to eliminate these differences.

FRS 101 does not modify adopted IFRS in respect of goodwill and indefinite-life intangible assets. However, non-amortisation of those assets conflicts with the Regulations necessitating use of a 'true and fair override' as explained at 4.1 below.

Similarly, FRS 101 does not modify the requirement under IFRS 9 *Financial Instruments* to present changes in the fair value of a financial liability attributable to own credit risk in other comprehensive income. However, this presentation conflicts with the Regulations necessitating use of a 'true and fair override' as explained at 4.2 below.

In respect of the matters discussed at 4.3 to 4.11 below, FRS 101 specifically amends adopted IFRS to remove conflicts identified between adopted IFRS and the Regulations. Therefore, the issue of invoking a 'true and fair override' does not arise in respect of these other matters.

FRS 101 changes adopted IFRS in respect of the following matters:

- Negative goodwill (see 4.3 below).
- Contingent consideration balances arising from business combinations (see 4.4 below).
- Government grants deducted from the cost of fixed assets (see 4.5 below).
- Provisions, contingent assets and contingent liabilities (see 4.6 below).
- Realised profits (see 4.7 below).
- Equalisation provisions (see 4.8 below).
- Investments in subsidiaries, associates and joint ventures by banking and insurance entities (see 4.9 below).

And

- Investment entities (see 4.10 below).

The position as regards limited liability partnerships (LLPs) is discussed at 4.11 below.

4.1 Positive goodwill and indefinite-life intangible assets

No changes have been made to adopted IFRS in respect of positive goodwill that is not amortised. Instead, FRS 101 states that paragraph B63(a) of IFRS 3 *Business Combinations*, which requires that goodwill is measured at cost less impairment, must be read in accordance with paragraph A2.8 of FRS 101.

[FRS 101.AG1(f)]. The non-amortisation of goodwill required by IFRS 3 conflicts with paragraph 22 of Schedule 1 to the Regulations (and its equivalents in Schedules 2 and 3) which require that an intangible asset (including goodwill) must be written off over its useful economic life.

FRS 101 notes that the non-amortisation of goodwill will usually be a departure, for the overriding purpose of giving a true and fair view, from the requirements of the Regulations. FRS 101 goes on to state that this is not a new instance of the use of the 'true and fair override' and it would have been required for companies reporting under previous UK GAAP which used an indefinite life for goodwill as permitted by FRS 10 *Goodwill and intangible assets*. [FRS 101.A2.8, 1 Sch 22].

This means that the FRC expects that entities with positive goodwill must not amortise that goodwill under FRS 101. Those entities must invoke a true and fair override as permitted by paragraph 10(2) of Schedule 1 to the Regulations (or its equivalents in Schedules 2 and 3) to overcome the requirement to write off goodwill over its useful economic life in paragraph 22 of Schedule 1 to the Regulations (or its equivalents in Schedules 2 and 3). The use of the true and fair override requires disclosure of the particulars of the departure from the Regulations, the reasons for it and its effect. [FRS 101.A2.8, 1 Sch 10(2)]. Continuation of goodwill amortisation, if permitted under previous GAAP, is not allowed by FRS 101.

It is anticipated that the use of a true and fair override in respect of goodwill amortisation will be limited in application since, in individual financial statements, there will only be goodwill where a business that is not an entity has been acquired.

FRS 101 goes on to state that similar considerations (i.e., the need for a true and fair override) may apply to other intangible assets that are not amortised because they have an indefinite life and intangible assets that have a residual value that is not zero (i.e., intangible assets that are not written off over their useful economic life). [FRS 101.A2.8A, 1 Sch 22].

4.2 Presentation of fair value gains and losses attributable to changes in own credit risk on financial liabilities designated at fair value through profit or loss in other comprehensive income

IFRS 9 requires qualifying entities to present fair value gains or losses attributable to changes in own credit risk on financial liabilities designated at fair value through profit or loss in other comprehensive income. The Note on Legal Requirements to FRS 101 observes that this will usually be a departure from the requirement of paragraph 40 of Schedule 1 of the Regulations (and its equivalents in Schedules 2 and 3) for the overriding purpose of giving a true and fair view. As a result, when applicable, disclosure will need to be given in the notes to the accounts of 'particulars of the departure, the reasons for it and its effect'.

[FRS 101.A27F].

FRS 101 is silent about the other two circumstances in IFRS 9 in which accounting for fair value gains and losses are required in other comprehensive income.

How we see it

In our view:

- Accounting for changes in the fair value of an equity instrument through other comprehensive income (without recycling fair value changes to profit and loss) makes use of the alternative accounting rules in the Regulations and does not therefore require the use of a true and fair override (see Chapter 6 at 8.2).
- The model used for accounting for changes in the fair value of a debt instrument through other comprehensive income is similar, but not identical, to the available-for-sale asset model under IAS 39 *Financial Instruments: Recognition and Measurement*. It is inferred from FRS 101's silence on the matter that this model is included within the fair value accounting rules in the Regulations (see Chapter 6 at 8.2) and does not therefore require the use of a true and fair override.

4.3 Negative goodwill

FRS 101 changes paragraph 34 of IFRS 3 so that any gain arising from a bargain purchase (i.e., negative goodwill) is not recognised immediately in profit and loss. Instead, any amount of negative goodwill resulting from a business combination must be shown on the face of the statement of financial position on the acquisition date immediately below goodwill, and followed by a subtotal of the net amount of positive and negative goodwill. Subsequently, the negative goodwill up to the fair value of the non-monetary assets acquired must be recognised in profit and loss in the periods in which the non-monetary assets are recovered. Any amount of the negative goodwill in excess of the fair values of the non-monetary assets acquired must be recognised in profit or loss in the periods expected to be benefited. [FRS 101.AG1(c)].

This change to adopted IFRS was necessary because certain principles and rules (on which the requirements of the Act are based on) may be inconsistent with the recognition requirements for negative goodwill under adopted IFRS. [FRS 101 Appendix II Table 1].

Monetary assets are defined in adopted IFRS as "money held and assets to be received in fixed or determinable amounts of money". [IAS 38.8]. Conversely, an essential feature of a non-monetary asset is the absence of a right to receive a fixed or determinable number of units of currency. IAS 21 *The Effects of Changes in Foreign Exchange Rates* gives examples of non-monetary assets as amounts prepaid for goods and services, goodwill, intangible assets, inventories, property, plant and equipment and right-of-use assets. [IAS 21.16]. In addition, IFRS 9 states that investments in equity instruments are non-monetary items. [IFRS 9.B5.7.3]. This suggests that equity investments in subsidiaries, associates or joint ventures are also non-monetary items.

4.4 Contingent consideration balances arising from business combinations

Contingent consideration balances arising from business combinations are treated differently depending on whether the business combination occurred before or after the application of amendments to UK Company Law issued in 2015, which were mandatory for accounting periods beginning on or after 1 January 2016. In summary: [FRS 101.AG1(d)].

- All contingent consideration arising in business combinations occurring in accounting periods beginning on or after 1 January 2016 is initially recognised at fair value with changes in fair value of consideration not classified as equity recognised in profit or loss. [IFRS 3.58].

And

- All contingent consideration balances arising from business combination occurring in accounting periods beginning before 1 January 2016 must be accounted for using the entity's previous accounting policies for such transactions. Prior to amendments which incorporate the 2015 Company Law changes, FRS 101 required that an adjustment to the cost of a business combination contingent on future events be recognised only if the estimated amount of the adjustment was probable and could be measured reliably. If the potential adjustment was not recognised at the acquisition date but subsequently became probable and could be measured reliably, the additional consideration was treated as an adjustment to the cost of the combination (i.e., goodwill).

The amendments to Company Law, which changed this accounting were set out in *The Companies, Partnerships and Groups (Accounts and Reports) Regulations 2015* (SI 2015/980). These amendments could have been early adopted prior to 2016 in which case the fair value requirements may apply to certain business combinations occurring in 2015. Given the time that has now elapsed, we believe that there are limited situations in which contingent consideration relating to pre-2016 business combinations, which is not revalued at fair value through profit or loss, still exists.

FRS 101 is silent on accounting for contingent consideration on the acquisition of a subsidiary, associate or joint venture which is accounted for as an investment under IAS 27. However, in practice, if contingent consideration is included in the initial measurement of the asset, subsequent payments are either recognised in profit or loss or capitalised as part of the cost of the asset.

How we see it

Consistent with the view expressed in the EY publication, International GAAP®, until the IASB issues further guidance, differing views remain about the circumstances in which, and to what extent, variable payments, such as contingent consideration must be recognised when initially recognising the underlying asset. There are also differing views about the extent to which subsequent changes must be recognised through profit or loss or capitalised as part of the cost of the asset. Where entities have made an accounting policy choice regarding recognition of contingent consideration and subsequent changes in accounting for the cost of investments in subsidiaries, associates or joint ventures in separate financial statements, the policy must be disclosed and consistently applied.

4.5 Government grants deducted from the cost of fixed assets

FRS 101 has deleted paragraph 28 of IAS 16 *Property, Plant and Equipment* and has amended or deleted paragraphs 24 to 29 of IAS 20 *Accounting for Government Grants and Disclosure of Government Assistance* in order to eliminate the option in adopted IFRS that permits a government grant relating to an asset to be deducted in arriving at the carrying amount of the asset. Consequently, all government grants related to assets must be presented in the financial statements by setting up the grant as deferred income which is recognised in profit or loss on a systematic basis over the useful life of the asset. In addition, the option in paragraph 29 of IAS 20 that permits grants related to income to be deducted in reporting the related expense has been deleted. Consequently, in profit or loss the grant must be reported either separately or under a general heading such as 'Other income'. [FRS 101.AG1(l), FRS 101.AG1(m), FRS 101.AG1(n), FRS 101.AG1(o), FRS 101.AG1(p), FRS 101.AG1(q), FRS 101.AG1(r)].

These changes to adopted IFRS were necessary because the Regulations prohibit off-setting of items that represent assets against items that represent liabilities, unless specifically permitted or required.

[FRS 101 Appendix II Table 1].

4.6 Provisions, contingent assets and contingent liabilities

FRS 101 changes paragraph 92 of IAS 37 *Provisions, Contingent Liabilities and Contingent Assets* to state that when, in extremely rare cases, disclosure of some or all of the information required by paragraphs 84-89 of IAS 37 can be expected to prejudice seriously the position of the entity in a dispute with other parties, on the subject matter of the provision, contingent liability or contingent asset, the entity need not disclose all of the information required by those paragraphs insofar as it relates to the dispute, but must disclose at least the following: [FRS 101.AG1(s)]

- In relation to provisions:
 - A table showing the reconciliation required by paragraph 84 in aggregate, including the source and application of any amounts transferred to or from provisions during the reporting period.
 - Particulars of each provision in any case where the amount of the provision is material.
 - And
 - The fact that, and reason why, the information required by paragraphs 84 and 85 has not been disclosed.
- In relation to contingent liabilities:
 - Particulars and the total amount of any contingent liabilities (excluding those which arise out of insurance contracts) that are not included in the statement of financial position.
 - The total amount of contingent liabilities which are undertaken on behalf of or for the benefit of:
 - Any parent or fellow subsidiary of the entity.
 - Any subsidiary of the entity.
 - Or
 - Any entity in which the reporting entity has a participating interest, must each be stated separately.
 - And
 - The fact that, and reason why, the information required by paragraph 86 has not been disclosed.
- In relation to contingent assets, the entity must disclose the general nature of the dispute, together with the fact that, and reason why, the information required by paragraph 89 has not been disclosed.

This amendment was made because the 'seriously prejudicial' exemption in IAS 37 does not apply to disclosures required by the Regulations. Although this matter is implicitly covered by paragraph 4A of FRS 101, which requires that the requirements of the Regulations must be complied with (see 2 above), the FRC decided to specifically highlight this constraint on the IAS 37 exemption. [FRS 101.BC79].

These amended disclosures apply to all entities applying FRS 101, not just entities subject to the requirements of the Regulations.

4.7 Realised profits

FRS 101 has changed adopted IFRS to clarify the precedence of the Regulations over IFRS in this matter by adding the words "or unless prohibited by the Act" after "an entity shall recognise all items of income and expense arising in a period in profit or loss unless an IFRS requires or permits otherwise". [FRS 101.AG1(h), FRS 101.AG1(k)].

Paragraph 13(a) of Schedule 1 to the Regulations (and its equivalents in Schedules 2 and 3 (the related requirement in Schedule 3 is modified)) require that only profits realised at the balance sheet date are included in the profit or loss account. [FRS 101.A2.12]. Paragraph 39 of Schedule 1 to the Regulations (and its equivalents in Schedules 2 and 3) allow stocks, investment property and living animals or plants to be held at fair value in Companies Act accounts. [FRS 101.A2.13]. Paragraph 40(2) of Schedule 1 to the Regulations (and its equivalents in Schedules 2 and 3) requires that, in general, movements in the fair value of financial instruments, stocks, investment properties or living animals and plants are recognised in the profit and loss account notwithstanding the usual restrictions allowing only realised profits and losses to be included in the profit and loss account. Therefore, paragraph 40 of Schedule 1 overrides paragraph 13(a) of Schedule 1 and such fair value gains can be recognised in profit and loss under FRS 101. [FRS 101.A2.14].

The Note on Legal Requirements to FRS 101 states that entities measuring investment properties, living animals or plants, or financial instruments at fair value may transfer such amounts to a separate non-distributable reserve instead of carrying them forward in retained earnings but are not required to do so. The FRC suggests that presenting fair value movements that are not distributable profits in a separate reserve may assist with the identification of profits available for that purpose. [FRS 101.A2.15].

Whether profits are available for distribution must be determined in accordance with applicable law. Entities may also refer to TECH 02/17BL to determine the profits available for distribution. [FRS 101.A2.16].

4.8 IFRS 17 Insurance Contracts

Entities that are both required to apply Schedule 3 of the Regulations (or requirements similar to those in Schedule 3 of the Regulations) and have contracts that are within the scope of IFRS 17 cannot apply FRS 101. This means that these entities, namely insurers, cannot apply FRS 101. [FRS 101.BC61G].

Insurance companies preparing Companies Act accounts are required to comply with Schedule 3 of the Regulations. Unlike companies preparing accounts under Schedule 1 to the Regulations, the formats and content of accounts under Schedule 3 cannot be adapted. [FRS 101.BC61C].

The FRC concluded that the approach and methodology that underpins IFRS 17 is so fundamentally different to the one that underpins the formats of Schedule 3 that, for Companies Act accounts (but not IAS accounts), it is not possible to apply IFRS 17 whilst continuing to maintain compliance with Company Law. [FRS 101.BC61E]. Other conflicts between IFRS 17 and Company Law also exist in respect of measurement. [FRS 101.BC61F].

However, entities that have contracts that are within the scope of IFRS 17 but are not insurers can apply FRS 101. This is because these entities are not required to comply with Schedule 3 of the Regulations.

4.9 Equity accounting for investments in subsidiaries, associates and joint ventures

IAS 27, Schedule 1 to the Regulations and the LLP Regulations permit the use of equity accounting for investments in subsidiaries, associates and joint ventures.

The use of equity accounting for these interests is conditional on the investment in subsidiary, associate or joint venture qualifying as a participating interest (see Chapter 6 at 4.3.4.D), which will usually be the case. If participating interests are accounted for using the equity method and the profit attributable to a participating interest recognised in profit and loss account exceeds the amount of any dividends (including dividends already paid and those whose payment can be claimed), the difference must be placed in a reserve which cannot be distributed to shareholders. [1 Sch 29A(2)(b)].

However, Schedule 2 and Schedule 3 to the Regulations do not permit the use of equity accounting for participating interests. Therefore, entities applying either Schedule 2 or Schedule 3 to the Regulations (i.e., banking and insurance entities, respectively) may not take advantage of the option in paragraph 10(c) of IAS 27 to account for investments in subsidiaries, joint ventures and associates using the equity method. [FRS 101.A2.7E].

4.10 Investment entities

FRS 101 does not apply to consolidated financial statements. However, a parent that meets the definition of an investment entity under IFRS 10 and is therefore required (in most situations) to measure its investment in a subsidiary at fair value through profit or loss, must measure that investment in the same way in its separate financial statements, as required by paragraph 11A of IAS 27. In other words, a qualifying entity that meets the definition of an investment entity must measure its investment in subsidiaries at fair value through profit or loss in its individual financial statements. [FRS 101.A2.17].

An investment entity which measures its investments in subsidiaries at fair value through profit or loss will be required to make the additional disclosures required by paragraph 36(4) of Schedule 1 to the Regulations (see 6.3 below). [FRS 101.A2.20].

4.11 Limited liability partnerships (LLPs)

LLPs applying FRS 101 will be doing so in conjunction with *The Limited Liability Partnerships, (Accounts and Audit) (Application of Companies Act 2006) Regulations 2008 (SI 2008/1911)* and the LLP Regulations, both as amended. It is considered by the FRC that in many cases these regulations are similar to the Regulations, limiting the situations in which legal matters relevant to the financial statements of LLPs are not addressed in Appendix II to FRS 101. [FRS 101.A2.21].

Therefore, generally, the issues identified in relation to Schedule 1 to the Regulations at 4.1 to 4.10 above also apply to Schedule 1 to the LLP Regulations.

5 Presentational differences between FRS 101 and adopted IFRS

As noted at 2 above, UK companies applying FRS 101 must prepare their financial statements in accordance with the CA 2006 and the Regulations. This is because financial statements prepared under FRS 101 are Companies Act accounts and not IAS accounts. [FRS 101.A2.3]. The presentation requirements of the CA 2006 and the Regulations are discussed in Chapter 6. While, generally, this chapter refers to companies and the Regulations, the requirements for LLPs are similar, although there are some minor differences.

The following presentational matters are discussed below:

- Balance sheet and profit and loss account formats required by FRS 101 (see 5.1 below).
- Order of presentation of the notes to the financial statements (see 5.2 below).
- Presentation of extraordinary activities (see 5.3 below).

And

- Presentation of discontinued operations (see 5.4 below).

The Regulations address the balance sheet and profit and loss account formats, and the notes required in the statutory accounts of UK companies. Accordingly, the presentation amendments made in Application Guidance 1 to FRS 101 (which apply to all qualifying entities, not just UK companies) relate to the balance sheet and profit and loss section of the statement of comprehensive income (whether in one or two statements). The adopted IFRS requirements for presentation of other comprehensive income still apply. FRS 101 makes no amendments to the requirement in adopted IFRS to present a statement of changes in equity for the reporting period.

There is no requirement to present a statement of cash flows when the reduced disclosure exemption is taken and the use of the disclosure exemption is disclosed in the financial statements (see 6.1.11 below).

A UK parent company presenting both consolidated financial statements (either IAS group accounts or Companies Act group accounts) and individual financial statements under FRS 101, can take advantage of the exemption in section 408 of the CA 2006 from presenting a profit and loss account and related notes in respect of its individual profit and loss account. [s408].

5.1 Balance sheet and profit and loss formats required by FRS 101

Qualifying entities subject to Schedule 1 to the Regulations have a choice regarding the presentation of the balance sheet and the profit and loss account. These entities can either:

- Comply with the balance sheet and profit and loss format requirements in Section B of Part 1 of Schedule 1 to the Regulations (i.e., use 'statutory formats').

Or

- Adapt one of the balance sheet or profit and loss account formats in Section B of Part 1 of Schedule 1 to the Regulations (i.e., use 'adapted formats') so as:

- (In the case of the balance sheet) to distinguish between current and non-current items in a different way.

And

- Provided that (for both the balance sheet and profit and loss account):
- The information given is at least equivalent to that which would have been required by the use of such format had it not been thus adapted.

And

- The presentation is in accordance with generally accepted accounting principles or practice.

[1 Sch 1A].

The LLP Regulations allow the same choice for LLPs. [1 Sch 1A (LLP)].

The choice to apply the adapted balance sheet and profit and loss formats (i.e., the presentation requirements of adopted IFRS) is available only for those entities applying Schedule 1 to the Regulations or the LLP Regulations. The choice is not available to entities applying Schedule 2 to the Regulations (banking companies) or Schedule 3 to the Regulations (insurance companies).

FRS 101 states that when a qualifying entity chooses to use the adapted formats as described above, it must apply the relevant presentation requirements of adopted IFRS and, in addition, the profit and loss account (whether presented as a component of the statement of comprehensive income, or as a separate statement) must disclose 'profit or loss before taxation'. [FRS 101.AG1(h), FRS 101.AG1(i), FRS 101.AG1(k), FRS 101.AG1(kA), FRS 101.AG1(kB)]. The presentation requirements of adopted IFRS are discussed in the EY publication, International GAAP®

A qualifying entity not permitted or not choosing to apply the adapted formats, [1 Sch 1A(1), 1 Sch 1A(2)], must comply with the balance sheet format requirements and present the components of profit or loss in the statement of comprehensive income (in either the single statement or two statement approach) in accordance with the profit and loss account formats of the CA 2006 (i.e., the statutory formats), instead of the presentation requirements of adopted IFRS.

A qualifying entity must apply, as required by Company Law, either Part 1 *General Rules and Formats* of Schedule 1 to the Regulations; Part 1 *General Rules and Formats* of Schedule 2 to the Regulations; Part 1 *General Rules and Formats* of Schedule 3 to the Regulations; or Part 1 *General Rules and Formats* of Schedule 1 to the LLP Regulations ('the General Rules to the formats'). [FRS 101.AG1(h), FRS 101.AG1(i), FRS 101.AG1(k), FRS 101.AG1(kA), FRS 101.AG1(kB)].

The General Rules to the formats apply to statutory formats. So far as is practicable, the General Rules to the formats (set out in paragraphs 2 to 9A of Section A of Part 1 of Schedule 1 to the Regulations) also apply to the adapted formats. [1 Sch 1A(3)]. There are similar requirements in the LLP Regulations. The General Rules to the formats are discussed in Chapter 6 at 3.4.

When an asset or liability relates to more than one item in the balance sheet, the relationship of such asset or liability to the relevant items must be disclosed either under those items or in the notes to the accounts. [1 Sch 9A]. This requirement in the General Rules to the formats applies to both statutory and adapted formats.

Banking and insurance companies, as well as those entities applying Schedule 1 to the Regulations but choosing not to use the adapted formats, must use the statutory balance sheet and profit and loss account formats set out in Section B of Part 1 of the relevant schedule to the Regulations. The Note on Legal Requirements to FRS 101 confirms that the requirements of adopted IFRS do not apply unless the adapted formats in Schedule 1 to the Regulations (i.e., the option to use the IAS formats) are chosen.

[FRS 101 Appendix II Table 1].

FRS 101 can also be applied by qualifying entities not subject to the Regulations or the LLP Regulations. The requirements in the Application Guidance to FRS 101 apply to all entities not just companies. [FRS 101.5(b)]. A qualifying entity must also ensure it complies with any relevant legal requirements applicable to it. [FRS 101.4A].

How we see it

FRS 102 is more specific than FRS 101 and requires entities to apply the formats included in one of Schedules 1, 2 or 3 to the Regulations or the LLP Regulations (so allowing the choice of statutory or adapted formats where Schedule 1 to the Regulations or the LLP Regulations are applied), except to the extent that these requirements are not permitted by any statutory framework under which such entities report.

In our view, a similar approach is intended under FRS 101.

The required format to be used by a qualifying entity that is not a company or an LLP may be determined by the legal framework governing the financial statements of such entities (see discussion in Chapter 6 at 3.1 on which formats apply to different types of entities). In other cases, management of such entities must apply judgement in determining the most appropriate format in the Regulations or LLP Regulations to use for the circumstances of the entity concerned, where the statutory framework is not prescriptive.

The General Rules to the formats to Schedule 1 to the Regulations state that once a particular format (in Section B of Part 1 to that schedule) for the balance sheet (or profit and loss account) has been adopted for any financial year, the company's directors must use the same format in preparing Companies Act accounts for subsequent financial years, unless in their opinion there are special reasons for a change. Particulars of any such change must be given in a note to the accounts in which the new format is first used, and the reasons for the change must be explained. [1 Sch 2]. Schedule 1 to the Regulations provides a choice of two balance sheet and two profit and loss account statutory formats. There is a similar requirement in the LLP Regulations. There is, however, no choice of statutory formats available in Schedules 2 or 3 of the Regulations.

The above paragraph is discussing a change in the statutory format adopted but, as the paragraph is included in the General Rules to the formats, its requirements apply so far as is practicable where adapted formats are used.

FRS 101 is silent on how an entity would implement a change from a statutory balance sheet and profit and loss account format to an adopted IFRS format (i.e., adapted format) (or *vice versa*) in an accounting period subsequent to adoption of FRS 101.

How we see it

A change from a statutory balance sheet and profit and loss account format to an adapted format, or *vice versa*, is a voluntary change in accounting policy to which IAS 8 applies. Consequently, the change must be applied retrospectively, prior periods must be restated and the disclosures required by paragraph 29 of IAS 8 must be made (as well as the disclosures required by the Regulations described above).

5.1.1 Additional presentation requirements where an entity is using the adapted (IAS 1) balance sheet and profit and loss account formats

The legal appendix to FRS 101 clarifies that an entity applying the adapted balance sheet and profit and loss account formats - see 5.1 above - must apply the relevant presentation requirements of IAS 1, i.e., paragraphs 54 to 76B of IAS 1 or paragraphs 24 and 47 to 82 of IFRS 18, subject to: [FRS 101.A2.9A]

- The disclosure of profit or loss before taxation and the amendment to IFRS 5 Non-current Assets Held for Sale and Discontinued Operations included in paragraph AG1(g) of FRS 101, as set out at 5.4 below.
- And
- Any further disaggregation of the statement of financial position, for example in relation to trade and other receivables and trade and other payables (which may be provided in the notes to the financial statements), that is necessary to meet the requirement to give the equivalent information.

The Note on Legal Requirements does not elaborate what is meant by a 'further disaggregation of the statement of financial position' other than provide the examples above. It reiterates that the option to apply the presentation requirements of adopted IFRS is not available to a qualifying entity applying Schedule 2 or Schedule 3 to the Regulations. [FRS 101.A2.9A].

As discussed at Section 5.1 above, the purpose of permitting adapted formats is to allow an entity to distinguish between current and non-current balance sheet items in a different way to statutory formats provided the information given is at least equivalent to the statutory formats and is in accordance with generally accepted accounting principles or practice.

The presentation requirements of adopted IFRS require an entity to present assets and liabilities in the statement of financial position in order of liquidity instead of a current/non-current basis if presentation in order of liquidity provides information that is reliable and more relevant, [IAS 1.60], or provides a more useful structured summary, [IFRS 18.96].

How we see it

In our view, where adapted formats are applied, the use of a liquidity presentation for assets and liabilities is not prohibited if it provides information that is reliable and more relevant (when IAS 1 is applied) or provides a more useful structured summary (when IFRS 18 is applied). A liquidity presentation can be considered as providing 'equivalent' information to that required by the statutory formats. However, qualifying entities using a liquidity presentation under adapted formats must disclose the amounts expected to be recovered or settled within one year and those expected to be recovered or settled after more than one year, as required by adopted IFRS.

The Regulations (and LLP Regulations) require supplementary information to be given in the notes to the accounts. These disclosure requirements apply where statutory formats or adapted formats are used. One complexity is that the information required sometimes refers to items found in the statutory formats (which may differ to the line items identified where the adapted formats are used). For example, the adapted formats do not refer to fixed assets, creditors: amounts falling due within one year, creditors: amounts falling due after more than one year, investments, land or buildings, or turnover. Therefore, a UK company using adapted formats in Companies Act accounts will need to identify which of its assets, liabilities and revenue streams needs to be included in the required disclosures. While the classification of non-current assets and current assets used in adapted formats differs to the fixed assets and current assets

classification required in statutory formats, the statutory definition of 'fixed assets' (see Chapter 6 at 4.2.2) is relevant for the purposes of disclosures in respect of fixed assets in the Regulations.

5.1.2 Additional presentation requirements needed to comply with IFRS by an entity using the Companies Act balance sheet and profit and loss account formats (statutory formats)

The Note on Legal Requirements to FRS 101 clarifies that for a qualifying entity not permitted or not choosing to apply the adapted (i.e., adopted IFRS) balance sheet or profit and loss account formats - see 5.1 above - the format and presentation requirements of adopted IFRS may conflict with those of Company Law because of the following: [FRS 101.A2.9B]

- Differences in the definition of 'fixed assets' (the term used in the Regulations meaning assets which are intended for use on a continuing basis in the entity's activities) and 'non-current assets' (the term used in adopted IFRS). See Chapter 6 at 4.1.1 and Chapter 6 at 4.2.2.
- Differences in the definition of 'current assets' as the term is used in the Regulations and UK-adopted international accounting standards. See Chapter 6 at 4.1.1 and Chapter 6 at 4.2.2.
- Differences in the definition of 'creditors: amounts falling due within or after more than one year' (the terms used in the Regulations) and 'current and non-current liabilities' (the terms used in UK-adopted international accounting standards). See Chapter 6 at 4.1.2 and Chapter 6 at 4.2.3. Under the CA 2006, a loan is treated as due for repayment on the earliest date on which a lender could require repayment, whilst under UK-adopted international accounting standards the due date is based on when the entity expects to settle the liability or has no unconditional right to defer payment.

And

- The CA 2006 requires presentation of debtors falling due after more than one year within current assets. Under UK-adopted international accounting standards, these items will (usually) be presented in non-current assets. The Note on Legal Requirements to FRS 101 provides further guidance on the presentation of debtors falling due after more than one year (which are shown in current assets) in the statutory formats - see 5.1.2.A below.

The statutory formats for the balance sheet and profit and loss account (and the related notes to the formats that must be followed) in Schedule 1 to the Regulations and the LLP Regulations are discussed in Chapter 6 at 4.2, 4.3 and 5.6.

5.1.2.A Debtors due after more than one year

The statutory balance sheet formats require all debtors to be shown under 'current assets'. However, the Regulations require the amount falling due after more than one year to be shown separately for each item included under debtors. The Note on Legal Requirements to FRS 101 reproduces the consensus of UITF 4 *Presentation of long-term debtors in current assets* that "in most cases it will be satisfactory to disclose the size of debtors due after more than one year in the notes to the accounts. There will be some instances, however, where the amount is so material in the context of the total net current assets that in the absence of disclosure of debtors due after more than one year on the face of the balance sheet readers may misinterpret the accounts. In such circumstances, the amount must be disclosed on the face of the balance sheet within current assets". [FRS 101.A2.10].

This disclosure is only relevant where statutory formats rather than adapted (i.e., adopted IFRS) formats are applied.

5.1.2.B Non-current assets or disposal groups held for sale

IFRS 5 requires an entity to present: [IFRS 5.38]

- A non-current asset classified as held for sale and the assets of a disposal group classified as held for sale separately from other assets in the statement of financial position.
- And
- The liabilities of a disposal group classified as held for sale separately from other liabilities in the statement of financial position.

IAS 1 and IFRS 18 require a single line approach in the balance sheet for "the total of assets classified as held for sale and assets included in disposal groups classified as held for sale in accordance with IFRS 5" and for "liabilities included in disposal groups classified as held for sale in accordance with IFRS 5". Detailed analysis of the components of the assets and liabilities held for sale is required in the notes to the financial statements. [IAS 1.54, IFRS 18.103].

However, a qualifying entity that has a disposal group classified as held for sale must ensure that its presentation of the disposal group, in accordance with IFRS 5, meets Company Law requirements. The Note on Legal Requirements to FRS 101 states that a single line presentation of non-current assets (or liabilities) held for sale will usually not meet Company Law requirements when the Company Law formats are applied. Therefore, additional disaggregation must be provided either in the statement of financial position (for example by disaggregating each relevant line item or by presenting the information in a columnar format) or in the notes. When the items are material, this must be on the face of the statement of financial position. [FRS 101.A2.10A]. This conflict between the Regulations and IFRS arises because the statutory formats included in the Regulations (and LLP Regulations) do not otherwise permit the aggregation of different types of assets and liabilities in this way. One practical solution could be to present the disposal group aggregations as a memorandum on the statement of financial position cross-referenced to the detailed analysis in the notes.

5.2 Notes to the financial statements

Schedule 1 to the Regulations (and its equivalents in Schedule 2 and Schedule 3 and the LLP Regulations) require the notes to the financial statements to be presented in the order in which, where relevant, the items to which they relate are presented in the statement of financial position and the income statement. [1 Sch 42(2)]. A qualifying entity preparing financial statements in accordance with FRS 101 must have regard to this requirement when determining a systematic manner for the presentation of its notes to the financial statements in accordance with adopted IFRS. [FRS 101.A2.11A].

5.2.1 Particulars of turnover

Schedule 1 to the Regulations (and its equivalents in Schedule 2 and Schedule 3 and the LLP Regulations) require particulars of turnover to be disclosed, including the amount of turnover attributable to each class of business carried on by the company. Where relevant, turnover attributable to different markets must also be disclosed. Although FRS 101 provides an exemption from paragraph 114 of IFRS 15 *Revenue from Contracts with Customers*, the requirements of the Regulations must still be complied with. [FRS 101.A2.11B].

5.3 Extraordinary items

IFRS has no concept of 'extraordinary items'. The concept of extraordinary items has also been removed for entities applying Schedule 1 to the Regulations or the LLP Regulations.

Consequently, only entities applying Schedule 2 or Schedule 3 to the Regulations (i.e., banking companies and insurance companies) are still required to present extraordinary items separately in the profit and loss account. However, we would expect this requirement to have no practical impact as we would not expect to see any extraordinary items under FRS 101. The Note on Legal Requirements to FRS 101 states that "entities should note that extraordinary items are extremely rare as they relate to highly abnormal events or transactions". [FRS 101.A2.11].

Ordinary activities (for entities reporting under Schedule 2 or Schedule 3 to the Regulations) are defined as "any activities which are undertaken by a reporting entity as part of its business and such related activities in which the reporting entity engages in furtherance of, incidental to, or arising from, these activities. Ordinary activities include any effects on the reporting entity of any event in the various environments in which it operates, including the political, regulatory, economic and geographical environments, irrespective of the frequency or unusual nature of the events". [FRS 101.AG1(j)].

Extraordinary activities are "material items possessing a high degree of abnormality which arise from events or transactions that fall outside the ordinary activities of the reporting entity and which are not expected to recur. They do not include items occurring within the entity's ordinary activities that are required to be disclosed by IAS 1.97 or IFRS 18.42, nor do they include prior period items merely because they relate to a prior period". [FRS 101.AG1(j)].

5.4 Presentation of discontinued operations

FRS 101 amends IFRS 5 to: [FRS 101.AG1(g)]

- Remove the option to present the analysis of discontinued operations into its component parts (i.e., revenue, expenses, pre-tax profit, related income tax expense, gain or loss on remeasurement to fair value less costs to sell or on disposal of the discontinued operation and the related income tax expense) in the notes to the financial statements. This analysis must be presented on the face of the statement of comprehensive income.

- Require the analysis above to be shown on the face of the statement of comprehensive income in a discontinued operations category and displayed in a column.
- Require a total column (i.e., the sum of continuing and discontinued operations) to be presented on the face of the statement of comprehensive income.

And

- Remove the option to present income from continuing operations and from discontinued operations attributable to owners of the parent in the notes to the financial statements. This analysis must be presented on the face of the statement of comprehensive income.

This amended presentation is required for all entities applying FRS 101, even those who have chosen to apply the adapted (i.e., adopted IFRS) balance sheet and profit and loss account presentation formats (see 5.1 above). This separate presentation of discontinued operations will also be required on the face of the income statement when IFRS 18 is applied.

In substance, this means that the single line presentation of discontinued operations in adopted IFRS is replaced by a three-column approach with the detailed analysis of the results from the discontinued operation shown on the face of the statement of comprehensive income. This is shown in the following Illustration which uses the Schedule 1 statutory formats:

Illustration 5-1: Example of presentation of discontinued operations (statutory format)

Statement of comprehensive income

For the year ended 31 December 20X6

	Continuing operations	Dis- continued operations	Total	Continuing operations	Dis- continued operations	Total
	20X6	20X6	20X6	20X5	20X5	20X5
	£000	£000	£000	£000	£000	£000
Turnover	4,200	1,232	5,432	3,201	1,500	4,701
Cost of Sales	(2,591)	(1,104)	(3,695)	(2,281)	(1,430)	(3,711)
Gross profit	1,609	128	1,737	920	70	990
Administrative expenses	(452)	(110)	(562)	(418)	(120)	(538)
Other operating income	212	-	212	198	-	198
Operating profit	1,369	18	1,387	700	(50)	650
Profit on disposal of operations		301	301		-	-
Interest receivable and similar income	14	-	14	16	-	16
Interest payable and similar expenses	(208)	-	(208)	(208)	-	(208)
Profit before tax	1,175	319	1,494	508	(50)	458
Tax on profit or loss	(390)	(4)	(394)	(261)	3	(258)
Profit after taxation and profit for the financial year	785	315	1,100	247	(47)	200
Other comprehensive income						
Remeasurement changes on defined benefit pension plans			(108)			(68)
Deferred tax movement relating to remeasurement changes			28			18
Total Comprehensive income for the year			1,020			150

6 Disclosure exemptions for qualifying entities

Qualifying entities may take advantage in their financial statements of a number of disclosure exemptions from adopted IFRS (see 6.1 below).

Qualifying entities that are financial institutions, as defined by FRS 101, are not entitled to some disclosure exemptions (see 6.4 below).

Some, but not all, of these exemptions are conditional on 'equivalent' disclosures in the consolidated financial statements of the group in which the entity is consolidated (see 6.2 below).

In addition, disclosures required by the Regulations (or the LLP Regulations) for certain financial instruments that are held at fair value must be made even if the qualifying entity takes advantage of the disclosure exemptions from the disclosure requirements of IFRS 7 *Financial Instruments: Disclosures* and/or IFRS 13 *Fair Value Measurement* (see 6.3 below). [FRS 101.A2.5B].

6.1 Disclosure exemptions before IFRS 18 adoption

Qualifying entities are permitted the following disclosure exemptions from adopted IFRS when the relevant standard is applied: [FRS 101.7, FRS 101.8]

- The requirement of paragraphs 6 and 21 of IFRS 1 to present an opening statement of financial position at the date of transition and related notes on first-time adoption of FRS 101 (see 3.4 above).
- The requirements of paragraphs 45(b) and 46 to 52 of IFRS 2 *Share-based Payments* provided that for a qualifying entity that is:
 - A subsidiary, the share-based payment arrangement concerns equity instruments of another group entity.
 - An ultimate parent, the share-based payment arrangement concerns its own equity instruments and its separate financial statements are presented alongside the consolidated financial statements of the group.

and, in both cases, provided that equivalent disclosures are included in the consolidated financial statements of the group in which the entity is consolidated (see 6.1.1 below).

- The requirements of paragraphs 62, B64(d), (e), (g), (h), (j) to (m), n(ii), (o)(ii), (p), (q)(ii), B66 and B67 of IFRS 3 provided that equivalent disclosures are included in the consolidated financial statements of the group in which the entity is consolidated (see 6.1.2 below).
- The requirements of paragraph 33(c) of IFRS 5 (see 6.1.3 below).
- The requirements of paragraph 24(b) of IFRS 6 to disclose the operating and investing cash flows arising from the exploration for and evaluation of mineral resources (see 6.1.4 below).
- The requirements of IFRS 7 provided that equivalent disclosures are included in the financial statements of the group in which the entity is consolidated (see 6.1.5A below). However, entities which are subject to the CA 2006 and the Regulations (or the LLP Regulations) are legally required to provide disclosures related to financial instruments including those measured at fair value (see 6.3 and 7.2 below). Qualifying entities that are financial institutions do not receive this exemption and must apply the disclosure requirements of IFRS 7 in full (see 6.4 below).
- The requirements of paragraphs 91 to 99 of IFRS 13 provided that equivalent disclosures are included in the consolidated financial statements of the group in which the entity is consolidated (see 6.1.6 below). However, entities which are subject to the CA 2006 and the Regulations (or the LLP Regulations) are legally required to provide disclosures related to financial instruments including those measured at fair value (see 6.3 and 7.2 below). Qualifying entities that are financial institutions can only take advantage of the exemptions to the extent that they apply to assets and liabilities other than financial instruments (see 6.4 below).
- The requirements of the second sentence of paragraph 110 and paragraphs 113(a), 114, 115, 118, 119(a) to (c), 120 to 127 and 129 of IFRS 15 (see 6.1.7 below).
- The requirements of paragraph 52, the second sentence of paragraph 89, and paragraphs 90, 91 and 93 of IFRS 16 as well as the requirements of paragraph 58 of IFRS 16, provided that the disclosure of details of indebtedness required by paragraph 61(1) of Schedule 1 to the Regulations is presented separately for lease liabilities and other liabilities, and in total (see 6.1.8 below).

- The requirement in paragraph 38 of IAS 1 to present comparative information in respect of:
 - Paragraph 53(a), (h) and (j) of IFRS 16
 - Paragraph 79(a)(iv) of IAS 1
 - Paragraph 73(e) of IAS 16
 - Paragraph 118(e) of IAS 38 *Intangible Assets*
 - Paragraphs 76 and 79(d) of IAS 40 *Investment Property*
 And
 - Paragraph 50 of IAS 41 *Agriculture* (see 6.1.9 below).
 - The requirements of paragraphs 10(d), 10(f), 16, 38A to 38D, 40A to 40D, 111 and 134 to 136 of IAS 1 (see 6.1.10A below). However, qualifying entities that are financial institutions are not permitted to take advantage of the exemptions in paragraphs 134 to 136 of IAS 1 (see 6.4 below).
 - The requirements of:
 - Paragraphs 1 to 44E, 44H(b)(ii) and 45 to 63 of IAS 7.
 And
 - Paragraphs 44F, 44G, 44(H)(a), 44H(b)(i), 44H(b)(iii) and 44H(c) of IAS 7 provided that equivalent disclosures are included in the consolidated financial statements in which the qualifying entity is included (see 6.1.11A below).
 - The requirements of paragraphs 30 and 31 of IAS 8 (see 6.1.12A below).
 - The requirements of paragraphs 88C and 88D of IAS 12, provided that equivalent disclosures are included in the consolidated financial statements of the group in which the entity is consolidated (see 6.1.13 below).
 - The requirements of paragraph 74A(b) of IAS 16 (see 6.1.14 below).
 - The requirements of paragraphs 17 and 18A of IAS 24 *Related Party Disclosures* and the requirements in IAS 24 to disclose related party transactions entered into between two or more members of a group, provided that any subsidiary which is a party to the transaction is wholly owned by such a member (see 6.1.15 below).
- And
- The requirements of paragraphs 130(f)(ii), 130(f)(iii), 134(d) to 134(f) and 135(c) to 135(e) of IAS 36 *Impairment of Assets* provided that equivalent disclosures are included in the consolidated financial statements of the group in which the entity is consolidated (see 6.1.16 below).

When a paragraph within a given standard cross-refers to the requirements of an exempted paragraph listed above, the qualifying entity is nevertheless permitted to take the exemption in the exempted paragraph. [FRS 101.8A].

Use of the disclosure exemptions is conditional on the following disclosures in the notes to the financial statements: [FRS 101.5(c)]

- A brief narrative summary of the exemptions adopted.
- And
- The name of the parent of the group in whose consolidated financial statements the reporting entity is consolidated and from where those financial statements may be obtained (i.e., the parent identified in the term 'qualifying entity').

There is no requirement to list all of the disclosure exemptions in detail. Reporting entities can also choose to apply the disclosure exemptions on a selective basis. This may be necessary, for example, where not all of the relevant 'equivalent' disclosures are made in the consolidated financial statements of the parent on the grounds of materiality (see 6.2 below).

Each of the disclosure exemptions listed above is discussed in 6.1.1 to 6.1.16 below.

6.1.A Disclosure exemptions after IFRS 18 adoption

Qualifying entities are permitted the following disclosure exemptions from adopted IFRS from when the relevant standard is applied:

- The requirement of paragraphs 6 and 21 of IFRS 1 to present an opening statement of financial position at the date of transition and related notes on first-time adoption of FRS 101 (see 3.4 above).

- The requirements of paragraphs 45(b) and 46 to 52 of IFRS 2 *Share-based Payments* provided that for a qualifying entity that is:
 - A subsidiary, the share-based payment arrangement concerns equity instruments of another group entity.
 - An ultimate parent, the share-based payment arrangement concerns its own equity instruments and its separate financial statements are presented alongside the consolidated financial statements of the group.

and, in both cases, provided that equivalent disclosures are included in the consolidated financial statements of the group in which the entity is consolidated (see 6.1.1 below);

- The requirements of paragraphs 62, B64(d), (e), (g), (h), (j) to (m), n(ii), (o)(ii), (p), (q)(ii), B66 and B67 of IFRS 3 provided that equivalent disclosures are included in the consolidated financial statements of the group in which the entity is consolidated (see 6.1.2 below).
- The requirements of paragraph 33(c) of IFRS 5 (see 6.1.3 below).
- The requirements of paragraph 24(b) of IFRS 6 to disclose the operating and investing cash flows arising from the exploration for and evaluation of mineral resources (see 6.1.4 below).
- The requirements of paragraphs 1 to 19 and 20 to 45 of IFRS 7 provided that equivalent disclosures are included in the financial statements of the group in which the entity is consolidated (see 6.1.5B below). However, entities which are subject to the CA 2006 and the Regulations (or the LLP Regulations) are legally required to provide disclosures related to financial instruments including those measured at fair value (see 6.3 and 7.2 below). Qualifying entities that are financial institutions do not receive this exemption and must apply the disclosure requirements of IFRS 7 in full (see 6.4 below).
- The requirements of paragraphs 91 to 99 of IFRS 13 provided that equivalent disclosures are included in the consolidated financial statements of the group in which the entity is consolidated (see 6.1.6 below). However, entities which are subject to the CA 2006 and the Regulations (or the LLP Regulations) are legally required to provide disclosures related to financial instruments including those measured at fair value (see 6.3 and 7.2 below). Qualifying entities that are financial institutions can only take advantage of the exemptions to the extent that they apply to assets and liabilities other than financial instruments (see 6.4 below).
- The requirements of the second sentence of paragraph 110 and paragraphs 113(a), 114, 115, 118, 119(a) to (c), 120 to 127 and 129 of IFRS 15 (see 6.1.7 below).
- The requirements of paragraph 52, the second sentence of paragraph 89, and paragraphs 90, 91 and 93 of IFRS 16 as well as the requirements of paragraph 58 of IFRS 16, provided that the disclosure of details of indebtedness required by paragraph 61(1) of Schedule 1 to the Regulations is presented separately for lease liabilities and other liabilities, and in total (see 6.1.8 below).
- The requirement in paragraph 31 of IFRS 18 to present comparative information in respect of:
 - Paragraph 53(a), (h) and (j) of IFRS 16
 - Paragraph 130(a)(iv) of IFRS 18
 - Paragraph 73(e) of IAS 16
 - Paragraph 118(e) of IAS 38 *Intangible Assets*
 - Paragraphs 76 and 79(d) of IAS 40 *Investment Property*
 - And
 - Paragraph 50 of IAS 41 *Agriculture* (see 6.1.9 below).
- The requirements of paragraphs 10(d) and (g), 22(e), 32, 37 to 40, 83(b), 121 to 125, 126 to 129 and B13 to B15, and the last two sentences of paragraph 3, of IFRS 18 (see 6.1.10B below). However, qualifying entities that are financial institutions are not permitted to take advantage of the exemptions in paragraphs 126 to 129 of IFRS 18 (see 6.4 below).
- The requirements of:
 - Paragraphs 1 to 44E, 44H(b)(ii) and 45 to 65 of IAS 7.
 - And
 - Paragraphs 44F, 44G, 44H(a), 44H(b)(i), 44H(b)(iii) and 44H(c) of IAS 7 provided that equivalent disclosures are included in the consolidated financial statements in which the qualifying entity is included (see 6.1.11B below).
- The requirements of paragraphs 6B, 30 and 31 of IAS 8 *Basis of Preparation of Financial Statements* (see 6.1.12B below).

- The requirements of paragraphs 88C and 88D of IAS 12, provided that equivalent disclosures are included in the consolidated financial statements of the group in which the entity is consolidated (see 6.1.13 below).
- The requirements of paragraph 74A(b) of IAS 16 (see 6.1.14 below).
- The requirements of paragraphs 17 and 18A of IAS 24 *Related Party Disclosures* and the requirements in IAS 24 to disclose related party transactions entered into between two or more members of a group, provided that any subsidiary which is a party to the transaction is wholly owned by such a member (see 6.1.15 below).
- The requirements of paragraphs 130(f)(ii), 130(f)(iii), 134(d) to 134(f) and 135(c) to 135(e) of IAS 36 *Impairment of Assets* provided that equivalent disclosures are included in the consolidated financial statements of the group in which the entity is consolidated (see 6.1.16 below).

And

- A qualifying entity providing reconciliations of items of 'fixed assets', in accordance with paragraph 51 of Schedule 1 to the Regulations, need not present these reconciliations for prior periods.

When a paragraph within a given standard cross-refers to the requirements of an exempted paragraph listed above, the qualifying entity is nevertheless permitted to take the exemption in the exempted paragraph. [FRS 101.8A].

Use of the disclosure exemptions is conditional on the following disclosures in the notes to the financial statements: [FRS 101.5(c)]

- A brief narrative summary of the exemptions adopted.

And

- The name of the parent of the group in whose consolidated financial statements the reporting entity is consolidated and from where those financial statements may be obtained (i.e., the parent identified in the term 'qualifying entity').

There is no requirement to list all of the disclosure exemptions in detail. Reporting entities can also choose to apply the disclosure exemptions on a selective basis. This may be necessary, for example, where not all of the relevant 'equivalent' disclosures are made in the consolidated financial statements of the parent on the grounds of materiality (see 6.2 below).

Each of the disclosure exemptions listed above is discussed in 6.1.1 to 6.1.16 below.

6.1.1 Share-based Payment (IFRS 2)

The disclosure exemption eliminates all IFRS 2 disclosures apart from those required by paragraphs 44 and 45(a), 45(c) and 45(d). In summary, this reduces the specific minimum disclosure requirements of IFRS 2 to:

- A description of each type of share-based payment arrangement that existed during the reporting period, including general terms and conditions, the maximum terms of options granted, and the method of settlement (e.g., whether in cash or equity).
- The weighted average share price at the date of exercise for share options exercised during the reporting period (or the weighted average share price during the period, if options were exercised on a regular basis throughout the period).

And

- The range of exercise prices and weighted average remaining contractual life for share options outstanding at the end of the reporting period.

In addition, an entity is still subject to the general disclosure objective of IFRS 2 to disclose information that enables users of the financial statements to understand the nature and extent of share-based payment arrangements that existed during the period which may require additional disclosures beyond those specially required above.

6.1.2 Business Combinations (IFRS 3)

In summary, this disclosure exemption eliminates the qualitative disclosures required for a business combination. However, a number of factual or quantitative disclosures are still required for each business combination including:

- The name and description of the acquiree, acquisition date and percentage of voting equity interests acquired.
- The acquisition-date fair value of total consideration transferred split by major class of consideration.

- The amount recognised at the acquisition date for each major class of assets acquired and liabilities assumed.
 - The amount of any negative goodwill recognised and the line item in the statement of comprehensive income in which it is recognised.
 - The amount of any non-controlling interest recognised and the measurement basis for the amount (although there would be no non-controlling interests for acquisitions in individual financial statements).
 - The amounts of revenue and profit or loss of the acquiree since acquisition date included in comprehensive income for the period.
- And
- The information above (except for the information in the first bullet) in aggregate for individually immaterial business combinations that are collectively material.

In addition, an acquirer is still subject to the general requirements of paragraphs 59 to 61 of IFRS 3 which may require additional disclosures beyond those specially required. These require disclosure of information that enables users of the financial statements to evaluate the nature and effect of a business combination that occurs, either during the current reporting period or at the end of the financial reporting period but before the financial statements are authorised for issue. These paragraphs also require disclosure of information that enables users of the financial statements to evaluate the financial effects of adjustments recognised in the current reporting period relating to business combinations that occurred in the current or previous periods.

6.1.3 Discontinued Operations (IFRS 5)

This exemption eliminates the requirement to disclose cash flows attributable to discontinued operations. The FRC considered that disclosure exemptions linked to the statement of cash flows must be based on the same conditions as the exemption from the preparation of the statement itself. Consequently, the exemption from the requirement of paragraph 33(c) of IFRS 5 was amended to extend it to any qualifying entity. [FRS 101.BC67C].

6.1.4 Exploration for and Evaluation of Mineral Resources (IFRS 6)

This exemption eliminates the requirement to disclose operating and investing cash flows arising from the exploration for and evaluation of mineral resources. However, the entity must disclose the amounts of assets, liabilities, income and expense as required by paragraph 24(b) of IFRS 6.

The FRC considered that the preparation of disclosures related to the statement of cash flows could lead to costs that are similar to those associated with the preparation of the statement itself. Therefore, the FRC concluded that exemptions from the disclosure of cash flows required by adopted IFRS are necessary to ensure cost savings that arise from the exemption from the requirement of IAS 7. Consequently, an exemption from the requirement of paragraph 24(b) of IFRS 6 was introduced (see 6.1.4 above). [FRS 101.BC67B].

6.1.5.A Financial Instruments: Disclosures (IFRS 7) before IFRS 18 endorsement

This exemption removes all of the disclosure requirements of IFRS 7. However, notwithstanding this exemption, some IFRS 7 disclosures are still required for certain financial instruments measured at fair value (see 6.3 below). In addition, some specific financial instruments disclosures are required by the Regulations or the LLP Regulations (see 7.2 below).

Financial institutions are not permitted to use this exemption (see 6.4 below).

6.1.5.B Financial Instruments: Disclosures (IFRS 7) after IFRS 18 endorsement

This exemption removes all the disclosure requirements of IFRS 7, except the disclosure requirements in paragraphs 19A and 19B. However, notwithstanding this exemption, some IFRS 7 disclosures are still required for certain financial instruments measured at fair value (see 6.3 below). In addition, some specific financial instruments disclosures are required by the Regulations or the LLP Regulations (see 7.2 below).

Financial institutions are not permitted to use this exemption (see 6.4 below).

IFRS 18 has moved some of the disclosure requirements about instruments classified as equity from IAS 1 to paragraphs 19A and 19B of IFRS 7. The FRC consider that affected qualifying entities are already providing disclosures required by those paragraphs and the information could be useful for users of financial statements that hold such instruments. Therefore, exemptions to remove the disclosure requirements of those paragraphs are not introduced by the amendments to FRS 101 Reduced Disclosure Framework - 2024/25 cycle.

6.1.6 Fair Value Measurement (IFRS 13)

This exemption removes all disclosure requirements of IFRS 13. However, notwithstanding this exemption, some IFRS 13 disclosures are still required for certain financial instruments measured at fair value (see 6.3 below). In addition, specific disclosures in respect of the fair value of stocks, financial instruments, investment property and living animals and plants carried at fair value are required by the Regulations (see 6.3 and 7.2 below).

Financial institutions are not permitted to use this disclosure exemption in respect of financial instruments. However, they can use this exemption in respect of fair value disclosures of non-financial assets and liabilities (see 6.4 below).

6.1.7 Revenue from Contracts with Customers (IFRS 15)

The intention of these disclosure exemptions is to confine the revenue disclosures to those that the FRC consider would be of relevance to a provider of credit to a qualifying entity (identified as being the likely external users of a qualifying entity's financial statements). That is, information supporting the statement of financial position rather than the income statement. [FRS 101.BC48]. Hence, exemptions are given from the following disclosures:

- The disclosure objectives (paragraph 110).
- Revenue recognised from contracts with customers (paragraph 113(a)).
- Disaggregation of revenue (paragraph 114).
- Disclosure of the relationship between disaggregated revenue and revenue information disclosed for each reportable segment, if IFRS 8 *Operating Segments* is applied (paragraph 115).
- A qualitative and quantitative explanation of significant changes in contract assets and contract liabilities during the reporting period (paragraph 118).
- Information about satisfying performance obligations, significant payment terms and the nature of goods and services transferred (paragraphs 119(a), 119(b) and 119(c)).
- Information about allocating the transaction price to performance obligations (paragraphs 120 to 122).
- Significant judgements made in applying IFRS 15 (paragraph 123).
- The methods used to recognise revenue satisfied over time and, for performance obligations satisfied at a point in time, the significant judgements in evaluating when a customer obtains control (paragraphs 124 and 125).
- Information about the methods, inputs and assumptions used for determining the transaction price, assessing whether the estimate of variable consideration is constrained, allocating the transaction price, and measuring obligations for returns, refunds and other similar obligations (paragraph 126).
- Judgements made in determining costs to obtain and fulfil a contract with a customer, and the method used to determine amortisation of those costs (paragraph 127).

And

- The use of any practical expedients concerning the existence of significant financing components or the incremental costs of obtaining a contract (paragraph 129).

Qualifying entities are still required to make the following specific disclosures:

- Impairment losses on receivables or contract assets arising from an entity's contracts with customers, to be disclosed separately from impairment losses on other contracts (paragraph 113(b)).
- The opening and closing balances of receivables, contract assets and contract liabilities from contracts with customers (paragraph 116(a)).
- Revenue recognised in the reporting period included in the contract liability at the beginning of the period (paragraph 116(b)).
- Revenue recognised in the reporting period from performance obligations satisfied or partially satisfied in prior periods (paragraph 116(c)).

- An explanation (which may use qualitative information) as to how the timing of satisfaction of performance obligations relates to the typical timing of payment and the effect that those factors have on the contract asset and liability balances (paragraph 117).
- A description of obligations for return, refunds and other similar obligations and types of warranties and related obligations (paragraph 119(d)-(e)).

And

- The closing balances of assets recognised from the costs incurred to obtain or fulfil a contract by main category of asset and the amount of amortisation and impairment in the reporting period (paragraph 128).

Qualifying entities are also still required to make the following disclosure requirements:

- Company Law requirements relating to disaggregation of turnover (see 5.2.1 above).

And

- The requirements of adopted IFRS related to judgements having a significant effect on the amounts recognised in the entity's financial statements. *[FRS 101.BC49]*.

The Basis for Conclusions also clarifies that, for the avoidance of doubt, although paragraph 117 of IFRS 15 (from which a qualifying entity is not exempt) cross-refers to paragraph 119, it is not necessary to comply with paragraph 119 in order to meet the requirements of paragraph 117. *[FRS 101.8A, FRS 101.BC50]*.

6.1.8 Leases (IFRS 16)

The intention of the disclosure exemptions for lessors is to provide similar disclosure exemptions to those given from disclosures in IFRS 15. *[FRS 101.BC61]*. The disclosure exemptions are as follows:

- The requirement for a lessee to provide all lease disclosures in a single note or separate section in its financial statements (paragraph 52).
- A lessee's maturity analysis of lease liabilities, separately from that of other financial liabilities (paragraph 58) provided that the disclosure of details of indebtedness required by paragraph 61(1) of Schedule 1 to the Regulations is presented separately for lease liabilities and other liabilities, and in total.
- The sentence that states that paragraphs 90 to 97 specify requirements on how to meet the disclosure objective for lessors (second sentence of paragraph 89). Some of these disclosures are not required.
- A lessor's lease income, finance income and selling profit/loss disclosures (paragraphs 90 to 91).

And

- A qualitative and quantitative explanation of the significant changes in the carrying amount of the net investment in finance leases (paragraph 93).

The exemption from the requirement of a lessee to provide all lease disclosures in a single note (or separate section in the financial statements) is provided because the FRC consider that it would result in unnecessary additional work that would provide minimal additional benefits to the users of the financial statements. This is because paragraph 42(2) of Schedule 1 to the Regulations (and its equivalents in Schedule 2 and Schedule 3 to the Regulations and the LLP Regulations) require entities to present the notes to the accounts in the order in which, where relevant, the items to which they relate are presented in the balance sheet and in the profit and loss account. *[FRS 101.BC52, FRS 101.BC53, FRS 101.BC54]*.

The exemption from the requirement for lessees to disclose a maturity analysis of lease liabilities is provided because FRS 101 provides an exemption for non-financial institutions from the maturity analysis requirements of IFRS 7 for financial liabilities (provided that equivalent disclosures are included in the consolidated financial statements of the group in which the qualifying entity is included). However, this exemption is conditional on an entity providing the Company Law disclosures about details of indebtedness separately for lease liabilities and other liabilities, and in total. This is because it was considered that users would find separate disclosures of lease liabilities useful. *[FRS 101.BC55, FRS 101.BC56, FRS 101.BC57, FRS 101.BC58, FRS 101.BC59]*.

An exemption from paragraphs 94 and 97 of IFRS 16 (which require lessors to provide a maturity analysis of finance and operating lease receivables) was not introduced as no equivalent requirements exist under Company Law and the FRC consider that these maturity analyses provide useful information to users about the lessor's liquidity and solvency. *[FRS 101.BC60]*. Apart from the exemptions above, lessees and lessors are subject to the detailed disclosure requirements of IFRS 16.

6.1.9 Comparatives

This exemption eliminates the requirement for comparatives to be presented for reconciliations of:

- The carrying amount of right-of-use assets by class of underlying assets at the beginning and end of the current period (IFRS 16).
- Outstanding shares at the beginning and end of the current period (IAS 1/IFRS 18).
- The carrying amount of property, plant and equipment at the beginning and end of the current period (IAS 16).
- The carrying amount of intangible assets at the beginning and end of the current period (IAS 38).
- The carrying amount of investment property held at either fair value or cost at the beginning and end of the current period (IAS 40).

And

- The carrying amount of biological assets at the beginning and end of the current period (IAS 41).

6.1.10.A Presentation (IAS 1)

This exemption removes:

- The requirement to present a cash flow statement (paragraphs 10(d) and 111 - see 6.1.11 below).
- The requirement to present a statement of financial position and related notes at the beginning of the earliest comparative period (or third balance sheet) whenever an entity applies an accounting policy retrospectively, makes a retrospective restatement, or when it reclassifies items in its financial statements (paragraph 10(f) and paragraphs 40A-40D).
- The requirement to make an explicit statement of compliance with IFRS. Indeed, FRS 101 prohibits such a statement of compliance and an FRS 101 statement of compliance is required instead (paragraph 16 - see 1.3 above).
- The requirements to present two primary statements as a minimum, information about narrative information in previous reporting periods relevant to understanding the current period's financial statements, and the suggestion that entities may present additional comparative information (paragraphs 38A-38D).

And

- The requirement to disclose information about capital and how it is managed (paragraphs 134-136).

Financial institutions are not permitted to use the exemption in respect of the disclosure of information about capital and how it is managed. This is because financial institutions are usually subject to externally imposed capital requirements.

6.1.10.B Presentation (IFRS 18)

This exemption removes:

- The requirement to present a cash flow statement (paragraphs 10(d), 22(e) and the last two sentences of paragraph 3)- see 6.1.11 below).
- The requirement to present a statement of financial position and related notes at the beginning of the earliest comparative period (or third balance sheet) whenever an entity applies an accounting policy retrospectively, makes a retrospective restatement, or when it reclassifies items in its financial statements (paragraphs 10(g) and 37 to 40).
- The requirements to present two primary statements as a minimum, information about narrative information in previous reporting periods relevant to understanding the current period's financial statements, and the suggestion that entities may present additional comparative information (paragraphs 32 and B13 to B15).
- The requirements to disclose information about the disaggregation of expenses in the operating category and outside the operating category (paragraph 83(b)).
- The requirements to disclose information about management-defined performance measures (paragraphs 121 to 125).

And

- The requirement to disclose information about capital and how it is managed (paragraphs 126 to 129 of IFRS 18).

Financial institutions are not permitted to use the exemption in respect of the disclosure of information about capital and how it is managed. This is because financial institutions are usually subject to externally imposed capital requirements.

6.1.11.A Statement of Cash Flows (IAS 7) before IFRS 18 amendments

The exemption removes:

- The requirement for a cash flow statement for any qualifying entity (paragraphs 1 to 44E and 45 to 63).
- The requirement to disclose information about an entity's supplier finance arrangements that enables users of financial statements to assess the effects of those arrangements on its liabilities and cash flows and on its exposure to liquidity risk (paragraphs 44F, 44G, 44H(a), 44H(b)(iii) and 44H(c)), provided that equivalent disclosures are included in the consolidated financial statements in which the qualifying entity is included.

And

- The requirement to disclose the carrying amounts, and associated line items presented in the statement of financial position, of the financial liabilities that are part of a supplier finance arrangement, for which suppliers have already received payment from the finance providers, as at the beginning and end of the reporting period, for any qualifying entity (paragraph 44H(b)(ii)).

The exemption to disclose information about supplier finance arrangement is contingent on equivalent disclosures in the consolidated financial statements in which the qualifying entity is included (except for paragraph 44H(b)(ii) which is applicable to all qualifying entity). This is because the FRC consider that this information is likely to be useful to users of the financial statements. [FRS 101.BC67CZB].

6.1.11.B Statement of Cash Flows (IAS 7) after IFRS 18 adoption

The exemption removes:

- The requirement for a cash flow statement for any qualifying entity (paragraphs 1 to 44E and 45 to 63).
- The requirement to disclose information about an entity's supplier finance arrangements that enables users of financial statements to assess the effects of those arrangements on its liabilities and cash flows and on its exposure to liquidity risk (paragraphs 44F, 44G, 44H(a), 44H(b)(iii) and 44H(c)), provided that equivalent disclosures are included in the consolidated financial statements in which the qualifying entity is included.

- The requirement to disclose the carrying amounts, and associated line items presented in the statement of financial position, of the financial liabilities that are part of a supplier finance arrangement, for which suppliers have already received payment from the finance providers, as at the beginning and end of the reporting period, for any qualifying entity (paragraph 44H(b)(ii)).

And

- The requirement to apply the amendments made to IAS 7 by IFRS 18 when qualifying entities apply IFRS 18 and amendments made by (paragraph 64).

The exemption to disclose information about supplier finance arrangements is contingent on equivalent disclosures in the consolidated financial statements in which the qualifying entity is included (except for paragraph 44H(b)(ii) which is applicable to all qualifying entity). This is because the FRC consider that this information is likely to be useful to users of the financial statements. [FRS 101.BC67CZB].

6.1.12.A Standards Issued but not Effective (IAS 8) before IFRS 18 adoption

This exemption removes the requirement to provide information about the impact of IFRSs that have been issued but are not yet effective.

6.1.12.B Basis for Preparation of Financial Statements (IAS 8) after IFRS 18 adoption

This exemption removes the requirement to provide information about the impact of IFRSs that have been issued but are not yet effective.

IFRS 18 updates the title of IAS 8 to *IAS 8 Basis of Preparation of Financial Statements* and also introduces a new paragraph 6B which requires an entity to make an explicit and unreserved statement of compliance to IFRS Accounting Standards in the notes (previously in paragraph 16 of IAS 1). The amendments to FRS 101 Reduced Disclosure Framework - 2024/25 cycle introduces an additional exemption to remove the requirement to make this disclosure when IFRS 18 is adopted for use in the UK (see 1.3 above).

6.1.13 Income Taxes (IAS 12)

This exemption removes the requirement to disclose qualitative and quantitative information about its exposure to Pillar Two income taxes at the end of the reporting period, provided that equivalent disclosures are included in the consolidated financial statements of the group in which the entity is consolidated.

The exemption from the requirements of paragraphs 88C and 88D of IAS 12 was introduced as the FRC consider that top-up taxes are determined on a group basis and hence useful information about the exposure to paying top-up taxes can be obtained from consolidated financial statements of the group in which the qualifying entity is included. [FRS 101.BC67CB].

6.1.14 Property, Plant and Equipment (IAS 16)

This exemption eliminates the requirement to disclose the amounts of proceeds and costs included in profit or loss that relate to items produced that are not an output of the entity's ordinary activities, and in which line items such proceeds and costs are presented in the statement of comprehensive income.

6.1.15 Related Party Transactions (IAS 24)

The exemptions in respect of IAS 24 remove:

- The requirement to disclose information about key management personnel compensation (paragraphs 17).
 - The requirement to disclose amounts incurred for the provision of key management personnel services that are provided by a separate management entity (paragraph 18A).
- And
- The requirements to disclose related party transactions between two or more members of a group, provided that any subsidiary which is a party to the transaction is wholly owned by such a member.

The last disclosure exemption above refers to transactions only and not to outstanding balances. As explained in the Basis for Conclusions to FRS 102, this is because there is a separate legal requirement in relation to the format of the balance sheet which requires disclosure of outstanding balances in aggregate for group undertakings and, separately, for undertakings in which the company has a participating interest. As a result, it is not possible to provide an effective exemption from the disclosure of outstanding balances with group undertakings. [FRS 102.B33.2].

Although the requirement to disclose information about key management personnel compensation is eliminated, UK companies are required separately by Schedule 5 to the Regulations to disclose information in respect of directors' remuneration. Additionally, quoted companies must prepare a directors' remuneration report as required by Schedule 8 to the Regulations. There is no exemption from other IAS 24 disclosure requirements, so disclosure of other transactions with key management personnel (e.g., director loans) is still required.

The wording of the exemption from disclosure of transactions with other wholly owned subsidiaries has been taken directly from the Regulations. [FRS 101.BC68].

Extract from FRS 101

Basis for Conclusions

IAS 24 Related Party Disclosures

Transactions with wholly-owned subsidiaries

69 In December 2017, amendments were made to Appendix II *Note on legal requirements to FRS 102* to clarify the FRC's view that:

- (a) This exemption may be applied to transactions between entities within a sub-group when the transacting subsidiary is wholly owned by the intermediate parent of that sub-group, even if that intermediate parent is not wholly owned by the ultimate controlling parent.
- (b) This exemption may not be applied to transactions between entities in an intermediate parent's sub-group (including the intermediate parent itself) and the entities in the larger group if the intermediate parent is not wholly owned by the parent of that larger group.

This is shown by Illustration 6-1 below.

Illustration 6-1: Application of the exemption from disclosure of transactions between wholly-owned subsidiary undertakings

Because H PLC only owns 95% of S2 Limited, the wholly owned subsidiaries exemption cannot be used in: (a) the separate financial statements of H PLC in respect of transactions with S2 Limited and S3 Limited; (b) the individual financial statements of S1 Limited in respect of transactions with S2 Limited and S3 Limited; (c) the separate financial statements of S2 Limited in respect of any transactions with H PLC and S1 Limited; or (d) the individual financial statements of S3 Limited in respect of any transactions with H PLC and S1 Limited.

The exemption can be used for any transactions in individual financial statements between H PLC and S1 Limited and between S2 Limited and S3 Limited.

However, if the remaining 5% of S2 Limited (not directly held by H PLC) was held by another wholly owned subsidiary undertaking of H PLC, then S2 Limited would be a wholly owned subsidiary undertaking of H PLC. In those circumstances, the exemption from disclosing transactions with the other entities in the group is available in the individual financial statements of H PLC, S1 Limited, S2 Limited and S3 Limited (as S1 Limited, S2 Limited and S3 Limited would all be wholly owned subsidiary undertakings of the H PLC group).

The exemption has no other conditions: it can be applied, for example, to an entity with an overseas parent.

6.1.16 Impairment of Assets (IAS 36)

This exemption eliminates all requirements to disclose information about estimates used to measure recoverable amounts of each cash-generating unit (or group of units) containing goodwill or intangible assets with indefinite useful lives, including details of fair value measurements where the recoverable amount is fair value less costs of disposal other than:

- The carrying amounts of goodwill and carrying amounts of indefinite life intangibles allocated to each such cash generating unit (or group of units) (paragraphs 134(a), 134(b), 135(a), 135(b)).
- And
- The basis on which the recoverable amount of those units has been determined (i.e., value in use or fair value less costs of disposal) (paragraph 134(c)).

Qualifying entities must still give the other disclosures required by paragraphs 126 to 135 of IAS 36 in respect of impairment losses (and reversal of impairment losses) recognised or reversed in the period. These include, *inter alia*, the recoverable amount of the asset (or cash generating unit) and whether the recoverable amount is its fair value less costs of disposal or its value in use. However, where an impairment loss has been recognised or reversed during the period in respect of an individual asset (including goodwill) or a cash-generating unit, and the recoverable amount was based on fair value less costs of disposal, the information on the valuation techniques used (and the key assumptions) for fair value measurements categorised within Level 2 and Level 3 of the fair value hierarchy are not required.

6.2 'Equivalent' disclosures

Certain of the disclosure exemptions in FRS 101 are dependent on the provision of 'equivalent' disclosures in the publicly available consolidated financial statements of the parent in which the entity is included.

The following table summarises which disclosure exemptions need 'equivalent' disclosures in the consolidated financial statements of the parent and which do not.

Disclosure exemption	Equivalent disclosures required in parent consolidated financial statements
First-time adoption exemption (see 6.1 above)	No
Share-based Payment (see 6.1.1 above)	Yes
Business Combinations (see 6.1.2 above)	Yes
Discontinued Operations (see 6.1.3 above)	No
Exploration for and Evaluation of Mineral Resources (see 6.1.4 above)	No
Financial Instruments: Disclosures (see 6.1.5.A and 6.1.5.B above)	Yes
Fair Value Measurement (see 6.1.6 above)	Yes
Revenue from Contracts with Customers (see 6.1.7 above)	No
Leases (see 6.1.8 above)	No
Comparatives (see 6.1.9 above)	No
Presentation (see 6.1.10.A and 6.1.10.B above)	No
Statement of Cash Flows (see 6.1.11.A and 6.1.11.B above) as follows:	
Preparation of a statement of cash flows	No
Supplier finance arrangement disclosures	Yes
Standards Issued but not Effective (see 6.1.12.A above)	No
Basis for Preparation of Financial Statements (see 6.1.12.B above)	No
Income Taxes (see 6.1.13 above)	Yes
Property, Plant and Equipment (see 6.1.14 above)	No
Related Party Transactions (see 6.1.15 above)	No
Impairment of Assets (see 6.1.16 above)	Yes

FRS 101 refers to the Application Guidance in FRS 100 in deciding whether the consolidated financial statements of the group in which the reporting entity is included provides disclosures that are 'equivalent' to the requirements of adopted IFRS from which relief is provided. [FRS 101.9].

The Application Guidance in FRS 100 states that:

- "...it is necessary to consider whether the publicly available consolidated financial statements of the parent provide disclosures that meet the basic disclosure requirements of the relevant standard issued (or adopted) by the relevant standard setter without regarding strict conformity with each and every disclosure. This assessment must be based on the particular facts, including the similarities to and differences from the requirements of the relevant standard from which relief is provided." The concept of 'equivalence' is intended to be aligned to that described in section 401 of the CA 2006 for UK entities, and section 300 of the Companies Act 2014 for Irish entities. [FRS 100.AG25].
- And
- "Disclosure exemptions for subsidiaries are permitted where the relevant disclosure requirements are made in the consolidated financial statements, even where the disclosures are made in aggregate or abbreviated form, or in relation to intra-group balances, those intra-group balances have been eliminated on consolidation. If, however, no disclosure is made in the consolidated financial statements

on the grounds of materiality, the relevant disclosures should be made at the subsidiary level if material in those financial statements". [FRS 100.AG10].

This means that a qualifying entity must review the consolidated financial statements of its parent to ensure that 'equivalent' disclosures have been made for each of the above exemptions that it intends to use. Where a particular 'equivalent' disclosure has not been made (unless the disclosure relates to an intra-group balance eliminated on consolidation) then the qualifying subsidiary cannot use the exemption in respect of that disclosure.

6.3 Disclosures required by the Regulations for certain financial instruments (and other assets) which may be held at fair value

Paragraph 36(4) of Schedule 1 to the Regulations (and its equivalents in Schedule 2 and Schedule 3 to the Regulations and the LLP Regulations) state that financial instruments which under adopted IFRS may be included in accounts at fair value, may be so included, provided that the disclosures required by such accounting standards are made. [FRS 101.A2.6]. The financial instruments referred to by paragraph 36(4) of Schedule 1 of the Regulations (and its equivalents) are those listed in paragraphs 36(2)(c) and 36(3) of Schedule 1 to the Regulations (and its equivalents). These are: [1 Sch 36]

- Any financial liability which is not held for trading or a derivative, i.e., a financial liability measured or designated at fair value through profit or loss (FVPL) under paragraphs 4.2.2, 4.3.5 or 4.3.6 of IFRS 9.
 - Loans and receivables originated by the reporting entity, not held for trading purposes, and measured or designated at either fair value through other comprehensive income (FVOCI) or FVPL under paragraphs 4.1.2A, 4.1.4 or 4.1.5 of IFRS 9.
 - Interests in subsidiary undertakings, associated undertakings and joint ventures accounted at FVOCI or FVPL under IFRS 9 via paragraphs 10, 11 or 11A of IAS 27 or paragraph 18 of IAS 28 *Investments in Associates and Joint Ventures*.
 - Contracts for contingent consideration in a business combination measured at FVPL.
- Or
- Other financial instruments with such special characteristics that the instruments according to generally accepted accounting principles or practice, are to be accounted for differently from other financial instruments.

The Note on legal requirements to FRS 101 confirms that a qualifying entity that has any of the above sub-set of financial instruments measured at fair value in accordance with the requirements of paragraph 36(4) of Schedule 1 to the Regulations (or its equivalents) is legally required to provide the relevant disclosures set out in extant UK-adopted international accounting standards. [FRS 101.A2.7].

This means that an entity with any of the above sub-set of financial instruments measured at fair value must make all material disclosures required by IFRS 7 and IFRS 13.

In addition, qualifying entities that are preparing Companies Act accounts must provide the disclosures required by paragraph 55 of Schedule 1 to the Regulations (and its equivalents in Schedules 2 and 3 to the Regulations and the LLP Regulations) which set out requirements relating to financial instruments at fair value. [FRS 101.A2.7D]. These disclosures relate to financial instruments and other assets held at fair value generally and not just to those financial instruments measured at fair value in accordance with paragraph 36(4) as discussed above. Disclosures are required of: [1 Sch 55]

- The significant assumptions underlying the valuation models and techniques used when determining the fair value of the instruments or other assets.
 - For each category of financial instrument or other asset, the fair value of the assets and the changes in value included directly in the profit and loss account or credited to or debited from the fair value reserve in respect of those assets.
 - For each class of derivatives, the extent and nature of the instruments, including significant terms and conditions that may affect the amount, timing and certainty of future cash flows.
- And
- Where any amount is transferred to or from the fair value reserve during the financial year, disclosure (in tabular form) of the opening and closing balance of the reserve, the amount transferred to or from the reserve during the year and the source and application respectively of the amounts so transferred.

6.4 Disclosure exemptions for financial institutions

Financial institutions are permitted to apply FRS 101 but receive fewer disclosure exemptions. A qualifying entity which is a financial institution may take advantage in its individual financial statements of the disclosure exemptions set out at 6.1 above except for: *[FRS 101.7]*

- The disclosure exemptions from IFRS 7.
- The disclosure exemptions from paragraphs 91 to 99 of IFRS 13 to the extent that they apply to financial instruments. Therefore, a financial institution can take advantage of the disclosure exemptions from paragraphs 91 to 99 of IFRS 13 for assets and liabilities other than financial instruments (e.g., property plant and equipment, intangible assets, and investment property).

And

- The capital disclosures required by adopted IFRS.

Entities which are subject to the CA 2006 and the Regulations or the LLP Regulations are legally required to provide disclosures related to financial instruments and assets and liabilities including those measured at fair value (see 6.3 above and 7.2 below).

The FRC has opted not to provide a generic definition of a financial institution. Instead, it has provided a list of entities that are stated to be financial institutions.

Extract from FRS 101

Appendix I

Glossary

financial institution	Any of the following:
	(a) a bank which is:
	(i) a firm with a Part 4A permission ⁵ which includes accepting deposits and:
	(a) which is a credit institution; or
	(b) whose Part 4A permission includes a requirement that it complies with the rules in the General Prudential sourcebook and the Prudential sourcebook for Banks, Building Societies and Investment Firms relating to banks, but which is not a building society, a friendly society or a credit union;
	(ii) an EEA bank which is a full credit institution;
	(b) a building society which is defined in section 119(1) of the Building Societies Act 1986 as a building society incorporated (or deemed to be incorporated) under that act;
	(c) a credit union, being a body corporate registered under the Co-operative and Community Benefit Societies Act 2014 as a credit union in accordance with the Credit Unions Act 1979, which is an authorised person;
	(d) a custodian bank or broker-dealer;
	(e) an entity that undertakes the business of effecting or carrying out insurance contracts, including general and life assurance entities;
	(f) an incorporated friendly society incorporated under the Friendly Societies Act 1992 or a registered friendly society registered under section 7(1)(a) of the Friendly Societies Act 1974 or any enactment which it replaced, including any registered branches;
	(g) an investment trust, Irish investment company, venture capital trust, mutual fund, exchange traded fund, unit trust, open-ended investment company (OEIC); or
	[Deleted]
	(h) any other entity whose principal activity is similar to those listed above but is not specifically included in that list.
	(i) A parent entity whose sole activity is to hold investments in other group entities is not a financial institution.

The list of entities considered to be a financial institution above does not include stockbrokers, retirement benefit plans and any other entity who generates wealth or manages risk through financial instruments but whose principal activity is not similar to those listed above. [FRS 101.BC19].

However, in some cases, judgement, based on the facts and circumstances, may be needed in assessing whether an entity's principal activities are similar to those listed at (a) to (g) above. For example, the Basis for Conclusions observes that judgement will need to be applied in determining whether a group treasury company is similar to the other entities listed in the definition of a financial institution. [FRS 101.BC21].

7 Additional Companies Act disclosures

FRS 101 individual financial statements (which are Companies Act accounts) are subject to disclosures required by the Regulations as well as other disclosures required by the Companies Act or other related regulations. These disclosures are in addition to those required by adopted IFRS.

There are two types of Companies Act disclosures that are required for a UK entity applying FRS 101:

- Those required for both IAS accounts (prepared under adopted IFRS) and Companies Act accounts (prepared under a form of UK GAAP) (see 7.1 below).

And

- Those required by the Regulations for Companies Act accounts but not for IAS accounts (see 7.2 below).

This means that, in certain scenarios, a move from adopted IFRS to FRS 101 would result in increased disclosures for an entity despite the use of the disclosure exemptions described at 6 above.

There may also be additional disclosures for an entity other than a company where that entity is subject to separate regulations.

7.1 Existing Companies Act disclosures in the financial statements for adopted IFRS and UK GAAP reporters that also apply under FRS 101

FRS 100 identifies the following required disclosures: *[FRS 100.A2.19]*

- Section 410A *Off-balance sheet arrangements*
- Section 411 *Employee numbers and costs*
- Section 412 *Directors' benefits: Remuneration*
- Section 413 *Directors' benefits: Advances, credit and guarantees*
- Sections 414A to 414D *Strategic Report*
- Sections 415 to 419 *Directors' Report*
- Sections 420 to 421 *Directors' Remuneration Report*

And

- Section 494 *Services provided by auditor and associates and related remuneration.*

The disclosures identified by FRS 100 above is incomplete and omits, for example, the information about related undertakings required by section 409. There are also certain disclosure exemptions for small companies and medium-sized companies (see Chapter 5 at 6 and Chapter 1 at 5.6.2).

LLPs are not subject to equivalent statutory requirements to those in sections 412 to 421 above although banking and insurance LLPs are required to prepare a strategic report for financial years beginning on or after 1 January 2017.

In addition, other Companies Act or related disclosures may apply depending on individual circumstances such as the disclosures required for a parent taking advantage of the exemption from preparing group accounts under either section 400 or section 401 of the CA 2006.

7.2 Disclosures required by the Regulations and the LLP Regulations in FRS 101 financial statements but not required under adopted IFRS

The Regulations and the LLP Regulations require various disclosures in financial statements. In particular, Part 3 of Schedules 1 to 3 to the Regulations (and Part 3 and Part 4 of Schedule 1 to the LLP Regulations) require certain disclosures to be made in the notes to the financial statements if not given in the primary statements. The relevant paragraphs are as follows:

- Schedule 1 paragraphs 42 to 75
 - Schedule 2 paragraphs 52 to 92B
 - Schedule 3 paragraphs 60 to 90B
- Or
- The LLP Regulations paragraphs 42 to 71

Although some of these disclosure requirements are replicated in adopted IFRS, others are not. Entities that move to FRS 101 from FRS 102 will have made these disclosures previously and therefore these requirements will not increase their reporting burden. Entities that move to FRS 101 from adopted IFRS will not have made these disclosures previously or any other disclosures required by the applicable schedule above and must consider carefully the impact of these new requirements against the benefits of the reduced disclosures discussed at 6 above.

In addition, entities subject to the Regulations and LLP Regulations are required to present the notes to the financial statements in the order in which, where relevant, the items to which they relate are presented in the balance sheet and profit and loss accounts (see 5.2 above). The General Rules to the formats in the Regulations and LLP Regulations require that where an asset or liability relates to more than one item in the balance sheet, the relationship of such asset or liability to the relevant items must be disclosed either under those items or in the notes to the accounts (see 5.1 above). [1 Sch 9A].

Some examples of disclosures not required under adopted IFRS in individual or separate financial statements are shown below. The disclosures illustrated below are not intended to be an exhaustive list of additional disclosures required by the Regulations and LLP Regulations for entities applying FRS 101 that have previously reported under adopted IFRS.

- Schedule 1 companies (i.e., companies other than banking and insurance companies):
 - Disclosures required for certain financial instruments which may be held at fair value (see 6.3 above). [1 Sch 36].
 - A statement required by large companies that the accounts have been prepared in accordance with applicable accounting policies. [1 Sch 45].
 - Disclosures in respect of share capital and debentures including information about shares and debentures allotted and contingent rights to shares. [1 Sch 47, 1 Sch 48, 1 Sch 49, 1 Sch 50].
 - Disclosure of the split of land between freehold and leasehold and the leasehold land between that held on a long lease and that held on a short lease. [1 Sch 53].
 - Disclosure of information about listed investments. [1 Sch 54].
 - Disclosure of information about the fair value of financial assets and liabilities, investment property, living animals and plant which, in substance, 'reinstates' some parts of IFRS 7 and IFRS 13. In particular, there are requirements to disclose significant assumptions underlying the valuation models and techniques used when determining fair value of the instruments, details of the fair value of financial instruments by category and details concerning significant terms and conditions of derivatives (see 6.3 above). [1 Sch 55].
 - Disclosure of information about creditors due after five years. [1 Sch 61].
 - Disclosure of information about guarantees and other financial commitments including charges on assets to secure liabilities, the particulars and total amount of any guarantees, contingencies and commitments not recorded in the balance sheet, the nature and form of valuable security given and separate disclosure of pension commitments and guarantees and commitments given to certain related entities. [1 Sch 63].
 - Disclosure of information about loans made in connection with the purchase of own shares. [1 Sch 64].
 - Disclosure of particulars of taxation. [1 Sch 67].
- And
- Disclosure of information about turnover by class of business and geographical markets. IFRS 8 does not require segmental information if an entity's debt or equity instruments are not traded in a public market or the entity is not in the process of filing financial statements for that purpose. However, the disclosures in the Regulations are required even if the entity is out of scope of IFRS 8. See also 5.2.1 above. [1 Sch 68].

The profit and loss account of a company that falls within section 408 of the CA 2006 (individual profit and loss account where group accounts prepared) need not contain the information specified in paragraphs 65 to 69 of Schedule 1. [Regulations 3(2)].

- Schedule 2 companies (i.e., banking companies):
 - A statement that the accounts have been prepared in accordance with applicable accounting policies. [2 Sch 54].
 - Disclosures in respect of share capital and debentures including information about shares and debentures allotted and contingent rights to shares. [2 Sch 58, 2 Sch 59, 2 Sch 60, 2 Sch 61].

- Disclosure of the split of land between freehold and leasehold and the leasehold land between that held on a long lease and that held on a short lease. [2 Sch 64].
- Disclosure of a specific maturity analysis for loans and advances and liabilities. [2 Sch 72].
- Disclosure of arrears of fixed cumulative dividends. [2 Sch 75].
- Disclosure of information about guarantees and other financial commitments including charges on assets to secure liabilities, the particulars and total amount of any guarantees, contingencies and commitments not recorded in the balance sheet, the nature and form of valuable security given and separate disclosure of pension commitments and guarantees and commitments given to certain related entities. [2 Sch 77].
- Disclosure of details of transferable securities. [2 Sch 79].
- Disclosure of leasing transactions. [2 Sch 80].
- Disclosure of assets and liabilities denominated in a currency other than the presentational currency. [2 Sch 81].
- Disclosure of details of unmatured forward transactions. [2 Sch 83].
- Disclosure of loans made in connection with the purchase of own shares. [2 Sch 84].
- Disclosure of particulars of taxation. [2 Sch 86].

And

- Disclosure of certain profit and loss account information by geographical markets. IFRS 8 does not require segmental information if an entity's debt or equity instruments are not traded in a public market or the entity is not in the process of filing financial statements for that purpose. However, the disclosures in the Regulations are required even if the entity is out of scope of IFRS 8. [2 Sch 87].

The profit and loss account of a banking company that falls within section 408 of the CA 2006 (individual profit and loss account where group accounts prepared) need not contain the information specified in paragraphs 85 to 91 of Schedule 2. [Regulations 5(2)].

- Schedule 3 companies (i.e., companies required to prepare Schedule 3 financial statements which do not issue insurance contracts):
 - A statement that the accounts have been prepared in accordance with applicable accounting policies. [3 Sch 62].
 - Disclosures in respect of share capital and debentures including information about shares and debentures allotted and contingent rights to shares. [3 Sch 65, 3 Sch 66, 3 Sch 67, 3 Sch 68].
 - Disclosure of the split of land between freehold and leasehold and the leasehold land between that held on a long lease and that held on a short lease. [3 Sch 71].
 - Disclosure of information about listed investments. [3 Sch 72].
 - Disclosure of creditors due after five years. [3 Sch 79].
 - Disclosure of information about guarantees and other financial commitments including charges on assets to secure liabilities, the particulars and total amount of any guarantees, contingencies and commitments not recorded in the balance sheet, the nature and form of valuable security given and separate disclosure of pension commitments and guarantees and commitments given to certain related entities. [3 Sch 81].
 - Disclosure of loans made in connection with the purchase of own shares. [3 Sch 82].
 - Disclosure of particulars of taxation. [3 Sch 84].
 - Disclosure of certain profit and loss account information by type of business and by geographical area. IFRS 8 does not require segmental information if an entity's debt or equity instruments are not traded in a public market or the entity is not in the process of filing financial statements for that purpose. However, the disclosures in the Regulations are required even if the entity is out of scope of IFRS 8. [3 Sch 85, 3 Sch 86, 3 Sch 87].

And

- Disclosure of total commissions for direct insurance business. [3 Sch 88].

The profit and loss account of an insurance company that falls within section 408 of the CA 2006 (individual profit and loss account where group accounts prepared) need not contain the information specified in paragraphs 83 to 89 of Schedule 3. [Regulations 6(2)].

Banking and insurance companies are financial institutions (see 6.4 above) and therefore must comply with IFRS 7 disclosures in full and IFRS 13 disclosures in respect of financial instruments, including disclosures about the fair value of financial assets and liabilities.

- LLPs (i.e., entities subject to the LLP Regulations)
 - A statement required by large LLPs that the accounts have been prepared in accordance with applicable accounting policies. [1 Sch 45 (LLP)].
 - Disclosures in respect of loans and debts due to members. [1 Sch 47 (LLP)].
 - Disclosures in respect of debentures. [1 Sch 48 (LLP)].
 - Disclosure of the split of land between freehold and leasehold and the leasehold land between that held on a long lease and that held on a short lease. [1 Sch 51 (LLP)].
 - Disclosure of information about listed investments. [1 Sch 52 (LLP)].
 - Disclosure of information about the fair value of financial assets and liabilities, stocks, investment property and living animals and plant where those assets and liabilities have been valued at fair value which, in substance, 'reinstates' some parts of IFRS 7 and IFRS 13. In particular, there are requirements to disclose information about significant assumptions where the fair value of a financial instrument results from generally accepted valuation models and techniques, details of the fair value of financial instruments by category and details concerning significant terms and conditions of derivatives (see 6.3 above). [1 Sch 53 (LLP)].
 - Disclosure of information about creditors due after five years. [1 Sch 59 (LLP)].
 - Disclosure of information about guarantees and other financial commitments including charges on assets to secure liabilities, the particulars and total amount of any guarantees, contingencies and commitments not recorded in the balance sheet, the nature and form of valuable security given and separate disclosure of pension commitments and guarantees and commitments given to certain related entities. [1 Sch 60 (LLP)].
 - Disclosure of particulars of taxation. [1 Sch 64 (LLP)].
 - Disclosure of information about turnover by class of business and geographical markets. IFRS 8 does not require segmental information if an entity's debt or equity instruments are not traded in a public market or the entity is not in the process of filing financial statements for that purpose. [1 Sch 65 (LLP)].
- And
 - Disclosure of particulars of members. [1 Sch 66 (LLP)].

8. Future changes to IFRS and their impact on FRS 101

Although not specifically addressed by FRS 101, future changes to adopted IFRS are automatically incorporated into FRS 101 unless they are modified by the FRC.

The FRC reviews FRS 101 annually to ensure that the reduced disclosure framework continues to be effective in providing disclosure reductions for qualifying entities when compared with adopted IFRS.

[FRS 101.BC10].

The principles established for FRS 101 is that the FRC aims to provide succinct financial reporting standards that: [FRS 101.BC4]

- Have consistency with global accounting standards through the application of an IFRS-based solution unless an alternative clearly better meets the overriding objective.
 - Balance improvement, through reflecting up-to-date thinking and developments in the way businesses operate and the transactions they undertake, with stability.
 - Balance consistent principles for accounting by all UK and Republic of Ireland entities with proportionate and practical solutions, based on size, complexity, public interest and users' information needs.
 - Promote efficiency within groups.
- And
- Are cost-effective to apply.

Whenever a new IFRS is issued or an amendment is made to an existing adopted IFRS, the FRC has to consider the following on qualifying entities: [FRS 101.BC7]

- Relevance - does the disclosure requirement provide information that is capable of making a difference to the decisions made by users of the financial statements of a qualifying entity?
 - Cost constraint on useful financial reporting - does the disclosure requirement impose costs on the preparers of the financial statements of a qualifying entity that are not justified by the benefits to the users of those financial statements?
- And
- Avoid gold plating - Does the disclosure requirement override an existing exemption provided by Company Law?

Appendix A - Defined terms

Extract from FRS 101

Appendix I

Glossary

adopted IFRS	IFRS Accounting Standards that have been adopted in the relevant jurisdiction. In the UK, this refers to UK-adopted international accounting standards. In the Republic of Ireland, this refers to EU-adopted IFRS.
date of transition	The beginning of the earliest period for which an entity presents full comparative information under a given standard in its first financial statements that comply with that standard
IAS / IFRS Accounting Standards	IFRS Accounting Standards issued by the International Accounting Standards Board (IASB). They comprise: (a) International Financial Reporting Standards; (b) IAS[®] Standards; (c) IFRIC[®] Interpretations developed by the IFRS Interpretations Committee; and (d) SIC[®] Interpretations developed by the former Standing Interpretations Committee.
individual financial statements	The accounts that are required to be prepared by an entity in accordance with the Act or relevant legislation, for example: (a) 'individual accounts', as set out in section 394 of the Act; (b) 'statement of accounts', as set out in section 132 of the Charities Act 2011; or (c) 'individual accounts', as set out in section 72A of the Building Societies Act 1986. Separate financial statements are included in the meaning of this term.
Regulations	The Large and Medium-sized Companies and Groups (Accounts and Reports) Regulations 2008 (SI 2008/410)
UK-adopted international accounting standards	IAS that have been adopted for use within the UK in accordance with the International Accounting Standards and European Public Limited-Liability Company (Amendment etc.) (EU Exit) Regulations 2019 (SI 2019/685).

Overview

Section 1 *Scope of FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland* sets out which entities required to prepare financial statements can apply FRS 102. FRS 102 is designed to apply to the general-purpose financial statements and financial reporting of entities, including those that are not companies or profit-oriented.

This chapter discusses some of the general requirements for UK entities preparing their financial statements in accordance with FRS 102. This chapter also covers the reduced disclosure framework applicable for qualifying entities. Note that this chapter does not intend to be a one-stop shop for all requirements of UK entities.

What you need to know

- FRS 102 is a single financial reporting standard for entities, in the UK and Republic of Ireland, that applies to the financial statements of entities that are not applying adopted IFRS, FRS 101 or FRS 105. If permitted by local laws and regulations, an entity outside the UK and Republic of Ireland, can choose to apply FRS 102.
- FRS 102 applies to general purpose financial statements of entities, including public benefit entities that are intended to give a true and fair view. FRS 102 can be applied in consolidated and individual financial statements.
- FRS 102 requires certain types of entities to directly apply particular IFRS Accounting Standards (as adopted in the relevant jurisdiction), namely IAS 33 *Earnings per Share*, IFRS 6 *Exploration for and Evaluation of Mineral Resources* and IFRS 8 *Operating Segments*. These standards apply to FRS 102 reporters that would fall within the scope of these standards if applying IFRS Accounting Standards.
- FRS 102 includes a reduced disclosure framework for qualifying entities, available in their individual financial statements only, where the criteria are met.

1 Introduction

Section 1 sets out which entities, required by Companies Act 2006 to prepare financial statements, can apply FRS 102. Its requirements are consistent with the general financial reporting framework set out in FRS 100 *Application of Financial Reporting Requirements*, discussed further at 2.1 below. FRS 102 applies to financial statements intended to give a true and fair view. As its application is not restricted to UK and Irish companies, all entities must ensure that preparation of their financial statements in accordance with FRS 102 is permitted by the legal framework in which they operate. The legal framework for UK companies is discussed in more detail in Chapter 1 at 6.

This chapter covers the following topics:

- Summary (see 1.1 below)
- Periodic Reviews (see 1.2 below)
- Effective date of FRS 102 and related standards (see 1.3 below)
- Structure of FRS 102 (see 1.4 below)
- Scope of FRS 102 (see 2 below)
- Reduced disclosure framework in FRS 102 (see 3 below)

And

- Companies Act 2006 ('CA 2006') requirements for FRS 102 reporting entities (see 4 below)

Except where otherwise stated, the rest of this chapter will refer to the requirements for companies and Limited Liability Partnerships (LLPs) in the UK.

FRS 103 *Insurance Contracts* (see Chapter 38) applies to financial statements prepared in accordance with FRS 102 by entities that issue insurance contracts (including reinsurance contracts), hold reinsurance contracts or issue financial instruments (other than insurance contracts) with discretionary participation features. [FRS 103.1.1, FRS 103.1.2, FRS 101.1.3].

FRS 104 *Interim Financial Reporting* is a voluntary standard that FRS 102 reporters can apply in preparing interim financial statements. This is discussed in Chapter 39.

1.1 Summary

This summary covers a number of areas relevant to the scope of FRS 102 and to its structure which are addressed more fully in the chapter, as indicated.

FRS 102 applies to the financial statements of entities preparing financial statements in accordance with legislation, regulation or accounting standards applicable in the UK and the Republic of Ireland that are not prepared in accordance with adopted IFRS, FRS 101 *Reduced Disclosure Framework*, or FRS 105 *The Financial Reporting Standard applicable to the Micro-entities Regime*. See 2.1 below.

- FRS 102 does not set out which entities must prepare financial statements. This is governed by the legal framework (or other regulation or requirements), if any, relating to the preparation of the entity's financial statements. For example, statutory accounts prepared in accordance with FRS 102 by a UK company are Companies Act accounts. While FRS 102 has been developed with the requirements for Companies Act accounts primarily in mind, the standard is available for adoption by entities other than UK companies. An entity applying FRS 102 must ensure that it complies with any applicable legal requirements. See 2.1 below.
- FRS 102 was originally issued in March 2013 and subsequently amended several times. This book covers the requirements of the September 2024 version of the Standard, which include the Periodic Review 2024 amendments to FRS 102 as discussed in 1.2 below. For details of effective date of this version of the Standard, see 1.3 below.
- FRS 102 applies to general purpose financial statements of entities, including public benefit entities (see 2.5.2 below) that are intended to give a true and fair view. FRS 102 can be applied in consolidated and individual financial statements.
- FRS 102 is a single financial reporting standard based on the IFRS for SMEs Accounting Standard *International Financial Reporting Standard for Small and Medium-sized Entities* which itself generally includes simplified requirements and disclosures compared to full IFRS Accounting Standards. When drafting the standard, the FRC made a number of modifications to IFRS for SMEs, including the scope and requirements. While largely based on IFRS for SMEs, FRS 102 is not just a simplified version of IFRS Accounting Standards. In certain cases, the standard includes direct references to IFRS Accounting Standards.

- Since FRS 102 includes less guidance than IFRS Accounting Standards, judgement is likely to be required in applying the standard. Section 10 *Accounting Policies, Estimates and Errors* sets out a 'GAAP hierarchy' that management must refer to in developing and applying relevant and reliable accounting policies where the standard does not specifically address the issue. This hierarchy includes references to applicable Statement of Recommended Practice (SORP). See 2.3 below. In addition, management may but are not required to refer to IFRS Accounting Standards addressing similar and related issues.
- FRS 102 requires certain types of entities to directly apply particular IFRS Accounting Standards (as adopted in the relevant jurisdiction), namely IAS 33, IFRS 6 and IFRS 8. These standards apply to FRS 102 reporters that would fall within the scope of these standards if applying IFRS Accounting Standards. See 2.4 below.
- In addition, an entity applying FRS 102 has a choice of applying the recognition and measurement requirements for financial instruments in:
 - Section 11 *Basic Financial Instruments* and Section 12 *Other Financial Instruments Issues* of FRS 102
 - IAS 39 *Financial Instruments: Recognition and Measurement* (the version extant immediately prior to IFRS 9 *Financial Instruments* superseding IAS 39). The ability to newly apply the IAS 39 option is permitted only in situations where applying IAS 39 is necessary to achieve consistency with group financial statements. This is possible for example, an entity which had not previously applied the IAS 39 option is acquired by a group that already applies the IAS 39 option
 Or
 - IFRS 9 *Financial Instruments* and IAS 39 (as amended by IFRS 9).

Whichever policy choice for the recognition and measurement of financial instruments is followed, FRS 102 reporters must give the disclosures required by Sections 11 and 12 and follow the presentation requirements (on offset of financial assets and financial liabilities) in these sections, rather than those required by IFRS Accounting Standards. See Chapter 13 at 3.

- FRS 102 requires an entity to apply FRS 103 to insurance contracts (including reinsurance contracts) that it issues and reinsurance contracts that it holds, and financial instruments (other than insurance contracts) with a discretionary participation feature that it issues. See Chapter 38.
- Since statutory accounts prepared by UK companies in accordance with FRS 102 are Companies Act accounts, these must comply with the requirements of the CA 2006 and *The Large and Medium-sized Companies and Groups (Accounts and Reports) Regulations 2008* (SI 2008/410) ('the Regulations') or *The Small Companies and Groups (Accounts and Directors' Report) Regulations 2008* (SI 2008/409) ('the Small Companies Regulations').

Statutory accounts prepared by LLPs in accordance with FRS 102 are non-IAS accounts and must comply with similar requirements under LLP law. Some of these requirements are included in *The Limited Liability Partnerships (Accounts and Audit) (Application of Companies Act 2006) Regulations 2008* (SI 2009/1911), *The Large and Medium-sized Limited Liability Partnerships (Accounts) Regulations 2008* (SI 2008/1913) and *The Small Limited Liability Partnerships (Accounts) Regulations 2008* (SI 2008/1912).

The CA 2006 and the relevant regulations set out the formats for the balance sheet and profit and loss account (see Chapter 6 at 3 to 5), recognition and measurement principles and further disclosures required in Companies Act accounts (or non-IAS accounts, for an LLP). Entities not subject to the Regulations (or LLP Regulations) must also use the statutory or, where permitted, adapted formats for the balance sheet and profit and loss account, set out in those regulations except to the extent that these requirements are not permitted by any statutory framework under which such entities report.

While FRS 102 (and Appendix III *Note on legal requirements* to the standard) highlight certain issues relevant to Companies Act accounts, the discussion is not comprehensive. See 4 below, Chapter 1 at 5 and Chapter 6 at 8.

- Section 34 *Specialised Activities* sets out specific accounting and disclosure requirements for agriculture, extractive activities, service concession arrangements, financial institutions, retirement benefit plans, heritage assets, funding commitments, and certain issues specific to public benefit entities. Paragraphs marked PBE throughout the standard are specific to public benefit entities, and not for general application. See 2.5 below.

Section 34, in particular, sets out additional disclosure requirements for the financial statements of a financial institution (and for the consolidated financial statements of a group containing a financial institution) and for the financial statements of a retirement benefit plan. The definition of a 'financial institution' and the required disclosures are discussed at 2.5.1 below.

- FRS 102 includes a reduced disclosure framework for qualifying entities, available in their individual financial statements only, where the criteria are met.

A qualifying entity is a member of a group where the parent of that group prepares publicly available consolidated financial statements which are intended to give a true and fair view and that member is included in the consolidation. Some of the disclosure exemptions available under the reduced disclosure framework are conditional on equivalent disclosures being included in the consolidated financial statements of the group in which the entity is consolidated. In addition, a financial institution has fewer exemptions than an entity that is not a financial institution. See 3 below.

- Section 35 *Transition to this FRS* addresses transition to FRS 102. Section 35 is based on a simplified version of IFRS 1 *First-time Adoption of International Financial Reporting Standards*, but with significant modifications. See Chapter 37.

1.2 Periodic Reviews of FRS 102

FRSs are subject to periodic reviews. This is an opportunity for the FRC to update and amend the standards, considering the feedback from stakeholders, developments in IFRS Accounting Standards and the IFRS for SME's Accounting Standard, and other emerging issues. These periodic reviews are performed approximately every five years. This allows experience of the most recent version of FRS 102 to develop, and also provides a period of stability between substantial changes. [FRS 102.BC.A.65]. When FRS 102 was first issued, it was envisaged previously that these reviews would take place every three years.

[FRS 102.BC.A.33]. The FRC assesses issues as they arise to determine whether action needs to be taken. When necessary this might involve introducing amendments to standards outside regular review cycles. [FRS 102.BC.A.45].

FRS 102 and FRS 105 are the primary focus of periodic reviews. However, proposed amendments to other FRSs may also arise from these reviews. On a similar note, an annual review of FRS 101 is carried out as IFRS Accounting Standards evolve, and to respond to stakeholder feedback about other possible improvements. These annual FRS 101 reviews are separate and independent from periodic reviews.

[FRS 102.BC.A.66].

Any amendments to FRS 102 to reflect major changes in IFRS Accounting Standards will be considered on a case-by-case basis, including the appropriate timing of adoption. The FRC agrees that, in most cases, it will be preferable to learn from IFRS implementation experience in determining whether, and if so how and when, FRS 102 needs to be amended. [FRS 102.BC.A.44].

1.2.1 Periodic Review 2024

In March 2024, the FRC issued *Amendments to FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland and other FRSs - Periodic Review 2024*. In February 2026 the FRC issued *Amendments to FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland and FRS 105 The Financial Reporting Standard applicable to the Micro-Entities Regime - Adapted formats* which amended paragraphs 9.2, 9.3, 9.11, 9.26A and 9.27A, inserted paragraphs 9.3A and 9.3B and deleted paragraph 13.14 (together, *The Periodic Review 2024 amendments*). [FRS 102.1.36]. The Periodic Review 2024 amendments apply for accounting periods beginning or after 1 January 2026.

This is the second periodic review completed by the FRC since the initial implementation of FRS 102.

[FRS 102.BC.A.67]. The Periodic Review 2024 amendments arose from proposals exposed in FRED 82 *Draft amendments to FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland - Periodic Review* in December 2022, and FRED 84 *Draft amendments to FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland - Supplier finance arrangements* in September 2023. [FRS 102.BC.A.69].

In February 2026, the FRC issued *Amendments to FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland and FRS 105 The Financial Reporting Standard applicable to the Micro-Entities Regime - Adapted formats*. These amendments introduce requirements which enable FRS 102 preparers applying the adapted formats to align with the statement of financial position and profit and loss presentation requirements of IFRS 18, clarify the definition of current liabilities and align requirements for the classification of loan arrangements with covenants to those in IAS 1 and IFRS 18. [FRS 102.1.71, FRS 102.1.72, FRS 102.1.73]. These amendments apply for accounting periods beginning on or after 1 January 2027 but can be early-applied (see 1.3.2 below).

The Periodic Review amendments, except for those issued in February 2026 discussed above, form part of the September 2024 version of FRS 102, the effective date of which is discussed in 1.3 below.

In developing these amendments, the FRC considered all the changes in the IFRS Accounting Standards, proposed changes in developing an updated version of IFRS for SMEs Accounting Standard, stakeholder feedback and other developments in corporate reporting.

As noted above, the Periodic Review 2024 amendments result in a number of changes, primarily to FRS 102 (and FRS 105). [FRS 102.BC.A.68, FRS 102(2026).BC.A.85-A.87]. The most significant changes in FRS 102 are the following:

- New accounting requirements for revenue in Section 23 *Revenue from Contracts with Customers* based on the five-step model for revenue recognition built on the requirements of IFRS 15 *Revenue from Contracts with Customers*, with appropriate simplifications. See Chapter 25. [FRS 102.1.61, FRS 102.1.62, FRS 102.1.63, FRS 102.1.64, FRS 102.1.65, FRS 102.1.66, FRS 102.1.67].
- New accounting requirements for leases in Section 20 *Leases* based on the on-balance sheet model from IFRS 16 *Leases*, with appropriate simplifications. See Chapter 23. [FRS 102.1.54, FRS 102.1.55, FRS 102.1.56, FRS 102.1.57, FRS 102.1.58, FRS 102.1.59, FRS 102.1.60].
- Updated requirements relating to fair value measurement in Section 2A *Fair Value Measurement* to align with the principles of IFRS 13 *Fair Value Measurement*. Fair Value Measurement was previously an appendix to Section 2 *Concepts and Pervasive Principles*. See Chapter 10. [FRS 102.1.41].
- Section 7 *Statement of Cash Flows* updated to reflect the disclosure requirements for supplier finance arrangements. See Chapter 7. [FRS 102.1.42].
- Section 29 *Income Tax* updated to reflect requirements relating to uncertain tax positions. See Chapter 31. [FRS 102.1.68].
- With respect to the amendments issued by the FRC in February 2026, the following requirements were updated in relation to entities adapting the balance sheet and profit or loss formats (See Chapter 6 at 9 for more details),
 - Section 4 *Statement of Financial Position* amended to introduce the guidance on classifying liabilities as current or non-current. The amendments align with the revisions made to IAS 1 during the period from 2020 to 2022, which was effective for IFRS Accounting Standards reporters for periods on or after 1 January 2024. [FRS 102(2026).1.72].
 - Section 4 and Section 5 *Statement of Comprehensive Income and Income Statement* updated the minimum required line items to align with the requirements in IFRS 18, which was effective for IFRS Accounting Standards reporters, for periods on or after 1 January 2027. [FRS 102(2026).1.73].

In addition to the above, Section 2 was updated to reflect IASB's *Conceptual Framework for Financial Reporting*, issued in 2018.

For entities applying the small companies regime and Section 1A *Small Entities* of FRS 102 in the preparation of the financial statements, Section 1A was updated to reduce the judgement applied by small entities in determining which additional disclosures are required in order for financial statements to give a true and fair view. Before the Periodic Review 2024 amendments, Section 1A reflected the requirements of the EU Accounting Directive which precluded Member States from imposing specific disclosure requirements on small entities, except those limited disclosures set out in CA 2006. Those requirements of the EU Accounting Directive had not been written into CA 2006, but had acted as a constraint in developing Section 1A. As a result of the UK's exit from the European Union, the FRC has taken the opportunity in the Periodic Review 2024 to update FRS 102 so that Section 1A now specifies required disclosures for small entities, thereby reducing the judgement applied by small entities. For more details on disclosure requirements for small entities, see Chapter 5 at 5. With respect to the amendments issued by the FRC in February 2026, Section 1A was also updated to align with the changes to Section 4 and 5 relating to requirements for entities adapting the balance sheet and profit or loss formats. See Chapter 5 at 7.

As noted above, some requirements in the FRSs have been aligned to IFRS Accounting Standards. However, there are principles in the IFRS Accounting Standards that the FRC decided not to incorporate in the Periodic Review 2024 amendments. These include the following:

- Expected credit loss model in IFRS 9. As part of the Periodic Review 2024, the FRC made no amendment to incorporate the expected credit loss model of IFRS 9 into FRS 102. Therefore, only entities applying IFRS 9 as an accounting policy choice under Sections 11 and 12 use the expected credit loss model. The FRC intends to reconsider this matter in the future, taking into account the IASB's third edition of the IFRS for SMEs Accounting Standard. For entities applying IFRS 9 and therefore using the expected credit loss model, new disclosure requirements were introduced in paragraphs 11.48ZA and 11.48ZB of FRS 102. Please see Chapter 15 for details of the new disclosures. [FRS 102.BC.B11.49ZA].
- Control model in IFRS 10 *Consolidated Financial Statements*. This was considered in the Triennial Review 2017. Although there were no amendments made to FRS 102 to incorporate the control model in IFRS 10, disclosures regarding unconsolidated structured entities (such as special purpose entities) were introduced. This principles-based disclosure was derived from IFRS 12 *Disclosure of Interests in Other Entities*. [FRS 102.BC.B9.3]. See Chapter 8 for details of required disclosures. Currently, there is no indication that this will be reconsidered in future periodic reviews.
- IFRS 17 *Insurance Contracts*. The FRC did not consider whether and how to align its FRSs with IFRS 17 in the Periodic Review 2024. The FRC is likely to wait for several years' implementation experience of IFRS 17 before considering alignment. The FRC also observed that conflicts arise between IFRS 17 and CA 2006. Therefore, it was concluded that it is not currently possible to apply IFRS 17 in Companies Act accounts. [FRS 103.BC57A].

1.3 Effective date of FRS 102 and related standards

For accounting periods beginning on or after 1 January 2026, the September 2024 version of FRS 102 is applicable to preparers. This version of FRS 102 incorporates all amendments issued up to September 2024, including those introduced by the amendments issued by the FRC in March 2024 and the amendments to Section 9 *Consolidated and Separate Financial Statements* and Section 13 *Inventories in Amendments to FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland and FRS 105 The Financial Reporting Standard applicable to the Micro-Entities Regime - Adapted formats* issued in February 2026. [FRS 102(2026).1.36, FRS 102.1.37, FRS 102(2026).72-73].

For accounting periods beginning on or after 1 January 2027, an entity must apply the amendments relating to adapted formats in *Amendments to FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland and FRS 105 The Financial Reporting Standard applicable to the Micro-Entities Regime - Adapted formats* issued in February 2026. [FRS 102.1.37, FRS 102(2026).72-73]

1.3.1 Accounting periods beginning on or after 1 January 2026 but before 1 January 2027

For accounting periods beginning on or after 1 January 2026, the following apply:

- The September 2024 version of FRS 102 and the clarifications and amendments to Section 9 *Consolidated and Separate Financial Statements* and Section 13 *Inventories in Amendments to FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland and FRS 105 The Financial Reporting Standard applicable to the Micro-Entities Regime - Adapted formats* issued in February 2026. [FRS 102(2026).1.36, FRS 102.1.37, FRS 102(2026).72-73]
- The September 2024 version of FRS 103 (if an entity is in scope of FRS 103) [FRS 103.1.11D]
And
- The September 2024 version of FRS 104 (if an entity is applying this standard to its interim reporting). [FRS 104.56D]

As discussed above, FRS 100 (September 2024) must be applied from the same date that the September 2024 version of FRS 102 is applied.

When an entity first applies the Periodic Review 2024 amendments, it applies the amendments retrospectively, in accordance with Section 10, except as specified in Section 1. [FRS 102.1.39]. The details of these transitional arrangements are discussed in this book and referred to as 'Periodic Review 2024 amendments' in each of the relevant chapters.

1.3.2 Accounting periods beginning on or after 1 January 2027

For accounting periods beginning on or after 1 January 2027, an entity must apply the amendments relating to adapted formats in *Amendments to FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland and FRS 105 The Financial Reporting Standard applicable to the Micro-Entities Regime - Adapted formats* issued in February 2026. [FRS 102.1.37, FRS 102(2026).72-73]

Early application of these amendments relating to adapted formats in the *Amendments to FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland and FRS 105 The Financial Reporting Standard applicable to the Micro-Entities Regime - Adapted formats* issued in February 2026 is permitted, provided that:

- All amendments are applied at the same time
- Or
- Only the amendments relating to the classification of current and non-current assets and liabilities are applied at the same time [FRS 102(2026).A.87]

If an entity does early adopt the amendments, it must disclose that fact. [FRS 102(2026).1.72, FRS 102(2026).1.73].

1.3.3 Effective date for entities subject to SORP

Following the issuance of FRS 102, some SORPs are being updated for consistency with the September 2024 version of FRS 102. See Chapter 1 at 3.6.1 for a list of the extant SORPs. However, some SORPs have not been updated. This results to an inconsistency in the extant SORPs and the current version of FRS 102.

Amendments to the relevant SORPs are not necessary before any changes to FRS 102 take effect because a change in accounting standards after a SORP has been issued means any conflicting provisions of a SORP cease to have effect. [FRS 100.6]. However, where there is lag between amendments made to FRS 102 are introduced and the SORPs are reviewed, there may be uncertainty as to which parts of a SORP are considered in conflict with the amended version of FRS 102 and over what, if any, changes to a SORP may subsequently be made. Consequently, an entity may be wary of early applying amendments to FRS 102 until the relevant SORP (which will generally include additional guidance and disclosures) has been reviewed. For example, the *Charities SORP (FRS 102) (second edition - October 2019)* includes additional disclosures for charities beyond those required by FRS 102, which would apply to small charities (unless specifically exempted by the SORP).

Certain entities may also be subject to legal requirements relating to the application of SORPs which may restrict the ability of an entity to early apply an amendment to FRS 102 (or related SORP). It is therefore always important for entities to understand the legislative or other regulatory requirements governing the preparation of their financial statements. This book does not discuss these requirements.

1.4 Structure of FRS 102

FRS 102 includes Section 1 which addresses the scope of FRS 102, Section 1A, Section 2, Section 2A, Sections 3 to 33 each addressing a separate accounting topic, Section 34 on specialised activities (see 2.5 below) and Section 35 on transition to FRS 102.

All paragraphs have equal authority. Some sections include appendices of implementation guidance or examples. Some of these are an integral part of FRS 102, whereas others provide guidance, but each specifies its status. Terms defined in the Glossary (included in Appendix I to FRS 102) are in bold type the first time they appear in each section of FRS 102 and in each sub-section of Section 34. [FRS 102 Overview (vi), FRS 102 Overview (vii)].

Appendix II *Table of equivalence for company law terminology* compares UK and Irish Company Law terminology with that used in FRS 102. Appendix III *Note on legal requirements* provides an overview of how the requirements in FRS 102 address the requirements of CA 2006. Appendix IV *Republic of Ireland legal references* outlines the provisions in Irish law (Companies Act 2014) (CA 2014) corresponding to the provisions of CA 2006 and the Regulations.

The Basis for Conclusions summarises the main issues considered by the FRC in developing FRS 102. Section 1 of FRS 102 is addressed in this chapter.

2 Scope of FRS 102

Extract from FRS 102

- 1.1 This FRS applies to financial statements that are intended to give a true and fair view of a reporting entity's financial position and profit or loss (or income and expenditure) for a period. *[FRS 102.1.1].*

The application of FRS 102 is intended to give a true and fair view of an entity's financial position and performance for a period.

FRS 102 is designed to apply to general purpose financial statements and financial reporting, intended to focus on the common information needs of a wide range of users (such as shareholders, lenders, other creditors, employees and members of the public), of entities including those that are not constituted as companies and those that are not profit-oriented. *[FRS 102 Overview(v)].*

FRS 102 applies to public benefit entities (PBEs) and other entities, not just to companies. *[FRS 102.1.2].* Paragraph numbers in the standard prefixed with a 'PBE' are applicable to public benefit entities and are not applied directly or by analogy to entities that are not public benefit entities (other than, where specifically directed, entities within a public benefit entity group). A public benefit entity must apply all paragraphs prefixed with a 'PBE' to the extent that they are relevant, provided that any SORP relating to that public benefit entity permits it. *[FRS 102.1.2].* These paragraphs are generally found in Section 34 but are not restricted to that section. See Chapter 36 at 6 and 2.5.2 below.

An entity applying FRS 102 must ensure it complies with any relevant legal requirements applicable to it. FRS 102 does not necessarily contain all legal disclosure requirements. FRS 102 Section 1A includes most legal disclosures for small companies but, for example, those only relevant when the financial statements have been audited are not included. *[FRS 102.1.2A].* See Chapter 5 at 5 for disclosures required for small companies (and LLPs), including those not included in FRS 102 Section 1A. For CA 2006 disclosure requirements for entities other than small entities, see Chapter 1 at 5.

2.1 Basis of preparation of financial statements

FRS 102 states that a UK entity required by the CA 2006 (or other legislation or regulation) to prepare consolidated financial statements in accordance with adopted IFRS must do so. Adopted IFRS refers to the IFRS Accounting Standards that have been adopted in the relevant jurisdiction. *[FRS 102.1.3].* In the UK, this is referred to as UK-Adopted International Accounting Standards. *[FRS 102 Appendix I].* The individual financial statements of such UK entity, or the individual financial statements or consolidated financial statements of any other UK entity, must be prepared in accordance with the following requirements:

- If the financial statements are the individual financial statements of an entity that is eligible to apply FRS 105 (and the entity chooses to do so), FRS 105
- Or
- If the financial statements are those of an entity that is not eligible to (or is eligible to but chooses not to) apply FRS 105, the financial statements must be prepared in accordance with:
 - (a) FRS 102
 - (b) UK-Adopted International Accounting Standards
- Or
- (c) FRS 101 (if the financial statements are individual financial statements of a qualifying entity) (see Chapter 2). *[FRS 102.1.3].*

The above requirements in Section 1 largely reinforce and are consistent with the general requirements on basis of preparation of financial statements in FRS 100. FRS 100 sets out the applicable financial reporting framework for entities preparing financial statements, intended to give a true and fair view, in accordance with legislation, regulations or accounting standards applicable in the UK and the Republic of Ireland. *[FRS 100.1, FRS 100.2].* However, FRS 100 sets out the choices available slightly different to Section 1 (see Chapter 1 at 3.3). FRS 100 states that the choice in (a) and (b) above relates to financial statements, whether consolidated or individual financial statements, that are not required by the CA 2006 (or other legislation or regulation) to be prepared in accordance with UK-Adopted International Accounting Standards. *[FRS 100.4].* While the CA 2006 does not require individual financial statements of UK companies with securities admitted to trading on a regulated market to be prepared in accordance with UK-Adopted International Accounting Standards, some UK companies may be subject to other regulations that do require the application of UK-Adopted International Accounting Standards in individual financial statements.

FRS 105 can be applied by a UK company, qualifying partnership, or LLP that meets the eligibility conditions to apply, and is not excluded from, the micro-entities regime. See Chapter 1 at 3.3.5

FRS 102 can also be used by entities that are not subject to the CA 2006 (or the CA 2014 in the Republic of Ireland). An entity's choice of financial reporting framework must be permitted by the legal framework or other regulations or requirements that govern the preparation of the entity's financial statements. Other agreements or arrangements (such as shareholders' agreements or banking agreements) may restrict the choice of financial reporting framework.

The basis of preparation of financial statements in the UK is addressed in more detail in Chapter 1 at 3.3.

The requirements of the CA 2006 (and certain other regulatory rules) governing preparation of financial statements by UK companies are discussed in Chapter 1 at 5. The CA 2006 exemptions available to small companies, small LLPs and small qualifying partnerships are addressed in Chapter 5 at 6, which includes discussions on how FRS 102 interacts with the CA 2006 exemptions for small companies, LLPs and qualifying partnerships, where a small entity chooses not to apply FRS 102 Section 1A (see 2.2 below).

2.2 Basis of preparation of financial statements for small entities

Small entities (as defined in Chapter 5 at 2.1) are entitled to apply Section 1A of FRS 102. If a small entity chooses not to apply the small entities regime, the entity must prepare its financial statements in accordance with FRS 102, excluding Section 1A. [FRS 102.1A.2].

Small entities applying Section 1A follow the same recognition and measurement principles as full FRS 102 but the presentation and disclosure requirements in Section 1A, which are based on the statutory requirements applicable to companies subject to the small companies regime (and LLPs subject to the small LLPs regime), are somewhat lighter than those that apply in full FRS 102. See Chapter 5 for a full discussion of the requirements of Section 1A.

A small entity, whether or not applying Section 1A, also benefits from:

- An exemption from the preparation of a cash flow statement (see Chapter 7 at 2.1).
- And
- An exemption from the preparation of consolidated financial statements (see Chapter 8 at 3.1.1.D).

2.3 Application of SORPs

SORPs recommend accounting practices for specialised industries or sectors, and supplement accounting standards and other legal and regulatory requirements in light of the special factors prevailing or transactions undertaken in a particular industry or sector. [FRS 102 Appendix I].

FRS 102 makes reference to current SORPs (to the extent the provisions are in effect) as part of the hierarchy for management to consider when developing and applying accounting policies. [FRS 102.10.5]. See Chapter 9 at 3.1. The provisions of a SORP cease to apply, for instance, where they conflict with a more recent financial reporting standard. [FRS 100.6]. See 1.3.3 above.

Individual SORPs need to be referred to in order to understand the circumstances in which they apply. If a SORP does apply, the entity must state in its financial statements the title of the SORP and whether the financial statements have been prepared in accordance with the SORP's provisions that are currently in effect. If the provisions of the SORP have been departed from, the entity needs to provide a description of how the financial statements depart from the practice recommended by the SORP. In particular, for any treatment not in accordance with the SORP, the entity discloses why the chosen treatment is judged more appropriate to the entity's circumstances and in the case of any omitted disclosures recommended by the SORP, the reason for the omission. A small entity in the Republic of Ireland applying the small entities regime in FRS 102 is exempt from this requirement, but such an entity is encouraged to provide the disclosures. [FRS 102.1.7A, FRS 100.6]. No such exemption is available for small entities in the UK.

2.4 Extension of specific IFRSs to certain types of entities

As FRS 102 is accessible to a wider scope of entities than the IFRS for SMEs Accounting Standard, the FRC has extended its requirements (compared to the IFRS for SMEs Accounting Standard) to address specific issues by way of direct references to adopted IFRS. These IFRS Accounting Standards apply with the same scope as contained within the individual IFRS Accounting Standards, as follows:

- IAS 33. This standard applies to an entity whose ordinary shares or potential ordinary shares are publicly traded or that files, or is in the process of filing, its financial statements with a securities commission or other regulatory organisation for the purpose of issuing ordinary shares in a public market, or an entity that chooses to disclose earnings per share. *[FRS 102.1.4]*.
- IFRS 6. This standard applies to an entity that is engaged in the exploration for and/or evaluation of mineral resources (extractive activities). *[FRS 102.34.11]*.
- IFRS 8. This standard applies to an entity whose debt or equity instruments are publicly traded, or that files, or is in the process of filing, its financial statements with a securities commission or other regulatory organisation for the purpose of issuing any class of instruments in a public market, or an entity that chooses to provide information described as segment information. If an entity discloses disaggregated information, but that information does not comply with IFRS 8's requirements, the information is not described as segment information. *[FRS 102.1.5]*. See Chapter 6 at 2.7.

References to other IFRS Accounting Standards made in IAS 33, IFRS 6 or IFRS 8 are taken to be references to the relevant section or paragraph made in FRS 102 (except that when applying paragraph 21 of IFRS 6, a cash generating unit or group of cash generating units must be no larger than an operating segment (as defined in FRS 102's Glossary) and the reference to IFRS 8 is ignored). *[FRS 102.1.7, FRS 102.34.11A, FRS 102.34.11B]*.

FRS 102 is not applicable to insurance contracts (including reinsurance contracts) issued or held by an entity, nor to financial instruments with a discretionary participation feature that an entity issues. Instead, an entity must apply FRS 103 to such contracts and instruments. *[FRS 102.1.6, FRS 103.1.2]*. This scope may be wider than entities that are legally insurers for legal or supervisory purposes. See Chapter 38 for information on FRS 103.

2.5 Specialised activities

Section 34 of FRS 102 is devoted to additional requirements specific to specialised activities. These address:

- Financial institutions (disclosures) (see 2.5.1 below)
 - Agricultural activities
 - Extractive activities
 - Service concession arrangements
 - Heritage assets
 - Funding commitments
 - Incoming resources from non-exchange transactions
 - Retirement benefit plans (accounting for retirement benefit plans and disclosures for such plans are not within the scope of this publication)
- And
- Public benefit entities (see 2.5.2 below)

Importantly, Section 34 sets out requirements on certain areas not addressed directly by previous UK accounting standards or IFRS Accounting Standards. FRS 102's requirements on specialised activities are addressed in Chapter 36.

2.5.1 Disclosure requirements for financial institutions required by Section 34

A financial institution that is a qualifying entity is not entitled to make use of the disclosure exemptions from Sections 11 and 12 when applying the reduced disclosure framework in its individual financial statements (see 3 below). *[FRS 102.1.9]*.

Section 34 of FRS 102 includes additional disclosure requirements for financial institutions (see definition at 2.5.1.A below) in financial statements prepared in accordance with FRS 102.

These disclosure requirements set out in paragraphs 19 to 33 of Section 34 must be provided in:

[FRS 102.34.17]

- The individual financial statements of a financial institution
- And
- The consolidated financial statements of a group containing a financial institution when the financial institution's financial instruments are material to the group.

Disclosures are required in the consolidated financial statements of a group containing a financial institution even if the principal activities of the group itself are not being a financial institution. This has an implication for group accounts where a group company is identified as a financial institution (see 2.5.1.A below). Disclosures will be required in the group accounts in relation to financial instruments of the group company (to the extent the transactions have not eliminated on consolidation), where these are material to the group.

The additional disclosures required by financial institutions are set out in Chapter 15 at 4.1.4.

2.5.1.A Definition of a financial institution

In broad terms, financial institutions are entities that hold assets in a fiduciary capacity or take deposits, including credit unions, building societies and investment entities. [FRS 102.BC.B34D.1]. However, the FRC has opted not to provide a generic definition of a financial institution. Instead, it has provided a list of entities that are financial institutions. A financial institution is stated to be any of the following: [FRS 102 Appendix I]

Extract from FRS 102

Appendix I Glossary

financial institution

Any of the following:

- (a) a bank which is:
 - (i) a with a Part4A permission which includes accepting deposits and:
 - (a) which is a credit institution; or
 - (b) whose Part 4A permission includes a requirement that it complies with the rules in the General Prudential sourcebook and the Prudential sourcebook for Banks, Building Societies and Investment Firms relating to banks, but which is not a building society, a friendly society or a credit union;
 - (ii) an EEA bank which is a full credit institution;
- (b) a building society which is defined in section 119(1) of the Building Societies Act 1986 as a building society incorporated (or deemed to be incorporated) under that act;
- (c) a credit union, being a body corporate registered under the Co-operative and Community Benefit Societies Act 2014 as a credit union in accordance with the Credit Unions Act 1979, which is an authorised person;
- (d) a custodian bank or broker-dealer;
- (e) an entity that undertakes the business of effecting or carrying out insurance contracts, including general and life assurance entities;
- (f) an incorporated under the Friendly Societies Act 1992 or a registered under section 7(1)(a) of the Friendly Societies Act 1974 or any enactment which it replaced, including any registered branches;
- (g) an investment trust, Irish investment company, venture capital trust, mutual fund, exchange traded fund, unit trust, open-ended investment company (OEIC); or
- (h) [Deleted]
- (i) any other entity whose principal activity is similar to those listed above but is not specifically included in that list.

A parent entity whose sole activity is to hold investments in other group entities is not a financial institution.

Retirement benefit plans are not financial institutions as they are not deemed to be similar to the other institutions in the list. Stockbrokers also are not considered to be financial institutions as they are considered to be generally dissimilar from other entities as they do not hold financial instruments on behalf of others. [FRS 102.BC.B34D.6, FRS 102.BC.B34D.7]

Whether or not a group treasury company is a financial institution will depend on the individual facts and circumstances. Judgement will need to be applied in determining whether a group treasury company is similar to the other entities listed in the definition of a financial institution. [FRS 102.BC.B34D.8].

If the risks arising from financial instruments are particularly significant to a business, additional disclosure may be required to enable users to evaluate the significance of those instruments, regardless of whether the entity meets the definition of a financial institution. If a group entity ceases to meet the definition of a financial institution, the disclosures relating to both the individual financial statements and the consolidated financial statements will no longer be required. [FRS 102.BC.B34D.9].

Identifying a group entity as a financial institution impacts both the disclosures that need to be given in the individual financial statements of that entity (prepared in accordance with FRS 102) and, where the financial instruments of the financial institution are material to the group, in the consolidated financial statements including the entity (where prepared in accordance with FRS 102) (see 2.5.1 above).

2.5.2 Public benefit entities

Paragraphs in FRS 102 that are prefixed by PBE are specific to public benefit entities (see definition in the Glossary to FRS 102 and discussed further in Chapter 36 at 6). These paragraphs must not be applied directly, or by analogy, to entities that are not public benefit entities (other than, where specifically directed, entities within a public benefit entity group, i.e., a public benefit entity parent and all its wholly-owned subsidiaries). [FRS 102.1.2].

Section 34 addresses incoming resources from non-exchange transactions, public benefit entity combinations, and public benefit entity concessionary loans. These parts of Section 34 include paragraphs prefixed by PBE and, therefore, apply only to public benefit entities. Other sections of FRS 102 also contain paragraphs prefixed by PBE. Section 34 also addresses other accounting topics such as heritage assets and funding commitments, which may be of particular relevance to some public benefit entities (as the paragraphs are not prefixed by PBE), but apply to all entities. See Chapter 36 at 6 and Chapter 24 at 3.10. Many public benefit entities may also be subject to the requirements of a SORP (see 1.3.3 and 2.3 above).

3 Reduced disclosure framework for qualifying entities

Extract from FRS 102

- 1.8** A qualifying entity (for the purposes of this FRS) which is not a financial institution may take advantage in its individual financial statements of the disclosure exemptions set out in paragraph 1.12.
- 1.9** A qualifying entity (for the purposes of this FRS) which is a financial institution may take advantage in its individual financial statements of the disclosure exemptions set out in paragraph 1.12, except for the disclosure exemptions from Section 11 Basic Financial Instruments and Section 12 Other Financial Instruments Issues.

FRS 102 provides for a reduced disclosure framework available only in the individual financial statements of a 'qualifying entity' (see 3.1 below). [FRS 102.1.8, FRS 102.1.9]. A qualifying entity which is required to prepare consolidated financial statements (for example, it is a parent company required by section 399 of the CA 2006 to prepare group accounts and is not entitled to any of the exemptions in sections 400 to 402 of the CA 2006 or chooses not to take advantage of these exemptions) may not take advantage of the disclosure exemptions in its consolidated financial statements. [FRS 102.1.10]. This does not preclude the reduced disclosure framework being applied in the individual financial statements of a parent preparing consolidated financial statements.

Individual financial statements to which FRS 102 applies are the accounts that are required to be prepared by an entity in accordance with the CA 2006 or relevant legislation, for example: 'individual accounts' as set out in section 394 of the CA 2006, a 'statement of accounts' as set out in section 132 of the Charities Act 2011, or 'individual accounts' as set out in section 72A of the Building Societies Act 1986. Separate financial statements are included in the meaning of the term 'individual financial statements'.

[FRS 102 Appendix I].

It is worth noting that FRS 102 uses the term 'separate financial statements' to mean those presented by a parent in which investments in subsidiaries, jointly controlled entities or associates are accounted for either at cost or fair value rather than on the basis of the reported results and net assets of the investees.

[FRS 102 Appendix I]. This differs to the definition of 'separate financial statements' in IFRSs. [IAS 27.4].

This means that FRS 102's reduced disclosure framework can be used in:

- Individual financial statements of subsidiary undertakings
 - Separate financial statements of an intermediate parent undertaking which does not prepare consolidated financial statements
- And
- Separate financial statements of a parent undertaking which does prepare consolidated financial statements.

However, the entity applying FRS 102's reduced disclosure framework must be included in a set of publicly available consolidated financial statements intended to give a true and fair view (see 3.1.6 below).

A parent company that prepares consolidated financial statements but applies FRS 102 in its individual financial statements can also use the exemption in section 408 of the CA 2006 from presenting a profit and loss account and related notes in the individual financial statements. This is the case whether or not it applies FRS 102's reduced disclosure framework.

3.1 Definition of a qualifying entity

Extract from FRS 102

Appendix I Glossary

qualifying entity (for the purposes of this FRS)

A member of a group where the parent of that group prepares publicly available consolidated financial statements which are intended to give a true and fair view (of the assets, liabilities, financial position and profit or loss) and that member is included in the consolidation.

A charity can be a qualifying entity under FRS 102, unlike under FRS 101. *[FRS 101 Appendix I, FRS 102 Appendix I]*.

There is no requirement that a qualifying entity is a member of the group in which it is consolidated for its entire reporting period. There is also no requirement that the financial statements of the qualifying entity and the consolidated financial statements of the parent of that group (which may be the reporting entity itself) must be coterminous (i.e., they have the same reporting periods).

How we see it

In our view, an entity meets the definition of a qualifying entity even if the entity is not included in the consolidated financial statements of the group for its entire reporting period, or that the financial statements of the parent of that group and the entity are not coterminous (i.e., have similar reporting periods). The use of the present tense in the definition of qualifying entity in the standard implies that the intention is only that the qualifying entity (where it does not prepare its own consolidated financial statements) is a subsidiary of the parent at its reporting date. This view is consistent with UK Company Law which requires that an entity which is a parent at the end of the financial year must prepare group accounts unless it is exempted from the requirement.

However, when the consolidated financial statements of the group and the qualifying entity's individual statements are not coterminous (i.e., they have different reporting periods), care must be applied in determining which exemptions a qualifying entity may be able to take. Some of the disclosure exemptions may not be available to the qualifying entity because the consolidated financial statements may not contain the 'equivalent' disclosures (see 3.5 below).

There is no requirement for the consolidated financial statements in which the qualifying entity is included to be prepared under FRS 102 nor that the parent that prepares the consolidated financial statements is a UK entity. However, the consolidated financial statements must be intended to give a true and fair view (see 3.1.6 below).

3.1.1 Publicly available consolidated financial statements

The definition of a qualifying entity (see 3.1 above) makes reference to a parent that prepares publicly available consolidated financial statements. FRS 102 requires that the consolidated financial statements of the parent can be accessed by the public as the use of FRS 102's reduced disclosure framework is conditional on a disclosure by the qualifying entity indicating from where those consolidated financial statements can be obtained (see 3.2 below). This does not mandate that the consolidated financial statements must be filed with a regulator. Therefore, for example, UK consolidated financial statements that have not been filed with the Registrar of Companies must be publicly available via some other medium.

3.1.2 Definition of 'group' and 'subsidiary'

The definition of a qualifying entity contains a footnote that refers to section 474(1) of the CA 2006 which defines a 'group' as a 'parent undertaking and its subsidiary undertakings'. *[s474(1)]*.

The CA 2006 states that an undertaking is a parent undertaking in relation to another undertaking, a subsidiary undertaking, if:

- It holds a majority of the voting rights in the undertaking. *[s1162(2)]*.
- It is a member of the undertaking and has the right to appoint or remove a majority of its board of directors *[s1162(2)]*
- It has the right to exercise a dominant influence over the undertaking by virtue of provisions contained in the undertaking's articles or by virtue of a control contract *[s1162(2)]*
- It is a member of the undertaking and controls alone, pursuant to an agreement with other shareholders or members, a majority of the voting rights in the undertaking *[s1162(2)]*
- It has the power to exercise, or actually exercises, dominant influence or control over it *[s1162(4)]*

Or

- It and the subsidiary undertaking are managed on a unified basis *[s1162(4)]*

An undertaking is treated as a member for the purposes above if any of its subsidiary undertakings is a member of that undertaking or if any shares in that other undertaking are held by a person acting on behalf of the undertaking or any of its subsidiary undertakings. *[s1162(3)]*.

A parent undertaking must be treated as the parent undertaking of undertakings in relation to which any of its subsidiary undertakings are, or are to be treated as, parent undertakings, and references to its subsidiary undertakings are construed accordingly. [s1162(5)]. Schedule 7 to the CA 2006 provides interpretation to terms used in Section 1162 of CA 2006. [s1162(6)]. References to 'shares' in Section 1162 and in Schedule 7 are to 'allotted shares'. [s1162(7)].

FRS 102 defines a subsidiary as an entity, including an unincorporated entity such as a partnership, that is controlled by the parent. [FRS 102 Appendix I]. Control is the power to govern the financial and operating policies of an entity so as to obtain benefits from its activities. [FRS 102 Appendix I]. FRS 102 goes on to explain in which circumstances control exists or can exist. [FRS 102.9.4, FRS 102.9.5, FRS 102.9.6, FRS 102.9.6A]. These circumstances are similar, but not identical to, those included in the definition of a subsidiary undertaking under Section 1162 of CA 2006.

Although there are slight differences in wording emphasis between the definition of a subsidiary undertaking in Section 1162 of CA 2006 and the requirements of Section 9 *Consolidated and Separate Financial Statements*, we would expect to see few conflicts arising in practice between Section 9 and the CA 2006 (see Chapter 8 at 3.2). The key issue for the application of FRS 102's reduced disclosure framework is whether the subsidiary is included in the parent's consolidated financial statements. A company that meets the definition of a subsidiary undertaking under the CA 2006 but is not included in the consolidated financial statements of its parent cannot apply FRS 102's reduced disclosure framework.

3.1.3 Entity included in the consolidation

The phrase 'included in the consolidation' (which may also be referred to as 'included in consolidated group accounts') is referenced to Section 474(1) of the CA 2006 which states that this means that 'the undertaking is included in the accounts by the method of full (and not proportional) consolidation and references to an undertaking excluded from consolidation must be construed accordingly'. Therefore, entities that are not fully consolidated in the consolidated financial statements, such as subsidiaries excluded from consolidation under FRS 102 [FRS 102.9.9, FRS 102.9.9A] or subsidiaries of investment entities that are accounted for at fair value through profit or loss under IFRS 10 *Consolidated Financial Statements*, cannot use FRS 102's reduced disclosure framework. Associates and jointly controlled entities are not qualifying entities since they are not members of a group (see 3.1.2 above).

3.1.4 Non-UK qualifying entities

There is no requirement that a qualifying entity is a UK entity. Non-UK entities can apply FRS 102's reduced disclosure framework in their individual or separate financial statements subject to meeting the criteria for its use, and provided FRS 102 is allowed for use in their own jurisdiction.

3.1.5 Non-controlling interests

There is no ownership threshold for a subsidiary to apply FRS 102's reduced disclosure framework. Therefore, a qualifying entity can apply the reduced disclosure framework even if its parent holds less than a majority of the voting rights, provided that the parent has control via other means (see Chapter 8 at 3.2).

3.1.6 Intended to give a true and fair view

The definition of a qualifying entity (see 3.1 above) does not require the consolidated financial statements in which the qualifying entity is included to give an explicit true and fair view of the assets, liabilities, financial position and profit or loss. Rather, the requirement is that the consolidated financial statements are 'intended to give a true and fair view'. This means that the consolidated financial statements in which the qualifying entity is consolidated need not contain an explicit opinion that they give a 'true and fair view' but, in substance, they are intended to give such a view. The FRC guidance *True and Fair* issued in June 2014 states that 'Fair presentation under IFRS (IFRS Accounting Standards) is equivalent to a true and fair view'¹⁵. It is therefore implied that financial statements prepared under equivalent standards to IFRS Accounting Standards can also give a true and fair view. See 3.1.6.A below for considerations in determining whether the financial reporting framework in which the consolidated financial statements are prepared, is 'intended to give a true and fair view'.

15 [True and Fair](#), Financial Reporting Council, page 1

3.1.6.A Considerations in determining whether preparing financial statements under a financial reporting framework is intended to give a true and fair view

This section discusses the considerations in determining whether preparing financial statements under a financial reporting framework is intended to give a true and fair view.

A UK parent company that wishes to claim an exemption from preparing group accounts under either Section 400 or Section 401 of the CA 2006 must be a subsidiary included in the consolidated accounts of a larger group. Those consolidated accounts (and where appropriate, the group's annual report) must be drawn up: [s400(2)(b), s401(2)(b)]

- In accordance with UK-adopted international accounting standards (for Sections 400 and 401).
- If the undertaking is a company, in accordance with the requirements of Part 15 of CA 2006, or if the undertaking is not a company, the legal requirements which apply to the drawing of consolidated accounts for that undertaking (for Section 400).
- In a manner equivalent to consolidated accounts and consolidated reports drawn up in accordance with the requirements of Part 15 of CA 2006 (for Section 401).

Or

- In accordance with accounting standards which are equivalent to UK-adopted international accounting standards, as determined pursuant to Commission Regulation (EC) No. 1569/2007 (for Section 401).

There are similar requirements for a parent LLP but for Section 401 of the LLP regulations, there is no reference to the basis on which the consolidated reports are drawn up. [s400(2)(b)(LLP), s401(2)(b)(LLP)].

How we see it

In our view, a set of consolidated financial statements that would meet the above criteria is intended to give a true and fair view.

The Application Guidance to FRS 100 states that consolidated financial statements of the higher parent will meet the condition that these are drawn up in a manner equivalent to consolidated accounts and consolidated reports drawn up in accordance with Part 15 of CA 2006, if they are intended to give a true and fair view and:

- Are prepared in accordance with FRS 102
- Or
- Are prepared using other Generally Accepted Accounting Principles (GAAPs) which are closely related to IFRS Accounting Standards, subject to consideration of the effect of any differences from UK-adopted international accounting standards.

Consolidated financial statements of the higher parent prepared in any other manner must be assessed for equivalence with Part 15 of CA 2006 based on the particular facts, including the similarities to and differences from the requirements of Part 15 of CA 2006. [FRS 100.AG14].

In determining whether the consolidated financial statements are drawn up in accordance with accounting standards equivalent to UK-adopted international accounting standards, as determined pursuant to Commission Regulation (EC) No. 1569/2007, the UK government recognised the following GAAP of equivalence to UK-adopted international accounting standards. These include those GAAPs previously recognised by the European Commission as equivalent to EU-adopted IFRS: [FRS 100.AG9]

- GAAP of Canada
- GAAP of the People's Republic of China
- GAAP of Japan
- GAAP of the Republic of Korea
- GAAP of the United States of America
- EU-adopted IFRS
- IFRSs as issued by the IASB

As at the date of the publication of the September 2024 version of FRS 100, the UK has not formally granted the equivalence of any other country's accounting standards to UK-adopted international accounting standards. These include the national accounting standards of EEA states or the IFRS for SMEs Accounting Standard.

The concept of equivalence for the purposes of Section 401 is discussed further in Chapter 8 at 3.1.1.C.

If the group, in which an entity is a member, prepares consolidated financial statements under a GAAP that is not 'equivalent' to UK-adopted international accounting standards, it begs the question as to whether the member can be a qualifying entity.

How we see it

In our view, an entity is not automatically excluded from being a qualifying entity, and from taking exemptions from FRS 102's reduced disclosure framework in its individual financial statements if it is a member of a group where the parent prepares consolidated financial statements under a GAAP that is not 'equivalent' to UK-adopted international accounting standards, provided that, those consolidated financial statements in which the entity is included are publicly available and are intended to give a true and fair view. Care must be applied in determining which exemptions a qualifying entity may be able to take.

A number of the disclosure exemptions under FRS 102's reduced disclosure framework are conditional on 'equivalent' disclosures being made in those publicly available consolidated financial statements in which the qualifying entity is included. [FRS 102.1.13]. Where the equivalent disclosure is not made, the relevant disclosure exemptions cannot be applied in the qualifying entity's individual financial statements prepared under FRS 102 (see 3.5 below). A GAAP that is not 'equivalent' to the UK-adopted international accounting standards is less likely to have those 'equivalent' disclosures.

One issue not addressed by FRS 102 is the impact of a qualified audit opinion on the parent's consolidated financial statements. A Queen's Counsel's opinion, obtained by the FRC in 2008, stated that 'the scope for arguing that financial statements which do not comply with relevant accounting standards nevertheless give a true and fair view, or a fair presentation, is very limited'.¹⁶

3.2 Use of the disclosure exemptions

The use of the disclosure exemptions in FRS 102's reduced disclosure framework (see 3.3 below) is conditional on all of the following criteria being met:

- The reporting entity applies the recognition, measurement and disclosure requirements of FRS 102.
And
- The reporting entity discloses in the notes to its financial statements:
 - (a) A brief narrative summary of the disclosure exemptions adopted.
And
 - (b) The name of the parent of the group in whose consolidated financial statements its financial statements are consolidated (i.e., the parent identified in the definition of 'qualifying entity') and from where those financial statements may be obtained. [FRS 102.1.11].

There is no requirement to list all the disclosure exemptions in detail. Reporting entities can also choose to apply the disclosure exemptions on a selective basis. This may be necessary, for example, where not all the relevant 'equivalent disclosures' are made in the consolidated financial statements of the parent on the grounds of materiality (see 3.5 below).

FRS 102 did not clarify as to whether the consolidated financial statements must be prepared before the individual financial statements of the qualifying entity in order for a qualifying entity to take advantage of the exemptions available under the reduced disclosure framework.

3.3 Disclosure exemptions for qualifying entities

A qualifying entity may take advantage of the following disclosure exemptions in its individual financial statements: [FRS 102.1.12]

- The requirements of Section 7 *Statement of Cash Flows*, and Section 3 *Financial Statement Presentation*, paragraph 3.17(d) (see 3.3.1 below), provided that in the case of paragraph 7.20C, which relates to supplier finance disclosures, equivalent disclosures are included in the consolidated financial statement in which the qualifying entity is included

¹⁶ [The Financial Reporting Council: The True and Fair Requirement Revisited - Opinion by Martin Moore QC, May 2008](#), para. 4(F).

- The requirements of:
 - (a) Section 11, paragraphs 11.42, 11.44, 11.45, 11.47, 11.48(a)(iii), 11.48(a)(iv), 11.48(b) and 11.48(c).
 - And
 - (b) Section 12 paragraphs 12.26 (in relation to those cross-referenced paragraphs from which a disclosure exemption is available), 12.27, 12.29(a), 12.29(b), 12.29A and 12.30.

These disclosure exemptions are subject to certain conditions and exceptions. See 3.3.2 and 3.4 below.
- The requirements of Section 20 *Leases*, paragraphs 20.80(f) and 20.116 (see 3.3.3 below).
- The requirements of Section 23 *Revenue*, paragraphs 23.131, 23.132, 23.133(a), 23.135(a) to 23.135(c), 23.136, 23.137 and 23.139 (see 3.3.4 below).
- The requirements of Section 26 *Share-based Payment*, paragraphs 26.18(b), 26.19 to 26.21 and 26.23, provided that for a qualifying entity that is:
 - (a) A subsidiary, the share-based payment arrangement concerns equity instruments of another group entity.
 - (b) An ultimate parent, the share-based payment arrangement concerns its own equity instruments and its separate financial statements are presented alongside the consolidated financial statements of the group.

And, in both cases, provided that the equivalent disclosures required by FRS 102 are included in the consolidated financial statements of the group in which the entity is consolidated (see 3.3.5 below)

- The requirement of Section 29 *Income Tax*, paragraphs 29.28(b) and 29.29, provided that disclosures equivalent to those required by FRS 102 are included in the consolidated financial statements of the group in which the entity is consolidated (see 3.3.6 below).
- The requirement of Section 33 *Related Party Disclosures*, paragraph 33.7 (see 3.3.7 below).
- The requirements of paragraph 24(b) of IFRS 6 to disclose the operating and investing cash flows arising from the exploration for and evaluation of mineral resources (see 3.3.8 below).

Qualifying entities must still ensure that they comply with any relevant legal requirements. FRS 102 does not necessarily contain all legal disclosure requirements. [FRS 102.1.2A].

3.3.1 Statement of cash flows

The exemption removes the requirement for a cash flow statement for any qualifying entity in its individual financial statements. This also removes the following disclosure requirements for supplier finance arrangements, if the equivalent disclosures are made in the consolidated financial statements in which the qualifying entity is included: [FRS 102.1.12(b)]

- The key terms and conditions of the arrangements.
- As at the end of the reporting period, the carrying amounts and associated line items presented in the statement of financial position of the financial liabilities that are part of the supplier finance arrangement, and the range of payment due dates for both the financial liabilities that are part of the supplier finance arrangement, and comparable trade payables that are not part of the supplier finance arrangement.
- And
- The type and effect of non-cash changes in the carrying amounts of the financial liabilities that are part of a supplier finance arrangement. [FRS 102.7.20(c)]

3.3.2 Financial instruments

The exemption removes certain of the disclosure requirements of Sections 11 and 12 (see 3.3 above). [FRS 102.1.12(c)]. Financial institutions are not permitted to use this exemption.

The exemption depends on there being equivalent disclosures in the publicly available consolidated financial statements in which the qualifying entity is included. The guidance on 'equivalence' included in FRS 100 (see 3.5 below) is clear that the exemption can be taken in relation to intra-group balances that are eliminated on consolidation in these consolidated financial statements. [FRS 100.AG26]

Notwithstanding this exemption, when a qualifying entity that is not a financial institution has financial instruments held at fair value under UK-adopted international accounting standards, it must give the disclosures required by UK-adopted international accounting standards (see 3.4 below). [1 Sch 36(4), 1 Sch 36(4)(LLP)].

The reduction in disclosure exemptions in relation to Sections 11 and 12 applies even if the qualifying entity is not subject to UK company and LLP law. See Chapter 15 at 4 for details of disclosure requirements for financial instruments that apply to all entities, including qualifying entities.

3.3.2.A Other disclosures required by the Regulations for financial instruments

Qualifying entities must also ensure that they comply with any relevant legal requirements. FRS 102 does not necessarily contain all legal disclosure requirements. [FRS 102.1.2A].

FRS 102 financial statements prepared in accordance with Part 15 of the CA 2006 are Companies Act accounts. A UK company's statutory accounts prepared in accordance with FRS 102 must give the disclosures in respect of financial instruments required by the Regulations (or by the Small Companies Regulations) even if the company is a qualifying entity using the reduced disclosure framework. Similarly, a UK LLP must comply with the disclosure requirements of the LLP Regulations (or the Small LLP Regulations).

In particular, qualifying entities that are preparing Companies Act accounts must provide the disclosures required by paragraph 55 of Schedule 1 to the Regulations (and its equivalents in the Small Companies Regulations, LLP Regulations and Small LLP Regulations) which set out requirements relating to financial instruments at fair value. [1 Sch 55]. These disclosures relate to financial instruments held at fair value generally and not just to those financial instruments measured at fair value in accordance with paragraph 36(4) of Schedule 1 to the Regulations (and its equivalents). FRS 102 reporters applying IFRS 9 or IAS 39 to the recognition and measurement of financial instruments may have financial instruments measured at fair value, but with fair value changes outside profit and loss. Appendix III to FRS 102 states that most of these disclosures will be satisfied by equivalent requirements of FRS 102 but cautions that entities will need to take care to ensure appropriate disclosure of derivatives is provided. [FRS 102.A3.12D]. In addition, the Regulations contain disclosures that have not been included in FRS 102 concerning investments and loans. Care is needed to ensure compliance with the statutory requirements in addition to the disclosures listed in the standard. See Chapter 15 at 4 for details of statutory disclosures for financial instruments required in the accounts of UK entities. For further details on required disclosures for financial instruments held at fair value in accordance with paragraph 36(4) of Schedule 1 to the Regulations, see 3.4 below.

The Regulations also require that the directors' report of a UK company must contain, in relation to the use of financial instruments, an indication of the financial risk management objectives, policies (including the policy for hedging each major type of forecasted transaction for which hedge accounting is used) and the exposure of the company to price risk, credit risk, liquidity risk and cash flow risk, unless not material. In respect of a group directors' report, this information is required for the company and its consolidated subsidiary undertakings. [7 Sch 6]. These requirements do not apply to LLPs.

3.3.3 Leases

For lessees, the exemption removes the requirement to disclose the total cash outflow for leases.

For lessors, the exemption removes the requirement to disclose:

- For finance leases, the selling profit or loss, finance income on the net investment in the lease, and income relating to variable lease payments which are not included in the measurement of the net investment in lease.
- For operating leases held by a lessor, a qualifying entity is not required to disclose lease income. [FRS 102.1.12(cA)]

3.3.4 Revenue from contracts with customers

This exemption removes most of the disclosure requirements in Section 23 (see Chapter 25 at 11.4). An entity, regardless of whether it is a qualifying entity or not, is required to disclose the following in its financial statements:

- Unless presented separately in the statement of comprehensive income (or income statement), the impairment losses recognised (applying Section 11) on receivables or contract assets from entity's contracts with customers. Any impairment losses on receivables or contract assets from other contracts must be separately disclosed. [FRS 102.23.133(b)]

- The opening and closing balances of receivables and contract balances (contract assets and liabilities), if they are not disclosed or presented separately. *[FRS 102.23.134(a)]*
- Revenue recognised in the current period that was included in the balance of the contract liability at the beginning of the period. *[FRS 102.23.134(b)]*
- The revenue recognised in the current period from performance obligations satisfied or partially satisfied in previous periods. An example of this is revenue recognised from changes in estimates of variable consideration. *[FRS 102.23.134(c)]*
- The description of obligations for returns, refunds and other similar obligations *[FRS 102.23.134(d)]*
- The description of types of warranties and related obligations *[FRS 102.23.134(e)]*
- The closing balances of assets recognised from the costs incurred to obtain or fulfil a contract, categorised appropriately (for example, by splitting amount to costs to obtain contracts with customers, pre-contract costs, and set-up costs). *[FRS 102.23.138(a)]*
- The amount of the amortisation and impairment losses in the period from assets recognised from costs incurred to obtain or fulfil a contract.

3.3.5 Share-based payment

The reduced disclosure framework in FRS 102 provides exemption for all the disclosure requirements of Section 26 (see Chapter 28 at 14) except for the following:

- A description of each type of share-based payment arrangements that existed at any time during the period, including the general terms and conditions of each arrangement, such as vesting requirements, the maximum term of options granted, and the method of settlement (e.g., whether in cash or equity). An entity with substantially similar types of share-based payment arrangement may aggregate this information. *[FRS 102.26.18(a)]*

And

- If the entity is part of a group share-based payment arrangement, and it measures its share-based payment expense on the basis of a reasonable allocation of the expense recognised for the group, it must disclose that fact and the basis for the allocation. *[FRS 102.26.22]*.

The exemption may only be taken by a subsidiary if the share-based payment arrangement concerns the equity instruments of another group entity, or by an ultimate parent entity if the share-based payment arrangement concerns its own equity instrument and its separate financial statements are presented alongside the consolidated financial statements. In addition to this, the exemption may only be taken if the disclosures equivalent to those required by FRS 102 are included in the consolidated financial statements in which the qualifying entity is included.

3.3.6 Income tax

Disclosure exemptions for qualifying entities in Section 29 apply only if an entity is in scope or is expected to be in scope of Pillar Two legislation. In this instance, a qualifying entity is only required to disclose the fact that it is, or it is expected to be within the scope of Pillar Two rules, provided that disclosures equivalent to those required by FRS 102 are included in the consolidated financial statements in which the qualifying entity is included. *[FRS 102.1.12(dA)]*.

3.3.7 Related party transactions

This exemption removes the requirement to disclose key management personnel compensation in total. *[FRS 102.1.12(e)]*.

3.3.8 Extractive activities

If an entity is engaged in the exploration for and/or evaluation of mineral resources, an entity applies the requirements of IFRS 6, as adopted in the relevant jurisdiction. *[FRS 102.34.11]*. A qualifying entity, applying IFRS 6, is not required to disclose the operating and investing cash flows arising from the exploration for and evaluation of mineral resources.

3.4 Disclosures required by the Regulations in the financial statements for certain financial instruments held at fair value

The Regulations require several disclosures for financial instruments which are held at fair value in accordance with paragraph 36(4) of Schedule 1 to the Regulations (and its equivalents in Schedules 2 and 3 to the Regulations, the Small Companies Regulations, LLP Regulations and Small LLP Regulations). See 3.4.1 below for a discussion of financial instruments that are in scope of this paragraph. For disclosure requirements relating to these financial instruments, see 3.4.2 below.

3.4.1 Financial instruments at fair value in accordance with paragraph 36(4) of Schedule 1 to the Regulations

Paragraph 36 of Schedule 1 to the Regulations (and its equivalents) allows financial instruments to be included in the financial statements at fair value, where their fair value can be measured reliably. Paragraph 36(4) of Schedule 1 to the Regulations (and its equivalents) state that “financial instruments which under UK-adopted international accounting standards may be included in accounts at fair value, may be so included, provided that the disclosures required by such accounting standards are made.” [1 Sch 36(4), 1 Sch 36(4)(LLP)]. Following the adoption by the UK of IFRS 9, IFRS 9 is now the principal point of reference for which financial instruments may be included in the accounts at fair value when referring to paragraph 36(4) of Schedule 1 to the Regulations. The Regulations (and its equivalents) were written with the application of the previously extant IAS 39 in mind. Terms such as ‘loans and receivables’, ‘held to maturity’ and ‘held for trading’ are not defined in FRS 102. The Regulations indicate that these terms are defined in the Accounting Directive (Directive 2013/34/EC) and Directive 91/674/EEC (for insurance undertakings) and in paragraph 96 of Schedule 2 to the Regulations (for banking companies). [10 Sch 3(1), 4 Sch 2(1)(LLP)]. Some of these terms are no longer used in IFRS 9 and therefore it would be necessary to refer back to definitions under the version of IAS 39 extant immediately before the introduction of IFRS 9.

Paragraphs 36(2) and 36(3) of Schedule 1 to the Regulations (and their equivalents) exclude certain types of financial instruments from being measured at fair value, unless these are permitted to be held at fair value by paragraph 36(4) of Schedule 1 to the Regulations (and its equivalents). [1 Sch 36, 2 Sch 44, 3 Sch 30, 1 Sch 36(SC), 1 Sch 36(LLP), 1 Sch 36(LLP SC)]. These financial instruments are as follows:

- Financial liabilities, unless they are held as part of a trading portfolio or are derivatives.
 - Financial instruments (other than derivatives) held to maturity.
 - Loans and receivables originated by the company (or the LLP) and not held for trading purposes.
 - Interests in subsidiary undertakings, associated undertakings and joint ventures.
 - Equity instruments issued by the company (or the LLP).
 - Contracts for contingent consideration in a business combination.
- And
- Other financial instruments with such special characteristics that the instruments according to generally accepted accounting principles or practice, are accounted for differently from other financial instruments. [1 Sch 36(2), 1 Sch 36(3), 1 Sch 36(2)(LLP), 1 Sch 36(3)(LLP)].

FRS 102 allows a choice of applying either IAS 39, IFRS 9, or Sections 11 and 12 in the recognition and measurement of financial instruments. [FRS 102.11.2, FRS 102.12.2]. Note that the ability to newly adopt the IAS 39 option is restricted to situations where adopting this option is necessary to achieve consistency with group financial statements. This is possible for example, an entity which had not previously applied the IAS 39 option is acquired by a group that already applies the IAS 39 option. See Chapter 11 at 4. The situations in which financial instruments are carried at fair value under FRS 102 will differ depending on the choice taken.

Sections 11 and 12, where applied to the recognition and measurement of financial instruments, distinguish between basic and other financial instruments. These requirements differ significantly to those of IAS 39 and IFRS 9. Most basic financial instruments (with certain exceptions) are carried at cost or amortised cost, whereas other financial instruments are carried at fair value through profit or loss. For other financial instruments, Section 12 does not permit measurement at fair value through profit or loss where this is not permitted by the Regulations (and its equivalents). [FRS 102.12.8(c)]. Hence the potential for conflict between Sections 11 and 12, and the Regulations (and its equivalents) over financial instruments permitted to be carried at fair value is expected to be limited. See Chapter 13 at 4 for a discussion of the classification and measurement of financial instruments and which financial instruments may be held at fair value under Sections 11 and 12.

Financial instruments that are held at fair value subject to paragraph 36(4) of Schedule 1 to the Regulations (and its equivalents) in FRS 102 financial statements (under any of the accounting choices) therefore include:

- Financial liabilities, which are not held as part of a trading portfolio nor derivatives that:
 - (a) Are designated at fair value through profit or loss because this eliminates or significantly reduces an 'accounting mismatch' or a group of financial assets and/or financial liabilities is managed and its performance evaluated on a fair value basis (IAS 39, IFRS 9 and Section 11 have similar but not identically worded provisions). *[IAS 39.9, IFRS 9.4.2.2, FRS 102.11.14(b)].*
 - (b) Where Sections 11 and 12 are applied, do not qualify as basic financial instruments under Section 11, but would meet the conditions to be measured or designated at fair value through profit or loss under UK-adopted international accounting standards (i.e., under paragraphs 4.3.5 and 4.3.6 of IFRS 9). *[IFRS 9.4.3.5, IFRS 9.4.3.6].*
 - (c) Where IAS 39 or IFRS 9 is applied, are hybrid contracts, but are measured or designated at fair value through profit or loss. *[IAS 39.11A, IAS 39.12, IFRS 9.4.3.5, IFRS 9.4.3.6].*
- Financial assets, which could have been designated as held to maturity (which are not derivatives) or loans and receivables originated by the reporting entity (and which are not held for trading purposes) that:
 - (a) Where IAS 39 is applied, are designated at either available-for-sale or are measured or designated at fair value through profit or loss (i.e., under paragraphs 9, 11A or 12 of IAS 39) - but would meet the conditions to be measured or designated at fair value under UK-adopted international accounting standards (i.e., under paragraphs 4.1.2A, 4.1.4, 4.1.5, 4.3.5 and 4.3.6 of IFRS 9). *[IAS 39.9, IAS 39.11A, IAS 39.12, IFRS 9.4.1.2A, IFRS 9.4.1.4-5, IFRS 9.4.3.5-6].*
 - (b) Where Sections 11 and 12 are applied, are designated at fair value through profit or loss. *[FRS 102.11.14(b)].*
 - (c) Where Sections 11 and 12 are applied, do not qualify as basic financial instruments but would meet the conditions to be measured or designated at fair value through profit or loss under UK-adopted international accounting standards (i.e., under paragraphs of 4.1.4, 4.1.5, 4.3.5 and 4.3.6 of IFRS 9). *[FRS 102.11.14(b), FRS 102.12.8(c), IFRS 9.4.1.45, IFRS 9.4.3.5-6].*

And

 - (d) Are measured at fair value in accordance with IFRS 9 (which is extant UK-adopted international accounting standards). *[IFRS 9.4.1.2A, IFRS 9.4.1.4-5].*

And

- Investments in subsidiaries, associated undertakings and joint ventures measured at fair value through profit or loss in consolidated or individual financial statements. *[FRS 102.9.9, FRS 102.9.9B, FRS 102.9.9C, FRS 102.9.26(c), FRS 102.14.4(d), FRS 102.14.4B, FRS 102.15.9(d), FRS 102.15.9B].* See Chapter 8 at 3.4, 4.1 and 4.2, Chapter 17 at 3.2.1 and Chapter 18 at 3.5.2 and 3.5.3.

FRS 102 permits or requires investments in subsidiaries, associates and joint ventures to be measured at fair value in consolidated and/or individual financial statements in certain circumstances. However, where such investments are held at fair value through profit and loss, these fall within the scope of paragraph 36(4) of Schedule 1 to the Regulations (and its equivalents). The interaction with company and LLP law is explained further in Chapter 13 at 4.4.

Contingent consideration arising in a business combination is not permitted to be held at fair value (whatever accounting policy choice is applied to the recognition and measurement of financial instruments). *[FRS 102.19.12, FRS 102.19.13, FRS 102.BC.A.28].* Equity instruments of the issuer are not held at fair value under Section 22 *Liabilities and Equity*.

3.4.2 Disclosures required for financial instruments at fair value in accordance with paragraph 36(4) of Schedule 1 to the Regulations

Appendix III to FRS 102 comments that an entity applying FRS 102 and holding financial instruments measured at fair value may be required to provide the disclosures required by paragraph 36(4) of Schedule 1 to the Regulations. *[FRS 102.A3.13].*

As noted at 3.4.1 above, the disclosures required by paragraph 36(4) of Schedule 1 to the Regulations (and its equivalents) are those in extant UK-adopted international accounting standards. The most logical interpretation of this is that an entity needs to make all material disclosures required by IFRS 7 *Financial Instruments: Disclosures* and IFRS 13, in respect of such financial instruments.

However, Appendix III to FRS 102 states that the disclosures required by paragraph 36(4) of Schedule 1 to the Regulations have been incorporated into Section 11. Some of the disclosure requirements of Section 11 apply to all financial instruments measured at fair value, whilst others (such as paragraph 11.48A) apply only to certain financial instruments (this does not include financial instruments held as part of a trading portfolio nor derivatives). The disclosure requirements of paragraph 11.48A will predominantly apply to certain financial liabilities, however, there may be instances where paragraph 36(3) of Schedule 1 to the Regulations requires that the disclosures must also be provided in relation to financial assets, e.g., investments in subsidiaries, associates or jointly controlled entities measured at fair value through profit or loss. [FRS 102.A3.13, FRS 102.9.27B].

How we see it

While the guidance in Appendix III above implies that FRS 102 reporters complying with the disclosures included in Sections 11 (and 12) will meet the disclosure requirements of paragraph 36(4) of Schedule 1 to the Regulations (and its equivalents), we consider that care needs to be taken with both the scope of the disclosures and disclosure requirements. In any event, FRS 102 reminds entities that they must ensure that they comply with any relevant legal requirements applicable to them and that the standard does not necessarily contain all legal disclosure requirements.

The disclosure requirements of Sections 11 and 12 apply to financial instruments within the scope of whichever accounting standard is applied for the recognition and measurement of financial instruments. [FRS 102.11.2, FRS 102.12.2].

Paragraph 11.48A, which is excluded from the disclosure exemptions in the reduced disclosure framework, has a more restricted scope for UK entities. It states that: “An entity in the UK, including an entity that is not a company, must provide the following disclosures for financial instruments measured at fair value through profit or loss in accordance with paragraph 36(4) of Schedule 1 to the Regulations. This does not include financial liabilities held as part of a trading portfolio nor financial liabilities that are derivatives.” Entities in the Republic of Ireland must provide the disclosures in paragraph 11.48A for financial instruments that are measured at fair value through profit or loss. [FRS 102.11.48A]

FRS 102 also requires a parent adopting a policy of accounting for its investments in subsidiaries, associates or jointly controlled entities at fair value through profit or loss in its separate financial statements to comply with the requirements of paragraph 36(4) of Schedule 1 to the Regulations by applying the disclosure requirements of Section 11 to those investments. [FRS 102.9.27B]. This means that all applicable disclosures in Section 11 must be given in respect of those investments.

How we see it

In our view, paragraph 36(4) of Schedule 1 to the Regulations also applies when investments in subsidiaries, associates or jointly controlled entities are held at fair value through profit or loss in the consolidated financial statements or in the individual financial statements of an investor or venturer, that is not a parent.

Care needs to be taken where IAS 39 or IFRS 9 is applied to the recognition and measurement of financial instruments, as financial instruments held at fair value (but not through profit or loss) may in principle be held at fair value subject to paragraph 36(4) of Schedule 1 to the Regulations (or its equivalents). Examples might include an available-for-sale financial asset or debt instrument at fair value through other comprehensive income. The disclosure requirements in Sections 11 and 12 for financial instruments at fair value, including paragraph 11.48A, are generally framed in respect of financial instruments at fair value through profit or loss, and therefore may not capture all financial instruments for which disclosures are required.

See Chapter 15 at 4 for details of disclosures for financial instruments, including those for financial instruments at fair value in accordance with paragraph 36(4) of Schedule 1 to the Regulations.

3.5 Equivalent disclosures

The disclosure exemptions in respect of cash flows, financial instruments, share-based payments and income tax set out in paragraphs 1.12(b), 1.12(c), 1.12(d), 1.12(dA), respectively of FRS 102 are dependent on the provision of ‘equivalent’ disclosures in the publicly available consolidated financial statements of the parent in which the qualifying entity is included.

FRS 102 refers to the Application Guidance in FRS 100 in deciding whether the consolidated financial statements of the group in which the reporting entity is included provides disclosures that are 'equivalent' to the requirements of FRS 102 from which relief is provided. [FRS 102.1.13].

The Application Guidance in FRS 100 states that:

- It is necessary to consider whether the consolidated financial statements of the parent provide disclosures that meet the basic disclosure requirements of FRS 102 without requiring strict conformity for each and every disclosure. This assessment must be based on the particular facts, including the similarities to and differences from the requirements of the relevant standard from which relief is provided. 'Equivalence' is intended to be aligned to that described in Section 401 of the CA 2006 (see Chapter 8 at 3.1.1.C and 3.1.6.A above). [FRS 100.AG25].

And

- Disclosure exemptions for subsidiaries are permitted where the relevant disclosure requirements are met in the consolidated financial statements, even where the disclosures are made in aggregate or in an abbreviated form, or in relation to intra-group balances, those intra-group balances have been eliminated on consolidation. If, however, no disclosure is made in the consolidated financial statements on the grounds of materiality, the relevant disclosures must be made at the subsidiary level if material in those financial statements. [FRS 100.AG26].

This means that a qualifying entity must review the consolidated financial statements of its parent to ensure that 'equivalent' disclosures have been made for each of the above exemptions that it intends to use. Where a particular 'equivalent' disclosure has not been made (unless the disclosure relates to an intra-group balance eliminated on consolidation) then the qualifying subsidiary cannot use the exemption in respect of that disclosure.

4 CA 2006 requirements for FRS 102 reporting entities

The requirements of the CA 2006 (and certain other regulatory rules) governing preparation of financial statements by UK companies are addressed in Chapter 1 at 5. See also 2.1 above for the requirements for which entities can apply FRS 102.

Statutory accounts prepared by a UK company in accordance with FRS 102 are Companies Act individual or group accounts and are therefore required to comply with the applicable provisions of Parts 15 and 16 of the CA 2006 and with the Regulations. [FRS 102.A3.7]. These requirements include the rules on recognition and measurement, the Companies Act accounts formats and note disclosures (see Chapter 6).

Appendix III *Note on legal requirements* to FRS 102 provides an overview of how the requirements in FRS 102 address UK law requirements. When discussing legal requirements relevant to FRS 102 financial statements, Appendix III generally refers to specific provisions of Schedule 1 to the Regulations. Entities applying Schedules 2, 3 or 6 to the Regulations must read such references as referring to the equivalent paragraph in those schedules. Small entities applying the Small Companies Regulation must read them as referring to the equivalent paragraph in Schedule 1 to the Small Companies Regulations. Similar provisions generally apply to LLPs in Schedule 1 to the LLP Regulations or Schedule 1 to the Small LLP Regulations. [FRS 102.A3.3].

Appendix III *Note on legal requirements* states that it does not list every legal requirement but instead focuses on those areas where greater judgement might be required in determining compliance with the law. [FRS 102.A3.11]. It notes that the standard 'is not intended to be a one-stop-shop for all accounting and legal requirements, and although the FRC believes the FRS 102 is not inconsistent with Company Law, compliance with FRS 102 alone will often be insufficient to ensure compliance with all the disclosure requirements set out in the Act and the Regulations. As a result, preparers will continue to be required to have regard to the requirements of Company Law in addition to accounting standards.' [FRS 102.A3.10].

4.1 Small and medium-sized entities

This section is relevant to small and medium-sized companies and LLPs that do not apply Section 1A of FRS 102. The requirements for entities applying Section 1A are covered in Chapter 5.

While this section refers to companies and LLPs, there are equivalent provisions for a qualifying partnership preparing the 'like annual accounts and reports', as if the partnership is a UK company, in accordance with the *Partnerships (Accounts) Regulations 2008*. See Chapter 6 at 3.1.4.

4.1.1 Small companies regime, small LLPs regime and small companies exemption

The criteria for use of the small companies regime and small LLPs regime, and the details of available exemptions for these entities, are discussed in Chapter 5 at 2 and 6.

A UK company subject to the small companies regime (or an LLP subject to the small LLPs regime) can apply the Small Companies Regulations (or the Small LLP Regulations) and is exempt from the requirement to prepare group accounts and from giving certain disclosures required in the notes to the financial statements by Part 15 of the CA 2006 (see Chapter 5 at 6).

In addition, FRS 102 Section 1A 'sets out the information that needs to be presented and disclosed in the financial statements of small entities that choose to apply the small entities regime' (see Chapter 5 at 2.1 for further information on entities eligible to apply the small entities' regime). [FRS 102.1A.1]. This paragraph implies that all eligible entities that choose to apply the small entities regime must apply the presentation and disclosure requirements in FRS 102 Section 1A. This includes the use of the formats included in Part 1 *General Rules and Formats* of Schedule 1 to the Small Companies Regulations or Part 1 *General Rules and Formats* of Schedule 1 to the Small LLP Regulations.

How we see it

In our view, entities may choose not to apply the requirements in FRS 102 Section 1A, and these entities will still be able to take advantage of other exemptions applicable to companies subject to the small companies regime or LLPs subject to the small LLPs regime. This is because paragraph 3(3) of the Small Companies Regulations specifically states that “accounts are treated as having complied with any provision of Schedule 1 to these Regulations if they comply instead with the corresponding provision of Schedule 1 to *The Large and Medium-sized Companies and Groups (Accounts and Reports) Regulations 2008*.” Paragraph 8(2) of the Small Companies Regulations makes a similar statement in respect of the group accounts formats included in Schedule 6 to the Small Companies Regulations and Schedule 6 to the Regulations. For LLPs, the corresponding statements are made in paragraphs 3(1) and 6(1) of the Small LLP Regulations.

A UK company that takes advantage of the small companies exemption is not required to prepare a strategic report, [s414B]. In the directors’ report, this entity is exempted from disclosing the recommended dividend. [s415A].

On the basis that a strategic report is required for traded or a banking LLP only, which are both excluded from the small LLP regime, and that an LLP is not required to prepare a directors’ report, there is no small companies exemption equivalent for LLPs. Some LLPs choose to prepare a separate members’ report but this is not a statutory requirement. While the LLP SORP includes certain disclosures (such as principal activities, a list of designated members, etc.) that could be included in such a report, the disclosures may be presented anywhere in the annual report. [LLP SORP.30, LLP SORP.31].

A UK company subject to the small companies regime or taking advantage of the small companies exemption is entitled to certain filing exemptions. An LLP subject to the small LLPs regime is also entitled to filing exemptions.

4.1.2 Medium-sized companies and LLPs

The criteria in determining whether an entity (a company or an LLP) is medium-sized, together with the details of available exemptions, are discussed in Chapter 1 at 5.6. The exemptions for medium-sized companies impacting the strategic report (not to disclose non-financial KPIs) are not relevant for LLPs. Companies (or LLPs) applying FRS 102 can make use of these exemptions to the extent they do not conflict with accounting standards, e.g., medium-sized companies would need to give related party disclosures in individual financial statements because this is required by FRS 102 notwithstanding the exemption in the Regulations. [Regulations 4(2B), LLP Regulations 4(2B)].

Appendix A - Defined terms

Extract from FRS 102

Appendix I

Glossary

adopted IFRS	IFRS Accounting Standards that have been adopted in the relevant jurisdiction. In the UK, this refers to UK-adopted international accounting standards. In the Republic of Ireland, this refers to EU-adopted IFRS.
consolidated financial statements	The financial statements of a parent and its subsidiaries presented as those of a single reporting entity.
financial institution	Any of the following: (a) a bank which is: (i) a with a Part4A permission which includes accepting deposits and: (a) which is a credit institution; or (b) whose Part 4A permission includes a requirement that it complies with the rules in the General Prudential sourcebook and the Prudential sourcebook for Banks, Building Societies and Investment Firms relating to banks, but which is not a building society, a friendly society or a credit union; (ii) an EEA bank which is a full credit institution; (b) a building society which is defined in section 119(1) of the Building Societies Act 1986 as a building society incorporated (or deemed to be incorporated) under that act; (c) a credit union, being a body corporate registered under the Co-operative and Community Benefit Societies Act 2014 as a credit union in accordance with the Credit Unions Act 1979, which is an authorised person; (d) a custodian bank or broker-dealer; (e) an entity that undertakes the business of effecting or carrying out insurance contracts, including general and life assurance entities; (f) an incorporated under the Friendly Societies Act 1992 or a registered under section 7(1)(a) of the Friendly Societies Act 1974 or any enactment which it replaced, including any registered branches; (g) an investment trust, Irish investment company, venture capital trust, mutual fund, exchange traded fund, unit trust, open-ended investment company (OEIC); or (h) [Deleted] (i) any other entity whose principal activity is similar to those listed above but is not specifically included in that list. A parent entity whose sole activity is to hold investments in other group entities is not a financial institution.
financial position	The relationship of the assets, liabilities and equity of an entity as reported in the statement of financial position.
financial statements	Structured representation of the financial position, financial performance and cash flows of an entity.
group	A parent and all its subsidiaries.

IAS / IFRS Accounting Standards	IFRS Accounting Standards and interpretations issued by the International Accounting Standards Board (IASB). They comprise: (a) International Financial Reporting Standards; (b) IAS® Standards; (c) IFRIC® Interpretations developed by the IFRS Interpretations Committee; and (d) SIC® Interpretations developed by the former Standing Interpretations Committee.
income and expenditure	The total of income less expenses, excluding the components of other comprehensive income. In the for-profit sector this is known as profit or loss.
individual financial statements	The accounts that are required to be prepared by an entity in accordance with the Act or relevant legislation, for example: (a) 'individual accounts', as set out in section 394 of the Act; (b) 'statement of accounts', as set out in section 132 of the Charities Act 2011; or (c) 'individual accounts', as set out in section 72A of the Building Societies Act 1986. Separate financial statements are included in the meaning of this term.
parent	An entity that has one or more subsidiaries.
profit or loss	The total of income less expenses, excluding the components of other comprehensive income.
qualifying entity (for the purposes of this FRS)	A member of a group where the parent of that group prepares publicly available consolidated financial statements which are intended to give a true and fair view (of the assets, liabilities, financial position and profit or loss) and that member is included in the consolidation.
separate financial statements	Those presented by a parent in which the investments in subsidiaries, associates or jointly controlled entities are accounted for either at cost or fair value rather than on the basis of the reported results and net assets of the investees. Separate financial statements are included within the meaning of individual financial statements.
small entity	A small entity is: (a) a company meeting the definition of a small company as set out in section 382 or 383 of the Act and not excluded from the small companies regime by section 384; (b) an LLP qualifying as small and not excluded from the small LLPs regime, as set out in LLP Regulations; or (c) any other entity that would have met the criteria in (a) had it been a company incorporated under company law.
Statement of Recommended Practice (SORP)	An extant Statement of Recommended Practice developed in accordance with Policy on Developing Statements of Recommended Practice (SORPs). SORPs recommend accounting practices for specialised industries or sectors. They supplement accounting standards and other legal and regulatory requirements in the light of the special factors prevailing or transactions undertaken in a particular industry or sector.
subsidiary	An entity, including an unincorporated entity such as a partnership, that is controlled by another entity (known as the parent).
UK-adopted international accounting standards	IAS that have been adopted for use within the UK in accordance with the International Accounting Standards and European Public Limited-Liability Company (Amendment etc.) (EU Exit) Regulations 2019 (SI 2019/685).
reporting period	The period covered by financial statements or by an interim financial report.

Overview

Section 2 *Concepts and Pervasive Principles* describes the objectives of the financial statements of entities within the scope of FRS 102 and sets out the concepts and basic principles underlying those financial statements. Financial statements prepared under FRS 102 by UK companies are subject to the requirements of the Companies Act 2006 and supporting regulations.

The Periodic Review 2024 amendments replaced the previous Section 2 in its entirety. The revised Section 2 is aligned with the concepts and principles contained within the Conceptual Framework which underpins the IFRS, though in the interests of brevity, Section 2 contains less discussion of the application of the principles.

What you need to know

- Section 2 explains the objective of general purpose financial statements, which is to provide financial information for the entity which is useful for decision-making by a wide range of users.
- If a particular transaction or event is not addressed by another section of FRS 102, the concepts and pervasive principles of Section 2 are applied to develop an accounting policy, using the hierarchy set out in Section 10 *Accounting Policies, Estimates and Errors*. If inconsistencies arise between Section 2 and another section of FRS 102, precedence is given to the requirements of the other section.
- Section 2 identifies:
 - Two fundamental qualitative characteristics of useful financial information: relevance and faithful representation.
 - Four enhancing qualitative characteristics: comparability, verifiability, timeliness, and understandability. These characteristics enhance the usefulness of information which is relevant and has been faithfully represented. The cost constraint on useful financial reporting is also addressed.
 - Materiality as an entity-specific aspect of relevance. Information will be material if omitting, misstating or obscuring it could reasonably be expected to influence decisions that the users of general purpose financial statements make on the basis of those statements.
 - Measurement bases, being historical cost and current value. Factors to consider when selecting a measurement base are outlined, giving guidance on how to apply both the fundamental qualitative characteristics and the enhancing characteristics to make the selection.
- Section 2 defines the elements of financial statements:
 - Assets, liabilities (including the unit of account) and equity which relate to a reporting entity's financial position.
 - Income and expenses, which relate to a reporting entity's financial performance.

And

 - Sets out the criteria for the recognition and derecognition of assets and liabilities.
- Section 2 addresses the concept of the reporting entity and the reporting period, the going concern assumption and includes principles for presentation and disclosure. It also addresses classification, offsetting and aggregation.
- Financial statements prepared by a UK company under FRS 102 are 'Companies Act accounts' and must apply the fundamental accounting principles set out in Company Law - going concern assumption, consistent accounting policies and measurement bases, prudence, accruals concept and separate determination (no offset). Section 2 addresses similar concepts.
- UK Company Law requires (with certain exceptions) that only realised profits are included in the income statement.

1 Introduction

Section 2 of FRS 102 is the equivalent of the IASB's Conceptual Framework for Financial Reporting ('the Conceptual Framework') which underpins IFRS. In the context of financial reporting, a conceptual framework is a statement of generally accepted principles that provide the basis for the evaluation of existing reporting practices and the development of new practices applicable to general purpose financial statements. It provides a conceptual basis for determining which events should be accounted for, how they should be measured and how they should be communicated. A conceptual framework is, therefore, used to inform standard setting, as well as being a point of reference for preparers of financial statements.

Similar to the Conceptual Framework, Section 2 is a statement of generally accepted theoretical principles which provide the basis for both the development of new reporting practices and the evaluation of existing ones. Since the financial reporting process is concerned with the provision of information that is useful in making business and economic decisions, a conceptual framework will form the theoretical basis for determining which events should be accounted for, how they should be measured and how they should be communicated. Therefore, although it is theoretical in nature, a conceptual framework for financial reporting has a highly practical end in view.

Unlike the Conceptual Framework (which is not an IFRS), Section 2 is an integral part of FRS 102, but its practical use is similar. Its purpose is to assist preparers in developing accounting policies for a transaction, other event or condition that is not specifically addressed by FRS 102. In the event of an inconsistency with another section of FRS 102, the latter takes precedence and, therefore, the changes to Section 2 are not expected to result in significant changes to existing practice. However, the updated concepts and pervasive principles will provide a basis for future standard-setting, and for the future development by preparers of accounting policies for a transaction, other event or condition that is not specifically addressed by FRS 102. [FRS 102.B2.2].

1.1 Key changes introduced by the Periodic Review 2024 amendments

Section 2 has been aligned with the Conceptual Framework published in 2018. Much of the detailed discussion of concepts and principles contained within the Conceptual Framework has not been brought into FRS 102, but given the close alignment, users of Section 2 are able to refer to that detailed discussion as required.

As less detail is contained in FRS 102 compared to IFRS, it is possible that an entity might need to apply the hierarchy permitted by Section 10 to refer to the Conceptual Framework to develop an accounting policy.

The definition of assets and liabilities has been aligned with the definitions in the Conceptual Framework and certain parts of the explanatory material from that framework have been introduced:

- An asset is a present economic resource (i.e., a right that has the potential to produce economic benefits) controlled by the entity as a result of past events.
- For a liability to exist, the entity must have a present obligation that exists as a result of past events to transfer an economic resource.

The previous definitions referred to an expectation of an inflow or outflow of economic benefits and that definition has been retained for certain sections, to avoid unintended consequences. These are set out below:

- Section 18 *Intangible assets other than Goodwill* - definition of an asset in respect of intangibles other than goodwill
- Section 20 *Leases* - definition of fair value in respect of lessor accounting
- Section 21 *Provisions and Contingencies* and Section 22 *Liabilities and Equity* - definition of liability in respect of provisions and contingencies, and liabilities and equity
- Section 26 *Share-based Payment* - definition of fair value in respect of share-based payments

This approach is considered consistent with that taken in the corresponding IFRS.¹⁷

¹⁷ At the date of writing, the IASB has proposed amendments to align the definition of a liability in IAS 37 *Provisions, Contingent Liabilities and Contingent Assets* with the definition in the Conceptual Framework. See Exposure Draft, November 2024: *Provisions - Targeted Improvements*. Proposed Amendments to IAS 37. The next milestone is Decide Project Direction.

Section 2 explains the meaning of 'control' as follows: An entity controls an economic resource if it has the present ability to direct the use of the economic resource and obtain the economic benefits that may flow from it. An entity has the present ability to direct the use of an economic resource if it has the right to deploy that economic resource in its activities, or to allow another party to deploy the economic resource in that other party's activities.

Given the previous lack of guidance on the definition of 'control', it is possible that some entities may have developed a different definition, based on risks and rewards, rather than on a present ability to direct the use of an economic resource. In such cases, those entities may need to revisit certain accounting policies. For example, an entity may need to assess whether costs related to customisation or configuration for cloud computing services represent an asset it controls or a service it purchases.

2 Comparison between Section 2 and Conceptual Framework

Section 2 has been revised to align with the concepts and principles expressed in the Conceptual Framework, published by the IASB in 2018. However, much of the detailed discussion and exposition of the principles contained in the Conceptual Framework has not been reproduced in Section 2. If more guidance in a particular area were needed, users could refer to the Conceptual Framework. The following is a non-exhaustive list of the main topics which are not directly addressed by Section 2:

- Executory contracts
- Substance of contractual rights and contractual obligations
- Factors specific to initial measurement
- More than one measurement basis
- Cash-flow-based measurement techniques
- Concepts of capital and capital maintenance

Statutory accounts prepared in accordance with FRS 102 by UK companies are subject to the requirements of the CA 2006 and its associated regulations. There are similar requirements under UK law for LLPs and other entities. For Irish entities, statutory accounts are subject to the requirements of the Companies Act 2014 and associated regulations. Section 2 does not address these legal requirements.

3 Concepts and Pervasive Principles

Section 2 contains the following topics which are aligned with the Conceptual Framework (except for the topics not covered in Section 2 as discussed in 2 above):

- Scope of this section (discussed in 3.1 below)
 - The objective of financial statements (discussed in 3.2 below)
 - Qualitative characteristics of useful financial information (discussed in 3.3 below)
 - Financial statements and the reporting entity (discussed in 3.4 below)
 - The elements of financial statements (discussed in 3.5 below)
 - Recognition and derecognition (discussed in 3.6 below)
 - Measurement (discussed in 3.7 below)
- And
- Presentation and disclosure (discussed in 3.8 below)

3.1 Scope of Section 2

Section 2 describes the objective of financial statements of entities within the scope of FRS 102 (see 3.2 below). It also sets out the concepts and basic principles underlying the financial statements of entities within the scope of FRS 102. [FRS 102.2.1].

When FRS 102 does not specifically address a transaction, other event or condition, the concepts and pervasive principles in Section 2 are applied in developing an accounting policy, using the hierarchy set out in Section 10 (and after considering the requirements and guidance dealing with similar and related issues in other sections of FRS 102 or if the entity is in scope of a Statement of Recommended Practice (SORP), in that SORP as described in paragraphs 4 and 5 of Section 10). [FRS 102.2.3, FRS 102.10.4, FRS 102.10.5].

In recognition of this hierarchy of sources, where inconsistencies arise between Section 2 and another section of FRS 102, precedence is given to the requirement of the other section. [FRS 102.2.2]. This clarifies that guidance in Section 2 is subordinate to specific requirements in the other sections of FRS 102.

3.2 The objective of financial statements

Section 2 defines the objective of general purpose financial reporting as being to provide financial information about the reporting entity that is useful for decision-making by a wide range of users who are not in a position to demand reports tailored to meet their particular information needs. Such general purpose financial statements allow users to make decisions and develop expectations based on their assessment of the amount, timing and uncertainty of future net cash inflows to the entity. [FRS 102.2.4].

Management is responsible for the use of an entity's economic resources - for example, by protecting those resources from the unfavourable effects of economic factors, such as price and technological changes. Information about how efficiently and effectively management has discharged this duty helps users to assess management's stewardship of those resources. It can also be useful for assessing how management may use the resources in future periods and thereby helps a user to assess the prospects for future cash inflows. [FRS 102.2.7].

To make these assessments, users need information about: [FRS 102.2.5]

- The economic resources of the entity, claims against the entity and changes in those resources and claims.
- And
- How efficiently and effectively the entity's management has discharged its responsibilities to use the entity's economic resources (management's stewardship).

Section 2 acknowledges that general purpose financial reports do not, and cannot, provide all the information needed by users. Users of financial reports need to consider other pertinent information, such as general economic and political conditions, and industry and company outlooks. [FRS 102.2.6].

General purpose financial reports are focused on meeting the needs of the largest number of users, who may have different, and possibly conflicting, needs for information. However, this does not preclude a reporting entity from including additional information that is useful to a particular subset of primary users. It should be noted, however, that Section 3 *Presentation of Financial Statements* states that the understandability of financial statements must not be reduced by obscuring material information with immaterial information. [FRS 102.3.16A].

3.3 Qualitative characteristics of useful financial information

Section 2 explains that the types of information likely to be most useful to users for the purposes of decision making are identified by various qualitative characteristics, [FRS 102.2.8], comprising:

- Two 'fundamental' qualitative characteristics (see 3.3.1 below):

- Relevance

And

- Faithful representation [FRS 102.2.9]

Supplemented by:

- Four 'enhancing' qualitative characteristics (see 3.3.2 below):

- Comparability

- Verifiability

- Timeliness

And

- Understandability [FRS 102.2.19]

Section 2 also notes the role of cost as a 'pervasive constraint' on a reporting entity's ability to provide useful financial information. [FRS 102.2.24]. This is discussed further in 3.3.3 below.

3.3.1 Fundamental qualitative characteristics

In order to be useful, financial information must be relevant (see 3.3.1.A below) and must faithfully represent what it purports to represent (see 3.3.1.C below). [FRS 102.2.9].

3.3.1.A Relevance

Extract from Section 2

2.10 Relevant financial information is capable of making a difference in the decisions made by users by helping them evaluate past, present or future events or confirming, or correcting, their past evaluations. Information may be capable of making a difference in a decision even if some users choose not to take advantage of it or are already aware of it from other sources. [FRS 102.2.10].

Financial information can have both confirmatory and predictive value. It has confirmatory value if it confirms or changes previous evaluations and it has predictive values if users can employ it, alongside other information, to predict future outcomes.

3.3.1.B Materiality

Materiality is an entity-specific aspect of relevance that depends on the nature or magnitude of information, or both. An entity assesses whether information, either individually or in combination with other information, is material in the context of its financial statements taken as a whole. In other words, information is material (and therefore relevant) if omitting it, misstating it, or obscuring it could reasonably be expected to influence the decisions of users of financial information about a specific reporting entity. Since materiality is specific to a particular reporting entity, it is not possible to specify a uniform quantitative threshold for materiality. [FRS 102.2.12, FRS 102.2.11].

Information is obscured if it is communicated in a way that would have a similar effect for users of general purpose financial statements to omitting or misstating that information. Examples of circumstances that may result in information being obscured could include usage of vague or unclear language, inappropriate aggregation of dissimilar information or disaggregation of similar information and hiding material information using immaterial information. [FRS 102.2.13].

Information is more useful if it is entity-specific, in other words, tailored to an entity's individual circumstances, rather than 'boilerplate' or standardised. See Chapter 6 at 8.4.

3.3.1.C Faithful representation

Section 2 observes that financial reports represent economic phenomena in words and numbers. To be useful, financial information must not only represent relevant phenomena, but it must also faithfully represent the substance of the phenomena that it purports to represent. In many circumstances, the substance of an economic phenomenon and its legal form are the same. If they are not the same, providing information only about the legal form would not faithfully represent the economic phenomenon.

[FRS 102.2.14].

Substance over form is a requirement of UK Company Law and is required by both *The Large and Medium-sized Companies and Groups (Accounts and reports) Regulations 2008 (SI 2008/410)* (the Regulations) and *The Small Companies and Groups (Accounts and Directors' Report) Regulations 2008 (SI 2008/409)* (the Small Companies' Regulations). [1 Sch 9, 2 Sch 10, 3 Sch 8, 1 Sch 9 (SC)].

A perfectly faithful representation would be:

- Complete
- Neutral
- And
- Free from error

Nonetheless, the standard acknowledges that while faithful representation involves maximising those qualities, it does not (and cannot) mean being accurate in all respects. [FRS 102.2.15].

A complete depiction includes all information, including all necessary descriptions and explanations, needed for a user to understand the phenomenon being depicted. [FRS 102.2.16]. Thus, a complete depiction of an asset might include not just a numerical depiction, but also a description of the nature of the assets and an explanation of what the numerical depiction means - for example, whether the asset is carried at historical cost or fair value.

A neutral depiction is one without bias in the selection or presentation of financial information. Section 2 discusses the word 'prudence', the exercise of which is considered to support neutrality. Prudence is defined as the exercise of caution, when making judgements under conditions of uncertainty. The outcome of the application of prudence is that:

- Assets and income are not overstated
- And
- Liabilities and expenses are not understated

However, the exercise of prudence does not allow for the understatement of assets or income or the overstatement of liabilities or expenses, as there may be consequences related to this, such as the overstatement or understatement of income or expenses in future periods.

The standard is clear that the exercise of prudence does not imply a need for asymmetry. In other words, there is no systematic need for more persuasive evidence to support the recognition of assets or income than the recognition of liabilities or expenses. Nonetheless, individual sections may contain asymmetric requirements if these are a consequence of decisions intended to select the most relevant information that faithfully represents what it purports to represent. [FRS 102.2.17].

Finally, the term 'free from error' does not necessarily imply that information is perfectly accurate in all respects. The standard focusses on the selection of the information or the application of the process used to produce the information, with the result that information is deemed 'free from error' if there are no errors or omissions either in the description of the event or in the selection or process used to produce information. [FRS 102.2.18].

3.3.2 Enhancing qualitative characteristics

The usefulness of relevant and faithfully represented financial information is enhanced by the characteristics of comparability (see 3.3.2.A below), verifiability (see 3.3.2.B below), timeliness (see 3.3.2.C below) and understandability (see 3.3.2.D below). These enhancing characteristics may also help determine how to depict a phenomenon if there are multiple ways to provide equally relevant information and equally faithful representation of that phenomenon. [FRS 102.2.19].

Unlike the *Conceptual Framework*, FRS 102 does not provide guidance on how the enhancing qualitative characteristics should be applied. Nonetheless, the guidance in the 'Framework' may be helpful to entities, when considering what information to present and disclose and how to disclose it. The framework notes that while the enhancing qualitative characteristics must be maximised to the extent possible, they cannot, either individually or as a group, make information useful if that information is irrelevant or does not give a faithful representation. [CF 2.37].

3.3.2.A Comparability

Comparability is the qualitative characteristic that enables users to identify and understand similarities in, and differences among, items. Unlike the other qualitative characteristics, comparability does not relate to a single item, since, by definition, a comparison requires at least two items. Information about a reporting entity is more useful if it can be compared with similar information about other entities and with similar information about the same entity for another period or another date. Permitting alternative accounting methods for the same economic phenomenon diminishes comparability, while informing users of the accounting policies employed in the preparation of the financial statements, and of any changes in those policies and the effects of such changes, enhances it. [FRS 102.2.20].

There is detailed guidance on comparability in Section 10, which requires an entity to select and apply its accounting policies consistently for similar transactions, other events or obligations unless an FRS specifically requires or permits categorisation of items for which different policies may be appropriate. Section 10 also requires disclosures where there are changes in accounting policies. [FRS 102.10.7, FRS 102.10.13, FRS 102.10.14]. See Chapter 9 at 3.6.1. Section 8 *Notes to the Financial Statements* requires an entity to disclose a summary of material accounting policy information. [FRS 102.8.4(b)]. See Chapter 6 at 8.4.

3.3.2.B Verifiability

The purpose of the characteristic of verifiability is to assure users that information disclosed faithfully represents the economic event that it purports to depict. The consequence of information being verifiable is that different knowledgeable and independent observers could reach a consensus, although not necessarily complete agreement, that a particular depiction is a faithful representation. While the standard does not provide a direct definition of 'knowledgeable', it is listed as one of the characteristics which a market participant would possess and is described as "having a reasonable understanding about the asset or liability and the transaction using all available information". The standard explains that quantified information need not be a single point estimate to be verifiable, as a range of possible amounts and their related probabilities can also be verified. [FRS 102.2.21].

3.3.2.C Timeliness

For information to be capable of influencing decision-makers, it needs to be available to them in time. The standard observes that, generally, the older the information is, the less useful it is, but that some information may continue to be timely long after the end of a reporting period, for example because some users may need to identify and assess trends. [FRS 102.2.22].

UK companies are required by law to file accounts within specified time limits. For a private company, the period allowed by the CA 2006 for filing financial statements is nine months after the end of the relevant accounting reference period and, for a public company, the period allowed for filing is six months after the end of the relevant accounting reference period. [s442].

3.3.2.D Understandability

Information is made understandable by classifying, characterising and presenting it clearly and concisely. Section 2, however, notes that excluding information from financial statements about phenomena that are inherently complex and difficult to understand would make reports incomplete and therefore possibly misleading. The need for understandability does not allow relevant information to be omitted on the grounds that it may be too difficult for some users to understand. [FRS 102.2.23].

3.3.3 The cost constraint

The standard asserts that cost is a pervasive constraint on the information provided by financial reporting, and that the cost of producing information must be justified by the benefits that it provides. It notes that while the evaluation of costs and benefits is substantially a judgemental process, the costs are not necessarily borne by those users who enjoy the benefits, and often the benefits are enjoyed by a broad range of external users. [FRS 102.2.24].

The standard identifies a number of benefits which may arise from the provision of relevant and faithfully representative financial information:

- Users are helped to make decisions with more confidence.
- Informed decisions may result in a more efficient functioning of capital markets and a lower cost of capital for the economy as a whole.
- An individual user may make more informed decisions.

- Management may make better decisions because financial information used internally is often based at least partly on information prepared for general purpose financial reporting purposes.

However, it is not possible for general purpose financial statements to provide all the information that every user finds relevant. [FRS 102.2.25].

3.4 Financial statements and the reporting entity

3.4.1 Reporting period and comparative information

A reporting period is defined as the period covered by financial statements or by an interim financial report. [FRS 102 Appendix I]. The period of time is specified, and those financial statements provide information about:

- Assets and liabilities (including unrecognised assets and liabilities) and equity that existed at the end of the reporting period, or during the reporting period.
- Income and expenses for the reporting period.

And

- At least one preceding reporting period, being the comparative period, except when FRS 102 permits or requires otherwise. [FRS 102.2.26, FRS 102.2.27].

Typically, information about future transactions is not included in financial statements, but in certain circumstances, it may constitute relevant information. In these cases, information about possible future transactions and other possible future events (forward-looking information) is included in financial statements if it:

- Relates to the entity's assets or liabilities (including unrecognised assets or liabilities) or equity that existed at the end of the reporting period, or during the reporting period, or to income or expenses for the reporting period.

And

- Is useful to users of financial statements.

This may arise if an asset or liability is measured by estimating future cash flows; information about those estimated future cash flows may help users of financial statements to understand the reported measures. Financial statements do not usually provide other types of forward-looking information, for example, explanatory material about management's expectations and strategies for the reporting entity, though this type of information may be provided in other reports which accompany the financial statements - for example, the strategic report. [FRS 102.2.28].

3.4.2 Perspective adopted in financial statements

Financial statements provide information about transactions and other events viewed from the perspective of the reporting entity as a whole. [FRS 102.2.29]. However, entities whose debt or equity instruments are publicly traded, or that files, or is in the process of filing its financial statements with a securities commission or regulator, is also required to provide information about its segments, following the requirements of IFRS 8 *Operating Segments*. This information may be given on a voluntary basis and in that case, the requirements of IFRS 8 must also be followed - see Chapter 3.

3.4.3 Going concern assumption

A fundamental principle is that financial statements are normally prepared on the assumption that the reporting entity is a going concern and will continue in operation for the foreseeable future. However, there may be situations where management either intends to liquidate the entity or to cease trading or has no realistic alternative but to do so. In such cases, the financial statements must be prepared on a different basis, and the financial statements must describe the basis used, as set out in paragraph 9 of Section 3 of the standard (see Chapter 6 at 8.3). [FRS 102.2.30, FRS 102.3.9].

3.4.4 The reporting entity

FRS 102 sets out what a reporting entity constitutes: it is an entity that is required, or chooses, to prepare financial statements. A reporting entity can be a single entity or a portion of an entity or can comprise more than one entity and is not necessarily a legal entity. If a reporting entity comprises both the parent and its subsidiaries, the reporting entity's financial statements are referred to as 'consolidated financial statements'. [FRS 102.2.31].

3.5 The elements of financial statements

As discussed in 3.2 above, the central tenet of Section 2 is that users of financial information require information concerning:

- The economic resources of and claims against an entity.
- And

- Changes in those resources and claims.

These are described in Section 2 as being linked to the 'elements' of financial statements which are: assets, liabilities, equity, income and expense. The recognition and derecognition of elements are discussed in 3.6 below. Measurement of the elements is discussed in 3.7 below and presentation in 3.8 below.

Extract from Section 2

- 2.32** The elements of financial statements defined in this section are: *[FRS 102.2.32]*
- (a) assets, liabilities and equity, which relate to a reporting entity's financial position; and
 - (b) income and expenses, which relate to a reporting entity's financial performance.

3.5.1 Definition of an asset

'An asset' is defined as a present economic resource controlled by the entity as a result of past events and an economic resource is defined as a right that has the potential to produce economic benefits. The different aspects of the definition are discussed below. *[FRS 102.2.33]*.

3.5.1.A Economic resource as a right

It is observed that rights that have the potential to produce economic benefits take many forms, including:

- Rights that correspond to an obligation of another party (see 3.5.2.A below), for example, rights to:
 - Receive cash.
 - Receive goods or services.
 - Exchange economic resources with another party on favourable terms. Such rights include, for example, a forward contract to buy an economic resource on terms that are currently favourable or an option to buy an economic resource.
- And
- Benefit from an obligation of another party to transfer an economic resource if a specified uncertain future event occurs.
- Rights that do not correspond to an obligation of another party, for example, rights:
 - Over physical objects, such as property, plant and equipment or inventories. Examples of such rights are a right to use a physical object, such as an item of property, plant or equipment or a right to benefit from the residual value of a leased object.
 - To use intellectual property.
- And
- That create or enhance the service potential of physical objects or intellectual property.

[FRS 102.2.34].

Section 2 observes that there are different ways of acquiring rights: some rights are established by contract, legislation or similar means. This might include ownership rights over a physical object, debt or equity instrument or registered patent or rights arising from leasing a physical object or intangible item. An entity could also obtain rights in other ways, such as:

- By acquiring or creating know-how that is not in the public domain. An entity has the right if it can access the know-how and has the present ability to keep the know-how secret, even if that know-how is not protected by a registered patent.
 - Or
 - Through a constructive obligation - an obligation of another party that arises because that party has no practical ability to act in a manner inconsistent with its customary practices, published policies or specific statement. The definition of constructive obligation is further discussed in 3.5.2.A below.
- [FRS 102.2.35].*

It is worth noting that not all of an entity's rights are assets of that entity; to be assets the rights must also satisfy the criteria of potential to produce economic benefits and control.

3.5.1.B Potential to produce economic benefits

It is only necessary that the right already exists for an asset to have the potential to produce economic benefits. Section 2 clarifies that it does not need to be certain, or even likely, that the right will produce economic benefits. [FRS 102.2.36].

3.5.1.C Control

Control is the concept which links an economic resource to an entity. In cases where it is not clear, assessing whether control exists helps to identify the economic resource for which the entity accounts. An entity controls an economic resource if it has the present ability to direct the use of the economic resource and obtain the economic benefits that may flow from it. An entity has the present ability to direct the use of an economic resource if it has the right to deploy that economic resource in its activities, or to permit another party to deploy the economic resource in that other party's activities. [FRS 102.2.37].

3.5.2 Definition of a liability

FRS 102 defines a liability as a present obligation of the entity to transfer an economic resource as a result of past events. [FRS 102 Appendix I].

Extract from Section 2

- 2.38 For a liability to exist, three criteria must all be satisfied: [FRS 102.2.38]
- (a) the entity has an obligation;
 - (b) the obligation is to transfer an economic resource; and
 - (c) the obligation is a present obligation that exists as a result of past events.

These criteria are discussed in turn below.

3.5.2.A Obligation

Section 2 defines an obligation as a duty or responsibility that an entity has no practical ability to avoid. It is always owed to another party, but it is not necessary to know the identity of the party to whom the obligation is owed. Often, obligations are established by contract, legislation or similar means and are legally enforceable by the party to whom they are owed. They can also stem from an entity's customary practices, published policies or specific statements, but they only arise if the entity has no practical ability to act in a manner inconsistent with those practices, policies or statements. An obligation arising in such a way is usually referred to as a 'constructive obligation'. [FRS 102.2.39].

3.5.2.B Transfer an economic resource

The second criterion for a liability is that the obligation is to transfer an economic resource. To satisfy this criterion, the obligation must have the potential to require the entity to transfer an economic resource to another party. Likelihood is not a feature of the assessment of whether that potential exists, as it does not need to be certain, or even likely, that the entity will be required to transfer an economic resource. For example, the transfer may be required only if a specified uncertain future event occurs. The only necessary condition is that the obligation already exists and that, in at least one circumstance, the entity would be required to transfer an economic resource. [FRS 102.2.40].

Section 2 provides a non-exhaustive list of examples of obligations to transfer an economic resource including:

- To pay cash.
 - To deliver goods or provide services.
 - To exchange economic resources with another party on unfavourable terms.
 - To transfer an economic resource if a specified uncertain future event occurs.
- And
- To issue a financial instrument if that financial instrument will oblige the entity to transfer an economic resource. [FRS 102.2.41].

Section 2 notes that there are other ways of settling an obligation to transfer an economic resource to the party that has a right to receive that resource. For example, in certain cases, an entity may decide to:

- Settle the obligation by negotiating a release from the obligation.
- Transfer the obligation to a third party.

Or

- Replace that obligation to transfer an economic resource with another obligation, by entering into a new transaction. [FRS 102.2.42].

3.5.2.C Present obligation existing as a result of past events

The third criterion for a liability is that the obligation is a present obligation that exists as a result of past events. This can only arise if two conditions exist:

- The entity has already obtained economic benefits or taken an action.
- And
- As a consequence, the entity will, or may have to, transfer an economic resource that it would not otherwise have had to transfer. [FRS 102.2.43].

Examples of economic benefits obtained might include goods or services. Examples of actions taken might include operating a particular business or operating in a particular market. If economic benefits are obtained, or an action is taken, over time, the resulting present obligation may accumulate over that time. [FRS 102.2.44].

3.5.3 Unit of account

Section 2 defines the unit of account as the right or the group of rights, the obligation or the group of obligations, or the group of rights and obligations, to which recognition criteria and measurement concepts are applied. [FRS 102.2.45].

The unit of account is crucial to assess how recognition criteria and measurement concepts will apply to that asset or liability and to the related income and expenses. It can occasionally be appropriate to select one unit of account for recognition and a different unit of account for measurement. Section 2 provides an example of contracts which may sometimes be recognised individually but measured as part of a portfolio of contracts. For presentation and disclosure purposes, assets, liabilities, income and expenses may need to be aggregated or separated into components. [FRS 102.2.46].

If an entity transfers part of an asset or part of a liability, the unit of account may change at that time, so that the transferred component and the retained component become separate units of account (derecognition is discussed in 3.6.4 below).

3.5.4 Income and expenses

Income and expenses are the elements of financial statements that relate to an entity's financial performance. To be able to understand management's stewardship of the entity's resources, users of financial statements need information about both an entity's financial position and its financial performance. The standard points out that although income and expenses are defined in terms of changes in assets and liabilities, information about income and expenses is just as important as information about assets and liabilities. [FRS 102.2.47].

Those terms are defined as follows: [FRS 102 Appendix I]

- Income is increases in assets or decreases in liabilities that result in increases in equity, other than those relating to contributions from equity investors.
- Expenses are decreases in assets or increases in liabilities that result in decreases in equity, other than those relating to distributions to equity investors.

A consequence of these definitions is that:

- Contributions from holders of equity claims are not income.
- And
- Distributions to holders of equity claims are not expenses.

Different transactions and other events generate income and expenses with different characteristics. Providing information separately about income and expenses with different characteristics can help users of financial statements to understand the entity's financial performance.

3.5.4.A The accrual basis

Section 2 requires an entity to prepare its financial statements using the accrual basis of accounting. This does not apply to cash flow information. The result of using the accrual basis is that items are recognised as assets, liabilities, equity, income or expenses when they satisfy the definitions and recognition criteria for those items. [FRS 102.2.48].

The principle of the accrual basis is that the effects of transactions (and other events) are recognised when they occur and not when cash or its equivalent is paid or received, and they are recorded in the accounting records and reported in the financial statements of the periods to which they relate. [FRS 102 Appendix I]. The definition is somewhat circular as it means that an item is recognised as income when it meets the definition and recognition criteria of income. The Regulations require that all income and charges relating to the financial year to which the accounts relate must be taken into account, without regard to the date or receipt of payment. [1 Sch 14, 2 Sch 20, 3 Sch 19, 1 Sch 14 (SC)]. Though the wording of the definition differs slightly between the standard and the Regulations, the meaning is very similar and is not expected to lead to differences of application.

3.6 Recognition and derecognition

Recognition is described in FRS 102 as the process of capturing for inclusion in the statement of financial position or statement of comprehensive income an item that meets the definition of one of the elements of financial statements: that is, an asset, a liability, equity, income or expenses. [FRS 102 Appendix I].

3.6.1 The recognition process

Recognition involves depicting the item in one of those statements (either alone or in aggregation with other items) in words and by a monetary amount and including that amount in one or more totals in that statement. The amount at which an asset, a liability or equity is recognised in the statement of financial position is referred to as its 'carrying amount'. [FRS 102 Appendix I].

Recognition provides the link between the elements of the financial statements - the statement of financial position and the statement(s) of financial performance - as follows:

- In the statement of financial position at the beginning and end of the reporting period, total assets minus total liabilities equal total equity
- And
- Recognised changes in equity during the reporting period comprise:
 - Income minus expenses recognised in the statement(s) of financial performance
 - Plus
 - Contributions from equity holders, minus distributions to equity holders. [FRS 102.2.49].

This is illustrated diagrammatically in Figure 3-1 below.

Figure 3-1: How recognition links the elements of financial statements

The statements of financial position and performance are linked because the recognition of one item (or a change in its carrying amount) requires the recognition or derecognition of one or more other items (or changes in the carrying amount of one or more other items). This is usually known as 'double-entry' bookkeeping.

3.6.2 Recognition criteria

Extract from Section 2

2.50 Only items that meet the definition of an asset, a liability or equity are recognised in the statement of financial position. Similarly, only items that meet the definition of income or expenses are recognised in the statement(s) of financial performance. *[FRS 102.2.50]*

However, not all items that meet the definition of one of those elements are recognised, for example, if doing so would not provide relevant information, or if the costs of doing so outweigh the benefits. *[FRS 102.2.51]*. Individual sections of the standard set out the recognition criteria for an item that meets the definition of one of the elements of financial statements. *[FRS 102.2.52]*.

If an item satisfies the recognition criteria and provides relevant information, it must be recognised - it is not possible to rectify an omission by disclosure of the accounting policies used or by notes or explanatory material. *[FRS 102.2.53]*.

An entity must not recognise items in the statement of financial position if they do not meet the definition of assets or of liabilities, unless the standard explicitly requires or permits this. The concept commonly referred to as 'matching' for measuring profit or loss is not to be applied. *[FRS 102.2.54]*.

Over time, the status of an item may change as a result of subsequent circumstances or events; consequently, an item that fails to meet the recognition criteria at a particular point in time may qualify for recognition at a later date. *[FRS 102.2.55]*.

3.6.2.A Relevance

Relevance is a key concept for assessing what information about assets, liabilities, equity, income and expenses must be provided to users of financial statements. In certain situations, recognition of a particular asset or liability and any resulting income, expenses or changes in equity may not always provide relevant information. That might arise when:

- It is uncertain whether an asset or liability exists (see 3.6.2.B below).
- Or
- An asset or liability exists, but the probability of an inflow or outflow of economic benefits is low (see 3.6.2.C below).

It is not sufficient to identify one or both of the factors described above, as other factors may need to be taken into account and may affect the conclusion. Thus, the combination of factors must be looked at as a whole and it cannot be automatically assumed that because one of the factors listed above is present, the information provided by recognition is not relevant. *[FRS 102.2.56]*.

3.6.2.B Existence uncertainty

Sometimes it is uncertain whether an asset or liability exists. In some cases, that uncertainty, possibly combined with factors such as a low probability of inflows or outflows of economic benefits and an extremely wide range of possible outcomes, may mean that the recognition of an asset or liability would not provide relevant information. This is because an asset or liability is, by necessity, measured at a single amount and cannot therefore reflect the wide range of possible outcomes. Whether or not the asset or liability is recognised, explanatory information about the uncertainties associated with it may need to be provided in the financial statements. *[FRS 102.2.57]*.

3.6.2.C Low probability of an inflow or outflow of economic benefits

As mentioned in 3.5.1.B and 3.5.2.B above, an asset or liability can exist even if the probability of an inflow or outflow of economic benefits is low. If the probability of an inflow or outflow of economic benefits is low, the most relevant information about the asset or liability might be information about the magnitude of the possible inflows or outflows, their possible timing and the factors affecting the probability of their occurrence. Information of this type is typically located in the notes. However, it may be the case that the probability of an inflow or outflow of economic benefits is low, but recognition of the asset or liability might provide relevant further information. *[FRS 102.2.58]*. An example of the type of relevant information envisaged here is information about the cost of an asset acquired in an exchange transaction on market terms, which generally reflects the probability of an inflow of economic benefits.

3.6.3 Faithful representation

The standard explains that in addition to providing relevant information, recognition of a particular asset or liability is appropriate if it provides a faithful representation of that asset or liability and of any resulting income, expenses or changes in equity. The level of measurement uncertainty associated with the asset or liability, amongst other factors, could affect whether a faithful representation can be provided.

[FRS 102.2.59].

3.6.3.A Measurement uncertainty and outcome uncertainty

Measurement is essential for the recognition of an asset or liability, though often, measurement must be estimated and is therefore subject to uncertainty. The standard notes that using reasonable estimates are a necessary part of the preparation of financial information. There is no conflict with the usefulness of the information disclosed, provided that the estimates are clearly and accurately described and explained.

[FRS 102.2.60].

FRS 102 clarifies that additional explanatory information about the uncertainties associated with the asset or liability's existence or measurement may be needed to ensure a faithful representation. This may be the case, regardless of whether the asset is recognised or not. Such a representation might include information about the amount or timing of any inflow or outflow of economic benefits that will ultimately result from it.

[FRS 102.2.61].

3.6.4 Derecognition

Derecognition is defined as the removal of all or part of a recognised asset or liability from an entity's statement of financial position. [FRS 102 Appendix I].

Extract from Section 2

- 2.62 Derecognition normally occurs when that item no longer meets the definition of an asset or of a liability:
- (a) for an asset, derecognition normally occurs when the entity loses control of all or part of the recognised asset; and
 - (b) for a liability, derecognition normally occurs when the entity no longer has a present obligation for all or part of the recognised liability.

[FRS 102.2.62]. Accounting requirements for derecognition are designed to represent faithfully both:

- Any assets and liabilities retained after the transaction or other event that led to the derecognition.
- And
- The change in the entity's assets and liabilities as a result of that transaction or other event.

[FRS 102.2.63].

The standard explains that these aims are usually achieved by:

- Derecognising any assets or liabilities (components) that have either: expired, been consumed, collected, fulfilled or transferred (collectively referred to as the transferred components).
- Recognising, and presenting separately in the statement of financial performance, any resulting income and expenses.
- Continuing to recognise, and presenting separately in the statement of financial position, any retained assets or liabilities retained (the retained component).
- And
- Providing explanatory information. [FRS 102.2.64].

3.7 Measurement

As discussed in 3.6.1 above, elements recognised in financial statements are quantified in monetary terms. This requires the selection of a measurement basis, which is defined in Section 2 as an identified feature (for example, historical cost, fair value or fulfilment value) of the item being measured. Applying a measurement basis to an asset or liability creates a measure for that asset or liability and for related income and expenses. [FRS 102.2.65, FRS 102.2.66].

The standard observes, perhaps somewhat unnecessarily, that different measurement bases may be appropriate for different assets, liabilities, income and expenses. [FRS 102.2.67].

3.7.1 Measurement bases

3.7.1.A Historical cost

Historical cost measures provide monetary information about assets, liabilities and related income and expenses, using information derived, at least in part, from the price of the transaction or other event that gave rise to them. [FRS 102.2.68]. Unlike current value, historical cost does not reflect changes in values, except to the extent that those changes relate to impairment of an asset or a liability becoming onerous.

The historical cost of an asset is the value of the costs incurred in acquiring or creating the asset. This comprises the consideration paid to acquire or create the asset plus transaction costs. The historical cost of a liability when it is incurred or assumed is the value of the consideration received to incur or take on the liability, minus transaction costs. [FRS 102.2.69].

As noted above, the historical cost of an asset is updated over time to reflect certain changes to the asset, as follows:

- Consumption of part, or all, of the economic resource that constitutes the asset in the form of depreciation or amortisation.
 - Extinguishment of part, or all, of the asset by payments received.
 - Lack of recoverability of the asset (impairment).
- And
- Accrual of interest to reflect any financing component of the asset. [FRS 102.2.70].

Similarly, the historical cost of a liability is updated over time to reflect applicable changes, as follows:

- Fulfilment of part, or all, of the liability. This might be by making payments that extinguish part, or all, of the liability or by satisfying an obligation to deliver goods.
 - The effect of events that increase the value of the obligation to transfer the economic resources needed to fulfil the liability to such an extent that the liability becomes onerous. A liability is onerous if the historical cost is no longer sufficient to depict the obligation to fulfil the liability.
- And
- Reflection of any financing component of the liability, for example, the accrual of interest. [FRS 102.2.71].

The standard explains that amortised cost is one method of applying a historical cost measurement basis to financial assets and financial liabilities. If a financial instrument has a variable rate, the discount rate used in applying amortised cost is updated to reflect changes in the variable rate. [FRS 102.2.72].

3.7.1.B Current value

Current value measures provide monetary information about assets, liabilities and related income and expenses, using information updated to reflect conditions at the measurement date. Current value measurement bases include: [FRS 102.2.73]

- Fair value
 - Value in use for assets and fulfilment value for liabilities
- And
- Current cost

Fair value

Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. [FRS 102 Appendix I]. It reflects the perspective of market participants; that is, participants in a market to which the entity has access. The asset or liability is measured using the same assumptions that market participants would use when pricing the asset or liability if those market participants act in their economic best interest.

The standard makes a distinction between the fair value of an asset or liability and the transaction price; it observes that fair value is not derived, even in part, from the price of the transaction or other event that gave rise to the asset or liability. This has an impact on the treatment of transaction costs; the latter are a characteristic of a transaction rather than of an asset or liability. Consequently, a fair value measurement is not increased by any transaction costs incurred when acquiring the asset and is not decreased by any transaction costs incurred when the liability is incurred. [FRS 102.2.73(a)].

Value in use for assets and fulfilment value for liabilities

Value in use is defined as the present value of the cash flows, or other economic benefits, that an entity expects to 'derive' from an asset or cash-generating unit. [FRS 102 Appendix I]. Fulfilment value is the converse, or the present value of the cash, or other economic resources, that an entity expects to be obliged to 'transfer' as it fulfils a liability. Because value in use and fulfilment value are both based on future cash flows, they do not include transaction costs incurred on acquiring an asset or taking on a liability. [FRS 102.2.73(b)]. However, both measurement techniques include the present value of any transaction costs an entity expects to incur on the ultimate disposal of the asset or on fulfilling the liability.

Current cost

Section 2 defines the current cost of an asset as the cost of an equivalent asset at the measurement date, comprising the consideration that would be paid at the measurement date plus the transaction costs that would be incurred at that date. The current cost of a liability is the consideration that would be received for an equivalent liability at the measurement date minus the transaction costs that would be incurred at that date. [FRS 102.2.73(c)].

3.7.2 Factors to consider in selecting measurement bases

The information provided by a measurement basis must, by necessity, be useful to users of financial statements. To achieve this, the information must be relevant, and it must faithfully represent what it purports to represent. In addition, the information provided must be, as far as possible, comparable, verifiable, timely and understandable. It follows that it is important to consider the nature of the information that the measurement basis will produce in both the statement of financial position and the statement(s) of financial performance. Other factors, including the qualitative characteristics discussed in 3.3.2 above, should also be considered - see 3.7.2.C below. In most cases, no single factor will determine which measurement basis should be selected. The relative importance of each factor will depend on facts and circumstances. [FRS 102.2.74, FRS 102.2.75].

3.7.2.A Relevance

The standard explains that a measurement basis affects the relevance of information provided in two ways and these apply to both an asset or liability and to the related income and expenses:

- The characteristics of the asset or liability, including the variability of cash flows and whether the value of the asset or liability is sensitive to market factors or other risks.

And

- How that asset or liability contributes to future cash flows. [FRS 102.2.76].

If the value of an asset or liability is sensitive to market factors or other risks, its historical cost might differ significantly from its current value. As a result, users of financial statements may find information about historical cost to be irrelevant, if information about changes in value is important to them. [FRS 102.2.77]. For example, amortised cost cannot provide relevant information about a financial asset or financial liability that is a derivative.

Some economic resources produce cash flows directly; in other cases, economic resources are used in combination to produce cash flows indirectly. How economic resources are used, and hence how assets and liabilities produce cash flows, depends in part on the nature of the business activities conducted by the entity.

Typically, for assets that can be sold independently and without a significant economic penalty, a current value measurement basis will provide the most relevant information, as it incorporates current estimates of the amount, timing and uncertainty of the future cash flows. For assets and liabilities that are used in combination, it is necessary to consider the principles of relevance and faithful representation, to the extent that they apply to the facts and circumstances. [FRS 102.2.78].

3.7.2.B Faithful representation

When assets and liabilities are related in some way, using different measurement bases for those assets and liabilities can create a measurement inconsistency; this is commonly referred to as an accounting mismatch. If financial statements contain measurement inconsistencies, those financial statements may not faithfully represent some aspects of the entity's financial position and financial performance.

Where cash flows from one asset or liability are directly linked to the cash flows from another asset or liability, avoiding an accounting mismatch by using the same measurement basis for related assets and liabilities may provide users of financial statements with information that is more useful than the information that would result from using different measurement bases. [FRS 102.2.79].

As noted in 3.3.1.C above, although a perfectly faithful representation is free from error, this does not mean that measures must be perfectly accurate in all respects. [FRS 102.2.15].

Measurement uncertainty arises when a measure cannot be determined directly by observing prices in an active market and must instead be estimated. This may affect whether information provided by that measurement basis provides a faithful representation of an entity's financial position and financial performance, though the effect may differ depending on the level of uncertainty. The standard explains that a high level of measurement uncertainty does not necessarily prevent the use of a measurement basis, if that basis provides relevant information. However, occasionally the level of measurement uncertainty is so high that information provided by a measurement basis might not provide a sufficiently faithful representation. In such cases, a different measurement basis that would result in relevant information must be considered. [FRS 102.2.80].

Section 2 draws a distinction between measurement uncertainty, outcome uncertainty and existence uncertainty:

- Outcome uncertainty is uncertainty about the amount or timing of any inflow or outflow of economic benefits that will result from an asset or liability.
- And
- Existence uncertainty is uncertainty about whether an asset or a liability exists (see 3.6.2.B above).
- [FRS 102.2.81].

The presence of outcome uncertainty or existence uncertainty may sometimes contribute to measurement uncertainty. However, outcome uncertainty or existence uncertainty does not necessarily result in measurement uncertainty. For example, if the fair value of an asset can be determined directly by observing prices in an active market, no measurement uncertainty is associated with the measurement of that fair value, even if it is uncertain how much cash the asset will ultimately produce and hence there is outcome uncertainty.

3.7.2.C Enhancing qualitative characteristics

The enhancing qualitative characteristics of comparability, understandability and verifiability all have implications for the selection of a measurement basis (discussed in 3.3.2 above), but that of timeliness has no specific implications. As well as the enhancing qualitative characteristics, the standard acknowledges that the cost constraint may have implications and hence consideration of whether the benefits justify the cost of providing and using that information is required. [FRS 102.2.82].

Consistently using the same measurement bases for the same items, either from period to period within a reporting entity or in a single period across entities, can help make financial statements more comparable and conversely, a change in measurement basis can make financial statements less understandable. Nonetheless, other factors may outweigh the reduction in understandability and in these cases a change may be justified. This may be the case if the change results in more relevant information. If any change is made, explanatory information is likely to be required to enable users of the financial statements to understand the effect of the change. [FRS 102.2.83, FRS 102.2.84].

As a general rule, the more measurement bases are used in a set of financial statements, the more complex the resulting information becomes and there is a risk that the information may become less understandable. This may also result in the totals or subtotals presented in the statement of financial position and the statement(s) of financial performance becoming less informative. It can therefore be seen that the characteristic of understandability depends partly on how many different measurement bases are used and on whether those bases are consistent over time. However, the provision of useful information is essential and thus it may be appropriate to use more measurement bases if that is necessary for that purpose. [FRS 102.2.85].

The characteristic of verifiability is enhanced when a user of the financial statements can independently corroborate the measurement basis, either directly, or indirectly. An example of direct corroboration is observing prices, whereas an example of indirect corroboration is checking inputs to a model. If it is not possible to verify a particular measure, explanatory information may be needed to enable users to understand how the measure was determined. In some cases, it may be necessary to specify the use of a different measurement basis. [FRS 102.2.86].

3.7.3 Measurement of equity

Extract from Section 2

2.87 The total carrying amount of equity (total equity) is not measured directly. It equals the total of the carrying amounts of all recognised assets less the total of the carrying amounts of all recognised liabilities. [FRS 102.2.87].

The standard observes that although total equity is not measured directly, it may be appropriate to measure directly the carrying amount of some individual classes of equity and some components of equity. [FRS 102.2.88]. For a discussion on the presentation and reconciliation of components of equity, see Chapter 6.

3.8 Presentation and disclosure

The presentation and disclosure requirements cover three topics: classification, offsetting and aggregation, each of which are discussed in turn below.

3.8.1 Classification

Classification is defined as the sorting of assets, liabilities, equity, income or expenses on the basis of shared characteristics for presentation and disclosure purposes. Examples of characteristics are given, such as the nature of the item, its role (or function) within the business activities conducted by the entity, and how it is measured, though this is not an exhaustive list. [FRS 102.2.89].

The standard points out that classifying together items which do not share characteristics, so dissimilar assets, liabilities, equity, income or expenses, can obscure relevant information and can reduce understandability and comparability, resulting in a failure to provide a faithful representation. [FRS 102.2.90].

Classification is applied to the unit of account selected for an asset or liability (see 3.5.3 above). However, it may sometimes be appropriate to separate an asset or liability into components that have different characteristics and to classify those components separately. Situations where that is appropriate are when separate classification would enhance the usefulness of the resulting financial information. [FRS 102.2.91]. An example of this is the separation of an asset or liability into current and non-current components.

3.8.1.A Classification of income and expenses

Section 2 requires all income and expenses to be classified and included either in profit or loss, or in other comprehensive income. [FRS 102.2.92]. As the income statement is the primary source of information about an entity's financial performance for the reporting period, all income and expenses are, in principle, included in that statement, unless FRS 102 requires or permits otherwise, or unless prohibited by the Act. [FRS 102.2.93]. This refers to the requirement for a UK company preparing Companies Act accounts to determine amounts included in the profit and loss account section of the statement of comprehensive income on a prudent basis, which results in only profits realised at the balance sheet date being included in profit or loss, with certain exceptions for fair value measurement. See 4.1 below and Chapter 6 at 5.2.

3.8.1.B Reclassification adjustments

Other comprehensive income includes income and expenses which are either required or permitted to be included in that statement; the question arises as to whether these items should be reclassified into profit and loss in a future period. This type of reclassification adjustment is sometimes referred to as 'recycling'. The standard clarifies that this is done when doing so results in the income statement providing more relevant information or providing a more faithful representation of the entity's financial performance for that future period. As a result, income and expenses included in other comprehensive income will not necessarily be reclassified into profit or loss. The reclassification requirements relating to specific items are set out in the relevant section of FRS 102. [FRS 102.2.94].

Reclassification is permitted for the following:

- Financial instruments held at available for sale, under the provisions of IAS 39 *Financial Instruments: Recognition and Measurement* that can be applied under Section 12 *Other Financial Instruments Issues* of FRS 102 (see Chapter 13 at 2.1). [FRS 102.12.2].
- Debt instruments carried at fair value through other comprehensive income, under the provisions of IFRS 9 *Financial Instruments*, that can be applied under Section 12 of FRS 102 (see Chapter 13 at 2.1). [FRS 102.12.2].

And

- The effective portion of gains and losses on hedging instruments in a cash flow hedge (see Chapter 14 at 4.8.3). *[FRS 102.12.23, IFRS 9.6.5.11]*.

Recycling of unrealised gains from a revaluation reserve within equity to profit and loss is generally not permitted by FRS 102, though the gain becomes realised at the point of disposal. A transfer of reserves from the revaluation reserve to retained earnings within the statement of changes in equity may be recorded.

3.8.1.C Classification of equity

Some components of equity may be subject to particular legal, regulatory or other requirements. Therefore, to achieve the objective of providing useful information, it may be necessary to classify equity claims separately. *[FRS 102.2.99]*.

3.8.2 Offsetting

The concept of offsetting refers to the process of grouping assets and liabilities, or income and expenses, which are recognised and measured as separate units of account and presenting them as single net amount in the statement of financial position. As a general rule, offsetting is not permitted, as it means that dissimilar items are classified together. *[FRS 102.2.95]*. However, there are limited circumstances in which offsetting is required or permitted by the standard. For example, in cases where it is not the normal operating activity of the entity, gains and losses on disposal of fixed assets (including investments and operating assets) are reported net by deducting from the proceeds on disposal the carrying amount of the asset and related selling expenses. *[FRS 102.2.98]*. Section 2 clarifies that measuring assets net of valuation allowances (for example, allowances for inventory obsolescence and allowances for uncollectible receivables) is not offsetting. *[FRS 102.2.96, FRS 102.2.97]*.

3.8.3 Aggregation

Section 2 defines aggregation as the adding together of assets, liabilities, equity, income or expenses that have shared characteristics and are included in the same classification. *[FRS 102.2.100]*.

The role of aggregation is to make information more useful by summarising a large volume of detail. Inevitably, aggregation conceals some of that detail and thus a risk of obscuring important information arises. Therefore, it is important to find a balance so that relevant information is not obscured by excessive aggregation or the inclusion of a large amount of insignificant detail. *[FRS 102.2.101]*.

4 Company Law principles

FRS 102 financial statements prepared by a UK company are 'Companies Act accounts' and must apply the fundamental accounting principles set out in Company Law - the going concern assumption, consistent accounting policies and measurement bases, prudence, the accruals concept and separate determination (no offset). Section 2 addresses similar concepts, as discussed at 3 above.

4.1 Application of prudence - realised profits

For UK companies, the Regulations also require that the amount of any item must be determined on a prudent basis. In particular, only profits realised at the balance sheet date are to be included in the profit and loss account and all liabilities which have arisen in respect of the financial year in which the accounts relate or a previous financial year must be taken into account, including those which only become apparent between the balance sheet date and the date on which it is signed by a director on behalf of the board in accordance with Section 414 of the CA 2006. [*1 Sch 13, 2 Sch 19, 3 Sch 18, 1 Sch 13 (SC), s414*]. See Chapter 6 at 8.1.

Appendix A - Defined terms

Extract from FRS 102

Appendix I

Glossary

accrual basis (of accounting)	The effects of transactions and other events are recognised when they occur (and not as cash or its equivalent is received or paid) and they are recorded in the accounting records and reported in the financial statements of the periods to which they relate.
Act	The Companies Act 2006
asset	A present economic resource controlled by the entity as a result of past events.
carrying amount	The amount at which an asset, a liability or equity is recognised in the statement of financial position.
consolidated financial statements	The financial statements of a parent and its subsidiaries presented as those of a single reporting entity.
derecognition	The removal of all or part of a recognised asset or liability from an entity's statement of financial position.
economic resource	A right that has the potential to produce economic benefits.
equity	The residual interest in the assets of the entity after deducting all its liabilities.
expenses	Decreases in assets, or increases in liabilities, that result in decreases in equity, other than those relating to distributions to equity investors.
financial statements	
general purpose financial report	A report that provides financial information about the reporting entity's economic resources, claims against the entity and changes in those economic resources and claims that is useful to primary users in making decisions relating to providing resources to the entity.
general purpose financial statements (generally referred to simply as financial statements)	Financial statements directed to the general financial information needs of a wide range of users who are not in a position to demand reports tailored to meet their particular information needs.
going concern	An entity is a going concern unless management either intends to liquidate the entity or to cease trading, or has no realistic alternative but to do so.
income	Increases in assets, or decreases in liabilities, that result in increases in equity, other than those relating to contributions from equity investors.
liability	A present obligation of the entity to transfer an economic resource as a result of past events.
material	Information is material if omitting, misstating, or obscuring it could reasonably be expected to influence decisions that the users of general purpose financial statements make on the basis of those financial statements, which provide financial information about a specific reporting entity.
measurement	The process of determining the monetary amounts at which the elements of the financial statements are to be recognised and carried in the statement of financial position and statement of comprehensive income.
objective of financial statements	To provide information about the financial position, performance and, when required to be presented, cash flows of an entity that is useful for economic decision-making by a broad range of users who are not in a position to demand reports tailored to meet their particular information needs.

recognition	The process of capturing for inclusion in the statement of financial position or statement of comprehensive income an item that meets the definition of one of the elements of financial statements: (a) assets; (b) liabilities; (c) equity; (d) income; or (e) expenses. Recognition involves depicting the item in one of those statements - either alone or in aggregation with other items - in words and by a monetary amount, and including that amount in one or more totals in that statement.
reporting period	The period covered by financial statements or by an interim financial report.

	Appendix A - Defined terms	219
	Appendix B - Index of Illustrations	223

Overview

This chapter deals with the requirements of Section 1A *Small Entities*.

What you need to know

- A small entity is: (1) a company qualifying for the small companies regime, (2) an LLP qualifying for the small LLPs regime, or (3) an entity that would have qualified for the small companies regime had it been a company incorporated under company law.
- Small entities applying FRS 102 *The Financial Reporting Standard applicable in the UK and Republic of Ireland* can choose to apply the small entities regime (i.e., Section 1A) or the full requirements of FRS 102 (excluding Section 1A). Therefore, Section 1A is optional for small entities to apply.
- Small entities other than UK companies or LLPs applying Section 1A must comply with the requirements of Section 1A (including those deriving from UK company and LLP law), except to the extent that these requirements are not permitted by its statutory framework.
- FRS 102 requires small entities to apply the recognition and measurement requirements of FRS 102 in full, with the exception of loans from a director or a director's close family member(s) where at least one of those individuals is a shareholder where a simpler accounting treatment is permitted.
- Section 1A addresses the presentation and disclosure requirements that apply to a small entity that chooses to apply the small entities regime, although a small entity applying Section 1A must still comply with most of the general principles in Section 3 *Financial Statement Presentation* of FRS 102.
- Small entities are not required to apply Sections 4 to 7 of FRS 102 (which cover the primary statements) nor other disclosure requirements of Sections 3, 8 to 35 of FRS 102 (unless specifically included in Section 1A). However, small entity financial statements are required to give a true and fair view, and this could necessitate the presentation of further primary statements or additional disclosures.
- Small entities must give an explicit and unreserved statement of compliance with FRS 102 in the notes to the financial statements, stating (where this is the case) that Section 1A has been applied. A statement (where applicable) that the financial statements are prepared in accordance with the provisions applicable to companies subject to the small companies regime (or the small LLPs regime, or small entities regime) is also given on the statement of financial position above the approval signature.
- A complete set of financial statements for a small entity applying Section 1A includes a statement of financial position, an income statement and notes (with comparatives). A cash flow statement is not required (even if Section 1A is not applied).
- Appendices A and B to Section 1A set out the permitted balance sheet and profit and loss account formats, which are aligned with those required by UK company law for companies applying the small companies regime (and the formats for LLPs applying the small LLPs regime). From April 2027, small entities only have a choice between adapted formats and statutory formats.
- Appendix C to Section 1A sets out the disclosure requirements for small entities. This appendix also sets out the disclosure requirements for small entities based on the requirements of UK company law, which are based closely on the requirements in the small companies regime. The Periodic Review 2024 Amendments increased the disclosures in Appendix C with the aim of reducing the amount of judgement required in determining what disclosures are needed for financial statements to give a true and fair view. Small entities subject to a Statement of Recommended Practice (SORP) could also be required by the SORP to present additional disclosures.
- Most small entities are exempt from the preparation of consolidated financial statements (whether or not they apply Section 1A), although some UK small companies and LLPs are not exempt.
- For financial years beginning on or after 6 April 2025, the size thresholds for a small company or LLP are £15 million turnover, a balance sheet total (total assets) of £7.5 million, and 50 employees. For a small company or LLP that is a parent, the corresponding size thresholds applied to the group it heads are £15 million turnover (£18 million gross of consolidation adjustments) and £7.5 million balance sheet total (£9 million gross of consolidation adjustments) and 50 employees.

1 Introduction

1.1 Background

In July 2015, the Financial Reporting Council (FRC) created a new small entities regime, Section 1A, within FRS 102. Section 1A allows small entities applying the small entities regime to follow simpler presentation and disclosure requirements than full FRS 102. The recognition and measurement principles of FRS 102 continue to apply (with very limited exceptions) to small entities. In addition, the FRC issued FRS 105 *The Financial Reporting Standard applicable to the Micro-entities Regime*. FRS 105 is outside the scope of this publication.

FRS 100 *Application of Financial Reporting Requirements* and FRS 102 (see Chapter 1 at 3.3 and Chapter 3 at 2.1) set out the accounting framework for preparation of an entity's financial statements, as follows:

- Certain entities are required by the CA 2006 or other legislation or regulation to apply adopted IFRS.
 - Entities preparing individual financial statements only that are eligible to apply the micro-entities regime may apply FRS 105.
 - Entities that are not eligible to or choose not to apply FRS 105 have a choice of applying: (1) adopted IFRS, (2) FRS 101 *Reduced Disclosure Framework - Disclosure exemptions from adopted IFRS for qualifying entities* (individual financial statements of a qualifying entity only), or (3) FRS 102
- And
- Entities qualifying for the small entities regime that adopt FRS 102 can choose to apply Section 1A or the full standard. [FRS 100.4, FRS 102.1A.1, FRS 102.1A.2, FRS 102.1.3].

Under the CA 2006, financial statements of a UK company prepared in accordance with FRS 101, FRS 102 or FRS 105 are Companies Act accounts (non-IAS accounts for an LLP). Financial statements of a UK company or LLP preparing financial statements in accordance with UK-adopted international accounting standards ('adopted IFRS') are IAS accounts.

When Section 1A was first introduced into FRS 102, the FRC concluded that it could not impose specific disclosure requirements for small entities that went beyond the statutory requirements. [FRS 102.BC.A.78]. Accordingly, the presentation and disclosure requirements of the original Section 1A were based on the requirements of the CA 2006 and The Small Companies and Groups (Accounts and Directors' Report) Regulations 2008 (SI 2008/409), as amended ('the Small Companies Regulations') for companies subject to the small companies regime. LLPs subject to the small LLPs regime have similar disclosures, as set out in The Limited Liability Partnerships (Accounts and Audit) (Application of Companies Act 2006) Regulations 2008 (SI 2008/1911) and The Small Limited Liability Partnerships (Accounts) Regulations 2008 (SI 2008/1912), as amended ('the Small LLP Regulations').

Following the UK's exit from the European Union, the FRC concluded that it was able to specify additional disclosures for small UK entities in Appendix C of Section 1A that are expected to be required for the financial statements to give a true and fair view, reducing the amount of judgement required by preparers. [FRS 102.BC.A.79, FRS 102.BC.B1A.3B]. In practice, since the true and fair view requirement is unchanged, the FRC notes that it expects that this will simplify the process of deciding which disclosures are given, although the disclosures given might not change. [FRS 102.BC.A.80].

In December 2024, The Companies (Accounts and Reports) (Amendment and Transitional Provision) Regulations 2024 (SI 2024/1303) raised the size thresholds for micro, small and medium-sized companies and LLPs, effective for financial years beginning on or after 6 April 2025 (see 2.2 and 2.3 below). In March 2025, the FRC issued Amendments to FRS 102 and FRS 105 to reflect the new size thresholds in Appendix III Note on Legal Requirements of those standards.

1.2 Scope of this chapter

A company subject to the small companies regime (in the UK), an LLP subject to the small LLPs regime, and an entity that would have qualified for the small companies regime had it been a company, is a 'small entity' permitted to use the small entities regime in FRS 102, i.e., to apply Section 1A of FRS 102. [s382, s383, s384, s382 (LLP), s383(LLP), s384 (LLP), FRS 102 Appendix I].

Section 1A sets out the information to be presented and disclosed in the financial statements of a small entity choosing to apply the small entities regime. Unless specifically excluded, all the recognition and measurement requirements of the full standard continue to apply. [FRS 102.1A.1]. These are discussed in other chapters of this book. FRS 102 exempts small entities from preparing a cash flow statement (see 3.3.3 below) and provides an optional alternative for accounting for loans from a director or a director's close family member(s), where at least one of those individuals is a shareholder (see 3.1 below). The cash flow statement and directors' loan exemptions are available to a small entity whether or not Section 1A is applied. In addition, most small entities are exempt from preparation of consolidated financial statements (see 3.2 below).

This chapter principally addresses which entities qualify as 'small entities', the requirements of Section 1A, and the related statutory requirements (for UK companies subject to the small companies regime and LLPs subject to the small LLPs regime). A summary of Section 1A is included in the Overview above. Key changes made by the Periodic Review 2024 amendments are noted at 1.3 below. Key definitions used in this chapter are included in Appendix A below.

The definition and qualifying criteria for a small entity, the small companies regime and small LLPs regime are discussed at 2 below. This chapter has been cross referred from Chapter 1 (which discusses FRS 100) because it includes the qualifying criteria for the small companies regime and the small LLPs regime. These qualifying criteria apply both to small companies and LLPs preparing Companies Act accounts (non-IAS accounts, for an LLP) – such as financial statements prepared in accordance with FRS 101 and FRS 102 – and to those preparing IAS accounts, i.e., financial statements prepared in accordance with UK-adopted international accounting standards (see 1.1 above).

The presentation requirements of full FRS 102 that are mandatory for entities applying Section 1A are covered at 3 below. These include the overriding requirement for the financial statements to give a true and fair view. If a small entity chooses not to apply Section 1A (or presents additional primary statements), Chapter 6 addresses the presentation requirements of full FRS 102.

UK companies subject to the small companies regime apply the Small Companies Regulations (and LLPs subject to the small LLPs regime apply the Small LLP Regulations). These regulations set out simpler formats for the balance sheet and profit and loss account, and fewer notes disclosures for companies applying the small companies regime in Companies Act accounts (and LLPs applying the small LLPs regime in non-IAS accounts).

The formats for the balance sheet and profit and loss account included in Section 1A are consistent with the formats for Companies Act accounts (non-IAS accounts for an LLP) included in the Small Companies Regulations and Small LLP Regulations. These are discussed at 4 below.

The notes disclosures required by Section 1A, the Small Companies Regulations and the Small LLP Regulations in Companies Act accounts (non-IAS accounts for an LLP) are largely replicated in the notes disclosures set out in Appendix C of Section 1A and addressed at 5 below.

The requirements for the preparation and filing of small company and small LLP financial statements are set out in the CA 2006 as well as in the relevant financial reporting framework.

The disclosure exemptions in the CA 2006 (and the related requirements for LLPs) for:

- The financial statements of UK companies and LLPs, prepared in accordance with the small companies regime and small LLPs regime respectively
- And
- The annual reports of UK companies taking advantage of the small companies exemption, are discussed at 6 below.

The commentary on the scope of the small companies regime, small LLPs regime and the disclosure exemptions in 2 and 6 below, covers both Companies Act and IAS accounts. This is because these requirements derive from the Companies Act 2006, Small Companies Regulations and Small LLP Regulations.

1.3 Changes made by the Periodic Review 2024

The Periodic Review 2024 amendments stress the requirement in paragraph 1A.5 of FRS 102 for small entity financial statements to give a true and fair view. The language in Section 1A has been strengthened stating that "In order to comply with the requirement of paragraph 1A.5, a small entity may need to provide disclosures in addition to those set out in this section". Therefore, a small entity may need to present additional primary statements, shall present sufficient information in the notes to the financial statements and may need to provide any of those disclosures that are relevant to material transactions, other events or conditions of the small entity that are in other sections of FRS 102 in order for its financial statements to meet the true and fair requirement. [FRS 102.1A.5, FRS 102.1A.6, FRS 102.1A.9, FRS 102.1A.16, FRS 102.1A.17].

The FRC has included additional disclosures for UK small entities in Appendix C of Section 1A, taken from full FRS 102, that the FRC considers necessary for financial statements to give a true and fair view. Some but not all of these were previously encouraged disclosures in Appendix E of Section 1A (which now applies only to Irish small entities). These are described further below.

Other requirements have been restated and clarified. These include the following:

- Clarification of which parts of Section 3 of FRS 102 do not apply to a small entity. All of Section 3 now applies except for paragraphs 3.12 and 3.13 (which address changes in presentation – where the Small Companies Regulations have similar requirements), paragraphs 3.17 to 3.19 (which address a complete set of financial statements – where Section 1A has its own requirements) and paragraph 3.24(b) (description of the nature of the entity's operations and its principal activities). *[FRS 102.1A.7]*.
- In order for the financial statements to give a true and fair view, a small entity that recognises gains or losses in other comprehensive income may need to present (rather than, as previously, is encouraged to present) a statement of total comprehensive income. A small entity that has changes in equity, other than profit or loss may need to present a statement of changes in equity (or a statement of income and retained earnings). *[FRS 102.1A.9]*. Consequently, Section 1A more strongly emphasises that these are circumstances where the additional primary statements could be required if necessary for the financial statements to give a true and fair view.
- A UK small entity must include an explicit and unreserved statement of compliance with FRS 102, stating that Section 1A has been applied (where this is the case). The same applies to the statement, if applicable, that the small entity is a Public Benefit Entity (PBE) as well. These were previously encouraged disclosures in Appendix E for UK small entities. *[FRS 102.1A.7, FRS 102.1AC.2A, FRS 102.PBE1AC.2B]*.
- Certain disclosure requirements from other sections of FRS 102 have been added relating to:
 - Going concern (such as: use of the going concern basis (including significant judgements), material uncertainties over going concern, and use of a non-going concern basis). *[FRS 102.1AC.2C]*
 - Significant leasing arrangements. *[FRS 102.1AC.31A, FRS 102.1AC.31B]*
 - Provisions and contingencies. *[FRS 102.1AC.31C]*
 - Share-based payment transactions. *[FRS 102.1AC.31D]*
 - Short-term leases, leases of low value assets and variable lease payments. *[FRS 102.1AC.32A]*. Right-of-use assets will also now be subject to the usual disclosures for fixed assets, such as roll-forward reconciliations, disclosures for revalued assets, and impairments (and reversals).
 - Performance obligations in contracts with customers. *[FRS 102.1AC.32B]*
- And
- Current and deferred tax. *[FRS 102.1AC.11A, FRS 102.1AC.32C]*.
- A UK small entity must disclose all related party transactions covering the same categories of related parties as in full FRS 102 (rather than the restricted categories set out in the previous version of Section 1A and the Small Companies Regulations for transactions not concluded under normal market conditions, as previously), subject to the same exemptions available to all FRS 102 reporters. *[FRS 102.1AC.35]*. The FRC has clarified the scope of the new requirements and the interaction with the statutory requirements (see 5.1.19.B and 5.1.19.C below).
- A UK small entity must disclose dividends declared and paid or payable during the period (this was previously an encouraged disclosure in Appendix E for UK small entities). *[FRS 102.1AC.40]*.
- A UK small entity adopting FRS 102 for the first time must explain how the transition has affected its financial position and performance (this was previously an encouraged disclosure in Appendix E for UK small entities). *[FRS 102.1AC.41]*.

The requirements of SORPs are not generally addressed in this chapter (except in the context of the balance sheet and profit and loss account formats used in small LLP financial statements).

1.4 Abbreviations

'Small Companies Regulations' refers to The Small Companies and Groups (Accounts and Directors' Report) Regulations 2008 (SI 2008/409) (as amended).

'Small LLP Regulations' refers to The Small Limited Liability Partnerships (Accounts) Regulations 2008 (SI 2008/1912) (as amended).

References to the 'General Rules to the formats' mean the 'General Rules', as included in Section A of Part 1 of Schedule 1 to the Small Companies Regulations or the equivalent requirements in the Small LLP Regulations.

The following statutory instruments are referred to by their statutory instrument number:

- The Limited Liability Partnerships (Accounts and Audit) (Application of Companies Act 2006) Regulations 2008 (as amended) (SI 2008/1911). This statutory instrument sets out how Parts 15 and 16 of the Companies Act 2006 apply to LLPs and is also referred to as 'the CA 2006 as applied to LLPs' in this chapter.
- The Companies (Accounts and Reports) (Amendment and Transitional Provision) Regulations 2024 (SI 2024/1303).

'LLP SORP' refers to the Statement of Recommended Practice Accounting by Limited Liability Partnerships issued by CCAB in November 2025 ('LLP SORP'), which reflects the Periodic Review 2024 amendments.

2 Scope of small entities regime (Section 1A of FRS 102)

Section 1A sets out the information to be presented and disclosed in the financial statements of a small entity that chooses to apply the small entities regime (see 2.1 below). [FRS 102.1A.1].

2.1 Application of Section 1A

A small entity is defined as:

- (a) A company meeting the definition of a small company as set out in sections 382 or 383 of the CA 2006 and not excluded from the small companies regime by section 384 (see 2.2 below).
- (b) An LLP qualifying as small and not excluded from the small LLPs regime, as set out in sections 382 to 384 of the CA 2006 as applied to LLPs (see 2.3 below).

Or

- (c) Any other entity that would have met the criteria in (a) had it been a company incorporated under company law. [FRS 102 Appendix I].

Section 1A is optional for small entities to apply. A small entity that chooses not to apply the small entities regime is required to apply FRS 102, excluding Section 1A, unless the small entity chooses to apply UK-adopted international accounting standards (or, if eligible, FRS 101). [FRS 102.1A.2].

However, as noted in Chapter 1 at 3.3, an entity's choice of financial reporting framework must be permitted by the legal framework or other regulations or requirements that govern the preparation of the entity's financial statements. [FRS 100.4, FRS 102.1.3]. Other agreements or arrangements (such as shareholders' agreements, banking agreements) may restrict the choice of financial reporting framework.

Entities that are subject to a SORP must confirm the applicability of Section 1A. SORPs may restrict entities within their scope from taking advantage of certain exemptions within FRS 102 for small entities or require additional disclosures in order to comply with the SORP.

References to a 'small entity' in paragraphs 1A.4 to 1A.22 of Section 1A (and its appendices), i.e., in the rest of Section 1A, are to a small entity that chooses to apply the small entities regime. [FRS 102.1A.3].

Section 1A applies to all small entities applying the small entities regime, whether or not they report under the CA 2006. Small entities that do not report under the CA 2006 must comply with Section 1A and with the CA 2006 and the Small Companies Regulations (or, where applicable, the CA 2006 as applied to LLPs and the Small LLP Regulations) where referred to by Section 1A, except to the extent that these requirements are not permitted by any statutory framework under which such entities report. [FRS 102.1A.4].

2.2 Small companies regime (UK)

The small companies regime applies to a company for a financial year in relation to which the company qualifies as small (see 2.2.1 and 2.2.2 below for the criteria for UK companies) and is not excluded from the regime (see 2.2.3 below for the types of excluded companies in the UK). [s381].

2.2.1 UK companies qualifying as small – company is not a parent undertaking (size criteria)

The discussion below addresses the qualifying conditions to be small for a company that is not a parent undertaking. See 2.2.2 below for the qualifying conditions for a company that is a parent undertaking.

A company qualifies as small in relation to its first financial year if the qualifying conditions (as set out below) are met in that year. [s382(1)].

A company qualifies as small in relation to a subsequent financial year if the qualifying conditions are met in that year except that in relation to a subsequent financial year, where on its balance sheet date a company meets or ceases to meet the qualifying conditions, then that will affect its qualification as a small company only if it occurs in two consecutive years. [s382(1A), s382(2)].

This provision is designed to assist companies which fluctuate in and out of the qualifying conditions. However, if a company fails to meet the criteria in two consecutive years, it will cease to qualify and then would need to meet the criteria in two later consecutive years to requalify for the exemptions. This is sometimes referred to as a 'year of grace'.

The qualifying conditions are met for a company in a year in which the company satisfies two or more of the following requirements: [s382(3)]

- Turnover is not more than £15 million.
- Balance sheet total (i.e., total assets shown in the balance sheet), [s382(5)], is not more than £7.5 million.

And

- Number of employees is not more than 50.

For financial years beginning prior to 6 April 2025, the turnover threshold was £10.2 million and the balance sheet total was £5.1 million.

If the company's financial year is not a full year, the maximum turnover figure is adjusted proportionately. [s382(4)].

The number of employees means the average number of persons employed under contracts of service by the company in the year (determining for each month, the number of such persons - whether employed throughout the month or not, adding together the monthly totals and dividing by the number of months in the financial year). [s382(6)].

As discussed in Chapter 6 at 7.7, 'contracts of service' with the company means an employment contract and therefore excludes people such as contractors or consultants. Executive directors generally have a contract of service, but non-executive directors may have contracts for services (rather than a contract of service) and if this is the case, would be excluded from the calculation of the number of employees. The calculation includes both part-time and full-time employees.

Although the small size criteria increased, effective for financial years beginning on or after 6 April 2025, the new size thresholds are applied to all preceding financial years in assessing whether a company is small in a particular financial year.¹⁸ This means the assessment is made as if the new small size criteria had always applied. For example, if a company with a calendar year end would qualify as small in 2026 and 2025 using the new small size criteria, it will be a small company in 2026 even if it had not qualified as small under the previous size criteria in 2025.

The Illustration below demonstrates the application of small size thresholds including application of the 'year of grace' rules.

Illustration 2-1: Applying the small size thresholds for UK companies and LLPs

Company A	20X5	20X4	20X3	20X2	20X1
	£'000	£'000	£'000	£'000	£'000
Turnover	17,000	16,200	16,000	11,000	10,800
Balance sheet total	6,000	6,500	6,000	5,650	5,500
Number of employees	49	55	51	45	45
Are at least two of the small size criteria met?	Yes	No	No	Yes	Yes
Is the company small?	No	No	Yes	Yes	Yes

In this Illustration, Company A, which is not a parent undertaking, prepares its financial statements for financial years that are calendar years. It is incorporated on 1 January 20X1 so 20X1 is its first financial year. The relevant size criteria applied in all years in the table above are those that apply for financial years beginning on or after 6 April 2025.

Does Company A qualify as small and in which years?

- Company A met at least two of the small size criteria, i.e., the qualifying conditions, in 20X1 and 20X2. It qualifies as small in those years.
- In 20X3, Company A does not meet two of the small size criteria but still qualifies as small because the qualifying conditions were met in the two preceding financial years (20X2 and 20X1).
- However, Company A ceases to qualify as small in 20X4, as it failed to meet two of the small size criteria for two financial years running.
- Although Company A again meets two of the small size criteria in 20X5, it does not qualify as small for its 20X5 financial statements, as it ceased to qualify as small in the prior year.

18 *The Companies (Accounts and Reports) (Amendment and Transitional Provision) Regulations 2024* (SI 2024/1303), paras. 2(2), 3 [The Companies \(Accounts and Reports\) \(Amendment and Transitional Provision\) Regulations 2024](#).

- If Company A meets two of the small size criteria again in 20X6, it will requalify as small for its 20X6 financial statements (as it would then meet the qualifying conditions for two years running).

However, had two of the small size criteria been met in 20X3 or 20X4, Company A would qualify as small in all the financial years shown above (on the basis that it had not failed the small size criteria for two financial years running).

2.2.2 UK companies qualifying as small – company is a parent undertaking (size criteria)

Where the company is itself a parent undertaking, it qualifies as small only if the group that it heads qualifies as a small group. [s382(7), s383(1)]. This is the case whether or not group accounts are prepared. Consequently, the assessment of whether a parent undertaking is small differs to that of a company that is not a parent undertaking, even if the entities are in the same group.

A group qualifies as small in relation to the parent's first financial year if the qualifying conditions (as set out below) are met in that year. [s383(2)].

A group qualifies as small in relation to a subsequent financial year if the qualifying conditions are met in that year except that in relation to a subsequent financial year, where on its balance sheet date the group meets or ceases to meet the qualifying conditions, then that will affect the group's qualification as a small group only if it occurs in two consecutive years. [s383(2A), s383(3)].

As discussed in 2.2.1 above, this provision, referred to as a 'year of grace', is designed to assist companies which fluctuate in and out of the qualifying conditions.

The qualifying conditions for a small group, including the separate financial statements of the parent undertaking, are met in a year in which the group headed by the company satisfies two or more of the following requirements: [s383(4)].

- Aggregate turnover must not exceed £15 million net (or £18 million gross).
- Aggregate balance sheet total (i.e., total assets shown in the balance sheet), [s382(5)], must not exceed £7.5 million (or £9 million gross).

And

- Aggregate number of employees must not exceed 50

For financial years beginning prior to 6 April 2025, the turnover threshold was £10.2 million net (£12.2 million gross), and the balance sheet total was £5.1 million net (£6.1 million gross). As discussed at 2.2.1 above, the assessment for financial years beginning on or after 6 April 2025 is made as if the new size criteria had always applied.

The aggregate figures are ascertained by aggregating the relevant figures determined in accordance with section 382 of CA 2006 for each member of the group (meaning the reporting company and its subsidiary undertakings). [s383(5), s474(1)]. The figures used for each subsidiary undertaking are those included in its individual accounts for the relevant financial year. Where the subsidiary undertaking's financial year is coterminous with that of the parent company, the relevant financial year ends at the same date as that of the parent company, or where it is not coterminous, the relevant financial year is the subsidiary undertaking's financial year ending last before the end of the financial year of the parent company. If those figures are not obtainable without disproportionate expense or undue delay, the latest available figures are used. [s383(7)].

The turnover and balance sheet total criteria can be satisfied on either the gross or net basis (with 'net' meaning after set-offs and other adjustments made to eliminate group transactions, and 'gross' meaning without those set-offs and other adjustments). It is permissible to satisfy turnover on the 'net' basis and the balance sheet total on the 'gross' basis (or vice versa). For Companies Act accounts (such as FRS 102 financial statements), the consolidation adjustments are determined in accordance with the Regulations or the Small Companies Regulations. For IAS accounts, the consolidation adjustments are determined in accordance with UK-adopted international accounting standards. [s383(6)].

Illustration 2-2: Applying the small size thresholds to a UK parent company/LLP

In this Illustration, Company B, which is a parent undertaking, prepares its financial statements for financial years that are calendar years. It is incorporated on 1 January 20X1 so 20X1 is its first financial year. The aggregate financial information of Company B and its subsidiary S (which also has a calendar year end) is presented below on a gross and a net (of consolidation adjustments) basis. The relevant size criteria applied to all years in the table are those that apply for financial years beginning on or after 6 April 2025.

Gross	20X5	20X4	20X3	20X2	20X1
	£'000	£'000	£'000	£'000	£'000
Turnover	21,000	20,500	19,000	18,500	16,000
Balance sheet total	11,000	10,000	10,000	8,900	8,500
Number of employees	55	55	49	51	45
Are at least two of the small size criteria met?	No	No	No	No	Yes

Net	20X5	20X4	20X3	20X2	20X1
	£'000	£'000	£'000	£'000	£'000
Turnover	18,100	16,200	14,800	14,400	11,500
Balance sheet total	9,200	8,500	8,000	7,600	6,000
Number of employees	55	55	49	51	45
Are at least two of the small size criteria met?	No	No	Yes	No	Yes

Does B qualify as small and in which years?

- In 20X1, B meets at least two of the small size criteria, i.e., the qualifying conditions (on either basis) and qualifies as small.
- In 20X2, B meets at least two of the small size criteria since it meets the turnover criterion on a net basis and the balance sheet total criterion on a gross basis. Therefore, B qualifies as small as it met the qualifying conditions in 20X2 and 20X1.
- In 20X3, B does not meet at least two of the small size criteria on a gross basis but it does so on a net basis and, therefore, meets the qualifying conditions. B qualifies as small as it meets the qualifying conditions in 20X3 and 20X2.
- In 20X4, B does not meet at least two of the small size criteria on either basis. Nevertheless, B qualifies as small because it met the qualifying conditions in 20X3 and 20X2.
- In 20X5, B no longer qualifies as small as it did not meet the qualifying conditions for two years running.
- Even if B meets two of the small size criteria again in 20X6, it will not requalify as small for its 20X6 financial statements.

The assessment is more complicated where a subsidiary does not have a coterminous year end. In such a case, the turnover and balance sheet total figures that are aggregated are based on the amounts shown in B's individual financial statements and those in S's individual financial statements for the relevant financial year (being the financial year end that ends last before B's financial year end).

2.2.3 Companies excluded from the small companies regime

A company is excluded from the small companies regime if it was at any time within the financial year to which the financial statements relate:

- A public company.
- A company that is an authorised insurance company, a banking company, an e-money issuer, a MiFID investment firm or a UCITS management company.
- A company that carries on insurance market activity.
- A company that is a scheme funder of a Master Trust scheme within the meanings given by section 39(1) of the Pension Schemes Act 2017 or section 39(1) of the Pension Schemes Act (Northern Ireland) 2021 (interpretation of Part 1).

Or

- A member of an ineligible group. [s384(1)].

A group is ineligible if any of its members is:

- A traded company.
- A body corporate (other than a company) whose shares are admitted to trading on a UK regulated market.
- A person (other than a small company) who has permission under Part 4A of the Financial Services and Markets Act 2000 to carry on a regulated activity.
- An e-money issuer.
- A small company that is an authorised insurance company, a banking company, a MiFID investment firm or a UCITS management company.
- A person who carries on insurance market activity.

Or

- A scheme funder of a Master Trust scheme within the meanings given by section 39(1) of the Pension Schemes Act 2017 or section 39(1) of the Pension Schemes Act (Northern Ireland) 2021 (interpretation of Part 1). [s384(2)].

A group means a parent undertaking and its subsidiary undertakings. [s474(1)]. Therefore, in determining whether a small company is excluded on the grounds that it is a member of an ineligible group, the term 'group' comprises the widest group of which the reporting company is a member. This differs from the scope of a 'group' used when evaluating whether the small size criteria are met, which is the group headed by the reporting company.

A company is a small company for the purposes of section 384(2) (the determination of whether a group is ineligible) if it qualified as small in relation to its last financial year ending on or before the end of the financial year to which the financial statements relate. [s384(3)].

2.2.3.A Relevant definitions for small companies regime

The reference to a 'company' above is to a company formed and registered (or treated as if formed and registered) under the CA 2006. This means a company formed and registered under the CA 2006, or prior to 1 October 2009 under the Companies Act 1985, Companies (Northern Ireland) Order 1986 (or was an existing company for the purposes of that Act and Order). [s1]. Sections 382 to 384 do apply also, with modifications, to unregistered companies via separate regulations (but such companies are outside the scope of this publication).¹⁹

A traded company (in this context) means a company which has transferable securities admitted to trading on a UK regulated market. [s474(1)]. Transferable securities are those classes of securities which are negotiable on the capital market (with the exception of instruments of payment). Common examples include shares, debt and depositary receipts in respect of such securities. [s1173(1)].

A UK regulated market is a regulated market which is a recognised investment exchange under section 285 of the Financial Services and Market Act 2000, but not an overseas investment exchange within the meaning of section 313 of that Act. [s1173(1)].

A list of UK regulated markets is obtainable from the Financial Conduct Authority (FCA) website and at the time of writing contains: The London Metal Exchange, ICE Futures Europe, London Stock Exchange, Aquis Stock Exchange Limited and Cboe Europe Equities Regulated Market.²⁰ However, certain segments of these exchanges are not UK regulated markets. For example, the Main Market of the London Stock Exchange (which includes issuers admitted to trading on the Official List and the Specialist Fund Segment) is a UK regulated market but the Alternative Investment Market (AIM), the International Securities Market, Professional Securities Market, and 'Admission to Trading Only' securities are not UK regulated markets.²¹ The Main Market of Aquis Stock Exchange is a UK regulated market for securities admitted to the Official List but the Growth Market for unlisted securities is not.²²

¹⁹ The Unregistered Companies Regulations 2009 (SI 2009/2436), Schedule 1, paras. 10(1), 10(2).

²⁰ The list of UK regulated markets is available from the FCA's Financial Services Register [Regulated Markets](#) (accessed 28 August 2025).

²¹ Admission and Disclosure Standards (effective July 2024), para. 1.2, London Stock Exchange [LSEG Admission and Disclosure Standards | Effective July 2024](#) (accessed 28 August 2025).

²² Overview, [Rules & Regulations - Aquis Stock Exchange](#) (accessed 28 August 2025).

A public company means a company limited by shares or limited by guarantee and having a share capital (a) whose certificate of incorporation states that it is a public company, and (b) in relation to which the requirements of the CA 2006 or the former Companies Acts as to registration or re-registration as a public company have been complied with (on or after the relevant date, being 22 December 1980 in Great Britain and 1 July 1983 in Northern Ireland). [s4]. Therefore, a public company means any UK-incorporated company that is a 'plc' or 'PLC' rather than a publicly traded company.

An authorised insurance company is defined in section 1165(2), a banking company in section 1164(2)-(3) and insurance market activity in section 1165(7) of the CA 2006. See Chapter 6 at 3.1.2 and 3.1.3.

The terms e-money issuer, MiFID investment firm, regulated activity, and UCITS management company are defined in section 474 of the CA 2006. [s474].

A body corporate includes a body incorporated outside the UK but does not include (a) a corporation sole, or (b) a partnership that, whether or not a legal person, is not regarded as a body corporate under the law by which it is governed. [s1173(1)]. Therefore, a body corporate would include an overseas company or a UK LLP.

2.3 Small LLPs regime (UK)

The small LLPs regime applies to an LLP for a financial year in relation to which the LLP qualifies as small (see 2.3.1 below for the size criteria for UK LLPs) and is not excluded from the regime (see 2.3.2 below for the types of excluded LLPs in the UK). [s381 (LLP)].

2.3.1 Size criteria

The small size criteria for an LLP that is not a parent and for an LLP that is a parent are the same as the small size criteria applied for a company that is not a parent (see 2.2.1 above) and a company that is a parent (see 2.2.2 above). These size criteria operate in the same way as described for UK companies above. [s382 (LLP), s383 (LLP)].

2.3.2 Excluded LLPs

An LLP is excluded from the small LLPs regime if it was at any time in the financial year to which the financial statements relate:

- A traded LLP (meaning an LLP any of whose transferable securities are admitted to trading on a UK regulated market).
 - An LLP that is an authorised insurance company, a banking LLP, an e-money issuer, a MiFID investment firm or a UCITS management company.
 - An LLP that carries on insurance market activity.
 - An LLP that is a scheme funder of a Master Trust scheme within the meanings given by section 39(1) of the Pension Schemes Act 2017 or section 39(1) of the Pension Schemes Act (Northern Ireland) 2021 (interpretation of Part 1).
- Or
- A member of an ineligible group. [s384(1) (LLP), s474(1)].
 - A group (i.e., a parent undertaking and its subsidiary undertakings) is ineligible if any of its members is: A traded company.
 - A body corporate (other than a company) whose shares are admitted to trading on a UK regulated market.
 - A person (other than a small company or small LLP) who has permission under Part 4A of the Financial Services and Markets Act 2000 to carry on a regulated activity.
 - An e-money issuer.
 - A small company or small LLP that is an authorised insurance company, a banking company or banking LLP, a MiFID investment firm or a UCITS management company.
 - A person who carries on insurance market activity.
- Or
- A scheme funder of a Master Trust scheme within the meanings given by section 39(1) of the Pension Schemes Act 2017 or section 39(1) of the Pension Schemes Act (Northern Ireland) 2021 (interpretation of Part 1). [s384(2) (LLP), s474(1) (LLP)].

A company or LLP is a small company or small LLP for the purposes of section 384(2) of the CA 2006 if it qualified as small in relation to its last financial year ending on or before the end of the financial year to which the financial statements relate. *[s384(3)(LLP)]*.

As discussed at 2.2.3 above, an LLP is a member of an ineligible group if the widest group to which the LLP belongs contains any excluded members.

The definition of an ineligible group for an LLP is similar but not identical to that used for a company (see 2.2.3 above). The relevant definitions for the exclusions are set out in the CA 2006 as applied to LLPs, *[s474(1)(LLP), s1173(1)(LLP)]*, and are similar to those discussed at 2.2.3.A above.

3 Requirements of Section 1A

Section 1A defines a small entity and sets out the financial statements requirements for small entities that are FRS 102 reporters and choose to apply Section 1A. Appendices A and B of Section 1A provide guidance on adapted and abridged balance sheet and profit and loss account formats. Appendix C of Section 1A sets out the disclosure requirements for small entities in the UK. Appendices D and E are only relevant for Republic of Ireland small entities.

Unless specifically excluded, all the requirements of FRS 102, including the recognition and measurement requirements, apply to a small entity applying Section 1A. [FRS 102.1A.1].

However, there is an optional relief (included in Section 11 *Basic Financial Instruments*) allowing small entities to measure loans from a director or a director's close family member(s) (where at least one of those individuals is a shareholder) at transaction price. This relief is available to a small entity, even if not applying Section 1A. [FRS 102.11.13A]. See 3.1 below.

A small entity applying Section 1A is not usually required to prepare consolidated financial statements (although some small entities might not fall within the statutory group accounts exemption). However, Section 1A addresses voluntary preparation of consolidated financial statements, including requiring the consolidation procedures in Section 9 *Consolidated and Separate Financial Statements* to be followed. [FRS 102.1A.21, FRS 102.1A.22, FRS 102.9.3(e)]. See 3.2 below.

Section 1A exempts small entities from most of the existing presentation and disclosure requirements of FRS 102. Accordingly, a small entity only needs to comply with certain parts of Section 3 of FRS 102 covering the general principles concerning presentation of financial statements (as set out in paragraph 1A.7 – see 3.3 below). [FRS 102.1A.7]. A small entity applying Section 1A is not required to comply with Section 4 *Statement of Financial Position*, Section 5 *Statement of Comprehensive Income and Income Statement*, Section 6 *Statement of Changes in Equity and Statement of Income and Retained Earnings* or Section 7 *Statement of Cash Flows*. [FRS 102.1A.7A]. Small entities are not required to prepare a cash flow statement (even if not applying Section 1A) unless required to do so by a SORP or law or other relevant regulation. [FRS 102.3.1B, FRS 102.7.1B]. See 3.3 below. In addition, a small entity is not specifically required to comply with the other disclosure requirements of Sections 3, and 8 to 35 of FRS 102. [FRS 102.1A.17]. However, Appendix C of Section 1A, which applies to a small entity in the UK, does scope in certain disclosures included in other Sections of FRS 102. See 5.1 below.

3.1 Optional measurement exemption for certain loans from a director or a close member of their family

The FRC has concluded that, whilst a small entity may have fewer, or simpler transactions, the accounting for a given transaction by a small entity will not differ. However, occasional specific exemptions may be granted in order to provide proportionate and practical solutions. [FRS 102.BC.B1A.8, FRS 102.BC.B1A.9]. Currently there is only one such exemption offered in FRS 102 which is in respect of loans from a director or a director's close family members. Similar relief is available to small LLPs. This exemption is set out in Section 11 of FRS 102, in paragraphs 11.13A to 11.13C. The directors' loan exemption is not available to small entities applying IFRS 9 *Financial Instruments* or IAS 39 *Financial Instruments: Recognition and Measurement*, to the recognition and measurement of financial instruments, as permitted as a policy choice under FRS 102. [FRS 102.11.2(b), FRS 102.11.2(c), FRS 102.12.2(b), FRS 102.12.2(c)].

3.1.1 Application of the exemption

FRS 102 generally requires that a financial asset or financial liability that is a financing transaction is measured at the present value of the future payments, discounted at a market rate of interest for a similar debt instrument as determined at initial recognition adjusted for transaction costs. [FRS 102.11.13]. There are limited optional exemptions from this requirement, where the initial measurement is at transaction price (see Chapter 13 at 5.2). [FRS 102.11.13A].

As an exception to this requirement, a basic financial liability of a small entity that is a loan from a person who is within a director's group of close family members, when that group contains at least one shareholder in the entity, is permitted to be measured initially at transaction price. [FRS 102.11.13A(a)]. The effective interest rate used when subsequently measuring the loan at amortised cost is the interest rate implicit in the contract, which may be zero. [FRS 102.11.14(a)(i)]. This relief is available to a small entity, whether or not Section 1A is applied.

'A director's group of close family members' means, in this context, the director and the close members of that director's family. This includes a person who is the sole director-shareholder of an entity. For an LLP, the reference to a 'shareholder' is read as 'a member who is a person'. [FRS 102.11.13A(a)]. A loan from a director, who is not a shareholder and has no close family members that are shareholders, will not qualify for the relief. [FRS 102.BC.B11.38].

How we see it

We believe the exemption is intended to be limited to a director (or member of an LLP) who is a natural person (individual) and would exclude a corporate director-shareholder or corporate member of an LLP.

The close members of the director's family are those family members who may be expected to influence, or be influenced by, that director in their dealings with the entity including:

- That director's children and spouse or domestic partner.
- Children of that director's spouse or domestic partner.

And

- Dependants of that director or that director's spouse or domestic partner. [FRS 102 Appendix I].

An example of a situation where the optional exemption to measure the loan initially at transaction price would be available is given in Illustration 3-1 below.

Illustration 3-1: Accounting for a loan from a director or a director's close family member(s) at transaction price using the exemption in paragraph 11.13A of FRS 102

A director's spouse makes an interest free loan to Entity A, which qualifies as a small entity. The director's adult son is a shareholder in Entity A.

The amount of the loan £200,000 is repayable after three years by the entity.

This situation would fall within the scope of paragraph 11.13A of FRS 102 since a loan is made by a director's close family member, and one of the director's close family members (the adult son) is a shareholder. There is no requirement for the shareholder to be the person making the loan.

Where the optional relief in paragraph 11.13A is used, Entity A records the loan liability initially at its transaction price of £200,000 and no interest is charged to profit or loss. The loan is then repaid at £200,000 in three years' time, extinguishing the liability.

3.1.2 Small entity becomes or ceases to be eligible for the exemption

An entity that was not a small entity when the transaction was entered into but subsequently becomes eligible to take advantage of the above exemption, and chooses to do so, applies the exemption retrospectively. [FRS 102.11.13C].

An entity that has taken advantage of the exemption but subsequently ceases to be a small entity is permitted, when remeasuring the financial liability to present value prospectively from the first reporting date after it ceases to be a small entity, to determine the present value either (1) on the basis of the facts and circumstances existing at that time or (2) at the date the financing arrangement was entered into. [FRS 102.11.13B].

This means that in the first reporting period in which the entity ceases to be a small entity, the financial liability is remeasured at its present value at the end of the reporting period - either at the present value required by paragraph 13 of Section 11 (using the market rates applicable to a similar transaction at the date the financing transaction was entered into) or on the basis of the facts and circumstances at the end of the reporting period. Interest would then be charged in subsequent reporting periods, applying the amortised cost method.

How we see it

While the adjustment is to be reflected prospectively, it is not specified where any catch up for any remeasurement required is reflected. However, in our view, the adjustment is most appropriately reflected in equity. This treatment is consistent with the accounting for any difference between the transaction price and the present value of such a loan on initial recognition, if the above exemption available for small entities had not been taken.

3.2 Preparation of consolidated financial statements under Section 1A

A small entity that is a parent entity is not required to prepare consolidated financial statements.

[FRS 102.1A.21]. The qualifying criteria for a small parent company and LLP in the UK are set out in 2.2 and 2.3 above. Note that the small size criteria are evaluated for the group headed by the small parent company or LLP and are set out in 2.2.1, 2.2.2 and 2.3.1 above.

The CA 2006 and related regulations use the term 'group accounts' and 'individual accounts' rather than 'consolidated financial statements' and 'individual financial statements'. The term 'group accounts' is used in this Chapter when discussing the statutory requirements for consolidated financial statements.

The exemption from preparation of group accounts set out in Section 9 of FRS 102 is more restrictive than that contained in section 399(2A) of the CA2006. [FRS 102.9.3(e)].

A parent company subject to the small companies regime, or a parent LLP subject to the small LLPs regime, that applies Section 1A and does not wish to prepare consolidated financial statements will also need to ensure that it meets the exemption in section 399(2A) of the CA 2006 from preparation of group accounts.

A company is exempt from the requirement to prepare group accounts if:

- (a) At the end of the financial year, the company is:
 - (i) Subject to the small companies regime (see 2.2 above).
 - Or
 - (ii) Would be subject to the small companies regime but for being a public company.
- And
- (b) Is not a member of a group (i.e., it is not a parent undertaking or subsidiary undertaking), [s474], which, at any time during the financial year, has an undertaking falling within section 399(2B) as a member. [s399(2A)].

An undertaking falls within section 399(2B) of the CA 2006 if:

- (a) It is established under the law of any part of the UK.
- (b) It has to prepare accounts in accordance with the requirements of Part 15 of the CA 2006.
- And
- (c) It:
 - (i) Is an undertaking whose transferable securities are admitted to trading on a UK regulated market.
 - (ii) Is a credit institution (within the meaning given by Article 4(1)(1) of Regulation (EU) No. 575/2013 of the European Parliament and of the Council, which is a CRR firm within the meaning of Article (4)(1)(2A) of Regulation (EU) No. 575/2013).
 - Or
 - (iii) Would be an insurance undertaking (within the meaning given by Article 2(1) of Council Directive 91/674/EEC of the European Parliament and of the Council, were the UK a member State).

Relevant definitions are at 2.2.3.A above.

Similarly, an LLP is exempt from the requirement to prepare group accounts if:

- (a) At the end of the financial year, the LLP is subject to the small LLPs regime (see 2.3 above).
- And
- (b) Is not a member of a group which, at any time during the financial year, has an undertaking falling within section 399(2B) of the CA 2006 as applied to LLPs (i.e., the same list as for companies above) as a member. [s399(2A)(LLP), s399(2B)(LLP)].

Other statutory exemptions from preparing group accounts are discussed in Chapter 8 at 3.1.1.

A UK company or LLP exempt from the statutory requirement to prepare group accounts is permitted still to do so. [s399(4), s399(4)(LLP)]. Such group accounts could be prepared as statutory group accounts, or as non-statutory group accounts for the members.

3.2.1 Voluntary preparation of consolidated financial statements

If a small entity that is a parent voluntarily chooses to prepare consolidated financial statements, it:

- (a) Must apply the consolidation procedures set out in Section 9 (see Chapter 8 at 3.5).
- (b) Is encouraged to provide the disclosures set out in paragraph 23 of Section 9 (see Chapter 8 at 3.9.1).

- (c) Must comply so far as practicable with the requirements of Section 1A as if it were a single entity (Schedule 6 of the Small Companies Regulations, paragraph 1(1)), subject to any restrictions or exemptions set out in legislation. [*6 Sch 1(1)(SC), 4 Sch 1(1)(LLP SC)*].

And

- (d) Must provide any disclosures required by Schedule 6 of the Small Companies Regulations (see 3.2.2 below). [*FRS 102.1A.22*].

3.2.2 Interaction with statutory requirements (where consolidated financial statements are prepared)

Group accounts are drawn up as at the same date as the accounts of the parent company or parent LLP. [*6 Sch 2(1A)(SC), 4 Sch 2(1A)(LLP SC)*]. The adapted formats or statutory formats can be applied in group accounts. See 4 below for further discussion of the formats.

Group accounts of small companies must comply with Schedule 6 to the Small Companies Regulations (and group accounts of small LLPs, with Schedule 4 to the Small LLP Regulations). The group accounts must comply so far as practicable with the provisions of Schedule 1 to the Small Companies Regulations/Small LLP Regulations as if the undertakings included in the consolidation were a single company (or LLP). This is similar to the requirement (c) in 3.2.1 above. These provisions include the balance sheet and profit and loss account formats (albeit with certain modifications for group accounts) and set out recognition, measurement and disclosure requirements for company and LLP individual accounts. The disclosure requirements for company and LLP individual accounts included in Schedule 1 to the Small Companies Regulations/Small LLP Regulations are largely reflected in Section 1A, see 5.1 below, and would need to be given for the consolidated group in group accounts (in addition to the disclosures for the individual company presented in the individual accounts).

Parent companies/LLPs preparing group accounts in accordance with the CA 2006 (for LLPs, the CA 2006 as applied to LLPs) can take advantage of the section 408 exemption not to publish the individual profit and loss account (providing the conditions for use of the exemption are met). See Chapter 1 at 5.3.2.

Schedule 6 to the Small Companies Regulations (and Schedule 4 to the Small LLP Regulations) also include further requirements over consolidation procedures, the acquisition method, the conditions for merger accounting and related disclosures. Part 2 of these schedules require disclosure of information on related undertakings to be given in the notes to the financial statements. There is an exemption from providing information on certain undertakings where the restrictive conditions of section 409(4) of the CA 2006 apply and use of the exemption is stated. [*Regulations (SC) 10, LLP SC Regulations 7*]. The disclosures include information on subsidiary undertakings, associated undertakings - which would generally include a jointly controlled entity and an associate, other undertakings in which the parent company/LLP or group has a significant holding, parent company or group's membership of qualifying undertakings, parent undertakings drawing up accounts for a larger group, and identification of the ultimate parent. These disclosures are not required in individual accounts of a small company/LLP. See 6.1.1 below.

The recognition and measurement requirements for group accounts in the Small Companies Regulations (and Small LLP Regulations) are the same as those set out in the Regulations (and LLP Regulations). These are discussed in Chapter 8 and Chapter 22.

As well as the items mentioned at 3.2.1 above, additional disclosures need to be given when group accounts are prepared. These are principally included in Part 15 of CA 2006 (for LLPs, the CA 2006 as applied to LLPs). The corresponding disclosures in individual accounts are addressed in 5.1 and 5.2 below. However, the scope and positioning of the disclosures in the group accounts can differ, for example:

- Certain disclosures are required below the individual company/LLP balance sheet only (e.g., approval of the annual accounts [*s414, s414 (LLP)*], the statement where an audit exemption is taken, [*s475, s475 (LLP)*], or the statement of the individual company/LLP's profit or loss where the section 408 exemption from presenting the individual accounts is taken). [*s408, s408 (LLP)*].
- In some cases, disclosure is required in the notes to both the individual and group accounts. Information is, therefore, given for both the individual company/LLP and the consolidated group (e.g., general information about the company/LLP, [*s396(A1), s396(A10 (LLP)), s404(A1), s404(A1)(LLP)*], the average number of employees, [*s411, s411 (LLP)*], and off-balance sheet arrangements, [*s410A, s410A (LLP)*]).
- In other cases, disclosure is required in the notes to the group accounts only. Information is, therefore, given only for the group (e.g., advances and credits granted to and guarantees of any kind entered into on behalf of the parent company's directors, by that company or by any of its subsidiary undertakings). [*s413*].

As few small entities will need to prepare group accounts, the requirements are not discussed in detail in this chapter.

3.3 Presentation requirements

Section 1A sets out the content of a complete set of financial statements (see 3.3.3 below).

A small entity's financial statements must also include a statement of compliance in the notes to the financial statements, although the form of this will differ from the statement of compliance given by an entity not applying Section 1A (see 5.1.2 below). In addition, a small entity that is also a public benefit entity must give an explicit and unreserved statement, that it is a public benefit entity. [FRS 102.1A.7, FRS 102.1AC.2A, FRS 102.PBE1AC.2B, FRS 102.3.3, FRS 102.PBE3.3A]. A small entity choosing to apply Section 1A also makes a statement that the financial statements are prepared in accordance with the provisions applicable to companies subject to the small companies regime (or the equivalent statement for small LLPs or other small entities) on the statement of financial position in a prominent position above the signature (see 3.3.2 below). [FRS 102.1A.6A, s414(3)(b), s414(3)(b)(LLP)].

A small entity applying Section 1A must still comply with Section 3, except for certain specified paragraphs (see 3.3.1 below). [FRS 102.1A.7, FRS 102.3.1A]. This means such an entity must still comply with Section 3's requirements on:

- The financial statements giving a 'true and fair view' (including the provisions for a 'true and fair override') (see 3.3.4 and 3.3.4.A below). [FRS 102.3.2, FRS 102.3.4, FRS 102.3.5, FRS 102.3.6]
 - Assessment of the entity's ability to continue as a going concern (see 3.3.5 below). [FRS 102.3.8, FRS 102.3.8A, FRS 102.3.9]
 - Frequency of reporting (see Chapter 6 at 2.2). [FRS 102.3.10]
 - Consistency of presentation, excluding the requirements on reclassification (see 3.3.6 below). [FRS 102.3.11]
 - Comparative information (see 3.3.6 below). [FRS 102.1A.10, FRS 102.3.14, FRS 102.3.14A, FRS 102.3.20]
 - Materiality and aggregation (see 3.3.7 below). [FRS 102.3.15, FRS 102.3.16, FRS 102.3.16A, FRS 102.3.16B]
 - Requirements to present each financial statement in a complete set of financial statements with equal prominence, and ability to use other titles for the financial statements as long as they are not misleading. [FRS 102.1A.11, FRS 102.3.21, FRS 102.3.22]
 - Identification of the financial statements, except for paragraph 3.24(b) of FRS 102 (see 3.3.8 below). [FRS 102.3.23, FRS 102.3.24(a)]
- And
- Interim financial reports, if prepared (see Chapter 39). [FRS 102.3.25].

3.3.1 Exemptions from certain presentation and disclosure requirements in FRS 102 for a small entity applying Section 1A

A UK small entity applying Section 1A is not required to comply with the following paragraphs of Section 3 (see also discussion below):

- The disclosure requirements of paragraph 3.12 (disclosures where the presentation or classification of items in the financial statements has changed, unless impracticable to do so – but paragraph 1AC.8 of FRS 102 requires certain disclosures, see 3.3.6 and 5.1.5 below). [FRS 102.1AC.8]
 - The disclosure requirements of paragraph 3.13 (disclosure of the reasons why it is impracticable to reclassify comparatives where the presentation or classification of items in the financial statements has changed).
 - Paragraph 3.17 (content of a complete set of financial statements – see 3.3.3 below for Section 1A's requirements for a complete set of financial statements).
 - Paragraph 3.18 (option to present a statement of income and retained earnings, where certain conditions are met).
 - Paragraph 3.19 (option to present only an income statement where there are no items of other comprehensive income, or to label the bottom line of the statement of comprehensive income as 'profit or loss').
- And
- The disclosure requirements of paragraph 3.24(b) (description of the nature of the entity's operations and its principal activities, unless disclosed in the business review (or similar statement) accompanying the financial statements). [FRS 102.1A.7, FRS 102.3.1A].

In addition, a small entity applying Section 1A is not required to comply with Sections 4, 5, 6 or 7 (which cover the primary statements – the statement of financial position, the income statement and the statement of comprehensive income, the statement of changes in equity (or statement of income and retained earnings) and the cash flow statement). A small entity is exempt from preparation of a cash flow statement (and the related disclosures in Section 7), whether or not Section 1A is applied, unless this is required by a SORP or law or other relevant regulation. [FRS 102.1A.7A, FRS 102.3.1B, FRS 102.7.1B].

A small entity is also not required to comply with the disclosure requirements of Sections 8 to 35 of FRS 102 although some of the disclosures required by these sections are incorporated by reference into Appendix C of Section 1A. However, a small entity must ensure that sufficient information is presented in the notes to the financial statements with Section 1A noting that the disclosures in those later sections of FRS 102 are usually considered relevant to financial statements giving a true and fair view. Accordingly, Section 1A explains that a small entity might need to provide any of those disclosures that are relevant to material transactions, other events or conditions in order to meet the requirement for its financial statements to give a true and fair view. [FRS 102.1A.16, FRS 102.1A.17].

3.3.2 Statements of compliance

Small entities choosing to apply Section 1A must make a statement of compliance that the financial statements are prepared in accordance with the provisions applicable to companies subject to the small companies regime (or to LLPs subject to the small LLPs regime), as required by legislation. Other entities may instead refer to the small entities regime. This statement is included on the individual statement of financial position, in a prominent position above the signature. [FRS 102.1A.6A, s414(3)(b), s414(3)(b)(LLP)].

Illustration 3-2 below provides examples of such statements.

Illustration 3-2: Statements where the small entities regime is applied (made on the individual statement of financial position, above the approval signature)

These financial statements have been prepared in accordance with the provisions applicable to companies subject to the small companies regime.

Or

These financial statements have been prepared in accordance with the provisions applicable to LLPs subject to the small LLPs regime.

Or

These financial statements have been prepared in accordance with the small entities regime set out in Section 1A Small Entities of FRS 102.

A small entity must also make an explicit and unreserved statement of compliance that the financial statements are prepared in accordance with FRS 102, clearly stating that Section 1A has been applied (where this is the case). This is to be given in the notes to the financial statements, rather than on the statement of financial position (see 5.1.2 below). [FRS 102.1A.7, FRS 102.1A.2A, FRS 102.3.3]. This is a separate requirement to the statement required by legislation that is discussed above.

Similarly, a small entity that is a public benefit entity that applies the 'PBE' prefixed paragraphs must make an explicit and unreserved statement that it is a public benefit entity in the notes to the financial statements. [FRS 102.1A.7, FRS 102.PBE1A.2B, FRS 102.PBE3.3A].

3.3.3 Content of complete set of financial statements

A complete set of financial statements of a small entity must include all the following (with comparatives – see 3.3.6 below): [FRS 102.1A.7, FRS 102.1A.8, FRS 102.3.20]

- A statement of financial position as at the reporting date, prepared in accordance with the requirements for a balance sheet set out in Part 1 General Rules and Formats of Schedule 1 to the Small Companies Regulations (or Part 1 General Rules and Formats of Schedule 1 to the Small LLP Regulations). [FRS 102.1A.12]
 - An income statement for the reporting period prepared in accordance with the requirements for a profit and loss account set out in Part 1 General Rules and Formats of Schedule 1 to the Small Companies Regulations (or Part 1 General Rules and Formats of Schedule 1 to the Small LLP Regulations). [FRS 102.1A.14]
- And
- Notes in accordance with paragraphs 1A.16 to 1A.17A (see 5 below). [FRS 102.1A.16, FRS 102.1A.16A, FRS 102.1A.17, FRS 102.1A.17A].

The formats for the statement of financial position and income statement are discussed at 4 below. Small entities that do not report under the CA 2006 need to follow those same formats except to the extent that those requirements are not permitted by any statutory framework under which such entities report.

[FRS 102.1A.4].

Small entities (regardless of whether applying Section 1A or not) need not prepare a cash flow statement, unless required to do so by an applicable SORP or law or other relevant regulation. [FRS 102.1A.7A, FRS 102.3.1B, FRS 102.7.1B].

A small entity is allowed to use other titles for the financial statements provided they are not misleading. [FRS 102.1A.7, FRS 102.1A.11, FRS 102.3.22]. Consequently, the terms 'balance sheet' or 'profit and loss account' remain acceptable for use. In a complete set of financial statements, an entity is required to present each financial statement with equal prominence. [FRS 102.1A.7, FRS 102.3.21].

There is nothing to prevent a small company from complying with requirements in FRS 102 for which an exemption exists, for example preparing a cash flow statement. Consequently, the presentation sections of FRS 102, beyond the mandatory paragraphs, may be relevant to small entities that present additional primary statements or disclosures.

Section 1A observes that a small entity that recognises gains or losses in other comprehensive income might need to present a statement of total comprehensive income, and a small entity with changes in equity (other than profit or loss) might need to present a statement of changes in equity or a statement of income and retained earnings. These additional statements could be needed in order for the financial statements to give a true and fair view. [FRS 102.1A.5, FRS 102.1A.9].

Notes to the financial statements contain information in addition to those presented in the primary financial statements and provide narrative descriptions or disaggregation of items presented in those statements and information about items that do not qualify for recognition in those statements. [FRS 102 Appendix I].

Consistent with the Small Companies Regulations (and Small LLP Regulations), the notes must be presented in the order in which, where relevant, the items to which they relate are presented in the statement of financial position and in the income statement. [FRS 102.1AC.2, 1 Sch 42(2)(SC), 1 Sch 42(2)(LLP SC)].

See 5 below for further discussion of the requirements for the notes to the financial statements, including the disclosures required in Appendix C of FRS 102.

3.3.4 True and fair view

The financial statements of a small entity are required to give a true and fair view of the assets, liabilities, financial position and profit or loss of the small entity for the reporting period. [FRS 102.1A.5]. The 'true and fair view' requirement in paragraph 1A.5 of FRS 102 refers to profit or loss (rather than financial performance, as in paragraph 3.2 of FRS 102) and excludes reference to cash flows because small entities are not generally required to present a statement of comprehensive income or a cash flow statement (see 3.3.3 above).

This is consistent with the UK company law requirements. The directors of a company (or members of an LLP) must not approve financial statements unless they are satisfied that the financial statements give a true and fair view of the assets, liabilities, financial position and profit or loss of the company (or LLP) (and in respect of any group accounts, the undertakings included in the consolidation as a whole, so far as concerns the members of the company (or LLP)). [s393, s393 (LLP)]. If compliance with the regulations, and any other provision made by or under the CA 2006 as to matters to be included in a company's (or LLP's) individual and/or group accounts or in notes to those financial statements, would not be sufficient to give a true and fair view, the necessary additional information must be given in the financial statements or in a note to the financial statements. [s396(4), s404(4), s396(4)(LLP), s404(4)(LLP)].

Section 3 of FRS 102 provides further guidance on the requirement that financial statements must give a true and fair view which also applies to small entities applying Section 1A (see Chapter 6 at 8.2). While Section 1A specifies fewer disclosures than full FRS 102, it contains a similar requirement to present additional disclosures where necessary to meet the requirement for the financial statements to give a true and fair view. [FRS 102.1A.16]. See also the discussion on information to be disclosed in the notes to the financial statements at 5 below and further discussion on the true and fair view requirement (including its relationship with accounting standards) in Chapter 1 at 6.2 and Chapter 6 at 8.2.

The general principles governing the preparation of financial statements - the going concern presumption, consistency (in applying accounting policies and measurement bases), use of prudence, use of the accruals basis, separate determination of individual assets and liabilities (no offsetting), and the requirement that the opening balance sheet for a financial year corresponds to the closing balance sheet for the previous financial year - are set out in the Small Companies Regulations (and Small LLP Regulations). [1 Sch 11 (SC), 1 Sch 12 (SC), 1 Sch 13 (SC), 1 Sch 14 (SC), 1 Sch 15(C), 1 Sch 15A (SC)].

In addition, at the balance sheet date, any provision made must represent the best estimate of the expenses likely to be incurred or, in the case of a liability, of the amount required to meet that liability, and provisions must not be used to adjust the values of assets. This requirement has been included within the general principles in the Small LLP Regulations but within Schedule 7 of the Small Companies Regulations. [7 Sch 2A(SC), 7 Sch 2B(SC)].

These general principles are the same as those set out in the Regulations (and LLP Regulations), as discussed in Chapter 6 at 8.1.1.

Similarly, the Small Companies Regulations (and Small LLP Regulations) set out the historical cost accounting rules, alternative accounting rules and fair value accounting rules. [1 Sch 16-41 (SC), 1 Sch 16-41 (LLP SC)]. These are the same recognition and measurement requirements as set out in the Regulations (and LLP Regulations) and are addressed, where relevant, in other chapters of this publication.

The Small Companies Regulations (and Small LLP Regulations) generally set out simpler disclosures than the Regulations (and LLP Regulations). However, a small company (or small LLP) is treated as complying with the relevant requirement of Schedule 1 to the Small Companies Regulations (or Schedule 1 to the Small LLP Regulations) if it complies with the corresponding provision in Schedule 1 to the Regulations (or Schedule 1 to the LLP Regulations). [Regulations (SC) 3(3), LLP SC Regulations 3(3)].

3.3.4.A True and fair override

In special circumstances when management concludes that compliance with any requirement of FRS 102 or applicable legislation (only when it allows for a true and fair override) is inconsistent with the requirement to give a true and fair view, the entity must depart from that requirement to the extent necessary to give a true and fair view, making the disclosures set out in paragraphs 3.5 and 3.6 of FRS 102. [FRS 102.1A.7, FRS 102.3.4, FRS 102.3.5, FRS 102.3.6]. See 5.1.6 below. These disclosures are consistent with the requirements of the CA 2006 for companies (for LLPs, the CA 2006 as applied to LLPs) to give the particulars of, reasons for, and effect of any such departure in a note to the financial statements. [s396(5), s404(5), s396(5)(LLP), s404(5)(LLP)]. There is further discussion of the true and fair override in FRS 102 and UK company law in Chapter 6 at 8.2.2.

Appendix III to FRS 102 highlights certain instances where the requirements of FRS 102 result in a departure from the requirements of the Regulations in order to give a 'true and fair view'. These examples, which are not exhaustive, are relevant to UK companies preparing Companies Act accounts (and similarly, LLPs preparing non-IAS accounts).

3.3.5 Going concern

FRS 102 requires management, when preparing financial statements, to make an assessment of an entity's ability to continue as a going concern. An entity is a going concern unless management either intends to liquidate the entity or to cease trading, or has no realistic alternative but to do so. In assessing whether the going concern assumption is appropriate, management takes into account all available information about the future, which is at least, but is not limited to, twelve months from the date when the financial statements are authorised for issue. [FRS 102.1A.7, FRS 102.3.8, FRS 102 Appendix I].

When a UK small entity's financial statements are prepared on a going concern basis, it must disclose that fact, along with confirmation that management has considered information about the future relating to a period which is at least, but is not limited to, twelve months from the date of authorisation of the financial statements for issue. If the entity has made significant judgements (see Chapter 6 at 8.3) in its assessment of its ability to continue as a going concern, these judgements are also disclosed. [FRS 102.1AC.2C, FRS 102.3.8A, FRS 102.8.6].

When management is aware, in making its assessment, of material uncertainties related to events or conditions that may cast significant doubt upon the entity's ability to continue as a going concern, those uncertainties are required to be disclosed in the financial statements. [FRS 102.1A.7, FRS 102.1AC.2C, FRS 102.3.9].

FRS 102 states that an entity shall not prepare its financial statements on a going concern basis if management determines after the reporting period either that it intends to liquidate the entity or to cease trading, or that it has no realistic alternative but to do so. Deterioration in operating results and financial position after the reporting period may indicate a need to consider whether the going concern assumption is no longer appropriate. If the going concern assumption is no longer appropriate, the effect is so pervasive that a fundamental change in the basis of accounting is required, rather than an adjustment to the amounts recognised within the original basis of accounting. [FRS 102.32.7A, FRS 102.32.7B]. When financial statements are not prepared on a going concern basis, that fact must be disclosed, together with the basis on which the financial statements are prepared and the reason why the entity is not regarded as a going

concern. [FRS 102.1A.7, FRS 102.1AC.2C, FRS 102.3.9]. Preparation of the financial statements on a non-going concern basis would also be a departure from one of the general principles (see 3.3.3 and 3.3.4 above). Particulars of the departure, the reasons for it and its effects are required to be disclosed (see 5.1.6 below). [FRS 102.1AC.10, 1 Sch 10(2)(SC), 1 Sch 10(2)(LLP SC)]. In practice, this is likely to require similar disclosures to those set out above.

FRS 102 provides no further guidance on the impact on the financial statements if it is determined that the going concern basis is not appropriate. Accordingly, entities will need to consider their individual circumstances to arrive at an appropriate basis. See also Chapter 6 at 8.3 for further discussion on FRS 102's going concern requirements.

FRS Factsheet 13, *The Going Concern Basis of Accounting for Small and Micro-entities* was issued by the FRC, in September 2025, to aid preparers of small company accounts in the UK in performing going concern assessments and in preparing financial statement disclosures about their conclusions and how those conclusions were reached. Factsheet 13 provides examples, in a table, of internal and external factors to consider in performing a going concern assessment.

3.3.6 Comparative information (including consistency of presentation)

Except when FRS 102 permits or requires otherwise, a small entity presents comparative information in respect of the preceding period for all amounts presented in the current period's financial statements. An entity is required to include comparative information for narrative and descriptive information when it is relevant to an understanding of the current period's financial statements. [FRS 102.3.14, FRS 102.1A.7, FRS 102.1A.10]. This means that the requirement to present comparative information applies both to mandatory and voluntary information presented for the current period. See Chapter 6 at 2.4.

FRS 102's requirements are consistent with the General Rules to the formats in Schedule 1 to the Small Companies Regulations/Small LLP Regulations which contain requirements on corresponding amounts to the balance sheet and profit and loss account (see 4.1.4 below). The Small Companies Regulations and Small LLP Regulations, like FRS 102, only require one comparative period to be presented. [1 Sch 5(SC), 1 Sch 7(SC), 1 Sch 5(LLP SC), 1 Sch 7(LLP SC)]. Other statutory or regulatory frameworks may require further periods to be presented.

The general requirements for presenting comparatives for notes disclosures are covered in accounting standards rather than in the CA 2006, the Small Companies Regulations or the Small LLP Regulations. In certain cases, FRS 102 provides specific exemptions from presenting comparatives for notes disclosures (which are indicated in the disclosures listed at 5 below).

The requirements on consistency of presenting and classification of items in the financial statements where Section 1A is applied are, in effect, the same as under full FRS 102 (see Chapter 6 at 2.4.1). [FRS 102.3.11, FRS 102.1A.7]. While Section 1A scopes out the disclosures in paragraphs 3.12 and 3.13 of FRS 102, a UK small entity is required to give disclosures concerning the non-comparability of and any adjustment made to corresponding amounts (i.e., comparatives). See 5.1.5 below.

3.3.7 Materiality and aggregation

The principle of materiality and the level of aggregation is particularly relevant to small entities in determining whether additional information is required to be presented in the notes to the financial statements in order for the financial statements to give a true and fair view (see the discussion on notes disclosures at 3.3.3 above). [FRS 102.1A.16, FRS 102.1A.17]. The principles on materiality and aggregation set out in Section 3 of FRS 102 also apply to a small entity applying Section 1A and are discussed in Chapter 4 at 3.3.1.B and Chapter 6 at 8.4. [FRS 102.1A.7, FRS 102.3.15, FRS 102.3.16, FRS 102.3.16A, FRS 102.3.16B].

A small company (or small LLP) reporting under FRS 102 must comply with the balance sheet and profit and loss account formats set out in the Small Companies Regulations (or Small LLP Regulations) respectively (see 4 below). The General Rules to the formats have rules over whether prescribed line items can be combined. The application of the General Rules to statutory and adapted formats is explained further in 4.1 below.

FRS 102 states that an entity need not provide a specific disclosure required by the standard (including those set out in Appendix C of Section 1A) if the information resulting from that disclosure is not material, except when required by the CA 2006 regardless of materiality. [FRS 102.1A.17A, FRS 102.1AC.1, FRS 102.3.16B].

3.3.8 Identification of the financial statements

It is commonly the case that financial statements will form only part of a larger annual report, regulatory filing or other document, but FRS 102 only applies to the financial statements (including the notes).

The annual report and accounts for a small UK company, for example, comprise the directors' report and the annual accounts. [s394, s415].

Accordingly, FRS 102 requires that an entity clearly identifies the financial statements and the notes and distinguishes them from other information in the same document. In addition, the entity must display the following information prominently, and repeat it, when necessary, for an understanding of the information presented:

- The name of the reporting entity and any change in its name since the end of the preceding reporting period.
- Whether the financial statements cover the individual entity or a group of entities.
- The date of the end of the reporting period and the period covered by the financial statements.
- The presentation currency, as defined in Section 30 *Foreign Currency Translation* (discussed in Chapter 32 at 3.1 and 3.6).

And

- The level of rounding, if any, used in presenting amounts in the financial statements. [FRS 102.1A.7, FRS 102.3.23].

These requirements are discussed further in Chapter 6 at 2.5.

4 Statement of financial position and income statement (individual financial statements)

As noted at 3.3.3 above, a small entity applying Section 1A must present a statement of financial position and its profit or loss for the period in an income statement, in accordance with the requirements for a balance sheet and profit and loss account set out in Part 1 General Rules and Formats of Schedule 1 to the Small Companies Regulations (or Part 1 General Rules and Formats of Schedule 1 to the Small LLP Regulations). [FRS 102.1A.12, FRS 102.1A.14]. The statement of financial position is referred to as 'the balance sheet' in company and LLP law and the income statement is referred to as 'the profit and loss account' in company and LLP law.

Section 1A of FRS 102 and the legislation provide the following alternatives for the statement of financial position and the income statement: [FRS 102.1AA.1, FRS 102.1AB.1]

- Apply the prescribed balance sheet and profit and loss account statutory formats as set out in legislation, subject to any permitted flexibility (see 4.1.1 and 4.3 below).

Or

- Adapt one of the balance sheet and profit and loss account formats (see 4.1.3 and 4.4 below). [FRS 102.1AA.3, FRS 102.1AA.5, FRS 102.1AA.5, FRS 102.1AA.6, FRS 102.1AB.3, FRS 102.1AB.4].

The requirements do not preclude an entity from applying a different choice of format (statutory or adapted) to the profit and loss account and statement of financial position. [FRS 102.1AA.1, FRS 102.1AB.1, 1 Sch 1B (SC), 1 Sch 1B (LLP SC)].

Small entities that use the statutory formats also have an option to prepare an abridged balance sheet and profit and loss account, where appropriate to the entity's circumstances and providing consent has been obtained. [FRS 102.1AA.2, FRS 102.1AB.2]. See 4.1.2 below.

Small entities that do not report under the CA 2006 must also comply with these requirements, except to the extent that these requirements are not permitted by any statutory framework under which they report. [FRS 102.1A.4]. Therefore, such entities could have a more restricted choice (or need to make certain modifications to the formats adopted).

While 4.3 to 4.4 below refer to the formats applicable to LLPs, detailed guidance on LLPs is outside the scope of this chapter. LLPs are also subject to additional requirements in the extant LLP SORP.

A small entity is required to apply the guidance in Appendix A and Appendix B to Section 1A in meeting the above requirements. [FRS 102.1A.13, FRS 102.1A.15].

The General Rules to the formats that apply to statutory formats are discussed at 4.1.1 below, those that apply to adapted formats at 4.1.3 below and those that apply to all the formats at 4.1.4 below. Changes in the format used are addressed at 4.1.5 below.

FRS 102 explains that an income statement (which is referred to as the 'profit and loss account' in the CA 2006) presents all items of income and expense recognised in a reporting period, excluding the items of other comprehensive income. [FRS 102 Appendix I]. FRS 102 contains further guidance on presentation of line items in the statement of financial position and income statement that is relevant whatever format is used. See 4.2 below.

See 3.3.2 above for the statements required on the statement of financial position above the approval signature where the small entities regime is applied.

4.1 General Rules to the formats

The following discussion relates to the General Rules to the formats which apply to balance sheet and profit and loss account formats included in Part 1 of Schedule 1 to the Small Companies Regulations (and Part 1 of Schedule 1 to the Small LLP Regulations).

4.1.1 Statutory formats

Section B of Part 1 of Schedule 1 to the Small Companies Regulations (Section B of Part 1 of Schedule 1 to the Small LLP Regulations, for a small LLP) provides a choice of two balance sheet formats and two profit and loss account formats. [1 Sch 1(1)(SC), 1 Sch 1(1)(LLP SC)]. These are referred to as the 'statutory formats' in this Chapter.

While there are two statutory formats – Format 1 and Format 2 – available for the balance sheet, only Format 1 is commonly used and illustrated in this Chapter. Both Format 1 and Format 2 profit and loss accounts are commonly used. There are some differences in detail in the line items required in the LLP statutory formats compared to the company statutory formats.

See Figure 4-1 at 4.3.1 below for the Format 1 balance sheet for a small company and Figures 4-2 and 4-3 at 4.3.1.B below for the Format 1 balance sheet (and additional SORP requirements) for a small LLP. A small company (or small LLP) must show the line items listed in the format chosen, which are to be read together with any of the notes following the formats in Section B which apply to those items. *[1 Sch 1(2)(SC), 1 Sch 1(2)(LLP SC)]*. Each of the headings and sub-headings denoted with a capital letter or Roman numeral must be presented on the face of the balance sheet in the order shown. In certain cases, the notes to the formats allow alternative positions. *[1 Sch 1(3)(SC), 1 Sch 1(3)(LLP SC)]*. There is some flexibility to adapt the arrangement, headings and sub-headings or to combine items denoted with an Arabic number in certain circumstances (see the discussion at 4.1.4 below). In practice, the balance sheet line items denoted with an Arabic number are often presented in the notes to the financial statements.

See Figure 4-4 at 4.3.2.A below and Figure 4-6 at 4.3.2.B below for the Format 1 and 2 profit and loss accounts applicable for the individual accounts of a UK small company (and Figure 4-5 at 4.3.2.A below and Figure 4-7 at 4.3.2.B below for the corresponding formats for a UK small LLP). Since all the headings are denoted with an Arabic number, there is some flexibility to adapt the arrangement, headings and sub-headings or to combine items in certain circumstances (see the discussion at 4.1.4 below).

The letters or numbers assigned to the line items in the statutory formats do not need to be given (and are not given in practice). *[1 Sch 1(3)(SC), 1 Sch 1(3)(LLP SC)]*.

The individual line items in the statutory balance sheet and profit and loss account formats (and their related notes), which are similar to those in the Regulations and LLP Regulations, are discussed in Chapter 6 at 4.3 and 5.6.

4.1.2 Abridged formats

Abridged formats can be used where appropriate to the circumstances of the company's (or the LLP's) business. Abridged formats derive from the statutory formats only (i.e., cannot be used with adapted formats) but show fewer headings in the balance sheet and combine certain line items in the profit and loss account. Abridged formats are not available for use in group accounts. *[6 Sch 1(1A)(SC), 4 Sch 1(1A)(LLP SC)]*.

To use abridged formats, small companies must comply with the additional legal requirement that all members of the company have given consent to the drawing up of abridged financial statements (which may only be given in respect of the preceding financial year). In accordance with paragraph 1A(4) of Schedule 1 to the Small Companies Regulations this option is not available to small entities that are charities. When a small entity that is not a company chooses to prepare abridged financial statements, it should ensure that: *[FRS 102.A3.11E, 1 Sch 1A(SC), 1 Sch 1(1A)(LLP SC)]*

- Similar consent is obtained from the members of its governing body, taking into account its legal form.
And
- Abridged financial statements would not be prohibited by relevant laws or regulation.

A small entity choosing to draw up an abridged balance sheet must also meet the requirement for the financial statements to give a true and fair view. A small entity must therefore also consider the requirements of paragraph 1A.16 of FRS 102 and provide any additional disclosure that is necessary in the notes to the financial statements, for example in relation to disaggregating the information in the balance sheet. *[FRS 102.1AA.2]*.

FRS 102 does not provide guidance on what circumstances it may be appropriate to use abridged formats. The format of abridged accounts is not in the scope of this publication.

4.1.3 Adapted formats

Paragraph 1B of Part 1 of Schedule 1 to the Small Companies Regulations (or the Small LLP Regulations) sets out the requirements for adapted formats (see 4.4 below). This paragraph allows adaptation of the statutory formats as long as the information given is at least equivalent to that which would have been required by the use of such format had it not been thus adapted, the presentation is in accordance with generally accepted accounting principles or practice (consequently as specified in Section 1A) and, in respect of the balance sheet, distinguishes between current and non-current items in a different way.

[1 Sch 1B(SC), 1 Sch 1B(LLP SC)].

4.1.4 General Rules applying to statutory and adapted formats

The following provisions in the General Rules to the formats (which are set out in paragraphs 2 to 9A of Section A of Part 1 of Schedule 1 to the Small Companies Regulations/Small LLP Regulations) apply to the statutory formats, [1 Sch 1 (SC), 1 Sch 1 (LLP SC)], and so far as is practicable, to the adapted formats.

[1 Sch 1C (SC), 1 Sch 1C (LLP SC)].

The Small Companies Regulations and Small LLP Regulations do not provide further guidance on how 'so far as is practicable' is to be interpreted.

How we see it

In our view, the phrase 'so far as practicable' is needed because the General Rules to the formats have been written from the perspective of the statutory formats and refer to items given an Arabic number which may not have a direct counterpart in the adapted formats. In other cases, such as in relation to corresponding amounts (meaning comparatives), there are no difficulties in applying the requirements. We do not consider that 'so far as is practicable' allows small companies or small LLPs flexibility to regard the General Rules to the formats as optional.

The Small Companies Regulations and Small LLP Regulations require that every profit and loss account must show 'profit or loss before taxation' as a line item on the face of the profit and loss account.

[1 Sch 6 (SC), 1 Sch 6 (LLP SC)]. This line item is not required for a qualifying partnership preparing statutory accounts.²³

The General Rules to the formats allow any item to be shown in a company's (or an LLP's) balance sheet or profit and loss account in greater detail than required by the particular format used. The balance sheet or profit and loss account is permitted to include an item representing or covering the amount of any asset or liability, income or expenditure not otherwise covered by any of the items listed in the format used (with certain exclusions not relevant to FRS 102 reporters). [1 Sch 3 (SC), 1 Sch 3 (LLP SC)].

Where the special nature of the company's (or the LLP's) business requires it, the company's directors (or the members of the LLP) must adapt the arrangement, headings and sub-headings otherwise required in respect of items given an Arabic number in the balance sheet or profit and loss account format used. The directors (or the members of the LLP) may combine items to which Arabic numbers are given in the formats if their individual amounts are not material to assessing the state of affairs or profit or loss of the company (or the LLP) for the financial year in question; or the combination facilitates that assessment. In the latter case, the individual amounts of any items combined must be disclosed in a note to the accounts. [1 Sch 4 (SC), 1 Sch 4 (LLP SC)].

Where adapted formats are used, any amendments made would need to comply 'so far as is practicable' with the General Rules to the formats (as discussed above). [1 Sch 1B (SC), 1 Sch 1B (LLP SC), 1 Sch 4 (SC), 1 Sch 4 (LLP SC)]. Section 1A further explains that an entity is permitted to amend the descriptions used in the line items required in the statement of financial position (or the sub-classifications of those line items required by paragraph 1AA.4), the ordering of items or aggregation of similar items in the statement of financial position, according to the nature of the small entity and its transactions in order to provide information that is relevant to an understanding of the small entity's financial position. Such amendments are allowed, providing that the information given is at least equivalent to that required by the balance sheet format had it not been adapted. [FRS 102.1AA.5]. Similarly, a small entity is permitted to include additional line items in the income statement, amend the descriptions used, and the ordering of items, when this is necessary to explain the elements of financial performance, providing the information given is at least equivalent to that required by the profit and loss account format had it not been adapted. [FRS 102.1AB.4]. FRS 102's requirements on materiality and aggregation are discussed at 3.3.7 above and in Chapter 6 at 8.4.

The heading or sub-heading required for a particular item in the balance sheet or profit and loss account format must be presented where there is an amount for that item in either the current or immediately preceding financial year; otherwise, the heading or sub-heading must be omitted. [1 Sch 5 (SC), 1 Sch 5 (LLP SC)]. In other words, nil line items must not be presented.

A corresponding amount (i.e., comparative) for the immediately preceding financial year must be shown for every item shown in the balance sheet or profit and loss account. Where that corresponding amount is not comparable with the amount shown in the current financial year, the corresponding amount may be adjusted. Particulars of the non-comparability and of any adjustment must be disclosed in a note to the financial statements (see 5.1.5 below). [1 Sch 7 (SC), 1 Sch 7 (LLP SC), FRS 102.1AC.8]. This statutory requirement

²³ Partnerships (Accounts) Regulations 2008 (SI 2008/569), para. 4 and Schedule, para. 2(1)(a).

allows FRS 102's requirements on restatement of comparatives to be followed (as discussed at 3.3.6 above).

Amounts in respect of items representing assets or income are not permitted to be set off against amounts in respect of items representing liabilities or expenditure (as the case may be), or *vice versa*. [1 Sch 8 (SC), 1 Sch 8 (LLP SC)]. FRS 102's requirements on offset are discussed in Chapter 6 at 8.1.1.C.

The company's directors (or the members of an LLP) must, in determining how amounts are presented within items in the profit and loss account and balance sheet, have regard to the substance of the reported transaction or arrangement, in accordance with generally accepted accounting principles or practice. [1 Sch 9 (SC), 1 Sch 9 (LLP SC)]. This requirement facilitates the presentation of certain shares as liabilities in accordance with FRS 102. See further discussion on the statutory requirements and FRS 102's requirements on 'substance over form' in Chapter 6 at 8.1.1.A.

Where an asset or liability relates to more than one item in the balance sheet, the relationship of such asset or liability to the relevant items must be disclosed either under those items or in the notes to the financial statements. [1 Sch 9A (SC), 1 Sch 9A (LLP SC)]. See 5.1.7.A below.

Examples of situations where this may be relevant include:

- Items which are partly reported in debtors: amounts falling due within one year and debtors: amounts falling due after more than one year, where reported separately on the balance sheet (in the statutory formats).
 - Items which are partly reported in creditors: amounts falling due within one year and creditors: amounts falling due after more than one year (in the statutory formats).
- And
- Items which are partly reported as current and non-current assets or liabilities (in the adapted formats).

This disclosure requirement does not appear to extend to reporting the relationship between assets and liabilities that derive from a single transaction (e.g., an asset acquired on a lease has an impact both on fixed assets and lease creditors) nor to identifying the associated deferred tax consequences of an asset or liability.

How we see it

Where a single asset or liability is required to be reported as more than one line item in the statement of financial position, e.g., split accounting for a convertible loan between equity and liability elements, or a loan at off-market rates made by a parent to its subsidiary is split between investment and loan asset, it would seem appropriate, in our view, to disclose the relationship between these line items.

4.1.5 Changes in formats

The General Rules to the formats (see 4.1 above) require that the company's directors (or the members of the LLP) use the same statutory balance sheet and profit and loss account format in preparing Companies Act accounts (non-IAS accounts for an LLP) for subsequent financial years, unless in their opinion there are special reasons for a change. Particulars of any such change must be given in a note to the financial statements in which the new format is first used, and the reasons for the change must be explained.

[1 Sch 2 (SC), 1 Sch 2 (LLP SC)].

While this paragraph refers to the statutory formats (see 4.3 below), the General Rules apply so far as is practicable to adapted formats (see 4.4 below).

How we see it

In our view, the same requirements apply to changes in the statutory format used and changes between adapted and statutory formats. Indeed, FRS 102 requires the same disclosure for a change in presentation of a small entity's statement of financial position or income statement, referencing this statutory requirement (see 5.1.5 below).

A change in the format applied is regarded as a change in accounting policy for the purposes of FRS 102 and, therefore, is applied retrospectively. [FRS 102.10.11(d)]. Accounting policies are defined as "the specific principles, bases, conventions, rules and practices applied by an entity in preparing and presenting financial statements". [FRS 102 Appendix I, FRS 102.10.2]. See Chapter 9 at 3.3 for the requirements on changes in accounting policy.

4.2 Presentation requirements in full FRS 102 relevant to small entities

Full FRS 102 includes additional requirements on presentation that are relevant whatever format is used. For instance:

- There is guidance on operating profit, where this is presented (see Chapter 6 at 5.7.3). *[FRS 102.5.9B]*.
- Incoming dividends and similar income receivable are recognised at an amount that includes any withholding tax but excludes other taxes, such as attributable tax credits. Any withholding tax suffered is shown as part of the tax charge (see Chapter 31 at 3.2 and 9.1.2). *[FRS 102.29.19]*.
- Section 28 Employee Benefits does not specify how the cost of a defined benefit plan should be presented in the income statement. *[FRS 102.28.23]*. Therefore, entities may present the cost as a single item or disaggregate the cost into components presented separately (see Chapter 30 at 3.5.10).
- Section 20 Leases requires a lessor to present underlying assets subject to operating leases in its statement of financial position according to the nature of the underlying asset (see Chapter 23 at 7.7). *[FRS 102.20.113]*.
- An entity issuing a convertible or compound instrument is required to allocate the proceeds between the liability and equity components. *[FRS 102.22.13]*. See Chapter 6 at 5.10.3.

Other chapters of this publication contain guidance on presentation of certain items under statutory or adapted formats. This guidance is also relevant for a small entity to apply as the formats under the Small Companies Regulations and Small LLP Regulations are similar to those under the Regulations and LLP Regulations.

FRS 102 specifies when items are to be reported in other comprehensive income rather than profit or loss. The Small Companies Regulations and Small LLP Regulations also restrict when unrealised profits can be reported in the profit and loss account. Consequently, certain unrealised profits may be required to be reported in other comprehensive income. See Chapter 6 at 5.2 for further information.

A small company (or small LLP) applying Section 1A is not required to present a separate line item (and columnar analysis) for discontinued operations on the face of the separate income statement (or profit or loss section of a single statement of comprehensive income, if any) since a small entity is not required to apply Section 5 of FRS 102. *[FRS 102.1A.7A, FRS 102.5.5B(f), FRS 102.5.7A, FRS 102.5.7E, FRS 102.5.7F]*.

4.3 Statutory formats

UK companies (and LLPs) applying statutory formats have a choice of two balance sheet and two profit and loss account formats, with the line items required set out in Section B of Part 1 of Schedule 1 to the Small Companies Regulations (and Section B of Part 1 of Schedule 1 to the Small LLP Regulations). *[1 Sch 1(1)(SC), 1 Sch 1(1)(LLP SC), FRS 102.1A.12, FRS 102.1A.14]*.

Statutory formats, as modified by Schedule 6 to the Small Companies Regulations (or Schedule 4 to the Small LLP Regulations), can also be used in group accounts (see 3.2 above). *[6 Sch 1 (SC), 4 Sch 1 (LLP SC)]*. These are not dealt with in this Chapter.

The General Rules to the formats (see 4.1 above) apply to the statutory formats.

4.3.1 Balance sheet formats

Schedule 1 to the Small Companies Regulations (and Schedule 1 to the Small LLP Regulations) provide a choice of two statutory formats for the balance sheet. Format 1 is a vertical format and is adopted by virtually all UK companies and LLPs. Format 2 presents assets separately from liabilities (including capital and reserves) and is rarely used. This chapter only discusses the format 1 balance sheet.

Figure 4-1 below sets out the Format 1 individual balance sheet for a small UK company. This needs to be read together with the notes to the formats discussed at 4.3.1.A below. *[1 Sch 1(2)(SC), 1 Sch 1(2)(LLP SC)]*.

Figure 4-1: Format 1 individual balance sheet – small UK company

A	Called up share capital not paid*
B	Fixed assets
I	Intangible assets
1	Goodwill
2	Other intangible assets
II	Tangible assets
1	Land and buildings
2	Plant and machinery etc.
III	Investments
1	Shares in group undertakings and participating interests
2	Loans to group undertakings and undertakings in which the company has a participating interest
3	Other investments other than loans
4	Other investments
C	Current assets
I	Stocks
1	Stocks
2	Payments on account
II	Debtors
1	Trade debtors
2	Amounts owed by group undertakings and undertakings in which the company has a participating interest
3	Other debtors*
III	Investments

2	Trade creditors
3	Amounts owed to group undertakings and undertakings in which the company has a participating interest
4	Other creditors* **
F	Net current assets (liabilities)
G	Total assets less current liabilities
H	Creditors: amounts falling due after more than one year
1	Bank loans and overdrafts
2	Trade creditors

	3	Amounts owed to group undertakings and undertakings in which the company has a participating interest
	4	Other creditors* **
I		Provisions for liabilities
J		Accruals and deferred income*
K		Capital and reserves
	I	Called up share capital***
	II	Share premium account
	III	Revaluation reserve
	IV	Other reserves~
	V	Profit and loss account
* The notes to format 1 provide alternative positions for prepayments and accrued income, and accruals and deferred income. Prepayments and accrued income may be shown within sub-heading C.II.3 and accruals and deferred income may be shown within E.4, H.4 or both (as the case may require). In determining the amount of net current assets (liabilities), any prepayments and accrued income must be taken into account (wherever shown). Called up share capital not paid may also be shown within C.II.3.		
** There must be shown separately (a) the amount of any convertible loans and (b) the amount for creditors in respect of taxation and social security.		
*** The company must show separately the amount of allotted share capital and the amount of called up share capital which has been paid up.		
~ There is no breakdown of 'Other reserves' in the formats in the Small Companies Regulations (unlike the Regulations).		

Each of the headings and sub-headings denoted with a capital letter or Roman numeral (which have been bolded for emphasis in Figure 4-1 above), must be presented on the face of the Format 1 balance sheet in a company's individual accounts, in the order and under the headings and sub-headings shown. The Format 1 balance sheet includes sub-headings denoted with an Arabic number. The General Rules to the formats (see 4.1 above) explain further the presentation of line items with an Arabic number.

The balance sheet statutory formats set out in the Small Companies Regulations (and Small LLP Regulations) distinguish between 'Fixed assets' and 'Current assets'. 'Fixed assets' are assets of a company (or an LLP) which are intended for use on a continuing basis in the company's (or the LLP's) activities, and 'Current assets' are assets not intended for such use. FRS 102 broadens the definitions to refer to 'an entity'. [8 Sch 3 (SC), 5 Sch 3 (LLP SC), FRS 102 Appendix I]. See Chapter 6 at 4.2.2.

In addition, the balance sheet statutory formats distinguish between 'Creditors: amounts falling due within one year' and 'Creditors: amounts falling due after more than one year'. In distinguishing amounts between the two categories of creditor, the deciding factor is the earliest date of payment. Section 4 of FRS 102 provides further guidance which, while not directly scoped into Section 1A, is relevant as the same distinction would be made for the statutory formats under the Regulations. A creditor is classified as due within one year when the entity does not have an unconditional right, at the end of the reporting period, to defer settlement of the creditor for at least 12 months after the reporting date. [FRS 102.4.7]. This is intended to be consistent with the statutory requirements in the Small Companies Regulations (and Small LLP Regulations) that: "A loan is treated as falling due for repayment, and an instalment of a loan is treated as falling due for payment, on the earliest date on which the lender could require repayment or (as the case may be) payment, if he exercised all options and rights available to him". [8 Sch 6 (SC), 5 Sch 6 (LLP SC), FRS 102.4.7]. A loan is not classified as 'Creditor: amounts falling due within one year' merely because the company expects to repay within twelve months of the reporting date. See further discussion at Chapter 6 at 4.2.3.

The notes to the balance sheet formats require that amounts falling due after more than one year must be shown separately for each item included under 'Debtors' (items C.II.1-3). Section 4 of FRS 102 requires that where the amount of debtors due after more than one year is so material in the context of the total net current assets that in the absence of disclosure of the debtors due after more than one year on the face of the statement of financial position readers may misinterpret the financial statements, the amount is disclosed on the face of the statement of financial position within current assets. In most cases, it will be satisfactory to disclose the amount due after more than one year in the notes to the financial statements. [FRS 102.4.4A].

How we see it

While FRS 102's presentation requirements for debtors due after more than one year do not apply directly to small entities using Section 1A, we would generally expect this practice to continue to be followed by a small entity applying Section 1A and using the statutory formats.

The headings for the format 1 balance sheet in the Small Companies Regulations (and Small LLP Regulations) are slightly simpler than the headings for the format 1 balance sheet in Schedule 1 to the Regulations (and LLP Regulations) and fewer disclosures are required in the notes to the financial statements. However, the guidance on the statutory balance sheet format headings in Schedules to the Regulations (and LLP Regulations) in Chapter 6 at 4.3 remains relevant.

Where an asset or liability relates to more than one item in the balance sheet, the relationship of such asset or liability to the relevant items must be disclosed either under those items or in the notes to the financial statements. [1 Sch 9A (SC), 1 Sch 9A (LLP SC)]. See discussion of this requirement at 4.1.4 above.

FRS 102 has accounting requirements for various items that do not have separate line items in Format 1. Such items include investment property, right-of-use assets, heritage assets, financial assets, biological assets, cash and cash equivalents and deferred tax. FRS 102's requirement (in Section 4) to present additional line items on the face of the statement of financial position where relevant to an understanding of the entity's financial position does not apply to small entities applying Section 1A. [FRS 102.1A.7A, FRS 102.4.3]. However, the General Rules to the formats provide flexibility to present line items in additional detail (see 4.1 above). So, for example, a property company might distinguish its investment property from other tangible fixed assets.

4.3.1.A Notes to the formats

Certain alternative positions for line items are indicated in Figure 4-1 above. In addition, the notes on the balance sheet formats clarify that:

- Amounts falling due after more than one year must be shown separately for each item included under 'Debtors' (items C.II.1-3).
- Within 'Other creditors' (items E4, H4 and J), there must be shown separately:
 - (a) The amount of any convertible loans.
 - And
 - (b) The amount for creditors in respect of taxation and social security.
- In determining the amount shown as 'Net current assets (liabilities)' (item F), any prepayments and accrued income must be taken into account, wherever shown.
- And
- The amount of allotted share capital and amount of called up share capital which has been paid up must be shown separately (item K.1).

Notes to the balance sheet formats that are not relevant to FRS 102 reporters or where FRS 102 has stricter requirements are not referred to above.

4.3.1.B Modifications of the Format 1 balance sheet for small LLPs

The Format 1 balance sheet in the Small LLP Regulations differs in certain respects, as shown in Figure 4-2 below. The Format 1 balance sheet needs to be read together with the notes to the formats included in the Small LLP Regulations which are the same as detailed at 4.3.1.A above for companies except for the omission of items relating to shares (which are not relevant for an LLP) and an additional requirement to analyse 'Loans and other debts due to members' to show separately: the aggregate amount of money advanced to the LLP by the members by way of loan; the aggregate amount of money owed to members by the LLP in respect of profits; and any other amounts.²⁴

The discussion at 4.3.1 on the format 1 balance sheet for a small company is also relevant for LLPs.

²⁴ Note 7 to the LLP balance sheet formats in Section B of Part 1 of Schedule 1 to SI 2008/1912.

C Prepayments and accrued income*	
D Creditors: amounts falling due within one year	
1	Bank loans and overdrafts
2	Trade creditors
3	Amounts owed to group undertakings and undertakings in which the LLP has a participating interest
4	Other creditors* **
E Net current assets (liabilities)	
F Total assets less current liabilities	
G Creditors: amounts falling due after more than one year	
1	Bank loans and overdrafts
2	Trade creditors

	3	Amounts owed to group undertakings and undertakings in which the LLP has a participating interest
	4	Other creditors* **
H		Provisions for liabilities
I		Accruals and deferred income*
		Net assets attributable to members
		Represented by: #
J		Loans and other debts due to members***
K		Members' other interests
	I	Members' capital
	II	Revaluation reserve
	III	Other reserves~
	*	The notes to format 1 provide alternative positions for prepayments and accrued income, and accruals and deferred income. Prepayments and accrued income may be shown within sub-heading B.II.3 and accruals and deferred income may be shown within D.4, G.4 or both (as the case may require). In determining the amount of net current assets (liabilities), any prepayments and accrued income must be taken into account (wherever shown).
	**	There must be shown separately (a) the amount of any convertible loans and (b) the amount for creditors in respect of taxation and social security.
	***	The LLP must show separately (a) the aggregate amount of money advanced to the LLP by the members by way of loan; (b) the aggregate amount of money owed to members by the LLP in respect of profits; and (c) any other amounts.
	~	There is no breakdown of 'Other reserves' in the formats in the Small LLP Regulations (unlike the LLP Regulations).
	#	The LLP SORP requires a total for 'Net assets attributable to members', and 'Total members' interests' (as a memorandum item) to be disclosed on the face of the balance sheet (see the discussion below this figure and Figure 4-3 below).

The LLP SORP provides further guidance on members' interests and the application of the statutory formats for LLPs.

The LLP SORP requires the face of the balance sheet to show a total for 'Net assets attributable to members' (i.e., a balance sheet total before 'Loans and other debts due to members' (item J) and 'Members' other interests' (item K)). In addition, 'Total members' interests' (i.e., the total of 'Loans and other debts due to members' (item J) and 'Members' other interests' (item K) less any amounts due from members included in debtors) must be presented as a memorandum item on the face of the balance sheet. The SORP also provides illustrations of LLP balance sheets for different situations (depending on whether the partnership interests are classified as equity or a liability or part equity/part liability). [LLP SORP.1, LLP SORP.58, Appendix 1, Appendix 2]. A possible presentation of this memorandum item is illustrated in Figure 4-3 below.

LLPs with no equity, e.g., because of the classification of the partnership interests in the LLP, will not have items to report for 'Members' other interests' in the balance sheet.

Figure 4-3 Presentation of small LLP balance sheet (following LLP SORP)

	£'000
Net assets attributable to members	xxx
Represented by:	£'000
Loans and other debts due to members within one year	
Members' capital classified as liability	x
Other amounts	x
	x (1)
Members' other interests	
Members' capital classified as equity	x
Members' other interests - other reserves classified as equity	x
	x (2)
	xxx
Total members' interests	
Amounts due from members	(x)
Loans and other debts due to members (1)	x
Members' other interests (2)	x
	xx

Adapted from the example in Exhibit B of Appendix 1 of the LLP SORP for an LLP (with some equity). See discussion above this figure.

4.3.2 Profit and loss account

Schedule 1 to the Small Companies Regulations (and Schedule 1 to the Small LLP Regulations) provides a choice of two statutory formats for the profit and loss account. [FRS 102.1A.14].

Format 1 analyses expenses by function and is illustrated at Figure 4-4 (for a small UK company) and Figure 4-5 (for a small LLP) at 4.3.2.A below.

Format 2 analyses expenses by nature and is illustrated at Figure 4-6 (for a small UK company) and Figure 4-7 (for a small LLP) at 4.3.2.B below.

The General Rules to the formats (see 4.1 above) apply. As all the line items are denoted with Arabic numbers, these allow a degree of flexibility in the profit and loss account formats.

The individual line items in the profit and loss account formats in the Small Companies Regulations (and Small LLP Regulations) are the same as in the Regulations (and LLP Regulations) and are discussed in Chapter 6 at 5.6 (disclosures in other sections of FRS 102, as referred to in that discussion, are generally not mandated for small entities applying Section 1A). [FRS 102.1A.17].

4.3.2.A Format 1 profit and loss account

Figure 4-4 below sets out the profit and loss account, analysing expenses by function (Format 1) for a small UK company. This needs to be read together with the notes to the formats in Section B of Schedule 1 to the Small Companies Regulations (see 4.3.2.C below).

Figure 4-4: Format 1 individual profit and loss account - small UK company

1	Turnover
2	Cost of sales
3	Gross profit or loss
4	Distribution costs
5	Administrative expenses
6	Other operating income
7	Income from shares in group undertakings
8	Income from participating interests†
9	Income from other fixed asset investments
10	Other interest receivable and similar income
11	Amounts written off investments
12	Interest payable and similar expenses
	Profit or loss before taxation*
13	Tax on profit or loss
14	Profit or loss after taxation
19	Other taxes not shown under the above items**
20	Profit or loss for the financial year†
* While not in format 1, every profit and loss account must show the amount of a company's profit or loss before taxation. [1 Sch 6 (SC)].	
** Rarely seen in practice.	

Figure 4-5 below sets out the profit and loss account, analysing expenses by function (Format 1) for a small LLP. This needs to be read together with the notes to the formats in Section B of Schedule 1 to the Small LLP Regulations (see 4.3.2.C below).

The LLP SORP provides further guidance on application of the statutory formats for LLPs. The SORP requires that the 'Profit or loss for the financial year before members' remuneration and profit shares' (the final line item in the statutory formats), 'Members' remuneration charged as an expense' (including related employment costs) and the 'Profit or loss for the financial year available for discretionary division among members' are separately presented on the face of the profit and loss account (or statement of comprehensive income). The LLP SORP provides extensive guidance on the treatment of members' remuneration. The LLP SORP provides guidance and illustrations of LLP profit and loss accounts for different situations, including where the partnership interest is classified as equity, liability or part equity/part liability. [LLP SORP. 51-54, LLP SORP.Appendix 1, LLP SORP.Appendix 2].

How we see it

In our view, small LLPs need to present 'Members' remuneration charged as an expense' and 'Profit or loss for the financial year available for discretionary division among members' on the face of the profit and loss account (or statement of comprehensive income, if any). This is because that presentation allows the income statement to show all items of income and expense, as required by the Glossary definition of an income statement in FRS 102.

Figure 4-5: Format 1 individual profit and loss account – small LLP

1	Turnover
2	Cost of sales
3	Gross profit or loss
4	Distribution costs
5	Administrative expenses
6	Other operating income
7	Income from shares in group undertakings
8	Income from participating interests
9	Income from other fixed asset investments
10	Other interest receivable and similar income
11	Amounts written off investments
12	Interest payable and similar expenses
	Profit or loss before taxation*
13	Tax on profit or loss
14	Profit or loss after taxation
19	Other taxes not shown under the above items**
20	Profit or loss for the financial year before members' remuneration and profit shares

* While not in format 2, every profit and loss account must show the amount of an LLP's profit or loss before taxation. [1 Sch 6 (LLP SC)].	
** Rarely seen in practice.	
~ Supplementary presentation requirements in the LLP SORP. See discussion above Figure 4-5 at 4.3.2.A above.	

4.3.2.C Notes to the formats

The line items in the formats need to be read together with the notes to the formats. [1 Sch 1(2)(SC), 1 Sch 1(2)(LLP SC)]. These require that:

- 'Cost of sales', 'Distribution costs' and 'Administrative expenses' (Format 1, items 2, 4 and 5) are stated after taking into account any necessary provisions for depreciation or diminution in value of assets.
- In 'Income from other fixed asset investments' and 'Other interest receivable and similar income' (Format 1, items 9 and 10; Format 2, items 11 and 12), income and interest derived from group undertakings must be shown separately from income and interest derived from other sources. In addition, for LLPs, interest receivable from members must not be included under this item.

And

- In 'Interest payable and similar expenses' (Format 1, item 12; Format 2, item 14), the amount payable to group undertakings must be shown separately. In addition, for LLPs, interest payable to members must not be included under this item.

4.4 Adapted formats

Paragraph 1B of Schedule 1 to the Small Companies Regulations (and paragraph 1B of Schedule 1 to the Small LLP Regulations) set out the adaptations to the statutory formats permitted for the balance sheet and profit and loss account. These provide limited guidance on the content of the adapted formats, leaving the detail to UK accounting standards. [FRS 102.1AA.3, FRS 102.1AA.4, FRS 102.1AA.5, FRS 102.1AA.6, FRS 102.1AB.3, FRS 102.1AB.4]. See 7 below for amendments to the adapted formats which are effective for accounting periods beginning on or after 1 January 2027, with early application permitted.

A company's directors (or the members of an LLP) may adapt one of the balance sheet formats in Section B of Part 1 of Schedule 1 to the Small Companies Regulations (or Section B of Part 1 of Schedule 1 to the Small LLP Regulations), so to distinguish between current and non-current items in a different way, provided that:

- (a) The information given is at least equivalent to that which would have been required by the use of such format had it not been thus adapted.

And

- (b) The presentation of those items is in accordance with generally accepted accounting principles or practice. [1 Sch 1B(1)(SC), 1 Sch 1B(1)(LLP SC)].

Similarly, a company's directors (or the members of an LLP) may adapt one of the profit and loss account formats in Section B of Part 1 of Schedule 1 to the Small Companies Regulations (or Section B of Part 1 of Schedule 1 to the Small LLP Regulations), provided that:

- (a) The information given is at least equivalent to that which would have been required by the use of such format had it not been thus adapted.

And

- (b) The presentation is in accordance with generally accepted accounting principles or practice. [1 Sch 1B(2)(SC), 1 Sch 1B(2)(LLP SC)].

Adapted formats are also available in group accounts, where prepared (see 3.2 above). [6 Sch 1 (SC), 3 Sch 1 (LLP SC)].

So far as is practicable, the provisions of paragraphs 2 to 9A of the General Rules to the formats (see 4.1.4 above) – which address the requirements in the Small Companies Regulations/Small LLP Regulations on presentation of line items – apply to the balance sheet or profit and loss account of a company (or an LLP), notwithstanding use of the adapted formats. [1 Sch 1C (SC), 1 Sch 1C (LLP SC)].

Small entities applying adapted formats for the balance sheet and profit and loss account follow the requirements for adapted formats in Section 1A of FRS 102 which allow a presentation of the balance sheet and profit and loss account which is much closer to IAS 1 *Presentation of Financial Statements*.

[FRS 102.1AA.3-1AA.6, FRS 102.1AB.3, FRS 102.1AB.4]. Section 1A specifies that, at a minimum, certain line items are presented on the face of the statement of financial position and income statement, with further sub-classifications of items in the statement of financial position in the notes to the financial statements (see 4.4.1 below). In general, few difficulties should arise over classification of line items where adapted formats are applied since the required line items are aligned with the categories of assets and liabilities discussed in FRS 102. Some areas to watch on classification are, however, discussed at Chapter 6 at 4.1 and 5.5.

How we see it

In our view, small entities applying Section 1A could also choose to follow the adapted formats set out in Sections 4 and 5 of FRS 102 as these simply require more detailed analysis. See Chapter 6 at 4.1 and 5.5.

4.4.1 Adapted balance sheet

An entity choosing to adapt one of the balance sheet formats shall, as a minimum, include in its statement of financial position the line items presented in Figure 4-14 below, distinguishing between those items that are current and those that are non-current (see 4.4.1.A and 4.4.1.B below). [FRS 102.1AA.3]. To comply with this requirement, an entity must present as separate classifications: current assets and non-current assets, and current liabilities and non-current liabilities. [FRS 102.1AA.6].

Where adapted formats are used, there is no requirement to disclose debtors: amounts falling due after more than one year or to classify creditors: amounts falling due within or after more than one year. This is clarified by Section 4 of FRS 102 in respect of adapted formats under full FRS 102. [FRS 102.4.4A, FRS 102.4.7]. While Section 1A is silent on this matter, this will also be the case where adapted formats are used in accordance with Section 1A.

For adapted balance sheet formats for accounting periods beginning on or after 1 January 2027, see 7 below.

Figure 4-14: Balance sheet – line items included in adapted formats

(a)	Property, plant and equipment
(b)	Investment property carried at fair value through profit or loss
(c)	Intangible assets
(d)	Financial assets (excluding amounts shown under (e), (f), (j) and (k))
(e)	Investments in associates
(f)	Investments in jointly controlled entities
(g)	Biological assets carried at cost less accumulated depreciation and impairment
(h)	Biological assets carried at fair value through profit or loss
(i)	Inventories
(j)	Trade and other receivables
(k)	Cash and cash equivalents
(l)	Trade and other payables
(m)	Provisions
(n)	Financial liabilities (excluding amounts shown under (l) and (m))
(o)	Liabilities and assets for current tax*
(p)	Deferred tax liabilities and deferred tax assets (classified as non-current)*
(q)	Non-controlling interest, presented within equity separately from the equity attributable to the owners of the parent #
(r)	Equity attributable to the owners of the parent~
~	For LLPs, additional line items are required on the face of the balance sheet – see the discussion below this figure and at 4.3.1.B above.
#	The line item (q) for non-controlling interest is relevant only where consolidated financial statements are prepared (see 3.2 above). Consolidated financial statements are not addressed in detail in this chapter.
*	While line items (o) and (p) appear to combine liabilities and assets for current tax and deferred tax respectively, the assets will need to be shown separately from the liabilities. Deferred tax is always classified as non-current.

The LLP SORP requires that, in order for the adapted formats to show the equivalent information to the statutory formats, 'Loans and other debts due to members' (item J in the statutory formats) and 'Members' other interests' (item K in the statutory formats) are separately disclosed on the face of the statement of financial position. [LLP SORP.26C].

The LLP SORP also requires that the face of the adapted balance sheet shows the 'Net assets attributable to members of the LLP' (i.e., a balance sheet total before 'Loans and other debts due to members' (item J) and 'Members' other interests' (item K)). In addition, 'Total members' interests' (being the total of 'Loans and other debts due to members' (item J) and 'Members' other interests' (item K) less any amounts due from members in debtors) is disclosed as a memorandum item on the face of the balance sheet.

[LLP SORP.26B, LLP SORP.58]. These are the same additional disclosures required by the LLP SORP where statutory formats are used (see 4.3.1.B above).

The prescribed line items for the balance sheet, where adapted formats are used under Section 1A, are the same as those required when full FRS 102 is applied. [FRS 102.1AA.3, FRS 102.4.2A]. Chapter 6 at 4.1 addresses application issues on the line items in adapted formats. In addition, Illustration 4-2 in Chapter 6 at 4.1.15 presents an illustrative statement of financial position (using adapted formats) relevant to both Section 1A and Section 4 of FRS 102.

So far as is practicable, the provisions of paragraphs 2 to 9A of the General Rules to the formats (see 4.1 above) apply to the adapted formats. [1 Sch 1C (SC), 1 Sch 1C (LLP SC)]. Where an asset or liability relates to more than one item in the balance sheet, the relationship of such asset or liability to the relevant items must be disclosed either under those items or in the notes to the financial statements. [1 Sch 9A (SC), 1 Sch 9A (LLP SC)].

In addition, the following sub-classifications of the line items presented must be disclosed either in the statement of financial position or in the notes:

- Property, plant and equipment in classifications appropriate to the entity
- Goodwill and other intangible assets
- Investments, showing separately shares and loans
- Trade and other receivables showing separately amounts due from related parties, and amounts due from other parties
- Trade and other payables, showing separately amounts payable to trade suppliers, and amounts payable to related parties
- And
- Classes of equity, such as called up share capital, share premium, retained earnings, revaluation reserve, fair value reserve and other reserves. [FRS 102.1AA.4].

The sub-classifications of line items required in the notes to the financial statements are less extensive than those required under Section 4 of FRS 102.

A small entity is permitted to amend the descriptions of the line items in the statement of financial position set out in Figure 4-14 above, [FRS 102.1AA.3], the descriptions of the sub-classifications of those line items referred to above, [FRS 102.1AA.4], and the ordering of items or aggregation of similar line items, according to the nature of the entity and its transactions, to provide information that is relevant to an understanding of the entity's financial position. This is allowed, providing the information given is at least equivalent to that required by the balance sheet format had it not been adapted. [FRS 102.1AA.5]. Generally, FRS 102's provisions on adapting the descriptions, order and aggregation of line items are consistent with the General Rules to the formats.

4.4.1.A Current and non-current assets

The definitions of current and non-current assets discussed below apply only where an entity chooses to use adapted formats in accordance with paragraph 1B(1) of Schedule 1 to the Small Companies Regulations (or paragraph 1B(1) of Schedule 1 to the Small LLP Regulations).

FRS 102 defines 'current assets' as: "Assets of an entity which ... are not non-current assets".

[FRS 102 Appendix I].

FRS 102 defines non-current assets as assets of the entity which:

- (a) It does not expect to realise, or intend to sell or consume, in its normal operating cycle (see Chapter 6 at 4.1.1.A).
- (b) It does not hold primarily for the purpose of trading (see Chapter 6 at 4.1.1.B).
- (c) It does not expect to realise within 12 months after the reporting period.

Or

- (d) Are cash or cash equivalents restricted from being exchanged or used to settle a liability for at least 12 months after the reporting period. [FRS 102 Appendix I].

The adapted formats also require that deferred tax assets are always classified as non-current.

[FRS 102.1AA.3].

'Cash or cash equivalents' are also defined in the FRS 102 Glossary, [FRS 102 Appendix I], and would be interpreted in a manner consistent with Section 7 of FRS 102 (see Chapter 7 at 3.2).

IAS 1/IFRS 18 *Presentation and Disclosure in Financial Statements* require an entity to classify an asset as current if the asset meets any of the conditions in (a) to (d) of paragraph 66 of IAS 1 or paragraph 99 of IFRS 18 respectively (and all other assets are non-current). [IAS 1.66, IFRS 18.99]. The conditions in (a) to (d) above in FRS 102's definition of 'non-current assets' are broadly the converse of the conditions (a) to (d) in

IAS 1/IFRS 18's definition of a current asset. By choosing to define non-current assets (leaving current assets as the residual), rather than current assets as in IAS 1/IFRS 18, there are potential ambiguities in the wording of the definition, which we consider are unintended.

How we see it

In our view, the FRC intended that the classification of assets as non-current and current is consistent with the requirements of paragraph 66 of IAS 1 (and paragraph 99 of IFRS 18).

FRS 102 provides no additional guidance beyond the definition above. However, since the intention is to provide a format more aligned with IAS 1, management may consider, as permitted by the hierarchy in Section 10 Accounting Policies, Estimates and Errors, the requirements of IFRS for further guidance.

[FRS 102.10.4, FRS 102.10.5, FRS 102.10.6].

See Chapter 6 at 4.1.1 for further discussion of the classification of current and non-current assets. The guidance presented there refers to IAS 1/IFRS 18's requirements, where appropriate.

The current portion of non-current financial assets would be classified as current, consistent with IFRS.

[IAS 1.68, IFRS 18.B95].

4.4.1.B Current and non-current liabilities

The definitions of current liabilities and non-current liabilities discussed below apply only where an entity chooses to use adapted formats in accordance with paragraph 1B(1) of Schedule 1 to the Small Companies Regulations (or paragraph 1B(1) of Schedule 1 to the Small LLP Regulations).

FRS 102 defines current liabilities as liabilities of the entity which:

- (a) It expects to settle in its normal operating cycle (see Chapter 6 at 4.1.2.A).
- (b) It holds primarily for the purpose of trading (see Chapter 6 at 4.1.2.B).
- (c) Are due to be settled within 12 months after the reporting period (see Chapter 6 at 4.1.2.C).

Or

- (d) It does not have an unconditional right to defer settlement for at least 12 months after the reporting period. (See Chapter 6 at 4.1.2.D). [FRS 102 Appendix I].

Meeting any one of (a) to (d) leads to the liability being required to be classified as current.

The FRS 102 Glossary defines non-current liabilities as liabilities of the entity which are not current liabilities (i.e., the residual). [FRS 102 Appendix I]. This approach is consistent with IAS 1 and IFRS 18. [IAS 1.69, IFRS 18.101, IFRS 18.102]. The adapted formats also require that deferred tax liabilities are always classified as non-current. [FRS 102.1AA.3].

The definition of current liabilities in extant FRS 102 does not wholly align with extant IAS 1 and IFRS 18. See Chapter 6 at 4.1.2.D for further discussion of the extant IFRS requirements and guidance on part (d) of the definition.

4.4.2 Adapted profit and loss account

Adapted formats may be used provided that the information given is at least equivalent to that which would have been required by the use of the statutory format had it not been thus adapted and the presentation is in accordance with generally accepted accounting principles or practice. [1 Sch 1B(2)(SC), 1 Sch 1B(2)(LLP SC)]. The detail, however, is left to accounting standards, namely Section 1A of FRS 102.

A small entity choosing to adapt one of the profit and loss account formats must, as a minimum, include in its income statement line items that present amounts (a) to (f) for the period (as set out in Figure 4-15 below). [FRS 102.1AB.3].

For adapted profit and loss formats for accounting periods beginning on or after 1 January 2027 see 7 below.

Figure 4-15 Profit and loss account – line items included in adapted formats

(a)	Revenue
(b)	Finance costs
(c)	Share of the profit or loss of investments in associates and jointly controlled entities accounted for using the equity method [#]
(d)	Profit or loss before taxation
(e)	Tax expense (excluding tax allocated to other comprehensive income or equity)
(f)	Profit or loss [~]
~	The LLP SORP requires further line items for LLPs. See discussion below this figure.
#	Only required in consolidated financial statements, as the equity method is not applied in individual financial statements under FRS 102. Consolidated financial statements are not addressed in detail in this chapter.

The LLP SORP provides guidance on adapted formats which we would expect to apply to all LLPs (including small LLPs) as the adaptations are intended to provide equivalent information to the statutory formats.

Adapted formats for an LLP are required to show a line item for 'Profit or loss for the financial year before members' remuneration and profit shares'. 'Members' remuneration charged as an expense' (which would include related employment costs) must then be deducted as an additional expense, [LLP SORP.26C, LLP SORP.53, LLP SORP.Appendix 1], presumably coming to the final line item of 'Profit or loss for the financial year available for discretionary division among members' (which would correspond to item (f) in Figure 4-15 above). This would be the same presentation on the face of the profit and loss account (or statement of comprehensive income) as discussed for statutory formats in Figure 4-5 at 4.3.2.A above and Figure 4-7 at 4.3.2.B above.

The provisions of paragraphs 2 to 9A of Section A of the General Rules to the formats (see 4.1 above) apply, so far as practicable, to the profit and loss account, notwithstanding the use of adapted formats.

[1 Sch 1C (SC), 1 Sch 1C (LLP SC)].

A small entity is permitted to include additional line items in the income statement and amends the descriptions used in the line items set out in (a) to (f) in Figure 4-15 above and the ordering of items, when this is necessary to explain the elements of financial performance, providing the information given is at least equivalent to that required by the profit and loss account format had it not been adapted.

[FRS 102.1AB.4].

An analysis of expenses in the notes to the financial statements or on the face of the income statement is not explicitly required by Section 1A of FRS 102 (since Section 5 of FRS 102 does not apply), [FRS 102.1A.7A, FRS 102.5.5B, FRS 102.5.7A]. However, adapted formats still need to give equivalent information to the statutory formats, [1 Sch 1B(2) (SC), 1 Sch 1B(2) (LLP SC)], and meet the true and fair requirement.

[FRS 102.1A.16]. Therefore, a small entity might consider that additional analysis is necessary to explaining elements of financial performance. [FRS 102.1AB.4].

Illustration 5-1 in Chapter 6 at 5.5.2 shows a statement of comprehensive income for an entity using adapted formats in full FRS 102 which provides an analysis of expenses. A small entity presenting only an income statement would omit the lines after 'profit for the year' in Illustration 5-1.

5 Information to be presented in the notes to the financial statements

Notes to the financial statements contain information in addition to those presented in the primary financial statements and provide narrative descriptions or disaggregation of items presented in those statements and information about items that do not qualify for recognition in those statements. *[FRS 102 Appendix I]*.

Consistent with the Small Companies Regulations (and Small LLP Regulations), the notes must be presented in the order in which, where relevant, the items to which they relate are presented in the statement of financial position and in the income statement. *[FRS 102.1AC.2, 1 Sch 42(2)(SC), 1 Sch 42(2)(LLP SC)]*.

A small entity must present sufficient information in the notes to the financial statements to meet the requirement for the financial statements to give a true and fair view of the assets, liabilities, financial position and profit or loss of the small entity for the reporting period. *[FRS 102.1A.6, FRS 102.1A.7, FRS 102.1A.16, FRS 102.3.2]*.

A small entity in the UK must provide, at a minimum, when relevant to its transactions, other events and conditions, the disclosures in Appendix C of FRS 102. *[FRS 102.1A.16A, FRS 102.1AC.1]*. These disclosures (which are set out in 5.1 below) are based mainly on the statutory requirements for UK companies subject to the small companies regime. The Small Companies Regulations (and Small LLP Regulations) set out supplementary information, analyses and reconciliations of line items to be given in the notes to the financial statements which apply whether statutory formats or the adapted formats are used. One complexity is that the information required generally refers to items found in the statutory formats (which differ to the line items identified where the adapted formats are used). For example, the adapted formats do not refer to fixed assets, creditors: amounts falling due within one year, creditors: amounts falling due after more than one year or investments. While the classification of non-current assets and current assets used in adapted formats differs to the fixed assets and current assets classification required in statutory formats, the statutory definition of 'fixed assets' (see Chapter 6 at 4.2.2) is relevant for the purposes of disclosures in respect of fixed assets in the Small Companies Regulations (and Small LLP Regulations). Section 1A of FRS 102 includes nearly all the statutory disclosures but restates these disclosures in a way that can be applied even if statutory formats are not used.

The list of disclosures in Appendix C of Section 1A is not quite exhaustive to meet the statutory disclosure requirements. There are some additional disclosures in legislation that derive from the notes to the statutory formats, where there are some differences for companies and LLPs (see 4.3 above) or are included in the CA 2006 (or the CA 2006 as applied to LLPs) itself – see 5.2 below.

Entities subject to a SORP may find that the SORP recommends additional disclosures. See Chapter 1 at 3.6 and Chapter 3 at 2.3 on application of SORPs.

A small entity need not provide a specific disclosure (including those set out in Appendix C of Section 1A) if the information resulting from that disclosure is not material, except when required by the CA 2006 regardless of materiality. *[FRS 102.1A.17A, FRS 102.1AC.1, FRS 102.3.16B]*.

See also the discussion of notes to the financial statements at 3.3.3 above, true and fair view at 3.3.4 above (which might necessitate a small entity providing additional disclosures) and materiality and aggregation at 3.3.7 above.

5.1 Disclosure requirements for small entities in the UK (included in Appendix C of Section 1A)

Appendix C of Section 1A sets out the disclosure requirements for small entities in the UK. The appendix, which is an integral part of Section 1A, sets out both requirements of Section 1A of FRS 102 and those of UK company law applicable to small entities. Some disclosure requirements cross-refer to other sections of FRS 102.

The disclosure requirements based on UK company law are shown in italic font in the appendix. The FRC states that the drafting is as close as possible to that set out in company law.

Appendix C observes that a small entity must make the disclosures stated as a minimum. A small entity need not provide a specific disclosure set out in the appendix if the information resulting from that disclosure is not material, except when required by company law regardless of materiality. *[FRS 102.1AC.1]*. The disclosure requirements are stated as they would apply in individual financial statements. Disclosures in consolidated financial statements are not dealt with in detail in this chapter, but 3.2 above provides some guidance.

Paragraphs in FRS 102 that have been cross referenced in Appendix C are also highlighted in the left-hand margin of other sections of the standard with a * (where there is a similar disclosure requirement in full FRS 102 to the statutory disclosures on which Appendix C of FRS 102 was originally based) or a ^ (where Appendix C has incorporated certain disclosures by cross reference to the full standard that the FRC considers are required in order for the financial statements to give a true and fair view). [FRS 102.1A.16B].

5.1.1 Structure of notes

The notes must be presented in the order in which, where relevant, the items to which they relate are presented in the statement of financial position and in the income statement. [1 Sch 42(2)(SC), 1 Sch 42(2)(LLP SC)].

Paragraphs 8.3 and 8.4 of FRS 102 address similar requirements (see Chapter 6 at 7.1). [FRS 102.1AC.2, FRS 102.8.3, FRS 102.8.4].

5.1.2 Compliance with FRS 102

A small entity applying Section 1A whose financial statements comply with FRS 102 must make an explicit and unreserved statement of compliance in the notes to the financial statements that the financial statements are prepared in accordance with FRS 102, clearly stating that Section 1A has been applied. A similar requirement is in paragraph 3.3 of FRS 102. [FRS 102.1AC.2A, FRS 102.1A.7, FRS 102.3.3].

Similarly, a small entity that is a public benefit entity that applies the 'PBE' prefixed paragraphs must make an explicit and unreserved statement that it is a public benefit entity. A similar requirement is in paragraph PBE 3.3A of FRS 102. [FRS 102.PBE1AC.2B, FRS 102.1A.7, FRS 102.PBE3.3A].

See 3.3.2 above for discussion and examples of compliance statements.

5.1.3 Going concern

A small entity applying Section 1A must make the following disclosures in respect of going concern: [FRS 102.1AC.2C].

- Disclosure that the financial statements are prepared on a going concern basis (where this is the case), as well as confirmation that management has considered information about the future, which is at least, but is not limited to, twelve months from the date when the financial statements are authorised for issue. [FRS 102.1A.7, FRS 102.3.8A].
- Disclosure of any significant judgements made in assessing the entity's ability to continue as a going concern. [FRS 102.1A.7, FRS 102.8.6].
- Disclosure of material uncertainties (if any), of which management is aware, in making its going concern assessment, related to events or conditions that may cast significant doubt upon the entity's ability to continue as a going concern. [FRS 102.1A.7, FRS 102.3.9].
- Disclosure that the financial statements are not prepared on a going concern basis, if applicable, together with the basis on which the financial statements are prepared and the reason why the entity is not regarded as a going concern. [FRS 102.1A.7, FRS 102.3.9].

See 3.3.5 above and Chapter 6 at 8.3 for further discussion of the going concern basis of accounting. As discussed in 3.3.5 above, the FRC has issued FRS Factsheet 13, to aid preparers of small company accounts in the UK in performing going concern assessments and in preparing financial statement disclosures.

5.1.4 Accounting policies

The accounting policies adopted by the small entity in determining the amounts to be included in respect of items shown in the statement of financial position and in determining the profit or loss of the small entity must be stated (including such policies with respect to the depreciation and impairment of assets).

[1 Sch 44 (SC), 1 Sch 44 (LLP SC)].

Paragraphs 8.5 and 8.5A of FRS 102 address similar requirements for disclosing accounting policy information. Appendix C of Section 1A notes that including information about the judgements made in applying the small entity's accounting policies, as set out in paragraph 8.6 of FRS 102, may be useful to users of the small entity's financial statements (see Chapter 6 at 7.2 and 7.3). [FRS 102.1AC.3, FRS 102.8.5, FRS 102.8.5A, FRS 102.8.6].

If any amount is included in a small entity's statement of financial position in respect of development costs, the note on accounting policies must include the following information:

(a) The period over which the amount of those costs originally capitalised is being or is to be written off.

And

(b) The reasons for capitalising the development costs in question. [1 Sch 21(2)(SC), 1 Sch 21(2)(LLP SC)].

Paragraph 18.27(a) of FRS 102 addresses similar requirements to (a) above (see Chapter 21 at 3.4.2).

[FRS 102.1AC.4, FRS 102.18.27(a)].

Where development costs are shown or included as an asset in the small entity's financial statements and the amount is not treated as a realised loss because there are special circumstances justifying this, a note to the financial statements must state the reasons for showing development costs as an asset and that it is not a realised loss. [s844, FRS 102.1AC.5].

TECH 02/17BL *Guidance on realised and distributable profits under the Companies Act 2006*, issued by the ICAEW and ICAS, clarifies that this exception for special circumstances allowing a capitalised development cost not to be treated as a realised loss would apply where the costs are carried forward in accordance with applicable accounting standards. [TECH 02/17BL.2.38]. In other words, development costs capitalised under FRS 102 are not treated as realised losses for distribution purposes.

Unrealised revaluation profits on capitalised development costs are not treated as realised losses. [s844(2)].

Where in exceptional cases, the useful life of intangible assets cannot be reliably estimated, there must be disclosed in a note to the financial statements the period over which those intangible assets are being written off and the reasons for choosing that period. [1 Sch 22(4)(SC), 1 Sch 22(4)(LLP SC)]. Intangible assets include goodwill. Paragraphs 18.27(a) of FRS 102 (see Chapter 21 at 3.4.2) and 19.25(g) of FRS 102 (see Chapter 22 at 4.1) address similar disclosure requirements. [FRS 102.1AC.6, FRS 102.18.27(a), FRS 102.19.25(g)].

5.1.5 Changes in presentation and accounting policies and corrections of prior period errors

Where there is a change in the presentation of a small entity's statement of financial position or income statement, particulars of any such change must be given in a note to the financial statements in which the new presentation is first used, and the reasons for the change must be explained. [1 Sch 2(2)(SC), 1 Sch 2(2)(LLP SC)]. Paragraphs 3.12 and 3.13 of FRS 102 address similar requirements (see 3.3.6 above). [FRS 102.1AC.7, FRS 102.3.12, FRS 102.3.13].

Where the corresponding amount for the immediately preceding reporting period is not comparable with the amount to be shown for the item in question in respect of the reporting period, and the corresponding amount is adjusted, the particulars of the non-comparability and of any adjustment must be disclosed in a note to the financial statements. [1 Sch 7(2)(SC), 1 Sch 7(2)(LLP SC)].

Changes in corresponding amounts occur, usually, where there has either been a change in accounting policy or the correction of a material prior period error. Paragraphs 10.13, 10.14 and 10.23 of FRS 102 address similar requirements (see 3.3.6 and 4.1 above, and Chapter 9 at 3.6.1 and 3.6.3). [FRS 102.1AC.8, FRS 102.10.13, FRS 102.10.14, FRS 102.10.23].

The statutory disclosures require particulars of non-comparability of comparatives regardless of whether or not any adjustment is made (see 4.1.4 above). [1 Sch 7(2)(SC), 1 Sch 7(2)(LLP SC)]. In most cases, a change in accounting policy, a correction of a prior period error or a reclassification would be retrospectively effected. Where amounts are not restated, e.g., due to transitional provisions in accounting policies or where it is impracticable to determine the effects of a change in accounting policies/material errors on earlier periods, [FRS 102.10.11, FRS 102.10.12, FRS 102.10.22], entities will need to disclose the non-comparability.

Where any amount relating to a preceding reporting period is included in any item in the income statement, the effect must be stated. [1 Sch 61(1)(SC), 1 Sch 59(1)(LLP SC), FRS 102.1AC.9].

5.1.6 True and fair override

If it appears to the small entity that there are special reasons for departing from any of the principles set out in company law in preparing the small entity's financial statements in respect of any reporting period, it may do so, in which case particulars of the departure, the reasons for it, and its effects must be given in the notes to the financial statements. [1 Sch 10(2)(SC), 1 Sch 10(2)(LLP SC)].

Section 1A notes that this is only expected to occur in special circumstances. Paragraphs 3.4 and 3.5 of FRS 102 (which also apply to a small entity applying Section 1A) address similar requirements.

[FRS 102.1AC.10, FRS 102.1A.7, FRS 102.3.4, FRS 102.3.5].

Paragraphs 3.5 and 3.6 of FRS 102 both apply to a small entity also and contain extra disclosure requirements as follows:

- When an entity departs from a requirement of FRS 102 (in special circumstances, in order to give a true and fair view) or from a requirement of applicable legislation, it must disclose:
 - (a) That management has concluded that the financial statements give a true and fair view of the entity's financial position, financial performance and, when required to be presented, cash flows.
 - (b) That it has complied with FRS 102 or applicable legislation, except that it has departed from a particular requirement of the standard or applicable legislation to the extent necessary to give a true and fair view.

And

 - (c) The nature and effect of the departure, including the treatment that FRS 102 or applicable legislation would require, the reason why that treatment would be so misleading in the circumstances that it would conflict with the objective of financial statements set out in Section 2 and the treatment adopted.
- When an entity has departed from a requirement of FRS 102 or applicable legislation in a prior period and that departure affects the amounts recognised in the financial statements for the current period, it must make the disclosures set out in (c) above. [FRS 102.3.5, FRS 102.3.6].

How we see it

FRS 102 does not explain what is required by 'the effect of the departure', but in our view, this means financial effect.

See 3.3.4 above for further discussion of the 'true and fair view' and 3.3.4.A above for further discussion of the 'true and fair override'.

5.1.7 An asset or liability relating to more than one item in the statement of financial position

Where an asset or liability relates to more than one item in the statement of financial position, the relationship of such asset or liability to the relevant items must be disclosed either under those items or in the notes to the financial statements. [1 Sch 9A (SC), 1 Sch 9A (LLP SC), FRS 102.1AC.11].

See 4.1.4 above for further discussion concerning situations where this disclosure requirement may apply.

5.1.8 Deferred tax

A small entity must provide the disclosures relating to deferred tax set out in paragraph 29.27(e) of FRS 102. [FRS 102.1AC.11A, FRS 102.29.27(e)].

5.1.9 Fixed assets

In respect of each item which is shown under the general item 'fixed assets' in the small entity's statement of financial position, the following information must be given:

- (a) The aggregate amounts (on the basis of cost or revaluation) in respect of that item as at the date of the beginning of the reporting period and as at the reporting date respectively.
- (b) The effect on any amount shown in the statement of financial position in respect of that item of:
 - (i) Any revision of the amount in respect of any assets included under that item made during the reporting period as a result of revaluation.
 - (ii) Acquisitions during the reporting period of any assets.
 - (iii) Disposals during the reporting period of any assets.

And

 - (iv) Any transfers of assets of the small entity to and from that item during the reporting period.

[1 Sch 48(1)(SC), 1 Sch 48(2)(SC), 1 Sch 47(1)-(2)(LLP SC), FRS 102.1AC.12].

In respect of each item within paragraph 1AC.12 of FRS 102 above, there must also be stated:

- (a) The cumulative amount of provisions for depreciation and impairment of assets included under that item as at the date of the beginning of the reporting period and as at the reporting date respectively.
- (b) The amount of any such provisions made in respect of the reporting period.

- (c) The amount of any adjustments made in respect of any such provisions during the reporting period in consequence of the disposal of any such assets.

And

- (d) The amount of any other adjustments made in respect of any such provisions during the reporting period. [1 Sch 48(3)(SC), 1 Sch 47(3)(LLP SC), FRS 102.1AC.13].

These two paragraphs above apply to all fixed assets, including investment property, plant and equipment, intangible assets (including goodwill), right-of-use assets, fixed asset investments, biological assets and heritage assets recognised in the statement of financial position.

Each item refers to a class of fixed assets shown separately either in the statement of financial position or in the notes to the financial statements. The reconciliations need not be presented for prior periods.

FRS 102 addresses similar requirements for investment property (paragraph 16.10(e) of FRS 102), property, plant and equipment (paragraphs 17.31(d) and (e) of FRS 102), intangible assets other than goodwill (paragraphs 18.27(c) and (e) of FRS 102), goodwill (paragraph 19.26 of FRS 102), right-of-use assets (paragraphs 20.81(a) and (b) of FRS 102), biological assets (paragraphs 34.7(c) and 34.10(e) of FRS 102) and heritage assets recognised in the statement of financial position (paragraphs 34.55(e) and (f) of FRS 102). [FRS 102.1AC.13, FRS 102.16.10, FRS 102.17.31, FRS 102.18.27, FRS 102.19.26, FRS 102.20.81, FRS 102.34.7, FRS 102.34.10, FRS 102.34.55]. These are discussed in Chapter 19 at 4.3, Chapter 20 at 3.9.1, Chapter 21 at 3.4.2, Chapter 22 at 4.2, Chapter 23 at 6.8, Chapter 36 at 2.9.1 and 2.9.2, and Chapter 36 at 5.4.4 respectively.

'Fixed assets' means assets of an entity which are intended for use on a continuing basis in the entity's activities, and 'Current assets' means assets not intended for such use. [8 Sch 3 (SC), 5 Sch 3 (LLP SC), FRS 102 Appendix I]. See 4.3.1 above and Chapter 6 at 4.2.2. The above disclosures are still required even if adapted formats with a non-current and current analysis of assets and liabilities are applied (see 4.4 above).

5.1.9.A Fixed assets (measured at revalued amounts using the alternative accounting rules)

Section 1A of FRS 102 requires disclosures for fixed assets revalued using the alternative accounting rules. These apply where:

- Investments in subsidiaries, associates and joint ventures are measured at fair value with changes in fair value recognised in other comprehensive income.
- Property, plant and equipment are revalued using the revaluation model set out in paragraphs 17.15B to 17.15F of FRS 102.
- Intangible assets other than goodwill are revalued using the revaluation model set out in paragraphs 18.18B to 18.18H of FRS 102.

And

- Right-of-use assets are revalued using the revaluation model set out in paragraph 20.61 of FRS 102. [FRS 102.1AC.14].

These disclosure requirements do not apply to investment property and biological assets measured at fair value through profit or loss. [FRS 102.1AC.14, FRS 102.1AC.15, FRS 102.1AC.16, FRS 102.1AC.17, FRS 102.1AC.18]. This is because such accounting for investment property and biological assets is in accordance with the fair value accounting rules rather than being a revaluation under the alternative accounting rules.

The disclosures in respect of fixed assets measured at revalued amounts using the alternative accounting rules are as follows:

- Where fixed assets are measured at revalued amounts, the items affected and the basis of valuation adopted in determining the amounts of the assets in question in the case of each such item must be disclosed in the note on accounting policies. [1 Sch 34(2)(SC), 1 Sch 34(2)(LLP SC), FRS 102.1AC.14].

Paragraphs 9.27(b), 17.31(a), 18.29A(c) and 20.85 of FRS 102 address similar disclosure requirements (see Chapter 8 at 4.6.1, Chapter 20 at 3.9.1, Chapter 21 at 3.4.4 and Chapter 23 at 6.8). [FRS 102.9.27, FRS 102.17.31, FRS 102.18.29A, FRS 102.20.85].

- Where any fixed assets of the small entity (other than listed investments) are included under any item shown in the small entity's statement of financial position at a revalued amount, the following information must be given:
 - (a) The years (so far as they are known to the directors) in which the assets were severally valued and the several values.
 - (b) In the case of assets that have been valued during the reporting period, the names of the persons who valued them or particulars of their qualifications for doing so (and whichever is stated), the bases of valuation used by them. *[1 Sch 49 (SC), 1 Sch 48 (LLP SC)]*.

Paragraphs 17.32A(a) and (c), 18.29A(a) and (c), and 34.55(e)(ii) of FRS 102 address similar requirements (see Chapter 20 at 3.9.1, Chapter 21 at 3.4.4 and Chapter 36 at 5.4.4). Section 1A of FRS 102 states that these paragraphs do not require the names or qualifications of the persons who valued the fixed assets to be disclosed. *[FRS 102.1AC.15, FRS 102.17.32A, FRS 102.18.29A, FRS 102.34.55]*.

A 'listed investment' means an investment as respects which there has been granted a listing on (a) a recognised investment exchange other than an overseas investment exchange (both as defined in Part 18 of the Financial Services and Markets Act 2000) or (b) a stock exchange of repute outside the UK. *[8 Sch 5 (SC), 5 Sch 5 (LLP SC)]*. A list of recognised investment exchanges (and recognised overseas investment exchanges) is available on the Financial Conduct Authority website.²⁵ AIM is not a recognised investment exchange.

In the case of each item in the statement of financial position measured at a revalued amount, the comparable amounts determined according to the historical cost accounting rules must be shown in a note to the financial statements. *[1 Sch 34(3) (SC), 1 Sch 34(3) (LLP SC)]*.

The comparable amount refers to the aggregate amount of cost and the aggregate of accumulated depreciation and accumulated impairment losses that would have been required according to the historical cost accounting rules. *[1 Sch 34(4) (SC), 1 Sch 34(4) (LLP SC)]*.

Paragraphs 17.32A(d), 18.29A(d) and 20.85 of FRS 102 address similar requirements (see Chapter 20 at 3.9.1, Chapter 21 at 3.4.4 and Chapter 23 at 6.8). *[FRS 102.1AC.16, FRS 102.17.32A, FRS 102.18.29A, FRS 102.20.85]*.

Where fixed assets are measured at revalued amounts, the following information must be given in tabular form:

- (a) Movements in the revaluation reserve in the reporting period, with an explanation of the tax treatment of items therein.

And

- (b) The carrying amount in the statement of financial position that would have been recognised had the fixed assets not been revalued. *[1 Sch 54(2) (SC), 1 Sch 53(2) (LLP SC)]*.

Paragraphs 6.3A (see Chapter 6 at 6.1), 17.32A(d), 18.29A(d), and 29.27(a) of FRS 102 (see Chapter 20 at 3.9.1, Chapter 21 at 3.4.4 and Chapter 31 at 12.3) address similar requirements. *[FRS 102.1AC.17, FRS 102.6.3A, FRS 102.17.32A, FRS 102.18.29A, FRS 102.29.27]*.

The treatment for taxation purposes of amounts credited or debited to the revaluation reserve must be disclosed in a note to the financial statements. *[1 Sch 35(6) (SC), 1 Sch 35(3) (LLP SC)]*.

Paragraph 29.27(a) of FRS 102 (see Chapter 31 at 12.3) addresses similar requirements. *[FRS 102.1AC.18, FRS 102.29.27]*.

5.1.10 Capitalisation of borrowing costs

Where a small entity adopts a policy of capitalising borrowing costs, the inclusion of interest in determining the cost of the asset and the amount of the interest so included is disclosed in a note to the financial statements. *[1 Sch 27(3) (SC), 1 Sch 27(3) (LLP SC)]*.

Paragraph 25.3A(a) of FRS 102 addresses a similar requirement to the second part of this (see Chapter 27 at 4.1). *[FRS 102.1AC.19, FRS 102.25.3A]*.

5.1.11 Impairment of assets

Provisions for impairment of fixed assets (including fixed asset investments) must be disclosed separately in a note to the financial statements if not shown separately in the income statement. *[1 Sch 19(3) (SC), 1 Sch 19(3) (LLP SC)]*.

²⁵ [Recognised Investment Exchanges](#), FCA website (accessed 28 August 2025).

Paragraph 27.32(a) of FRS 102 (see Chapter 29 at 9) addresses similar requirements. [FRS 102.1AC.20, FRS 102.27.32].

Any provisions for impairment of fixed assets that are reversed because the reasons for which they were made have ceased to apply must be disclosed (either separately or in aggregate) in a note to the financial statements if not shown separately in the income statement. [1 Sch 20(2)(SC), 1 Sch 20(2)(LLP SC)].

Paragraph 27.32(b) of FRS 102 (see Chapter 29 at 9) addresses similar requirements. [FRS 102.1AC.21, FRS 102.27.32].

5.1.12 Fair value measurement

Where financial instruments or other assets have been measured in accordance with the fair value accounting rules there must be stated:

- (a) The significant assumptions underlying the valuation models and techniques used to determine the fair values.
- (b) For each category of financial instrument or other asset, the fair value of assets in that category and the change in value:
 - (i) Included directly in the income statement.
 - Or
 - (ii) Credited to or (as the case may be) debited from the fair value reserve, in respect of those assets. [1 Sch 51(2)(a)(SC), 1 Sch 51(2)(b)(SC), 1 Sch 50(2)(a)(LLP SC), 1 Sch 50(b)(LLP SC)].

Section 1A of FRS 102 explains that this disclosure does not apply where financial instruments or other assets are measured at fair value only on initial recognition. Instead, this disclosure applies where financial instruments, certain inventories, investment property, and biological assets are subsequently measured at fair value through profit or loss, which is permitted or required by paragraphs 9.26(c), 11.14(b), 11.14(d)(iii), 11.14(d)(iv), 12.8, 13.4A, 14.4(d), 15.9(d), 16.7 and 34.4 of FRS 102.

Paragraphs 11.41, 11.43, 11.48(a)(i), 11.48(a)(ii), 12.28, 12.29(c) and 12.29(e) of FRS 102 address similar disclosure requirements for financial instruments. See Chapter 15 at 4.1.

Paragraphs 16.10(a) and 16.10(e)(ii) of FRS 102 address similar disclosure requirements for investment property. See Chapter 19 at 4.3.

Paragraphs 34.7(b) and 34.7(c)(i) of FRS 102 address similar disclosure requirements for biological assets. See Chapter 36 at 2.9.1. [FRS 102.1AC.22].

How we see it

The requirements in paragraph 51(2)(b) of Schedule 1 to the Small Companies Regulations, and paragraph 50(2)(b) of Schedule 1 to the Small LLP Regulations and Section 1A (and (b)(ii) in paragraph 1AC.22 above) refer to 'changes in value ... in respect of those assets'.

This appears to be a drafting error, when compared to both Directive 2013/34/EU (the Accounting Directive) and the previous statutory disclosure requirement for financial instruments. In our view, the disclosure is intended to be 'in respect of those financial instruments or other assets'.

Where financial instruments or other assets have been measured in accordance with the fair value accounting rules there must be stated for each class of derivatives, the extent and nature of the instruments, including significant terms and conditions that may affect the amount, timing and certainty of future cash flows. [1 Sch 51(2)(c)(SC), 1 Sch 50(2)(c)(LLP SC), FRS 102.1AC.23].

Where any amount is transferred to or from the fair value reserve during the reporting period, there must be stated in tabular form:

- (a) The amount of the reserve as at the beginning of the reporting period and as at the reporting date respectively.
- And
- (b) The amount transferred to or from the reserve during that year. [1 Sch 51(3)(SC), 1 Sch 50(3)(LLP SC)].

Paragraphs 6.3A (see Chapter 6 at 6.1), 12.29(c) and 12.29(d) (see Chapter 15 at 4.1) address similar requirements. [FRS 102.1AC.24, FRS 102.6.3A, FRS 102.12.29]. See Chapter 6 at 4.3.12.H for use of the fair value reserve, where certain financial instruments are held at fair value.

5.1.12.A Financial instruments measured at fair value

Financial instruments which under UK-adopted international accounting standards may be included in accounts at fair value, may be so included, provided that the disclosures required by such accounting standards are made. [1 Sch 36(4)(SC), 1 Sch 36(4)(LLP SC)].

Section 1A of FRS 102 explains that this only applies in certain circumstances, for example, it does not apply to derivatives. It applies where investments in subsidiaries, associates and joint ventures are measured at fair value through profit or loss. When it applies, the disclosures required by Section 11 that relate to financial assets and financial liabilities measured at fair value, including paragraph 11.48A of FRS 102, must be given. [FRS 102.1AC.26, FRS 102.11.48A].

The explanatory guidance above is consistent that this disclosure applies only to financial instruments that are held at fair value subject to the requirements of paragraph 36(4) to Schedule 1 to the Small Companies Regulations (or paragraph 36(4) to Schedule 1 to the Small LLP Regulations). Therefore, the disclosures would not apply to all financial instruments held at fair value but would apply to those financial instruments held at fair value that are listed in paragraphs 36(2) and (3) of those Schedules but are permitted to be held at fair value in accordance with UK-adopted international accounting standards.

How we see it

In our view, the above disclosure applies to all small entities applying Section 1A with such financial instruments, whether or not subject to the statutory disclosure requirements of paragraph 36(4) (except to the extent that these requirements are not permitted by any statutory framework under which such entities report).

5.1.13 Indebtedness, guarantees and financial commitments

For the aggregate of all items shown under 'Creditors' in the small entity's statement of financial position there must be stated the aggregate of the following amounts:

- (a) The amount of any debts included under 'Creditors' which are payable or repayable otherwise than by instalments and fall due for payment or repayment after the end of the period of five years beginning with the day next following the reporting date.

And

- (b) In the case of any debts so included which are payable or repayable by instalments, the amount of any instalments which fall due for payment after the end of that period. [FRS 102.1AC.27, 1 Sch 55(1)(SC), 1 Sch 54(1)(LLP SC)].

In respect of each item shown under 'Creditors' in the small entity's statement of financial position there must be stated the aggregate amount of any debts included under that item in respect of which any security has been given by the small entity with an indication of the nature and form of any such security. [1 Sch 55(2)(SC), 1 Sch 54(2)(LLP SC)].

Paragraphs 11.46, 13.22(e), 16.10(c), 17.32(a) and 18.28(c) address similar requirements.

[FRS 102.1AC.28, FRS 102.11.46, FRS 102.13.22, FRS 102.16.10, FRS 102.17.32, FRS 102.18.28]. See Chapter 15 at 4.1, Chapter 16 at 3.5.2, Chapter 19 at 4.3 and Chapter 20 at 3.9.1.

The above disclosures are still required even if adapted formats with a non-current and current analysis of assets and liabilities are applied (see 4.4 above).

The total amount of any financial commitments, guarantees and contingencies that are not included in the balance sheet must be stated. [1 Sch 57(1)(SC), 1 Sch 55(1)(LLP SC)].

The total amount of any commitments concerning pensions must be separately disclosed. [1 Sch 57(3)(SC), 1 Sch 55(3)(LLP SC)].

The total amount of any commitments which are undertaken on behalf of or for the benefit of:

- (a) Any parent, fellow subsidiary or any subsidiary of the small entity (see definitions in Chapter 3 at 3.1.2)
- Or
- (b) Any undertaking in which the small entity has a participating interest (see definitions in Chapter 6 at 4.3.4.D)

must be separately stated and those within (a) must also be stated separately from those within (b).

[1 Sch 57(4)(SC), 1 Sch 55(4)(LLP SC)].

Section 1A of FRS 102 explains that such commitments can arise in a variety of situations including in relation to group entities, investments, property, plant and equipment, leases and pension obligations. [FRS 102.1AC.29].

An indication of the nature and form of any valuable security given by the small entity in respect of commitments, guarantees and contingencies within paragraph 1AC.29 of FRS 102 (the above bullet) must be given. [1 Sch 57(2)(SC), 1 Sch 55(2)(LLP SC)].

Paragraphs 11.46, 13.22(e), 16.10(c), 17.32(a) and 18.28(c) address similar requirements.

[FRS 102.1AC.30, FRS 102.11.46, FRS 102.13.22, FRS 102.16.10, FRS 102.17.32, FRS 102.18.28]. See Chapter 15 at 4.1.2.D, Chapter 16 at 3.5.2, Chapter 19 at 4.3 and Chapter 20 at 3.9.1.

If in any reporting period a small entity is or has been party to arrangements that are not reflected in its statement of financial position and at the reporting date the risks or benefits arising from those arrangements are material, the nature and business purpose of the arrangements must be given in the notes to the financial statements to the extent necessary for enabling the financial position of the small entity to be assessed. [s410A, s410A (LLP)].

Examples of off-balance sheet arrangements given in Section 1A of FRS 102 include risk and benefit-sharing arrangements or obligations arising from a contract such as debt factoring, combined sale and repurchase arrangements, consignment stock arrangements, take or pay arrangements, securitisation arranged through separate entities, pledged assets, leases for which the lessee has taken a recognition exemption, outsourcing and the like. In many cases, the disclosures about financial commitments and contingencies required by paragraphs 1AC.29 and 1AC.30 of FRS 102 (the two preceding bulleted disclosures) will also address such arrangements. [FRS 102.1AC.31].

See Chapter 6 at 7.8 for discussion of off-balance sheet arrangements.

5.1.14 Leases

A small entity that is a lessee must provide a general description of its significant leasing arrangements. A similar disclosure requirement is set out in paragraph 20.76 of FRS 102. [FRS 102.1AC.31A, FRS 102.20.76]. See Chapter 23 at 6.8.

If necessary to enable users to understand its significant leasing arrangements, a lessee shall provide additional qualitative and quantitative information. A similar disclosure requirement is set out in paragraph 20.77 of FRS 102. [FRS 102.1AC.31C, FRS 102.20.77]. See Chapter 23 at 6.8.

5.1.15 Provisions and contingencies

A small entity shall provide the disclosures relating to provisions and contingencies set out in paragraphs 21.14 to 21.17A of FRS 102. [FRS 102.1AC.31C, FRS 102.21.14, FRS 102.21.15, FRS 102.21.16, FRS 102.21.17, FRS 102.21.17A]. See Chapter 24 at 4.

5.1.16 Share-based payments

A small entity must provide the disclosures relating to share-based payment transactions set out in paragraphs 26.18(a), 26.18(b)(i), 26.18(b)(vi), 26.18(b)(vii) and 26.23 of FRS 102. [FRS 102.1AC.31D, FRS 102.26.18, FRS 102.26.23]. See Chapter 28 at 14.1 and 14.3.

5.1.17 Notes supporting the income statement

5.1.17.A Exceptional items

The amount and nature of any individual items of income or expenses of exceptional size or incidence must be stated. [1 Sch 61(2)(SC), 1 Sch 59(2)(LLP SC)].

Paragraph 5.9A of FRS 102 addresses a similar requirement in relation to material items. [FRS 102.1AC.32, FRS 102.5.9A]. See Chapter 6 at 5.7.5.

5.1.17.B Leases

A small entity must provide the disclosures relating to short-term leases, leases of low value assets and variable lease payments set out in paragraphs 20.80(b) to 20.80(d) of FRS 102. [FRS 102.1AC.32A, FRS 102.20.80]. See Chapter 23 at 6.8.

5.1.17.C Revenue from contracts with customers

A small entity must provide the disclosures relating to its performance obligations in contracts with customers set out in paragraphs 23.135(a) to 23.135(c) of FRS 102. [FRS 102.1AC.32B, FRS 102.23.135]. See Chapter 25 at 11.4.1.D.

5.1.17.D Tax

A small entity must provide the disclosures relating to current tax and deferred tax set out in paragraphs 29.26 and 29.27(b) of FRS 102. [FRS 102.1AC.32C, FRS 102.29.26, FRS 102.29.27]. See Chapter 31 at 3.7.3.D.

5.1.18 Information about employee numbers

The notes to a small entity's financial statements must disclose the average number of persons employed by the small entity in the reporting period. [s411(1), s411(1)(LLP), FRS 102.1AC.33].

The average number is ascertained by determining the number of persons employed under contracts of service by the company for each month in the financial year (whether throughout the month or not – so including both part- and full-time employees), adding together all the monthly numbers and dividing by the numbers of months in the financial year. [s411(3), s411(4), s411(3)(LLP), s411(4)(LLP)]. See Chapter 6 at 7.7.

5.1.19 Related party disclosures

5.1.19.A Parent of small entity preparing consolidated financial statements

Where the small entity is a subsidiary, the following information must be given in respect of the parent of the smallest group for which consolidated financial statements are drawn up of which the small entity is a member:

- (a) The name of the parent which draws up the consolidated financial statements.
- (b) The address of the parent's registered office (whether in or outside the UK).

Or

- (c) If it is unincorporated, the address of its principal place of business. [1 Sch 65 (SC), 1 Sch 63 (LLP SC)].

Paragraph 33.5 of FRS 102 addresses a similar requirement to paragraph (a). [FRS 102.1AC.34, FRS 102.33.5]. See Chapter 35 at 4.1.

How we see it

In the Small LLP Regulations, as detailed above, (c) reads if it is incorporated, the address of its principal place of business. This differs to the Small Companies Regulations and appears to be a drafting error. We believe that the disclosure at (c) above is also intended for LLPs.

5.1.19.B Related party transactions

A small entity must provide the disclosures required by paragraphs 33.9 and 33.14 of FRS 102 subject to the provisions of paragraphs 33.1A and 33.11 of FRS 102 (see Chapter 35 at 4.3.3.). [FRS 102.1AC.35, FRS 102.33.1A, FRS 102.33.9, FRS 102.33.11, FRS 102.33.14]. 'Related parties' are defined as in paragraph 33.2 (see Chapter 35 at 3.1). [FRS 102.33.2].

Therefore, a small entity that has related party transactions must disclose the nature of the related party relationship as well as information about the transactions, outstanding balances and commitments necessary for an understanding of the potential effect of the relationship on the financial statements.

At a minimum, disclosures must include:

- (a) The amount of the transactions.
- (b) The amount of outstanding balances and commitments, and:
 - (i) Their terms and conditions, including whether they are secured, and the nature of the consideration to be provided in settlement.

And

 - (ii) Details of any guarantees given or received.
- (c) Provisions for uncollectible receivables related to the amount of outstanding balances.

And

- (d) The expense recognised during the period in respect of bad or doubtful debts due from related parties.

Such transactions could include purchases, sales, or transfers of goods or services, leases, guarantees and settlements by the entity on behalf of the related party or *vice versa*. [FRS 102.1AC.35, FRS 102.33.9].

An entity may disclose items of a similar nature in the aggregate except when separate disclosure is necessary for an understanding of the effects of related party transactions on the financial statements of the entity. [FRS 102.1AC.35, FRS 102.33.14].

FRS 102 provides two exemptions from the above disclosure of related party transactions in paragraphs 33.1A and 33.11 of the standard.

- Disclosures need not be given of transactions entered into between two or more members of a group, provided that any subsidiary which is a party to the transaction is wholly owned by such a member. [FRS 102.1AC.35, FRS 102.33.1A]. See Chapter 35 at 1.1.2 for discussion on the application of this exemption. The formats themselves require certain information containing transactions and balances with group undertakings and participating interests.

And

- An entity is exempt from the above disclosure requirements in relation to related party transactions, outstanding balances and commitments with:

(a) A government that has control, joint control or significant influence over the reporting entity.

And

(b) Another entity that is a related party because the same government has control, joint control or significant influence over both the reporting entity and the other entity. [FRS 102.1AC.35, FRS 102.33.11].

See Chapter 35 at 4.3.3 for discussion on the meaning of this exemption.

The FRC has confirmed that small entities disclosing all transactions with related parties in accordance with paragraph 1AC.35 will be compliant with the equivalent requirements of the Small Companies Regulations. [FRS 102.A3.11F, FRS 102.BC.B1A.10]. Hence, the Small Companies Regulations disclosures are not listed in this publication. Nevertheless, questions have arisen as to whether paragraph 1AC.35 and/or the statutory disclosures require information on directors' remuneration or key management personnel compensation. This issue is addressed at 5.1.19.C below.

5.1.19.C Directors' remuneration and key management personnel disclosures

Section 1A requires small entities to give the related party transaction disclosures referred to at 5.1.19.B above. Section 1A does not scope in paragraph 33.7 which requires total key management personnel compensation to be given. However, because the text of paragraph 33.9 of FRS 102 also states that "Those disclosure requirements are in addition to the requirements in paragraph 33.7 to disclose key management personnel compensation", there was uncertainty as to whether a small entity applying Section 1A of FRS 102 needed to disclose total key management personnel compensation.

The position in relation to disclosure of key management compensation and directors' remuneration has been clarified by the FRC in a note on the FRC website²⁶ as follows:

- Paragraphs FRS 102.33.7 and FRS 102.33.9 are intended to be complementary, not duplicative. Accordingly, there is no explicit requirement in FRS 102 for a UK small entity to disclose directors' remuneration.
- However, the small entity may still need to disclose this information to comply with the following provisions:
 - Directors' remuneration not concluded under normal market conditions would require disclosure by law (paragraph 66 of Schedule 1 to the Small Companies Regulations) (see 5.1.19.C above). [1 Sch 66 (SC)].
 - Section 393 of the CA 2006 requires the financial statements of a company to give a true and fair view. [s393, s393 (LLP)]. In order to comply, a small entity may need to provide disclosures in addition to those explicitly required by FRS 102. This could in principle apply to directors' remuneration; judgement may be required.
 - Transactions with directors that fall outside the definition of key management personnel compensation, and therefore outside the scope of paragraph FRS 102.33.7, require disclosure under paragraph FRS 102.33.9 (see 5.1.19.B above). [FRS 102.1AC.35, FRS 102.33.7, FRS 102.33.9].

5.1.19.D Advances, credits and guarantees

Details of advances and credits granted by the small entity to its directors and guarantees of any kind entered into by the small entity on behalf of its directors must be shown in the notes to the financial statements.

The details required of an advance or credit are:

- (a) Its amount
- (b) An indication of the interest rate
- (c) its main conditions
- (d) Any amounts repaid
- (e) Any amounts written off

And

- (f) Any amounts waived.

There must also be stated in the notes to the financial statements the totals of amounts stated under (a), (d), (e) and (f).

The details required of a guarantee are:

- (a) Its main terms
- (b) The amount of the maximum liability that may be incurred by the small entity

And

- (c) Any amount paid and any liability incurred by the small entity for the purpose of fulfilling the guarantee (including any loss incurred by reason of enforcement of the guarantee).

There must also be stated in the notes to the financial statements the totals of amounts stated under (b) and (c). [s413].

Paragraph 33.9 of FRS 102 addresses similar requirements for all related parties. [FRS 102.33.9, FRS 102.1AC.35]. See 5.1.19.B above and Chapter 35 at 4.3.2.

A small entity that is not a company shall provide this disclosure in relation to members of its governing body. [FRS 102.1AC.36].

See Chapter 6 at 7.9 for discussion of the scope and content of this disclosure (which also addresses the disclosures required where the entity prepares group accounts).

5.1.20 Other requirements

5.1.20.A General requirements

The financial statements must state:

- (a) The part of the UK in which the small entity is registered.
- (b) The small entity's registered number.
- (c) Whether the small entity is a public or a private company and whether the small entity is limited by shares or by guarantee.
- (d) The address of the small entity's registered office.

And

- (e) Where appropriate, the fact that the entity is being wound up. [s396, s396 (LLP)].

Paragraph 3.24(a) of FRS 102 (which applies to a small entity applying Section 1A of FRS 102) has similar disclosure requirements, i.e., the legal form of the entity, its country of incorporation, and the address of its registered office (or principal place of business, if different). [FRS 102.1AC.37, FRS 102.1A.7, FRS 102.3.24(a)].

Paragraph 1AC.37(c) above is not required for a small LLP.

This disclosure is discussed further in Chapter 6 at 7.5.

See also 3.3.8 above which addresses the general requirements of FRS 102 on identification of the financial statements.

Where items to which Arabic numbers are given in the formats have been combined, unless they are not material, the individual amounts of any items which have been combined must be disclosed in a note to the financial statements. [1 Sch 4(3)(SC), 1 Sch 4(3)(LLP SC), FRS 102.1AC.38].

See the discussion on the General Rules to the formats at 4.1 above.

The nature and financial effect of material events arising after the reporting date which are not reflected in the income statement or statement of financial position must be stated. [1 Sch 64 (SC), 1 Sch 62 (LLP SC)].

Paragraphs 32.10 and 32.11 of FRS 102 address similar requirements. See Chapter 34 at 3.3 and 3.1.3. [FRS 102.1AC.39, FRS 102.32.10, FRS 102.32.11].

5.1.20.B Requirements for dividends and on transition

A small entity must disclose dividends declared and paid or payable during the period. Paragraph 6.5(b) of FRS 102 addresses similar requirements. See Chapter 6 at 6.2. [FRS 102.1AC.40, FRS 102.6.5].

On first-time adoption of FRS 102, a small entity must provide an explanation of how the transition has affected its financial position and financial performance as set out in paragraph 35.13 of FRS 102.

[FRS 102.1AC.41, FRS 102.35.13].

This would include:

- A description of the nature of each change in accounting policy.
- Reconciliations of the entity's equity determined in accordance with its previous financial reporting framework to its equity determined in accordance with FRS 102 for both of the following dates:
 - (i) The date of transition to FRS 102.
 - And
 - (ii) The end of the latest period presented in the entity's most recent annual financial statements determined in accordance with its previous financial reporting framework.
 - And
- A reconciliation of the entity's profit or loss determined in accordance with its previous financial reporting framework for the latest period in its most recent annual financial statements to its profit or loss determined in accordance with FRS 102 for the same period.

See Chapter 37 at 6.3 for further discussion of the reconciliations presented by a first-time adopter of FRS 102.

5.2 Statutory disclosures not mentioned in Section 1A

Financial statements of a small entity will also need to comply with any statutory requirements arising from the CA 2006 and applicable regulations, or other legal framework that applies to the small entity.

Section 1A does not contain a complete list of all statutory requirements for a small company (or LLP) applying the small companies regime (or small LLPs regime). Some additional disclosures in individual accounts are noted below.

5.2.1 Auditor limitation of liability agreements

A small company which has entered into a liability limitation agreement (that purports to limit the liability owed to a company by its auditor in respect of any negligence, default, breach of duty or breach of trust, occurring in the course of the audit of the accounts, of which the auditor may be guilty in relation to the company [s534]) must disclose its principal terms, the date of the resolution approving the agreement or the agreement's principal terms or, in the case of a private company, the date of the resolution waiving the need for such approval. This disclosure is required in a note to the annual accounts for the financial year to which the agreement relates, unless the agreement was entered into too late for it to be reasonably practicable for the disclosure to be made in those accounts (in which case, the disclosure is made in a note to the company's next accounts). [s538].²⁷ This disclosure does not apply to a small LLP.

A company subject to the small companies regime and an LLP subject to the small LLPs regime is not required to disclose remuneration received or receivable by the company's auditor. [s494, s494 (LLP)].²⁸

²⁷ The Companies (Disclosure of Auditor Remuneration and Liability Limitation Agreements) Regulations 2008 (SI 2008/489) (as amended), regulation 8.

²⁸ The Companies (Disclosure of Auditor Remuneration and Liability Limitation Agreements) Regulations 2008 (SI 2008/489) (as amended), regulation 4.

5.2.2 Audit exemption statement

If a small company takes advantage of an exemption from audit of its annual accounts, its balance sheet will need to contain a statement by the directors to the effect that:

- (a) The company is exempt from audit under section 477 (small companies), section 479A (subsidiary companies), section 480 (dormant companies) or under section 482 (non-profit-making companies subject to public sector audit) of the CA 2006, stating the relevant exemption.
- (b) The members have not required the company to obtain an audit of its accounts for the year in question in accordance with section 476 of the CA 2006.

And

- (c) The directors acknowledge their responsibilities for complying with the requirements of the CA 2006 with respect to accounting records and the preparation of accounts.

The statement must appear above the signature of the director required by section 414 of the CA 2006 (see 5.2.5 below). [s475, s414]. From 1 April 2027 (an absolute date), condition (a) will require the balance sheet to include a statement by the company's directors identifying the exemption in question and confirming that the company qualifies for the exemption.²⁹

LLPs have a similar but not identical audit exemption statement.

If a small LLP takes advantage of an exemption from audit of its annual accounts, its balance sheet will need to contain a statement by the members of the LLP to the effect that:

- (a) The LLP is exempt from audit under section 477 (small LLPs), section 479A (subsidiary LLPs) or section 480 (dormant LLPs) of the CA 2006 (as applied to LLPs by The Limited Liability Partnerships (Accounts and Audit) (Application of Companies Act 2006) Regulations 2008), stating the relevant exemption.

And

- (b) The members acknowledge their responsibilities for complying with the requirements of the CA 2006 (as applied to LLPs by The Limited Liability Partnerships (Accounts and Audit) (Application of Companies Act 2006) Regulations 2008) with respect to accounting records and the preparation of accounts.

The statement must appear above the signature of the designated member of the LLP required by section 414 of the CA 2006, as applied to LLPs (see 5.2.5 below). [s475 (LLP), s414 (LLP)].

Companies House guidance available on the Companies House website includes suitable wording of the audit exemption statements.³⁰

5.2.3 Group accounts not prepared by a parent company

A company subject to the small companies regime (or an LLP subject to the small LLPs regime) is usually exempt from preparing group accounts (unless the additional restrictions discussed in section 399(2A)-(2B) of the CA 2006 apply – see 3.2 above). There is no requirement to disclose use of the exemption available in section 399(2A)-(2B) from preparing group accounts. [s399(2A), s399(2B), s399(2A)(LLP), s399(2B)(LLP)].

However, if the exemption from preparing group accounts in sections 400 or 401 of the CA 2006 is taken, the parent company (or parent LLP) must disclose in the notes to its individual accounts that it is exempt from the obligation to prepare and deliver group accounts. [s400(2)(c), s401(2)(d), s400(2)(c)(LLP), s401(2)(d)(LLP)].

5.2.4 Fixed asset investments valued at deemed cost

Where fixed asset investments (falling under item B.III in the statutory balance sheet format for companies and item A.III for LLPs – see 4.1 above) are included at a value determined on any basis which appears to the directors (for an LLP, the members) to be appropriate in the circumstances of the company/LLP, particulars of the method of valuation adopted and of the reasons for adopting it must be disclosed in a note to the accounts. This disclosure only applies where the valuation is in accordance with the alternative accounting rules but is not required where investments are included at a market value determined as at the date of their last valuation. [1 Sch 32(3)(SC), 1 Sch 32(3)(LLP SC)].

²⁹ [Changes to accounts - Changes to UK company law](#) on Companies House website (accessed 28 August 2025).

³⁰ [Companies House accounts guidance - GOV.UK](#), section 11.1 and [Filing LLP accounts at Companies House - GOV.UK](#), section 10.1 (accessed on 28 August 2025).

This disclosure is required where, for example, investments in subsidiaries, associates or jointly controlled entities are carried using a deemed cost in individual or separate financial statements on transition to FRS 102. [FRS 102.35.10(f)]. See Chapter 37 at 3.4.2. The disclosure does not apply when fixed asset investments are measured at fair value.

6 Small companies and LLPs – UK statutory exemptions

There are two sets of exemptions available for small companies (and small LLPs):

- The small companies regime (and small LLPs regime)
This applies to the preparation of the financial statements (see 6.1 to 6.1.2 below) and the content of the directors' report (see 6.1.3 below).
And
- The small companies exemption
This provides an exemption from preparation of a strategic report and an exemption from certain disclosures in and filing of the directors' report (see 6.2.1 and 7.3 below). [*s414A(2), s414B, s415A, s444A*].

Companies House have confirmed that the option for a small company not to file a directors' report and/or profit and loss account will no longer be available from 1 April 2027 (an absolute date).³¹ It is not clear at the time of writing whether filing requirements will change for small LLPs.

There is no equivalent of the small companies exemption for small LLPs. This is because an LLP is not required to prepare a strategic report (unless it is a traded LLP or banking LLP, categories which are excluded from the small LLPs regime – see 2.3.2 above, [*s414A(1)(LLP), s384(1)(LLP)*]) or a directors' report. In addition, a small LLP would not meet the size criteria to prepare an energy and carbon report. [*s415A (LLP), s416A (LLP)*]. The SORP includes specific disclosures scoped in for small LLPs that might be included in a 'members' report' but are permitted anywhere in the annual report. If a members' report was prepared, this would not be a statutory report.

The small companies regime, small LLPs regime and small companies exemption are available in both:

- Companies Act accounts (non-IAS accounts for an LLP) – i.e., those prepared in accordance with FRS 101 and FRS 102.
And
- IAS accounts, i.e., those prepared in accordance with UK-adopted international accounting standards.

The discussion below sets out the requirements in the CA 2006 and Small Companies Regulations and the equivalents for the small LLPs regime. Unlike the rest of the chapter, both Companies Act accounts and IAS accounts are discussed. It does not cover companies or LLPs applying the micro-entity provisions (which are discussed in Chapter 1 at 5.4).

A company subject to the small companies regime (or an LLP subject to the small LLPs regime) must meet certain small size criteria and not be excluded from the small companies regime (or small LLPs regime), i.e., it must not be one of the types of ineligible company (or LLP) nor a member of an ineligible group. See 2.2 and 2.3 above.

A company entitled to the small companies exemption (see 6.2 below) must meet the same small size criteria as for the small companies regime and must not be an ineligible company (although it may be a member of an ineligible group). The criteria to be subject to the small companies regime are, therefore, more onerous than for the small companies exemption; companies subject to the small companies regime will also qualify for the small companies exemption.

These exemptions operate independently from each other – a company entitled to both the small companies regime and the small companies exemption may choose to apply both, neither, the small companies regime only or the small companies exemption only.

The exemptions in the CA 2006 (and the CA 2006 as applied to LLPs) from preparing group accounts available for small companies and LLPs (which have certain additional restrictions) are discussed at 3.2 and 5.2.3 above.

Certain statements are required where the financial statements are prepared in accordance with the small companies regime (or the small LLPs regime) or small company exemptions are taken in preparing the directors' report or for an audit exemption. See 6.1.3 and 6.2.3 below and 5.2.2 above.

31 *Economic Crime and Corporate Transparency Act 2023*, section 54, 58(3). [Economic Crime and Corporate Transparency Act 2023](#) (which amends section 444 of CA 2006) and [Changes to accounts - Changes to UK company law](#) on Companies House website (accessed 28 August 2025).

6.1 Use of the small companies regime and the small LLPs regime

Companies subject to the small companies regime (see 2.2 above), whether preparing Companies Act accounts or IAS accounts, must provide the disclosures required by the CA 2006, the Small Companies Regulations and other applicable regulations, but are exempt from certain disclosures in Part 15 of the CA 2006 that are required by companies not subject to the small companies regime.

Similarly, LLPs subject to the small LLPs regime (see 2.3 above), whether preparing non-IAS accounts or IAS accounts, must provide the disclosures required by the CA 2006 (as applied to LLPs), the Small LLP Regulations and other applicable regulations, but are exempt from certain disclosures in Part 15 of the CA 2006 (as applied to LLPs) that are required by LLPs not subject to the small LLPs regime.

Different schedules of the Small Companies Regulations and Small LLP Regulations apply to Companies Act accounts (non-IAS accounts for an LLP) and IAS accounts. See 6.1.1 below.

The disclosures of the relevant accounting standard followed must also be given.

The statutory disclosures required in the individual financial statements of a company applying Section 1A are set out at 5.1 and 5.2 above. These incorporate the disclosures of Part 15 of the CA 2006 and Schedule 1 to the Small Companies Regulations (the Small LLP Regulations have similar disclosures). The disclosures for LLPs are generally the same as those for companies, although there are a few differences noted in 5.1 above and LLPs preparing FRS 102 financial statements are also subject to the LLP SORP (see 5 above).

Disclosures in the CA 2006 generally apply both to IAS accounts and Companies Act accounts.

In addition, a company preparing IAS individual and/or group accounts must state that the individual accounts (and any group accounts) are prepared in accordance with UK-adopted international accounting standards. [s397(2), s406(2), s474, s397(2)(LLP), s406(2)(LLP), s474 (LLP)].

How we see it

Our view is that companies subject to the small companies regime (and LLPs subject to the small LLPs regime) can still apply FRS 101 or full FRS 102. However, this does not preclude the small company or small LLP taking advantage of other exemptions applicable to companies subject to the small companies regime (or LLPs subject to the small LLPs regime), although any disclosures required by FRS 101 or full FRS 102, as applicable, will need to be given.

6.1.1 Small Companies Regulations and Small LLP Regulations

The Small Companies Regulations (and Small LLP Regulations) contain significantly fewer disclosures than the Regulations (and LLP Regulations).

Figure 6-1 below sets out the schedules that apply to small companies and small LLPs (certain schedules were removed in 2015 and 2016 which is why the lists are not consecutive).

Figure 6-1 Schedules that apply in the Small Companies Regulations and Small LLP Regulations (as amended)

Small Companies Regulations	Small LLP Regulations
Schedule 1 (Companies Act individual accounts)	Schedule 1 (Non-IAS individual accounts)
Schedule 5 (Matters to be dealt with in directors' report)*	
Schedule 6 (Group accounts)	Schedule 4 (Group Accounts)
- Part 1	- Part 1
- Part 2*	- Part 2*
Schedule 7 (Interpretation of term 'provision')	
Schedule 8 (General interpretation)*	Schedule 5 (General interpretation)*
	Note this includes the definition of a provision.
* Applies to both Companies Act accounts and IAS accounts	* Applies to both non-IAS accounts and IAS accounts

A company subject to the small companies regime preparing Companies Act accounts must comply with all applicable requirements of the Small Companies Regulations. Similarly, an LLP subject to the small LLPs regime preparing non-IAS accounts must comply with all applicable requirements of the Small LLP Regulations.

A company subject to the small companies regime preparing IAS accounts does not apply Schedule 1 nor, where group accounts are prepared, Part 1 of Schedule 6 to the Small Companies Regulations. These schedules set out the formats for the profit and loss account and balance sheet, recognition and measurement principles, and disclosure requirements in Companies Act accounts. Similarly, an LLP subject to the small LLPs regime preparing IAS accounts does not apply Schedule 1 nor Part 1 of Schedule 4 to the Small LLP Regulations.

However, both Companies Act group accounts (non-IAS group accounts for an LLP) and IAS group accounts must give the information on related undertakings set out in Part 2 of Schedule 6 to the Small Companies Regulations (Part 2 of Schedule 4 to the Small LLP Regulations) in the notes to the financial statements. There is an exemption from providing information on certain undertakings where the restrictive conditions of section 409(4) of the CA 2006 apply and use of the exemption is stated. [*Regulations (SC) 10, LLP SC Regulations 7*]. See 3.2.2 above.

Companies subject to the small companies regime (and LLPs subject to the small LLPs regime) that choose to apply Section 1A follow the statutory or adapted formats in Schedule 1 to the Small Companies Regulations (or Schedule 1 to the Small LLP Regulations) (see 4 above).

Where a small entity chooses to apply FRS 101 or full FRS 102 (where Section 1A is not applied), these accounting standards require use of the statutory or adapted formats included in the Regulations (or LLP Regulations). [*FRS 101.AG1, FRS 102.4.2, FRS 102.4.2A, FRS 102.5.5, FRS 102.5.5B, FRS 102.5.7, FRS 102.5.7A*].

A small entity preparing IAS accounts prepares a complete set of financial statements as described in UK-adopted international accounting standards.

6.1.2 Disclosure exemptions for small companies regime and small LLPs regime in IAS accounts and Companies Act accounts

The disclosures included in Part 15 of the CA 2006 apply both to Companies Act accounts (non-IAS accounts, for an LLP) and IAS accounts. UK companies subject to the small companies regime (and LLPs subject to the small LLPs regime) benefit from the following disclosure exemptions from the requirements of Part 15 of the CA 2006 (or the CA 2006 as applied to LLPs):

- The financial impact of off-balance sheet arrangements on the company/LLP (and where group accounts are prepared, on the consolidated group) is not required. However, the nature and business purpose of the arrangements, to the extent necessary for enabling the financial position of the company/LLP (and where group accounts are prepared, of the consolidated group) to be assessed, must be disclosed. [*s410A, s410A (LLP)*]. See 5.1.13 above and Chapter 6 at 7.8).
- Information analysing employee numbers by category and staff costs is not required, although the total (monthly) average number of persons employed by the company/LLP (and where group accounts are prepared, the consolidated group) must be disclosed (see 5.1.18 above and Chapter 6 at 7.7). [*s411, s411 (LLP)*]
And
- No disclosure is required of remuneration received or receivable by the company's (or LLP's) auditor. [*s494, s494 (LLP)*]. See 5.2.1 above.

In addition, the disclosures in Schedule 1 to the Small Companies Regulations and Schedule 1 to the Small LLP Regulations are significantly fewer than those required for large and medium-sized companies applying the Regulations. These disclosures are largely set out in Appendix C of Section 1A (see 5.1 above) and only apply to Companies Act accounts (for a company) and non-IAS accounts (for an LLP).

A company (or LLP) gives disclosures for related undertakings (set out in Part 2 of Schedule 6 to the Small Companies Regulations and Part 2 of Schedule 4 to the Small LLP Regulations) only in group accounts, where prepared (see 3.2.2 above). This disclosure exemption applies to both Companies Act accounts (non-IAS accounts for an LLP) and IAS accounts.

6.1.3 Statements required in the financial statements where the small companies regime or small LLPs regime are used

If a company's financial statements are prepared in accordance with the small companies regime, the company's balance sheet must contain, in a prominent position above the signature of the director (and printed name of the director signing), a statement to the effect that the financial statements have been prepared in accordance with the provisions applicable to companies subject to the small companies regime. A similar statement on the balance sheet is required above the signature (and printed name) of the designated member of the LLP, where the LLP's financial statements are prepared in accordance with the small LLPs regime. This statement does not apply where the company or LLP applies the micro-entity provisions (see Chapter 1 at 5.4). [s414(3)(b), s414(3)(b)(LLP)].

This requirement has been included in Section 1A (and adapted for other small entities). See 3.3.2 above (which includes examples of the above statement) and 5.1.2 above (which covers the related statement of compliance with FRS 102, made in the notes to the financial statements).

6.2 Criteria for use of the small companies exemption

A company is entitled to the small companies exemption in relation to the directors' report (see 6.2.1 below) and the strategic report (see 6.2.2 below) for a financial year if it is entitled to prepare financial statements for the year in accordance with the small companies regime (see 2.2 above) or would be so entitled but for being or having been a member of an ineligible group. [s414B, s415A].

The company must, therefore, meet the same small size criteria as for the small companies regime (and if the company is a parent company, it must head a small group). The company must also not have been an ineligible company itself at any time during the financial year to which the accounts relate (but may still use the small companies exemption if it was a member of an ineligible group at any time during that financial year). See 2.2.3 above for the list of ineligible companies. The small companies exemption, consequently, extends to more companies than those entitled to use the small companies regime.

The small companies exemption is available both to companies preparing Companies Act accounts and companies preparing IAS accounts (i.e., prepared using UK-adopted international accounting standards).

There is no equivalent of the small companies exemption for small LLPs. This is because an LLP is not required to prepare a strategic report (unless it is a traded LLP or banking LLP, categories which are excluded from the small LLPs regime – see 2.3.2 above, [s414A(1)(LLP), s384(1)(LLP)]) or a directors' report.

6.2.1 Disclosure exemptions for the small companies exemption – directors' report

Companies entitled to the small companies exemption are exempt from including the amount recommended by the directors to be paid by way of dividend (required by section 416(3) of the CA 2006). [s415A(2), s416(3)].

If a company is entitled to the small companies exemption, the directors' report must still include:

- The names of persons who were, at any time during the financial year, directors of the company. [s416(1)(a)]
- Specified disclosures of qualifying third party indemnity provisions and qualifying pension scheme indemnity provisions. [s236]

And

- The statement as to disclosure of relevant information to auditors (unless the company has taken advantage of an audit exemption). [s418].

A company subject to the small companies regime may comply with Schedule 5 to the Small Companies Regulations which has fewer disclosures for the directors' report.

Schedule 5 requires disclosure of:

- Certain particulars of UK political donations and UK political expenditure (where the aggregate donations and expenditure made or incurred by the company and its subsidiaries exceed £2,000) and the amount of contributions to a non-UK political party. Wholly-owned subsidiaries of a UK parent company are not required to make this disclosure.
- And
- The company's policy relating to the employment of disabled persons (where the average weekly number of employees exceeds 250). (This disclosure is removed from both the Small Companies Regulations and Regulations for financial years beginning on or after 6 April 2025).³² [5 Sch 2, 5 Sch 3, 5 Sch 5].

³² [The Companies \(Accounts and Reports\) \(Amendment and Transitional Provision\) Regulations 2024](#), paras. 4 and 5.

Where any of the above exemptions are taken, the required statement in the directors' report that the company has taken advantage of the small companies exemption in preparing the directors' report must be made. See Illustration 6-1 at 6.2.3 below.

Where the company is entitled to the small companies exemption, but not subject to the small companies regime, the company must comply with the requirements for the directors' report in Schedule 7 to the Regulations. [Regulations 10].

6.2.2 Small companies exemption from preparing strategic report

A company entitled to the small companies exemption is not required to prepare a strategic report. [s414A(2)]. A company subject to the small companies regime is explicitly not required to prepare a non-financial and sustainability report containing climate-related financial disclosures even if it chose to prepare a strategic report. [s414CA(3)(a)].

While there is no statutory requirement to do so, where a company entitled to the small companies exemption takes advantage of the exemption not to prepare a strategic report, a statement is commonly included in the directors' report, above the signature of the director or secretary (and printed name of the signatory) to explain that it has done so.

6.2.3 Statements required in the directors' report where the small companies exemption is used

The directors' report must be approved by the board of directors and signed on behalf of the board by a director or secretary, [s419(1)], and the name of the signatory printed. [s444(6), s444A(3)]. Where a company has taken advantage of the small companies exemption in preparing the directors' report, a statement to this effect is required in the directors' report, in a prominent place above the signature of the director (or secretary) signing on behalf of the board. [s419(2)]. The statement made in the directors' report refers to the small companies exemption even if the company is also subject to the small companies regime. See Illustration 6-1 for an example of such a statement.

Illustration 6-1: Example small companies exemption statement in directors' report

The directors' report has been prepared in accordance with the provisions applicable to companies entitled to the small companies exemption.

7 Future developments

In February 2026 the FRC published *Amendments to FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland* to reflect the replacement of IAS 1 with IFRS 18. These amendments are applicable for accounting periods beginning on or after 1 January 2027 (to align with the effective date of IFRS 18) with early application permitted.

The amendments:

- Change the requirements for classifying assets and liabilities as current or non-current when choosing to adapt one of the balance sheet formats. [FRS 102.1.72].
- And
- Change the presentation requirements when choosing to adapt one of the statement of financial position formats and/or one of the profit and loss formats. [FRS 102.1.73].

Early application is permitted separately for the amendments related to the classification of assets and liabilities as current or non-current provided that fact is disclosed. [FRS 102.1.72].

Early application is permitted for the changes to the presentation requirements of the statement of financial position and/or profit and loss formats provided the changes to the classification of assets and liabilities as current or non-current are also early applied. Early application must be disclosed. [FRS 102.1.73].

7.1 Changes to the adapted statement of financial position formats

The following changes are made: [FRS 102.1AA.3, FRS 102.1AA.3A, FRS 102.1AA.4]

- 'Intangible assets' is renamed 'intangible assets other than goodwill'
- 'Goodwill' must be shown as a separate line on the face of the statement below 'intangible assets other than goodwill'

- The following must be presented as separate classifications in the statement of financial position:
 - Current assets
 - Non-current assets
 - Current liabilities
 - And
 - Non-current liabilities

When determining the classification of liabilities as current or non-current, an entity must apply paragraphs 4A.8 to 4A.19 of FRS 102. See Chapter 6 at 4.1.2.D. [FRS 102.1AA.3A]. As a result of these amendments paragraph 1AA.6 is deleted.

7.2 Changes to the adapted profit and loss account formats

The profit and loss account formats must include, as a minimum the following amounts for the period:
[FRS 102.1AB.3, FRS 102.1AB.5]

Figure 7-1 Profit and loss account – line items included in adapted formats from 1 January 2027

(a)	Revenue
(b)	Operating expenses
(c)	Operating profit or loss
(d)	Share of the profit or loss of investments in associates and jointly controlled entities accounted for using the equity method ^{#1}
(e)	Profit or loss before financing and taxation ^{#2}
(f)	Finance costs
(g)	Profit or loss before taxation
(h)	Tax expense excluding tax allocated to other comprehensive income or equity
(f)	Profit or loss
#1	Only required in consolidated financial statements, as the equity method is not applied in individual financial statements under FRS 102. Consolidated financial statements are not addressed in detail in this chapter.
#2	If an entity presents within operating profit, finance income and/or finance expenses that do not relate to providing financing to customers, it must not present this line item.

Material accounting policy information may include an entity's choice to adapt one of the balance sheet formats. [FRS 102.1AA.7, FRS 102.1AB.6].

In determining operating profit, a small entity applies the guidance in Section 5 of FRS 102. See Chapter 6 at 5.7.3. [FRS 102.5.9B].

Appendix A - Defined terms

Extract from FRS 102

Appendix I

Glossary

Act	The Companies Act 2006
adopted IFRS	IFRS accounting standards that have been adopted in the relevant jurisdiction. In the UK, this refers to UK-adopted international accounting standards. In the Republic of Ireland, this refers to EU-adopted IFRS.
cash	Cash on hand and demand deposits.
cash equivalents	Short-term, highly liquid investments that are readily convertible to known amounts of cash and that are subject to an insignificant risk of changes in value.
consolidated financial statements	The financial statements of a parent and its subsidiaries presented as those of a single reporting entity.
current assets	Assets of an entity which: (a) for an entity choosing to apply paragraph 1A(1) of Schedule 1 to the Regulations, are not non-current assets; or (b) for all other entities, are not fixed assets.
current liabilities (for the purposes of an entity applying paragraph 1A(1) of Schedule 1 to the Regulations)	Liabilities of the entity which: (a) it expects to settle in its normal operating cycle; (b) it holds primarily for the purpose of trading; (c) are due to be settled within 12 months after the reporting period; or (d) it does not have an unconditional right to defer settlement for at least 12 months after the reporting period.
fixed assets	Assets of an entity which are intended for use on a continuing basis in the entity's activities.
group	A parent and all its subsidiaries.
income statement	Financial statement that presents all items of income and expense recognised in a reporting period, excluding the items of other comprehensive income (referred to as the profit and loss account in the Act).
individual financial statements	The accounts that are required to be prepared by an entity in accordance with the Act or relevant legislation, for example: (a) 'individual accounts', as set out in section 394 of the Act; (b) 'statement of accounts', as set out in section 132 of the Charities Act 2011; or (c) 'individual accounts', as set out in section 72A of the Building Societies Act 1986. Separate financial statements are included in the meaning of this term.
interim financial report	A financial report containing either a complete set of financial statements or a set of condensed financial statements for an interim period.
LLP Regulations	The Large and Medium-sized Limited Liability Partnerships (Accounts) Regulations 2008 (SI 2008/1913)

material	Information is material if omitting, misstating or obscuring it could reasonably be expected to influence decisions that the users of general purpose financial statements make on the basis of those financial statements, which provide financial information about a specific reporting entity.
non-controlling interest	The equity in a subsidiary not attributable, directly or indirectly, to a parent.
non-current assets	Assets of the entity which: (a) it does not expect to realise, or intend to sell or consume, in its normal operating cycle; (b) it does not hold primarily for the purpose of trading; (c) it does not expect to realise within 12 months after the reporting period; or (d) are cash or cash equivalents restricted from being exchanged or used to settle a liability for at least 12 months after the reporting period.
non-current liabilities	Liabilities of the entity which are not current liabilities.
notes (to financial statements)	Notes contain information in addition to that presented in the statement of financial position, statement of comprehensive income, income statement (if presented), combined statement of income and retained earnings (if presented), statement of changes in equity and statement of cash flows. Notes provide narrative descriptions or disaggregations of items presented in those statements and information about items that do not qualify for recognition in those statements.
other comprehensive income	Items of income and expense (including reclassification adjustments) that are not recognised in profit or loss as required or permitted by this FRS or by law.
parent	An entity that has one or more subsidiaries.
profit or loss	The total of income less expenses, excluding the components of other comprehensive income.
qualifying entity (for the purposes of this FRS)	A member of a group where the parent of that group prepares publicly available consolidated financial statements which are intended to give a true and fair view (of the assets, liabilities, financial position and profit or loss) and that member is included in the consolidation*.
Regulations	*As set out in section 474(1) of the Act. The Large and Medium-sized Companies and Groups (Accounts and Reports) Regulations 2008 (SI 2008/410)
related party	A related party is a person or entity that is related to the entity that is preparing its financial statements (the reporting entity). (a) A person or a close member of that person's family is related to a reporting entity if that person: (i) has control or joint control over the reporting entity; (ii) has significant influence over the reporting entity; or (iii) is a member of the key management personnel of the reporting entity or of a parent of the reporting entity. (b) An entity is related to a reporting entity if any of the following conditions apply: (i) the entity and the reporting entity are members of the same group (which means that each parent, subsidiary and fellow subsidiary is related to the others). (ii) one entity is an associate or joint venture of the other entity (or of a member of a group of which the other entity is a member).

Extract from FRS 102

	(iii) both entities are joint ventures of the same third entity. (iv) one entity is a joint venture of a third entity and the other entity is an associate of the third entity. (v) the entity is a post-employment benefit plan for the benefit of employees of either the reporting entity or an entity related to the reporting entity. If the reporting entity is itself such a plan, the sponsoring employers are also related to the reporting entity. (vi) the entity is controlled or jointly controlled by a person identified in (a). (vii) a person identified in (a)(i) has significant influence over the entity or is a member of the key management personnel of the entity (or of a parent of the entity). (viii) the entity, or any member of a group of which it is a part, provides key management personnel services to the reporting entity or to the parent of the reporting entity.
related party transaction	A transfer of resources, services or obligations between a reporting entity and a related party, regardless of whether a price is charged.
reporting date	The end of the latest period covered by financial statements or by an interim financial report.
reporting period	The period covered by financial statements or by an interim financial report.
revenue	Income arising in the course of an entity's ordinary activities.
Small Companies Regulations	The Small Companies and Groups (Accounts and Directors' Report) Regulations 2008 (SI 2008/409)
small entity	A small entity is: (a) a company meeting the definition of a small company as set out in section 382 or 383 of the Act and not excluded from the small companies regime by section 384; (b) an LLP qualifying as small and not excluded from the small LLPs regime, as set out in LLP Regulations; or (c) any other entity that would have met the criteria in (a) had it been a company incorporated under company law.
Small LLP Regulations	The Small Limited Liability Partnership (Accounts) Regulations 2008 (SI 2008/1912)
statement of cash flows	Financial statement that provides information about the changes in cash and cash equivalents of an entity for a period, showing separately changes during the period from operating, investing and financing activities.
statement of changes in equity	Financial statement that presents an entity's profit or loss for a reporting period, other comprehensive income for the period, the effects of changes in accounting policies and corrections of material errors recognised in the period, and the amounts of investments by, and dividends and other distributions to, equity investors during the period.
statement of comprehensive income	Financial statement that presents all items of income and expense recognised in a period, including those items recognised in determining profit or loss (which is a subtotal in the statement of comprehensive income) and items of other comprehensive income. If an entity chooses to present both an income statement and a statement of comprehensive income, the statement of comprehensive income begins with profit or loss and then displays the items of other comprehensive income.

Extract from FRS 102

statement of financial position	Financial statement that presents the relationship of an entity's assets, liabilities and equity as of a specific date (referred to as the balance sheet in the Act).
statement of income and retained earnings	Financial statement that presents the profit or loss and changes in retained earnings for a reporting period.
Statement of Recommended Practice (SORP)	An extant Statement of Recommended Practice developed in accordance with Policy on Developing Statements of Recommended Practice (SORPs). SORPs recommend accounting practices for specialised industries or sectors. They supplement accounting standards and other legal and regulatory requirements in the light of the special factors prevailing or transactions undertaken in a particular industry or sector.
subsidiary	An entity, including an unincorporated entity such as a partnership, that is controlled by another entity (known as the parent).
turnover	The amounts derived from the provision of goods and services after deduction of: (a) trade discounts; (b) value added tax; and (c) any other taxes based on the amounts so derived.

Certain abbreviations used in this chapter are included at 1.4 above.

Relevant definitions for the small companies regime and small LLPs regime are included at 2.2.3.A above

Chapter 6

Presentation of financial statements

Contents

Overview	228
1 Introduction	229
1.1 Applicability to UK companies, LLPs, and other entities	230
1.2 Other entities	230
1.3 February 2026 (FRS 102 (2026)) amendments that form part of the Periodic Review 2024	230
2 Composition of financial statements	232
2.1 Objectives of sections in FRS 102 addressing presentation of financial statements	232
2.2 Frequency of reporting and period covered	233
2.3 Components of a complete set of financial statements	233
2.4 Comparative information	234
2.4.1 Consistency of, and reclassification of comparative information	235
2.5 Identification of the financial statements	235
2.6 Statement of compliance	236
2.6.1 Statement that financial statements have been prepared in accordance with applicable accounting standards	237
2.7 Segmental reporting	237
3 Company law formats	238
3.1 Which formats should be applied?	238
3.1.1 UK companies and LLPs applying FRS 102 (but not Section 1A)	238
3.1.2 Definition of banking company and banking group	238
3.1.3 Definition of insurance company and insurance group	238
3.1.4 Qualifying partnerships (not applying Section 1A)	239
3.1.5 Other entities required to prepare statutory accounts in accordance with Part 15 of CA 2006	239
3.1.6 Other entities (not applying Section 1A)	240
3.2 Required formats - statement of financial position and statement of comprehensive income	240
3.2.1 Individual financial statements	240
3.2.2 Consolidated financial statements	240
3.2.3 Adapted formats	241
3.3 Changes in formats	242
3.4 General Rules to the formats	242

3.4.1	General Rules governing the form of the statutory formats	242
3.4.2	General Rules applying to statutory formats and adapted formats	243
3.5	Non-controlling interests in consolidated financial statements	245
3.5.1	Illustrative examples of presentation of non-controlling interests	245
4	Statement of financial position	247
4.1	Adapted formats (including application issues)	247
4.1.1	Definition of current and non-current assets (adapted formats only)	250
4.1.2	Definitions of current liabilities and non-current liabilities (adapted formats only)	251
4.1.3	Property, plant and equipment	255
4.1.4	Investment property	255
4.1.5	Right-of-use assets and lease liabilities (lessee presentation)	255
4.1.6	Intangible assets	255
4.1.7	Financial assets and financial liabilities	256
4.1.8	Biological assets	256
4.1.9	Inventories	256
4.1.10	Provisions	257
4.1.11	Current tax	257
4.1.12	Deferred tax	257
4.1.13	Equity	257
4.1.14	Other application issues	258
4.1.15	Illustrative statement of financial position (adapted formats)	258
4.2	Statutory formats - format 1 Balance Sheet	260
4.2.1	Modifications of format 1 balance sheet for LLPs	262
4.2.2	Fixed assets and current assets	266
4.2.3	Creditors: amounts falling due within one year and creditors: amounts falling due after more than one year	267
4.3	Application issues for statutory formats - format 1 balance sheet	267
4.3.1	Called up share capital not paid	268
4.3.2	Intangible assets	268
4.3.3	Tangible fixed assets	268
4.3.4	Investments	270
4.3.5	Stocks	273
4.3.6	Debtors (including prepayments and accrued income)	273
4.3.7	Cash at bank and in hand	275
4.3.8	Creditors: amounts falling due within one year and creditors: amounts falling due after more than one year	275
4.3.9	Net current assets or liabilities	279
4.3.10	Total assets less current liabilities	279
4.3.11	Provisions for liabilities	279
4.3.12	Capital and reserves	280
4.3.13	Other application issues	282
4.4	Additional disclosures in respect of share capital (or equivalent) (adapted formats and statutory formats)	284
4.4.1	FRS 102 disclosures in respect of share capital (or equivalent)	284
4.4.2	Information required by the Regulations in respect of share capital	285

4.5	Information on disposal group to be presented in the notes (adapted formats and statutory formats)	286
5	Statement of comprehensive income	287
5.1	Format of the statement of comprehensive income (adapted formats and statutory formats)	287
5.1.1	Section 408 exemption in group accounts	288
5.1.2	The distinction between income, revenue, turnover and gains	288
5.2	Items reported in other comprehensive income (adapted formats and statutory formats)	289
5.2.1	Items reported in other comprehensive income where an entity chooses to apply the recognition and measurement provisions of IAS 39 or IFRS 9	290
5.2.2	Impact of realised and unrealised profits on items reported in other comprehensive income	290
5.3	Single-statement approach (adapted formats and statutory formats)	291
5.4	Two-statement approach (adapted formats and statutory formats)	291
5.5	Adapted formats	292
5.5.1	Other implementation issues (adapted formats)	293
5.5.2	Illustrative statement of comprehensive income (adapted formats)	294
5.6	Statutory formats - format 1 and format 2 profit and loss accounts	296
5.6.1	Turnover (format 1 and format 2)	300
5.6.2	Cost of sales, distribution costs and administrative expenses (format 1)	300
5.6.3	Gross profit (format 1)	301
5.6.4	Other operating income (format 1 and format 2)	301
5.6.5	Income from shares in group undertakings and income from participating interests (format 1 and format 2)	301
5.6.6	Income from other fixed asset investments, other interest receivable and similar income (format 1 and format 2)	302
5.6.7	Amounts written off investments (format 1 and format 2)	302
5.6.8	Interest payable and similar expenses (format 1 and format 2)	303
5.6.9	Tax on profit or loss (format 1 and format 2)	304
5.6.10	Own work capitalised (format 2)	304
5.6.11	Staff costs (format 2)	304
5.6.12	Depreciation and other amounts written off tangible and intangible fixed assets and amounts written off current assets to the extent that they exceed write-offs which are normal in the undertaking concerned (format 2)	304
5.6.13	Changes in stocks of finished goods and work in progress and raw materials and consumables (format 2)	304
5.6.14	Other external expenses and other operating expenses (format 2)	305
5.7	Requirements applicable to both approaches (adapted formats and statutory formats)	305
5.7.1	Disclosure of turnover in the statement of comprehensive income (or separate income statement)	305
5.7.2	Additional line items, headings and subtotals	305
5.7.3	Disclosure of operating profit	305
5.7.4	Analysis of expenses by nature or function	306
5.7.5	Presentation of 'exceptional items'	307
5.7.6	Presentation of extraordinary items	307
5.8	Presentation of discontinued operations (adapted formats and statutory formats)	307

5.8.1	Definition of discontinued operation	308
5.8.2	Adjustments to amounts previously presented in discontinued operations in prior periods	308
5.8.3	Example of presentation of discontinued operations	309
5.9	Earnings per share (adapted formats and statutory formats)	309
5.10	Issues common to adapted and statutory formats	310
5.10.1	Heritage assets	310
5.10.2	Exploration and evaluation of mineral resources	310
5.10.3	Compound instruments	310
6	Statement of changes in equity	311
6.1	Information to be presented in the statement of changes in equity	311
6.1.1	Related disclosures in the Regulations and LLP Regulations	312
6.1.2	Example of statement of changes in equity	313
6.2	Statement of income and retained earnings	314
7	Notes to the financial statements	316
7.1	Structure of the notes	316
7.2	Material accounting policy information	316
7.3	Judgements in applying accounting policies	318
7.4	Information about key sources of estimation uncertainty	318
7.5	Other notes disclosures in the presentation sections of FRS 102	319
7.6	Segmental disclosures of turnover	319
7.7	Staff numbers and costs (and number of members of an LLP)	320
7.8	Off balance sheet arrangements	321
7.8.1	Guarantees, contingencies and commitments	321
7.9	Directors' advances, credits and guarantees	322
7.9.1	Banking companies and holding companies of credit institutions	323

	Appendix A - Defined terms	351
	Appendix B - Index of Illustrations	354

Overview

There is no single section in FRS 102 dealing with the purpose, form, content and structure of financial statements; these topics are addressed principally in the following sections:

- Section 3 Financial Statement Presentation
- Section 4 Statement of Financial Position
- Section 5 Statement of Comprehensive Income and Income Statement
- Section 6 Statement of Changes in Equity and Statement of Income and Retained Earnings
- Section 7 Statement of Cash Flows
- Section 8 Notes to the Financial Statements
- Section 10 Accounting Policies, Estimates and Errors

Chapter 6 addresses sections 3-6 and 8 of FRS 102. Note that Sections 7 and 10 are addressed in Chapters 7 and 9 respectively.

What you need to know

- Sections 3-6 and 8 together set out the requirement for financial statements to give a true and fair view, the requirements for compliance with FRS 102 and what constitutes a complete set of financial statements. Each element of a complete set of financial statements is then elaborated on in its individual section.
- Statutory accounts prepared in accordance with FRS 102 by UK companies are Companies Act accounts and must also comply with statutory requirements of the Companies Act 2006 and applicable regulations. These requirements are discussed where relevant in this chapter.
- Section 3 specifies that a complete set of financial statements includes:
 - A statement of financial position as at the reporting date (to be presented either according to the requirements of the Companies Act 2006 and applicable regulations or following an 'adapted' format, similar to IAS 1 *Presentation of Financial Statements* (for reporting periods beginning on or after 1 January 2027, similar to IFRS 18 *Presentation and Disclosure in Financial Statements* - see section 1.3) with specified line items).
 - Either:
 - A single statement of comprehensive income (to be presented either according to the requirements of the Companies Act 2006 and applicable regulations or following an 'adapted' format, similar to IAS 1 (or IFRS 18), with specified line items).
 - Or
 - A separate income statement and a separate statement of comprehensive income.
 - A statement of changes in equity for the reporting period.
 - A statement of cash flows for the reporting period (see Chapter 7 on the requirements of Section 7).
 - Notes, comprising material accounting policy information and other explanatory information.
- Section 8 expands on what this information must include: the basis of preparation; accounting policies (including judgements made and key sources of estimation uncertainty); disclosures required by FRS 102 not presented elsewhere in the financial statements; and information relevant to understanding the financial statements not presented elsewhere in the financial statements.

1 Introduction

The following sections of FRS 102 - *The Financial Reporting Standard applicable in the UK and Republic of Ireland* - address the presentation, i.e., the form, content and structure, of financial statements:

- Section 3 - *Financial Statement Presentation*
 - Section 4 - *Statement of Financial Position*
 - Section 5 - *Statement of Comprehensive Income and Income Statement*
 - Section 6 - *Statement of Changes in Equity and Statement of Income and Retained Earnings*
 - Section 7 - *Statement of Cash Flows*
- And
- Section 8 - *Notes to the Financial Statements*

The above sections cover the content of a complete set of FRS 102 financial statements of an entity applying the full version of FRS 102, as issued in September 2024, including the primary statements and notes required, the concept of a true and fair view, and general principles underlying preparation of financial statements.

This chapter deals only with Sections 3 to 6 (see 3 to 6 below) and Section 8 (see 7 and 8 below). Section 7 is addressed in Chapter 7. FRS 102's requirements on presentation overlap with Section 1 - *Scope* (which covers the reduced disclosure framework - see Chapter 3), Section 2 - *Concepts and Pervasive Principles* (see Chapter 4) and Section 10 (see Chapter 9). As a consequence of the Periodic Review 2024, minor amendments have been made to these sections, which are incorporated in the discussion in that chapter.

Small entities applying the small entities regime in FRS 102 apply the simpler presentation and disclosure requirements in Section 1A - *Small Entities*. These are based on the statutory requirements for companies subject to the small companies regime. Any requirements relating specifically to small entities contained in Sections 3-6 and Section 8 are addressed in Chapter 5.

Statutory accounts prepared in accordance with FRS 102 by UK companies are Companies Act accounts and must also comply with statutory requirements included in:

- The Companies Act 2006 ('CA 2006')
- And
- *The Large and Medium-sized Companies and Groups (Accounts and Reports) Regulations 2008* (SI 2008/410), as amended ('the Regulations') or *The Small Companies and Groups (Accounts and Directors' Report) Regulations 2008* (SI 2008/409), as amended ('the Small Companies Regulations')

Companies Act accounts are required to give a true and fair view, and to comply with the applicable regulations governing the form and content of the balance sheet and profit and loss account and additional notes. [s396, s404].

Similarly, LLPs preparing statutory accounts and reports in accordance with FRS 102 prepare non-IAS accounts and must comply with the requirements of:

- *The Limited Liability Partnerships (Accounts and Audit) (Application of Companies Act 2006) Regulations 2008* (SI 2008/1911), as amended
- And
- *The Small Limited Partnerships (Accounts) Regulations 2008* ('Small LLP Regulations') (SI 2008/1912) and *The Large and Medium-sized Limited Liability Partnerships (Accounts) Regulations 2008* ('the LLP Regulations') (SI 2008/1913), as amended

Non-IAS accounts for LLPs are required to give a true and fair view and comply with the applicable regulations governing the form and content of the balance sheet and profit and loss account and additional notes. [s396 (LLP), s404 (LLP)].

Chapter 1 at 5 provides information on CA 2006 requirements for statutory accounts and reports for UK companies. The requirements for the accounts of LLPs are similar to those for UK companies. LLPs are not required to prepare statutory reports such as a strategic or directors' report.

FRS 102 mandates that UK companies and LLPs must comply with the requirements for a balance sheet and profit and loss account in the applicable schedules to the Regulations or the LLP Regulations.

[FRS 102.4.2, FRS 102.5.5]. Sections 4 and 5 extend this requirement to other entities, except to the extent that this conflicts with the statutory frameworks that apply to their financial statements. [FRS 102.4.1, FRS 102.5.1].

The Regulations, LLP Regulations and FRS 102 share basic principles underlying the preparation of financial statements such as going concern, prudence, accruals, materiality, aggregation and consistency, although the Regulations and LLP Regulations further restrict when profits may be reported in the profit and loss account (see 8 below). The Regulations and LLP Regulations also set out certain requirements for recognition and measurement of assets and liabilities, namely the historical cost accounting rules, the alternative accounting rules and the fair value accounting rules.

1.1 Applicability to UK companies, LLPs, and other entities

Except where otherwise stated, the rest of this chapter covers the presentation requirements for UK companies and for LLPs.

While this chapter (see 4 below) addresses which profit and loss account and balance sheet formats are applied by a UK banking company (see 3.1.2 below), a UK insurance company (see 3.1.3 below) or, in group accounts, by the holding company of a banking or insurance group, it does not address the content of such formats in detail. The format and content of a profit and loss account and balance sheet of a UK insurance company is discussed in Chapter 38.

LLPs, qualifying partnerships (unless exempt under regulation 7 of *The Partnerships (Accounts) Regulations* 2008) and certain other entities preparing annual accounts in accordance with Part 15 of CA 2006 (see 3.1.4 and 3.1.5 below) are subject to similar requirements to those for UK companies preparing Companies Act accounts, modified as necessary by the specific regulations that govern the content of their annual accounts. The formats for qualifying partnerships are based on those required for UK companies with the modifications discussed at 3.1.4. The formats applicable to LLPs are addressed throughout this chapter, but the main focus of the chapter is on UK companies. The *Statement of Recommended Practice - Accounting by Limited Liability Partnerships* (November 2025) ('LLP SORP') issued by the Consultative Committee of Accounting Bodies (CCAB) provides additional guidance on the requirements of both FRS 102 and the LLP Regulations. The LLP SORP is referred to, where relevant, but its requirements are not covered in detail in this publication.

The presentation requirements in Sections 4 and 5 apply to all entities that apply FRS 102, whether or not they report under CA 2006. Entities that do not report under CA 2006 shall comply with these requirements and with the Regulations (or, where applicable, the LLP Regulations), where referred to, except to the extent that these requirements are not permitted by any statutory framework under which such entities report. [FRS 102.4.1, FRS 102.5.1].

1.2 Other entities

Other entities that apply FRS 102 may include entities required by their governing legislation, or other regulation or requirement to prepare financial statements that present a true and fair view of the financial position and performance of the reporting entity. Entities that are not UK companies need to satisfy themselves that FRS 102 does not conflict with any relevant legal obligations. [FRS 102.A3.41].

The FRC sets out summary information concerning the statutory frameworks for certain entities whose financial statements are required to present a true and fair view, including: building societies, charities established in any part of the UK (accruals accounts), co-operative and community benefit societies, friendly societies and occupational pension schemes. The FRC also comment on how application of FRS 102 relates to the required statutory framework. [FRS 102.A3.42].

1.3 February 2026 (FRS 102 (2026)) amendments that form part of the Periodic Review 2024

IAS 1 will be replaced by IFRS 18 for periods beginning on or after 1 January 2027. Wherever the presentation requirements of IAS 1 are referenced in this chapter, the equivalent reference to the comparable requirement in IFRS 18 is also provided. Some of the requirements of IAS 1 have been moved to IAS 8, which is renamed IAS 8 *Basis of Preparation of Financial Statements*. If the presentation requirements of IAS 1 referenced in this chapter have been moved to IAS 8, the relevant reference in IAS 8 is given.

On 18 February 2026, FRC published *Amendments to FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland and FRS 105 The Financial Reporting Standard applicable to the Micro-entities Regime* (FRS 102 (2026) amendments), following the introduction of IFRS 18. These amendments introduce two main sets of requirements which enable FRS 102 preparers applying the adapted formats to align with the requirements of IFRS 18, clarify the definition of current liabilities and align requirements for the classification of loan arrangements with covenants to those in IAS 1 and IFRS 18.

The February 2026 amendments relating to the adapted formats are effective for periods on or after 1 January 2027, with early adoption permitted (see 9 below).

2 Composition of financial statements

Financial statements are a structured representation of the financial position, financial performance and cash flows of an entity. *[FRS 102 Appendix I]*.

Section 3 explains the requirement that financial statements give a 'true and fair view', what compliance with the standard requires and what a complete set of financial statements contains. *[FRS 102.3.1]*.

UK companies preparing Companies Act accounts must also comply with CA 2006 and the Regulations or the Small Companies Regulations (and other applicable regulations), which set out further recognition, measurement and disclosure requirements. Similarly, LLPs preparing non-IAS accounts must also comply with SI 2008/1911 (which applies the accounts and audit provisions of CA 2006 to LLPs), the LLP Regulations or the Small LLP Regulations (and other applicable regulations), which set out further recognition, measurement and disclosure requirements.

The statutory requirements in the Regulations and LLP Regulations are addressed, where appropriate, in the relevant sections below.

The general principles in the Regulations, LLP Regulations and FRS 102 (which are similar) are discussed at 8 below. There are three accounting models in the Regulations and LLP Regulations for the recognition and measurement of assets and liabilities:

- Historical cost accounting rules
 - Alternative accounting rules (which provide an alternative measurement basis to the historical cost rules, usually at a valuation)
- And
- Fair value accounting rules (which may be applied to living animals and plants, financial instruments, investment properties, and certain categories of stocks)

FRS 102's requirements are generally consistent with, but often more restrictive than, those in the Regulations and LLP Regulations. Certain areas where FRS 102's requirements are in conflict with the Regulations (and consequently, also with the LLP Regulations) are highlighted in Appendix III to FRS 102. The Small Companies Regulations and Small LLP Regulations, where applied, have the same general principles and accounting models, albeit with fewer related disclosures. See Chapter 5 at 6.1.1 and at 6.1.2.

This chapter refers to certain concepts in the Regulations and LLP Regulations. Unless otherwise indicated, these references are interpreted as follows:

- 'General Rules to the formats' are the General Rules included in Section A of Part 1 of Schedule 1 to the Regulations and Section A of Part 1 of Schedule 1 to the LLP Regulations
 - 'Statutory formats' are the formats in Section B of Part 1 of Schedule 1 to the Regulations and Section B of Part 1 of Schedule 1 to the LLP Regulations
- And
- 'Adapted formats' are the formats permitted by paragraph 1A of Schedule 1 to the Regulations and paragraph 1A of Schedule 1 to the LLP Regulations (as an alternative to the 'statutory formats')

2.1 Objectives of sections in FRS 102 addressing presentation of financial statements

Sections 3 to 8 include the following objectives:

- To set out the requirement that the financial statements of an entity shall give a true and fair view, what compliance with FRS 102 requires and what is a complete set of financial statements. *[FRS 102.3.1]*.
- To set out the information that shall be presented in a statement of financial position (referred to as the 'balance sheet' under CA 2006) and how to present it. *[FRS 102.4.1]*.
- To require an entity to present total comprehensive income for a period, being its financial performance for the period - in one or two- statements - and to set out the information that shall be presented in those statements and how to present it. *[FRS 102.5.1]*.
- To set out requirements for presenting the changes in an entity's equity for a period either in a statement of changes in equity, or if specified conditions are met and an entity chooses, in a statement of income and retained earnings. *[FRS 102.6.1]*.

- To set out the information required in a statement of cash flows and how to present it. See Chapter 7 for further details. [FRS 102.7.1].
- And
- To set out the principles underlying information to be presented in the notes to the financial statements and how to present it. In addition, nearly every section of FRS 102 requires disclosures that are normally presented in the notes. [FRS 102.8.1].

2.2 Frequency of reporting and period covered

An entity must present a complete set of financial statements (including comparative information) at least annually.

When the end of an entity's reporting period changes and annual financial statements are presented for a period longer or shorter than one year, the entity shall disclose that fact, the reason for using a longer or shorter period, and the fact that comparative amounts presented in the financial statements, including the related notes, are not entirely comparable. [FRS 102.3.10].

Normally, financial statements are consistently prepared covering a one year period, which, for a UK company or LLP, will generally end with the last day of the accounting reference period, based on the accounting reference date notified to the Registrar.

Some entities, particularly in the retail sector, present financial statements for a 52-week period. This practice is permitted by CA 2006 - companies and LLPs may prepare financial statements to a financial year end, not more than 7 days before or after the end of the accounting reference period, as the directors or members of the LLP may determine. [s390(2)(b), s391, s390(2)(b)(LLP), s391 (LLP)].

How we see it

While FRS 102 does not explicitly address the issue, we consider that financial statements prepared in accordance with FRS 102 can be made up to a financial year end not more than 7 days from the end of the accounting reference period.

2.3 Components of a complete set of financial statements

A complete set of financial statements under FRS 102 (for an entity not applying Section 1A) includes all of the following, each of which must be presented with equal prominence: [FRS 102.3.17, FRS 102.3.21]

- A statement of financial position as at the reporting date (see 3 and 4 below)
 - A statement of comprehensive income for the reporting period (see 3 and 5 below) to be presented either as:
 - A single statement of comprehensive income, displaying all items of income and expense recognised during the period including those items recognised in determining profit or loss (which is a subtotal in the statement of comprehensive income) and items of other comprehensive income
 - Or
 - A separate income statement and a separate statement of comprehensive income. In this case, the statement of comprehensive income begins with profit or loss and then displays the items of other comprehensive income
 - A statement of changes in equity for the reporting period (see 6 below)
 - A statement of cash flows (unless exempt) for the reporting period (see Chapter 7)
- And
- Notes, comprising material accounting policy information and other explanatory information (see 7 below)

In addition to information about the reporting period, FRS 102 also requires comparative information in respect of the preceding period for all amounts presented in the current period's financial statements, unless FRS 102 specifically permits or requires otherwise. Therefore, a complete set of financial statements includes, at a minimum, two of each of the required financial statements and related notes. [FRS 102.3.14, FRS 102.3.20]. Comparative information, including the statutory requirements of the Regulations and LLP Regulations, is discussed at 2.4 below.

Chapter 7 at 3.1 sets out exemptions from preparing a cash flow statement. Qualifying entities (see Chapter 3 at 3.1 and 3.3.1 using the reduced disclosure framework in individual financial statements) are also exempt. FRS 102 further exempts a small entity (as defined in Chapter 5 at 3.3.3) from preparing a cash flow statement. This cash flow exemption is available both to small entities applying Section 1A and to small entities applying the full version of FRS 102, unless they are required to prepare one by an applicable SORP or law or other relevant regulation. [FRS 102.3.1B].

Sections 4 and 5 require that the balance sheet and profit and loss account formats in Part 1 of the applicable schedule of the Regulations or LLP Regulations are followed in presenting the statement of financial position and the 'profit and loss' section of the statement of comprehensive income. These formats include both the statutory formats and the adapted formats available as an alternative to statutory formats under Schedule 1 to the Regulations and Schedule 1 to the LLP Regulations. [FRS 102.4.2, FRS 102.5.5, FRS 102.5.7]. See 3 below for further discussion of the formats.

Other titles for the financial statements can be used, as long as they are not misleading. [FRS 102.3.22]. For instance, an entity may wish to refer to a balance sheet (for the statement of financial position) or the profit and loss account (instead of an income statement, where total comprehensive income is presented in two statements).

If an entity has no items of other comprehensive income in any of the periods presented, it may present only an income statement or a statement of comprehensive income in which the 'bottom line' is labelled profit or loss. [FRS 102.3.19].

If the only changes to equity during the periods presented in the financial statements arise from profit or loss, payments of dividends, corrections of prior period errors and changes in accounting policy, the entity may present a single statement of income and retained earnings in place of the statement of comprehensive income and statement of changes in equity. [FRS 102.3.18].

FRS 102 explains that notes contain information in addition to that presented in the primary statements and provide narrative descriptions or disaggregations of items presented in those statements and information about items that do not qualify for recognition in those statements. [FRS 102.8.1].

2.4 Comparative information

Except when FRS 102 permits or requires otherwise, an entity presents comparative information in respect of the preceding period for all amounts presented in the current period's financial statements, including both the primary statements and the notes. This means that the requirement to present comparative information applies both to mandatory and voluntary information presented for the current period. With regard to narrative and descriptive information, comparatives must be provided when this is relevant to an understanding of the current period's financial statements. [FRS 102.3.14].

In certain cases, FRS 102 provides specific exemptions from presenting comparatives. For example, there is no requirement to present comparatives for the reconciliations of movements in the number of shares outstanding, or of the movements in the carrying amounts of certain assets. The standard clarifies that an entity providing reconciliations of items of fixed assets in accordance with paragraph 51 of Schedule 1 to the Regulations, need not present these reconciliations for prior periods. [FRS 102.3.14A].

The Regulations and LLP Regulations require only one comparative period to be presented for the balance sheet and profit and loss account formats. [1 Sch 7, 1 Sch 7 (LLP)]. The Regulations and LLP Regulations do not specifically require comparative note disclosures but these are required by FRS 102, unless specifically exempted. Other statutory or regulatory frameworks may require further periods to be presented.

The General Rules to the formats (see 3.4 below) require that for each item presented in the balance sheet and profit and loss account, the corresponding amount for the immediately preceding financial year (i.e., the comparative) must also be shown. [1 Sch 7(1), 1 Sch 7(1) (LLP)].

The heading or sub-heading required for a particular item in the balance sheet or profit and loss account format must be presented where there is an amount for that item in either the current or immediately preceding financial year; otherwise, the heading or sub-heading must be omitted. [1 Sch 5 (SC), 1 Sch 5 (LLP SC)]. In other words, nil line items must not be presented.

2.4.1 Consistency of, and reclassification of comparative information

An entity must retain the presentation and classification of items in the financial statements from one period to the next unless: *[FRS 102.3.11]*

- It is apparent, following a significant change in the nature of the entity's operations or a review of its financial statements, that another presentation or classification would be more appropriate having regard to the criteria for selection and application of accounting policies in Section 10 (see Chapter 9).
Or
- FRS 102 (or another applicable FRS) requires a change in presentation.

When entities change the presentation or classification of items in the financial statements, the comparatives must be reclassified, unless this is impracticable, in which case the reason should be disclosed. When comparative amounts are reclassified, the following disclosures are required:

- The nature of the reclassification
 - The amount of each item (or class of items) reclassified
- And
- The reasons for the reclassification *[FRS 102.3.12, FRS 102.3.13]*

Applying a requirement is impracticable when the entity cannot apply it after making every reasonable effort to do so. *[FRS 102 Appendix I]*.

This situation should be distinguished from a reclassification due to a change in use of an asset. An example is a reclassification out of investment property because it ceases to meet the definition of investment property in the current period. This is treated as a transfer arising in the current period and does not lead to a reclassification of comparatives. *[FRS 102.16.9]*.

In addition, the initial application of a policy to revalue property, plant and equipment (or intangible assets, where the strict criteria are met) is treated as a revaluation in accordance with Section 17 - *Property, Plant and Equipment* - and Section 18 - *Intangible Assets other than Goodwill* - respectively. *[FRS 102.10.10A]*. This means that it is reflected as an adjustment in the period of application of the revaluation policy rather than retrospectively.

Restatements of comparatives may also arise from:

- Changes in accounting policy (see Chapter 9 at 3.3)
 - Correction of prior period errors (see Chapter 9 at 3.5)
 - Presentation of discontinued operations (see 5.8 below)
- And
- Hindsight adjustments in respect of provisional fair values of identifiable assets, liabilities and contingent liabilities arising on business combinations (see Chapter 22 at 3.7.4)

FRS 102 (unlike IAS 1/IFRS 18) does not require presentation of a third balance sheet at the beginning of the preceding period when there is a retrospective restatement due to an accounting policy change, reclassification or correction of a material error. *[IAS 1.10(f), IAS 1.40A, IAS 1.40B, IAS 1.40C, IAS 1.40D, IFRS 18.37]*. See Chapter 9 at 2.3.

Where the comparative shown in the balance sheet and profit and loss account formats is not comparable with the amount shown in the current period, the General Rules to the formats (see 3.4 below) permit the comparative to be adjusted. Particulars of the non-comparability, and of any adjustment, must be disclosed in a note to the accounts. *[1 Sch 7(2), 1 Sch 7(2)(LLP)]*. This statutory requirement would permit FRS 102's requirements on restatement of comparatives to be followed. Where amounts are not restated, e.g., due to transitional provisions in accounting policies or where it is impracticable to determine the effects of a change in accounting policies on earlier periods, *[FRS 102.10.11, FRS 102.10.12]*, a note to the financial statements will need to disclose the non-comparability.

2.5 Identification of the financial statements

It is commonly the case that financial statements will form part of a larger annual report, regulatory filing or other document, but FRS 102 only applies to the financial statements (including the notes). An LLP is not required to prepare a members' report, but the LLP SORP requires certain information to be disclosed which may be included in a separate members' report. *[LLP SORP.30, LLP SORP.31]*. A traded LLP or a banking LLP is also required to prepare a strategic report. *[s414A(1), s414A(1)(LLP)]*.

Accordingly, FRS 102 requires that an entity clearly identifies the financial statements and the notes and distinguishes them from other information in the same document. In addition, the entity must display the following information prominently, and repeat it when necessary, for an understanding of the information presented: [FRS 102.3.23]

- The name of the reporting entity and any change in its name from the end of the preceding reporting period.
- Whether the financial statements cover the individual entity or a group of entities.
- The date of the end of the reporting period and the period covered by the financial statements.
- The presentation currency, as defined in Section 30 - *Foreign Currency Translation* (discussed in Chapter 32 at 3.1 and 3.6).

And

- The level of rounding, if any, used in presenting amounts in the financial statements.

In practice, these requirements can be met through the use of appropriate headings for pages, statements, notes and columns etc., for example: the inclusion of a basis of preparation note within the accounting policies; the use of appropriate titles for the primary financial statements, distinguishing group and company; and the use of appropriate headings in the columns in the primary financial statements (and notes to the financial statements). Entities will need to consider how best to present the required information where financial statements are made available electronically.

Financial statements are usually presented to an appropriate level of rounding, such as thousands or millions of currency units. An appropriate level of rounding can avoid obscuring useful information, but entities need to ensure that material information is not omitted (see 8.4 below). The level of rounding used must be clearly disclosed in the primary statements and notes to the financial statements. Entities are not precluded from using lower levels of rounding in certain notes to the financial statements. For example, where the financial statements are presented in millions of units of the presentation currency, it may be appropriate to include information on directors' remuneration at a lower level of rounding. In all cases, it is important that the units used are clearly stated.

FRS 102 also requires disclosures in the notes concerning matters relating to legal form and registration, see 7.5 below.

2.6 Statement of compliance

A set of financial statements prepared in accordance with FRS 102 must contain an explicit and unreserved statement of compliance with FRS 102 in the notes to the financial statements. Financial statements must not be described as complying with FRS 102 unless they comply with *all* the requirements of the standard.

[FRS 102.3.3, FRS 100.9].

FRS 102 additionally requires a public benefit entity (see Chapter 36 at 6 for the definition of a public benefit entity) that applies the 'PBE' prefixed paragraphs to make an explicit and unreserved statement that it is a public benefit entity. [FRS 102.PBE3.3A]. This is because the specific requirements reserved for public benefit entities (prefixed with 'PBE') must not be applied directly, or by analogy by entities that are not public benefit entities (other than, where specifically directed, entities within a public benefit entity group). [FRS 102.1.2]. See Chapter 3 at 2.5.2.

An example is presented Illustration 2-1 below.

Illustration 2-1: Statement of Compliance - illustrative wording

These financial statements were prepared in accordance with Financial Reporting Standard 102 'The Financial Reporting Standard applicable in the UK and Republic of Ireland'. [The [company/entity] is a public benefit entity as defined in Financial Reporting Standard 102 'The Financial Reporting Standard applicable in the UK and Republic of Ireland'].*

* delete as applicable.

In special circumstances when management concludes that compliance with any requirement of FRS 102 or applicable legislation (only where it allows for a true and fair override) is inconsistent with the requirement to give a true and fair view, the entity shall depart from that requirement to the extent necessary to give a true and fair view, giving the required disclosures set out in paragraph 5 of section 3 of the standard.

[FRS 102.3.4, FRS 102.3.5]. See 8.2 below for further discussion of the 'true and fair override' under FRS 102 (and where applicable, under CA 2006), together with the implications for the statement of compliance.

2.6.1 Statement that financial statements have been prepared in accordance with applicable accounting standards

The Regulations (and LLP Regulations) require a large UK company preparing Companies Act accounts (or a large LLP preparing non-IAS accounts) to state in the notes to the accounts whether the accounts have been prepared in accordance with applicable accounting standards, giving particulars of any material departure from those standards and the reasons for it (see Chapter 1 at 3.5). [1 Sch 45, 1 Sch 45 (LLP)].

This statement is also required in the group accounts of a medium-sized company or LLP (see Chapter 1 at 5.6.1) but not in its individual accounts. [Regulations 4(2A), 1 Sch 45, LLP Regulations 4(2A), 1 Sch 45 (LLP)].

Where a 'true and fair override' in accordance with paragraph 5 of section 3 of the standard (see 8.2 below) is applied in the financial statements, the above statement will need to include or refer to the disclosures of the override.

Financial statements prepared in accordance with FRS 102 are prepared in accordance with applicable accounting standards (which are defined in section 464 of CA 2006). [s464, s464 (LLP)].

2.7 Segmental reporting

FRS 102 requires certain entities to apply IFRS 8 *Operating Segments*. IFRS 8 applies to an entity whose debt or equity instruments are publicly traded, or that files, or is in the process of filing, its financial statements with a securities commission or other regulatory organisation for the purpose of issuing any class of instruments in a public market, or an entity that chooses to provide information described as segment information.

FRS 102 states that if an entity discloses disaggregated information, but that information does not comply with IFRS 8's requirements, it is not permitted to describe that information as segment information.

[FRS 102.1.5].

The determination of whether a group falls into the scope of IFRS 8 relates solely to the parent entity, rather than to subsidiaries within the group. [IFRS 8.BC.23]. Therefore, IFRS 8 does not apply to a group headed by a parent that has no listed financial instruments, even if the group contains a subsidiary that has any of its equity or debt instruments traded in a public market. Of course, a subsidiary with publicly traded debt or equity instruments preparing FRS 102 financial statements would be required to provide segment information in accordance with IFRS 8 in its financial statements.

IFRS 8 describes a 'public market' as including a domestic or foreign stock exchange or an over-the-counter market, including local and regional markets, [IFRS 8.2], but does not define what would make some markets 'public' and others not.

How we see it

In our view, a market is 'public' when buyers and sellers (market participants) can transact with one another (directly; through agents; or in a secondary market) at a price determined in that market. A public market does not exist when the buyers and sellers can transact only with the entity itself (or an agent acting on its behalf).

The requirement for an entity to list its securities on a stock exchange is not the sole factor in determining whether the entity is in scope of IFRS 8. Its securities must be traded in a public market meeting the criteria above.

See the EY publication, International GAAP®, for a discussion of the scope of IFRS 8 and its requirements for segmental reporting. See 7.6 below for further discussion of the segmental disclosures of turnover.

3 Company law formats

Sections 4 and 5 of FRS 102 cover the requirements for the statement of financial position and statement of comprehensive income (and income statement, where the statement of comprehensive income is presented as two statements) respectively.

Sections 4 and 5 apply to *all* FRS 102 reporters (apart from small entities applying Section 1A), whether or not they report under CA 2006. Entities that do not report under CA 2006 are required to comply with the requirements set out in Sections 4 and 5 and with the Regulations (or, where applicable, the LLP Regulations) where referred to in Sections 4 and 5, except to the extent that these requirements are not permitted by any statutory framework under which such entities report. *[FRS 102.1A.7, FRS 102.4.1, FRS 102.4.1A, FRS 102.5.1, FRS 102.5.1A]*.

3.1 Which formats should be applied?

3.1.1 UK companies and LLPs applying FRS 102 (but not Section 1A)

3.2.1 and 3.2.2 below explain which formats are applied by UK companies and LLPs applying the full version of FRS 102.

The definitions of banking company, banking group, insurance company, and insurance group are relevant to determining which formats are required. See 3.1.2 and 3.1.3 below.

3.1.2 Definition of banking company and banking group

A 'banking company' means a person who has permission under Part 4A of the Financial Services and Markets Act 2000 to accept deposits, other than:

- A person who is not a company.
And
- A person who has such permission only for the purpose of carrying on another regulated activity in accordance with permission under that Part.

This definition is to be read with section 22 of the Financial Services and Markets Act 2000, any relevant order under that section and Schedule 2 to the Financial Services and Markets Act 2000. *[s1164(2), s1164(3)]*.

A 'banking group' means a group (i.e., a parent undertaking and its subsidiary undertakings) where the parent company is a banking company or where: *[s1164(4), s1173(1)]*

- The parent company's principal subsidiary undertakings are wholly or mainly credit institutions.
And
- The parent company does not itself carry on any material business apart from the acquisition, management and disposal of interests in subsidiary undertakings.

For the purposes of the definition of 'banking group', the 'principal subsidiary undertakings' are the subsidiary undertakings of the company whose results or financial position would principally affect the figures shown in the group accounts and the 'management of interests in subsidiary undertakings' includes the provision of services to such undertakings. *[s1164(5)]*.

A credit institution is defined as a credit institution within the meaning of Article 4(1)(1) of Regulation (EU) No. 575/2013 of the European Parliament and of the Council, i.e., as "an undertaking the business of which is to take deposits or other repayable funds from the public and to grant credits for its own account." *[s1173(1)]*.

3.1.3 Definition of insurance company and insurance group

An 'insurance company' means:

- An authorised insurance company (i.e., a person (whether incorporated or not) who has permission under Part 4A of the Financial Services and Markets Act 2000 to effect or carry out contracts of insurance).
- Or

- Any other person (whether incorporated or not) who:
 - Carries on insurance market activity (as defined in section 316(3) of the Financial Services and Markets Act 2000).
 - Or
 - May effect or carry out contracts of insurance under which the benefits provided by that person are exclusively or primarily benefits in kind in the event of accident to or breakdown of a vehicle.

Neither definition includes a friendly society within the meaning of the Friendly Societies Act 1992.

[s1165(2), s1165(3), s1165(4)].

References to 'contracts of insurance' and 'to the effecting or carrying out of such contracts' must be read with section 22 of the Financial Services and Markets Act 2000, any relevant order under that section and Schedule 2 to the Financial Services and Markets Act 2000. [s1165(8)].

An 'insurance group' means a group (i.e., parent undertaking and its subsidiary undertakings) where the parent company is an insurance company or where: [s1165(5)]

- The parent company's principal subsidiary undertakings are wholly or mainly insurance companies.
- And
- The parent company does not itself carry on any material business apart from the acquisition, management and disposal of interests in subsidiary undertakings.

For the purposes of the definition of 'insurance group', the 'principal subsidiary undertakings' are the subsidiary undertakings of the company whose results or financial position would principally affect the figures shown in the group accounts and the 'management of interests in subsidiary undertakings' includes the provision of services to such undertakings. [s1165(6)].

3.1.4 Qualifying partnerships (not applying Section 1A)

A qualifying partnership (as defined in the *Partnerships (Accounts) Regulations 2008* (SI 2008/569), unless exempt under regulation 7 of SI 2008/569, is required to prepare annual accounts and reports as would be required, if the partnership were a company under Part 15 of CA 2006 or under the Small Companies Regulations or the Regulations.

Part 1 of the Schedule to these regulations sets out certain modifications and adaptations to be made to the Regulations and Small Companies Regulations for these purposes. In addition, modifications may be necessary to take account of the fact that partnerships are unincorporated. For the purposes of the formats, there is no requirement for the profit and loss account to show profit or loss before taxation.³³

Consequently, the requirements for qualifying partnerships preparing statutory accounts are the same (subject to the modifications and adaptations noted above) as for UK companies (see 3.1.1 above).

3.1.5 Other entities required to prepare statutory accounts in accordance with Part 15 of CA 2006

Certain other entities are required by regulations to prepare annual accounts as if the entity is a company subject to Part 15 of CA 2006 and these regulations specify the formats to be applied for the balance sheet and profit and loss account. Some examples are given below.

The Bank Accounts Directive (Miscellaneous Banks) Regulations 2008 (SI 2008/567) requires a 'qualifying bank' (as defined in those regulations) to prepare annual accounts and a directors' report as if it were a banking company (or the parent company of a banking group) in accordance with Schedule 2 to the Regulations (with certain adaptations or modifications set out in the Schedule to SI 2008/567).

Similarly, an insurance undertaking (as defined in *The Insurance Accounts Directive (Miscellaneous Insurance Undertakings) Regulations 2008* (SI 2008/565)) must prepare annual accounts and a directors' report as if it were an insurance company (or the parent company of an insurance group) in accordance with Schedule 3 to the Regulations (with certain adaptations or modifications).

The entities described above would not be eligible to apply Section 1A. Such entities discussed above are generally outside the scope of this publication. However, it is important that all entities determine the statutory framework, if any, that applies to the preparation of their financial statements.

³³ Partnerships (Accounts) Regulations 2008 (SI 2008/569), para. 4 and Schedule.

3.1.6 Other entities (not applying Section 1A)

Other entities (not applying Section 1A) must apply the formats included in one of Schedules 1 to 3 to the Regulations or in the LLP Regulations, except to the extent that these requirements are not permitted by any statutory framework under which such entities report. [FRS 102.4.1, FRS 102.4.1A, FRS 102.4.2, FRS 102.5.1, FRS 102.5.5, FRS 102.5.7]. The Basis for Conclusions to FRS 102 states that “it was concluded that all entities applying FRS 102 would be required to follow company law formats as this would promote consistency between reporting entities regardless of the legal framework under which they operate”. [FRS 102.BC.A15].

As FRS 102 does not specify which format should be used, management of such entities must apply judgement in determining the most appropriate format to apply for the circumstances of the entity concerned, where the statutory framework is not prescriptive.

3.2 Required formats - statement of financial position and statement of comprehensive income

3.2.1 Individual financial statements

An entity must present its statement of financial position and, in the statement of comprehensive income (or in the separate income statement), the items to be included in a profit and loss account in accordance with one of the following requirements for individual financial statements: [FRS 102.4.2, FRS 102.5.5, FRS 102.5.7]

- Part 1 General Rules and Formats of Schedule 1 to the Regulations - applies to companies other than banking companies (defined in section 1164) and insurance companies (defined in section 1165) [Regulations 3]
- Part 1 General Rules and Formats of Schedule 2 to the Regulations - applies to banking companies [Regulations 5]
- Part 1 *General Rules and Formats* of Schedule 3 to the Regulations - applies to insurance companies [Regulations 6]
- Part 1 *General Rules and Formats* of Schedule 1 to the LLP Regulations - applies to limited liability partnerships (LLPs) [LLP Regulations 3]

Schedule 1 to the Regulations and Schedule 1 to the LLP Regulations provide a choice of:

- Statutory formats (as set out in Section B of Part 1 of those schedules) - see 4.2, 4.3 and 5.6 below
- Or
- Adapted formats (as permitted by paragraph 1A of Schedule 1 to the Regulations and paragraph 1A of Schedule 1 to the LLP Regulations) - see 3.2.3, 4.1 and 5.5 below

Schedule 2 and Schedule 3 to the Regulations provide only for statutory formats.

The Regulations require individual accounts of a banking or insurance company to contain a statement that they are prepared in accordance with the provisions of the Regulations relating to banking or insurance companies, as relevant. [Regulations 5(3), Regulations 6(3)]. The definitions of a banking company and an insurance company are given at 3.1.2 and 3.1.3 above.

3.2.2 Consolidated financial statements

The consolidated statement of financial position and consolidated statement of comprehensive income (or consolidated income statement, where the two-statement approach is used) of a group must be presented in accordance with the requirements for a consolidated balance sheet and consolidated profit and loss account of Schedule 6 to the Regulations or Schedule 3 to the LLP Regulations. [FRS 102.4.2, FRS 102.5.5, FRS 102.5.7].

Schedule 6 to the Regulations addresses the balance sheet and profit and loss account formats applicable to group accounts of companies, modifying the formats included in the earlier schedules. The group accounts must comply, so far as practicable with the provisions of Schedule 1 to the Regulations (including the formats) as if the undertakings included in the consolidation were a single company. [Regulations 9, 6 Sch 1(1)].

The parent company of a group (other than a banking or insurance group) applies Part 1 of Schedule 6 to the Regulations. The parent company of a banking group (defined in section 1164(4)-(5)) applies Part 1 (as modified by Part 2) of Schedule 6 to the Regulations. The parent company of an insurance group (defined in section 1165(5)-(6)) applies Part 1 (as modified by Part 3) of Schedule 6 to the Regulations. [Regulations 9].

This means that the parent company of a group (other than a banking or insurance group) follows the formats in Schedule 1 to the Regulations in its group accounts. The parent of a banking group follows the formats in Schedule 2 to the Regulations in its group accounts. The parent of an insurance group follows the formats in Schedule 3 to the Regulations. In each case, Schedule 6 to the Regulations sets out the modifications required to the respective formats used in the individual accounts.

The Regulations require that the group accounts prepared by a parent of a banking or insurance group must make a statement that they are prepared in accordance with the provisions of the Regulations relating to banking groups or insurance groups, as relevant. *[Regulations 9(4)]*.

It is possible for the parent company of a banking and insurance group to be required to follow the formats in Schedule 1 to the Regulations in its individual accounts (i.e., where it is not a banking or insurance company itself).

Schedule 3 to the LLP Regulations similarly addresses the balance sheet and profit and loss formats applicable to group accounts of LLPs. *[LLP Regulations 6, 3 Sch 1 (LLP), FRS 102.4.2, FRS 102.5.5, FRS 102.5.7]*. The parent LLP follows the formats in Schedule 1 to the LLP Regulations, with certain modifications to the formats used in the individual accounts.

The modifications for group accounts for companies (other than banking and insurance companies) and LLPs are addressed at 3.5 (presentation of non-controlling interest), and in the introductory sections at 4.1 and 5.5 (adapted formats) and 4.2 and 5.6 (statutory formats) below. Where adapted formats (see 3.2.3 below) are used, the only modification is in relation to non-controlling interests.

3.2.3 Adapted formats

Adapted formats can be used by UK companies and by LLPs respectively.

Paragraph 1A of Schedule 1 to the Regulations (and paragraph 1A of Schedule 1 to the LLP Regulations) set out the adaptations to the statutory formats permitted for the balance sheet and profit and loss account. Paragraph 1A (set out in full below) refers to the formats in Section B of Part 1 of Schedule 1 to the Regulations (and Section B of Part 1 of Schedule 1 to the LLP Regulations).

A company's directors (or the members of an LLP) may adapt one of the balance sheet formats in Section B of Part 1 of Schedule 1 to the Regulations (or Section B of Part 1 of Schedule 1 to the LLP Regulations) to distinguish between current and non-current items in a different way and may adapt one of the profit and loss account formats in Section B of Part 1 of Schedule 1 to the Regulations (or Section B of Part 1 of Schedule 1 to the LLP Regulations), provided that: *[1 Sch 1A(1), 1 Sch 1A(1)(LLP)]*

- (a) The information given is at least equivalent to that which would have been required by the use of the format, had it not been adapted.

And

- (b) The presentation of those items is in accordance with generally accepted accounting principles or practice.

So far as is practicable, the General Rules to the formats (i.e., provisions of paragraphs 2 to 9A of Section A of Part 1 of Schedule 1 to the Regulations or the same paragraphs in the LLP Regulations - see 3.4 below) apply to a company's (or an LLP's) balance sheet or profit or loss account, notwithstanding any adaptation applying paragraph 1A. *[1 Sch 1A(3), 1 Sch 1A(3)(LLP)]*.

Adapted formats, as modified by Schedule 6 to the Regulations (or Schedule 3 to the LLP Regulations) (see 3.2.2 above) may also be used in group accounts of a parent company of a group (other than a banking group or insurance group) and in the group accounts of a parent LLP. *[6 Sch 1(1), 3 Sch 1 (LLP)]*. Adapted formats are not permitted to be used in the group accounts of banking groups or insurance groups because their group accounts are drawn up in accordance with Schedule 2 and Schedule 3 to the Regulations (with modifications), which do not allow for adapted formats.

Paragraph 1A provides limited guidance on the content of the adapted formats, leaving the detail to UK accounting standards. Indeed, Appendix III to FRS 102 states that "for entities within its scope, FRS 102 sets out a framework for the information to be presented by those entities choosing to adapt the formats". *[FRS 102.A3.38]*.

Entities applying adapted formats for the balance sheet and profit and loss account must, therefore, follow the requirements for adapted formats in Sections 4 and 5, which allow a presentation of the statement of financial position and the statement of comprehensive income to be much closer to IAS 1/IFRS 18³⁴. These formats might be used where IFRS is used for group reporting, but FRS 102 has been adopted in the individual accounts of group undertakings or to assist comparability with competitors.

Sections 4 and 5 specify that, at a minimum, certain line items are presented in the statement of financial position and statement of comprehensive income (or income statement, where the two-statement approach is used), with further sub-classifications of certain line items presented in the statement of financial position in the notes to the financial statements. In addition, FRS 102 sets out when additional line items must be presented and how adapted formats can be modified (see 3.4.2, 4.1 and 5.5 below). [FRS 102.4.2C, FRS 102.4.3, FRS 102.5.5C, FRS 102.5.9]. In general, few difficulties should arise over classification of line items where adapted formats are applied since the required line items are aligned with the categories of assets and liabilities discussed in FRS 102. Differences in classification are discussed at 4.1 and 5.5 below.

Schedule 1 to the Regulations (and Schedule 1 to the LLP Regulations) require supplementary information in respect of certain line items in the balance sheet and profit and loss account to be given in the notes to the accounts. This information is in respect of line items found in the statutory formats and may not align completely with the line items used, where the adapted formats are applied.

See 4.1 and 5.5 below for further discussion of adapted formats.

3.3 Changes in formats

The General Rules to the formats (see 3.4 below) require that once a company's (or an LLP's) the statement of financial position and the statement of comprehensive income has been prepared for any financial year using one of the formats (in Section B of Part 1 of Schedule 1 to the Regulations or Section B of Part 1 of Schedule 1 to the LLP Regulations), the company's directors (or the members of an LLP) must use the same format in preparing Companies Act accounts (non-IAS accounts, for an LLP) for subsequent financial years, unless in their opinion there are special reasons for a change. Particulars of any such change must be given in a note to the accounts in which the new format is first used, and the reasons for the change must be explained. [1 Sch 2, 6 Sch 1, 1 Sch 2 (LLP), 3 Sch 1 (LLP)].

There are similar rules for changes in statutory profit and loss account formats for banking companies in Schedule 2 to the Regulations. [2 Sch 3, 6 Sch 1]. There is no choice of statutory balance sheet formats in Schedule 2 to the Regulations or of statutory formats in Schedule 3 to the Regulations.

While this paragraph refers to the statutory formats, the General Rules apply so far as is practicable to adapted formats. [1 Sch 1A(3), 1 Sch 1A(3)(LLP)].

How we see it

In our view, the same requirements apply to changes in the statutory format used and to a change between statutory formats and adapted formats.

A change in the format applied is regarded as a change in accounting policy for the purposes of FRS 102 and, therefore, is applied retrospectively. Accounting policies are defined as "the specific principles, bases, conventions, rules and practices applied by an entity in preparing and presenting financial statements".

[FRS 102 Appendix I, FRS 102.10.2]. See Chapter 9 at 3.3 for the requirements on changes in accounting policy.

3.4 General Rules to the formats

The following discussion relates to the General Rules to the formats which apply to balance sheet and profit and loss account formats included in Schedule 1 to the Regulations (and Schedule 1 to the LLP Regulations).

The General Rules to the formats also cover changes in formats (see 4.3 above).

3.4.1 General Rules governing the form of the statutory formats

Subject to paragraph 1A (which provides for adapted formats - see 3.2.3 above) and the following provisions of the Schedule:

³⁴ On 18 February 2026, the FRC published the FRS 102 (2026) amendments, following the introduction of IFRS 18. These amendments form part of the Periodic Review 2024. However, these amendments are effective for periods on or after 1 January 2027 (see 9 below).

- Every balance sheet of a company (or an LLP) must show the items listed in either of the balance sheet formats.
And
- Every profit and loss account of a company (or an LLP) must show the items listed in either of the profit and loss account formats.

The items in the balance sheet and profit and loss account statutory formats must be shown in the order and under the headings and sub-headings given in the particular format used, but the letters or numbers assigned to that item in the format do not need to be given (and are not in practice). References in the Schedule to items listed must be read together with any of the notes following the formats in Section B which apply to those items, which may also permit alternative positions for particular items. [1 Sch 1, 1 Sch 1 (LLP)]. The individual line items in the statutory balance sheet and profit and loss account formats are discussed respectively at 4.2 and 5.6 below.

While there are two statutory formats, format 1 and format 2, available for the balance sheet, only format 1 is commonly used. Both format 1 and format 2 profit and loss accounts are commonly used. There are some differences in detail in the line items required in the LLP statutory formats compared to the company statutory formats.

See Figure 4-2 at 4.2 below for the format 1 balance sheet and Figures 5-2 to 5-5 at 5.6 below for the format 1 and format 2 profit and loss accounts for the individual accounts of a UK company and an LLP. Each of the headings and sub-headings denoted with a capital letter or Roman numeral must be presented in the balance sheet.

3.4.2 General Rules applying to statutory formats and adapted formats

The following provisions in the General Rules to the formats apply to the statutory formats and, so far as is practicable, to the adapted formats. [1 Sch 1A(3)].

The Regulations (and LLP Regulations) do not provide further guidance on how 'so far as is practicable' is to be interpreted.

How we see it

In our view, the phrase 'so far as is practicable' is needed because the General Rules have been written from the perspective of the statutory formats and refer to items given an Arabic number which may not have a direct counterpart in the adapted formats. In other cases, such as in relation to comparatives, there are no difficulties in applying the requirements. We do not consider that 'so far as is practicable' allows companies or LLPs the flexibility to regard the General Rules to the formats as optional.

Schedules 1 to the Regulations and the LLP Regulations require that every profit and loss account must show 'profit or loss before taxation' as a line item in the profit and loss account. [1 Sch 6, 1 Sch 6 (LLP)]. Previously, the line item required was 'profit or loss on ordinary activities before taxation'. This change was not in fact made to the formats in Schedule 2 and Schedule 3 to the Regulations, nor was it made to the disclosures required by Section 29 of FRS 102 (see Chapter 31 at 12.3). The line item 'profit or loss before taxation' is not required for a qualifying partnership preparing statutory accounts (see 3.1.4 above).³⁵

How we see it

In our view, for a company following Schedule 1 formats, the line item must be labelled 'profit or loss before taxation' (not 'profit or loss on ordinary activities before taxation') to align with the legal requirement in Schedules 1 to the Regulations and the LLP Regulations.

The General Rules to the formats allow any item to be shown in a company's (or an LLP's) balance sheet or profit and loss account in greater detail than required by the particular format used. The balance sheet or profit and loss account may include an item representing or covering the amount of any asset or liability, income or expenditure not otherwise covered by any of the items listed in the format used. However, preliminary expenses; the expenses of, and commission on, any issue of shares or debentures (relevant for a company only); and the costs of research may not be treated as assets in the balance sheet. [1 Sch 3, 1 Sch 3 (LLP)]. A qualifying partnership preparing statutory accounts is not subject to the above rules on which types of costs may not be treated as assets in the balance sheet.³⁶

³⁵ Partnerships (Accounts) Regulations 2008 (SI 2008/569), para. 4 and Schedule.

³⁶ Partnerships (Accounts) Regulations 2008 (SI 2008/569), para. 4 and Schedule.

Where the special nature of the company's (or the LLP's) business requires it, the company's directors (or the members of the LLP) *must* adapt the arrangement, headings and sub-headings otherwise required in respect of items given an Arabic number in the balance sheet or profit and loss account format used. The directors (or the members of the LLP) *may* combine items to which Arabic numbers are given in the formats if their individual amounts are not material to assessing the state of affairs or profit or loss of the company (or the LLP) for the financial year in question; or the combination facilitates that assessment. In the latter case, the individual amounts of any items combined must be disclosed in a note to the accounts. [1 Sch 4, 1 Sch 4 (LLP)].

FRS 102's requirements on materiality and aggregation are discussed at 8.4 below.

FRS 102 contains additional requirements that are consistent with the General Rules. Additional line items, headings and subtotals are required to be added where relevant to an understanding of the entity's financial position or financial performance (this applies both to statutory and adapted formats - see 4.1, 4.2 and 5.7 below). [FRS 102.4.3, FRS 102.5.9]. Where additional detail is provided in the statement of financial position or statement of comprehensive income, it is usual to provide a subtotal for the heading.

The heading or sub-heading required for a particular item in the balance sheet or profit and loss account format must be presented where there is an amount for that item in either the current or immediately preceding financial year; otherwise, the heading or sub-heading must be omitted. [1 Sch 5, 1 Sch 5 (SC), 1 Sch 5 (LLP SC)].

A corresponding amount (i.e., comparative) for the immediately preceding financial year must be shown for every item shown in the statement of financial position and in the statement of comprehensive income. FRS 102's requirements on comparatives are discussed at 2.4 above.

Amounts in respect of items representing assets or income may not be set off against amounts in respect of items representing liabilities or expenditure (as the case may be), or *vice versa*. [1 Sch 8, 1 Sch 8 (LLP)].

FRS 102's requirements on offsetting are discussed at 8.1.1.C below.

The company's directors (or the members of an LLP) must, in determining how amounts are presented within items in the profit and loss account and balance sheet, have regard to the substance of the reported transaction or arrangement, in accordance with generally accepted accounting principles or practice. [1 Sch 9, 1 Sch 9 (LLP)].

Finally, where an asset or liability relates to more than one item in the balance sheet, the relationship of that asset or liability to the relevant items must be disclosed either under those items or in the notes to the accounts. [1 Sch 9A, 1 Sch 9A (LLP)].

Examples of situations where this may be relevant include:

- Items which are partly reported in debtors: amounts falling due within one year and debtors: amounts falling due after more than one year, where reported separately on the balance sheet (in the statutory formats).
 - Items which are partly reported in creditors: amounts falling due within one year and creditors: amounts falling due after more than one year (in the statutory formats).
- And
- Items which are partly reported as current and non-current assets or liabilities (in the adapted formats).

This disclosure requirement does not appear to extend to reporting the relationship between assets and liabilities that derive from a single transaction (e.g., an asset acquired on a lease that has an impact both on fixed assets and lease creditors) nor, to identifying the associated deferred tax consequences of an asset or liability.

How we see it

Where a single asset or liability is required to be reported as more than one line item in the statement of financial position, for example, split accounting for a convertible loan between equity and liability elements, or a loan at off-market rates made by a parent to its subsidiary is split between investment and loan asset, it would seem appropriate, in our view, to disclose the relationship between these line items.

There was no need for FRS 102 to explain how the statutory formats could be amended, as this is covered in the General Rules to the formats. However, amendments to the adapted formats, which do not include Arabic-numbered items, would need to comply so far as is practicable with the General Rules to the formats. Sections 4 and 5 explain what amendments may be made to the line items required for adapted formats. An entity may amend the descriptions used, the ordering of items and the aggregation of similar

items in the statement of financial position (including the sub-classifications of certain line items required to be presented in the statement of financial position or in the notes to the financial statements), according to the nature of the entity and its transactions, to provide information relevant to an understanding of the entity's financial position, providing the information given is at least equivalent to that required by the balance sheet format, had it not been adapted. [FRS 102.4.2C]. Similarly, an entity may include additional line items in the income statement, amend the descriptions used, and the ordering of items when this is necessary to explain the elements of financial performance, providing the information given is at least equivalent to that required by the profit and loss account format had it not been adapted. [FRS 102.5.5C].

3.5 Non-controlling interests in consolidated financial statements

FRS 102, the Regulations and LLP Regulations address the presentation of non-controlling interests. These requirements are relevant to consolidated financial statements, prepared using statutory or adapted formats.

Under FRS 102, a non-controlling interest is defined as “the equity in a subsidiary not attributable, directly or indirectly, to a parent”. Equity is “the residual interest in the assets of the entity after deducting all its liabilities”. Owners (as referred to below) are ‘holders of instruments classified as equity’. [FRS 102 Appendix I].

FRS 102 requires that a non-controlling interest is presented in the consolidated statement of financial position within equity, separately from the equity of the owners of the parent. [FRS 102.9.20].

The statement of changes in equity (see 6.1 below) presents: [FRS 102.6.3]

- Total comprehensive income, showing separately the total amounts attributable to owners of the parent and non-controlling interests.
- And
- Since non-controlling interest is a component of equity, a reconciliation of the changes in the carrying amount of non-controlling interests.

In addition, the statement of comprehensive income (or separate income statement, where presented) shows as allocations of profit or loss and total comprehensive income: [FRS 102.5.6, FRS 102.5.7A, FRS 102.5.7B, FRS 102.5.7C, FRS 102.9.21]

- The profit or loss for the period attributable to the owners of the parent separately from the profit or loss for the period attributable to non-controlling interest.
- And
- The total comprehensive income attributable to the owners of the parent separately from the total comprehensive income attributable to non-controlling interest.

The statutory requirements for presentation of non-controlling interests (see 3.5.1 below) permit a presentation consistent with the requirements of FRS 102. In most cases, the amounts shown as non-controlling interest under FRS 102 (see Chapter 8 at 3.7) and the amounts required by the Regulations (or LLP Regulations) (see 3.5.1 below) will be the same. There is a theoretical possibility that the amounts required by FRS 102 (which has a wider definition) and the Regulations (or LLP Regulations) may differ. In that case, two totals are strictly required to be presented to meet both the requirements of FRS 102 and the Regulations (or LLP Regulations). In practice, we expect such a difference to be rare.

How we see it

In our view, the same requirements for presentation of non-controlling interests apply to adapted formats (see 3.2.3 above) because the General Rules to the formats require that any adaptations made must be ‘at least equivalent’ to the information required in the statutory formats.

3.5.1 Illustrative examples of presentation of non-controlling interests

Illustration 3-1 below illustrates the presentation of non-controlling interests in the statement of financial position for a UK company under FRS 102 and is consistent with the Regulations. The terminology ‘non-controlling interests’ in the Regulations (rather than ‘non-controlling interest’ in FRS 102) is used.

Illustration 3-1: Presentation of non-controlling interests in statement of financial position

	£'000
Capital and reserves	
Called up share capital	12,075

Share premium account	493
Capital redemption reserve	500
Merger reserve	6,250
Profit and loss account	27,882
Equity attributable to owners of the parent company	47,200
Non-controlling interests	360
	47,560

See also Figure 4-1 at 4.1 below and Illustration 4-2 at 4.1.15 below for the presentation of non-controlling interests in the statement of financial position in adapted formats.

Illustration 6-1 at 6.1.2 below illustrates the presentation of non-controlling interests in the statement of changes in equity.

FRS 102 allows the statement of comprehensive income to be shown as a single statement or using the two-statement approach (with a separate income statement). [FRS 102.5.2].

Illustration 3-2 below illustrates the allocation of profit or loss to owners of the parent and to non-controlling interests where a separate income statement is presented. Where a separate income statement is presented, an allocation of total comprehensive income between owners of the parent and the non-controlling interest would also be presented at the end of the statement of total comprehensive income.

[FRS 102.5.6, FRS 102.5.7B, FRS 102.5.7C].

See also Illustration 5-2 at 5.5.2 below which illustrates the presentation for the statement of comprehensive income (with a separate income statement) using adapted formats.

Illustration 3-2: Presentation of non-controlling interests in separate income statement	
	£'000
Profit before taxation	7,786
Tax on profit	(3,339)
Profit after taxation and profit for the financial year	4,447
Profit for the financial year attributable to:	
Owners of the parent company	4,209
Non-controlling interests	238

Where a single statement of comprehensive income is presented (see 5.3 below), these allocations of profit or loss and of total comprehensive income would both be presented as two lines below the total comprehensive income for the period. [FRS 102.5.7A, FRS 102.5.7B, FRS 102.5.7C]. See Illustration 5-1 at 5.5.2 below which illustrates this for a single statement of comprehensive income using adapted formats.

4 Statement of financial position

Section 4 applies to all entities, whether or not they report under CA 2006. Entities that do not report under CA 2006 must comply with the requirements of Section 4 and with the Regulations (or where applicable, the LLP Regulations) where referred to in Section 4, except to the extent that these requirements are not permitted by any statutory framework under which such entities report. [FRS 102.4.1].

The statement of financial position (referred to as the balance sheet in CA 2006) presents an entity's assets, liabilities and equity at the end of the reporting period. [FRS 102.4.1].

An entity presents its statement of financial position in accordance with the requirements in Part 1 of the applicable schedule to the Regulations or Part 1 of Schedule 1 to the LLP Regulations. [FRS 102.4.2]. The formats required by different types of entity (and in consolidated financial statements) are discussed in more detail in 3.1 and 3.2 above.

Part 1 of Schedule 1 to the Regulations and Part 1 of Schedule 1 to the LLP Regulations, provide a choice of:

- One of two balance sheet statutory formats (as set out in Section B of the relevant Part)
- Or
- Adapted formats

Schedule 2 (banking companies) and Schedule 3 (insurance companies) to the Regulations require use of the statutory formats and do not allow use of adapted formats. The statutory formats for insurance companies are discussed in Chapter 38 at 8. This publication does not set out or discuss the statutory formats for banking companies.

The consolidated statement of financial position of a group must be presented in accordance with the requirements for a consolidated balance sheet in Schedule 6 to the Regulations (or, where applicable, Schedule 3 to the LLP Regulations). [FRS 102.4.2]. How adapted formats and statutory formats are applied in consolidated financial statements is further explained in 3.2.2 above and 4.1 and 4.2 below.

This part of the chapter is set out as follows:

- 4.1 - Adapted formats (including implementation issues)
- 4.2 - Statutory formats - format 1 balance sheet
- 4.3 - Implementation issues for statutory formats - format 1 balance sheet
- 4.4 - Additional disclosures in respect of share capital (or equivalent) (adapted formats and statutory formats)
- And
- 4.5 - Information on disposal groups to be presented in the notes (adapted formats and statutory formats)

Certain classification issues are highlighted in the commentary on the statutory and adapted formats. In particular, the line items in the statutory formats are not always aligned with the accounting requirements in FRS 102 (e.g., 'tangible fixed assets' in the statutory formats would include property, plant and equipment, investment properties and other items).

Some additional analyses of line items and disclosures required by the Regulations (and LLP Regulations) in the notes to the accounts are highlighted at 4.3 below. Disclosures in the Regulations and LLP Regulations (unless they derive directly from the notes to the statutory formats so only apply to the statutory formats) are also required where adapted formats are used. These disclosures are not separately noted in the discussion in 4.1 below on adapted formats.

Disclosures relating to the statement of financial position specifically required by FRS 102 are set out at 4.4 and 4.5 below. These disclosures apply for both adapted formats and statutory formats. Sections 4.4 and 4.5 below also discuss similar disclosures found in the Regulations or LLP Regulations.

4.1 Adapted formats (including application issues)

An entity choosing to apply paragraph 1A(1) of Schedule 1 to the Regulations and adapt one of the balance sheet formats (see 3.2.3 above) shall, as a minimum, include in its statement of financial position the line items presented in Figure 4-1 below, distinguishing between those items that are current and those that are non-current (see 4.1.1 and 4.1.2 below). [FRS 102.4.2A]. To comply with this requirement, an entity must present current and non-current assets and current and non-current liabilities as separate classifications. [FRS 102.4.2D].

FRS 102 refers only to the Regulations, because at the time that this paragraph was added in to FRS 102, the LLP Regulations did not permit the use of adapted formats. Since paragraph 1A(1) of Schedule 1 to the LLP Regulations now allows the use of adapted formats, this paragraph should be read as extending to LLPs.

FRS 102's presentation requirements for adapted formats for the balance sheet are similar to, but not identical to, those of IAS 1.

FRS 102 is amended effective for periods on or after 1 January 2027 to align with the requirements of IFRS 18 (see 9.1 below). Under the amendment, the presentation of goodwill as a separate line item from other intangible assets is required [FRS 102(2026).4A.4].

Figure 4-1 Adapted formats - balance sheet (effective for periods on or before 1 January 2027)

(a)	Property, plant and equipment
(b)	Investment property carried at fair value through profit and loss
(c)	Intangible assets
(d)	Financial assets (excluding amounts shown under (e), (f), (j) and (k))
(e)	Investments in associates
(f)	Investments in jointly controlled entities
(g)	Biological assets carried at cost less accumulated depreciation and impairment
(h)	Biological assets carried at fair value through profit and loss
(i)	Inventories
(j)	Trade and other receivables
(k)	Cash and cash equivalents
(l)	Trade and other payables
(m)	Provisions
(n)	Financial liabilities (excluding amounts shown under (l) and (m))
(o)	Liabilities and assets for current tax
(p)	Deferred tax liabilities and deferred tax assets (classified as non-current)
(q)	Non-controlling interest, presented within equity separately from the equity attributable to the owners of the parent#
	And
(r)	Equity attributable to the owners of the parent~
~	The LLP SORP requires a total for net assets attributable to members, and total members' interests (as a memorandum item) to be disclosed in the statement of financial position. These disclosures are retained where adapted formats are used and 'loans and other debts due to members' and 'members' other interests' (items J and K in the statutory formats for LLPs) are shown as line items in the statement of financial position. See Figure 4-4 at 4.2.1 below and the discussion below.
#	Not required in individual financial statements.

An illustrative example statement of financial position, including figures and comparatives, is included in Illustration 4-2 at 4.1.15 below.

The LLP SORP requires that, in order for the adapted formats to show the equivalent information to the statutory formats, 'loans and other debts due to members' (item J in the statutory formats) and 'members' other interests' (item K in the statutory formats) must be separately disclosed in the balance sheet. The face of the balance sheet must show the total for net assets attributable to members (i.e., the total of 'loans and other debts due to members' and 'members' other interests') and disclose total members' interests (being the total of 'loans and other debts due to members' and 'members' other interests', less any 'amounts due from members' in debtors) as a memorandum item. [LLP SORP.26C, LLP SORP.58]. Detailed guidance on issues specific to LLPs is outside the scope of this chapter.

In general, few difficulties should arise over classification of line items since the required line items are aligned with the categories of assets and liabilities discussed in FRS 102. The line items required in adapted formats and some application issues on classification are discussed at 4.1.3 to 4.1.14 below.

While line items (o) and (p) appear to combine liabilities and assets for current tax and deferred tax respectively, the assets will need to be shown separately from the liabilities. Deferred tax is always classified as non-current. Line item (q) for non-controlling interest (see 3.5 above) is only relevant where consolidated financial statements are prepared.

So far as is practicable, paragraphs 2 to 9A of the General Rules to the formats apply to the adapted formats. [1 Sch 1A(3), 1 Sch 1A(3)(LLP)].

Section 4 requires that the following sub-classifications of the line items presented must be disclosed either in the statement of financial position or in the notes: [FRS 102.4.2B]

- Property, plant and equipment in classifications appropriate to the entity
- Intangible assets and goodwill in classifications appropriate to the entity
- Investments, showing separately shares and loans
- Trade and other receivables showing separately amounts due from related parties, amounts due from other parties, prepayments and accrued income
- Inventories, showing separately, amounts of inventories:
 - Held for sale in the ordinary course of business
 - In the process of production for sale
 And
 - In the form of materials or supplies to be consumed in the production process or in the rendering of services
- Trade and other payables, showing separately amounts payable to trade suppliers, payable to related parties, deferred income and accruals
- And
 - Classes of equity, such as share capital, share premium, retained earnings, revaluation reserve, fair value reserve and other reserves

Requirements relating to additional line items, headings and subtotals and the ordering of items and aggregation of similar line items are set out in 3.4.2 above.

Other analyses of line items are specified by other sections of FRS 102 (refer to the relevant chapters of this publication) or by the Regulations (or LLP Regulations). These disclosures are not set out at 4.1 and 5.5 below (as they are covered in the relevant chapters of this publication), although some of the latter are highlighted at 4.2, 4.3 and 5.6 below in respect of the statutory formats.

The Regulations (and LLP Regulations) require supplementary information to be given in the notes to the accounts where statutory formats or the adapted formats are used. One complexity is that the information required sometimes refers to items found in the statutory formats (which may differ to the line items identified where the adapted formats are used). For example, the adapted formats do not refer to fixed assets, creditors: amounts falling due within one year, creditors: amounts falling due after more than one year, investments, land or buildings, or turnover. A UK company (or an LLP) using adapted formats in Companies Act accounts (non-IAS accounts, for an LLP) will, therefore, need to identify which of its assets, liabilities, revenue streams need to be included in the required disclosures. While the classification of non-current assets and current assets used in adapted formats differs to the fixed assets and current assets classification required in statutory formats, the statutory definition of 'fixed assets' (see 4.2.2 below) is relevant for the purposes of disclosures in respect of fixed assets in the Regulations (and the LLP Regulations).

In addition, the Regulations (and the LLP Regulations) frequently require analyses and reconciliations to be given for Arabic-numbered sub-headings in the statutory balance sheet formats. As noted above, adapted formats require various sub-classifications to be presented in the statement of financial position or notes to the financial statements. The statutory disclosures are often required for items which are combined in the balance sheet or profit or loss account in order to facilitate assessment of the state of affairs or profit or loss. Examples are the reconciliation of movements in fixed assets, or the reconciliation of movements in reserves (discussed at 6.1.1 below). In the first example, the disclosure overlaps with the reconciliations of the carrying amounts of certain assets required by FRS 102, but the Regulations (and the LLP Regulations) require separate fixed asset reconciliations for cost and cumulative provision for depreciation and diminution. See 4.2.2 below.

4.1.1 Definition of current and non-current assets (adapted formats only)

Periods commencing prior to 1 January 2027

The definitions of current and non-current assets discussed below apply only where an entity chooses to use adapted formats in accordance with paragraph 1A(1) of Schedule 1 to the Regulations (or paragraph 1A(1) of Schedule 1 to the LLP Regulations).

FRS 102 defines non-current assets. Current assets are the assets of the entity which are not non-current assets (i.e., the residual). [FRS 102 Appendix I]. This differs to IAS 1/IFRS 18 which defines current assets and non-current assets are the residual. [IAS 1.66, IFRS 18.99].

Non-current assets are defined in the FRS 102 Glossary as: Assets of the entity which: [FRS 102 Appendix I]

(a) it does not expect to realise, or intend to sell or consume, in its normal operating cycle (see 4.1.1.A below)

(b) it does not hold primarily for the purpose of trading (see 4.1.1.B below)

(c) it does not expect to realise within 12 months after the reporting period

Or

(d) are cash or cash equivalents restricted from being exchanged or used to settle a liability for at least 12 months after the reporting period.

The adapted formats require that deferred tax assets are always classified as non-current. [FRS 102.4.2A(p)].

'Cash or cash equivalents' are defined in the FRS 102 Glossary and should be interpreted in a manner consistent with Section 7 (see Chapter 7 at 3.2).

IAS 1/IFRS 18 require an entity to classify an asset as current if it meets any of the conditions in (a) to (d) of paragraph 66 of IAS 1 or paragraph 99 of IFRS 18 respectively. The conditions in (a) to (d) above of FRS 102's definition of 'non-current assets' are broadly the converse of the conditions in (a) to (d) in IAS 1/IFRS 18's definition of a current asset.

FRS 102 provides no additional guidance beyond the definitions of current and non-current assets above. However, since the intention is to provide a format more aligned with IAS 1/IFRS 18, management may consider, as permitted by the hierarchy in Section 10, the requirements of IAS 1/IFRS 18 for further guidance. The guidance presented at 4.1.1.A to D below refers to IAS 1/IFRS 18's requirements, where appropriate. The current portion of non-current financial assets would be classified as current, consistent with IFRS. [IAS 1.68, IFRS 18.B95].

FRS 102 (2026) amendments for periods commencing after 1 January 2027

In February 2026, the FRC published the FRS 102 (2026) amendments, to reflect the replacement of IAS 1 with IFRS 18. The amendments align the definition of current assets (in relation to adapting the balance sheet formats) with IFRS Accounting Standards, where the current assets are now defined and the non-current assets are the residual (see 9.2 below). Entities may early adopt the FRS 102 (2026) amendments provided both definitions and associated guidance are adopted at the same time and there is disclosure of early adoption.

4.1.1.A Operating cycle

Item (a) of the definition of non-current assets above distinguishes between current and non-current based on the length of the normal operating cycle. The concept of 'operating cycle' is not further explained in FRS 102 but IAS 1/IFRS 18 states that "the operating cycle of an entity is the time between the acquisition of assets for processing and their realisation in cash or cash equivalents. When the entity's normal operating cycle is not clearly identifiable, it is assumed to be twelve months." [IAS 1.68, IFRS 18.B95]. IAS 1/IFRS 18 does not provide any further guidance on how to determine if an entity's operating cycle is 'clearly identifiable'. In some businesses, the time involved in producing goods or providing services varies significantly from one customer project to another. In such cases, it may be difficult to determine what the normal operating cycle is. Management must consider all facts and circumstances and use judgement to determine whether it is appropriate to consider that the operating cycle is clearly identifiable, or whether the twelve months default is to be used.

IAS 1/IFRS 18 further explains that when an entity supplies goods or services within a clearly identifiable operating cycle, separate classification of current and non-current assets and liabilities in the statement of financial position provides useful information by distinguishing the net assets that are continuously circulating as working capital from those used in long-term operations. It also highlights assets that are expected to be realised within the current operating cycle, and liabilities that are due for settlement within the same period. [IAS 1.62, IFRS 18.B90].

Current assets, therefore, include assets (such as inventories and trade receivables) that are sold, consumed or realised as part of the normal operating cycle even when they are not expected to be realised within twelve months after the reporting period. [IAS 1.68, IFRS 18.B95].

4.1.1.B Held for the purpose of trading

Current assets include assets held primarily for the purpose of trading, for example, some financial assets classified as trading in accordance with IFRS 9 - *Financial Instruments* or IAS 39 - *Financial Instruments: Recognition and Measurement*, where these standards are applied to the recognition and measurement of financial instruments.

However, consistent with IFRS practice, a classification as 'held for trading' (e.g., as required for a derivative that is not hedge accounted) does not necessarily mean the financial asset is 'held for the purpose of trading' for the purposes of current/non-current classification.

4.1.1.C Assets previously classified as non-current but subsequently held for sale

FRS 102 does not include the concept in IFRS of non-current assets and disposal groups held for sale, and the adapted formats, therefore, do not require separate presentation for such items.

FRS 102 does not address whether items such as property, plant and equipment should be reclassified as current if expected to be realised within twelve months after the reporting period.

How we see it

In our view, an entity must present property, plant and equipment which is expected to be realised within 12 months after the reporting period separately within current assets. Property, plant and equipment not expected to be disposed of within 12 months is classified as non-current.

An entity that, in the course of its ordinary activities, routinely sells items of property, plant and equipment that it has held for rental to others, must transfer such assets to inventory when they cease to be rented and become held for sale, consistent with IFRS requirements. [IAS 16.68A]. See Chapter 20 at 3.9.

4.1.1.D Post-employment benefits

The question arises as to whether a current/non-current analysis needs to be made for defined benefit plan net asset balances. IAS 19 - *Employee Benefits* - does not specify whether such a split should be made, on the grounds that it may sometimes be arbitrary. [IAS 19.133, IAS 19.BC.200]. In practice, few, if any, IFRS reporters make this split.

How we see it

Where the same concern over the arbitrary nature of a split arises, in our view, FRS 102 reporters may follow the practice of some IFRS reporters and present such balances as non-current.

4.1.2 Definitions of current liabilities and non-current liabilities (adapted formats only)

Periods commencing prior to 1 January 2027

For periods commencing prior to 1 January 2027, the definition of current liabilities is as follows:

Current liabilities are defined as liabilities of the entity which:

- (a) It expects to settle in its normal operating cycle (see 4.1.2.A below)
- (b) It holds primarily for the purpose of trading (see 4.1.2.B below)
- (c) Are due to be settled within 12 months after the reporting period (see 4.1.2.C below)

Or

- (d) It does not have an unconditional right to defer settlement for at least 12 months after the reporting period (see 4.1.2.D below)

Meeting any one of (a) to (d) leads to the liability being required to be classified as current.

The adapted formats also require that deferred tax liabilities are always classified as non-current.

[FRS 102.4.2A(p)].

Non-current liabilities are "liabilities of the entity which are not current liabilities", in other words they are the residual, once current liabilities have been identified. [FRS 102 Appendix I].

FRS 102 (2026) amendments for periods commencing after 1 January 2027 (see 9.2 below)

For periods commencing after 1 January 2027, the definition of current liabilities has been updated by the FRS 102 (2026) amendments to align fully with the definition in IAS 1/IFRS 18. Specifically, 'unconditional' has been removed from the definition, so that the final part of the definition is as follows: "liabilities of the entity... for which it does not have the right at the end of the reporting period to defer settlement for at least 12 months after the reporting period".

This follows the precise wording of amendments to IAS 1 made by the IASB in 2020 and 2022 to reconcile apparent contradictions between the former wording which referred in places to an 'unconditional right' and in others to 'expects' and 'discretion'. The impact of the amended wording is discussed in 4.1.2.D below.

The FRS 102 (2026) amendments also introduce guidance in respect of each element of the definition of 'current liabilities', in a manner consistent with the requirements of IAS 1 and IFRS 18. Further discussion is set out in 4.1.2.A to 4.1.2.C below.

4.1.2.A Operating cycle

The concept of 'operating cycle' is explained at 4.1.1.A above.

FRS 102 (2026) amendments/IAS 1/IFRS 18 explain that some current liabilities, such as trade payables and some accruals for employee and other operating costs, are part of the working capital used in the normal operating cycle and are classified as current liabilities, even if they are due to be settled more than twelve months after the reporting period. The same normal operating cycle applies to the classification of an entity's assets and liabilities and when not clearly identifiable, is assumed to be twelve months.

[FRS 102(2026).4A.9, IAS 1.70, IFRS 18.B96].

4.1.2.B Held for the purpose of trading

Current liabilities include assets held primarily for the purpose of trading, for example, some financial liabilities classified as trading in accordance with IAS 39 or IFRS 9.

However, consistent with IFRS practice, a classification as 'held for trading' (e.g., as required for a derivative, that is not hedge accounted) does not necessarily mean the financial liability is 'held for the purpose of trading' for the purposes of current/non-current classification.

4.1.2.C Due for settlement within 12 months

Some current liabilities are not settled as part of the normal operating cycle but are due for settlement within twelve months after the end of the reporting period. Examples given by the FRS 102 (2026) amendments/IAS 1/IFRS 18 include bank overdrafts, the current portion of non-current financial liabilities, dividends payable, income taxes and other non-trade payables.

Financial liabilities that provide financing on a long-term basis (i.e., are not part of the working capital used in the entity's normal operating cycle) and are not due for settlement within twelve months after the end of the reporting period are non-current liabilities. *[FRS 102(2026).4A.10, IAS 1.71, IFRS 18.B97].* As explained at 4.1.2.D below, there must be an unconditional right, as at the end of the reporting period, to defer settlement for at least twelve months thereafter, in order for a liability to be reported as non-current.

4.1.2.D No unconditional right to defer settlement

As set out in 4.1.2 above, since the application of amendments to IAS 1 for periods commencing on or after 1 January 2024, the definitions of 'current liabilities' in FRS 102 and IAS 1/IFRS 18 have not wholly aligned. Specifically, in IAS 1/IFRS 18, the criterion in (d) in 4.1.2 above no longer refers to an 'unconditional' right to defer settlement for at least 12 months after the reporting period, but simply to a 'right to defer'. Additional guidance has been added to IAS 1/IFRS 18 to illustrate the application of the 'right to defer' in the context of liabilities arising from loan arrangements which are subject to covenants. However, in February 2026, the FRC published the FRS 102 (2026) amendments, which have aligned the definitions and the requirements for the classification of loan arrangements with covenants to those in IAS 1 and IFRS 18 (see 9 below).

While the definition of a current liability in FRS 102 differs from that in IAS 1/IFRS 18 for the period between the amendments to IAS 1 (effective 1 January 2024) and the publication of the FRS 102 (2026) amendments (effective 1 January 2027), the FRC did not intend the definitions to diverge. We note that past practice indicates that some preparers had applied the same criteria as those in IAS 1 as amended, ignoring the conditionality inherent in a covenant.

Early adoption of the FRS 102 (2026) amendments is permitted, provided that the amendments relating to the classification of both current and non-current assets and liabilities are adopted simultaneously. This issue is expected to be transitional in nature and will cease to arise for periods beginning on or after 1 January 2027, when the amended classification requirements in FRS 102 are effective.

The FRS 102 (2026) amendments/IAS 1/IFRS 18 clarify that a right to defer settlement of a liability for at least twelve months must have substance and must exist at the end of the reporting period. [IAS 1.72A, IFRS 18.B99]. Often, an entity's right to defer settlement of a loan liability for at least twelve months after the reporting period is subject to the entity complying with certain conditions in the loan arrangements. Those conditions are described as covenants. For the purposes of applying the classification criterion of whether a right to defer exists, such covenants affect whether the right exists at the end of the reporting period, if the entity is required to comply with the covenant *on or before* the end of the reporting period. This is the case, even if compliance with the covenant is assessed after the reporting period. If, however, a covenant is only required to be complied with *after* the reporting period end, such a covenant is ignored for classification purposes. [FRS 102(2026).4A.13, IAS 1.72B, IFRS 18.B100(b)]

The guidance above is framed only in terms of loan arrangements and therefore other liabilities not constituting loan arrangements would need to be assessed, according to their individual facts and circumstances, to see if there is a basis for concluding that there is a right to defer settlement for at least twelve months after the reporting period end. [FRS 102(2026) Appendix I, IAS 1.69 (d), IFRS 18.101(d)].

The FRS 102 (2026) amendments/IAS 1/IFRS 18 further explain that liabilities would be non-current if an entity has the right, at the end of the reporting period, to roll over an obligation for at least twelve months after the period end under an existing loan facility, even if it would otherwise be due within a shorter period. However, if no such right exists at the end of the reporting period, the entity does not consider the potential to refinance the obligation and consequently classifies the obligation as current.

[FRS 102(2026).4A.14, IAS 1.73, IFRS 18.B101].

Under the FRS 102 (2026) amendments/IAS 1/IFRS 18, if a liability is due to be settled within 12 months after the end of the reporting period, but the entity has a right under the arrangement to roll the loan over for an extended period, the loan is classified as non-current. [FRS 102(2026).4A.14, IAS 1.73, IFRS 18.B101].

How we see it

A rollover right may exist in conjunction with a future covenant, such that the latter is to be tested before the right to roll over may be exercised. In such a case, we believe the covenant must be assessed under paragraph 4A.13 of FRS 102 (as amended in February 2026), paragraph 72B of IAS 1 or paragraph B100 of IFRS 18, separately from the rollover right assessed under paragraph 4A.14 of FRS 102 (as amended in February 2026) paragraph 73 of IAS 1 or paragraph B101 of IFRS 18. Thus, the loan is classified as non-current, unless there are other circumstances unrelated to the covenant that impact the classification assessment.

The liability is classified as non-current if the lender agreed by the period end to provide a period of grace ending at least twelve months after the reporting period, within which the entity can rectify the breach and during which the lender cannot demand immediate repayment. [FRS 102(2026).4A.16, IAS 1.75, IFRS 18.103].

Conditions of breach or default at the end of the reporting period may, however, be material for disclosure in the financial statements (even if no specific disclosure applies), whether adapted formats or statutory formats are applied. A breach or default arising (or its rectification) after the end of the reporting period, while not one of the examples specifically listed in Section 32 *Events after the End of the Reporting Period*, may be a material post-balance sheet event requiring disclosure (see Chapter 34 at 3.3.1) [FRS 102.32.10, FRS 102.32.11], and may also be relevant to the going concern assessment and related disclosures (see 8.3 below).

It is important to note that management intention does not play a role in the classification of liabilities. Thus a liability meeting the definition of non-current liabilities will still be classified as non-current even if management intends or expects the entity to settle the liability within twelve months after the reporting period, or even if the liability is settled between the end of the reporting period and the date the financial statements are authorised for issue. [FRS 102(2026).4A.17, IAS 1.75A, IFRS 18.104]. Although not explicitly required in FRS 102, it may still be appropriate to disclose information relating to the timing of the settlement in order for users of the financial statements to understand the impact of the liability on the entity's financial position. [IAS 1.75A, IFRS 18.104]. The requirement to ignore management intent in respect of classification may represent a change in practice for some entities, as previous practice may have taken into account management's expectations and the discretion afforded to management.

The FRS 102 (2026) amendments/IAS 1/IFRS 18 also set out the meaning of the 'settlement' of a liability. In the context of the FRS 102 (2026) amendments/IAS 1/IFRS 18, settlement refers to a transfer to the counterparty that results in the extinguishment of the liability. [FRS 102(2026).4A.18, IAS 1.76A, IFRS 18.B107]

Settlement by way of an entity's own equity instruments is an example of settlement that impacts the classification of a liability. A single situation is outlined in which the terms of a liability include an option held by the counterparty to trigger settlement by way of an entity's own equity instruments. If that option is separately classified by the entity as an equity instrument then in that case only, the option is ignored for classification purposes. [FRS 102(2026).4A.19, IAS 1.76B, IFRS 18.B108].

Were it not for this exception, any liability with an option held by the counterparty to settle in an entity's own equity instruments would automatically have to be classified as current, as there would be no right to defer settlement for at least 12 months after the reporting period end. The FRS 102 (2026) amendments/IAS 1/IFRS 18 clarify that the exception is limited to instruments where the option is classified as an equity instrument, recognised separately from the liability as an equity component of a compound financial instrument. Under these requirements, the transfer of equity instruments constitutes a settlement event for any obligation to transfer equity instruments classified as a liability. The requirement may change practice for certain entities because it had been perceived by some to be applicable to all convertible instruments.

Illustration 4-1 below illustrates the operation of the above requirements.

Illustration 4-1: Determining whether liabilities should be presented as current or non-current

Scenario 1

An entity has a long-term loan arrangement containing a debt covenant. The specific requirements in the debt covenant have to be met as at 31 December every year. The loan is due in more than 12 months. The entity breaches the debt covenant at or before the period end. As a result, the loan becomes payable on demand.

Scenario 2

Same as scenario 1, but the lender agreed not to demand repayment as a consequence of the breach. This agreement from the lender is obtained:

- (a) at or before the period end and is for a period of more than 12 months after the period end
- (b) at or before the period end and is for a period of less than 12 months after the period end
- (c) after the period end but before the financial statements are authorised for issue

Scenario 3

An entity has a long-term loan arrangement containing a debt covenant. The specific requirements in the debt covenant must be met quarterly. The loan is due in more than 12 months. At the period end, the debt covenants are met. However, circumstances change unexpectedly and the entity breaches the debt covenant after the period end but before the financial statements are authorised for issue.

As discussed at Chapter 15 at 4.1.2.E, Section 11 (subject to any exemption taken under the reduced disclosure framework in individual accounts of a qualifying entity) requires the following disclosures for any loans payable recognised at the reporting date, for which there is a breach of terms or default of principal, interest, sinking fund, or redemption terms that has not been remedied by the reporting date:

- Details of that breach or default.
 - The carrying amount of the related loans payable at the reporting date .
- And
- Whether the breach or default was remedied, or the terms of the loans payable were renegotiated, before the financial statements were authorised for issue. [FRS 102.1.8, FRS 102.1.12(c), FRS 102.11.47].

The table below sets out whether debt is to be presented as current or non-current and whether the Section 11 disclosures above are required.

	Scenario	Scenario	Scenario	Scenario	Scenario
	1	2(a)	2(b)	2(c)	3
At the period end, does the entity have an unconditional right to defer the settlement of the liability for at least 12 months?	no	yes	no	no	yes
Classification of the liability	current	non-current	current	current	non-current
Are the above Section 11 disclosures required?	yes	no	yes	yes	no

4.1.2.E Post-employment benefits

Refer to the discussion at 4.1.1.D above. Where the same concern over the arbitrary nature of a split arises, FRS 102 reporters are able to follow the practice of some IFRS reporters and report such balances as non-current.

4.1.3 Property, plant and equipment

Where adapted formats are used, FRS 102 requires that sub-classifications of property, plant and equipment that are appropriate to the entity are presented, either in the statement of financial position or in the notes. [FRS 102.4.2B(a)].

4.1.4 Investment property

Investment property carried at fair value through profit and loss is required to be presented as a separate line item in the statement of financial position in adapted formats, (see Figure 4-1 at 4.1 above) as set out in Section 4. [FRS 102.4.2A(b)]. Section 20 also requires right-of use assets which meet the definition of investment property to be presented as investment property in the statement of financial position [FRS 102.20.75]. Investment property held by the entity and rented to another group entity is permitted to be either accounted for at fair value through profit or loss or to be transferred to property, plant and equipment and accounted for using the cost model in Section 17. In the latter case, the investment property is presented as part of property plant and equipment and not within investment property. [FRS 102.17.30A].

4.1.5 Right-of-use assets and lease liabilities (lessee presentation)

Right-of-use assets are required to be presented either separately in the statement of financial position or together with the corresponding owned assets, with disclosure of the line item in the statement of financial position that includes right-of-use assets, as set out in section 20. [FRS 102.20.74].

Right-of-use assets that meet the definition of investment property are presented as investment property (see above 4.1.4). [FRS 102.20.75].

Lease liabilities are presented either separately from other liabilities or together with other liabilities with disclosure of the line item in the statement of financial position that includes the lease liabilities. [FRS 102.20.74].

See Illustration 4-2 in 4.1.15 below for an example of the adapted format where right-of-use assets and lease liabilities are shown as separate line items.

Lease-related depreciation and lease-related interest expense are presented separately (i.e., lease-related depreciation and lease-related interest expense cannot be combined) in the statement of comprehensive income. Interest expense on the lease liability must be presented within finance costs. [IFRS 16.49]. These presentation requirements are valid for both adapted and statutory formats. For further discussion of the presentation of leases for lessees refer to Chapter 23 at 6.7.

4.1.6 Intangible assets

Where adapted formats are used, FRS 102 requires that sub-classifications of intangible assets and goodwill appropriate to the entity are presented, either in the statement of financial position or in the notes. [FRS 102.4.2B(b)].

4.1.6.A Goodwill and negative goodwill

FRS 102 does not specify that positive goodwill is shown as a separate line item in the statement of financial position in adapted formats but requires that sub-classifications of intangible assets and goodwill appropriate to the entity are presented, either in the statement of financial position or in the notes. [FRS 102.4.2A, FRS 102.4.2B(b)].

Goodwill does not strictly fall within the definition of an intangible asset since it is not identifiable; in practice it is observed that many entities disclose positive goodwill, if material, separately in the statement of financial position, applying the requirements to present additional line items, where it is relevant to an understanding of the entity's financial position. [FRS 102.4.3]. Moreover, presentation of goodwill in the statement of financial position does appear to be implied by the requirements in Section 19 - *Business Combinations and Goodwill*. Where negative goodwill arises, FRS 102 requires that it to be separately disclosed in the statement of financial position, immediately below positive goodwill, and followed by a subtotal of the net amount of the positive goodwill and the excess. [FRS 102.19.24(b)]. See Chapter 22 at 3.9.3.

4.1.7 Financial assets and financial liabilities

FRS 102 requires the following line items to be presented in the statement of financial position (see Figure 4-1 at 4.1 above): [FRS 102.4.2A]

- (d) Financial assets (excluding items shown under (e), (f), (j) and (k) below) (see Chapter 15)
- (e) Investments in associates (see Chapter 17)
- (f) Investments in jointly controlled entities (see Chapter 18)
- (j) Trade and other receivables
- (k) Cash and cash equivalents (see Chapter 7)
- (l) Trade and other payables

And

- (n) Financial liabilities (excluding items shown under (l) and (m - provisions)) (see Chapter 15)

'Cash or cash equivalents' are defined in the FRS 102 Glossary and should be interpreted in a manner consistent with Section 7 (see Chapter 7).

FRS 102 only permits investments in associates and investments in jointly controlled entities to be accounted for using the equity method in consolidated financial statements and requires them to be presented as separate line items when using adapted formats in those financial statements. FRS 102 also requires investments in associates and jointly controlled entities to be presented as separate line items in individual financial statements (when the investments are presented at either cost less impairment or fair value). This is in contrast to IAS 1/IFRS 18, which only requires associates and joint ventures accounted for using the equity method to be presented in aggregate on the balance sheet and does not require separate presentation on the balance sheet of associates and joint ventures not accounted for under the equity method.

Where adapted formats are used, FRS 102 requires further sub-classifications to be disclosed, either in the statement of financial position or in the notes, for the following line items: [FRS 102.4.2B(c), FRS 102.4.2B(d), FRS 102.4.2B(f)]

- (a) Investments, showing separately shares and loans
- (b) Trade and other receivables, showing separately amounts due from related parties (see Chapter 35 at 3.1), amounts due from other parties, prepayments and accrued income

And

- (c) Trade and other payables, showing separately amounts payable to trade suppliers, payable to related parties, deferred income and accruals

4.1.8 Biological assets

Where adapted formats are applied, an entity must present separately in the statement of financial position: [FRS 102.4.2A(g), FRS 102.4.2A(h)]

- Biological assets carried at cost less accumulated depreciation and impairment
- And
- Biological assets carried at fair value through profit and loss

4.1.9 Inventories

Where adapted formats are used, FRS 102 requires that inventories are shown in the statement of financial position. [FRS 102.4.2A(i)].

An analysis of inventories, sub-classified between (a) to (c) below, is disclosed either in the statement of financial position or in the notes. [FRS 102.4.2B(e)].

FRS 102 defines inventories as:

Extract from FRS 102

Appendix I	Assets:
	(a) held for sale in the ordinary course of business;
	(b) in the process of production for such sale; or
	(c) in the form of materials or supplies to be consumed in the production process or in the rendering of services.

4.1.10 Provisions

Current and non-current provisions are reported as separate classifications in adapted formats, in contrast to balance sheet statutory formats, where there is a single line item for provisions for liabilities.

4.1.11 Current tax

Liabilities and assets for current tax must be shown as separate line items in the statement of financial position, classified as appropriate as current or non-current.

FRS 102 includes rules on offset of current tax assets and liabilities (see Chapter 31 at 11.1.1). [FRS 102.29.24].

4.1.12 Deferred tax

Deferred tax assets and liabilities must be shown as separate line items in the statement of financial position, but always classified as non-current. [FRS 102.4.2A].

FRS 102 includes rules on offset of deferred tax assets and liabilities (see Chapter 31 at 11.1.1). [FRS 102.29.24A].

Certain of the statutory disclosures in the Regulations (and LLP Regulations) may cause complexity because under the statutory formats, deferred tax is included as a line item within provisions. In particular, UK companies preparing Companies Act accounts must state the provision for deferred tax separately from any other tax provisions and reconcile movements in deferred tax (as it is a line item under provisions). [1 Sch 59, 1 Sch 60, 1 Sch 57(LLP), 1 Sch 58(LLP)]. See 4.3.11 and 4.3.13.B below.

How we see it

In our view, the reconciliation of movements in deferred tax is also required where adapted formats are used, even though deferred tax is not shown as a provision in the balance sheet.

4.1.13 Equity

Equity attributable to the owners of the parent and to non-controlling interest (see 3.5 above) must be presented as separate line items within equity.

Where adapted formats are used, separate sub-classifications for classes of equity must be disclosed, either in the statement of financial position or in the notes. This includes items such as: share capital, share premium, retained earnings, revaluation reserve, fair value reserve and other reserves. [FRS 102.4.2B(g)].

In the statutory balance sheet formats, the amount of the revaluation reserve must be shown in the balance sheet under 'Capital and reserves'. [1 Sch 35(2)]. The adapted formats do not include the same headings as the statutory formats, but because of the requirement to give equivalent information to the statutory formats, it may be necessary to present this line item.

How we see it

In our view, the requirement to give equivalent information means that the revaluation reserve must be presented in the statement of financial position, along with other equity line items required by the statutory formats.

4.1.14 Other application issues

4.1.14.A Contract assets and contract liabilities

Contract assets and contract liabilities must be presented in the statement of financial position, split as necessary between current and non-current classification. [FRS 102.23.124].

4.1.14.B Assets and disposal groups held for sale

FRS 102 does not include a concept of assets and disposal groups held for sale, comparable to that in IFRS 5 - *Non-current Assets Held for Sale and Discontinued Operations*.

FRS 102, therefore, does not require an entity to present a non-current asset classified as held for sale or the assets of a disposal group held for sale separately from other assets in the statement of financial position, nor the liabilities of a disposal group held for sale separately from other liabilities in the statement of financial position. [IFRS 5.38, IAS 1.54, IFRS 18.103].

How we see it

The absence of the concept of 'held for sale' in FRS 102 does not preclude entities presenting additional analysis in the notes to the financial statements. However, we believe it would be inappropriate to present a classification in the statement of financial position that does not exist in the standard.

4.1.14.C Post-employment benefit assets and liabilities

FRS 102, like IFRS accounting standards, does not specify where in the statement of financial position a net asset or net liability in respect of a defined benefit plan should be presented, nor whether such balances should be shown separately in the statement of financial position or only in the notes. This is left to the judgement of the reporting entity, but FRS 102 requires additional line items, headings and subtotals when relevant to an understanding of the entity's financial position. [FRS 102.4.3]. Classification of post-employment benefit assets and liabilities as current or non-current is discussed at 4.1.1.D above.

Employers with more than one plan may find that some are in surplus while others are in deficit. The general rules in FRS 102 prohibit offsetting of such balances. [FRS 102.2.96]. Deferred tax is presented separately from defined benefit pensions balances.

See 4.3.13.D below for discussion of disclosures also relevant to a UK company preparing Companies Act accounts (or an LLP preparing non-IAS accounts).

4.1.14.D Government grants

FRS 102 does not require government grants to be presented separately in the statement of financial position but does require disclosure of the nature and amounts of grants recognised in the financial statements. [FRS 102.24.6(b)]. Some grants may be received in advance of the performance-related conditions being met. In this case, grants relating to the performance model (see Chapter 26) must be recognised as a liability. [FRS 102.24.5B(c)]. Where the accrual model is used, if part of a grant relating to an asset is deferred, it is recognised as deferred income and not deducted from the carrying amount of the asset. [FRS 102.24.5G]. FRS 102 does not address the presentation where a grant accounted for under the accrual model has been received but does not yet meet the recognition criteria.

How we see it

It would generally be appropriate for a grant accounted for under the accrual model and which has not yet met the recognition criteria, to be presented as a liability, rather than as deferred income, consistent with the requirement for the performance model.

4.1.15 Illustrative statement of financial position (adapted formats)

Illustration 4-2 shows a statement of financial position using the adapted formats. This includes some additional line items to those listed in Figure 4-1 at 4.1 above. Situations when additional line items may be or are required to be presented are explained at 4.1 above.

Illustration 4-2: Illustrative statement of financial position (adapted formats)**XYZ GROUP - STATEMENT OF FINANCIAL POSITION AS AT 31 DECEMBER 201Y**

	£'000 201Y	£'000 201X

Total equity	<u>48,008</u>	<u>38,416</u>

4.2 Statutory formats - format 1 Balance Sheet

The Regulations and the LLP Regulations provide a choice of two statutory formats for the balance sheet. Format 1 is a vertical format and is adopted by virtually all UK companies and LLPs. Format 2 presents assets separately from capital, reserves and liabilities and is rarely used. [1 Sch 1, 1 Sch 1 (LLP)].

This chapter discusses only the format 1 balance sheets applicable to companies (other than banking or insurance companies) and LLPs. This publication does not discuss the formats in Schedule 2 applicable to banking companies and groups. The formats in Schedule 3 applicable to insurance companies and groups are discussed in Chapter 38 at 8. See 3.1 and 3.2 above for discussion as to which formats apply to which types of entity.

Each of the headings and sub-headings denoted with a capital letter or Roman numeral, as set out in Figure 4-2 below, must be presented in the format 1 balance sheet for the individual accounts in the order and under the headings and sub-headings given. The format 1 balance sheet includes sub-headings, denoted with an Arabic number, which though shown in Figure 4-2, can be (and often are in practice) presented in the notes to the accounts. The General Rules to the formats (see 3.4 above) explain further the presentation of line items with an Arabic number. The individual line items in the format 1 balance sheet are discussed respectively at 4.3 below.

The line items in the formats need to be read together with the notes to the formats. [1 Sch 1, 1 Sch 1 (LLP)]. See 4.2.1 below for modification of the format 1 balance sheet for LLPs.

The modifications required to format 1 in a UK company's group accounts are:

- The identification of non-controlling interests (see 3.5 above).
And
- The sub-heading 'Participating interests' (item B III.3 in format 1) is replaced by 'Interests in associated undertakings' and 'Other participating interests' (see 4.3.4.D and 4.3.4.E below). [6 Sch 17, 6 Sch 20].

The General Rules to the formats (see 3.4 above) must be complied with.

	2	Reserve for own shares
	3	Reserves provided for by the articles of association
	4	Other reserves, including the fair value reserve
	V	Profit and loss account
* The notes to format 1 provide alternative positions for prepayments and accrued income, and accruals and deferred income, as sub-headings at C-II.6 (for prepayments and accrued income) and at E.9 and H.9 (for accruals and deferred income). Called up share capital not paid may also be shown at C-II.5.		
** Modifications required in group accounts (see discussion above Figure 4-2)		
# This presentation would not be consistent with FRS 102 which would show own shares as a deduction from equity. [FRS 102.22.16]		

An entity is required to present additional line items, headings and subtotals in the statement of financial position when such presentation is relevant to an understanding of the entity's financial position.

[FRS 102.4.3]. Judgement is needed in determining whether additional items should be presented, where material and relevant (see discussion, including relevant IAS 1/IFRS 18 guidance at 4.1 above). Any amendments would need to comply with the General Rules to the formats (see 3.4 above).

FRS 102, like IFRS accounting standards, has accounting requirements for various items that do not have separate line items in format 1, but which would be presented separately in the statement of financial position under IAS 1/IFRS 18. Such items include investment property, goodwill (under IFRS 18 only), financial assets, biological assets, cash and cash equivalents and deferred tax. FRS 102 generally requires separate disclosures of the amounts of these items in the notes to the financial statements (and sometimes requires reconciliations of the movements in the balances of such items). As noted above, FRS 102 requires additional line items to be presented in the statement of financial position where relevant to an understanding of the entity's financial position. So, for example, a property company may distinguish its investment property from other tangible fixed assets. The presentation of additional line items might require use of boxes and subtotals in order to comply with the balance sheet statutory formats.

4.2.1 Modifications of format 1 balance sheet for LLPs

The main headings in the format 1 balance sheet in the LLP Regulations differ to those in Figure 4-2 at 4.2 above in the following respects:

- A - Called up share capital is omitted so the main headings are A - Fixed Assets to I - Accruals and deferred income

- There is an additional item J - Loans and other debts due to members. The following amounts must be shown separately under this item - the aggregate amount of money advanced to the LLP by the members by way of loan, the aggregate amount of money owed to members by the LLP in respect of profits, and any other amounts

And

- In addition, K - Capital and reserves is replaced with K - Members' other interests (with sub-headings K.I - Members' capital, K.II - Revaluation reserve and K.III - Other reserves, including the fair value reserve)

The subheadings in format 1 for LLPs are generally similar to format 1 for companies (apart from referring to LLPs and differences related to above).

As explained at 4.2 above, the format 1 balance sheet includes sub-headings denoted with an Arabic number, which though shown in Figure 4-3, can be (and often are in practice) presented in the notes to the accounts.

Figure 4-3 Format 1 individual balance sheet (for an LLP)

SORP		Net assets attributable to members:
		Represented by:#
J		Loans and other debts to members
K		Members' other interests**
	I	Members' capital
	II	Revaluation reserve
	III	Other reserves, including the fair value reserve

- * The notes to format 1 provide alternative positions for prepayments and accrued income, and accruals and deferred income, as sub-headings at B-II.5 (for prepayments and accrued income) and at D.9 and G.9 (for accruals and deferred income).
- ** Modifications required in group accounts (see discussion below).
- # The LLP SORP requires a total for net assets attributable to members, and total members' interests (as a memorandum item) to be disclosed in the statement of financial position. [LLP SORP 58]. See Figure 4-4 below.

The modifications required to format 1 in group accounts are:

- The identification of non-controlling interests (see 3.5 above)
- And
- The sub-heading 'Participating interests' (item A.III.3 in format 1) is replaced by 'Interests in associated undertakings' and 'Other participating interests' (see 4.3.4.D and 4.3.4.E below) [3 Sch 17 (LLP), 3 Sch 20 (LLP)]

The LLP SORP provides further guidance on members' interests and application of the statutory formats for LLPs. The LLP SORP requires that the face of the statement of financial position shows a total for net assets attributable to members. In addition, total members' interests (being the total of 'loans and other debts due to members' and 'members' other interests', i.e., the amounts in items J and K in the statutory formats, less any 'amounts due from members' in debtors) must be disclosed as a memorandum item in the statement of financial position. [LLP SORP.58].

The SORP provides illustrative examples of LLP balance sheets (using statutory formats) for different situations (depending on whether the partnership interests are classified as equity or a liability or part equity/part liability). [LLP SORP.58, Appendix I]. In these illustrative examples, a subtotal labelled 'Net assets attributable to members' is drawn in the formats before items J and K and items J and K are then presented below this subtotal, as shown in Figure 4-4 below (the capital letters for the line items are not required to be shown but are presented for convenience below). As discussed at 4.1 above, as the LLP SORP also permits adapted formats to be used, this presentation will also be required where adapted formats are used.

LLPs with no equity, e.g., because of the classification of the partnership interests in the LLP, will not have items to report for 'members' other interests' in the balance sheet.

Detailed guidance on issues specific to LLPs is outside the scope of this chapter.

Figure 4-4 Presentation of LLP balance sheet (following SORP)

		£'000

	Members' other interests	<u> x </u>
		<u> x </u>
Based on the example in Exhibit B of Appendix 1 of the LLP SORP for an LLP (with some equity)		

4.2.2 Fixed assets and current assets

The balance sheet statutory formats distinguish between fixed assets and current assets, defining 'fixed assets' with 'current assets' as the residual.

'Fixed assets' are assets of a company (or an LLP) which are intended for use on a continuing basis in the company's (or the LLP's) activities, and 'current assets' are assets not intended for such use. FRS 102 broadens the definitions to refer to 'an entity'. [10 Sch 4, 4 Sch 3 (LLP), FRS 102 Appendix I].

Current assets include all debtors, even if they are due after more than one year. However, if the amount of debtors due after more than one year is so material in the context of the total net current assets that readers may misinterpret the financial statements in the absence of disclosure of the debtors due after more than one year in the statement of financial position, the amount must be disclosed there within current assets. The standard expects this to be rare - in most cases, it will be satisfactory to disclose the amount due after more than one year in the notes to the financial statements. [FRS 102.4.4A].

Note (5) on the balance sheet formats in the Regulations (and the equivalent requirement for LLPs)³⁷ state that the amount falling due after more than one year must be shown separately for each item included under debtors.

A UK company preparing Companies Act accounts (or an LLP preparing non-IAS accounts) must disclose the following in the notes to the accounts, for *each* category of fixed assets shown in the balance sheet (or would be so shown, if Arabic-numbered line items were not combined as permitted by paragraph 4(2)(b) of the General Rules to the formats - see 3.4 above): [1 Sch 51, 1 Sch 49 (LLP)]

- The gross cost (based on the historical cost) or valuation (using the alternative accounting rules) at the beginning and end of the financial year
- The effects on the amounts shown for gross cost/valuation of:
 - Any revaluations of any assets made during the financial year
 - Acquisitions of any assets during the financial year
 - Disposals of any assets during the financial year
 And
 - Any transfers of assets (to and from that category) during the financial year
- The cumulative amount of provisions for depreciation or diminution in value at the beginning and end of the financial year
- The amount of any provisions for depreciation and diminution made in respect of the financial year
- The amount of any adjustments to such provisions arising from the disposal of any assets
- And
- The amount of any other adjustments in respect of such provisions for depreciation and diminution

How we see it

Where the Regulations (or LLP Regulations) require disclosures in respect of fixed assets or current assets, in our view, these disclosures need to be given where statutory formats or adapted formats are used.

The above statutory requirements overlap with FRS 102's requirements to provide reconciliations of changes in the carrying amounts for each class of property, plant and equipment [FRS 102.17.31(e)] (see Chapter 20 at 3.10.1); each class of intangible asset [FRS 102.18.27(e)] (see Chapter 21 at 3.4.2); goodwill and negative goodwill (separately) [FRS 102.19.26, FRS 102.19.26A] (see Chapter 22 at 4.2); investment property at fair value through profit or loss [FRS 102.16.10(e)] (see Chapter 19 at 4.3); and biological assets (separately for each class carried under the cost model and each class carried under the fair value model) [FRS 102.34.7(c), FRS 102.34.10(e)] (see Chapter 36 at 2.7 and 2.8).

The Regulations (and LLP Regulations) require separate fixed asset reconciliations for cost and cumulative provision for depreciation and diminution, whereas FRS 102 only requires reconciliation of the carrying amounts.

³⁷ LLPs - Note 3 on the balance sheet formats in Section B of Part 1 of Schedule 1 to LLP Regulations (SI 2008/1913).

Comparatives are not required for the reconciliations required by FRS 102, the Regulations (and LLP Regulations). This is because comparatives are specifically exempted under the equivalent reconciliation requirement in FRS 102 and the Regulations and LLP Regulations do not specify whether comparatives are required for notes disclosures. See 2.4 above.

A UK company preparing Companies Act accounts (or an LLP preparing non-IAS accounts) must also give additional disclosures in the notes to the accounts where the alternative accounting rules are applied - see 2 above.

4.2.3 Creditors: amounts falling due within one year and creditors: amounts falling due after more than one year

The Regulations (and LLP Regulations) distinguish between:

- Creditors: amounts falling due within one year
- And
- Creditors: amounts falling due after more than one year

These two line items are shown in the statement of financial position in the format 1 balance sheet. In distinguishing amounts between the two categories of creditor, the deciding factor is the earliest date of payment.

FRS 102 states that an entity shall classify a creditor as due within one year when the entity does not have an unconditional right, at the end of the reporting period, to defer settlement of the creditor for at least twelve months after the reporting date. For example, this would be the case if the earliest date on which the lender, exercising all available options and rights, could require repayment or (as the case may be) payment was within twelve months after the reporting date. [FRS 102.4.7].

FRS 102's requirements are intended to be consistent with the requirements in the Regulations (and LLP Regulations) which state that a loan or advance (including a liability comprising a loan or advance) is treated as falling due for repayment, and an instalment of a loan or advance is treated as falling due for payment, on the earliest date on which the lender could require repayment or (as the case may be) payment, if they exercised all options and rights available to them. [10 Sch 9, 4 Sch 6 (LLP)]. Without the full statutory definition, the final sentence of paragraph 7 of section 4 of the standard appears confusing because it is not clear why a distinction between repayment and payment is being made. This sentence is intended to illustrate when an entity does not have an unconditional right to defer settlement of the creditor (which must be assessed as at the end of the reporting period). A loan is not classified as a creditor: amounts falling due within one year merely because the company expects to repay within twelve months of the reporting date.

The FRS (102) 2026 amendments/IAS 1/IFRS 18 also includes detailed guidance on the impact of refinancing liabilities that management may consider, as permitted by the hierarchy in Section 10. IAS 1/IFRS 18 requires classification between current and non-current liabilities, which is a different determination. [IAS 1.69(d), IFRS 18 101(d)]. See 4.1.2.D above.

4.3 Application issues for statutory formats - format 1 balance sheet

In most cases, it will be straightforward to identify in which line items to present assets and liabilities in the format 1 balance sheet. The discussion in this section provides guidance on each heading and subheading included in the format 1 balance sheet and on the related notes on the balance sheet formats and the extracts shown relate to the statutory formats. Except where indicated, the line items required are the same for LLPs (although these may have different capital letter-Roman numeral-Arabic number references - see 4.2 above).

The notes on the balance sheet formats in Section B form part of the statutory formats for the balance sheet. Therefore, entities following the statutory formats must comply with the balance sheet format adopted, including the related notes on that format. This is the case even if the entity is not a UK company or LLP subject to those statutory requirements.

Where disclosures in the Regulations (or LLP Regulations) are discussed in this section, these are not intended to be comprehensive but to highlight additional disclosures *directly* related to a specific line item. The disclosures required for the line items in the notes to the accounts highlighted here are also required in the notes to the accounts where adapted formats are used (unless they relate to the notes on the balance sheet formats in Section B, as referred above). The disclosures highlighted do not cover all the related disclosures in the Regulations or LLP Regulations.

4.3.1 Called up share capital not paid

This line item can be presented in the position of Called up share capital not paid (item A) in the statement of financial position. Alternatively, this line item can be presented either in the statement of financial position or in the notes to the accounts as item 5 within Current assets - Debtors (C.II) (see 4.3.6.D below).³⁸

'Called up' share capital and 'paid up' share capital are explained at 4.3.12.A below. Called up share capital not paid can arise, for example, because calls made on the shares have not been paid, or where the share capital is 'paid up' because the amounts are payable on a specified future date under the articles or terms of allotment or other arrangement for payment of those shares. It is therefore called up share capital, even though it has not yet been settled. [s547].

4.3.2 Intangible assets

Figure 4-5 shows the analysis required in respect of intangible assets (in the statement of financial position or in the notes to the accounts - see 3.4 above) under format 1.

Figure 4-5 Analysis of intangible assets

B Fixed assets	
I	Intangible assets
1	Development costs
2	Concessions, patents, licences, trade marks and similar rights and assets
3	Goodwill
4	Payments on account

Intangible assets are not defined in the Regulations (or LLP Regulations); they include the line items listed in Figure 4-5 above, but FRS 102 financial statements must apply the more restrictive requirements of the standard (see 4.1.6 above and Chapter 21). The balance sheet format notes (and the equivalent requirement for LLPs)³⁹ state that amounts are only included in the balance sheet as concessions, patents, licences, trade marks and similar rights and assets if either the assets were acquired for valuable consideration and are not required to be shown under goodwill, or the assets in question were created by the company (or the LLP) itself. They⁴⁰ also state that amounts representing goodwill are only included to the extent that the goodwill was acquired for valuable consideration. Therefore, consistent with FRS 102, internally generated goodwill cannot be capitalised. [FRS 102.18.8C(f)].

The Regulations and LLP Regulations do not address the presentation of negative goodwill, but FRS 102's requirements on presentation of negative goodwill, which also apply to statutory formats, are addressed at 4.1.6.A above.

The format 1 balance sheet includes a line item for payments on account, i.e., advance payments made for intangible fixed assets.

FRS 102, the Regulations (and the LLP Regulations) require reconciliations of movements in intangible assets and comparatives are not required. FRS 102 requires reconciliations of changes in the carrying amounts to be given for each class of intangible asset, for goodwill, and for negative goodwill.

[FRS 102.18.27(e), FRS 102.19.26, FRS 102.19.26A]. See Chapter 21 at 3.4.2 and Chapter 22 at 4.2. See 4.2.2 above for the requirements for reconciliations of movements in fixed assets in the Regulations (and the LLP Regulations) for UK companies preparing Companies Act accounts (and LLP accounts preparing non-IAS accounts). These disclosures apply where statutory formats or adapted formats are used.

4.3.3 Tangible fixed assets

Figure 4-6 shows the analysis required (in the statement of financial position or in the notes to the accounts - see 3.4 above) in respect of tangible fixed assets under format 1. In practice, most UK companies relegate

³⁸ Note 1 on the balance sheet formats in Section B of Part 1 of Schedule 1 to SI 2008/410.

³⁹ LLPs - Note 1 on the balance sheet formats in Section B of Part 1 of Schedule 1 to SI 2008/1913.

⁴⁰ LLPs - Note 2 on the balance sheet formats in Section B of Part 1 of Schedule 1 to SI 2008/1913.

the sub-headings within tangible assets denoted by an Arabic number to the notes to the accounts, showing only the net book value of tangible assets in the statement of financial position.

Figure 4-6 Analysis of tangible fixed assets

B	Fixed assets
II	Tangible assets
1	Land and buildings
2	Plant and machinery
3	Fixtures, fittings, tools and equipment
4	Payments on account and assets in course of construction

The Regulations (and LLP Regulations) define fixed assets (see 4.2.2 above) but not tangible fixed assets. While FRS 102 does not define the term 'tangible assets', these differ from intangible assets in that they are assets 'with physical substance'.

The distinction between fixed assets and current assets is usually clear and the statutory definition is not normally interpreted to mean that individual assets are transferred to current assets when a decision to dispose of them has been made. See 4.3.13.C below.

The format 1 balance sheet includes a line item (which can be in the notes) for payments on account; these are advance payments made for tangible fixed assets.

Tangible fixed assets include property, plant and equipment, as defined in FRS 102. The definition of property, plant and equipment and some classification issues are discussed at 4.1.3 above and in Chapter 20. Investment property is also classified within tangible fixed assets in the statutory formats (see 4.3.3.A below).

A UK company preparing Companies Act accounts (or an LLP preparing non-IAS accounts) must also disclose, in the notes to the accounts, 'land and buildings' analysed between freehold land and leasehold land, with leasehold land analysed between land held on a long lease (meaning the unexpired term at the end of the financial year is not less than 50 years) and leasehold land held on a short lease (i.e., a lease that is not a long lease). [1 Sch 53, 10 Sch 7, 1 Sch 51 (LLP)]. This disclosure applies where adapted formats or statutory formats are used.

4.3.3.A Investment property

As noted at 4.3.3 above, investment property is included within tangible fixed assets in the statutory formats. The Regulations (and LLP Regulations) do not require presentation of investment property in the statement of financial position but do permit items to be shown in greater detail. FRS 102 requires additional line items, headings and subtotals when relevant to an understanding of the entity's financial position (see 3.4 above). Therefore, some entities may consider it appropriate to present investment property as a separate line item in the statement of financial position.

Chapter 19 at 3.1 explains the definition of investment property. Some property may have mixed use (e.g., partly owner-occupied and partly held for rental) which may be required to be split into components for investment property and property, plant and equipment. See Chapter 19 at 3.1.7 and Chapter 20 at 3.3.4. In the statutory formats, both components would qualify to be presented as tangible fixed assets. Nevertheless, such a split would be relevant for measurement and for the purposes of FRS 102's disclosures.

4.3.3.B Right-of-use assets (lessee presentation)

The General Rules (see 3.4 above) to the formats allow any item to be shown in a company's (or an LLP's) balance sheet in greater detail than required by the particular format used. Entities using statutory balance sheet formats may therefore choose to present right-of-use assets separately from other assets (as a separate sub-heading of fixed assets in the balance sheet), or within the same line item within which the corresponding underlying asset would be presented if they were owned (i.e., within the tangible or intangible (depending on the nature of the underlying asset) sub-headings in the balance sheet)).

[FRS 102.20.74(a)].

Respective lease liabilities are required to be distinguished between:

- Creditors: amounts falling due within one year

And

- Creditors: amounts falling due after more than one year

Thus, these two line items are required to be shown in the statement of financial position when the format 1 balance sheet is used by the company. Further separate disclosure in the notes to the accounts is expected.

Paragraph 74(b) of Section 20 of the standard requires that if the lessee does not present lease liabilities separately in the statement of financial position, the lessee shall disclose which line items in the statement of financial position include those liabilities. [FRS 102.20.74(b)].

Section 4.1.5 above explains presentation of lease-related depreciation and lease related interest expenses in the statement of comprehensive income.

4.3.4 Investments

Figure 4-7 shows the analysis required in respect of investments in the statement of financial position or in the notes to the accounts - see 3.4 above under format 1.

Figure 4-7 Analysis of investments

B	Fixed assets
III	Investments
1	Shares in group undertakings
2	Loans to group undertakings
3	Participating interests†
4	Loans to undertakings in which the company has a participating interest
5	Other investments other than loans
6	Other loans
7	Own shares*
†	In group accounts, this line item is replaced by two items: 'Interests in associated undertakings' and 'Other participating interests'
*	Line item B.III.7 is not included in format 1 in the LLP Regulations. In addition, the equivalent line item to B.III.4 refers to an LLP rather than a company.
C	Current assets
III	Investments
1	Shares in group undertakings
2	Own shares*
3	Other investments
*	Line item C.III.2 is not included in format 1 in the LLP Regulations

4.3.4.A Current assets or fixed asset investments?

The format 1 balance sheet distinguishes between fixed asset and current asset investments. It is necessary to apply the general rule that a fixed asset is one which is 'intended for use on a continuing basis in the entity's activities' and a current asset is one not intended for such use (see 4.2.2 above). However, this is an unhelpful distinction for investments which, by their nature, are not intended for use in an entity's activities at all, whether on a continuing basis or not.

Current asset investments may include cash equivalents, meaning: short-term, highly liquid investments that are readily convertible to cash (i.e., cash on hand and demand deposits) and that are subject to an insignificant risk of changes in value. [FRS 102 Appendix I]. Examples of current asset investments that may qualify as cash equivalents, but do not fall within the statutory heading 'cash at bank and in hand', include investments in money market funds. Current asset investments may also include investments that do not qualify as cash equivalents but are still of a short-term nature, and investments held for trading purposes.

Investments in shares in subsidiaries or associates or trade investments will generally be fixed asset investments. Entities frequently make loans to subsidiaries or associates, which are often repayable on demand and management will need to exercise judgement in determining whether such loans are debtors or are a fixed asset investment in nature. For example, loan financing provided for the long-term, with no intention of repayment in the foreseeable future, may be more of a fixed asset investment in nature, even where the balance is strictly repayable on demand.

Discussion of the different sub-headings required to be shown for investments is included below. Amounts owed by group undertakings must not be offset with amounts owed to the same group undertaking or other group undertakings, where the offset criteria are not met. The same principle applies to balances with undertakings in which the entity has a participating interest. Offset is required when, and only when, the entity has both a currently legally enforceable right to set off the balances and an intention either to settle on a net basis, or to realise the asset and settle the liability simultaneously. [FRS 102.11.38A, FRS 102.12.25W].

A UK company preparing Companies Act accounts (or an LLP preparing non-IAS accounts) must disclose the following in the notes to the accounts:

- The amount of listed investments included in each line item under current asset or fixed asset investments shown in the statement of financial position (or would be so shown, if line items were not combined as permitted).
 - The aggregate market value of the listed investments, where this differs from their carrying amount in the financial statements.
- And
- Both the market value and the stock exchange value of any investments (where the market value is higher than the stock exchange value). [1 Sch 54, 1 Sch 52 (LLP)].

A listed investment is an investment which has been granted a listing on a recognised investment exchange other than an overseas investment exchange (both as defined in Part 18 of the Financial Services and Markets Act 2000) or a stock exchange of repute outside the UK. [10 Sch 8, 4 Sch 5 (LLP)]. A list of recognised investment exchanges (and recognised overseas investment exchanges) is available on the Financial Conduct Authority website. AIM is not a recognised investment exchange. This disclosure applies where adapted formats or statutory formats are used.

See 4.2.2 above for the requirements for reconciliations of movements in fixed assets in the Regulations/LLP Regulations for UK companies preparing Companies Act accounts and LLP accounts preparing non-IAS accounts. The question arises as to whether comparatives are required for these reconciliations.

How we see it

We consider that the general rules on comparatives in FRS 102 apply and that comparatives are required for the reconciliation of movements in fixed asset investments. This is because FRS 102 has no comparable disclosure requirement to reconcile movements in fixed asset investments and therefore, does not provide an exemption from comparatives, as it does for some reconciliations included in FRS 102.

These disclosures above apply whether statutory formats or adapted formats are used.

4.3.4.B Group undertakings, participating interests and associated undertakings

Schedule 6, dealing with Companies Act group accounts, replaces the line item 'participating interests', applicable to individual financial statements, with two line items, 'interests in associated undertakings' and 'other participating' interests'. [6 Sch 20]. The terms 'group undertakings', 'participating interests' and 'associated undertakings' are explained at 4.3.4.C to 4.3.4.E below.

FRS 102 does not require investments in associates and jointly controlled entities to be presented in the statement of financial position in either the individual or consolidated financial statements, where the statutory formats are used.

Disclosure of the carrying amount of investments in associates is required and, separately, the carrying amount of investments in jointly controlled entities. [FRS 102.14.12(b), FRS 102.15.19(b)]. This could be presented in the notes to the financial statements, although the standard requires additional line items, headings and subtotals when relevant to an understanding of the entity's financial position. [FRS 102.4.3].

All UK companies (and LLPs) must also comply with the extensive requirements of regulation 7 and Schedule 4 to the Regulations (and the equivalent requirements for LLPs)⁴¹ in relation to information about related undertakings. This information must be presented in full in the company's (or the LLP's) accounts. These requirements apply both to Companies Act accounts (non-IAS accounts, for an LLP) and IAS accounts.

4.3.4.C Group undertakings

A 'group undertaking' means a parent undertaking or subsidiary undertaking of the reporting entity, or a subsidiary undertaking of any parent undertaking (i.e., a fellow subsidiary undertaking) of the reporting entity. [s1161(5), s1161(5)(LLP)]. Parent and subsidiary undertakings are defined in section 1162 of CA 2006. [s1162, s1162 (LLP)]. See Chapter 3 at 3.1.2 and Chapter 8 at 3.2.

FRS 102 defines a subsidiary as an entity that is controlled by the parent. Control is the power to govern the financial and operating policies of an entity so as to obtain benefits from its activities. The standard goes on to explain in what circumstances control exists or can exist. [FRS 102.9.4, FRS 102.9.5, FRS 102.9.6, FRS 102.9.6AJ]. These circumstances are similar but not identical to those included in the definition of a subsidiary undertaking under section 1162.

Although there are slight differences in wording emphasis between the definition of a subsidiary undertaking in section 1162 and the requirements of Section 9 - *Consolidated and Separate Financial Statements*, we would expect to see few conflicts arising in practice between Section 9 and CA 2006 (see Chapter 8 at 3.2).

4.3.4.D Participating interest

A 'participating interest' means an interest held by, or on behalf of, an undertaking (or in group accounts, by, or on behalf of, the parent and its consolidated subsidiary undertakings) in the shares of another undertaking which it holds on a long-term basis for the purpose of securing a contribution to its activities (or in group accounts, the consolidated group's activities) by the exercise of control or influence arising from or related to that interest.

A holding of 20% or more of the shares of the undertaking is presumed to be a participating interest unless the contrary is shown. An interest in shares of another undertaking includes an interest which is convertible into an interest in shares and an option to acquire shares or any such interest, even if the shares are unissued until the conversion or exercise of the option.

In the context of the statutory formats, 'participating interest' does not include an interest in a group undertaking (see 4.3.4.C above). [10 Sch 11, 4 Sch 8 (LLP)].

4.3.4.E Associated undertaking

An 'associated undertaking' is an undertaking in which an undertaking included in the consolidation:

- Has a participating interest (as defined at 4.3.4.D above) and over whose operating and financial policy it exercises a significant influence.
- And
- Which is not a subsidiary undertaking of the parent company or a joint venture dealt with in accordance with paragraph 18 of Schedule 6 to the Regulations (or the equivalent requirement for LLPs).⁴² The proportional consolidation permitted by paragraph 18 of Schedule 6 is not consistent with the requirements of FRS 102, as the standard requires an associate to be accounted for using the equity method in the parent's consolidated financial statements. [6 Sch 19, FRS 102.15.9A, FRS 102.15.9B].

An undertaking holding 20% or more of the voting rights in another undertaking is presumed to exercise a significant influence over it unless the contrary is shown. Voting rights mean the rights conferred on shareholders in respect of their shares (or where the undertaking does not have a share capital, on members) to vote at general meetings of the undertaking on all, or substantially all matters. Paragraphs 5 to 11 of Schedule 7 to CA 2006 apply in determining whether 20% or more of the voting rights are held. [6 Sch 19, 3 Sch 19 (LLP)].

The term 'associated undertaking' in the Regulations and LLP Regulations will generally include both an associate (see Chapter 17 at 3.1) and a jointly controlled entity (see Chapter 18 at 3.5 and Chapter 18 at 4), as defined under FRS 102. [FRS 102.14.2, FRS 102.14.3, FRS 102.15.8, FRS 102 Appendix I].

41 LLPs - Regulation 5 and Schedule 2 to SI 2008/1913.

42 LLPs - para. 18 of Schedule 3 to SI 2008/1913.

4.3.4.F Own shares

While 'own shares' have a sub-heading under investments in the balance sheet formats, FRS 102 requires investments in own shares to be treated as treasury shares and deducted from equity. [FRS 102.22.16]. Consequently, this line item will not be used under FRS 102. The format 1 balance sheet has an alternative position 'reserve for own shares' within the capital and reserves section which will be used under FRS 102 (see 4.3.12.G below).

4.3.5 Stocks

Figure 4-8 shows the analysis required in respect of stocks in the statement of financial position or in the notes to the accounts - see 3.4 above under format 1.

Figure 4-8 Analysis of stocks

C		Current assets
I		Stocks
	1	Raw materials and consumables
	2	Work in progress
	3	Finished goods and goods for resale
	4	Payments on account

The items reported under stocks in the balance sheet formats will generally correspond with inventories under FRS 102. See also 4.1.9 above and Chapter 16 at 3.1, which discuss certain classification issues in respect of inventories, including transfers to inventories from other categories of assets; these are also relevant to classification under format 1.

Note (8) on the balance sheet formats (and the equivalent requirement for LLPs)⁴³ state that payments received on account of orders must be shown within creditors in so far as they are not shown as deductions from stocks. We would not expect payments received on account to be deducted from stock (or inventory) as this would not meet the offset requirements of FRS 102, and therefore all payments received on account must be shown within creditors.

4.3.6 Debtors (including prepayments and accrued income)

Figure 4-9 shows the analysis required in respect of debtors in the statement of financial position or in the notes to the accounts - see 3.4 above under format 1.

⁴³ LLPs - Note 6 on the balance sheet formats in Section B of Part 1 of Schedule 1 to SI 2008/1913.

Figure 4-9 Analysis of debtors

C	Current assets
II	Debtors
1	Trade debtors
2	Amounts owed by group undertakings
3	Amounts owed by undertakings in which the company has a participating interest**
4	Other debtors
5	Called up share capital not paid*
6	Prepayments and accrued income*
* Format 1 provides alternative positions for called up share capital not paid at heading A and prepayments and accrued income at heading D. In format 1 in the LLP Regulations, called up share capital is omitted and the alternative position for prepayments and accrued income is at heading C (i.e., the same as heading D in the company balance sheet formats).	
** In format 1 in the LLP Regulations, amounts owed by undertakings in which the LLP has a participating interest.	

While all debtors are reported within current assets, debtors include amounts falling due within and amounts falling due after more than one year.

As discussed at 4.2.2 above, where the amount of debtors due after more than one year is so material in the context of total net current assets that, in the absence of disclosure of the debtors due after more than one year in the statement of financial position, the financial statements may be misinterpreted, the amount must be disclosed in the statement of financial position within current assets. In most cases, it will be satisfactory to disclose the amount due after more than one year in the notes to the financial statements.

[FRS 102.4.4A].

Note (5) on the balance sheet formats (and the equivalent requirement for LLPs)⁴⁴ state that the amount falling due after more than one year must be shown separately for each item included under debtors.

For a discussion of the presentation of contract assets, see 4.3.13.A below.

4.3.6.A Trade debtors

Trade debtors are generally amounts receivable from customers, e.g., relating to amounts invoiced to customers, as well as debit balances owed by suppliers. The amounts in trade debtors are stated net of any bad debt provisions or write offs, and the effects of credit notes and other rebates.

Care must be taken not to offset any debit balances in trade debtors with trade creditors (and *vice versa*) where the offset criteria are not met.

The separate line items for 'amounts owed by group undertakings' and 'amounts owed by undertakings in which the company/LLP has a participating interest' will include trade debtors due from group undertakings and participating interests respectively (see 4.3.6.B below).

4.3.6.B Amounts owed by group undertakings, and by undertakings in which the company has a participating interest

The line items 'amounts owed by group undertakings' and 'amounts owed by undertakings in which the company has a participating interest' include all amounts owed by such undertakings, e.g., loans regarded as current assets, dividends and interest receivable, trading items such as current accounts and balances with group treasury companies. The meanings of 'group undertaking' and 'participating interest' are discussed at 4.3.4.C and 4.3.4.D above.

As noted at 4.3.4.A above, management must exercise judgement in determining whether amounts owed by group undertakings or undertakings in which the entity has a participating interest are debtors or fixed asset investments. Again, if the offset criteria in FRS 102 are not met, intercompany debtors and creditors must not be offset.

⁴⁴ LLPs - Note 3 on the balance sheet formats in Section B of Part 1 of Schedule 1 to SI 2008/1913.

4.3.6.C Other debtors

This will cover debtors other than those identified in other line items, for example, amounts receivable from a sale of property, plant and equipment.

4.3.6.D Called up share capital not paid

The format 1 balance sheet permits called up share capital not paid to be presented either within debtors or in the position of line item A, i.e., in the statement of financial position (see 4.3.1 above).

4.3.6.E Prepayments and accrued income

Prepayments and accrued income can be presented either within debtors or as a separate line item in the statement of financial position (line item D).⁴⁵

Prepayments and accrued income are not defined in FRS 102 or the Regulations (or LLP Regulations). Prepayments arise where payments are made in advance of receiving goods or services and must meet the definition and recognition criteria of an asset, including recoverability, in FRS 102 (see Chapter 4 at 3.3.1). While FRS 102 prohibits the recognition as an intangible asset of certain types of expenditure (see Chapter 21), it does not preclude recognition of a prepayment where payment for goods or services is made in advance of the delivery of the goods or rendering of the services. [FRS 102.18.8D].

While the format 1 balance sheet combines prepayments and accrued income into one line item, these two items can have separate characteristics, and they differ in nature and liquidity. As noted at 3.4 above, the balance sheet formats allow any item to be shown in greater detail and FRS 102 requires additional line items, headings and subtotals when relevant to an understanding of the entity's financial position.

4.3.7 Cash at bank and in hand

The Regulations and LLP Regulations do not define cash at bank and in hand. Bank deposits with notice or maturity periods may or may not meet FRS 102's definition of 'cash' (i.e., cash on hand and demand deposits) or 'cash equivalents' (i.e., short-term, highly liquid investments that are readily convertible to known amounts of cash and that are subject to an insignificant risk of changes in value). [FRS 102.7.2, FRS 102 Appendix I]. See Chapter 7 at 3.2.

The standard's requirements on offset of financial assets and financial liabilities are strict. Offset of a financial asset and liability is required when, and only when, an entity currently has a legally enforceable right to set off the recognised amounts and intends either to settle on a net basis, or to realise the asset and settle the liability simultaneously. [FRS 102.11.38A, FRS 102.12.25W]. There may be group arrangements with a bank (such as cash pooling arrangements) where there are rights of offset and the contractual terms and conditions, and how these operate in practice can vary widely. A right of offset alone is insufficient to meet the requirements on offset of financial assets and financial liabilities, if there is no intention to settle net. See Chapter 13 at 8.1.

4.3.8 Creditors: amounts falling due within one year and creditors: amounts falling due after more than one year

Figure 4-10 shows the analysis required in respect of creditors (in the statement of financial position or in the notes to the accounts - see 3.4 above) under format 1.

⁴⁵ Note 6 on the balance sheet formats in Section B of Part 1 of Schedule 1 to SI 2008/410. For LLPs, the alternative position is line item C (note 4 to the balance sheet formats in Section B of Part 1 of Schedule 1 to SI 2008/1913).

Figure 4-10 Analysis of creditors: amounts falling due within one year

E	Creditors: amounts falling due within one year
1	Debenture loans
2	Bank loans and overdrafts
3	Payments received on account
4	Trade creditors
5	Bills of exchange payable
6	Amounts owed to group undertakings
7	Amounts owed to undertakings in which the company has a participating interest**
8	Other creditors including taxation and social security
9	Accruals and deferred income*
H	Creditors: amounts falling due within one year
1	Debenture loans
2	Bank loans and overdrafts
3	Payments received on account
4	Trade creditors
5	Bills of exchange payable
6	Amounts owed to group undertakings
7	Amounts owed to undertakings in which the company has a participating interest**
8	Other creditors including taxation and social security
9	Accruals and deferred income*
* Format 1 provides an alternative position for accruals and deferred income, at heading J. In format 1 in the LLP Regulations, the alternative position for accruals and deferred income is at heading I (i.e., the same as heading J in the company balance sheet formats).	
** In format 1 in the LLP Regulations, amounts owed to undertakings in which the LLP has a participating interest.	

The same line items are required for creditors: amounts falling due within one year and creditors: amounts falling due after more than one year. See 4.2.3 above for discussion of these two categories of creditors.

In addition, the General Rules to the formats (see 3.4 above) require that, in determining how amounts are presented within items in the balance sheet, the directors of the company (or the members of the LLP) must have regard to the substance of the reported transaction or arrangement, in accordance with generally accepted accounting principles or practice. [1 Sch 9, 1 Sch 9 (LLP)]. This provision facilitates the presentation of shares (such as certain preference shares), which are required to be classified as liabilities under accounting standards, to be shown as creditors rather than as called up share capital under the balance sheet statutory format. See Chapter 13 at 4.1. Note, however, that disclosures required by the Regulations in the notes to the accounts in relation to share capital (see, for example, the disclosures listed in 4.4.2 below) still apply, even if the shares are classified as a liability.

The General Rules to the formats permit certain adaptations to the balance sheet formats, as well as permitting line items to be shown in greater detail. These adaptations are required if the special nature of the company's business makes it necessary. FRS 102 requires additional line items, headings and subtotals when relevant to an understanding of the entity's financial position; this may be appropriate for the analysis of creditors. For example, it may be appropriate to present preference shares classed as a liability and other items separately from other creditors.

UK companies preparing Companies Act accounts (and LLPs preparing non-IAS accounts) must state in the notes to the accounts, for the aggregate of all items shown under 'creditors' in the balance sheet, the aggregate of:

- (a) The amount of any debts included under 'creditors' which are payable or repayable otherwise than by instalments and fall due for payment or repayment after the end of the period of five years beginning with the day next following the end of the financial year.

And

- (b) For debts included under 'creditors' which are payable or repayable by instalments, the amount of any instalments which fall due for payment after the end of that period. [1 Sch 61, 1 Sch 59 (LLP)].

In relation to each debt which is taken into account in (a) or (b) above, the terms of payment or repayment and rate of any interest payable on the debt must be stated. If the number of debts is such that, in the opinion of the directors (or the members of the LLP), the statement required would be of excessive length, a general indication of the terms of payment or repayment and the rates of any interest payable on the debts can be given.

For each item shown under 'creditors' in the statement of financial position, the aggregate amount of any debts included under that item in respect of which any security has been given by the company (or by the LLP), and an indication of the nature and the form of the securities given must also be stated. [1 Sch 61, 1 Sch 59 (LLP)]. This disclosure applies to both adapted formats or statutory formats.

Where any outstanding loans made under the authority of section 682(2)(b), (c) or (d) of CA 2006 (various cases of financial assistance by a company for the purchase of its own shares) are included under any item shown in the company's statement of financial position, the aggregate amount of those items must be disclosed for each item in question. [1 Sch 64(2)]. This disclosure applies where adapted formats or statutory formats are used.

For a discussion of the presentation of contract liabilities, see 4.3.13.A below.

4.3.8.A Debenture loans

The format 1 balance sheet has separate line items for debenture loans and bank loans and overdrafts. Therefore, bank loans and overdrafts need to be shown separately, even if they might also qualify as a debenture loan.

Note (7) on the balance sheet formats (and the equivalent requirement for LLPs)⁴⁶ state that the amount of any convertible loans (within debenture loans) must be shown separately.

A 'debenture' is not defined in CA 2006, except that it is stated to include 'debenture stock, bonds and other securities of a company (LLP), whether or not constituting a charge on the assets of the company.' [s738, s738 (LLP)]. In general use, a 'debenture' is a term applying to any document evidencing a loan. For the purposes of the statutory formats, this would generally mean a debt instrument issued by the company (or the LLP) with a written loan agreement, and usually giving some form of security or charge over its assets, although this is not an essential feature.

UK companies preparing Companies Act accounts (and LLPs preparing non-IAS accounts) must make the following disclosures in the notes to the accounts: [1 Sch 50, 1 Sch 48 (LLP)]

- If the company (or the LLP) has issued any debentures during the financial year, the classes of debentures issued during the financial year, and for each class of debentures, the amount issued and consideration received by the company (or the LLP) for the issue.
- And
- Where any of the company's (or the LLP's) debentures are held by a nominee of or trustee for the company (or the LLP), the nominal amount of the debentures and the amount at which they are stated in the company's (or the LLP's) accounting records.

This disclosure applies for both adapted formats and statutory formats.

4.3.8.B Bank loans and overdrafts

In relation to bank loans and overdrafts, care is needed with applying the requirements on offset of financial assets and financial liabilities, particularly in group arrangements with a bank (such as cash pooling arrangements) where there are rights of offset. See 4.3.7 above for discussion of offset in respect of group cash pooling arrangements.

⁴⁶ LLPs - Note 5 on the balance sheet formats in Section B of Part 1 of Schedule 1 to SI 2008/1913.

4.3.8.C Payments on account

As noted at 4.3.5 above we would not expect payments received on account to be deducted from stock (or inventory) as this would not meet the offset requirements of FRS 102.

4.3.8.D Trade creditors

Trade creditors are generally amounts payable to suppliers of goods and services, e.g., relating to amounts invoiced by suppliers and could include credit balances due to trade debtors.

Debit balances in trade debtors must not be offset with trade creditors (and *vice versa*) where the offset criteria are not met. The separate line items for 'amounts owed to group undertakings' and 'amounts owed to undertakings in which the entity has a participating interest' will include trade creditors due to group undertakings and participating interests respectively (see 4.3.8.F below).

4.3.8.E Bills of exchange

A bill of exchange is a written instrument used mainly in international trade, where one party agrees to pay an amount to another party on demand or on a specified date. The bill can often be transferred by the holder of the bill to a bank or finance house at a discount.

4.3.8.F Amounts owed to group undertakings, and to undertakings in which the company has a participating interest

The line items 'amounts owed to group undertakings' and 'amounts owed to undertakings in which the company has a participating interest' include all amounts owed by such undertakings which could include loans, dividends and interest payable, trading items such as current accounts and balances with group treasury companies. The meanings of 'group undertaking' and 'participating interest' are discussed at 4.3.4.C and 4.3.4.D above. Debtors and creditors must not be offset where the offset criteria are not met.

4.3.8.G Other creditors, including taxation and social security

Other creditors are creditors that do not belong in other line items.

Note (9) on the balance formats (and the equivalent requirement for LLPs)⁴⁷ state that the amount for creditors in respect of taxation and social security must be shown separately from the amount for other creditors. Taxation and social security creditors would include corporation tax, VAT, PAYE and National Insurance, and other taxes, including overseas taxation. This analysis can be given in the notes to the accounts.

In fact, FRS 102 does not explicitly require separate disclosure of the current tax creditor, although it requires disclosure of information that would enable users of the financial statements to evaluate the nature and financial effect of the current and deferred tax consequences of recognised transactions and other events. [FRS 102.29.25].

Deferred tax liabilities are not included in this heading but in 'Provisions for liabilities' (see 4.3.11 below).

4.3.8.H Accruals and deferred income

Accruals and deferred income can either be shown in the statement of financial position (line item J) or in the notes under creditors amounts falling due within 1 year or after one year as appropriate.⁴⁸

While the format 1 balance sheet combines accruals and deferred income into one line item, these two items can have separate characteristics, for example, they may differ in nature and liquidity. As noted at 3.4 above, the balance sheet formats allow any item to be shown in greater detail and FRS 102 requires additional line items, headings and subtotals when relevant to an understanding of the entity's financial position.

⁴⁷ LLPs - Note 7 on the balance sheet formats in Section B of Part 1 of Schedule 1 to SI 2008/1913.

⁴⁸ Note 10 on the balance sheet formats in Section B of Part 1 of Schedule 1 to SI 2008/410. For LLPs, the alternative position is line item I (note 8 on the balance sheet formats in Section B of Part 1 of Schedule 1 to SI 2008/1913).

4.3.9 Net current assets or liabilities

The format 1 balance sheet requires a subtotal to be shown for net current assets or liabilities in the statement of financial position.

Note (11) on the balance sheet formats (and the equivalent requirement for LLPs)⁴⁹ state that any amounts shown under 'prepayments and accrued income' must be taken into account in determining net current assets or liabilities, wherever shown (see 4.3.6.E above). Therefore, net current assets or liabilities for a company will represent the amounts reported at item C in format 1 plus prepayments and accrued income (at item D, if shown separately) less creditors: amounts falling due within one year (at item E). For LLPs, net current assets or liabilities is the sum of the amounts reported at item B in format 1, plus prepayments and accrued income (at item C, if shown separately) less creditors: amounts falling due within one year (at item D). See Figure 4-2 at 4.2 and Figure 4-3 at 4.2.1 above.

4.3.10 Total assets less current liabilities

The format 1 balance sheet requires a subtotal to be shown for total assets less current liabilities in the statement of financial position. This subtotal is the sum of fixed assets and net current assets or liabilities (see 4.3.9 above).

While the format 1 balance sheet does not require a net assets subtotal (with a balancing subtotal for capital and reserves), most companies present this. Sometimes companies have presented a balancing subtotal for 'capital and reserves' together with 'creditors: amounts falling due within one year', a practice not precluded by the Regulations (or LLP Regulations).

4.3.11 Provisions for liabilities

Figure 4-11 shows the analysis required, either in the statement of financial position or in the notes to the accounts - see 3.4 above, in respect of provisions for liabilities under format 1.

Figure 4-11 Analysis of provisions for liabilities

I Provisions for liabilities	
1	Pensions and similar obligations
2	Taxation, including deferred taxation
3	Other provisions

References to 'provisions for liabilities' in the Regulations and LLP Regulations are "to any amount retained as reasonably necessary for the purpose of providing for any liability the nature of which is clearly defined and which is either likely to be incurred, or certain to be incurred but uncertain as to amount or as to the date on which it will arise." [9 Sch 2, 4 Sch 10 (LLP)]. FRS 102 defines a provision more succinctly as "a liability of uncertain timing or amount." [FRS 102 Appendix I].

The General Rules to the formats (see 3.4 above) allow or, where the special nature of the company's business requires this, require certain adaptations to the balance sheet formats, as well as allowing line items to be shown in greater detail.

FRS 102 requires an entity to present a reconciliation of each class of provision (comparatives are not required) and requires further narrative disclosures for each class of provision. [FRS 102.21.14, FRS 102.21.17, FRS 102.21.17A]. See Chapter 24 at 4.1.

UK companies preparing Companies Act accounts and LLPs preparing non-IAS accounts must give:

- Particulars of each material provision included in the line item 'Other provisions' in the notes to the accounts. [1 Sch 59(3), 1 Sch 57(3) (LLP)].
- Particulars of any pension commitments included in the statement of financial position, giving separate particulars of any commitment relating wholly or partly to pensions payable to past directors of the company or past members of the LLP. [1 Sch 63(5), 1 Sch 63(4), 1 Sch 63(6), 1 Sch 60(4) (LLP)].

⁴⁹ LLPs - Note 9 on the balance sheet formats in Section B of Part 1 of Schedule 1 to LLP Regulations (SI 2008/1913).

- Where there have been transfers to provisions, or from any provisions (otherwise than for the purpose for which the provision was established) relating to any of the provisions required to be shown as separate line items in the statement of financial position or the notes (see 3.4 above), the company (or the LLP) must disclose the following in tabular form, in the notes to the accounts, in respect of the aggregate of provisions included in the same item:
 - The amount of the provisions as at the beginning and end of the financial year
 - Any amounts transferred to or from the provisions during that year
 And
 - The source and application respectively of any amounts transferred

Comparatives are not required (since these are specifically exempted under the equivalent reconciliation requirement in FRS 102). [1 Sch 59(1), 1 Sch 59(2), 1 Sch 57(1)(LLP), 1 Sch 57(2)(LLP)].

The above reconciliation required by the Regulations and LLP Regulations is similar to that required by FRS 102. However, the statutory requirement applies to movements in deferred tax provisions (see 4.3.13.B below) and pension provisions, as these are line items under 'provisions for liabilities'. In respect of pension provisions, FRS 102 already requires reconciliations of defined benefit obligations and plan assets, which provide similar information, albeit not for the net balance. [FRS 102.28.41(e), FRS 102.28.41(f)]. See Chapter 30 at 4.1.4.A.

The above disclosures apply where adapted formats or statutory formats are used.

4.3.12 Capital and reserves

Figure 4-12 shows the analysis required in respect of capital and reserves under format 1 for a UK company.

For an LLP, K - Capital and reserves is replaced with K - Members' other interests (with sub-headings K.I - Members' capital, K.II - Revaluation reserve and K.III - Other reserves, including the fair value reserve). The items shown in K - Members' other interests are equity for an LLP. However, members' interests classified as a liability would be shown in J - Loans and other debts due to members (see 4.2.1 above), which does not have an equivalent in the format 1 balance sheet for a UK company.

Figure 4-12 Analysis of capital and reserves - UK company

Analysis of capital and reserves - UK company	
K	Capital and reserves
I	Called up share capital
II	Share premium account
III	Revaluation reserve
IV	Other reserves
1	Capital redemption reserve
2	Reserve for own shares
3	Reserves provided for by the articles of association
4	Other reserves, including the fair value reserve
V	Profit and loss account
	See discussion above for the line items required for K - Members' other interests in the LLP Regulations.

The capital and reserves section of the statement of financial position includes a number of line items denoted by a Roman numeral which must be presented in the statement of financial position, with no adaptation of the order of the headings or description used permitted. The analysis of other reserves may be presented in the notes to the accounts, where permitted by the General Rules to the formats (see 3.4 above).

FRS 102's requirement to present a statement of changes in equity; the disclosures in the Regulations and LLP Regulations relating to capital and reserves, the disclosures in the LLP Regulations relating to loans and other debts due to members; and the LLP SORP's related requirement to show a reconciliation of members' interests, are discussed at 4.4 and 6 below.

4.3.12.A Called up share capital

FRS 102's requirements on recording issuances of equity instruments are consistent with the presentation of called up share capital in the Regulations (see Chapter 13 at 4.4). Called up share capital is presented as the first item in equity under format 1 and under adapted formats, it is one of the classes of equity which may be presented either in the statement of financial position or in the notes. [1 Sch 1, FRS 102.4.2B(g)].

4.3.12.B Share premium account

The share premium account is a statutory reserve that arises on the issue of share capital and under format 1 is presented under called up share capital. [1 Sch 1, FRS 102.4.2B(g)].

4.3.12.C Revaluation reserve

The revaluation reserve arises where an asset is carried at valuation using the alternative accounting rules in the Regulations (or LLP Regulations). [1 Sch 35, 1 Sch 35 (LLP)].

The amount of the revaluation reserve is presented in the position given for the item 'revaluation reserve' under capital and reserves in the balance sheet formats. The name 'revaluation reserve' must be used. [1 Sch 35(2), 1 Sch 35(2)(LLP)]. Under adapted formats, it is one of the classes of equity which may be presented either in the statement of financial position or in the notes. [FRS 102.4.2B(g)].

4.3.12.D Reserves provided for by the Articles of Association

Where the articles specifically provide for reserves to be established, this line item is used. This is not relevant to LLPs.

4.3.12.E Other reserves

The General Rules to the formats (see 3.4 above) permit, certain adaptations to the balance sheet formats, as well as allowing line items to be shown in greater detail. These adaptations are required if the special nature of the company's business makes it necessary.

FRS 102 requires additional line items, headings and subtotals when relevant to an understanding of the entity's financial position and this may be applicable when considering the analysis of other reserves. [FRS 102.4.3].

The sub-headings within the 'Other reserves' category are discussed at 4.3.12.F to 4.3.12.H below.

4.3.12.F Capital redemption reserve

The capital redemption reserve is a statutory reserve. [s733, s734]. If applicable, it is presented in the position of other reserves when applying the statutory formats and under the adapted formats, it is one of the 'other reserves' which may be presented either in the statement of financial position or in the notes. [1 Sch 1, FRS 102.4.2B(g)].

4.3.12.G Reserve for own shares

Note (4) on the balance sheet formats states that the nominal value of the own shares held must be shown separately in the notes to the accounts. This note strictly refers to own shares presented as an asset (which is not permitted under FRS 102), but entities commonly disclose this information even where own shares are presented in equity. Where treasury shares are held, there are further statutory disclosures (see 4.4.2 below).

This line item is not relevant for LLPs.

4.3.12.H Other reserves, including fair value reserve (item K.IV.4)

Other reserves reported at item K.IV.4 might include a reserve arising where merger relief (under sections 612 and 613) or group reconstruction relief (under section 611) is taken, but the company chooses to record a reserve equivalent to the share premium that would have been recorded but for the relief (as permitted by section 615).

Where a UK company prepares Companies Act accounts (or an LLP prepares non-IAS accounts), the fair value accounting rules in the Regulations (or LLP Regulations) have the effect that the changes in fair value: [1 Sch 40, 1 Sch 40 (LLP)]

- Of the hedging instrument in respect of cash-flow hedges and hedges of net investment in foreign operations (to the extent effective)

- Relating to exchange differences on monetary items forming part of the company's net investment in a foreign entity (see below)
- And
- Of available-for-sale financial assets

must or, in the case of available-for-sale financial assets, may be recognised in a separate statutory reserve (the fair value reserve). This is an 'Other reserve (including fair value reserve)' in the statutory formats. Available-for-sale financial assets may arise where a company chooses to apply the recognition and measurement provisions of IAS 39.

FRS 102 requires exchange differences arising on translation of a foreign operation in the financial statements that include that foreign operation, including a monetary item that forms part of the net investment in that foreign operation, to be recognised in other comprehensive income and accumulated in equity. However, there is no requirement to accumulate these in a separate reserve. [FRS 102.30.13]. See Chapter 32 at 3.6. Entities are not, however, precluded from doing so. The fair value accounting rules in the Regulations (and LLP Regulations) state that exchange differences on monetary items forming part of the company's or LLP's net investment in a foreign entity must be, accumulated within the fair value reserve. However, the fair value accounting rules apply only to a financial instrument measured at fair value. The Regulations and LLP Regulations are silent on whether that this requirement applies to a monetary item such as a loan to a foreign entity (which would usually be recorded at amortised cost).

4.3.12.I Profit and loss reserve

The profit and loss account reserve, or retained earnings, arises from the accumulation of the results for the year, and other items taken to other comprehensive income or to equity, but not classified in another reserve.

When profits are unrealised, companies may prefer to report these in a reserve other than retained earnings, so as to distinguish these from other profits that are realised. There is no separate line item for the profit and loss reserve in the LLP formats.

4.3.13 Other application issues

4.3.13.A Contract assets and liabilities

Neither the Regulations nor the LLP Regulations specifically address the presentation of contract assets or contract liabilities. Contract assets may include amounts receivable under contracts that have not yet been invoiced (and, therefore, are not recorded in trade debtors).

Contract assets and contract liabilities do not feature in the balance sheet formats. FRS 102 requires contract assets and contract liabilities to be presented in the statement of financial position, but does not specify precisely where it should be presented. [FRS 102.23.124]

How we see it

In our view, it would be appropriate to include contract assets as a line item within debtors (see 4.3.6 above). Contract liabilities are similar in nature to deferred income. The statutory formats permit a choice of locations for the deferred income line item; either in creditors falling due within one year/creditors falling due after more than one year or in the separate line item for accruals and deferred income.

4.3.13.B Deferred tax

FRS 102 requires deferred tax liabilities to be presented within 'provisions for liabilities' (see 4.3.11 above) and deferred tax assets to be presented within debtors. [FRS 102.29.23]. This means that there is no requirement to present deferred tax separately in the statement of financial position, however, entities may do so. FRS 102 includes rules on offset of deferred tax assets and liabilities (see Chapter 31 at 11.1.1). [FRS 102.29.24A].

This presentation is consistent with the statutory formats in the Regulations (and LLP Regulations) but differs from the presentation of deferred tax under the adapted formats in FRS 102 (see 4.1 above) or in IFRS accounting standards as a non-current asset and/or non-current liability shown in the statement of financial position. [IAS 1.54, IAS 1.56, IFRS 18.98, IFRS 18.101].

Deferred tax assets may include amounts due after more than one year. See 4.2.2 above for the disclosure requirements for 'debtors: amounts falling due after more than one year' in FRS 102 and the Regulations (and LLP Regulations), where statutory formats are used.

FRS 102 requires that the amount of deferred tax liabilities and deferred tax assets at the end of the reporting period for each type of timing difference and the amount of unused tax losses and tax credits is disclosed separately. [FRS 102.29.27(e)]. Therefore, while deferred tax is not required to be shown in the statutory balance sheet, this disclosure would be required in the notes. FRS 102's full disclosures for deferred tax are set out in Chapter 31 at 12.

A UK company preparing Companies Act accounts (or an LLP preparing non-IAS accounts) must state the provision for deferred tax separately from any other tax provisions. [1 Sch 60, 1 Sch 58 (LLP)]. This should not lead to additional disclosure since deferred tax will of course be shown already in the statement of financial position for adapted formats and, as noted above, FRS 102 requires disclosure of deferred tax balances in the notes.

Where there have been transfers to and from deferred tax, the amount of the provision at the beginning and end of the year, and the movements in that provision must also be disclosed in the notes to the accounts (see 4.3.11 above). [1 Sch 59, 1 Sch 57 (LLP)]. This disclosure is required where statutory formats are used.

4.3.13.C Assets and disposal groups held for sale

FRS 102 does not include a concept of assets and disposal groups held for sale, comparable to that in IFRS 5. Therefore, an entity is not required to present a non-current asset classified as held for sale and the assets of a disposal group held for sale separately from other assets in the statement of financial position and the liabilities of a disposal group held for sale separately from other liabilities in the statement of financial position. [IFRS 5.38, IAS 1.54, IFRS 18.103].

In addition, FRS 102 does not permit such presentation of disposal groups in the statement of financial position because the General Rules to the formats (see 3.4 above) do not allow the aggregation of different line items into two lines, being assets and liabilities of the disposal group, in this way. This does not preclude entities presenting additional analysis in the notes to the financial statements. See also the disclosures at 4.5 below.

As noted at 4.3.3 above, the statutory definition of a fixed asset is not normally interpreted to mean that individual assets are transferred to current assets when a decision to dispose of them has been made (but see 4.1.9 above which sets out some situations where we would expect a change in use of the asset to lead to reclassification as inventory). Nevertheless, some companies do make such transfers.

4.3.13.D Post-employment benefit assets and liabilities

FRS 102 does not explicitly address the presentation of post-employment benefit assets and liabilities.

The format 1 balance sheet includes a line item 'pensions and similar liabilities' within provisions for liabilities (see 4.3.11 above). There is no specific line item for pension assets.

How we see it

In our view, a pension asset could be presented as a separate line item within debtors. Defined benefit assets may include amounts due after more than one year.

See 4.2.2 above for the disclosure requirements in FRS 102 and in the Regulations (and LLP Regulations) for 'debtors: amounts due after more than one year'.

As FRS 102 does not specify a line item, there may be divergence in practice in the presentation of defined benefit pension surpluses and deficits. However, the related deferred tax asset or liability must be shown separately, as offsetting is not permitted. Disclosure requirements for defined benefit plans are discussed in Chapter 30 at 4.1.4.

The Regulations (and LLP Regulations) require certain disclosures in Companies Act accounts (non-IAS accounts, for an LLP) for pension commitments included in the statement of financial position (see 4.3.11 above) and for pension commitments not included in the statement of financial position (see 7.8.1 below).

Where there have been transfers to and from provisions for liabilities, which may include pension provisions, the amount of the provision at the beginning and end of the year, and the movements in that provision must also be disclosed in the notes to the accounts (see 4.3.11 above). [1 Sch 59, 1 Sch 57 (LLP)]. As noted at 4.3.11 above, FRS 102 also requires a reconciliation of movements in plan assets and plan liabilities. [FRS 102.28.41(e), FRS 102.28.41(f)].

These disclosures are relevant to adapted formats and statutory formats.

4.3.13.E Biological assets

The format 1 balance sheet does not include a line item for biological assets, which should be reported within either tangible fixed assets (e.g., an apple orchard) or stock (e.g., farmed salmon), as appropriate. FRS 102 requires reconciliations of changes in the carrying amounts to be given for biological assets (separately for each class carried under the cost model and each class carried under the fair value model) (see Chapter 36 at 2.6 and 2.7. [*FRS 102.34.7(c)*, *FRS 102.34.10(e)*]).

See 4.2.2 above for the requirements for reconciliations of movements in fixed assets in the Regulations (and the LLP Regulations) for UK companies preparing Companies Act accounts (and LLP accounts preparing non-IAS accounts). These disclosures apply where statutory formats or adapted formats are used.

Comparatives are not required for the reconciliations required by FRS 102 or the Regulations (and LLP Regulations).

4.3.13.F Financial assets and financial liabilities

The format 1 balance sheet does not include specific line items for financial assets and financial liabilities. Financial assets will generally be reported, as appropriate, within 'cash at bank and in hand', 'debtors', 'current asset investments' or 'fixed asset investments'. Financial liabilities will generally be reported, as appropriate, within 'creditors: amounts falling due within one year' and 'creditors: amounts falling due after more than one year' or 'provisions for liabilities' (e.g., contingent consideration on a business combination). FRS 102 requires further analyses of specified categories of financial assets and financial liabilities to be disclosed either in the statement of financial position or in the notes to the financial statements (see 4.1.7 above for details). The Regulations and LLP Regulations also include various disclosures, some of which have been highlighted in the relevant sections above and also in respect of financial instruments held at fair value.

4.3.13.G Government grants

FRS 102 sets out two models for recognising government grants - the accrual model and the performance model (see Chapter 26). There is no specific line for government grants in the balance sheet statutory formats.

The discussion at 4.1.14.D above on presentation and disclosure of government grants under the two models is equally applicable to statutory formats.

4.3.13.H Leases - right of use assets and lease liabilities

FRS 102 sets out presentation and disclosure requirements relating to right of use assets and lease liabilities. There is no specified line item for right of use assets and lease liabilities in the balance sheet statutory formats. For a detailed discussion of the requirements and how they interact with the requirements of the statutory formats, see Chapter 23 at 6.7.

4.4 Additional disclosures in respect of share capital (or equivalent) (adapted formats and statutory formats)

FRS 102 (see 4.4.1 below) and the Regulations (see 4.4.2 below) require similar disclosures in respect of share capital.

4.4.1 FRS 102 disclosures in respect of share capital (or equivalent)

FRS 102 requires an entity with share capital to disclose the following information, either in the statement of financial position or in the notes: [*FRS 102.4.12*]

(a) For each class of share capital:

- (i) The number of shares issued and fully paid, and issued but not fully paid
- (ii) Par value per share, or that the shares have no par value
- (iii) The rights, preferences and restrictions attaching to that class including restrictions on the distribution of dividends and the repayment of capital
- (iv) Shares in the entity held by the entity or by its subsidiaries, associates or joint ventures

- (v) Shares reserved for issue under options and contracts for the sale of shares, including the terms and amounts

And

- (b) A description of each reserve within equity

An entity without share capital, such as a partnership or trust, must disclose information equivalent to that required by (a) above, showing changes during the period in each category of equity, and the rights, preferences and restrictions attaching to each category of equity. *[FRS 102.4.13]*.

4.4.2 Information required by the Regulations in respect of share capital

Some of the FRS 102 disclosure requirements overlap with the disclosure requirements in relation to share capital included in the Regulations for UK companies preparing Companies Act accounts.

The Regulations require the following disclosures in the notes to the accounts:

- The amount of allotted share capital and, separately, the amount of called up share capital which has been paid up (this may be given in the statement of financial position or in the notes)⁵⁰
- Where shares of more than one class have been allotted, the number and aggregate nominal value of shares of each class allotted *[1 Sch 47(1)(a)]*
- Where shares are held as treasury shares, the number and aggregate nominal value of the treasury shares and, where shares of more than one class have been allotted, the number and aggregate nominal value of the shares of each class held as treasury shares *[1 Sch 47(1)(b)]*
- Where any part of the allotted share capital consists of redeemable shares: *[1 Sch 47(2)]*
 - The earliest and latest dates on which the company has power to redeem those shares
 - Whether those shares must be redeemed in any event or are liable to be redeemed at the option of the company or of the shareholder

And

 - Whether any (and if so, what) premium is payable on redemption
- If the company has allotted any shares during the financial year: *[1 Sch 48]*
 - The classes of shares allotted

And

 - For each class of shares, the number allotted, their aggregate nominal value, and the consideration received by the company for the allotment
- With respect to any contingent right to the allotment of shares in the company (i.e., any option to subscribe for shares and any other right to require the allotment of shares to any person whether arising on the conversion into shares of securities of any other description or otherwise), particulars of: *[1 Sch 49]*
 - The number, description and amount of the shares in relation to which the right is exercisable
 - The period during which it is exercisable

And

 - The price to be paid for the shares allotted
- If any fixed cumulative dividends on the company's shares are in arrear: *[1 Sch 62]*
 - The amount of the arrears

And

 - The period for which the dividends or, if there is more than one class, each class of them are in arrear

And

 - The number, description and amount of the shares in the company held by, or on behalf of, its subsidiary undertakings (except where the subsidiary undertaking is concerned as personal representative, or, subject to certain exceptions, as trustee) *[4 Sch 3]*

⁵⁰ Note 12 on the balance sheet formats in Section B of Part 1 of Schedule 1 to SI 2008/410.

The LLP Regulations do not include the above disclosures (as not relevant) although the following information is required in the notes to the accounts in respect of loans and other debts due to members: [1 Sch 47 (LLP)]

- The aggregate amount of loans and other debts due to members as at the date of the financial year
- The aggregate amounts contributed by members during the financial year
- The aggregate amounts transferred to or from the profit and loss account during that year
- The aggregate amounts withdrawn by members or applied on behalf of members during that year
- The aggregate amount of loans and other debts due to members as at the balance sheet date

And

- The aggregate amount of loans and other debts due to members that fall due after more than one year

The LLP SORP provides further guidance on this disclosure, adding further related disclosures, and requires a reconciliation of the movement in members' interests analysed between 'members' other interests' and 'loans and other debts due to members', which would meet the requirements of paragraph 13 of section 4 of the standard (see 4.4.1 above) and the statutory requirements in paragraph 47 of Schedule 1 to the LLP Regulations. [LLP SORP.60].

Detailed guidance on issues specific to LLPs is outside the scope of this chapter.

4.5 Information on disposal group to be presented in the notes (adapted formats and statutory formats)

As discussed at, FRS 102 does not include a concept of 'held for sale', comparable to that in IFRS 5 (see 4.1.14.B and 4.3.13.C above). However, FRS 102 does define a 'disposal group' (see Chapter 20 at 3.9) and requires limited disclosures where there is, at the end of the reporting period, a binding sale agreement for a major disposal of assets, or a disposal group. The entity must disclose in the notes to the financial statements: [FRS 102.4.14]

- A description of the asset(s) or the disposal group
 - A description of the facts and circumstances of the sale
- And
- The carrying amount of the assets or, for a disposal group, the carrying amounts of the assets and liabilities within the disposal group

5 Statement of comprehensive income

This part of the chapter sets out the requirements for the income statement for entities not applying Section 1A.

FRS 102 requires an entity to present its total comprehensive income for a period, i.e., its financial performance for period, in one or two statements. Financial performance is the relationship of the income and expenses of an entity as reported in the statement of comprehensive income. *[FRS 102 Appendix I]*.

This part of the chapter is set out as follows:

- 5.1 - Format of the statement of comprehensive income (adapted formats and statutory formats)
 - 5.2 - Items reported in other comprehensive income (adapted formats and statutory formats)
 - 5.3 - Single statement approach (adapted formats and statutory formats)
 - 5.4 - Two-statement approach (adapted formats and statutory formats)
 - 5.5 - Adapted formats
 - 5.6 - Statutory formats - format 1 and 2 profit and loss accounts
 - 5.7 - Requirements applicable to both approaches (adapted formats and statutory formats)
 - 5.8 - Presentation of discontinued operations (adapted formats and statutory formats)
 - 5.9 - Earnings per share (adapted formats and statutory formats)
- And
- 5.10 - Issues common to adapted and statutory formats

5.1 Format of the statement of comprehensive income (adapted formats and statutory formats)

Part 1 of Schedule 1 to the Regulations (and Part 1 of Schedule 1 to the LLP Regulations) provide a choice of:

- One of two profit and loss account statutory formats (as set out in Section B of the relevant Part)
- Or
- Use of adapted formats

Schedule 2 (banking companies) and Schedule 3 (insurance companies) to the Regulations require use of the statutory formats and do not allow use of adapted formats. The statutory formats for insurance companies are discussed in Chapter 38 at 8. This publication does not set out or discuss the statutory formats for banking companies.

The consolidated statement of comprehensive income or income statement (depending on the option taken) of a group must be presented in accordance with the requirements for a consolidated profit and loss account of Schedule 6 to the Regulations (or, where applicable, Schedule 3 to the LLP Regulations).

[FRS 102.5.5, FRS 102.5.7]. How adapted formats and statutory formats are applied in consolidated financial statements is further explained in 3.2.2 above and 5.5 and 5.6 below.

Section 5's requirements to present a statement of comprehensive income in either single statement form or in two-statement form are discussed below. The single statement form is discussed at 5.3 below and the two-statement form at 5.4 below. Items presented in other comprehensive income under both forms are discussed at 5.2 below. Adapted formats (see 5.5 below) and statutory formats (see 5.6 below) can be used under both the single statement and two-statement forms of the statement of comprehensive income. Supplementary requirements in FRS 102 relevant to the statement of comprehensive income are discussed at 5.7 to 5.9 below. The discussion at 5.1 to 5.4 and 5.7 to 5.9 below is relevant to both adapted formats and statutory formats.

An entity must present its total comprehensive income for a period either: *[FRS 102.5.2, FRS 102 Appendix I]*

- In a single statement of comprehensive income which presents all items of income and expense recognised in the period (and includes a subtotal for profit or loss).
- Or
- In two statements - an income statement (referred to as the profit and loss account in CA 2006) and a statement of comprehensive income, in which case the income statement presents all items of income and expense recognised in the period except those that are recognised in total comprehensive income outside of profit or loss as permitted or required by FRS 102.

A change from the single-statement approach to the two-statement approach, or *vice versa*, is a retrospective change in accounting policy to which Section 10 applies. [FRS 102.5.3]. See Chapter 9 at 3.3. These requirements apply both to consolidated and individual financial statements.

5.1.1 Section 408 exemption in group accounts

Where a UK company (or an LLP) prepares group accounts in accordance with CA 2006, the company (or the LLP) can take advantage of the exemption in section 408 of CA 2006 not to present the individual profit and loss account and certain related notes (providing the conditions for use of the exemption are met). See Chapter 1 at 5.3.2.

References in Part 15 to the profit and loss account include notes to the accounts giving information required by any provision of CA 2006 and that is either required or allowed by that provision to be given in a note to the company's accounts. [s472].

The section 408 exemption, where used, provides that:

- The company's (or the LLP's) individual profit and loss account need not contain the information specified in paragraphs 65 to 69 of Schedule 1 to the Regulations (or paragraphs 62 to 67 of Schedule 1 to the LLP Regulations) [Regulations 3(2), 1 Sch 65, 1 Sch 66, 1 Sch 67, 1 Sch 68, 1 Sch 69, LLP Regulations 3(2), 1 Sch 62(LLP), 1 Sch 63(LLP), 1 Sch 64(LLP), 1 Sch 65(LLP), 1 Sch 66(LLP), 1 Sch 67(LLP)]

And

- The company's (or the LLP's) individual profit and loss account must be approved by the directors (or the members of the LLP) in accordance with section 414(1) of CA 2006, but may be omitted from the company's (or the LLP's) annual accounts [s414(1), s414(1)(LLP)]

The exemption is conditional on the company's (or the LLP's) individual statement of financial position showing the company's (or LLP's) profit or loss for the financial year, determined in accordance with CA 2006 and disclosing use of the section 408 exemption in the annual accounts.

5.1.2 The distinction between income, revenue, turnover and gains

Income encompasses both revenue and gains; it is defined in FRS 102 as "increases in assets or decreases in liabilities that result in increases in equity, other than those relating to contributions from equity investors". [FRS 102 Appendix I, FRS 102.2.47].

FRS 102 defines revenue as income that arises in the course of the ordinary activities of an entity. [FRS 102 Appendix I]. It may be referred to by a variety of different names, including sales, fees, interest, dividends, royalties and rent. Section 23 addresses a subset of revenue - revenue from a contract with a customer - see Chapter 25.

Turnover is defined in section 474(1) and FRS 102 - see the discussion in 5.6.1 below. Turnover is applicable only for entities applying the statutory formats.

Gains are defined as increases in economic benefits that meet the definition of income, but are not revenue, for example, a gain on the disposal of a non-current asset. [FRS 102 Appendix I]. The definition of income also includes unrealised gains; for example, gains arising on the revaluation of investment property or property, plant and equipment. Not all gains are recognised in the statement of profit or loss, as some are required to be recognised in the statement of other comprehensive income.

As noted above, the definition of revenue includes a reference to 'ordinary activities'. Section 5 defines ordinary activities broadly, as 'any activities which are undertaken by a reporting entity as part of its business'. [FRS 102.5.10A] The purpose of this broad definition is to distinguish ordinary activities from 'extraordinary activities' - see 5.7.6 below. The Glossary to FRS 102 also uses the term 'ordinary activities' in its definition of a customer - "a party which has contracted with an entity to obtain goods or services that are an output of the entity's ordinary activities". The question arises as to what 'ordinary activities' mean in the context of revenue and, specifically, revenue from a contract with a customer.

How we see it

Despite the broad definition of 'ordinary activities' in the standard, we believe that in order to identify its revenue (and, more specifically, its revenue from contracts with customers), an entity must distinguish income generated by its primary business activities from income generated by its incidental activities. In our view, only income generated from an entity's primary business activities is presented as revenue. Income from incidental activities is not revenue and is more appropriately presented as other income.

The requirements on offsetting a gain on disposal of a fixed asset are set out in Section 2 and Section 17. If an entity's normal operating activities do not include buying and selling fixed assets, gains and losses on the disposal of such assets must be reported by deducting the carrying amount of the asset and related selling expenses from the proceeds on disposal and are presented within other income or expense. [FRS 102.2.98, FRS 102.17.28]. However, if an entity routinely sells PP&E that it has held for rental to others, this is part of its primary business activities, and the income is presented as revenue from contracts with customers. This is discussed further in Chapter 25 at 3.1.6.D.

5.2 Items reported in other comprehensive income (adapted formats and statutory formats)

Other comprehensive income means items of income and expense (including reclassification adjustments), that are not recognised in profit or loss as required or permitted by FRS 102. [FRS 102 Appendix I]. Therefore, profit and loss is the default category; all comprehensive income is part of profit and loss unless FRS 102 permits or requires otherwise.

Tax expense/(income) is recognised in other comprehensive income where the transaction or other event that resulted in the tax is recognised in other comprehensive income. [FRS 102.29.22]. See Chapter 31 at 9.

FRS 102 requires the following items to be included in other comprehensive income:

- (a) Changes in revaluation surplus relating to property, plant and equipment [FRS 102.17.15E, FRS 102.17.15F] (see Chapter 20 at 3.7.3), and changes in revaluation surplus relating to intangible assets [FRS 102.18.18G, FRS 102.18.18H] (see Chapter 21 at 3.3.2.C).
- (b) Remeasurements of the net defined benefit liability of defined benefit plans. These remeasurements comprise actuarial gains and losses, the return on plan assets excluding amounts included in net interest on the net defined benefit liability and any change in the amount of a defined benefit plan surplus that is not recoverable excluding amounts included in net interest on the net defined benefit liability [FRS 102.28.23(d), FRS 102.28.25, FRS 102.28.25A] (see Chapter 30 at 3.5.10.B).
- (c) Exchange gains and losses arising from translating the financial statements of a foreign operation, including in consolidated financial statements, exchange differences on a monetary item that forms part of the net investment in the foreign operation. However, under FRS 102, unlike IAS 21 - *The Effects of Changes in Foreign Exchange Rates*, cumulative exchange differences accumulated in equity are not reclassified to profit or loss on disposal of a net investment in a foreign operation [FRS 102.9.18A, FRS 102.30.13J] (see Chapter 32 at 3.6 and 3.7).
- (d) The effective portion of fair value gains and losses on hedging instruments in a cash flow hedge or a hedge of the foreign exchange risk in a net investment in a foreign operation. The amounts taken to equity in respect of the hedge of the foreign exchange risk in a net investment in a foreign operation are not reclassified to profit or loss on disposal or partial disposal of the foreign operation [FRS 102.12.23, FRS 102.12.24, FRS 102.12.25A] (see Chapter 14 at 4.8.3 and Chapter 14 at 4.9.2).
- (e) Fair value gains and losses through other comprehensive income, where an investor that is not a parent measures its interests in jointly controlled entities, [FRS 102.15.9(c)], and investments in associates in its individual financial statements using the fair value model [FRS 102.14.4(c), FRS 102.14.10] (see Chapter 17 at 3.2.4 and Chapter 18 at 3.5.2).
- (f) Fair value gains and losses through other comprehensive income for investments in subsidiaries, associates and jointly controlled entities in a parent's separate financial statements and in consolidated financial statements for certain excluded subsidiaries [FRS 102.9.9, FRS 102.9.26(b), FRS 102.9.26A] (see Chapter 8 at 3.4 and Chapter 8 at 4.2).

And

- (g) Any unrealised gain arising on an exchange of business or non-monetary assets for an interest in a subsidiary, jointly controlled entity or associate, [FRS 102.9.31], (see Chapter 8 at 3.8).

Of the above items, only the amounts taken to other comprehensive income in relation to cash flow hedges (at (d) above) may be reclassified to profit or loss in a subsequent period under FRS 102.

Where the entity applies the recognition and measurement requirements of IAS 39 or IFRS 9 to financial instruments, further items are reported in other comprehensive income (see 5.2.1 below).

The Regulations and LLP Regulations restrict when unrealised profits can be reported in the profit and loss account. Consequently, certain unrealised profits may be required to be reported in other comprehensive income (see 5.2.2 below).

5.2.1 Items reported in other comprehensive income where an entity chooses to apply the recognition and measurement provisions of IAS 39 or IFRS 9

Where the recognition and measurement requirements of IAS 39 or IFRS 9 are applied to financial instruments, as permitted by FRS 102, the following items would also be reported in other comprehensive income in accordance with the requirements of the applicable accounting standard:

- (a) Gains and losses on remeasuring available-for-sale financial assets (IAS 39) [IAS 39.55(b)]
- (b) Gains and losses on financial assets that are debt instruments (meeting the specified criteria) that are carried at fair value through other comprehensive income (if the entity chooses to apply IFRS 9) [IFRS 9.4.1.2A, IFRS 9.5.7.1(d), IFRS 9.5.7.10, IFRS 9.5.7.11]
- (c) Gains and losses on remeasuring investments in equity instruments designated as measured at fair value through other comprehensive income, with no recycling (IFRS 9) [IFRS 9.4.1.4, IFRS 9.5.7.1(b), IFRS 9.5.7.5, IFRS 9.5.7.6]
- (d) The effective portion of gains and losses on hedging instruments in a cash flow hedge or hedge of a net investment in a foreign operation (IAS 39 or IFRS 9) [IAS 39.95, IAS 39.96, IAS 39.97, IAS 39.98, IAS 39.99, IAS 39.100, IAS 39.101, IAS 39.102, IFRS 9.6.5.11, IFRS 9.6.5.12, IFRS 9.6.5.13, IFRS 9.6.5.14]

And

- (e) For liabilities designated as at fair value through profit or loss, fair value changes attributable to changes in the liability's credit risk, unless this would create or enlarge an accounting mismatch in profit and loss (IFRS 9) [IFRS 9.4.2.2, IFRS 9.5.7.1(c), IFRS 9.5.7.7, IFRS 9.5.7.8, IFRS 9.5.7.9, FRS 102.A3.12C]

This accounting treatment will usually require use of a 'true and fair override' for a UK company or LLP since it breaches the requirements of the Regulations, Small Companies Regulations, LLP Regulations or Small LLP Regulations)

Only items (a), (b) and the effective portion of gains and losses on hedging instruments in a cash flow hedge at (c) above may be reclassified to profit or loss in a subsequent period. The amounts recognised in other comprehensive income and accumulated in equity in respect of the hedge of the foreign exchange risk in a net investment in a foreign operation are not reclassified to profit or loss on disposal or partial disposal of the foreign operation. [FRS 102.9.18A, FRS 102.30.13].

5.2.2 Impact of realised and unrealised profits on items reported in other comprehensive income

UK companies preparing Companies Act accounts (and LLPs preparing non-IAS accounts) must follow the statutory requirement that "only profits realised at the balance sheet are to be included in the profit and loss account" (see 8.1.1 below). [1 Sch 13(a), 1 Sch 13(a)(LLP)].

Notwithstanding this restriction, changes in the value of a financial instrument or in the value of an investment property or a living animal or plant measured using the fair value accounting rules (in paragraphs 36, 38 and 39 of Schedule 1 to the Regulations and the same paragraphs in the LLP Regulations) must be reflected in the profit and loss account. This is subject to the requirements of paragraphs 40(3) and (4) of Schedule 1 to the Regulations (and the same paragraphs in the LLP Regulations) for available-for-sale financial assets, hedge accounting and for exchange differences on monetary items forming part of the net investment in a foreign entity, which permit or require certain movements on financial instruments to be reflected in a statutory 'fair value reserve'. [1 Sch 40(2), 1 Sch 40(3), 1 Sch 40(4), 1 Sch 40(2)(LLP), 1 Sch 40(3)(LLP), 1 Sch 40(4)(LLP)].

While UK companies and LLPs may now measure stocks at fair value using the fair value accounting rules, paragraph 40 of Schedule 1 to the Regulations does not specify where fair value changes arising on stock are presented. FRS 102 allows stock to be measured at fair value less costs to sell in restrictive circumstances; in such circumstances, the fair value changes are recognised in profit or loss. [FRS 102.13.3].

FRS 102 requires that "an entity shall recognise all items of income and expense arising in a period in profit or loss unless an FRS requires or permits otherwise or *unless prohibited by the Act*" [emphasis added]. [FRS 102.5.8].

Where the standard is explicit that it requires that a particular gain must be reported in profit or loss but this would conflict with the Regulations or LLP Regulations, the entity should consider whether a 'true and fair override' of the requirements of CA 2006 is appropriate (see 8.2 below).

How we see it

In our view, where the standard is not explicit, profit and loss is the default location for gains and losses. However, entities should consider Appendix III which highlights the company law requirements on realised profits. These company law considerations are only relevant to entities subject to the Regulations or LLP Regulations (or corresponding requirements in another statutory or regulatory framework that applies to the entity).

Whether profits are available for distribution must be determined in accordance with applicable law. Technical Release 02/17BL *Guidance on realised and distributable profits under the Companies Act 2006* ('TECH 02/17BL') provides guidance on the determination of the profits available for distribution under CA 2006. [FRS 102.A3.29]. See Chapter 1 at 5.8.

5.3 Single-statement approach (adapted formats and statutory formats)

In the single-statement approach, an entity must present the items to be included in a profit and loss account in accordance with the requirements in Part 1 of the applicable schedule to the Regulations or Part 1 of Schedule 1 to the LLP Regulations.

The consolidated statement of comprehensive income of a group must be presented in accordance with the requirements of Schedule 6 to the Regulations (or, where applicable, Schedule 3 to the LLP Regulations). [FRS 102.5.5].

The formats required by different types of entity (and in consolidated financial statements) are discussed in more detail in 3.1, 3.2 and 5.1 above.

A subtotal for profit or loss is included in the statement of comprehensive income. [FRS 102 Appendix I].

In addition, the statement of comprehensive income must include line items that present: [FRS 102.5.5A]

- (a) Each component of other comprehensive income recognised as part of total comprehensive income outside profit or loss as permitted or required by FRS 102 classified by nature (excluding amounts in (b)). These components must be shown either net of related tax, or gross of related tax (with a single amount shown for the aggregate amount of income tax relating to those components)
 - (b) The share of the other comprehensive income of associates and jointly controlled entities accounted for using the equity method
- And
- (c) Total comprehensive income

The statement of comprehensive income must also show the allocation of profit or loss for the period and of total comprehensive income for the period attributable to non-controlling interest and owners of the parent. [FRS 102.5.6]. See 3.5 above for a discussion of how this allocation should be presented under the formats for the group profit and loss account.

See Illustration 5-1 at 5.5.2 below for an example of a single statement of comprehensive income, in this case using adapted formats.

5.4 Two-statement approach (adapted formats and statutory formats)

Under the two-statement approach, an entity must present in an income statement the items to be included in a profit and loss account in accordance with the requirements in Part 1 of the applicable schedule to the Regulations or Part 1 of Schedule 1 to the LLP Regulations.

The consolidated statement of comprehensive income of a group must be presented in accordance with the requirements of Schedule 6 to the Regulations (or, where applicable, Schedule 3 to the LLP Regulations). [FRS 102.5.7].

The formats required by different types of entity (and in consolidated financial statements) are discussed in more detail in 3.1, 3.2 and 5.1 above.

The income statement must show the allocation of profit or loss for the period attributable to non-controlling interest and owners of the parent. [FRS 102.5.7B].

The statement of comprehensive income (whether adapted formats or statutory formats are used) begins with profit or loss as its first line and then includes, as a minimum, line items that present:

- (a) Each component of other comprehensive income recognised as part of total comprehensive income outside profit or loss as permitted or required by the standard classified by nature (excluding amounts in (b)). These components must be shown either net of related tax, or gross of related tax (with a single amount shown for the aggregate amount of income tax relating to those components)
 - (b) The share of the other comprehensive income of associates and jointly controlled entities accounted for by the equity method
- And
- (c) Total comprehensive income

The statement of comprehensive income must show the allocation of total comprehensive income for the period attributed to non-controlling interest and owners of the parent. [FRS 102.5.7A, FRS 102.5.7B, FRS 102.5.7C]. See 3.5 above for a discussion of how the allocations of profit or loss and total comprehensive income should be presented under the formats for the group profit and loss account.

See Illustration 5-2 at 5.5.2 for an example statement of comprehensive income (where a two-statement form is applied).

5.5 Adapted formats

An entity choosing to apply paragraph 1A(2) of Schedule 1 to the Regulations and adapt one of the profit and loss account formats (see 3.2 above for discussion as to which formats apply to which types of entity) shall, as a minimum:

- Include in its statement of comprehensive income (under the single statement form) line items that present amounts (a) to (j) for the period (as set out in Figure 5-1 below). [FRS 102.5.5B].
- And
- Include in its income statement (under the two-statement form) line items that present amounts (a) to (g) for the period (as set out in Figure 5-1 at 5.5 below), with profit or loss as the last line. The statement of comprehensive income shall begin with profit or loss as its first line and shall display as a minimum line items (h) to (j), with total comprehensive income as its last line. [FRS 102.5.7A].

The main modification required for group profit and loss account using adapted formats is the identification of non-controlling interests (see 3.5, 5.3 and 5.4 above). [FRS 102.5.6, FRS 102.5.7A, FRS 102.5.7B, FRS 102.5.7C].

Figure 5-1 Profit and loss account - UK company (other than a banking company or insurance company) and LLP - adapted formats (effective for periods on or before 1 January 2027)

(a)	Revenue
(b)	Finance costs
(c)	Share of the profit or loss of investments in associates and jointly controlled entities accounted for using the equity method
(d)	Profit or loss before taxation
(e)	Tax expense (excluding tax allocated to items (h) and (i) below or to equity)
(f)	A single amount comprising the total of:*
	(i) the post-tax profit or loss of a discontinued operation, and
	the post-tax gain or loss attributable to the impairment or on the disposal of the assets or
	(ii) disposal group(s) constituting discontinued operations
(g)	Profit or loss~
(h)	Each item of other comprehensive income classified by nature (excluding amounts in (i))
(i)	Share of other comprehensive income of associates and jointly controlled entities accounted for using the equity method
(j)	Total comprehensive income

* As set out in paragraph 5.7E (including a column for discontinued operations - see 5.8 below)

- The LLP SORP (2025) requires that LLPs using adapted formats show a line item for 'members' remuneration charged as an expense' as an additional expense.

See 9.1 below for periods beginning on or after 1 January 2027.

While FRS 102 refers to the Regulations, the same requirements apply to LLPs since paragraph 1A(2) of Schedule 1 to the LLP Regulations also allows the use of adapted formats.

The LLP SORP requires that adapted formats show a line item for 'profit or loss for the financial year before members' remuneration and profit shares' (in order to give equivalent information to the statutory formats). 'Members' remuneration charged as an expense' (which includes related employment costs) must be deducted as an additional expense, coming to the final line item of 'profit or loss for the financial year available for discretionary division among members' (which would correspond to item (g) in Figure 5-1 above). This is the same presentation in the profit or loss account (or statement of comprehensive income) as discussed for statutory formats at 5.6 below.

So far as is practicable, paragraphs 2 to 9A of the General Rules to the formats (see 3.4 above) apply to the income statement (or profit and loss account section of the single statement of comprehensive income), notwithstanding any such adaptation pursuant to paragraph 1A. [1 Sch 1A(3), 1 Sch 1A(3)(LLP)].

An entity may include additional line items in the income statement and amend the descriptions used in the line items set out in (a) to (j) and the ordering of items, when this is necessary to explain the elements of financial performance, providing the information given is at least equivalent to that required by the profit and loss account format, had it not been adapted. [FRS 102.5.5C]. The effect of paragraph 5C of section 5 of the standard is to clarify that there is flexibility in the presentation requirements where adapted formats are used.

The requirement (see 5.7.2 below) that an entity shall present additional line items, headings and subtotals in the statement of comprehensive income (and in the income statement, where presented) when such presentation is relevant to an understanding of the entity's financial performance also applies to adapted formats. [FRS 102.5.9].

5.5.1 Other implementation issues (adapted formats)

Schedule 1 to the Regulations (and Schedule 1 to the LLP Regulations) state that adapted formats may be used, provided that the information given is at least equivalent to that which would have been required by the use of the statutory format. The presentation must be in accordance with generally accepted accounting principles or practice. [1 Sch 1A(2), 1 Sch 1A(2)(LLP)].

The detail of adapted formats is left to accounting standards. The minimum items that FRS 102 requires to be presented in the statement of comprehensive income (in one or two statements), the ability to adapt the headings, and the requirement to present additional line items where relevant to an understanding of financial performance are discussed at 5.5 above.

Section 5 includes additional requirements relevant to the statement of comprehensive income (see 5.7 below) that apply to adapted formats and statutory formats. These include the presentation of turnover, guidance on operating profit (if presented under IAS 1), presentation of an analysis of expenses (see 5.5.2 and 5.7.4 below) and disclosure of the nature and amount of material items included in total comprehensive income. Note that the presentation of operating profit is mandatory under IFRS 18 [IFRS 18.69(a)] FRS 102's requirements for presentation of discontinued operations are discussed at 5.8 below, and for earnings per share (for those entities required to or choosing to present this) at 5.9 below.

These requirements are generally self-explanatory. However, adapted formats must present revenue in the income statement (or single statement of comprehensive income) (see 5.5 above). [FRS 102.5.5B]. FRS 102's requirement to present turnover in the income statement (or statement of comprehensive income, if presented) [FRS 102.5.7D] (see 5.7.1 below) implies that an additional analysis of revenue between turnover and other components of revenue (if any) is required in the income statement (or single statement of comprehensive income).

Other sections of FRS 102 require supplementary analyses of certain line items presented in the income statement (or profit or loss section of the statement of comprehensive income), which may be included in the notes to the financial statements.

The Regulations (and LLP Regulations) require UK companies preparing Companies Act accounts (and LLPs preparing non-IAS accounts) to give further supplementary information in respect of certain line items in the notes to the accounts. These disclosures are relevant where adapted formats or statutory formats are used. One complexity is that the information required by the Regulations (or LLP Regulations) is generally framed in respect of line items required in the statutory formats (e.g., turnover), whereas the headings used in the statutory formats may differ to those included where the adapted formats are used. Further information on certain of these statutory disclosures is given in 5.6 below.

FRS 102, the Regulations and LLP Regulations require numerous further disclosures (which may be given in the notes) concerning items recognised in profit or loss. Refer to the disclosure sections of the relevant chapters in this publication.

5.5.2 Illustrative statement of comprehensive income (adapted formats)

Illustration 5-1 below shows a single statement of comprehensive income, where the adapted formats are used. This is based on an illustrative example in IAS 1's Implementation Guidance, modified to illustrate the requirements of FRS 102. Note that this Illustration will not be applicable for reporters modifying a statement of comprehensive income under IFRS 18, as the latter standard has mandatory categories and subtotals which must be included in a statement of financial performance and are not included in the Illustration below.

Illustration 5-1: Presentation of comprehensive income in a single statement

XYZ Group - Statement of profit or loss and other comprehensive income for the year ended 31 December 202X

	202X	202Y
	£'000	£'000
	Total	Total
Revenue	390,000	355,000
Cost of sales	(245,000)	(230,000)
Gross profit	145,000	125,000
Other income	20,667	11,300
Distribution costs	(9,000)	(8,700)
Administrative expenses	(20,000)	(21,000)
Other expenses	(2,100)	(1,200)
Finance costs	(8,000)	(7,500)
Share of profit of associates ⁽¹⁾	35,100	30,100
Profit before taxation	161,667	128,000
Income tax expense	(40,417)	(32,000)
PROFIT FOR THE YEAR	121,250	96,000
Other comprehensive income:		
Gains on property revaluation	933	3,367
Remeasurements of defined benefit pension plans	(667)	1,333
Available-for-sale financial assets ⁽⁴⁾⁽⁵⁾	(24,000)	26,667
Exchange differences on translating foreign operations ⁽⁴⁾	5,334	10,667
Cash flow hedges ⁽⁴⁾	(667)	(4,000)
Share of gain (loss) on property revaluation of associates ⁽²⁾	400	(700)
Income tax ⁽³⁾	4,667	(9,334)
Other comprehensive income for the year, net of tax	(14,000)	28,000
TOTAL COMPREHENSIVE INCOME FOR THE YEAR	107,250	124,000
Profit attributable to:		
Owners of the parent	97,000	82,900
Non-controlling interests	24,250	13,100
	121,250	96,000
Total comprehensive income attributable to:		
Owners of the parent	85,800	105,300
Non-controlling interests	21,450	18,700
	107,250	124,000

Alternatively, items of other comprehensive income could be presented in the statement of comprehensive income net of tax, as follows.

Statement of comprehensive income section (alternative presentation)

	201X £'000	201Y £'000
Other comprehensive income for the year, after tax:		
Gains on property revaluation	600	2,700
Remeasurements of defined benefit pension plans	(500)	1,000
Available-for-sale financial assets ⁽⁴⁾⁽⁵⁾	(18,000)	20,000
Exchange differences on translating foreign operations ⁽⁴⁾	4,000	8,000
Cash flow hedges ⁽⁴⁾	(500)	(3,000)
Share of gain (loss) on property revaluation of associates ⁽²⁾	400	(700)
Other comprehensive income for the year, net of tax⁽³⁾	(14,000)	28,000

(1) This means the share of associates' profit attributable to owners of the associates, i.e., it is after tax and non-controlling interests in the associates.

(2) This means the share of associates' gain (loss) on property revaluation attributable to owners of the associates, i.e., it is after tax and non-controlling interests in the associates.

(3) Unlike IAS 1/IFRS 18, there is no requirement for the notes to disclose income tax relating to each item of other comprehensive income, although the aggregate current and deferred tax relating to items that recognised as items of other comprehensive income or equity is required in the notes. [FRS 102.29.27(a)].

(4) Unlike IAS 1/IFRS 18, items in other comprehensive income are not analysed between items that will be reclassified to profit and loss and items that may be reclassified subsequently to profit and loss. Exchange differences on translating foreign operations are not subsequently reclassified under FRS 102. The change in fair value of the hedging item recognised in other comprehensive income in respect of cash flow hedges and hedges of a net investment in a foreign operation and the amounts reclassified to profit or loss in respect of cash flow hedges in the period are required to be disclosed in the notes. [FRS 102.12.29(c), FRS 102.12.29(d), FRS 102.12.29A].

FRS 102 requires an analysis of other comprehensive income by item in the statement of changes in equity or in the notes to the accounts. [FRS 102.6.3A].

(5) An FRS 102 reporter will only have available-for-sale financial assets if it applies IAS 39 for recognition and measurement of financial instruments.

As a reminder,

- FRS 102 does not require separate presentation in other comprehensive income between items that will not be reclassified to profit or loss and items that may be reclassified subsequently to profit or loss.
- Earnings per share information has not been illustrated (see 5.9 below for entities required to present earnings per share information). [FRS 102.1.4].
- An analysis of expenses must be presented, either in the income statement or in the notes to the financial statements, which is equivalent to what would have been presented if statutory formats had been used (see 5.6 below). [FRS 102.5.5B].

And

- The 'share of the profit or loss of investments in associates and jointly controlled entities accounted for using the equity method' is a separate line item in the adapted formats for the statement of comprehensive income (or separate income statement, where the two-statement form is used) (see 5.5 below). [FRS 102.5.5B(c), FRS 102.5.7A].

Illustration 5-2 below shows the statement of comprehensive income using the two-statement form. This is relevant for both adapted formats and statutory formats because the requirements for the statement of comprehensive income derive from Section 5 (rather than the formats in the Regulations (or LLP Regulations)). As in Illustration 5-1, the items in other comprehensive income may alternatively be presented net of tax.

The separate income statement (not presented in Illustration 5-2) would follow the requirements for adapted formats (see 5.5 above) (where permitted for use) or statutory formats (see 5.6 below) and would show the allocation of profit between owners of the parent and non-controlling interest.

Illustration 5-2 is adapted from an illustrative example in IAS 1, modified to illustrate the requirements of FRS 102. Illustration 5-2 looks the same as the latter part of the single statement of comprehensive income presented in Illustration 5-1 above but only shows the allocation of total comprehensive income between owners of the parent and non-controlling interest. The footnotes included in Illustration 5-2 relate to the same footnotes as in Illustration 5-1.

Illustration 5-2: Statement of comprehensive income illustrating the presentation of comprehensive income in two statements**XYZ Group - Statement of profit or loss and other comprehensive income for the year ended 31 December 201Y**

	201Y	201X
	£'000	£'000
Profit for the year	121,250	65,500
Other comprehensive income:		
Gains on property revaluation	933	3,367
Remeasurements of defined benefit pension plans	(667)	1,333
Available-for-sale financial assets ⁽⁴⁾⁽⁵⁾	(24,000)	26,667
Exchange differences on translating foreign operations ⁽⁴⁾	5,334	10,667
Cash flow hedges ⁽⁴⁾	(667)	(4,000)
Share of gain (loss) on property revaluation of associates ⁽²⁾	400	(700)
Income tax ⁽³⁾	4,667	(9,334)
Other comprehensive income for the year, net of tax	<u>(14,000)</u>	<u>28,000</u>
TOTAL COMPREHENSIVE INCOME FOR THE YEAR	<u>107,250</u>	<u>93,500</u>
Total comprehensive income attributable to:		
Owners of the parent	85,800	74,800
Non-controlling interests	<u>21,450</u>	<u>18,700</u>
	<u>107,250</u>	<u>93,500</u>

5.6 Statutory formats - format 1 and format 2 profit and loss accounts

The following discussion relates only to the profit and loss account statutory formats for companies applying Schedule 1 to the Regulations and for LLPs. Section B of Part 1 of Schedule 1 to the Regulations (and Section B of Part 1 of Schedule 1 to the LLP Regulations) provide a choice of format 1 and format 2 for the profit and loss account.

The format 1 profit and loss account, which analyses expenses by function for a UK company (other than a banking company or insurance company), is presented at Figure 5-2 below.

Figure 5-2 Format 1 profit and loss account (UK company other than a banking company or insurance company)

1	Turnover
2	Cost of sales
3	Gross profit or loss
4	Distribution costs
5	Administrative expenses
6	Other operating income
7	Income from shares in group undertakings
8	Income from participating interests†
9	Income from other fixed asset investments
10	Other interest receivable and similar income
11	Amounts written off investments
12	Interest payable and similar expenses

	Profit or loss before taxation*
13	Tax on profit or loss
14	Profit or loss after taxation
19	Other taxes not shown under the above items
20	Profit or loss for the financial year
*	While not in format 1, every profit and loss account must show the amount of a company's profit or loss before taxation (1 Sch 6, Regulations).
†	See discussion below for modifications in group accounts.

The format 1 profit and loss account for an LLP is presented at Figure 5-3 below.

Figure 5-3 Format 1 profit and loss account (LLP)

1	Turnover
2	Cost of sales
3	Gross profit or loss
4	Distribution costs
5	Administrative expenses
6	Other operating income
7	Income from shares in group undertakings
8	Income from participating interests†
9	Income from other fixed asset investments
10	Other interest receivable and similar income
11	Amounts written off investments
12	Interest payable and similar expenses
	Profit or loss before taxation*
13	Tax on profit or loss
14	Profit or loss after taxation
19	Other taxes not shown under the above items
20	Profit or loss for the financial year before members' remuneration and profit shares
<i>SORP</i>	<i>Members' remuneration charged as an expense</i>
<i>SORP</i>	<i>Profit or loss for the financial year available for discretionary division among members</i>
*	While not in format 1, every profit and loss account must show the amount of an LLP's profit or loss before taxation (1 Sch 6, LLP Regulations).
†	See discussion below for modifications in group accounts.
<i>SORP</i>	Requirements for formats included in the LLP SORP rather than the LLP Regulations.

The final line in the format 1 and format 2 profit and loss accounts in the LLP Regulations is 'profit or loss for the financial year before members' remuneration and profit shares'. The LLP SORP provides further guidance on application of the statutory formats for LLPs, and requires that 'profit or loss for the financial year before members' remuneration and profit shares', 'members' remuneration charged as an expense' and 'profit or loss for the financial year available for discretionary division among members' is presented. The basis on which each element of remuneration has been treated in the accounts must be disclosed and explained by way of note. [LLP SORP.51]. The SORP provides guidance and illustrations of LLP profit or loss account for different situations. Detailed guidance on issues specific to LLPs is outside the scope of this publication. The format 2 profit and loss account, which analyses expenses by nature, for a UK company is presented at Figure 5-4 below.

Figure 5-4 Format 2 for the profit and loss account (UK company other than a banking company or insurance company)

1	Turnover
2	Change in stocks of finished goods and in work in progress
3	Own work capitalised
4	Other operating income
5	(a) Raw materials and consumables
	(b) Other external expenses
6	Staff costs
	(a) wages and salaries
	(b) social security costs
	(c) other pension costs
7	(a) Depreciation and other amounts written off tangible and intangible fixed assets
	(b) Amounts written off current assets, to the extent that they exceed write-offs which are normal in the undertaking concerned~
8	Other operating expenses
9	Income from shares in group undertakings
10	Income from participating interests†
11	Income from other fixed asset investments
12	Other interest receivable and similar income
13	Amounts written off investments
14	Interest payable and similar expenses
	Profit or loss before taxation*
15	Tax on profit or loss
16	Profit or loss after taxation
21	Other taxes not shown under the above items
22	Profit or loss for the financial year
* While not in format 2, every profit and loss account must show the amount of a company's profit or loss before taxation (1 Sch 6, Regulations).	
† See discussion below for modifications in group accounts.	

The format 2 profit and loss account for an LLP is presented at Figure 5-5 below. Additional line items are required by the SORP, as discussed above.

Figure 5-5 Format 2 for the profit and loss account (LLP)

1	Turnover
2	Change in stocks of finished goods and in work in progress
3	Own work capitalised
4	Other operating income
5	(a) Raw materials and consumables
	(b) Other external expenses

	(a) wages and salaries
	(b) social security costs
	(c) other pension costs
7	(a) Depreciation and other amounts written off tangible and intangible fixed assets
	(b) Amounts written off current assets, to the extent that they exceed write-offs which are normal in the undertaking concerned~
8	Other operating expenses
9	Income from shares in group undertakings
10	Income from participating interests†
11	Income from other fixed asset investments
12	Other interest receivable and similar income
13	Amounts written off investments
14	Interest payable and similar expenses
	Profit or loss before taxation*
15	Tax on profit or loss
16	Profit or loss after taxation
21	Other taxes not shown under the above items
22	Profit or loss for the financial year before members' remuneration and profit shares
SORP	<i>Members' remuneration charged as an expense</i>
SORP	<i>Profit or loss for the financial year available for discretionary division among members</i>
*	While not in format 2, every profit and loss account must show the amount of an LLP's profit or loss before taxation (1 Sch 6, LLP Regulations).
†	See discussion below for modifications in group accounts.
SORP	Requirements for formats included in the LLP SORP (2025) rather than the LLP Regulations.

The main modification required for group profit and loss account statutory formats is the identification of non-controlling interests (see 3.5, 5.3 and 5.4 above) and replacing 'income from participating interests' with 'income from associated undertakings' and 'income from other participating interests' (see 5.6.5 below).

The line items in the formats need to be read together with the notes to the formats in Part 1 of Section B of Schedule 1 to the Regulations (and Part 1 of Section B of Schedule 1 to the LLP Regulations). [1 Sch 1, 1 Sch 1 (LLP)]. The individual line items in the profit and loss account formats (together with the relevant notes to the statutory formats) are discussed at 5.6.1 to 5.6.14 below.

The General Rules to the formats (see 3.4 above) apply. As all line items are denoted with Arabic numbers, these allow a degree of flexibility in the profit and loss account formats. FRS 102 further requires that an entity shall present additional line items, headings and subtotals in the statement of comprehensive income (and in the separate income statement, where presented) when such presentation is relevant to an understanding of the entity's financial performance. [FRS 102.5.9]. See 5.7.2 below.

Section 5 includes additional requirements relevant to the statement of comprehensive income (see 5.7 below). FRS 102's requirements for presentation of discontinued operations are discussed at 5.8 below, and for earnings per share (for those entities required to or choosing to present this) at 5.9 below.

Other sections of FRS 102 also require supplementary analysis of certain line items presented in the income statement (or profit or loss section of the statement of comprehensive income), which may be included in the notes to the financial statements. The Regulations (and LLP Regulations) require UK companies preparing Companies Act accounts (and LLPs preparing non-IAS accounts) to give further supplementary information in respect of certain line items in the notes to the accounts. These disclosures are relevant where adapted formats or statutory formats are used. Some of these disclosures are highlighted in the discussion of line items at 5.6.1 to 5.6.14 below.

FRS 102, the Regulations and LLP Regulations require numerous further disclosures (which may be given in the notes to the financial statements) concerning items recognised in profit or loss. The LLP Regulations generally include similar disclosures to the Regulations. Refer to the disclosure sections of other chapters of this publication.

5.6.1 Turnover (format 1 and format 2)

Turnover, in relation to a company (or LLP), is defined as: [s474(1), s474(1)(LLP), FRS 102 Appendix I]

Extract from the Companies Act 2006

s474(1) the amounts derived from the provision of goods and services, after deduction of:

- (a) trade discounts,
- (b) value added tax, and
- (c) any other taxes based on the amounts so derived.

FRS 102 has the same definition as in section 474(1).

FRS 102 further requires that turnover is presented in the income statement (or statement of comprehensive income, if presented). [FRS 102.5.7D]. See 5.7.1 below.

Not all income reported in the statement of comprehensive income is turnover, nor is the concept of turnover synonymous with revenue. For example, a company may receive rental or interest income - while these would be types of revenue under FRS 102, these may or may not fall to be reported as turnover. Similarly, an entity whose business includes renting out properties to tenants would include rental income within turnover, but this may be 'other operating income' for another entity. An entity whose business is as a lessor and receives finance lease income would report that interest income in the position of the turnover line (although it may well be described as finance lease income), but an entity that merely receives interest income on its bank deposits or other investments would report that interest income as 'other interest receivable and similar income'.

How we see it

Where significant judgement is applied in determining which sources of revenue qualify as turnover, it may be appropriate to include an accounting policy for turnover and explain these judgements.

See 7.6 below for the segmental disclosures of turnover required in Companies Act accounts (or non-IAS accounts, for an LLP).

5.6.2 Cost of sales, distribution costs and administrative expenses (format 1)

The format 1 profit and loss account requires a functional classification of expenses - between cost of sales, distribution costs and administrative expenses. These categories of cost are not defined in the Regulations (or LLP Regulations). The allocation of costs will depend on the particular circumstances of an entity's business and must be applied consistently. Judgement may be required in allocating costs to certain functions and, where this is the case, it may be appropriate to include an accounting policy for the allocation of expenses, explaining significant judgements taken (see 7.3 below). The following discussion provides guidance for the types of items that often fall within these headings.

Cost of sales for a manufacturer would generally include production costs (including direct material, payroll and other costs and direct and indirect overheads attributable to the production function) and adjustments for opening and closing inventory. For a service provider, these would include the costs of providing the service.

Distribution costs would generally include transport and warehousing costs for the distribution of finished goods. Selling and marketing costs (such as advertising, payroll costs of the selling, marketing and distribution functions, sales commission and overheads attributable to the selling, marketing and distribution functions) are often included in this heading.

Administrative expenses would generally include payroll costs of general management and administrative staff, general overheads, property costs not classified within cost of sales or distribution costs, bad debts, professional fees and often goodwill amortisation and impairment.

Note (14) on the profit and loss account formats (format 1) (and the equivalent requirement for LLPs)⁵¹ require that cost of sales, distribution costs and administrative expenses are stated after taking into account any necessary provisions for depreciation or diminution in value of assets.

UK companies and LLPs sometimes show other line items (e.g., research and development costs) or amend or combine other line items, taking advantage of the flexibility available in the Regulations. FRS 102 requires additional line items, headings and subtotals when relevant to an understanding of the entity's financial performance (see 5.7.2 below). [FRS 102.5.9].

5.6.3 Gross profit (format 1)

The format 1 profit and loss account requires gross profit or loss, i.e., turnover less cost of sales, to be shown as a separate line item.

5.6.4 Other operating income (format 1 and format 2)

Other operating income is not defined in the Regulations (or LLP Regulations). In practice, this line item often includes government grant income, operating lease income, other rental income or negative goodwill amortisation.

5.6.5 Income from shares in group undertakings and income from participating interests (format 1 and format 2)

The formats for the individual profit and loss account include 'income from shares in group undertakings' and 'income from participating interests'. Dividend income from shares in group undertakings and from participating interests are included in these line items.

For the group profit and loss account statutory formats, 'income from participating interests' is replaced with 'income from associated undertakings' and 'income from other participating interests'. Income from associated undertakings usually includes the share of the profit or loss of associates and jointly controlled entities. Income from shares in group undertakings will not arise in consolidated financial statements unless there are unconsolidated subsidiaries.

The meanings of group undertakings, participating interests and associated undertakings are explained at 4.3.4.C to 4.3.4.E above.

Incoming dividends and similar income receivable are recognised at an amount that includes any withholding tax but excludes other taxes, such as attributable tax credits. Any withholding tax suffered is shown as part of the tax charge. [FRS 102.29.19]. See 5.6.9 below.

FRS 102 requires separate disclosure of the entity's share of the profit or loss of associates accounted for using the equity method and the entity's share of any discontinued operations of such associates. [FRS 102.14.14]. The same information is required for jointly controlled entities. [FRS 102.15.20]. There is no requirement to present this information in the statement of comprehensive income (or separate income statement). However, entities may consider adapting the heading 'income from associated undertakings' to show the share of the profit or loss of investments in associates and jointly controlled entities, even if the analysis of this between investments in associates and jointly controlled entities is relegated to the notes.

FRS 102 does not address where fair value movements are presented in the profit and loss account formats when investments in subsidiaries, associates and jointly controlled entities are carried at fair value through profit and loss in consolidated and/or individual financial statements. [FRS 102.9.9B, FRS 102.14.4, FRS 102.15.9]. Chapter 8 at 3.4 and Chapter 8 at 4, Chapter 17 at 3.2.1, and Chapter 18 at 3.5.2 and Chapter 18 at 3.5.3 discuss the situations where this accounting is required or permitted.

How we see it

In our view, entities may present fair value gains and fair value losses on such investments, where material, adjacent to income from shares in group undertakings and income from participating interests (but disclosed separately).

⁵¹ LLPs - Note 12 on the profit and loss accounts (format 1) in Section B of Part 1 of Schedule 1 to SI 2008/1913.

FRS 102 requires additional line items in the statement of comprehensive income (or separate income statement), where relevant to an understanding of the entity's financial performance (see 5.7.2 below). Where this accounting is used, all the disclosures in Section 11 in respect of such investments will be required. [FRS 102.9.27B].

5.6.6 Income from other fixed asset investments, other interest receivable and similar income (format 1 and format 2)

The formats have two-line items - 'income from other fixed asset investments', and 'other interest receivable and similar income'. Note (15) on the profit and loss account formats (format 1 and format 2) (and the equivalent requirement for LLPs)⁵² state that income and interest derived from group undertakings must be shown separately from income and interest derived from other sources. For LLPs, interest receivable from members must also not be included under these line items.

Incoming dividends and similar income receivable are recognised at an amount that includes any withholding tax but excludes other taxes, such as attributable tax credits. Any withholding tax suffered is shown as part of the tax charge. [FRS 102.29.19]. See 5.6.9 below.

How we see it

In our view, entities may present fair value gains and fair value losses on other fixed asset investments, where material, adjacent to income from other fixed asset investments, but disclosed separately.

Section 28 does not specify how the net interest on the net defined benefit liability is presented in the statement of comprehensive income (see Chapter 30 at 3.5.10.A). The net interest could be either a positive or negative figure.

How we see it

In our view, net interest could be presented in either 'other finance income', 'interest payable' or another component of profit or loss provided the basis of allocation is explained.

The presentation of gains on settlement of financial liabilities is not addressed by FRS 102.

How we see it

In our view, entities may show the gains on settlement within 'other interest receivable and similar income', or where material, present the gains adjacent to interest receivable and similar income but disclosed separately.

FRS 102 requires further analyses of income, expense and net gains or net losses (including fair value changes) by specified category of financial instrument. Interest expense and interest income (calculated using the effective interest method) for financial assets and financial liabilities not at fair value, and impairment losses for each class of financial asset must also be disclosed. There are also disclosures for financial instruments at fair value through profit or loss (that are not financial liabilities held as part of a trading portfolio, nor derivatives). These can be disclosed in the notes to the financial statements.

[FRS 102.11.48, FRS 102.48A, FRS 102.12.26]. Certain of these disclosures are not required where the reduced disclosure framework is applied in individual financial statements of a qualifying entity, that is not a financial institution. [FRS 102.1.8, FRS 102.1.12(c)]. See Chapter 15 at 4.1.3.

5.6.7 Amounts written off investments (format 1 and format 2)

The line item 'amounts written off investments' is used for impairments of fixed asset investments (including investments in subsidiaries, associates and jointly controlled entities) carried at cost less impairment in the individual financial statements. It is usual to present a write-back of a previous provision under the same heading as where the provision was originally recognised (in the same way as an adjustment to reverse a bad debt provision is shown within administrative expenses).

⁵² LLPs - Note 13 on the profit and loss account formats (format 1) in Section B of Part 1 of Schedule 1 to SI 2008/1913.

The positioning of this line item between 'other interest income receivable and similar income' and 'interest payable and similar expenses' is below where many entities would position operating profit, where presented (see 5.7.3 below). FRS 102 is silent on where impairments of investments should be presented. Nevertheless, some entities may find it appropriate, based on the nature of their business, to report 'amounts written off investments' within operating profit.

FRS 102 requires disclosure of impairment losses for each class of financial asset, i.e., a grouping that is appropriate to the nature of the information disclosed and that takes into account the characteristics of the financial assets. [FRS 102.11.48(c)]. In addition, disclosure of impairment losses and reversals of impairment losses (and the line items in which those impairment losses are included) are required separately for investments in associates and investments in jointly controlled entities. [FRS 102.27.33(e), FRS 102.27.33(f)].

In addition, a UK company preparing Companies Act accounts (or an LLP preparing non-IAS accounts) must disclose separately in a note to the accounts (if not shown separately in the statement of comprehensive income): [1 Sch 19(3), 1 Sch 20(2), 1 Sch 19(3)(LLP), 1 Sch 20(2)(LLP)]

- Provisions for diminution in value
- And
- Any amounts written back in respect of such provisions

These disclosures apply where the fixed asset investment is accounted for using the historical cost rules. The disclosures do not apply to fixed asset investments held at fair value using the fair value accounting rules.

5.6.8 Interest payable and similar expenses (format 1 and format 2)

'Interest payable and similar expenses' includes finance costs on financial liabilities (including shares classified as a financial liability or where a component of the share is classified as a financial liability).

Note (16) on the profit and loss account formats (format 1 and format 2) (and the equivalent requirement for LLPs)⁵³ states that interest payable to group undertakings must be shown separately from income and interest derived from other sources. For LLPs, interest payable to members must not be included under these line items. The LLP SORP explains how interest payable to members is treated (and when it falls to be treated as part of members' remuneration as an expense). [LLP SORP.21, LLP SORP.54].

The presentation of losses on settlement of financial liabilities is not addressed by FRS 102.

How we see it

In our view, entities may show the losses on settlement within other interest payable and similar expenses, or, where material, present the losses adjacent to other interest payable and similar expenses but disclosed separately.

Section 28 does not specify how the net interest on the net defined benefit liability should be presented in the statement of comprehensive income (see Chapter 30 at 3.5.10.A). The net interest could be either a positive or negative figure.

How we see it

In our view, net interest could be presented in either 'other finance income', 'interest payable' or another component of profit or loss provided the basis of allocation is explained.

FRS 102 requires further analyses of income, expense and net gains or net losses (including fair value changes) by specified category of financial instrument. Interest expense and interest income (calculated using the effective interest method) for financial assets and financial liabilities not at fair value, and impairment losses for each class of financial asset must also be disclosed. There are also extensive disclosures for financial instruments at fair value through profit or loss (that are not financial liabilities held as part of a trading portfolio nor derivatives). These can be disclosed in the notes to the financial statements. [FRS 102.11.48, FRS 102.48A, FRS 102.12.26]. Certain of these disclosures are not required where the reduced disclosure framework is applied in individual financial statements of a qualifying entity that is not a financial institution. [FRS 102.1.8, FRS 102.1.12(c)]. See Chapter 15 at 4.1.3.

⁵³ LLPs - Note 14 on the profit and loss account formats (format 1) in Section B of Part 1 of Schedule 1 to SI 2008/1913.

In addition, a UK company preparing Companies Act accounts (or an LLP preparing non-IAS accounts) must state in the notes to the accounts: the amount of interest on or any similar charges in respect of:

- Bank loans and overdrafts
- And
- Loans of any other kind made to the company (or the LLP)

This analysis is not required in relation to interest or charges on loans to the company (or the LLP) from group undertakings, but applies to all other loans, whether made on security of debentures or not. [1 Sch 66, 1 Sch 63 (LLP)].

5.6.9 Tax on profit or loss (format 1 and format 2)

Tax includes current and deferred tax. In some situations, entities may need to apply judgement in determining whether a particular tax or tax credit is an income tax and whether to classify interest and penalties as tax. See Chapter 31 at 3.4. FRS 102 requires disclosures of judgements in applying accounting policies with the most significant effect on the financial statements - see 7.3 below.

Incoming dividends and similar income receivable are recognised at an amount that includes any withholding tax but excludes other taxes, such as attributable tax credits. Any withholding tax is shown as part of the tax charge. [FRS 102.29.19].

A UK company preparing Companies Act accounts (or an LLP preparing non-IAS accounts) must give further disclosures in respect of tax on profit or loss in the notes to the accounts. [1 Sch 67, 1 Sch 64 (LLP)]. FRS 102's disclosures in respect of current and deferred tax are discussed in Chapter 31 at 12.

5.6.10 Own work capitalised (format 2)

The format 2 profit and loss account includes a line item for 'own work capitalised'.

Own work capitalised may arise, for example, where an entity capitalises the directly attributable costs of constructing its own property, plant and equipment. [FRS 102.17.10]. The costs are reported in the relevant line items and a credit item is shown in own work capitalised.

5.6.11 Staff costs (format 2)

The format 2 profit and loss account has a line item for 'staff costs', to be analysed between wages and salaries, social security costs and pension costs (see 7.7 below for the definitions).

UK companies and LLPs, whether preparing Companies Act accounts (non-IAS accounts, for an LLP) or IAS accounts, must disclose information on staff numbers and on staff costs in the notes to the accounts (insofar as not stated elsewhere in the accounts). [s411, s411(LLP)]. See 7.7 below.

5.6.12 Depreciation and other amounts written off tangible and intangible fixed assets and amounts written off current assets to the extent that they exceed write-offs which are normal in the undertaking concerned (format 2)

The format 2 profit and loss account has separate line items for 'depreciation and other amounts written off tangible and intangible fixed assets' and 'amounts written off current assets to the extent that they exceed write offs which are normal in the undertaking concerned'.

Entities may also show provisions against current assets under different headings, e.g., changes in stocks/raw materials and consumables (for inventory - see 5.6.13 below) or 'other operating expenses' (e.g., this heading might be used for bad debts - see 5.6.14 below). Judgement is needed as to whether such provisions exceed write offs that are normal and fall to be presented as amounts written off current assets to the extent that they exceed write offs which are normal in the undertaking concerned.

5.6.13 Changes in stocks of finished goods and work in progress and raw materials and consumables (format 2)

The format 2 profit and loss account includes separate line items for the 'change in stocks of finished goods and work in progress' and for 'raw materials and consumables'.

'Raw materials and consumables' would include purchases of raw materials and consumables, adjusted for changes in stocks of raw materials and consumables.

5.6.14 Other external expenses and other operating expenses (format 2)

The format 2 profit and loss account includes separate line items for: 'other external expenses' and for 'other operating expenses'. The Regulations and LLP Regulations do not define these terms. There is therefore likely to be diversity in practice in the allocation of costs between these headings, but a consistent policy should be followed.

5.7 Requirements applicable to both approaches (adapted formats and statutory formats)

FRS 102 includes supplementary requirements relating to the statement of comprehensive income (beyond the requirements to follow the formats permitted by the Regulations or LLP Regulations).

5.7.1 Disclosure of turnover in the statement of comprehensive income (or separate income statement)

Turnover must be disclosed in the income statement (or statement of comprehensive income, if presented). [FRS 102.5.7D].

However, not all income reported in the statement of comprehensive income is turnover, nor is the concept of turnover synonymous with revenue. See 5.6.1 above.

5.7.2 Additional line items, headings and subtotals

An entity shall present additional line items, headings and subtotals in the statement of comprehensive income (and in the income statement, if presented) when such presentation is relevant to an understanding of the entity's financial performance. [FRS 102.5.9]. Judgement is needed in determining whether additional items should be presented, where material and relevant.

While any amendments to the income statement (or profit and loss section of the statement of comprehensive income) would need to comply with the General Rules to the formats (see 3.4 above), the statutory formats provide flexibility since the profit and loss account line items are denoted with Arabic numbers.

Where adapted formats are used, any amendments made would need to comply so far as is practicable with the General Rules to the formats. FRS 102 explains that an entity may include additional line items in the income statement and amend the descriptions used in paragraph 5B of section 5 of the standard (i.e., for the line items (a) to (j)) (see Figure 5-1 at 5.5 above) and the ordering of items, when this is necessary to explain the elements of financial performance, providing the information given is at least equivalent to that required by the profit and loss account format had it not been adapted. [FRS 102.5.5C]. The effect of this is to clarify the extent of flexibility available in the presentation requirements where adapted formats are used. For statutory formats, the General Rules to the formats clearly set out the flexibility for Arabic numbered items, but Arabic numbers do not appear in the adapted formats.

How we see it

While the requirement to present additional line items, headings and subtotals when relevant to an understanding of the entity's financial performance is included within the requirements for the single statement approach, in our view, this is intended to also apply where the two-statement approach is applied.

5.7.3 Disclosure of operating profit

FRS 102 does not require disclosure of 'operating profit'. If an entity elects to disclose operating profit, the entity must ensure that the amount disclosed is representative of activities that would normally be regarded as 'operating', e.g., it is inappropriate to exclude items clearly related to operations (such as inventory write-downs, profit or losses on the sale of property, plant and equipment, investment property and intangible assets and restructuring and relocation expenses, because they occur irregularly or infrequently or are unusual in amount. It is also inappropriate to exclude items on the grounds that they do not involve cash flows, such as depreciation and amortisation expenses. Profits or losses on the disposal of a discontinued operation must be excluded from operating profit. [FRS 102.5.9B].

The income statement (or profit and loss section of the statement of comprehensive income) identifies separate line items for the share of the profit or loss of investments in associates and jointly controlled entities accounted for using the equity method in adapted formats (see 5.5 above).

How we see it

For entities presenting a measure of operating profit using the adapted formats to align with IAS 1, in our view, it is acceptable for an entity to determine which investments form part of its operating activities and include their results in that measure, with the results of non-operating investments excluded from it. Another acceptable alternative would be to exclude the results of all associates and jointly controlled entities from operating profit.

However, if an entity is using the adapted formats to align with IFRS 18, income and expenses from equity accounted associates must be excluded from the operating category and included in the investing category. If the entity has investments in associates that are not equity accounted, income and expenses from those investments are also classified in the investing category, unless the entity had a main business activity of investing in such assets - in which case the income and expenses from those investments are classified in the operating category (see 9.1 below).

5.7.4 Analysis of expenses by nature or function

The statutory formats in Schedule 1 to the Regulations (and Schedule 1 to the LLP Regulations) (see 5.6 above) require an analysis of expenses by nature (format 2 profit and loss account) or by function (format 1 profit and loss account), and where the adapted formats available in those schedules are used (see 5.5 above), FRS 102 requires an analysis of expenses to be presented either in the income statement or in the notes to the financial statements, which is equivalent to what would have been presented if the statutory formats had been adopted. [FRS 102.5.5B].

How we see it

Where an entity applies FRS 102 but is not required to prepare its accounts in accordance with CA 2006, we consider that the entity must comply with the formats (and disclosures in the notes to the statutory formats, where the statutory formats are applied) but is not required to give the other statutory disclosures.

Schedule 1 to the Regulations (and the LLP Regulations) require certain information about the nature of expenses to be provided as line items in format 2 and in the notes to the accounts where format 1 is applied:

- The format 2 profit and loss account includes line items for staff costs (see 5.6.11 above) and 'depreciation and other amounts written off tangible and intangible fixed assets' (see 5.6.12 above)
 - All UK companies (and LLPs), except companies subject to the small companies regime (and LLPs subject to the small LLPs regime) must present the analysis of staff costs in the notes to the accounts, insofar as not stated elsewhere in the accounts (see 7.7 below). This requirement applies both to Companies Act accounts (non-IAS accounts, for an LLP) and IAS accounts
- And
- Note (17) on the profit and loss account formats and the equivalent requirement for LLPs⁵⁴ state that the amount of depreciation and other amounts written off tangible and intangible fixed assets must be disclosed in a note to the accounts where the format 1 profit and loss account is used

In addition, a UK company preparing Companies Act accounts (or an LLP preparing non-IAS accounts) must disclose separately in a note to the accounts (if not shown separately in the profit and loss account):

[1 Sch 19(3), 1 Sch 20(2), 1 Sch 19(3)(LLP), 1 Sch 20(2)(LLP)]

- Provisions for diminution in value of fixed assets
- And

- Any amounts written back in respect of such provisions

These disclosures must be given where statutory or adapted formats are used. These disclosures apply where the fixed assets in question are accounted for using the historical cost rules. The disclosures do not apply to fixed asset investments held at fair value using the fair value accounting rules.

⁵⁴ LLPs - Note 15 on the profit and loss accounts (format 1) in Section B of Part 1 of Schedule 1 to SI 2008/1913.

5.7.5 Presentation of 'exceptional items'

FRS 102 does not use the phrase 'exceptional items'. However, when items included in total comprehensive income are material, their nature and amount must be disclosed separately in the statement of comprehensive income (and in the income statement, if presented) or in the notes. [FRS 102.5.9A]. The level of prominence given to such items is left to the judgement of the entity concerned. Materiality is discussed at 8.4 below.

A UK company preparing Companies Act accounts (or an LLP preparing non-IAS accounts) must state the amount, nature and effect of any individual items of income and expenditure which are of exceptional size or incidence in the notes to the accounts. [1 Sch 69(2), 1 Sch 67(2)(LLP)].

See 5.8 below for FRS 102's requirements on presentation of discontinued operations.

5.7.6 Presentation of extraordinary items

An entity applying the adapted formats or statutory formats in Schedule 1 to the Regulations must not present or describe any items of income or expense as extraordinary items in the statement of comprehensive income (or in the income statement, if presented) or in the notes. [FRS 102.5.10]. This requirement also applies to LLPs. The concept of extraordinary items does not appear in Schedule 1 to the Regulations and Schedule 1 to the LLP Regulations, though it is referred to in Schedules 2 and 3, so theoretically the concept still exists in those schedules only.

Despite not permitting any items to be presented or described as 'extraordinary', FRS 102 provides the following definition: "extraordinary items are material items possessing a high degree of abnormality which arise from events or transactions that fall outside the ordinary activities of the reporting entity and which are not expected to recur." The additional line items required to be disclosed by paragraph 9 of section 5 of the standard (see 5.7.2 above) and material items required to be disclosed by paragraph 9A of the section 5 of the standard (see 5.7.5 above) are not extraordinary items when they arise from the entity's ordinary activities. In addition, extraordinary items do not include prior period items merely because they relate to a prior period. [FRS 102.5.10B].

Ordinary activities are defined as "any activities which are undertaken by a reporting entity as part of its business and such related activities in which the reporting entity engages in furtherance of, incidental to, or arising from, these activities. Ordinary activities include any effects on the reporting entity of any event in the various environments in which it operates, including the political, regulatory, economic and geographical environments, irrespective of the frequency or unusual nature of the events". [FRS 102.5.10A].

5.8 Presentation of discontinued operations (adapted formats and statutory formats)

FRS 102 requires an entity to disclose in the income statement (or statement of comprehensive income) an amount comprising the total of:

- (a) The post-tax profit or loss of discontinued operations (see definition at 5.8.1 below)

And

- (b) The post-tax gain or loss attributable to the impairment or on the disposal of the assets or disposal group(s) constituting discontinued operations (see 4.5 above for the definition of disposal group)

A line-by-line analysis must be presented in the income statement (or statement of comprehensive income), with columns presented for continuing operations, discontinued operations and for total operations. This requirement applies both to adapted formats (this is line item (f) - see Figure 5-1 at 5.5 above) and statutory formats. [FRS 102.5.5B, FRS 102.5.7E]. This means more detailed disclosure than is commonly seen under IFRS 5, but the line-by-line analysis is to enable compliance with the profit and loss account formats in the Regulations (or the LLP Regulations).

There is no requirement to analyse other comprehensive income between continuing and discontinued operations.

The disclosures for discontinued operations must relate to operations discontinued by the end of the reporting period for the latest period presented, with re-presentation of prior periods where applicable. [FRS 102.5.7F].

5.8.1 Definition of discontinued operation

FRS 102 defines a discontinued operation as a component of an entity (i.e., operations and cash flows that can be clearly distinguished, operationally and for financial reporting purposes from the rest of the entity) that has been disposed of and: [FRS 102 Appendix I]

- Represented a separate major line of business or geographical area of operations
- Was part of a single co-ordinated plan to dispose of a separate major line of business or geographical area of operations

Or

- Was a subsidiary acquired exclusively with a view to resale

The definition of discontinued operations in FRS 102 differs to that included in IFRS 5 in that it refers to “a component of an entity *that has been disposed of*” whereas IFRS 5 refers to a “component of an entity that *either has been disposed of or is classified as held for sale*” [emphasis added]. As noted at 5.8 above, the presentation of discontinued operations relates to operations disposed of at the reporting date.

IFRS 5, which has the same definition of a component as in FRS 102, clarifies that “a component of an entity will have been a cash-generating unit or a group of cash-generating units while being held for use”. [IFRS 5.31]. Under both IFRS accounting standards and FRS 102, a cash generating unit is “the smallest identifiable group of assets that generates cash inflows that are largely independent of the cash inflows from other assets or groups of assets”. [IFRS 5 Appendix A, FRS 102.27.8, FRS 102 Appendix I]. See Chapter 29 at 4.4 Management may consider IFRS 5’s guidance on a component, as permitted by the hierarchy in Section 10. [FRS 102.10.4, FRS 102.10.5, FRS 102.10.6].

FRS 102 does not clarify the phrase ‘has been disposed of’. In our view, the phrase ‘has been disposed of’ may be interpreted more widely than a sale. An entity’s management must use judgement in developing and applying an accounting policy and may consider the requirements and guidance in IFRS 5. IFRS 5’s requirements would be consistent with a view that a component meeting any of the criteria in the bullets above is discontinued if, at the end of the reporting period, the component is an abandoned operation, or the entity has partially disposed of and lost control of the operation or has distributed the operation. However, since the phrase ‘has been disposed of’ has not been explained further in FRS 102, different interpretations of what this means may arise in practice.

5.8.2 Adjustments to amounts previously presented in discontinued operations in prior periods

FRS 102 does not address adjustments to amounts previously presented in discontinued operations. Given the absence of specific requirements in FRS 102, management may consider the requirements and guidance of IFRS accounting standards in this area.

IFRS 5 requires that adjustments in the current period to amounts previously presented in discontinued operations that are directly related to the disposal of a discontinued operation in a prior period are classified separately in discontinued operations. The nature and amount of such adjustments must be disclosed. Examples given of circumstances in which these adjustments may arise include the following: [IFRS 5.35]

- The resolution of uncertainties that arise from the terms of the disposal transaction, such as the resolution of purchase price adjustments and indemnification issues with the purchaser.
- The resolution of uncertainties that arise from and are directly related to the operations of the component before its disposal, such as environmental and product warranty obligations retained by the seller.

And

- The settlement of employee benefit plan obligations, provided that the settlement is directly related to the disposal transaction.

5.8.3 Example of presentation of discontinued operations

Illustration 5-3: Presentation of discontinued operations

Statement of comprehensive income

For the year ended 31 December 202X

	202X			201Y		
	Continuing operations	Discontinued operations	Total	Continuing operation (as restated)	Discontinued operations (as restated)	Total
	£'000	£'000	£'000	£'000	£'000	£'000
Turnover	4,200	1,232	5,432	3,201	1,500	4,701
Cost of sales	(2,591)	(1,104)	(3,695)	(2,281)	(1,430)	(3,711)
Gross profit	1,609	128	1,737	920	70	990
Administrative expenses	(452)	(110)	(562)	(418)	(120)	(538)
Other operating income	212	-	212	198	-	198
Operating profit	1,369	18	1,387	700	(50)	650
Profit on disposal of operations	-	301	301	-	-	-
Interest receivable and similar income	14	-	14	16	-	16
Interest payable and similar expenses	(208)	-	(208)	(208)	-	(208)
Profit before taxation	1,175	319	1,494	508	(50)	458
Taxation	(390)	(4)	(394)	(261)	3	(258)
Profit after taxation and profit for the financial year	785	315	1,100	247	(47)	200
Other comprehensive income						
Actuarial losses on defined benefit pension plans			(108)			(68)
Deferred tax movement relating to actuarial losses			28			18
Total comprehensive income for the year			1,020			150

The above example is taken from the Appendix to Section 5, which accompanies but is not part of that section, and provides guidance on application of paragraph 7E of Section 5 of the standard for presenting discontinued operations.

5.9 Earnings per share (adapted formats and statutory formats)

IAS 33 - *Earnings per Share* - must be followed by an entity whose ordinary shares or potential ordinary shares are publicly traded or that files, or is in the process of filing, its financial statements with a securities commission or other regulatory organisation for the purpose of issuing ordinary shares in a public market. IAS 33 also applies to an entity that chooses to disclose voluntarily earnings per share (EPS). [FRS 102.1.4].

IAS 33 requires an entity to present the basic and diluted EPS for profit or loss from continuing operations attributable to ordinary equity holders of the parent entity, and for total profit or loss attributable to ordinary equity holders of the parent entity. This must be given for each class of ordinary share that has a different right to share in profit for the period. [IAS 33.9, IAS 33.66]. Basic and diluted EPS must be presented with equal prominence in the statement of comprehensive income (or in the income statement, if presented) for every period for which a statement of comprehensive income is presented. [IAS 33.66, IAS 33.67, IAS 33.67A].

An entity may disclose basic and diluted EPS for discontinued operations *either* in the statement of comprehensive income (or in the income statement, if presented) *or* in the notes. [IAS 33.68, IAS 33.68A].

Basic and diluted EPS are presented even if the amounts are negative, i.e., a loss per share. [IAS 33.69]. If basic and diluted EPS are equal, dual presentation can be achieved in one line in the statement of comprehensive income. [IAS 33.67].

IAS 33 provides further requirements on the calculation of basic and diluted EPS and on the accompanying disclosures.

5.10 Issues common to adapted and statutory formats

5.10.1 Heritage assets

Heritage assets are tangible and intangible assets with historic, artistic, scientific, technological, geophysical or environmental qualities that are held and maintained principally for their contribution to knowledge and culture (see Chapter 36 at 5). [FRS 102 Appendix I]. FRS 102 also acknowledges that a right of use asset could in principle meet the definition of a heritage asset, but this is not expected to be common. [FRS 102.B34F.2]. All heritage assets are required to be presented separately from other assets, both in the adapted formats and the statutory formats. [FRS 102.34.54A].

5.10.2 Exploration and evaluation of mineral resources

IFRS 6 - *Exploration for and Evaluation of Mineral Resources* is applied by FRS 102 reporters, (applying both adapted and statutory formats) who operate in the exploration for and/or evaluation of mineral resources. [FRS 102.34.11]. It requires entities within its scope to classify exploration and evaluation assets as either intangible or tangible assets according to the nature of the assets acquired and apply the classification consistently. [IFRS 6.15].

For example, drilling rights must be presented as intangible assets, whereas vehicles and drilling rigs are tangible assets. A tangible asset that is used in developing an intangible asset must still be presented as a tangible asset. However, "to the extent that a tangible asset is consumed in developing an intangible asset, the amount reflecting that consumption is part of the cost of the intangible asset." For example, the depreciation of a portable drilling rig is capitalised as part of the intangible exploration and evaluation asset that represents the costs incurred on active exploration projects. [IFRS 6.16, IFRS 6.BC.33]. See Chapter 36 at 3.

5.10.3 Compound instruments

FRS 102 requires that an entity issuing a convertible or compound instrument must allocate the proceeds between the liability component and the equity component. [FRS 102.22.13]. This classification is permitted by the Regulations (and LLP Regulations) which require that, in determining how amounts are presented within items in the balance sheet, the directors of the company (or the members of the LLP) must have regard to the substance of the reported transaction or arrangement, in accordance with generally accepted accounting principles or practice (see 4.4 above). [1 Sch 9, 1 Sch 9 (LLP)].

Appendix 2 of TECH 02/17BL includes numerical illustrations of the treatment of compound instruments.

6 Statement of changes in equity

An entity must present a statement of changes in equity, or if certain conditions are met and an entity chooses to, a statement of income and retained earnings (see 6.2 below). [FRS 102.6.1].

Equity is the residual interest in the assets of the entity after deducting all its liabilities. It is not measured directly and equals the total of the carrying amounts of all recognised assets, less the total of the carrying amounts of all recognised liabilities. It may be sub-classified in the statement of financial position. For example, sub-classifications may include funds contributed by shareholders, retained earnings, and gains or losses recognised directly in equity. [FRS 102.2.87, FRS 102 Appendix I].

Section 22 - *Liabilities and Equity* - requires certain financial instruments - that would otherwise meet the definition of a liability - to be classified as equity because they represent the residual interest in the net assets of the entity. Puttable financial instruments, and instruments (or components of instruments) that contain obligations only on liquidation are, therefore, classified as equity providing the criteria for equity classification are met. [FRS 102.22.4].

FRS 102's requirements for the statement of changes in equity are similar to those included in IFRS accounting standards.

The Regulations and LLP Regulations do not require a statement of changes in equity to be presented but do require an analysis of movements on reserves and certain disclosures relating to dividends and appropriations. In practice, the analysis of movements in reserves could be combined with the statement of changes in equity. See 6.1 below.

6.1 Information to be presented in the statement of changes in equity

The statement of changes in equity presents an entity's profit or loss for a reporting period, other comprehensive income for the period, the effects of changes in accounting policies and corrections of material errors recognised in the period and the amounts of investments by, and dividends and other distributions to, equity investors during the period. [FRS 102.6.2].

The effects of corrections of material errors and changes in accounting policies are presented as retrospective adjustments of prior periods rather than as part of profit or loss in the period in which they arise. [FRS 102.5.8]. This is why such errors and changes in accounting policies are reported as separate line items in the statement of changes in equity (or, if presented, the statement of income and retained earnings). [FRS 102.6.3(b), FRS 102.6.5(c), FRS 102.6.5(d)]. The retrospective adjustments for material errors and changes in accounting policy are consistent with the requirements of IFRS accounting standards.

The statement of changes in equity shows: [FRS 102.6.3, FRS 102.6.3A, FRS 102 Appendix I]

- (a) Total comprehensive income for the period (the sum of profit and loss and other comprehensive income - see 6 above) showing separately the total amounts attributable to owners of the parent and to non-controlling interests (see 3.5 above)
- (b) For each component of equity, the effects of retrospective application (of accounting policies) or retrospective restatement recognised in accordance with Section 10
- And
- (c) For each component of equity, a reconciliation between the carrying amount at the beginning and the end of the period, separately disclosing changes resulting from:
 - (i) Profit or loss
 - (ii) Other comprehensive income (which must be analysed by item, either in the statement of changes in equity or in the notes)
 - And
 - (iii) The amounts of investments by, and dividends and other distributions to, owners, showing separately issues of shares, purchase of own share transactions, dividends and other distributions to owners, and changes in ownership interests in subsidiaries that do not result in a loss of control

It can be seen that (a) above is effectively a sub-total of the sum of the items required by (c)(i) and (c)(ii). Items required to be recognised in other comprehensive income are listed at 5.2 above.

FRS 102 does not define a 'component of equity'. However, IAS 1/IFRS 18, which has a similar requirement to (c) above, states that 'components of equity' include, for example, each class of contributed equity, the accumulated balance of each class of other comprehensive income and retained earnings. [IAS 1.108, IFRS 18.111].

How we see it

In our view, the components presented must, as a minimum, include the components of capital and reserves relating to the headings and subheadings set out in the statutory formats (see 4.3.12 above), bearing in mind that an analysis of movements in these reserves is already required by the Regulations (or LLP Regulations).

Other components of equity might include, for example, the cash flow hedge reserve or fair value movements accumulated in equity on available-for-sale financial assets, where IAS 39 is applied. For UK companies and LLPs, these reserves would be included within the statutory fair value reserve required by the fair value accounting rules.

Where adapted formats are used, FRS 102 requires separate sub-classifications for classes of equity (such as share capital, share premium, retained earnings, revaluation reserve and fair value reserve) to be shown either in the statement of financial position or in the notes to the financial statements (see 4.1.13 above). [FRS 102.4.2B(g)]. These sub-classifications are likely to represent, at a minimum, components of equity for the purposes of the statement of changes in equity.

6.1.1 Related disclosures in the Regulations and LLP Regulations

Where there have been transfers to or from any reserves (and the reserves are shown as separate line items in the statement of financial position, or would be so shown, if Arabic-numbered line items were not combined as permitted by paragraph 4(2)(b) of the General Rules to the formats - see 3.4 above), a UK company preparing Companies Act accounts (or an LLP preparing non-IAS accounts) must disclose, in the notes to the accounts, in respect of the aggregate of reserves included in the same item:

- The amount of the reserves at the beginning and end of the financial year
- Any amounts transferred to or from the reserve during that year
- And
- The source and application respectively of any amounts transferred

This information must be presented in tabular form. [1 Sch 59(1), 1 Sch 59(2), 1 Sch 57(1)(LLP), 1 Sch 57(2)(LLP)]. Comparatives are required under the general requirements of FRS 102 (as there is not a specific exemption). [FRS 102.3.14].

This disclosure requirement is relevant to both statutory formats and adapted formats. For statutory formats, the movements in reserves will include the headings and sub-headings listed in the statutory formats (see 4.3.12 above).

How we see it

For adapted formats, in our view, it is appropriate to present the movements in reserves for the classes of equity identified in the statement of financial position or in the notes to the financial statements (see 4.1.13 above). These are normally the same components of equity identified when presenting the statement of changes in equity.

UK companies preparing Companies Act accounts (relevant to adapted formats and statutory formats) are required to state in the notes to the accounts: [1 Sch 43]

- Any amount set aside to (or proposed to be set aside to), or withdrawn from (or proposed to be withdrawn from) reserves
- The aggregate amount of dividends paid in the financial year (other than those for which a liability existed at the immediately preceding balance sheet date)
- The aggregate amount of dividends that the company is liable to pay at the balance sheet date
- And
- The aggregate amount of dividends that are proposed before the date of approval of the accounts, and not otherwise disclosed above

The LLP Regulations only require LLPs preparing non-IAS accounts to state in the notes to the accounts any amount set aside to (or proposed to be set aside to) or withdrawn from (or proposed to be withdrawn from) reserves. [1 Sch 43 (LLP)].

Particulars must be given of the proposed appropriation of profit or treatment of loss or, where applicable, particulars of the actual appropriation of profits or treatment of the losses. [1 Sch 72B, 1 Sch 70B (LLP)].

Where an entity declares dividends to holders of its equity instruments after the end of the reporting period, those dividends are not recognised as a liability because no obligation exists at that time, but FRS 102 permits an entity to show the dividend as a segregated component of retained earnings at the end of the reporting period. [FRS 102.32.8].

FRS 102 requires an entity to *disclose* the fair value of non-cash assets distributed to its owners in the reporting period (except when the non-cash assets are ultimately controlled by the same parties before and after the distribution). [FRS 102.22.18].

6.1.2 Example of statement of changes in equity

FRS 102 does not include an illustrative statement of changes in equity. Illustration 6-1 shows the requirements below.

An analysis is required of other comprehensive income by item in the statement of changes in equity or in the notes to the accounts. [FRS 102.6.3A]. The detail in which this analysis must be presented is not specified.

Illustration 6-1: Combined statement of changes in equity

XYZ Group - Statement of changes in equity for the year ended 31 December 202X

(£'000)

	Called up share capital	Share premium account	Re-valuation reserve	Capital redemption reserve	Own shares	Merger reserve	Fair value reserve	Profit and loss account	Equity owners of parent	Non-controlling interest	Total equity

Share based payment expense	-	-	-	-	-	-	-	307	307	-	307
Balance at 31 December 202X	12,075	500	3,300	500	(774)	6,250	1,859	23,521	47,231	329	47,560

- (a) The amount included in retained earnings for 202Y of £4,331,000 represents profit attributable to owners of the parent of £4,872,000 less remeasurement losses (net of tax) on defined benefit pension plans of £541,000 (gross £676,000 less tax £135,000).
The amount included in the cash flow hedge reserve for 202Y comprises a loss on cash flow hedges of £574,000 (£717,000 less tax £143,000) which represented losses (net of tax) transferred to cash flow hedge of £774,000 less reclassification of losses (net of tax) to profit and loss of £200,000. The amount included in non-controlling interest of £2,000 for 2015 relates to exchange translation gains (no attributable tax).
The amount included in the revaluation surplus of £100,000 for 202Y represents the share of other comprehensive income of associates of £100,000 (gross £120,000 less tax £20,000). Other comprehensive income of associates relates solely to gains or losses on property revaluation.
- (b) The amount included in retained earnings for 202X of £5,406,000 represents profit attributable to owners of the parent of £4,674,000 plus remeasurement gains on defined benefit pension plans of £732,000 (£915,000 less tax £183,000).
The amount included in the cash flow hedge reserve for 202X comprises a loss on cash flow hedges of £665,000 (£831,000 less tax £166,000) which represented losses (net of tax) transferred to cash flow hedge of £900,000 less reclassification of losses (net of tax) to profit and loss of £235,000. The amount included in non-controlling interest of £3,000 for 201Y relates to exchange translation gains (no attributable tax).
The amount included in the revaluation surplus of £200,000 for 202X represents the share of other comprehensive income of associates of £200,000 (gross £240,000 less tax £40,000). Other comprehensive income of associates relates solely to gains or losses on property revaluation.

Where an entity has more than one class of share capital, the entity must disclose dividends paid (in aggregate and per share) separately for each class of share capital. *[FRS 102.6.3B]*

The LLP SORP provides detailed guidance on the statement of changes in equity (and on the SORP's requirement for an LLP to present, either as a primary statement or in the notes, a reconciliation of members' interests). The SORP defines members' interests as comprising both 'other members' interests' and 'loans and other debts due to members' less any amounts due from members in debtors and specifies the format for the reconciliation of members' interests. Comparatives, i.e., the full table reconciling movements in the comparative year, are required, where this reconciliation is presented as a primary statement. *[LLP SORP.59, LLP SORP.59A, LLP SORP.59B, LLP SORP.60, LLP SORP.60A]*.

Not all LLPs have equity (e.g., if the LLP's partnership interests are classified entirely as liabilities). The LLP SORP clarifies that no statement of changes in equity is required in such circumstances (unless a reconciliation of members' interests is presented as a primary statement) but requires that a statement must be made in one of the primary statements or in the notes to the accounts that the LLP has no equity and consequently a statement of changes in equity is not given. *[LLP SORP.59A]*.

6.2 Statement of income and retained earnings

The purpose of a statement of income and retained earnings is to present an entity's profit or loss and changes in retained earnings for a reporting period.

An entity is permitted, but is not required, to present a statement of income and retained earnings in place of a statement of comprehensive income and a statement of changes in equity if the only changes to its equity in the periods for which financial statements are presented arise from: *[FRS 102.6.4]*

- Profit or loss
 - Payment of dividends
 - Corrections of prior period errors
- And

- Changes in accounting policy

In essence, this means that the statement of income and retained earnings may be presented where the entity does not have items of other comprehensive income, investments by equity investors or non-dividend distributions to equity investors in the current or comparative periods presented.

The statement of income and retained earnings shows the following items in addition to the information required in the statement of comprehensive income by Section 5: *[FRS 102.6.5]*

- Retained earnings at the beginning of the reporting period
 - Dividends declared and paid or payable during the period
 - Restatements of retained earnings for corrections of prior period material errors
 - Restatements of retained earnings for changes in accounting policy
- And
- Retained earnings at the end of the reporting period

See Illustration 6-2 which illustrates a statement of income and retained earnings.

The LLP SORP does not recommend that LLPs present a statement of income and retained earnings, on the grounds that it will be of little benefit to users of LLP financial statements in most cases. [LLP SORP.26A].

Illustration 6-2: Statement of income and retained earnings (extract)

	202X	202Y
	£'000	Restated £'000
Profit before taxation	1,494	458
Taxation	(394)	(258)
Profit after taxation and profit for the financial year	1,100	200
Retained earnings brought forward at 1 January 2X (1 January 2Y) - as originally reported	12,285	13,500
Prior period adjustment - changes in accounting policy	(1,820)	(2,235)
Prior period adjustment - correction of error	(1,900)	(1,900)
Retained earnings brought forward at 1 January 2X (1 January 2Y) - as restated	9,665	9,565
Dividends paid [or payable]	(1,500)	(1,000)
Retained earnings carried forward at 31 December 2X (31 December 2Y)	8,165	8,565

7 Notes to the financial statements

FRS 102 sets out the principles underlying the information to be presented in the notes and how to present it. Notes contain information in addition to that presented in the primary statements. Notes provide narrative descriptions or disaggregation of items presented in those statements and information about items that do not qualify for recognition in those statements. Most sections of FRS 102 require disclosures that are normally presented in the notes. [FRS 102.8.1].

UK companies preparing Companies Act accounts are required by CA 2006 (principally Part 15), the Regulations and other applicable regulations to disclose certain information in the notes to the accounts. Similarly, LLPs preparing non-IAS accounts are required by CA 2006 (as applied to LLPs by SI 2008/1911), the LLP Regulations and other applicable regulations to disclose certain information in the notes to the accounts. Certain of these statutory disclosures have been commented on in the discussion of the statutory formats at 4.3 and 5.6 above (because they represent additional analyses for line items required in the statement of financial position or in the statement of comprehensive income), but the disclosures generally apply where adapted formats are used as well.

7.1 Structure of the notes

FRS 102 requires the notes to: [FRS 102.8.2]

- (a) Present information about the basis of preparation of the financial statements and the specific accounting policies used
- (b) Disclose the information required by FRS 102 that is not presented in the primary statements
And
- (c) Provide information that is not presented elsewhere in the financial statements, but is relevant to an understanding of any of them

The notes must, as far as practicable, be presented in a systematic manner. Each item in the financial statements must be cross-referenced to any related information in the notes. [FRS 102.8.3].

The notes are normally presented in the following order: [FRS 102.8.4]

- (a) A statement that the financial statements have been prepared in compliance with FRS 102 (see 2.6 above)
- (b) A summary of material accounting policy information (see 7.2 below)
- (c) Supporting information for items presented in the financial statements, in the sequence in which each statement and each line item is presented
And
- (d) Any other disclosures

These requirements of FRS 102 are consistent with the traditional order of financial statements. The Regulations require that the notes to the accounts of a company give the information set out in Part 3 of Schedule 1, 2 or 3 to the Regulations, as applicable, in the order in which, where relevant, the items to which they relate are presented in the statement of financial position and in the statement of comprehensive income. [1 Sch 42(2)]. The LLP Regulations similarly require that the notes to an LLP's accounts give the information set out in Part 3 of Schedule 1 to the LLP Regulations in this same order. [1 Sch 42(2)(LLP)]. The same applies in group accounts of UK parent companies and parent LLPs. [6 Sch 1(1), 3 Sch 1 (LLP)]. This requirement is emphasised in a footnote to paragraph 4 of section 8 of the standard which states: "Company law requires the notes to be presented in the order in which, where relevant, the items to which they relate are presented in the statement of financial position and in the income statement."

7.2 Material accounting policy information

Material accounting policy information is information which, when considered together with other information included in an entity's financial statements, can reasonably be expected to influence decisions that the primary users of general purpose financial statements make on the basis of those financial statements. The disclosure of material accounting policy information must include the measurement basis (or bases) used in preparing the financial statements. [FRS 102.8.5].

The standard explains that accounting policy information relating to immaterial transactions, events or conditions is generally immaterial and therefore does not need to be disclosed, unless the Regulations or LLP Regulations require disclosure. However, certain transactions are required to be disclosed under the Regulations or LLP Regulations, irrespective of materiality, such as disclosures relating to staff costs, development costs and directors' loans. It is possible that even if the amount of a transaction (or event or condition) is immaterial, the nature of it renders the relevant accounting policy information material. Conversely, not all accounting policy information is necessarily material just because the related transactions, events or conditions are material. [FRS 102.8.5A].

FRS 102 notes that information is more useful if it focuses on how an entity has applied the requirements of the standard to its own circumstances (that is, it is entity-specific) rather than if it is standardised information, or information that only duplicates or summarises the requirements of the standard.

[FRS 102.8.5C].

Accounting policy information is expected to be material if users of an entity's financial statements would need it to understand other material information in the financial statements. The standard presents examples of when it is likely that such information should be disclosed; that is when the information relates to material transactions, other events or conditions and: [FRS 102.8.5B]

- The entity changed its accounting policy during the reporting period and this change resulted in a material change to the information in the financial statements.
- The entity chose the accounting policy from one or more options permitted by FRS 102, for example if the entity chose to measure investment property at historical cost rather than fair value.
- The accounting policy was developed in accordance with Section 10 in the absence of a Section of FRS 102 that specifically applies (see Chapter 9).
- The accounting policy relates to an area for which an entity is required to make significant judgements or assumptions in applying an accounting policy, and the entity discloses those judgements or assumptions in accordance with paragraphs 6 and 7 of section 8 of the standard (see 7.3 below).
- The accounting required for them is complex and users of the entity's financial statements would otherwise not understand those material transactions, other events or conditions. For example, if an entity applies more than one Section of FRS 102 to a class of material transactions.

An entity's conclusion that accounting policy information is immaterial does not affect the related disclosure requirements set out in other sections of the standard. [FRS 102.8.5D].

Judgement is clearly required when determining what is material accounting policy information and the level of detail required in those disclosures. In recent years, the FRC has continued to comment on the quality of disclosure of accounting policies, particularly revenue recognition policies. The FRC's Corporate Reporting Review function has challenged companies where the information is not company-specific or is generic (including boilerplate text copied from accounting standards); and where accounting policy information, that might have been expected given the business model, was not present (e.g., if the business model includes distinct and significant revenue streams described in the business review; accounting policy information relevant to each stream would be expected). Accounting policy information must be given for material transactions, particularly if unusual or non-recurring but the FRC does not expect immaterial or irrelevant accounting policy information to be disclosed. Industry-specific accounting policy information must be clearly disclosed, avoiding industry specific jargon.⁵⁵

Disclosure of particular accounting policies is especially useful to users when those policies are selected from alternatives allowed in FRS 102 (e.g., the accrual or performance model for government grants) and the standard often explicitly requires material accounting policy information to be disclosed in such situations. In addition, disclosure is useful where it relates to significant accounting policies not specifically required to be disclosed but which have been selected by management in accordance with the hierarchy in Section 10.

A UK company preparing Companies Act accounts (or an LLP preparing non-IAS accounts) is also required to disclose the accounting policies used in determining the amounts to be included in respect of items shown in the statement of financial position and in determining the profit or loss of the company (or the LLP), in the notes to the accounts. [1 Sch 44, 1 Sch 44 (LLP)].

⁵⁵ See, for example, the FRC's Corporate Reporting Review: Annual Report 2015 (October 2015), section 5.2.

The Regulations (and LLP Regulations) specifically require the note on accounting policies to include:

- Accounting policies with respect to depreciation and diminution in value of assets [1 Sch 44, 1 Sch 44 (LLP)]
 - The items affected and the basis of valuation adopted for each item measured using the alternative accounting rules, e.g., where property, plant and equipment is revalued [1 Sch 34(2), 1 Sch 34(2) (LLP)]
- And
- The amortisation period for capitalised development costs, together with the reasons for capitalising the development costs [1 Sch 21, 1 Sch 21 (LLP)]

While not required by the Regulations (or LLP Regulations), it is common practice to include the following required note disclosures within the disclosure of material accounting policy information:

- Where in exceptional cases the useful life of intangible assets (including goodwill) cannot be reliably estimated, the amortisation period (which must not exceed ten years) chosen by the directors (or the members of the LLP), together with the reasons for choosing that period. [1 Sch 22, 1 Sch 22 (LLP)].
- And
- The basis of translating sums denominated in foreign currencies into sterling (or the currency in which the accounts are drawn up). [1 Sch 70, 1 Sch 68 (LLP)].

Most financial statements disclose the accounting convention used in their preparation. An example is given below, although the nature of the departures from the historical cost convention will depend on an entity's accounting policies.

Illustration 7-1: Accounting convention

The financial statements are prepared in accordance with the historical cost convention, except for the revaluation of property, plant and equipment at market value under the alternative accounting rules and application of the fair value accounting rules to derivative financial assets and liabilities and hedging relationships.

7.3 Judgements in applying accounting policies

An entity's material accounting policy information or other notes must disclose the judgements, apart from those involving estimations, that management has made in the process of applying the entity's accounting policies and that have the most significant effect on the amounts recognised in the financial statements.

[FRS 102.8.6].

Examples of judgements in applying accounting policies include: for a lessor, whether a lease is classified as an operating or finance lease; whether a transaction is a business combination or an asset transaction; and whether the entity is acting as principal or agent in a revenue transaction.

Individual sections in FRS 102 may specifically require disclosure of certain judgements, although in general, there are fewer such disclosures required than under IFRS accounting standards).

7.4 Information about key sources of estimation uncertainty

The notes to the financial statements must disclose information about the key assumptions concerning the future, and other key sources of estimation uncertainty at the reporting date, that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year. In respect of those assets and liabilities, the notes shall include details of their nature and their carrying amount as at the end of the reporting period. [FRS 102.8.7].

The Regulations and LLP Regulations require the notes to the accounts to include the significant assumptions underlying the valuation models and techniques used to determine financial instruments, investment property, living animals and plants and stocks measured at fair value (under the fair value accounting rules). [1 Sch 55(2)(a), 1 Sch 53(2)(a) (LLP)].

IAS 1/IAS 8 includes the same requirement as FRS 102 on disclosure of key sources of estimation uncertainty, [IAS 1.125, IAS 8 2027.31A], but contains more explanatory guidance that management may consider, as permitted by the hierarchy in Section 10, in determining how to make the above disclosure.

7.5 Other notes disclosures in the presentation sections of FRS 102

An entity shall disclose in the notes to the financial statements: [FRS 102.3.24(a), FRS 102.3.24(b)]

- The legal form of the entity, its country of incorporation and the address of its registered office (and principal place of business, if different from the registered office)

And

- A description of the nature of the entity's operations and its principal activities unless this is disclosed in the business review (or similar statement) accompanying the financial statements.

An entity's principal activities will often be explained in the strategic report as part of the business review.

The date the financial statements were authorised for issue and who gave that authorisation must be disclosed. If the entity's owners or others have the power to amend the financial statements after issue, the entity shall disclose that fact. [FRS 102.32.9]. See Chapter 34 at 3.4.1.

The above requirement overlaps with the requirements in CA 2006 for the company's directors to approve the annual accounts and for a director, on behalf of the board, to sign the company statement of financial position (with the printed name of the director signing on behalf of the board stated in published and filed copies).⁵⁶ [s414, s433, s444, s445, s446, s447]. For LLPs, the same requirements apply but the annual accounts are approved by the members of the LLP and are signed, on behalf of the members, by a designated member. [s414 (LLP), s433 (LLP), s444 (LLP), s445 (LLP), s446 (LLP), s447 (LLP)]. However, the disclosures on authorisation of the financial statements required by FRS 102 are also often included as a separate note to the financial statements.

In addition, individual and group accounts of a company (or an LLP) must state:

- The part of the UK in which the company (or the LLP) is registered
- The company's (or the LLP's) registered number
- Whether the company is a public or private company and whether it is limited by shares or by guarantee (no equivalent disclosure for LLPs)
- The address of the company's (or the LLP's) registered office

And

- Where appropriate, the fact that the company (or the LLP) is being wound up

This disclosure requirement applies to both Companies Act accounts (non-IAS accounts, for an LLP) and IAS accounts. [s396(A1), s397(1), s404(A1), s406(1), s396(A1)(LLP), s397(1)(LLP), s404(A1)(LLP), s406(1)(LLP)].

7.6 Segmental disclosures of turnover

A UK company preparing Companies Act accounts (or an LLP preparing non-IAS accounts) must give the following disclosures in the notes to the accounts:

- Where the company (or LLP) has carried on business of two or more classes during the financial year that, in the opinion of the directors (or of the members of the LLP), differ substantially from each other, the amount of the turnover attributable to each class of business together with the description of the class.

And

- Where the company (or LLP) has supplied geographical markets during the financial year that, in the opinion of the directors (or of the members of the LLP), differ substantially from each other, the amount of the turnover attributable to each such market.

The directors (or the members of the LLP) should have regard to the manner in which the company's (or LLP's) activities are organised in making the above analysis. Classes of business (or markets) which, in the opinion of the directors (or of the members of the LLP), do not differ substantially from each other must be treated as one class (or market). Amounts attributable to a class of business (or market) that are not material may be included in the amount stated in respect of another class of business (or market).

Where disclosure of any of the information required would, in the opinion of the directors (or of the members of the LLP), be seriously prejudicial to the interests of the company (or the LLP), that information need not be disclosed, but the fact that any such information has not been disclosed must be stated.

[1 Sch 68, 1 Sch 65 (LLP)].

⁵⁶ The Registrars' Rules require that the filed copy of the annual accounts is also signed by a director.

For group accounts, the disclosures are given for the company (or LLP) and undertakings included in the consolidation (i.e., consolidated undertakings). [6 Sch 1(1), 3 Sch 1 (LLP)].

The above requirements do not apply for a company subject to the small companies regime or an LLP subject to the small LLPs regime.

7.7 Staff numbers and costs (and number of members of an LLP)

Company law requires a UK company or an LLP to disclose the following in respect of staff numbers and costs in the notes to the annual accounts: [s411(1), s411(2), s411(5), s411(1)(LLP), s411(2)(LLP), s411(5)(LLP)]

- (a) The average number of persons employed by the company (or the LLP) in the financial year
- (b) The average number of persons within each category of persons so employed
 - This means an analysis of (a) by category selected by the company's directors (or the members of the LLP), having regard to the manner in which the company's (or the LLP's) activities are organised
 - And
- (c) in respect of all persons employed by the company (or the LLP) during the financial year under contracts of service, the aggregate amounts of:
 - (i) Wages and salaries paid or payable in respect of the year to those persons
 - (ii) Social security costs incurred by the company (or the LLP) on their behalf
 - And
 - (iii) Other pension costs so incurred

unless stated elsewhere in the company's (or the LLP's) accounts.

This disclosure applies both to Companies Act accounts (non-IAS accounts, for an LLP) and IAS accounts. The information in (c) may already be stated elsewhere in the company's (or the LLP's) accounts where the format 2 profit and loss account is used.

Where group accounts are prepared, the information in (a) to (c) above is required both for the consolidated group (i.e., the company (or the LLP) and its consolidated subsidiary undertakings) [s411(7), s411(7)(LLP)] and for the company (or the LLP).

The average number of persons employed is determined by dividing the 'relevant annual number' by the number of months in the financial year. The relevant annual number is determined by ascertaining the number of persons employed under contracts of service by the company (or the LLP) for each month in the financial year (whether throughout the month or not - so including both part-time and full-time employees) and then adding together all the monthly numbers. The number of persons so employed in each category is determined in a similar way. [s411(3), s411(4), s411(3)(LLP), s411(4)(LLP)].

Wages and salaries, and social security costs are determined by reference to payments made or costs incurred in respect of all persons employed by the company (or the LLP) during the financial year under contracts of service. [s411(5), s411(5)(LLP), 4 Sch 12 (LLP), 10 Sch 14].

Social security costs mean any contributions by the company (or the LLP) to any state social security or pension scheme, fund or arrangement. [s411(6), s411(6)(LLP), 4 Sch 12 (LLP), 10 Sch 14].

Pension costs include any costs incurred by the company (or the LLP) in respect of any pension scheme established for the purpose of providing pensions for current or former employees; any sums set aside for the future payment of pensions directly by the company (or the LLP) to current or former employees; and any pensions paid directly to such persons without having first been set aside. [s411(6), s411(6)(LLP), 4 Sch 12 (LLP), 10 Sch 14]. Pension costs exclude contributions to a state pension scheme - these are disclosed as social security costs.

The disclosures relate to persons employed on 'contracts of service' with the company (or the LLP) (meaning an employment contract) and, therefore, exclude self-employed people such as contractors or consultants. Executive directors generally have a contract of service, but non-executive directors may have contracts for services. Where this is the case, the non-executive directors would be excluded from the above disclosure. All directors fall within the scope of statutory directors' remuneration disclosures (as noted at 8 above, these are beyond the scope of this publication).

In groups, employees with contracts of service with one entity (such as the parent or a corporate services entity) may be seconded to another group entity or paid by another entity, sometimes with costs recharged. In such cases, we recommend that entities supplement the statutory disclosures for persons with contracts of service with additional information on staff costs and staff numbers, explaining the particular situation, including the impact on the profit and loss account.

LLPs preparing non-IAS accounts must also disclose the average number of members of the LLP in the financial year. This is computed by dividing the relevant annual number (i.e., determining the number of members of the LLP for all or part of each month in the financial year, and adding together all the monthly numbers) by the number of months in the financial year. [1 Sch 66(1)(LLP), 1 Sch 66(2)(LLP)].

FRS 102 also includes disclosures in respect of share-based payment and employee benefits (see Chapter 28 at 14 and Chapter 30 at 4).

7.8 Off balance sheet arrangements

A company or LLP may be party to arrangements that are not reflected in its statement of financial position and at the reporting date, the risks or benefits arising from those arrangements may be material. If that is the case, company law requires a UK company or an LLP to disclose information in the notes to the accounts, as follows:

- (a) The nature and business purpose of the arrangements

And

- (b) The financial impact of the arrangements on the company (or the LLP)

The information need only be given to the extent necessary for enabling the financial position to be assessed.

This disclosure applies both to Companies Act accounts (non-IAS accounts, for an LLP) and IAS accounts.

In group accounts, the disclosures relate to the company and the undertakings included in the consolidation. [s410A, s410A (LLP)]. Where group accounts are prepared, the information in (a) and (b) is given for both the consolidated group and the company (or the LLP).

Section 410A implements the requirement for disclosure of 'off-balance sheet arrangements' included in Directive 2006/46/EC. Recital 9 to the EU Directive states:

"Such off-balance sheet arrangements could be any transactions or agreements which companies may have with entities, even unincorporated ones that are not included in the balance sheet. Such off-balance sheet arrangements may be associated with the creation or use of one or more Special Purpose Entities (SPEs) and offshore activities designed to address, *inter alia*, economic, legal, tax or accounting objectives. Examples of such off-balance sheet arrangements include risk and benefit-sharing arrangements or obligations arising from a contract such as debt factoring, combined sale and repurchase agreements, consignment stock arrangements, take or pay arrangements, securitisation arranged through separate companies and unincorporated entities, pledged assets, operating leasing arrangements, outsourcing and the like. Appropriate disclosure of the material risks and benefits of such arrangements that are not included in the balance sheet must be set out in the notes to the accounts or the consolidated accounts."

The examples listed in Recital 9 are not to be taken as exhaustive. FRS 102 and/or the Regulations and LLP Regulations already require disclosures about certain off-balance sheet arrangements. The Regulations and LLP Regulations also, *inter alia*, require certain disclosures including in relation to the nature and form of security given for debts (see 4.3.8 above) and in respect of guarantees, contingencies and other financial commitments (see 7.8.1 below). As discussed at 7.3 above, FRS 102 also requires significant judgements in applying accounting policies to be disclosed.

UK companies and LLPs will, however, still need to consider whether the disclosures given are sufficient to meet the requirements of section 410A and whether the entity is party to material off-balance sheet arrangements not required to be disclosed by FRS 102 that must be disclosed in accordance with section 410A. However, we consider this would rarely occur.

7.8.1 Guarantees, contingencies and commitments

Company law requires a UK company preparing Companies Act accounts (or an LLP preparing non-IAS accounts) to give the following information in a note to the accounts: [1 Sch 63, 1 Sch 60 (LLP)]

- (a) particulars must be given of any charge on the assets of the company (or the LLP) to secure the liabilities of any other person, including the amount secured
- (b) particulars and the total amount of any financial commitments, guarantees and contingencies that are not included in the statement of financial position must be disclosed, together with an indication of the nature and form of any valuable security given by the company (or the LLP) in respect of such commitments, guarantees and contingencies
- (c) the total amount of any pension commitments (within (b) above) that are not included in the statement of financial position must be separately disclosed

- (d) separate particulars of any pension commitment (within (c) above) relating wholly or partly to pensions payable to past directors of the company (or to past members of the LLP) must be given
- (e) the total amount of any commitments, guarantees and contingencies (within (b) above) that are not included in the statement of financial position undertaken on behalf or for the benefit of:
 - (i) any parent undertaking or fellow subsidiary undertaking of the company (or LLP)
 - (ii) any subsidiary undertaking of the company (or LLP)
 Or
 - (iii) any undertaking in which the company (or LLP) has a participating interest
 must be separately stated and those within each of paragraphs (i), (ii) and (iii) must also be stated separately from those within any other of those paragraphs
- And
- (f) particulars must also be given of any pension commitments which are included on the statement of financial position, with separate particulars given for any pension commitment relating wholly or partly to pensions payable to past directors of the company.

Part (e) above appears to require the totals for (i), (ii), (iii) (and the sum of the totals for (i) to (iii)) to be separately stated.

See 4.3.4.C and 4.3.4.D above and Chapter 3 at 3.1.2 for guidance on the relevant definitions.

Where group accounts are prepared, the disclosures are given for both the consolidated group (i.e., the company (or LLP) and its consolidated subsidiary undertakings) and the individual company (or LLP). [6 Sch 1(1), 3 Sch 1(1)(LLP)].

7.9 Directors' advances, credits and guarantees

Company law requires a UK company preparing Companies Act accounts or IAS accounts to disclose information concerning directors' advances, credits and guarantees. There is no equivalent disclosure for LLPs.

A company that does not prepare group accounts must disclose in the notes to its individual accounts: [s413(1)]

- Advances and credits granted by the company to its directors
- And
- Guarantees of any kind entered into by the company on behalf of its directors.

A parent company that prepares group accounts must disclose in the notes to the group accounts: [s413(2)]

- Advances and credits granted to the directors of the parent company, by that company or by any of its subsidiary undertakings
- And
- Guarantees of any kind entered into on behalf of the directors of the parent company, by that company or by any of its subsidiary undertakings

The details required for an advance or credit are: [s413(3), s413(5)]

- Its amount - for each advance or credit and totals in aggregate
- An indication of the interest rate
- Its main conditions
- Any amounts repaid - for each advance or credit and totals in aggregate
- Any amounts written off - for each advance or credit and totals in aggregate
- And
- Any amounts waived - for each advance or credit and totals in aggregate

The details required for a guarantee are: [s413(4), s413(5)]

- Its main terms
- The amount of the maximum liability that may be incurred by the company (or its subsidiary) - for each guarantee and totals in aggregate
- And
- Any amount paid and any liability incurred by the company (or its subsidiary) for the purpose of fulfilling the guarantee (including any loss incurred by reason of enforcement of the guarantee) - for each guarantee and also totals in aggregate

Disclosure is required: [s413(6), s413(7)]

- In respect of persons who were directors of the company at any time in the financial year to which the financial statements relate
And
- For every advance, credit or guarantee that subsisted at any time in the financial year:
 - Whenever it was entered into
 - Whether or not the person concerned was a director of the company at the time it was entered into
And
 - In relation to an advance, credit or guarantee involving a subsidiary undertaking of the company, whether or not that undertaking was a subsidiary undertaking at the time the advance, credit or guarantee was entered into

There are certain exemptions for banking companies (and the holding companies of credit institutions (see definitions at 3.1.2 above), as explained at 7.9.1 below.

The terms advances, credits, and guarantees are not defined in CA 2006 itself. The rules governing the lawfulness of transactions in Part 10 of CA 2006 refer to loans, quasi-loans (including related guarantees or provision of security) and credit transactions. While these terms do not align with the terms used in section 413, loans and quasi-loans and credit transactions would generally be considered as advances and credits; guarantees or provision of security would be disclosed as guarantees.

The requirements appear to require disclosure of each advance or credit, or guarantee made. This could be arduous in some contexts, as the definition of advances and credits could include directors' current accounts or personal purchases made using a company credit card (as well as loans and outstanding credit card balances provided by banks or finance subsidiaries of certain retailers).

7.9.1 Banking companies and holding companies of credit institutions

A banking company or the holding company of a credit institution is only required to disclose: [s413(8)]

- The total amounts of advances and credits granted by the company (or in group accounts, by the company and its subsidiary undertakings) [s413(5)(a)]
And
- The total amounts of the maximum liability that may be incurred by the company (or its subsidiary) in respect of guarantees entered into by the company (or in group accounts, by the company and its subsidiary undertakings) [s413(5)(c)]

8 General principles for preparation of financial statements

The objective of financial statements is to provide information about an entity that is useful for decision-making by a wide range of users who are not in a position to demand reports tailored to meet their particular information needs. [FRS 102.2.4]. The type of information envisaged is information about the economic resources of the entity, claims against the entity and changes in those resources and claims. It should also provide information about management's stewardship - or how efficiently and effectively an entity's management has discharged its responsibilities to use the entity's economic resources. [FRS 102.2.5].

This section addresses FRS 102's requirement for financial statements to give a true and fair view, the adoption of the going concern basis, and materiality and aggregation. There are similar requirements in the Regulations (and LLP Regulations), as highlighted at 8.1 below.

8.1 Requirements of the Regulations (and LLP Regulations)

The Regulations (and LLP Regulations) include:

- The requirement for accounts to give a true and fair view, and the concept of a 'true and fair override' (see 8.2 below)
 - General principles for the preparation of financial statements, similar to those included in FRS 102 (see 8.1.1 below)
- And
- Recognition and measurement principles, where assets and liabilities are measured under the historical cost convention, alternative accounting rules and fair value accounting rules

8.1.1 General principles for preparation of financial statements

The general principles set out in the Regulations and the LLP Regulations for the preparation of financial statements are: [1 Sch 10, 1 Sch 11, 1 Sch 12, 1 Sch 13, 1 Sch 14, 1 Sch 15, 1 Sch 15A, 1 Sch 10 (LLP), 1 Sch 11 (LLP), 1 Sch 12 (LLP), 1 Sch 13 (LLP), 1 Sch 14 (LLP), 1 Sch 15 (LLP), 1 Sch 15A (LLP), 1 Sch 40(2), 1 Sch 40(2) (LLP)]

- The company (or the LLP) is presumed to be carrying on business as a going concern (see 8.3 below)
 - Accounting policies (and measurement bases) must be applied consistently within the same accounts and from one financial year to the next (see 2.6.1 above)
 - The amount of any item must be determined on a prudent basis, and in particular:
 - Only profits realised at the balance sheet date are to be included in the profit and loss account (except where fair value changes of financial instruments, investment property or living animals or plants are required to be included in the profit and loss account by the fair value accounting rules)
 - All liabilities which have arisen in respect of the financial year to which the accounts relate or a previous financial year must be taken into account, including those which only became apparent between the balance sheet date and the date on which it is signed on behalf of the Board (or the members of the LLP) in accordance with section 414 of CA 2006
- And
- All provisions for diminution of value must be recognised, whether the result of the financial year is a profit or loss
 - All income and charges relating to the financial year to which the accounts relate must be taken into account without regard to the date of receipt or payment (i.e., accruals basis)
 - In determining the aggregate amount of any item, the amount of each individual asset or liability that falls to be taken into account must be determined separately (i.e., no offsetting)
- And
- The opening balance sheet for each financial year must correspond to the closing balance sheet for the preceding financial year

In addition, at the balance sheet date, any provision made must represent the best estimate of the expenses likely to be incurred or, in the case of a liability, of the amount required to meet that liability; and provisions must not be used to adjust the values of assets. [9 Sch 2A, 9 Sch 2B, 1 Sch 13(d) (LLP), 1 Sch 13(d) (LLP)]. This requirement has been included within the general principles in the LLP Regulations but in Schedule 9 to the Regulations.

The above principles apply in both individual and group accounts. [6 Sch 1(1), 3 Sch 1(1) (LLP)].

Schedules 2 and 3 to the Regulations (and the Small Companies Regulations, which are addressed in Chapter 5) have the same requirements. However, the prohibition on presenting unrealised profits in the profit and loss account (unless permitted by the fair value accounting rules) in Schedule 3 to the Regulations is also subject to note (9) to the profit and loss account formats in that schedule concerning the presentation of unrealised gains and losses on investments. Only the references in Schedule 1 to the Regulations and Schedule 1 to the LLP Regulations are noted below.

8.1.1.A Substance over form

Where an FRS does not specifically address a transaction, management must use its judgement in developing and applying an accounting policy that results in relevant and reliable information. *[FRS 102.10.4]*. One of the characteristics of reliable information is that the financial statements “reflect the economic substance of transactions, other events and conditions, and not merely the legal form.” *[FRS 102.10.4(b)(ii)]*. Section 2 also touches on this when describing the characteristic of faithful representation, explaining that financial information must faithfully represent the substance of the economic phenomenon that it purports to represent. In cases where the legal form is not the same as the substance, providing information only about the legal form would not faithfully represent the economic phenomenon. *[FRS 102.2.14]*.

The General Rules to the formats (see 3.4 above) require that items in the balance sheet and profit and loss account formats are presented, having regard to the substance of the reported transaction or arrangement, in accordance with generally accepted accounting principles or practice. *[1 Sch 9, 1 Sch 9 (LLP)]*. This requirement facilitates the presentation of certain shares as liabilities in accordance with FRS 102.

8.1.1.B Prudence

FRS 102 identifies prudence as “the exercise of caution when making judgements under conditions of uncertainty. The exercise of prudence means that assets and income are not overstated and liabilities or expenses are not understated. Equally, the exercise of prudence does not allow for the deliberate understatement of assets or income, or the overstatement of liabilities or expenses. In short, prudence does not permit bias.” *[FRS 102 Appendix I]*. The absence of bias results in a neutral depiction and this is supported by the exercise of prudence. However, exercising prudence does not mean that more persuasive evidence is needed to support the recognition of assets or income, compared to that needed for the recognition of liabilities or expenses. In other words, it does not imply a need for asymmetry, though individual sections of the standard may have asymmetric requirements if this is needed to select the most relevant information that faithfully represents what it purports to represent. *[FRS 102.2.17]*.

FRS 102 does not specifically refer to realised profits. However, a UK company preparing Companies Act accounts (or an LLP preparing non-IAS accounts) is required by the Regulations (or LLP Regulations) to determine amounts included in the profit and loss account section of the statement of comprehensive income (or separate income statement) on a prudent basis, which results in only profits realised at the balance sheet date being included in profit or loss. This is discussed in Appendix III to FRS 102.

[FRS 102.A3.25, FRS 102.A3.26, FRS 102.A3.27, FRS 102.A3.28, FRS 102.A3.29]. Consequently, UK companies preparing Companies Act accounts (and LLPs preparing non-IAS accounts) must present certain unrealised gains in other comprehensive income instead. Profit or loss and other comprehensive income, including the concept of realised profits, are discussed further at 5.2 above.

UK companies should be mindful that not all gains (even if recognised in profit or loss) may be distributable. Appendix III to FRS 102 states that entities measuring financial instruments, investment properties, and living animals and plants at fair value should note that they may transfer such amounts to a separate non-distributable reserve, instead of a transfer to retained earnings, but are not required to do so. Presenting fair value movements that are not distributable profits in the separate reserve may assist with identification of profits available for that purpose. *[FRS 102.A3.28]*. Appendix III further notes that the determination of profits available for distribution is a complex area where accounting and company law interface and that companies may refer to TECH 02/17BL, or any successor document, to determine profits available for distribution. *[FRS 102.A3.29]*.

8.1.1.C Offset

The standard explains that offsetting occurs when an entity recognises both an asset and liability as separate units of account, but presents them as a single net amount in the statement of financial position. As this means classifying dissimilar items together, it is generally not appropriate. [FRS 102.2.95]. FRS 102 prohibits offset of assets and liabilities, or income and expenses, unless required or permitted by an FRS (meaning, at present, FRS 102 itself or FRS 103, where applied). [FRS 102.2.96]. See Chapter 4 at 3.8.2. For the avoidance of doubt, the standard clarifies that measuring assets net of valuation allowance - for example, allowances for inventory obsolescence and uncollectible receivables is not offsetting. [FRS 102.2.97]. The rules on offsetting are similar to the requirement in the General Rules to the formats (see 3.4 above) that amounts in respect of items representing assets or income may not be set off against amounts in respect of items representing liabilities or expenditure (as the case may be), or *vice versa*. [1 Sch 8, 1 Sch 8 (LLP)].

FRS 102 sets out when financial assets and liabilities [FRS 102.11.38A, FRS 102.12.25B] (see Chapter 15 at 3.3), employee benefits [FRS 102.28.3(a), FRS 102.28.14, FRS 102.28.30] (see Chapter 30 at 3.5.1 and Chapter 30 at 3.7.2), current tax, and deferred tax [FRS 102.29.24, FRS 102.29.24A], (see Chapter 31 at 11.1.1) must be offset. Where the offset criteria are met, FRS 102 is saying that there is effectively a single asset or liability.

In respect of the profit and loss account, if an entity's normal operating activities do not include buying and selling fixed assets (including investments and operating assets), gains and losses on disposal of fixed assets (net of related selling expenses) are reported. [FRS 102.2.98]. Expenses for a provision are permitted to be shown net of the amount recognised for reimbursement of the provision. [FRS 102.21.9].

FRS 102 also permits cash flows from operating, investing and financing activities to be presented on a net basis where specified criteria are met. [FRS 102.7.10A, FRS 102.7.10B, FRS 102.7.10C, FRS 102.7.10D].

Appendix III to FRS 102 explains how the requirements on reimbursement of provisions (offsetting permitted in profit and loss account only) and financial assets (offsetting required when, and only when the criteria are met) are consistent with the Regulations. [FRS 102.A3.22, FRS 102.A3.23].

8.2 True and fair view and compliance with FRS 102

The FRC's *Foreword to Accounting Standards* (January 2022) explains that accounting standards are applicable to the financial statements of a reporting entity that are required to give a true and fair view of its financial position at the reporting date and of its profit or loss (or income and expenditure) for the reporting period. The whole essence of accounting standards is to provide for recognition, measurement, presentation and disclosure for specific aspects of financial reporting in a way that reflects economic reality and hence provides a true and fair view. The *Foreword to Accounting Standards* refers to information about 'true and fair' on the FRC's website (e.g., the guidance *True and Fair* issued in June 2014). [Foreword.4-6].

True and Fair notes, *inter alia*, that accounting standards are developed after full due process and "these processes should result in accounting standards that, in the vast majority of cases, are complied with when presenting a true and fair view." Where the accounting standards clearly address an issue, but the requirements are insufficient to fully explain the issue, the solution is normally additional disclosure. However, a company must depart from a particular accounting standard where required in order to meet the requirement for the accounts to give a true and fair view. The guidance notes that these circumstances are more likely to arise when the precise circumstances were not contemplated during the development of the relevant standard.

The FRC expects preparers, those charged with governance and auditors to stand back and ensure that the financial statements as a whole give a true and fair view, provide additional disclosures where compliance with an accounting standard is insufficient to give a true and fair view, to use the true and fair override where compliance with the standards does not result in the presentation of a true and fair view and to ensure that the consideration they give to these matters is evident in their deliberations and documentation.⁵⁷

8.2.1 True and fair view - requirements of FRS 102 and the Regulations

FRS 102 requires that financial statements shall give a true and fair view of the assets, liabilities, financial position, financial performance and, when required to be presented, cash flows of an entity. [FRS 102.3.2, FRS 102 Appendix I].

⁵⁷ True and Fair, FRC, June 2014.

Section 393 of CA 2006 also requires that the directors of a UK company or the members of an LLP must not approve the annual accounts unless they are satisfied that they give: *[s393, s393 (LLP)]*

- In the case of the individual accounts, a true and fair view of the assets, liabilities, financial position and profit or loss of the company or LLP
And
- In the case of the group accounts (if any), a true and fair view of the assets, liabilities, financial position and profit or loss of the undertakings included in the consolidation as a whole, so far as concerns members of the company or LLP

The 'undertakings included in the consolidation' means the parent company or the parent LLP and its consolidated subsidiary undertakings and is referred to as 'the group' below.

Companies Act accounts (or non-IAS accounts, for an LLP) must include:

- A balance sheet that gives a true and fair view of the company's or LLP's state of affairs (and, where applicable, the group's state of affairs, so far as concerns members of the company or LLP) as at the end of the financial year
And
- A profit and loss account that gives a true and fair view of the company's or LLP's profit or loss (and, where applicable, the group's profit or loss, so far as concerns members of the company or LLP) for the financial year

The accounts must comply with regulations made by the Secretary of State as to the form and content of the individual (and where applicable, the consolidated) balance sheet and profit and loss account, and additional information to be provided by way of notes to the accounts. *[s396(1), s396(2), s396(3), s404(1), s404(2), s404(3), s396(1)(LLP), s396(2)(LLP), s396(3)(LLP), s404(1)(LLP), s404(2)(LLP), s404(3)(LLP)]*.

Application of FRS 102, with additional disclosure when necessary, is presumed to result in financial statements that give a true and fair view of the financial position, financial performance and, when required to be presented, cash flows of entities within the scope of the standard. *[FRS 102.3.2(a)]*.

All paragraphs of FRS 102 have equal authority. Some sections include appendices containing implementation guidance or examples, some of which are an integral part of the standard and others provide application guidance (each specifies its status). We would generally expect that entities follow the implementation guidance unless there is a valid reason. The presumption that application of FRS 102 (with any necessary additional disclosure) results in a true and fair view is subject to the override set out in paragraph 4 of section 3 of the standard (and for entities preparing financial statements subject to CA 2006, the true and fair override). *[FRS 102.3.4]*. See 8.2.2 below.

The additional disclosures referred to in paragraph 2(a) of section 3 of the standard are necessary when compliance with the specific requirements in the standard is insufficient to enable users to understand the effect of particular transactions, other events and conditions on the entity's financial position and financial performance. *[FRS 102.3.2]*.

This is consistent with the statutory requirement that if compliance with the regulations, and any other provisions made by or under CA 2006, as to matters to be included in a company's or an LLP's individual accounts (and, where applicable, group accounts) or in notes to those accounts would not be sufficient to give a true and fair view, the necessary additional information must be given in the accounts or in a note to them. *[s396(4), s404(4), s396(4)(LLP), s404(4)(LLP)]*.

8.2.2 The 'true and fair override' - requirements of FRS 102 and the Regulations

In special circumstances when management concludes that compliance with any requirement of FRS 102 or applicable legislation (only when it allows for a true and fair override) is inconsistent with the requirement to give a true and fair view, the entity shall depart from that requirement in the manner set out in paragraph 5 of section 3 of the standard. *[FRS 102.3.4]*.

When an entity departs from a requirement of FRS 102, or from a requirement of applicable legislation, it shall disclose:

- (a) That management has concluded that the financial statements give a true and fair view of the entity's financial position, financial performance and, when required to be presented, cash flows.
- (b) That it has complied with FRS 102 or applicable legislation, except that it has departed from a particular requirement of the standard or applicable legislation to the extent necessary to give a true and fair view.

And

- (c) The nature and effect of the departure including the treatment that FRS 102 or applicable legislation would require, the reason why that treatment would be so misleading in the circumstances that it would conflict with the objective of financial statements set out in Section 2 (see 9 above), and the treatment adopted. *[FRS 102.3.5]*.

When an entity has departed from a requirement of FRS 102 or applicable legislation in a prior period and that departure affects the amounts recognised in the financial statements for the current period, it shall make the disclosures set out in (c) above. *[FRS 102.3.6]*.

These disclosures are consistent with the statutory disclosures that: if in special circumstances, compliance with any of those provisions is inconsistent with the requirement to give a true and fair view, the directors must depart from that provision to the extent necessary to give a true and fair view. Particulars of any such departure, the reasons for it and its effect must be given in a note to the accounts. *[s396(5), s404(5), s396(5)(LLP), s404(5)(LLP)]*.

How we see it

FRS 102 does not explain what is required by the 'effect' of the departure from the requirement to give a true and fair view, but in our view, this means 'financial effect'.

In the absence of guidance in FRS 102, management may consider the requirements of IFRS accounting standards. Where there is a departure from the standards in the current period (or a departure was made in a previous period which impacts the amounts recognised in the financial statements in the current period), IAS 1/IAS 8 requires disclosure, for each period presented, of the financial impact of the departure on each item in the financial statements that would have been reported in complying with the requirement.

[IAS 1.20(d), IAS 1.21, IAS 8 (2027).6F].

In addition, where it appears to the directors of the company (or members of the LLP) that there are special reasons for departing from any of the general principles (see 8.1.1 above) in preparing the company's (or the LLP's) accounts for the financial year, the particulars of the departure, the reasons for it and its effect must be disclosed in a note to the accounts. *[1 Sch 10(2), 1 Sch 10(2)(LLP)]*. Appendix III to FRS 102 highlights certain instances where the requirements of FRS 102 result in a departure from the requirements of the Regulations in order to give a 'true and fair view'. These examples, which are not exhaustive, are relevant to UK companies preparing Companies Act accounts. They are also relevant to LLPs preparing non-IAS accounts- except that the conditions for merger accounting differ for UK companies and LLPs.

Large and medium-sized companies (and LLPs) must state in the notes to the accounts (see 2.6.1 above) whether the accounts have been prepared in accordance with applicable accounting standards, giving particulars of any material departures from those standards and the reasons. *[1 Sch 45, 1 Sch 45 (LLP)]*.

Medium-sized companies (and LLPs) are exempt from making this statement in individual accounts.

[Regulations 4(2A), LLP Regulations 4(2A)]. It is appropriate for this statement to either include or cross refer any disclosures of the true and fair override.

8.3 Going concern

FRS 102 requires management, when preparing financial statements, to make an assessment of an entity's ability to continue as a going concern. An entity is a going concern unless management either intends to liquidate the entity or to cease trading, or has no realistic alternative but to do so. In assessing whether the going concern assumption is appropriate, management takes into account all available information about the future, which is at least, but is not limited to, twelve months from the date when the financial statements are authorised for issue. *[FRS 102.3.8, FRS 102 Appendix I]*.

When an entity does prepare its financial statements on a going concern basis, it must disclose that fact, along with confirmation that management has considered future information relating to at least twelve months (or longer) from the date of authorisation, as described above. If the entity has made significant judgements in its assessment of its ability to continue as a going concern, those judgements must also be disclosed (see section 7.3 above). *[FRS 102.3.8A]*

When management is aware, in making its assessment, of material uncertainties related to events or conditions that may cast significant doubt upon the entity's ability to continue as a going concern, those uncertainties must be disclosed in the financial statements. *[FRS 102.3.9]*.

When financial statements are not prepared on a going concern basis, that fact must be disclosed, together with the basis on which the financial statements are prepared and the reason why the entity is not regarded as a going concern. *[FRS 102.3.9]*.

FRS 102 states that an entity shall not prepare its financial statements on a going concern basis if management determines after the reporting period either that it intends to liquidate the entity or to cease trading or that it has no realistic alternative but to do so. Deterioration in operating results and financial position after the reporting period may indicate a need to consider whether the going concern assumption is no longer appropriate. If the going concern assumption is no longer appropriate, the effect is so pervasive that a fundamental change in the basis of accounting is required, rather than an adjustment to the amounts recognised within the original basis of accounting and therefore the disclosure requirements in paragraph 9 of section 3 of the standard, as described above, apply. [FRS 102.32.7A, FRS 102.32.7B].

FRS 102 provides no further guidance on the impact on the financial statements if it is determined that the going concern basis is not appropriate. Accordingly, entities will need to consider their individual circumstances to arrive at an appropriate basis.

FRS 102's requirements are supplemented by the FRC's February 2025 *Guidance on the Going Concern Basis of Accounting and Related Reporting (including Solvency and Liquidity Risks)* ('2025 FRC Guidance').⁵⁸ This guidance is intended for all companies with the exception of small and micro entities and for entities which apply The UK Corporate Governance Code, either because they are required to or because they apply the Code voluntarily. It is equally applicable to those entities that do not apply the Code. See 8.3.1 below.

8.3.1 2025 FRC Guidance on Going Concern

The 2025 FRC Guidance replaces all previous guidance on going concern. It integrates requirements from company law, accounting and auditing standards, listing rules, the UK Corporate Governance Code and other regulations relating to reporting on the going concern basis of accounting and on solvency and liquidity risk. It incorporates recent developments in the corporate reporting framework and auditing standards, evolving reporting practice, and the FRC's continued focus on encouraging high-quality reporting within the annual report.⁵⁹

The 2025 FRC Guidance is non-mandatory best practice guidance which aims to serve as a proportionate and practical guide for directors of all companies within its scope (including *UK Corporate Governance Code* (the Code) companies) to assist them with the application of the applicable legal and regulatory requirements to:

- Assess and make disclosures related to the going concern basis of accounting and any material uncertainties in their financial statements.
- And
- Disclose principal risks and uncertainties, which may include risks that might impact solvency and liquidity, within their strategic report.

While the 2025 FRC Guidance refers to directors and companies for simplicity, the guidance notes that it is also likely to be relevant to other entities, such as partnerships. It outlines the responsibilities of the auditor in connection with the directors' assessment of the company's ability to continue to adopt the going concern basis of accounting and the related disclosures in the financial statements or annual report.

The FRC's factsheet containing guidance on the going concern basis of accounting for small and micro-companies is discussed in Chapter 5 at 3.3.5.

The term 'going concern' refers to the going concern basis of preparation in the financial statements. However, the 2025 FRC Guidance further:

- Encourages directors to take a broader view, over a longer term, of the principal risks and uncertainties that goes beyond the specific requirements in accounting standards.
 - Acknowledges that companies have risk management and control processes in place that underpin the assessment and that the degree of formality of these processes and the level of analysis applied depends on the size, complexity, and the particular circumstances of the company.
- And
- Acknowledges that the amount of information disclosed should be proportionate to the uncertainties to which the company is exposed and to its financial and liquidity position⁶⁰.

⁵⁸ This version of the guidance has superseded previous *Guidance on the Going Concern Basis of Accounting and Reporting on Solvency and Liquidity Risk - Guidance for directors of companies that do not apply The UK Corporate Governance Code*, issued on April 2016.

⁵⁹ *Guidance on the Going Concern Basis of Accounting and Related Reporting (including Solvency and Liquidity Risks)*, February 2025, FRC, Summary and para 1.6.

⁶⁰ *Guidance on the Going Concern Basis of Accounting and Related Reporting (including Solvency and Liquidity Risks)*, February 2025, FRC, para 1.7.

8.3.1.A Overview of approach

A company faces many risks. In making their assessment of principal risks, directors are encouraged to consider a broad range of business risks, including both financial and non-financial (for example, operational, competitive, market or regulatory factors, which may ultimately impact on solvency or liquidity).

The principal risks and uncertainties, i.e., those matters that could significantly affect the development, performance, position and future prospects of the company, are required to be disclosed in the strategic report. These will generally be the matters that the directors regularly monitor and discuss because of their likelihood, the magnitude of their potential effect, or a combination of the two.

Some of the principal risks may have the potential to threaten the company's ability to continue in operation because of their impact on solvency, i.e., the risk that a company will be unable to meet its liabilities in full, and liquidity, i.e., the risk that a company will be unable to meet its liabilities as they fall due. Insolvency is likely to be preceded by a lack of liquidity. An example of a principal risk that could have an impact on solvency or liquidity may be if a company is dependent on a single customer. If the customer ceased purchasing the company's products or services or became unable to pay its debts to the company, the company may be unable to meet its liabilities as they fall due. In an extreme case, the loss of the customer might have the potential to render the company insolvent.⁶¹

Material uncertainties arising from significant solvency and liquidity risks must be disclosed in accordance with the requirements of the accounting standards and provisions of the Code. In extreme circumstances, such risks may crystallise, thus making liquidation of the company inevitable and the going concern basis of accounting inappropriate.⁶²

The guidance summarises the process for determining which disclosures are necessary as follows:

- Identification of risks and uncertainties, including those relating to solvency and liquidity and other potential threats to the company's ability continue in operation
- Determining which of the identified risks and uncertainties are 'principal' and thereby require disclosure in the strategic report [s414C(2)(b)]
- Considering whether it is appropriate to adopt the going concern basis of accounting and provide disclosures about the basis adopted in the financial statements
- Considering whether there are material uncertainties that require disclosure in the financial statements [FRS 102.3.8, FRS 102.3.8A, FRS 102.3.9]
- In extreme circumstances, considering whether it is appropriate to adopt the going concern basis of accounting [FRS 102.3.9]

And

- Considering whether disclosures additional to those explicitly required by law, regulation or accounting standards are necessary for the financial statements to comply with overarching disclosure requirements (including disclosures about significant judgements made) and to provide a true and fair view⁶³ [s393]

The guidance covers:

- Factors for directors to consider when determining whether the going concern basis of accounting is appropriate (and whether significant judgements about material uncertainties should be identified)
 - Making an assessment of the solvency and liquidity risks that might constitute principal risks for a company requiring disclosure in the strategic report
 - Guidance on the assessment periods for the going concern basis of accounting and those risks
 - Guidance on the assessment process
- And
- Summaries of the related reporting requirements (including auditor reporting)

61 Guidance on the Going Concern Basis of Accounting and Related Reporting (including Solvency and Liquidity Risks), February 2025, FRC, paras. 2.3, 4.1-4.7.

62 Guidance on the Going Concern Basis of Accounting and Related Reporting (including Solvency and Liquidity Risks), February 2025, FRC, para 2.3.

63 Guidance on the Going Concern Basis of Accounting and Related Reporting (including Solvency and Liquidity Risks), February 2025, FRC, para 2.4.

It also addresses the application of the guidance to half-yearly financial reports and preliminary announcements.⁶⁴ It is beyond the scope of this publication to set out the guidance in full but some of its considerations are set out below. Auditor reporting is not covered here.

8.3.1.B The assessment process - principal risks and going concern basis of accounting

Section 5 of the 2025 FRC Guidance provides further factors to consider and techniques that may be applied in:

- Assessing whether the going concern basis of accounting is appropriate
- Whether there are material uncertainties that may cast significant doubt on the going concern basis
- And
- Identifying principal risks and uncertainties to disclose in the strategic report, including risks that might impact solvency and liquidity

The factors discussed include:

- Forecasts and budgets
- The timing of cash flows
- Sensitivity analysis
- Products, services and markets
- Inflation
- Geopolitical and economic events
- Financial and operational risk management
- Borrowing facilities
- Alternative sources of finance (including government support schemes)
- Contingent liabilities
- And
- Acquisitions, disposals and restructuring; and group considerations (covered in section 7 of the 2025 Guidance)

For companies that apply the Code, these factors and techniques may also be relevant for the assessment of prospects (viability statement) under the Code and the UK Listing Rules.

The directors should assess which factors are likely to be relevant to their company, which will depend on the size, complexity and particular circumstances of the company, its industry and the general economic environment. Some factors will be more relevant for the assessment of the principal risks disclosures in the strategic report (or the assessment of prospects for Code companies) and others more relevant for the assessment of the going concern basis of accounting. The level of detail and the time horizon of the assessment may also differ for these purposes as longer-term assessments, such as for the strategic report disclosures, are likely to be performed at a higher, more aggregated level.⁶⁵

The assessment of solvency and liquidity risks should consider the likelihood and possible effects of those risks materialising. The period of assessment for solvency and liquidity risks, in the context of the requirement to disclose principal risks and uncertainties in the strategic report is a matter of judgement for the directors based on the particular facts and circumstances of the company. This will usually be longer than twelve months from the date the financial statement were authorised for issue, and will depend on the nature of the business, its stage of development, debt maturities, investment and planning time horizons.

Similarly, the extent of the assessment process, will be a matter of judgement for the directors based on the size, complexity and particular circumstances of the company. Given the forward-looking nature of the assessment, the level of detail and accuracy of the information available relating to the future will vary.⁶⁶

In making their assessment, the directors should consider all available information about the future at the date they approve the financial statements, such as the information from budgets and forecasts. The guidance recommends that the assessment should be documented in sufficient detail to explain the

⁶⁴ Guidance on the Going Concern Basis of Accounting and Related Reporting (including Solvency and Liquidity Risks), February 2025, FRC, para 2.5.

⁶⁵ Guidance on the Going Concern Basis of Accounting and Related Reporting (including Solvency and Liquidity Risks), February 2025, FRC, paras. 5.1-5.7.

⁶⁶ Guidance on the Going Concern Basis of Accounting and Related Reporting (including Solvency and Liquidity Risks), February 2025, FRC, paras. 4.10-4.12.

directors' conclusion with respect to the going concern basis of accounting at the date of approval of the financial statements.⁶⁷

The going concern assessment may result in four possible outcomes:

- The going concern basis of accounting is appropriate and there are no material uncertainties
- The going concern basis is appropriate and there are no material uncertainties but reaching this conclusion involves significant judgement
- The going concern basis is appropriate but there are material uncertainties. Reaching that conclusion may or may not involve significant judgement

Or

- The going concern basis of accounting is not appropriate

In the first three cases, the going concern basis of accounting is adopted.⁶⁸

The guidance explains that the threshold for departing from the going concern basis of accounting is very high as there are often realistic alternatives to liquidation or cessation of operations, even if they depend on uncertain future events.⁶⁹

However, events or conditions might result in the going concern basis of accounting becoming inappropriate in future accounting periods. The directors, in performing their assessment, should consider all available information about the future, the realistically possible outcomes of events and changes in conditions and the realistically possible responses to such events and conditions that would be available to the directors. Uncertainties relating to such events or conditions are considered material if their disclosure could reasonably be expected to affect the economic decisions of shareholders and other users of the financial statements, which is a matter of judgement. In making this judgement, the directors should consider the uncertainties arising from their assessment, both individually and in combination with others.

The guidance highlights that key focus areas to consider include:

- The magnitude of the potential impacts of the uncertain future events or changes in conditions on the company and the likelihood of their occurrence
 - The realistic availability and likely effectiveness of any mitigating actions that the directors could take to avoid, or reduce the impact or likelihood of, the uncertain future events or changes in conditions
- And
- Whether these uncertain future events or changes in conditions are unusual, rather than occurring with sufficient regularity for the directors to make predictions about them with a high degree of confidence

The guidance states that uncertainties should not usually be considered material if the likelihood that the company will not be able to continue to use the going concern basis of accounting is assessed to be remote, however significant the assessed potential impact.⁷⁰

8.3.1.C Going concern disclosures

Except for the explicit statement about the adoption of the going concern basis of accounting [FRS 102.3.8A], there are no other specific disclosure requirements where the going concern basis of accounting is adopted and no material uncertainties are identified and/or no significant judgement is involved in reaching that conclusion.

The disclosures set out in paragraphs 8A and 9 of section 3 of the standard (see 8.3 above) must be given where:

- The going concern basis of accounting is appropriate but material uncertainties have been identified
 - There are no material uncertainties but reaching that conclusion involved significant judgement
- And
- The going concern basis of accounting is not appropriate

⁶⁷ Guidance on the Going Concern Basis of Accounting and Related Reporting (including Solvency and Liquidity Risks), February 2025, FRC, paras. 3.4 - 3.7.

⁶⁸ Guidance on the Going Concern Basis of Accounting and Related Reporting (including Solvency and Liquidity Risks), February 2025, FRC, para. 3.23.

⁶⁹ Guidance on the Going Concern Basis of Accounting and Related Reporting (including Solvency and Liquidity Risks), February 2025, FRC, para. 3.3.

⁷⁰ Guidance on the Going Concern Basis of Accounting and Related Reporting (including Solvency and Liquidity Risks), February 2025, FRC, paras. 3.10-3.13.

The 2025 FRC Guidance recommends as best practice that: where material uncertainties are identified, the financial statements should disclose clearly the existence and nature of the material uncertainty, including a description of the principal events or conditions that may cast significant doubt on the entity's ability to continue as a going concern and the directors' plans to deal with these events or conditions. Disclosures about material uncertainties must be company specific. Directors may also wish to bear in mind the obligation of the auditor to report if an appropriate level of clarity in the disclosure of material uncertainties has not been achieved.⁷¹

Paragraphs 8A of section 3 and 6 of section 8 of the standard require disclosure of judgements made in applying the company's accounting policies that have the most significant effect on amounts recognised in the financial statements (significant judgements). This applies to situations when significant judgement has been applied in determining whether the going concern basis of accounting is appropriate or a material uncertainty in respect of going concern exists. [FRS 102.3.8A, FRS 102.8.6].

The FRC 2025 Guidance provides examples of situations that could involve significant judgement in determining whether the going concern basis of accounting is appropriate or whether a material uncertainty exists (if they have a significant effect on the overall assessment either individually or when considered together with other factors), as follows:

- When a significant borrowing facility may need to be restructured or renewed
- When a waiver of a covenant by a lender of a significant borrowing facility may be needed
- And
- If other types of significant business restructuring, asset disposals or cost reductions are planned during the assessment period and these have been assumed in the assessment based on the directors' expectations of achieving them⁷²

Disclosures about significant judgements related to going concern assessments must be company specific and must clearly identify the judgement made. The same approach is relevant for the disclosures about assumptions used by the directors as those should provide sufficient information about the directors' basis for their assessment. This allows users to understand how the company might be affected by changes in factors and to assess whether the assumptions are consistent with those applied in other areas of the financial statements (such as impairment reviews) unless another accounting standard permits or requires otherwise in specific circumstances.⁷³

However, in all cases, additional disclosures may be required to give a true and fair view and the appropriateness of disclosures required will depend on facts and circumstances.

The Regulations also require disclosures in the directors' report providing an indication of the company's financial risk management objectives and policies (including the policy for hedging each major type of forecasted transaction for which hedge accounting is used) and the exposure of the company to price risk, credit risk, liquidity risk and cash flow risk, where material. [7 Sch 6].

The guidance recommends as best practice that the principal risks and uncertainties are described in a clear, concise and understandable way and must include a description of how the principal risks and uncertainties are managed or mitigated.

When the directors identify solvency or liquidity risks as principal risks, they must explain the particular economic or operational conditions that give rise to those principal risks and uncertainties, and the potential impact on specific aspects of the business. Issues that may require disclosure depend on individual facts and circumstances may include:

- Uncertainties about current financing arrangements (whether committed or uncommitted)
- Potential changes in financing arrangements such as critical covenants and any need to increase borrowing levels
- Counterparty risks arising from current credit arrangements (including the availability of insurance when relevant) with either customers or suppliers
- A dependency on key suppliers and/or customers
- And

71 Guidance on the Going Concern Basis of Accounting and Related Reporting (including Solvency and Liquidity Risks), February 2025, FRC, paras 3.28-3.29.

72 Guidance on the Going Concern Basis of Accounting and Related Reporting (including Solvency and Liquidity Risks), February 2025, FRC, paras 3.33.

73 Guidance on the Going Concern Basis of Accounting and Related Reporting (including Solvency and Liquidity Risks), February 2025, FRC, paras 3.32-3.35.

- Uncertainties posed by the potential impact of the economic outlook on business activities⁷⁴

The guidance includes a reminder that the principal risks identified must only include those risks that are material to an understanding of the business. Immaterial information obscures key messages and detracts from the understandability of the information provided in the annual report.⁷⁵

Where relevant, the description of the principal risks and uncertainties (together with their potential impact on the business, management and mitigation) should also highlight any linkage with the disclosures relating to the going concern basis of accounting, material uncertainties and risks in the financial statements.⁷⁶

To facilitate the effective communication of going concern information, the guidance notes that it is helpful to group together similar or related disclosure requirements arising from different legal or regulatory requirements. Where law or regulation sets out the location, and the information is presented outside the specified component of the annual report (such as the strategic report, or the financial statements), the information will need to be included as an integral part of the specified component by way of cross referencing identifying the nature and location of the required information. A component is not complete without the information that is cross referenced and the cross-referenced information must be included in the annual report. This differs from 'signposting' which helps users locate complementary information within or outside the annual report. A component must meet its legal and regulatory requirements without reference to signposted information.⁷⁷

8.3.2 Companies that are applying the Code

As noted at 8.3.1 above, companies applying the Code are subject to more onerous requirements under the Code and for listed companies, under the Listing Rules. Those requirements in relation to going concern are now incorporated in 2025 FRC Guidance. While most companies applying the Code are likely to be IFRS reporters, some entities applying FRS 102 (that are not required to prepare group accounts) are listed companies and others may choose voluntarily to apply the Code. Some brief remarks on the Code and the requirements in the Listing Rules are included below, although entities should refer to the 2025 FRC Guidance for more detail.

The Listing Rules (UKLR 6.6.6R(6a-b)) require companies with a listing in the commercial companies and closed-ended investment funds listing categories, to state how it has applied the main principles of the Code and to:

- Make a statement of compliance
- Explain the code provisions, if any, which it has not complied with
- The period, if any, for which it did not comply (where those code provisions are of a continuing nature) And
- The reasons for non-compliance⁷⁸

In addition, the Listing Rules require the directors to make the statements in the annual financial report on:

- The appropriateness of adopting the going concern basis of accounting (containing the information set out in Provision 30 of the Code) And
- Their assessment of the prospects of the company (containing the information set out in Provision 31 of the Code)

prepared in accordance with the Corporate Governance Code (2024) and guidance issued by the FRC in January 2024.⁷⁹

The Code (2024) itself contains a main principle that the Board should determine the nature and extent of the principal risks the company is willing to take in order to achieve its long-term strategic objectives. The Board must establish procedures to manage risks and oversee the internal control framework.

⁷⁴ Guidance on the Going Concern Basis of Accounting and Related Reporting (including Solvency and Liquidity Risks), February 2025, FRC, para. 4.13-4.14.

⁷⁵ Guidance on the Going Concern Basis of Accounting and Related Reporting (including Solvency and Liquidity Risks), February 2025, FRC, paras. 6.6-6.7.

⁷⁶ Guidance on the Going Concern Basis of Accounting and Related Reporting (including Solvency and Liquidity Risks), February 2025, FRC, para. 4.15.

⁷⁷ Guidance on the Going Concern Basis of Accounting and Related Reporting (including Solvency and Liquidity Risks), February 2025, FRC, paras. 6.9-6.16.

⁷⁸ UK Listing Rules, FCA, UKLR 6.6.6R(6).

⁷⁹ Listing Rules, FCA, UKLR 6.6.6R(3).

This main principle is supported by a number of interrelated Code provisions. This then informs the Board's assessment of the longer-term viability of the company as well as the Board's assessment of whether the going concern basis of preparation remains appropriate, identifying any material uncertainties and/or significant judgements. When relevant, the description of the principal risks and uncertainties facing the entity should highlight any linkage with disclosures in the financial statements relating to the going concern basis of accounting, material uncertainties and risks, and any other related disclosures in the annual report (such as impairment reviews or, for Code companies, the viability statement).⁸⁰

The Board is also responsible for monitoring and reviewing (on an ongoing basis) the effectiveness of the risk management and internal control systems. The aim is that the above processes will be integrated with the Board's ongoing business planning and risk management processes and the disclosures required in the annual report and financial statements will be informed by these processes.

The key, related provisions in the 2024 version of the Code are as follows:

- The board must carry out a robust assessment of the company's emerging and principal risks⁸¹ and confirm in the annual report that it has completed this assessment; the latter must include a description of its principal risks, and an explanation of how these are being managed or mitigated, as well as an explanation of what procedures are in place to identify and manage emerging risks (Code provision 28).
- The board must monitor the company's risk management and internal control framework and, at least annually, carry out a review of its effectiveness. The monitoring and review should cover all material controls, including financial, operational, reporting and compliance controls. The board must disclose in the annual report:
 - A description of how the board has monitored and reviewed the effectiveness of the framework
 - A declaration of effectiveness of the material controls as at the balance sheet date
 - And
 - A description of any material controls which have not operated effectively as at the balance sheet date, the action taken, or proposed, to improve them and any action taken to address previously reported issues⁸² (Code provision 29)
- In annual and interim financial statements, the board must state whether it considers it appropriate to adopt the going concern basis of accounting in preparing them, and identify any material uncertainties to the company's ability to continue to do so over a period of at least twelve months from the date of approval of the financial statements (Code provision 30).
- Taking account of the company's current position and principal risks, the board must explain in the annual report how it has assessed the prospects of the company, over what period it has done so and why it considers that period to be appropriate. The board must state whether it has a reasonable expectation that the company will be able to continue in operation and meet its liabilities as they fall due over the period of their assessment, drawing attention to any qualifications or assumptions as necessary (Code provision 31).

Companies required to apply DTR 7.2 must include in the corporate governance statement a description of the main features of the company's internal control and risk management systems in relation to the financial reporting process. In group accounts, this covers the undertakings included in the consolidation, taken as a whole.⁸³

The 2024 FRC Code Guidance summarises the Board's responsibilities for risk management and internal control; the establishment, monitoring and review of risk management and internal control systems; and the Board's related business and financial reporting responsibilities. It is beyond the scope of this publication to cover this guidance in detail.

Further guidance on adoption of the going concern basis of accounting (including disclosures on material uncertainties and/or significant judgement) in the financial statements, as well as reporting on principal risks and uncertainties (in the strategic report) are now covered in 2025 FRC Guidance, discussed above.

80 Guidance on the Going Concern Basis of Accounting and Related Reporting (including Solvency and Liquidity Risks), February 2025, FRC, para. 4.15

81 Principal risks should include, but are not necessarily limited to, those that could result in events or circumstances that might threaten the company's business model, future performance, solvency or liquidity and reputation. In deciding which risks are principal risks companies should consider the potential impact and probability of the related events or circumstances, and the timescale over which they may occur.

82 This Provision will apply for financial years beginning on or after 1 January 2026. Until then, Provision 29 of the 2018 UK Corporate Governance Code applies.

83 Disclosure and Transparency Rules, FCA, DTR 7.2.5 and DTR 7.2.10.

8.4 Materiality and aggregation

Financial statements result from processing large numbers of transactions or other events that are aggregated into classes according to their nature or function. The final stage in the process of aggregation and classification is the presentation of condensed and classified data, which form line items in the financial statements. *[FRS 102.3.16]*.

FRS 102 reporters must comply with the balance sheet and profit and loss account formats set out in the Regulations (or LLP Regulations) (see 3.1 and 3.2 above for which formats apply to which entity). FRS 102 requires an entity to present additional line items, headings and subtotals where relevant to an understanding of the financial position or financial performance. *[FRS 102.4.3, FRS 102.5.5C, FRS 102.5.9]*.

The extent of aggregation versus detailed analysis is clearly a judgemental one, with either extreme eroding the usefulness of the information. FRS 102 resolves this issue with the concept of materiality (see Chapter 4 at 3.3.1.B). 'Material' is defined as follows: "Information is material if omitting, misstating or obscuring it could reasonably be expected to influence decisions that the users of general purpose financial statements make on the basis of those financial statements, which provide information about a specific reporting entity." The latter concept is important, as the standard further explains that materiality is an entity specific aspect of relevance that depends on the nature or magnitude of the information, or both. The assessment of whether an item is material is assessed in the context of the financial statements as a whole. *[FRS 102.2.11, FRS 102.2.12, FRS 102 Appendix I]*.

How we see it

While it is not explicitly stated in the standard, we believe that the guidance in IAS 8 and Practice Statement 2 about the inappropriateness of making, or leaving uncorrected, immaterial departures from IFRS to achieve a particular presentation is relevant to FRS 102 reporters.

The standard explains further what it means by 'obscuring' and focusses on the effect - if the effect of the information for users is similar to omitting or misstating, then the information has been obscured. Examples are given, such as the use of vague or unclear language, inappropriate aggregation of dissimilar information or the disaggregation of similar information and hiding material information using immaterial information. *[FRS 102.2.13]*.

FRS 102 requires each material class of similar items to be presented separately and items of a dissimilar nature or function to be presented separately unless they are immaterial. *[FRS 102.3.15]*. If a line item is not individually material, it is aggregated with other items either in those statements or in the notes. An item that may not warrant separate presentation in those financial statements may warrant separate presentation in the notes. The standard states that an entity should decide, taking into consideration all relevant facts and circumstances, how it aggregates information in the financial statements, which includes the notes. An entity must not reduce the understandability of its financial statements by obscuring material information with immaterial information or by aggregating material items that have different natures or functions. *[FRS 102.3.16, FRS 102.3.16A]*.

The General Rules to the formats (see 3.4 above) allow the directors of a company (or members of an LLP) to combine items denoted with Arabic numbers in the statutory balance sheet and profit and loss account formats if their individual amounts are not material to assessing the state of affairs or profit or loss of the company (or of the LLP) for the financial year in question, or where the combination facilitates that assessment (in which case, the individual amounts of the line items combined must be disclosed in the notes). *[1 Sch 4(2), 1 Sch 4(2)(LLP)]*.

FRS 102 states that an entity need not provide a specific disclosure required by the standard if the information resulting from that disclosure is not material, and this is the case even if FRS 102 contains a list of specific requirements or describes them as minimum requirements. *[FRS 102.3.16B]*. UK companies preparing Companies Act accounts must also comply with the disclosure requirements of the Regulations. The Regulations permit that "amounts which in the particular context of any provision of Schedules 1, 2 or 3 to these Regulations are not material may be disregarded for the purposes of that provision." *[10 Sch 10]*. However, certain disclosures required by the Act must be given regardless of materiality, such as information on subsidiary undertakings. *[FRS 102.3.16B]*. The LLP Regulations have the same requirements in respect of Schedule 1 to the LLP Regulations. *[4 Sch 7 (LLP)]*.

9 Amendments relating to the adapted formats effective for periods on or after 1 January 2027

In February 2026, the FRC published the FRS 102 (2026) amendments, to reflect the replacement of IAS 1 with IFRS 18. The amendments introduce requirements which enable FRS 102 preparers applying the adapted formats to align with the requirements of IFRS 18. They also clarify the definition of current liabilities and align the requirements for the classification of loan arrangements with covenants to those in IAS 1 and IFRS 18.

The amendments to FRS 102 relating to the adapted formats will be effective for accounting periods beginning on or after 1 January 2027, to match the effective date of IFRS 18. Early adoption is permitted, subject to the following:

- All the amendments are applied at the same time.
- Or
- Only the amendments relating to the classification of current and non-current assets and liabilities are applied at the same time (see 9.2 below). [FRS 102(2026).A.87].

9.1 Minimum required line items

9.1.1 Adapted formats – balance sheet

As discussed above in 4.1 above, the minimum required line items in the statement of financial position are updated to require presentation of goodwill as a separate line item from other intangible assets.

[FRS 102(2026).4A.4].

Figure 9-1 Adapted formats - balance sheet (effective for periods on or after 1 January 2027)

(a)	Property, plant and equipment
(b)	Investment property carried at fair value through profit and loss
(c)	Intangible assets other than goodwill
(d)	Goodwill
(e)	Financial assets (excluding amounts shown under (e), (f), (j) and (k))
(f)	Investments in associates
(g)	Investments in jointly controlled entities
(h)	Biological assets carried at cost less accumulated depreciation and impairment
(i)	Biological assets carried at fair value through profit and loss
(j)	Inventories
(k)	Trade and other receivables
(l)	Cash and cash equivalents
(m)	Trade and other payables
(n)	Provisions
(o)	Financial liabilities (excluding amounts shown under (l) and (m))
(p)	Liabilities and assets for current tax
(q)	Deferred tax liabilities and deferred tax assets (classified as non-current)
(r)	Non-controlling interest, presented within equity separately from the equity attributable to the owners of the parent#
	And
(s)	Equity attributable to the owners of the parent~

- ~ The LLP SORP requires a total for net assets attributable to members, and total members' interests (as a memorandum item) to be disclosed in the statement of financial position. These disclosures are retained where adapted formats are used and 'loans and other debts due to members' and 'members' other interests' (items J and K in the statutory formats for LLPs) are shown as line items in the statement of financial position. See Figure 4-4 at 4.2.1 above and the discussion in 4.1.
- # Not required in individual financial statements.

9.1.2 Adapted formats – profit and loss account

The minimum line items are significantly amended for the profit and loss account formats to align with the requirements in IFRS 18. Two new mandatory subtotals are introduced:

- Operating profit or loss
And
- Profit or loss before financing and taxation

An entity is not permitted to present 'profit or loss before financing and taxation' where finance income and/or finance expenses included within operating profit do not relate to providing financing to customers. [FRS 102(2026).5A.5].

An entity which uses the adapted formats must present operating profit. Entities using the statutory formats may choose to disclose or present operating profit. When an entity presents or discloses operating profit it must ensure that the amount disclosed is representative of activities that would be regarded as 'operating'. For example, it is inappropriate to exclude items clearly related to operations (such as inventory write-downs, profit or losses on sale of property, plant and equipment and intangible assets and restructuring and relocation expenses) because they occur irregularly or infrequently or are unusual in amount. Similarly, it is inappropriate to exclude items on the grounds that they do not involve cash flows, such as depreciation and amortisation expenses. Profits or losses on the disposal of a discontinued operation must be excluded from operating profit. [FRS 102(2026).5.9B]. Prior to the FRS 102 (2026) amendments, the standard included 'profits or losses on the sale of investment property' in the list of items that it would be inappropriate to exclude from the 'operating profit' subtotal. Under IFRS 18, in certain circumstances, the profit or loss on the sale of investment property is included in the investing category (and therefore outside operating profit). Therefore 'investment property' has been removed from the list of examples to avoid constraining those entities choosing to adapt the profit and loss account formats. [FRS 102(2026).BC.B5.9].

'Finance costs' was a required line item under IAS 1, but is not under IFRS 18. The FRS 102 (2026) amendments retain finance costs as a minimum required line item, located between the 'profit or loss before financing and taxation' and the 'profit or loss before taxation' subtotals, in order to meet the requirements of the Regulations. Therefore, if an entity classifies any finance income or expenses within operating profit, it may be necessary to present further information in the notes, such as a summary of finance income or expenses. [FRS 102(2026).BC.B5.8].

Although the line items and subtotals have been amended to enable alignment with IFRS 18, the full category-based income statement classification requirements are not incorporated into FRS 102. The standard does not include most of the detailed requirements of IFRS 18 which explain how income and expenses are allocated between the operating, investing and financing categories. Therefore, diversity in the presentation and classification of income and expenses between those categories may arise. Nevertheless, preparers may consider the requirements of IFRS Accounting Standards, applying the FRS 102 GAAP hierarchy, where FRS 102 is silent on a particular transaction, event or condition. Therefore, an entity may consider the requirements in IFRS 18 in determining how items of income and expenses are presented and classified, when applying the adapted formats to the profit or loss account.

Figure 9-2 Profit and loss account - UK company (other than a banking company or insurance company) and LLP - adapted formats (effective for periods on or after 1 January 2027)

(a)	Revenue
(b)	Operating expenses, analysed using one or both of the following characteristics: (i) The nature of the expenses, or (ii) The function of the expenses within the entity
(c)	Operating profit or loss
(d)	Share of the profit or loss of investments in associates and jointly controlled entities accounted for using the equity method
(e)	Profit or loss before financing and taxation
(f)	Finance costs
(g)	Profit or loss before taxation
(h)	Tax expense (excluding tax allocated to items (k) and (l) below or to equity)
(i)	An amount comprising the total of:* (i) the post-tax profit or loss of a discontinued operation, and - the post-tax gain or loss attributable to the impairment or on the disposal of the assets or (ii) disposal group(s) constituting discontinued operations
(j)	Profit or loss~
(k)	Each item of other comprehensive income classified by nature (excluding amounts in (l)), with each component presented either: (i) net of related tax effects, or - before the related tax effects with one amount shown for the aggregate amount of (ii) income tax relating to these components
(l)	Share of other comprehensive income of associates and jointly controlled entities accounted for using the equity method
(m)	Total comprehensive income

* As set out in paragraph 5.7E (including a column for discontinued operations - see 5.8 above)

- The LLP SORP (2025) requires that LLPs using adapted formats show a line item for 'members' remuneration charged as an expense' as an additional expense.

In determining the disclosures relating to an entity's material accounting policy information, an entity may consider including its election to adapt the balance sheet and profit or loss account formats. An entity may also consider disclosing accounting policy information relating to the classification of items presented in the income statement. [FRS 102(2026).4A.7, FRS 102(2026).5A.8].

9.2 Definition of current and non-current assets and liabilities

The FRS 102 (2026) amendments update the definitions of current and non-current assets and liabilities to mirror the wording in IAS 1 and IFRS 18. Under the revised definition of 'current liability', a liability is classified as current when the entity does not have the right, as at the reporting date, to defer settlement for at least twelve months after that date. Previously, the definition referred to an 'unconditional' right to defer settlement. The 2026 amendments introduce guidance for each part of the definition, including extensive guidance on the classification of loan arrangements with covenants. This is consistent with the requirements introduced in the suite of amendments made to IAS 1 from 2020 to 2022 (effective for IFRS Accounting Standards reporters for periods on or after 1 January 2024). The main objective of the 2020/2022 amendments was to provide clearer guidance on how covenants relating to a loan arrangement affect an entity's right to defer settlement of those liabilities and consequently whether those liabilities are classified as current or non-current.

While the definition of a current liability in FRS 102 differs from that in IAS 1/IFRS 18 for the period between the amendments to IAS 1 (effective 1 January 2024) to the publication of the FRS 102 (2026) amendments (effective 1 January 2027), the FRC never intended the definitions to diverge. We note that past practice indicates that some preparers had aligned their considerations with those in IAS 1 as amended, ignoring the conditionality inherent in a covenant.

Early adoption of the FRS 102 (2026) amendments is permitted, provided that the amendments relating to the classification of both current and non-current assets and liabilities are adopted simultaneously. We consider that, even if applying the unamended standard, it is appropriate to refer to the guidance added into IAS 1/IFRS 18, applying the hierarchy. Where an entity refers to this IAS 1/IFRS 18 guidance in determining whether liabilities are current or non-current for periods on or before 1 January 2027, this has the practical effect of early adopting the FRS 102 (2026) amendments to the current and non-current assets and liabilities classification requirements (see 9.2 below) and therefore disclosure of that fact is required.

Prior to the amendments to FRS 102, current assets were defined as assets of the entity which are not non-current (i.e., the residual). This differed to IAS 1/IFRS 18 which defines current assets and non-current assets are the residual. [*IAS 1.66, IFRS 18.99*]. The amendments now align the definition of current assets (in relation to adapting the balance sheet formats) with IFRS Accounting Standards.

Current assets (for the purposes of adapting the profit or loss accounts formats) are defined in the amended FRS 102 glossary as:

Assets of an entity which:

- (a) it expects to realise, or intends to sell or consume, in its normal operating cycle (see 4.1.1.A above)
- (b) it holds primarily for the purpose of trading (see 4.1.1.B above)
- (c) it expects to realise within 12 months after the reporting period; or
- (d) are cash or cash equivalents, unless the asset is restricted from being exchanged or used to settle a liability for at least 12 months after the reporting period.

No changes were made to the definition of non-current liabilities. See 4.1.1 and 4.1.2 above for further discussion of the amendments.

10 Summary of differences between FRS 102 and IFRS

For simplicity, the comparison below is for a UK company preparing its financial statements in accordance with Schedule 1 to the Regulations or an LLP. Other UK companies and certain other entities are subject to similar statutory requirements (but there may be some differences, particularly in relation to the formats applied).

All relevant schedules in the Regulations (or LLP Regulations) apply to the statutory accounts of a UK company (or an LLP) prepared in accordance with FRS 102 - which are Companies Act accounts (or non-IAS accounts, for an LLP). Only certain schedules in the Regulations (or LLP Regulations) apply to statutory accounts prepared by UK companies (or LLPs) in accordance with UK-adopted IFRS, which are IAS accounts. Therefore, many of the requirements in the Regulations referred to in the FRS 102 columns do not apply to IAS accounts (although they do apply to FRS 101 financial statements).

FRS 102 requires all entities to follow the applicable formats for the profit and loss account and balance sheet set out in the Regulations (or LLP Regulations), except to the extent that these conflict with the entity's statutory framework. While UK companies applying Schedule 1 to the Regulations and LLPs are able to follow adapted or statutory formats, banking and insurance companies (and groups) must follow the applicable statutory formats in Schedules 2 and 3 to the Regulations (which differ). The other disclosure requirements of the Regulations (or LLP Regulations) only apply to entities subject to these statutory requirements.

	FRS 102	IFRS
Complete set of financial statements	A complete set of financial statements includes a: ▪ Statement of financial position ▪ Statement of comprehensive income (either as a single statement or as a separate income statement and statement of comprehensive income) ▪ Statement of cash flows (unless exempt) ▪ Statement of changes in equity And ▪ Related notes In certain circumstances, a statement of income and retained earnings can be presented as an alternative to a statement of changes in equity and a statement of comprehensive income. Comparatives must be presented. FRS 102 includes guidance on comparatives for narrative as well as numerical information.	IFRS has the same components for a complete set of financial statements as FRS 102. There is more extensive guidance on comparatives. However, there are no exemptions from presenting a cash flow statement, and a statement of income and retained earnings is not available as an alternative primary statement.
Application of company law formats for profit and loss account and balance sheet	The income statement (or profit and loss section of statement of comprehensive income) and statement of financial position of all entities must comply with the applicable profit and loss account and balance sheet formats set out in the Regulations or the LLP Regulations, except to the extent that these requirements are not permitted by any statutory framework under which such entities report. FRS 102 permits use of adapted formats (which are similar to IAS 1 formats, note that these do not reflect	The statement of financial position and statement of comprehensive income follow the requirements of IAS 1/IFRS 18 which sets out minimum line items to be presented in these primary statements. The formats in the Regulations and the LLP Regulations do not apply. The statutory requirements on only including realised profits (with certain exceptions) in profit or loss do not apply. IAS 1 also requires additional line items, headings and subtotals to be

	FRS 102	IFRS
	the requirements of IFRS 18) as an alternative to statutory formats where Schedule 1 to the Regulations or the LLP Regulations are applied. Additional line items, headings and subtotals must be presented when relevant to an understanding of the financial position or financial performance. The General Rules to the formats (and FRS 102) explain the flexibility available to amend line items. Per the statutory requirements, only realised profits (with certain exceptions) may be included in profit or loss. The LLP SORP also has additional requirements relevant to the presentation of FRS 102 financial statements of LLPs.	presented when relevant to an understanding of the financial position or financial performance. IFRS 18 has a similar requirement, requiring additional line items, headings and subtotals to be presented when necessary to provide a useful structured summary. IAS 1/IFRS 18 includes more guidance on the use of additional line items, including reconciliation of additional subtotals presented with the subtotals and totals required by IFRS.
Definition of discontinued operations	Discontinued operations are defined as a component of an entity that has been disposed of by the reporting date and: ▪ Represented a separate major line of business or geographical area of operations - Or ▪ Was part of a single coordinated plan to dispose of a separate major line of business or geographical area of operations Or ▪ Was a subsidiary acquired exclusively with a view to resale. This is different to IFRS when a discontinued operation does not have to be disposed of at the reporting date. There is no further guidance on the definition of discontinued operations and there is no concept of held for sale in FRS 102.	IFRS 5 has the same criteria as FRS 102 for a discontinued operation but the definition of discontinued operation also includes operations which are classified as held for sale (i.e., not disposed of at the reporting date). FRS 102 does not have a concept of 'held for sale' (see below). IFRS 5 includes extensive guidance on the definition. It is explicit that discontinued operations include sales of operations leading to loss of control, operations held for distribution (or distributed) and abandoned operations (in the period of abandonment).
Presentation of discontinued operations	FRS 102 requires a columnar line-by-line analysis of continuing, discontinued and total operations to be presented in the statement of comprehensive income (or separate income statement) down to an amount that comprises the total of post-tax profit or loss of discontinued operations and the post-tax gain or loss attributed to the impairment or on the disposal of the assets or disposal group(s) constituting discontinued operations.	IFRS requires a one line presentation of discontinued operations comprising the total of post-tax profit or loss of discontinued operations and the post-tax gain or loss recognised on the measurement to fair value less costs to sell or on the disposal of the assets or disposal group(s) constituting the discontinued operation. No columnar analysis of each line item is permitted. Additional analysis of this subtotal and other disclosures regarding discontinued operations are required in the notes.

	FRS 102	IFRS
Operating profit subtotal	An operating profit subtotal is not required but FRS 102 includes guidance, if operating profit is presented.	Like FRS 102, IAS 1 does not require an operating profit subtotal to be presented. Its basis of conclusions includes similar guidance to FRS 102 on operating profit, where this is presented. Operating profit will be a required subtotal when IFRS 18 replaces IAS 1 from 1 January 2027.
Exceptional items	FRS 102 does not use the term 'exceptional items' (although the term is used in the Regulations and LLP Regulations). FRS 102 requires separate disclosure (in the notes or in the statement of comprehensive income/income statement) of the nature and amount of material items included in total comprehensive income.	IAS 1 has the same requirements regarding the separate disclosure of the nature and amount of material items as FRS 102, although the requirements of the Regulations or LLP Regulations do not apply. IFRS 18 does not use the term 'exceptional' and has more detailed guidance on aggregation and disaggregation of items based on shared characteristics. It requires additional line items to be presented where this is necessary to provide a useful structured summary of an entity's income and expenses.
Extraordinary items	Extraordinary items are not permitted where Schedule 1 to the Regulations or the LLP Regulations are applied.	IAS 1/IFRS 18 does not have a concept of an extraordinary item.
Current and fixed assets (balance sheet statutory formats)	<i>Statutory formats</i> The statutory formats in Schedule 1 to the Regulations and the LLP Regulations distinguish between current and fixed assets. Fixed assets are defined as assets of a company which are intended for use on a continuing basis in the company's activities, and current assets are assets not intended for such use. Receivables are presented as current assets regardless of when contractually due, unless a loan is determined to be a fixed asset investment in nature. Current assets include debtors, even if these include items expected to be realised after more than one year. The definition of current and fixed assets differs to that for current and non-current assets in IAS 1. FRS 102 requires disclosure of the amounts of debtors due after more than one year in the statement of financial position where the amounts are so material in the context of net current assets, that the financial statements may otherwise be	IAS 1/IFRS 18 distinguishes between current assets (defined) and non-current assets (the residual), which are separate classifications on the statement of financial position. If there is an expectation that the receivable (that is contractually repayable on demand), will not be repaid within twelve months, then under IAS 1/IFRS 18 it must be classified as non-current, unless it satisfies one of the other criteria in IAS 1 paragraph 66, i.e., it is expected to be realised in the entity's normal operating cycle or held primarily for the purpose of trading. A presentation based on liquidity can be used where it provides reliable and more relevant information. Line items containing amounts expected to be settled no more than 12 months after the reporting period and more than 12 months after the reporting period must be separately analysed in the notes.

FRS 102	IFRS
	misinterpreted. The analysis of amounts due within and after more than one year must be presented for each line item in debtors in the notes (if not in the statement of financial position).
Creditors: amounts falling due within and after more than one year (balance sheet statutory formats)	<i>Statutory formats</i> The statutory formats in Schedule 1 to the Regulations and the LLP Regulations distinguish between Creditors: amounts falling due within one year and Creditors: amounts falling due after more than one year. These differ from the definitions of current and non-current liabilities in IAS 1/IFRS 18. For example, under IAS 1/IFRS 18, an item which is not due for settlement within 12 months is reported as a current liability if the entity expects to settle it in its operating cycle.
Adapted balance sheet formats in Schedule 1 to the Regulations	<i>Adapted formats</i> Where adapted formats in Schedule 1 to the Regulations or the LLP Regulations are applied, the statement of financial position must show the headings specified in Section 4 (similar to IAS 1/IFRS 18), with separate classifications for current assets, non-current assets, current liabilities and non-current liabilities. FRS 102 specifies a supplementary analysis of certain headings to be given in the statement of financial position or in the notes.
Provisions	<i>Statutory formats</i> There is a single heading 'provisions for liabilities' in the balance sheet formats in Schedule 1 to the Regulations and the LLP Regulations.

	FRS 102	IFRS
	<i>Adapted formats</i> Where adapted formats in Schedule 1 to the Regulations or the LLP Regulations are applied, the presentation of provisions is consistent with IAS 1/IFRS 18.	
Deferred tax	<i>Statutory formats</i> Deferred tax is shown as a debtor or within provisions for liabilities under the balance sheet formats in Schedule 1 to the Regulations and the LLP Regulations. <i>Adapted formats</i> Where adapted formats in Schedule 1 to the Regulations or the LLP Regulations are applied, the presentation of deferred tax is consistent with IAS 1/IFRS 18.	IAS 1/IFRS 18 requires deferred tax to be shown as a separate line item in the statement of financial position, classified as a non-current asset or non-current liability.
Retirement benefits	<i>Statutory formats</i> The presentation of assets and liabilities under defined benefit schemes is not addressed by FRS 102. An asset would generally be presented as a debtor and a liability as a provision, under Schedule 1 to the Regulations or LLP Regulations. An alternative is to apply the presentation previously used in FRS 17 (applicable standard pre-FRS 102), where the defined benefit asset or liability is presented separately (but not net of deferred tax) on the statement of financial position after other net assets. <i>Adapted formats</i> Where adapted formats in Schedule 1 to the Regulations or the LLP Regulations are applied, there is no specified line item for defined benefit scheme assets or liabilities. Presentation is likely to be similar to IFRS practice (although FRS 102 is silent on the analysis between current and non-current).	IFRS does not require assets and liabilities under defined benefit schemes to be analysed between current and non-current. Many IFRS reporters show such assets and liabilities as non-current in practice.
Assets and disposal groups held for sale	<i>Statutory and adapted formats</i> FRS 102 does not have a concept of held for sale. FRS 102 requires disclosures where, at the reporting date, an entity has a binding sale agreement for a major disposal of assets or a disposal group.	IAS 1/IFRS 18 requires separate presentation in the statement of financial position of: ▪ The total of assets classified as held for sale and assets included in disposal groups classified as held for sale in accordance with IFRS 5 And

FRS 102	IFRS
	Liabilities included in disposal groups classified as held for sale in accordance with IFRS 5. Additional information is required in the notes.
Presentation of non-controlling interest in consolidated financial statements	<i>Statutory and adapted formats</i> FRS 102 requires presentation of non-controlling interest as a separate component of equity in the consolidated statement of financial position. The profit or loss and total comprehensive income for the period attributable to non-controlling interest must be shown in the statement of comprehensive income. Schedule 6 to the Regulations and Schedule 3 to the LLP Regulations require presentation of non-controlling interest, meaning the amount of capital and reserves (and profit or loss) attributable to shares in subsidiary undertakings held by or on behalf of persons other than the parent and its subsidiary undertakings. This amount will usually be the same as non-controlling interest under FRS 102.
Statement of changes in equity (SOCIE) and Statement of Income and Retained Earnings	Where the only movements in equity arise from profit or loss, dividends, corrections of errors or changes in accounting policy, a statement of income and retained earnings can be presented instead of the SOCIE and a statement of comprehensive income. The SOCIE can be combined with the analysis of movements in reserves required by Schedule 1 to the Regulations or the LLP Regulations.
Items to be reported in other comprehensive income	Items reported in other comprehensive income include <i>inter alia</i>: - revaluations of property, plant and equipment - revaluations of investments in subsidiaries, associates and jointly controlled entities (at fair value through other comprehensive income) - remeasurement gains and losses on defined benefit schemes - exchange gains and losses on retranslation of foreign operations and - cash flow hedges and net investment hedges
	IAS 1/IFRS 18 has the same presentational requirement for non-controlling interest as FRS 102. The requirements of Schedule 6 to the Regulations and Schedule 3 to the LLP Regulations do not apply. IAS 1/IFRS 18 has the same requirements as FRS 102 except that there is no alternative to present a statement of income and retained earnings. While the analysis of the reserves required by Schedule 1 to the Regulations or the LLP Regulations is not required under IFRSs, similar information is presented in the SOCIE. Items reported in other comprehensive income relating to financial instruments may differ to FRS 102 (where Sections 11 and 12 are applied) principally because of different accounting requirements for financial instruments under IFRSs - for example, there will be no cost of hedging reserve if the entity is applying Section 12 or IAS 39. Unlike FRS 102, the items must be grouped on the statement of comprehensive income between: Items that may not be reclassified to profit and loss in a subsequent period And

	FRS 102	IFRS
	Further categories of other comprehensive income arise where IAS 39 or IFRS 9 is applied. Exchange gains and losses on retranslation of foreign operations are not subsequently reclassified to profit or loss on 'disposal'/loss of control. Schedule 1 to the Regulations and the LLP Regulations require that only realised profits are included in profit or loss (except for fair value movements in profit or loss, where the fair value accounting rules are applied).	Items that may be reclassified subsequently to profit and loss (which, unlike FRS 102, include exchange gains and losses on retranslation of foreign operations).
Prior year adjustments	Prior year adjustments are required for retrospective correction for material errors, changes in accounting policies and reclassifications of items. The adjustment is shown as an item in the statement of changes in equity (or where presented, statement of income and retained earnings).	IAS 1/IFRS 18's requirements are the same as FRS 102 (except there is no statement of income and retained earnings). IAS 1/IFRS 18 additionally requires presentation of a third statement of financial position at the beginning of the comparative period, where there is a restatement of comparatives.
Presentation of associates and jointly controlled entities	<i>Statutory formats</i> Schedules 1 and 6 to the Regulations and the LLP Regulations only require fixed asset investments to be presented as a main heading in the statement of financial position. In group accounts, income from associated undertakings - which would generally include both associates and jointly controlled entities accounted by the equity method - is a line item in the profit and loss account formats. <i>Adapted formats</i> Where adapted formats in Schedule 1 to the Regulations or the LLP Regulations are applied: - Investments in associates and investments in jointly controlled entities are separate line items in the statement of financial position (the line items do not distinguish whether the investments are accounted for by the equity method) - And - A single line for the share of profits or losses of investments in jointly controlled entities and associates accounted for by the equity method is shown in the statement of comprehensive income	IAS 1's presentational requirements for investments in associates and joint ventures in the primary statements are similar to those for investments in associates and jointly controlled entities where adapted formats are applied in FRS 102. However, the statement of financial position only has a single line item for investments accounted for using the equity method. IFRS 18 introduces mandated categories in the statement of performance. Associates and joint ventures accounted for applying the equity method will be presented in the investing category. IFRS generally has more extensive disclosures for associates and joint arrangements (including joint ventures), including financial information on individually material investments in joint ventures and associates (unless an exemption applies).

FRS 102	IFRS
<i>FRS 102 supplementary requirements (applicable to both statutory and adapted formats)</i> ▪ The share of other comprehensive income of associates and jointly controlled entities accounted for by the equity method (combined) is a line item in the statement of comprehensive income ▪ The carrying amounts of investments in associates and the carrying amounts of investments in jointly controlled entities are disclosed (this can be in the notes) ▪ The share of profits or losses of investments (and the share of any discontinued operations) of jointly controlled entities accounted for by the equity method; and of associates accounted for by the equity method are disclosed (this can be in the notes) There are other disclosures, but generally less extensive than IFRS.	
Reduced disclosure framework (and other disclosure exemptions)	<i>Reduced disclosure framework</i> The reduced disclosure framework is available in individual financial statements of qualifying entities only, where the conditions for its use are met. The reduced disclosure framework allows for exemption from preparing a cash flow statement and certain disclosures in the following areas: ▪ Financial instruments (for non-financial institutions) ▪ Share-based payment ▪ Lease disclosures Revenue from contracts with customers And ▪ Disclosure of key management personnel compensation Entities taking advantage of the exemption from preparing a cash flow statement have an exemption from disclosing information applicable to supplier finance disclosures, provided that equivalent disclosures are included in the consolidated financial statements in which the qualifying entity is included. The share-based payment and financial instruments disclosure exemptions require 'equivalent disclosures' to be
	IFRS 19 <i>Subsidiaries without Public Accountability: Disclosures</i>, effective from 1 January 2027, provides a reduced disclosure framework for eligible entities. Entities applying FRS 101 are not permitted to apply IFRS 19.

FRS 102	IFRS	
included in the publicly available consolidated financial statements in which the qualifying entity is consolidated. <i>Related party transactions - all entities</i> FRS 102 does not require disclosure of intra-group related party transactions (providing that any subsidiary that is party to the transaction is wholly owned by a member of the group). <i>Cash flow exemptions</i> FRS 102 does not require the following entities to prepare a cash flow statement: ▪ Mutual life assurance companies ▪ Retirement benefit plans ▪ Investment funds that meet certain conditions (i.e., that substantially all of the entity's investments are highly liquid and are carried at fair value and a statement of changes in net assets is provided) ▪ A small entity (applying Section 1A or the full version of FRS 102) SORPs may restrict use of this exemption, e.g., the Charities SORP (FRS 102), Update Bulletin 1 only allows small charities below a lower size threshold to omit a cash flow statement.		
Notes: judgements and estimation uncertainty	FRS 102 requires disclosure of: ▪ Judgements, apart from those involving estimations, in applying accounting policies and ▪ Key assumptions and sources of estimation uncertainty at the reporting date that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year	Same requirement as FRS 102 but IAS 1/IAS 8 2027 provides more guidance on disclosure of judgements and key assumptions and sources of estimation uncertainty.
Notes: sources of disclosure requirements	FRS 102 and the CA 2006, the Regulations or LLP Regulations (and other applicable regulations) include disclosure requirements for the notes. The LLP SORP also has additional disclosure requirements relevant to FRS 102 financial statements of LLPs.	IFRS's disclosures are more extensive than those required by FRS 102. The disclosures required by Schedules 1 to 3, and 6 to the Regulations or Schedules 1 and 3 to the LLP Regulations do not apply to IAS accounts.

FRS 102		IFRS
		However, IAS accounts must comply with disclosures in the Companies Act 2006, and other applicable schedules of the Regulations or LLP Regulations (and other applicable regulations).
Statement of compliance	A statement of compliance that the financial statements are prepared in accordance with FRS 102 (and where applicable, FRS 103) is required. Where an entity is a public benefit entity, a statement to this effect must also be included. The Regulations (and the LLP Regulations) require large and medium-sized companies (and LLPs) to state that the accounts have been prepared in accordance with applicable accounting standards, giving particulars of any departures. Medium-sized companies (and LLPs) do not need to give this statement in their individual accounts.	A statement of compliance that the financial statements are prepared in accordance with IFRSs (or UK-adopted international accounting standards or EU-adopted IFRS where applicable) is required. The requirements in the Regulations (and the LLP Regulations) to state that the accounts have been prepared in accordance with applicable accounting standards do not apply.

Appendix A - Defined terms

Extract from FRS 102 Appendix 1 Glossary

Glossary

Term	Definition
current assets*	Assets of the entity which: (a) for an entity choosing to apply paragraph 1A(1) of Schedule 1 to the Regulations are not non-current assets*; or (b) for all other entities, are not fixed assets.
current liabilities for the purposes of an entity applying paragraph 1A(1) of Schedule 1 to the Regulations*	Liabilities of the entity which: (a) it expects to settle in its normal operating cycle; (b) it holds primarily for the purpose of trading; (c) are due to be settled within 12 months after the reporting period; or (d) it does not have an unconditional right to defer settlement for at least 12 months after the reporting period.
equity	The residual interest in the assets of the entity after deducting all its liabilities.
expenses	Decreases in economic benefits during the reporting period in the form of outflows or depletions of assets or incurrences of liabilities that result in decreases in equity, other than those relating to distributions to equity investors.
fair value	The price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. In the absence of any specific guidance provided in the relevant section of this FRS, the guidance in Section 2A <i>Fair Value Measurement</i> shall be used in determining fair value.
performance	The relationship of the income and expenses of an entity, as reported in the statement of comprehensive income.
financial position	The relationship of the assets, liabilities, and equity of an entity as reported in the statement of financial position.
financial statements	Structured representation of the financial position, financial performance and cash flows of an entity. [General purpose financial statements (generally referred to simply as financial statements) are financial statements directed to the general financial information needs of a wide range of users who are not in a position to demand reports tailored to meet their particular information needs.]
fixed assets	Assets of an entity which are intended for use on a continuing basis in the entity's activities.
income	Increases in assets or decreases in liabilities that result in increases in equity, other than those relating to contributions from equity investors.
income statement	Financial statement that presents all items of income and expense recognised in a reporting period, excluding the items of other comprehensive income (referred to as the profit and loss account in the Act).
LLP Regulations	The Large and Medium-sized Limited Liability Partnerships (Accounts) Regulations 2008 (SI 2008/1913).

material	Information is material if omitting, misstating or obscuring it could reasonably be expected to influence decisions that the users of general purpose financial statements make on the basis of those financial statements, which provide financial information about a specific reporting entity.
non-current assets*	Assets of the entity which: (a) it does not expect to realise, or intend to sell or consume, in its normal operating cycle; (b) it does not hold primarily for the purpose of trading; it does not expect to realise within 12 months after the reporting period; or (c) are cash or cash equivalents restricted from being exchanged or used to settle a liability for at least 12 months after the reporting period.
non-current liabilities*	Liabilities of the entity which are not current liabilities.
other comprehensive income	Items of income and expense (including reclassification adjustments) that are not recognised in profit or loss as required or permitted by this FRS or by law.
profit or loss (or income and expenditure)	The total of income less expenses, excluding the components of other comprehensive income. NB In the not-for-profit sector, this may be known as income and expenditure (and the profit and loss account, as an income and expenditure account). [s474(2)].
reporting period	The period covered by financial statements or by an interim financial report.
Regulations	The Large and Medium-sized Companies and Groups (Accounts and Reports) Regulations 2008 (SI 2008/410).
Small Companies Regulations	The Small Companies and Groups (Accounts and Directors' Report) Regulations 2008 (SI 2008/409).
small entity	A small entity is: (a) a company meeting the definition of a small company as set out in section 382 or 383 of CA 2006 and not excluded from the small companies regime by section 384; (b) an LLP qualifying as small and not excluded from the small LLPs regime, as set out in LLP Regulations; or (c) any other entity that would have met the criteria in (a) had it been a company incorporated under company law.
Small LLP Regulations	The Small Limited Liability Partnerships (Accounts) Regulations 2008 (SI 2008/1912).
Statement of Recommended Practice (SORP)	An extant Statement of Recommended Practice developed in accordance with Policy on Developing Statements of Recommended Practice (SORPs). SORPs recommend accounting practices for specialised industries or sectors. They supplement accounting standards and other legal and regulatory requirements in the light of the special factors prevailing or transactions undertaken in a particular industry or sector.
statement of comprehensive income	A financial statement that presents all items of income and expense recognised in a period, including those items recognised in determining profit or loss (which is a subtotal in the statement of comprehensive income) and items of other comprehensive income. If an entity chooses to present both an income statement and a statement of comprehensive income, the statement of comprehensive income begins with profit or loss and then displays the items of other comprehensive income.

total comprehensive income	The change in equity during a period resulting from transactions and other events, other than those changes resulting from transactions from equity participants (equal to the sum of profit or loss and other comprehensive income).
turnover	The amounts derived from the provision of goods and services, after deduction of: (a) trade discounts; (b) value added tax; and (c) any other taxes based on the amounts so derived.

* The definitions of non-current assets and non-current liabilities are relevant where an entity applies paragraph 1A(1) of Schedule 1 to the Regulations or paragraph 1A(1) of Schedule 1 to the LLP Regulations (i.e., uses adapted formats).

Chapter 7 Statement of cash flows

Contents

Overview	358
1 Introduction	359
2 Comparison between Section 7 and IFRS	360
2.1 Entities exempt from preparing a statement of cash flows	360
2.2 Presentation using the indirect method	360
2.3 Cash flows of discontinued operations	360
2.4 Cash flows of supplier finance arrangements	360
2.5 Contingent consideration paid on business combinations	361
2.6 Net debt disclosure	361
3 The requirements of Section 7 for a statement of cash flows	362
3.1 Scope	362
3.2 Cash and cash equivalents	362
3.2.1 Cash	362
3.2.1.A Restrictions on the use of cash	363
3.2.1.B Cryptocurrencies vs. Central Bank Digital Currencies (CBDC)	363
3.2.1.C Client money	364
3.2.2 Cash equivalents	365
3.2.2.A Short-term investments	365
3.2.2.B Money market funds	366
3.2.2.C Investments with maturities greater than three months	367
3.2.2.D Bank overdrafts	367
3.2.2.E Credit card receivables at the point of sale	367
3.2.3 Reassessment of cash and cash equivalents after initial recognition	368
3.3 Classification in the statement of cash flows	368
3.3.1 Reporting cash flows from operating activities	369
3.3.1.A Indirect method	369
3.3.1.B Direct method	373
3.3.2 Reporting cash flows from investing activities	373
3.3.3 Reporting cash flows from financing activities	374
3.4 Allocating items to operating, investing and financing activities	374
3.4.1 Interest and dividends	374
3.4.2 Taxes on income	375
3.4.3 VAT and other non-income tax cash flows	375
3.4.4 Cash contributions to a long-term employee benefit fund	375

3.4.5	Cash flows from factoring of trade receivables	375
3.4.6	Cash flows from supply-chain financing arrangements	376
3.4.7	Cash received as compensation for an insured loss	377
3.4.8	Cash flows for service concession arrangements	378
3.4.8.A	Accounting by grantors	378
3.4.8.B	Accounting by operators	378
3.4.9	Treasury shares	378
3.4.10	Cash flows related to the costs of a share issue	378
3.4.11	Cash flows paid or received under derivative contracts	379
3.4.12	Debt instruments issued at a discount or premium	379
3.4.13	Early settlement of a debt instrument	379
3.4.14	Receipt of a government grant	380
3.5	Other cash flow presentation matters	380
3.5.1	Reporting cash flows on a net basis	380
3.5.2	Material cash flows	380
3.5.3	Non-cash transactions and presentation of cash paid or received on an entity's behalf	381
3.6	Foreign currency cash flows	382
3.6.1	Foreign currency denominated transactions	382
3.6.2	Operating cash flows presented using the indirect method	382
3.6.2.A	Realised and unrealised gains and losses relating to operating activities	382
3.6.2.B	Realised and unrealised gains and losses relating to non-operating activities	383
3.6.3	Cash and cash equivalent balances denominated in foreign currencies	383
3.6.4	Consolidated financial statements including foreign subsidiaries	383
3.6.4.A	The indirect method and foreign subsidiaries	383
3.6.4.B	Exchange differences on retranslation of foreign subsidiaries reported in other comprehensive income.	384
3.7	Transactions on deferred terms	384
3.7.1	Asset purchased on deferred terms from the supplier	384
3.7.2	Asset disposals on deferred terms	384
3.7.3	Revenue contracts with deferred payment terms	384
3.7.4	Variable and contingent consideration for asset acquisitions outside of a business combination	385
3.8	Cash flows from leasing transactions	385
3.8.1	Accounting as lessee	385
3.8.2	Payments made by the lessee before commencement date	386
3.8.3	Lease incentives	386
3.8.4.	Sale and leaseback transactions	386
3.8.5	Accounting as lessor	387
3.9	Additional considerations for groups	387
3.9.1	Preparing a consolidated statement of cash flows	387
3.9.2	Transactions with non-controlling interests	388
3.10	Acquisitions and disposals	388
3.10.1	Deferred and other non-cash consideration	388
3.10.2	Contingent consideration paid on business combinations	388
3.10.2.A	Contingent consideration conditional on continuing employment	389

3.10.2.B	Contingent consideration received on disposals	389
3.10.3	Acquisition of a business that is not a subsidiary	389
3.11	Cash flows of associates, joint arrangements and investment entities	389
3.11.1	Investments in associates and joint ventures	389
3.11.2	Jointly controlled operations	389
3.12	Cash flows in separate financial statements	390
3.12.1	Cash flows of subsidiaries, associates and joint ventures	390
3.12.2	Group treasury arrangements	390
3.12.3	Group cash pooling and cash sharing arrangements	391
3.12.3.A	Cash pooling	391
3.12.3.B	Notional cash pooling	391

Overview

This chapter addresses the requirements of Section 7 *Statement of Cash Flows*.

The chapter discusses the definition of cash and cash equivalents, the difficulties commonly encountered when applying these definitions, the practical issues and judgements that frequently arise when attempting to classify cash flows under operating, investing and financing activities, and the disclosure requirements of Section 7.

It is important to note that the principles of Section 7 are consistent with IAS 7. However, there are some significant differences in the detail of the requirements. See 2 below for more details.

What you need to know

- FRS 102 allows the following entities an exemption from preparing a statement of cash flows:
 - Qualifying entities
 - Mutual life assurance companies
 - Retirement benefit plans
 - Investment funds that meet certain conditions
 - Small entities (although it must be noted that a small entity may be required to prepare a statement of cash flows by an applicable Statement of Recommended Practice (SORP))
- All other entities are required to prepare a statement of cash flows
- Qualifying entities exempted from preparing a statement of cash flows will only be exempt from the supplier finance disclosure requirements if equivalent disclosures are included in the consolidated financial statements in which the entity is incorporated.
- A statement of cash flows prepared under FRS 102 provides the following:
 - Reconciles the movement in cash and cash equivalents (not just cash) year on year
 - Groups cash flows into three headings - cash flows from operating, investing and financing activities in a manner that is most appropriate to the business of the entity
 - Requires the preparation of three main supporting notes - a breakdown of the components that make up cash and cash equivalents, an analysis of changes in net debt, and disclosures about supplier finance arrangements
- Cash equivalents are short-term, highly liquid investments that are readily convertible to known amounts of cash and that are subject to an insignificant risk of changes in value.

Non-cash transactions must be excluded from the statement of cash flows.

1 Introduction

A statement of cash flows provides useful information about an entity's activities in generating cash to repay debt, distribute dividends or reinvest to maintain or expand operating capacity; about its financing activities, both debt and equity; and about its investing and spending of cash. The statement of cash flows provides information about the changes in cash and cash equivalents of an entity for a reporting period, showing separately changes from operating activities, investing activities and financing activities.

This information, when combined with information in the rest of the financial statements, provides information to users to enable them to evaluate the changes in net assets of an entity, its financial structure (including its liquidity and solvency) and its ability to affect the amounts and timing of cash flows to adapt to changing circumstances and opportunities.

Section 7 is based on the equivalent IFRS standard, IAS 7. However, a number of the explanatory paragraphs within IAS 7 have not been incorporated into Section 7 of FRS 102.

2 Comparison between Section 7 and IFRS

Section 7 of FRS 102 is comparable to IAS 7, but there are some notable differences that are discussed in 2.1 to 2.6 below. Unlike Section 7 of FRS 102, IAS 7 includes additional explanatory paragraphs that provide more details. However, by applying Section 2 *Concepts and Pervasive Principles* - FRS 102 financial statement preparers will most likely reach the same conclusions under FRS 102.

2.1 Entities exempt from preparing a statement of cash flows

There are no exemptions from preparing a statement of cash flows in IAS 7.

In contrast, FRS 102 allows the following entities an exemption from preparing a statement of cash flows:

- Qualifying entities (see Chapter 3).
- Mutual life assurance companies.
- Retirement benefit plans.

And

- Investment funds meeting certain conditions. [FRS 102.1.12(b), FRS 102.7.1A].

Additionally, a financial institution that undertakes the business of effecting or carrying out insurance contracts must include the cash flows of their long-term business only to the extent of cash transferred and available to meet the obligations of the company or group as a whole. [FRS 102.7.10E].

A small entity is not required to comply with Section 7, even if it does not apply Section 1A *Small Entities*. [FRS 102.7.1B]. However, a small entity may be required to prepare a statement of cash flows by an applicable Statement of Recommended Practice (SORP). [FRS 102.3.1B].

2.2 Presentation using the indirect method

IAS 7 allows an alternative presentation for the indirect method whereby the net cash flow from operating activities may be presented by showing the revenues and expenses disclosed in the statement of comprehensive income and the changes during the period in inventories and operating receivables and payables. [IAS 7.20].

This alternative presentation option of the indirect method is not available under Section 7.

IAS 7 is also stricter about which measure of profit figure is allowed to be used as the starting point for reconciliation when using the indirect method. Profit before tax and profit after tax can both be used as the starting point for the reconciliation. In contrast, FRS 102 allows the use of any profit measure reported on the income statement, as covered in 3.3.1.A below.

2.3 Cash flows of discontinued operations

IFRS 5 *Non-current Assets Held for Sale and Discontinued Operations* requires an entity to disclose the net cash flows attributable to the operating, investing and financing activities of discontinued operations. These disclosures can be presented either on the face of the statement of cash flows or in the notes. Disclosure is not required for disposal groups that are newly acquired subsidiaries which are classified as held for sale on acquisition in accordance with IFRS 5. [IFRS 5.33(c)].

FRS 102 does not contain any requirements to make disclosures in respect of cash flows from discontinued operations. However, aggregate cash flows arising from obtaining or losing control of subsidiaries or other businesses are shown separately within investing activities. [FRS 102.7.10].

2.4 Cash flows of supplier finance arrangements

IFRS and FRS 102 reporters are required to disclose information about their supplier finance arrangements that enables users of financial statements to assess the effects of those arrangements on the entity's liabilities, cash flows and on the entity's exposure to liquidity risk. [IAS 7.44F, FRS 102.7.20C].

Although the disclosure requirements for supplier finance arrangements under IAS 7 are similar to those under Section 7 of FRS 102, they are not identical. While IAS 7 mandates the disclosure of the carrying amounts and associated line items of financial liabilities for which suppliers have already received payment from finance providers, FRS 102 does not specifically require this disclosure.

There are disclosure exemptions for qualifying entities under FRS 102, provided equivalent disclosures have been included in the consolidated financial statements in which the qualifying entity is included. *[FRS 102.1.12(b)].*

2.5 Contingent consideration paid on business combinations

After initial recognition and measurement, IFRS requires that any subsequent changes in the measurement of contingent consideration in a business combination must be recognised in profit or loss.

[IFRS 3.58]. This means that any excess cash flow above the value of the contingent consideration recognised at the acquisition date is classified as an operating activity, as IAS 7 stipulates that only expenditures resulting in a recognised asset are eligible for classification as investing activities. *[IAS 7.16]*. However, under Section 7, these excess cash flows are classified as investing activities because Section 19 requires that, apart from any element of discounting to reflect the time value of money, any changes to the estimate of the contingent consideration are treated as adjustments to the cost of the business combination.

2.6 Net debt disclosure

FRS 102 requires the disclosure of a reconciliation of changes in net debt as part of the financial statements. This reconciliation involves detailing the movements in the components of net debt, such as borrowings, cash and cash equivalents, over a reporting period.

In contrast, IFRS does not explicitly require a net debt reconciliation. It makes no specific reference to 'net debt' or the need for a reconciliation of changes in net debt. However, it requires disclosures that enable users of financial statements to evaluate changes in liabilities arising from financing activities, including both changes arising from cash flows and non-cash changes, with changes presented by the categories specified in IAS 7.

3 The requirements of Section 7 for a statement of cash flows

Section 7 specifies how entities report information about the historical changes in cash and cash equivalents and has a relatively flexible approach, which allows them to be applied to all entities including financial institutions. This flexibility can be seen, for example, in the way entities can determine their own policy for the classification of interest and dividend cash flows, provided that they are separately disclosed, and this is applied consistently from period to period. Additional disclosure is encouraged where this provides information on an entity's specific circumstances.

3.1 Scope

The application of Section 7 is not mandatory for entities that are 'qualifying entities' (see Chapter 3 at 3.1 and Chapter 3 at 3.3.1). In substance, this means that most subsidiaries, regardless of the percentage of voting rights controlled within a group, and parents that also prepare publicly available consolidated financial statements, will not need to prepare a statement of cash flows in their individual financial statements. However, a qualifying entity that prepares consolidated financial statements is required to prepare a statement of cash flows in those consolidated financial statements. The following entities are also not required to produce a statement of cash flows:

- Mutual life assurance companies.
- Retirement benefit plans.
- Or
- Investment funds that meet all of the following conditions:
 - Substantially all of the entity's investments are highly liquid
 - Substantially all of the entity's investments are carried at market value.
- And
- The entity provides a statement of changes in net assets. [FRS 102.7.1A].

A financial institution that undertakes the business of effecting or carrying out insurance contracts (other than mutual life assurance companies scoped out as above) must include the cash flows of their long-term business only to the extent of cash transferred and available to meet obligations of the company or group as a whole. [FRS 102.7.10E].

A small entity is not required to prepare a statement of cash flows. [FRS 102.7.1B, FRS 102.1A.7]. This exemption applies even if the small entity does not use the small entities accounting regime in Section 1A. However, a small entity may be required to prepare a statement of cash flows by an applicable SORP.

3.2 Cash and cash equivalents

The purpose of the statement of cash flows is to provide information about changes in cash and cash equivalent. Understanding the definitions of cash and cash equivalents are therefore essential to its presentation.

Amounts that fail to meet the definitions of cash and cash equivalents are not to be included as part of cash and cash equivalents for the purposes of preparing the statement of cash flows. In the statement of financial position, such amounts must be presented separately from cash and cash equivalents.

Cash flows relating to restricted amounts that fail to meet the definition of cash and cash equivalents would generally meet the definition of investing activities, as they relate to the acquisition or disposal of investments (see 3.2.1.A below). Cash held in a foreign currency, or investments acquired in a currency other than the functional currency of the entity ('foreign currency') are not excluded from qualifying as cash and cash equivalents merely because they are denominated in a foreign currency, provided they meet the other criteria discussed below.

3.2.1 Cash

FRS 102 defines cash as "cash on hand and demand deposits" and includes no other requirements with respect to determining whether an item qualifies as cash. [FRS 102 Appendix I].

In defining 'cash', FRS 102 does not explain what is meant by 'demand deposits', perhaps because the term is commonly understood as amounts that can be withdrawn on demand, without prior notice being required or a penalty being charged (for example, by an additional fee or forfeiture of interest). In contrast to 'demand deposits', term deposits are discussed at 3.2.2.C below.

In practice, cash may be held by an entity for a specific purpose or may be subject to restrictions on its use, imposed either by the bank, by the entity or by a third party.

The nature of any restriction on use of cash (and cash equivalents - see 3.2.1.A below) must be carefully assessed to determine if the balance still meets the definition of cash in the standard.

3.2.1.A Restrictions on the use of cash

As discussed at 4.1.2. below, an entity must disclose, together with a commentary by management, the amount of significant cash and cash equivalent balances held by the entity that are not available for use by the entity. [FRS 102.7.21]. The nature of the restriction must be assessed to determine if the balance is ineligible for inclusion in cash equivalents because the restriction results in the investment ceasing to be highly liquid or readily convertible. For example, when an entity covenants to maintain a minimum level of cash or deposits as security for certain short-term obligations, and no amounts are specifically designated for that purpose, such balances could still be regarded as cash equivalents, albeit subject to restrictions, provided they meet the criteria outlined in paragraph 2 of Section 7 (see 3.2.2 below).

However, an entity may be required formally to set aside cash, for example by way of a deposit into an escrow account, as part of a specific project or transaction, such as the acquisition or construction of a property. In such circumstances, it is necessary to consider the terms and conditions relating to the account and the conditions relating to both the entity and counterparty's access to the funds within it to determine whether it is appropriate for the deposit to be classified as cash equivalents.

Whilst decisions of the IFRS IC do not apply directly to entities reporting under FRS 102, due to the similarities between Section 7 and IAS 7, entities considering a similar fact pattern under FRS 102 could leverage on the analysis and interpretation of IFRS IC on demand deposits with restrictions on use arising from contracts with third parties. This is detailed below.

In March 2022, the IFRS IC issued an agenda decision⁸⁴ following a request about whether an entity includes a demand deposit as a component of cash and cash equivalents in its statements of cash flows and financial position when the demand deposit is subject to contractual restrictions on use agreed with a third party.

In the fact pattern described in the request, the entity:

- Holds a demand deposit whose terms and conditions do not prevent the entity from accessing the amounts held in it (that is, were the entity to request any amount from the deposit, it would receive that amount on demand).
- Has a contractual obligation with a third party to keep a specified amount of cash in that separate demand deposit and to use the cash only for specified purposes. If the entity were to use the amounts held in the demand deposit for purposes other than those agreed with the third party, the entity would be in breach of its contractual obligation.

The IFRS IC concluded that restrictions on the use of a demand deposit arising from a contract with a third party do not result in the deposit no longer being cash unless those restrictions change the nature of the deposit in a way that it would no longer meet the definition of cash in IAS 7.

In the fact pattern described in the request, the contractual restrictions on use of the amounts held in the demand deposit do not change the nature of the deposit - the entity can access those amounts on demand.

The IFRS IC therefore concluded that the entity includes the demand deposit as a component of 'cash and cash equivalents' in its statement of cash flows.

3.2.1.B Cryptocurrencies vs. Central Bank Digital Currencies (CBDC)

Section 7 has no specific guidance on Cryptocurrencies and Central Bank Digital Currencies (CBDC) however there has been some guidance from the IFRS IC which could be applied by FRS 102 reporters since there are no significant differences between the principles of Section 7 and IAS 7.

In a June 2019 agenda decision², the IFRS IC defined a cryptocurrency as a crypto-asset with all of the following characteristics:

- A digital or virtual currency recorded on a distributed ledger that uses cryptography for security.
 - Not issued by a jurisdictional authority or other party.
- And
- Does not give rise to a contract between the holder and another party.

⁸⁴ [IFRIC Update](#), March 2022, available on the IFRS Foundation's website.

In the agenda decision the IFRS IC observed that cryptocurrencies did not have at that time the characteristics of cash. In particular, the IFRS IC noted that, although some cryptocurrencies could be used in exchange for particular goods or services, it was not aware of any cryptocurrency that was used as a medium of exchange or as the monetary unit in pricing goods or services to such an extent that it would have been the basis on which all transactions were measured and recognised in financial statements.⁸⁵

Until now, the volume of transactions in which cryptocurrencies are used as a medium of exchange has remained quite low and some crypto assets are not used as a medium of exchange at all at this stage. There are some jurisdictions where payment in bitcoin, for example, is accepted, but currently, the acceptance of cryptocurrencies by a merchant is not mandated in most jurisdictions.

How we see it

We are not aware of any cryptocurrencies that would currently be considered cash.

In future periods, a holder would need to consider whether those cryptocurrencies represent a medium of exchange and unit of account to such extent that it could be the basis on which the holder recognises and measures all transactions in its financial statements (i.e., it could act as the functional currency of an entity).

Cryptocurrencies also currently do not meet the definition of cash equivalents because they are generally not convertible to known amounts of cash, nor are they subject to an insignificant risk of change in value or have maturities.

3.2.1.C Client money

Some financial institutions and other entities hold money on behalf of clients. The terms on which such money is held can vary widely. There are numerous types of arrangements that result in an entity depositing their money in a client account held by another entity. It is impossible to generalise as to the appropriate treatment in either of the parties' financial statement as this will be dependent on a careful assessment of the terms and conditions of each specific arrangement.

From the perspective of the depositary entity (i.e., the entity that holds the money on behalf of its client) it is important to identify precisely how the funds are held. Are they required to be segregated in bank accounts separate from that of the depositary entity itself or are they allowed to be commingled with those of the depositary entity? Other key considerations include:

- Which party is at risk from the failure of assets, such as bank accounts, in which the client money is held?
 - The status of the funds in the event of the insolvency of either the reporting entity or its client.
 - Whether the reporting entity can use the cash for its own purposes as opposed to administering the cash on behalf of the client in its capacity as an agent.
- And
- Which party has the benefit of income from the assets.

If the depositary entity assesses that the funds will be included as an asset on its statement of financial position, it would then need to assess what kind of financial asset this represents; cash or cash equivalents, by applying the definitions, (see 3.2 above). A corresponding liability would also be recognised. Any restrictions on the use of the cash or cash equivalents must be considered and disclosed.

From the perspective of the entity depositing its money in a client account held by another entity, it would be necessary to consider whether the funds still meet the definition of cash (see 3.2.1 above). This would only be the case if the funds are available to withdraw on demand, and without penalty, directly by the entity. If the funds held are subject to an advance notice period before they can be withdrawn or used, or there are other restrictions on their withdrawal, it is unlikely that they will meet the definition of cash. Depending on the specific facts and circumstances, the funds may meet the definition of a 'cash equivalent' however, this would only be the case if the definition of cash equivalents is met. If the definitions of cash and cash equivalents are not met, the funds will be presented as a receivable in the financial statements of the entity depositing its money in a client account.

⁸⁵ [IFRIC Update](#), June 2019, available on the IFRS Foundation's website.

3.2.2 Cash equivalents

Extract from Section 7

7.2 Cash equivalents are short-term, highly liquid investments that are readily convertible to known amounts of cash and that are subject to an insignificant risk of changes in value. Therefore, an investment normally qualifies as a cash equivalent only when it has a short maturity of, say, three months or less from the date of acquisition. Bank overdrafts are normally considered financing activities similar to borrowings. However, if they are repayable on demand and form an integral part of an entity's cash management, bank overdrafts are a component of cash and cash equivalents. *[FRS 102.7.2].*

How we see it

FRS 102 does not offer any additional guidance on defining cash and cash equivalents. Given the alignment between Section 7 of FRS 102 and IAS 7, it would not be unreasonable for entities preparing financial statements under FRS 102 to refer to IAS 7 which explains that cash equivalents are held for the purpose of meeting short-term cash commitments rather than for investment or other purposes. See the EY publication, International GAAP® for further details.

Bank overdrafts are normally considered financing activities unless they are repayable on demand and form an integral part of an entity's cash management, in which case they are a component of cash and cash equivalents. *[FRS 102.7.2].*

In practice, however, determining the components of cash equivalents can be difficult. This is discussed further at 3.2.2 A to 3.2.2.D below.

An entity must disclose the components of cash and cash equivalents and present a reconciliation of the amounts in the statement of cash flows to the equivalent amounts in the balance sheet. However, an entity is not required to present this reconciliation if the amount of cash and cash equivalents presented in the statement of cash flows is identical to the amount similarly described in the statement of financial position. *[FRS 102.7.20].*

This reconciliation is needed because the Large and Medium-sized Companies and Groups (Accounts and Reports) Regulations 2008 (SI 2008/410) (the Regulations) require the separate presentation of cash at bank and in hand on the face of the balance sheet. Banking Entities that apply Schedule 2 formats must include as cash only balances at central banks and loans and advances to banks repayable on demand within cash on the balance sheet. *[FRS 102.7.20A].*

FRS 102 states that a complete set of financial statements must include in the notes a summary of significant accounting policies, which would include a policy on how the entity determines cash equivalents. *[FRS 102.3.17(e)].* These cash equivalents would need to meet the four conditions shown above to qualify as a cash equivalent, namely that they are short term, highly liquid investments that are readily convertible to known amounts of cash and that are subject to an insignificant risk of changes in value.

The effect of any changes in the policy for determining components of cash and cash equivalents, for example, a change in the classification of financial instruments previously considered to be part of an entity's investment portfolio, must be reported under Section 10 *Accounting Policies, Estimates and Errors*. *[FRS 102.10.11(d)].* This would require comparatives to be restated, and additional disclosures given, including the reasons for the change in policy.

If, however, an entity changes the purpose for which it holds certain investments, for example a deposit which was previously held for the short term and is now held for the longer term to generate an investment return, this would be considered a change in facts and circumstances, which would be accounted for prospectively. In these circumstances, the reclassification out of cash and cash equivalents would appear as a reconciling item in the statement of cash flows, rather than as an investing cash outflow.

3.2.2.A Short-term investments

As discussed at 3.2.2 above, for an investment to qualify as a cash equivalent it must be readily convertible to a known amount of cash and be subject to an insignificant risk of changes in value. Normally only an investment with a short maturity of, say, three months or less from the date of acquisition qualifies as a cash equivalent. *[FRS 102.7.2].* Whilst Section 7 does not address the matter, it would seem logical that equity instruments will not normally meet the definition of cash equivalents as they have no maturity date and are usually exposed to a not insignificant risk of changes in value. One exception to this is where an equity instrument is a cash equivalent in substance, such as redeemable preference shares acquired within a short period to their maturity date.

When the standard refers to a 'known amount of cash' it means that the amount must be known or determinable at the date on which the investment is acquired. Accordingly, traded commodities, such as gold bullion, would not normally be expected to be cash equivalents because the proceeds to be realised from such commodities is determined at the date of disposal rather than being known or determinable when the investment is made.

3.2.2.B Money market funds

Entities commonly invest in money market-type funds (MMF) such as an open-ended mutual fund that invests in money market instruments like certificates of deposit, commercial paper, treasury bills, bankers' acceptances and repurchase agreements. Although there are different types of money market funds, they generally aim to provide investors with a low-risk, low-return investment while preserving the value of the assets and maintaining a high level of liquidity. The question then arises as to whether investments in such funds can be classified as cash equivalents. As discussed below, entities may consider the underlying investments of the fund when assessing the significance of the risk of changes in value, however when determining whether classification as a cash equivalent is appropriate, the unit of account is the investment in the money market fund itself.

To meet the definition of a cash equivalent, an investment must be short term; highly liquid; readily convertible to a known amount of cash; and subject to insignificant risk of changes in value. Section 7 considers a maturity date of three months or less from the date of acquisition to be short-term in the context of maturity, however money market funds generally do not have a legal maturity date. However, if the investments are puttable and can be sold back to the fund at any time, they may meet the short-term criterion.

Typically, investments in money market funds are redeemed directly with the fund, therefore in assessing liquidity of the investment, focus must be on the liquidity of the fund itself. In making this assessment, entities must consider the nature of any redemption restrictions in place as these may prevent the redemption of the investment in the short term. Alternatively, if a money market fund investment is quoted in an active market, it might be regarded as highly liquid on that basis.

The short-term and highly liquid investment must also be readily convertible into known amounts of cash which are subject to an insignificant risk of changes in value. [FRS 102.7.2].

As discussed in 3.2.2A above, this means that the amount of cash that will be received must be known at the time of the initial investment. Accordingly, investments in shares or units of money market funds cannot be considered as cash equivalents simply because they are convertible at any time at the then market price in an active market. In addition, an entity would have to satisfy itself that any investment was subject to an insignificant risk of change in value for it to be classified as a cash equivalent.

How we see it

In our view, in order for an entity to satisfy itself that an investment in a money market fund is subject to an insignificant risk of change in value, the entity must conclude that the range of possible returns are very small. This evaluation is first made at the time of acquiring the investment and reassessment is required if the facts and circumstances change.

The evaluation will involve consideration of factors such as:

- The maturity of the underlying investments of the fund.
- The credit rating of the fund.
- The nature of the investments held by the fund (i.e., not subject to volatility).
- The extent of diversification in the portfolio (which is expected to be very high).

And

- The investment policy of the fund; and any mechanisms by the fund to guarantee returns (for example by reference to short-term money market interest rates).

Substantial judgement may be required in assessing whether an investment in money market funds can be classified as a cash equivalent. As discussed in 4.1.1 below, entities are required to disclose the policies adopted in determining the composition of cash equivalents and, where relevant, this must include the policy applied and judgements made in classifying investments in money market fund.

3.2.2.C Investments with maturities greater than three months

The longer the term of an investment, the greater the risk that a change in market conditions (such as interest rates) can significantly affect its value. For this reason, FRS 102 excludes most equity investments from cash equivalents and restricts the inclusion of other investments to those with a short maturity (which the standard illustrates as three months or less from the date of their acquisition by the entity).

[FRS 102.7.2].

An investment with a term on acquisition of, say, nine months is not reclassified as a cash equivalent from the date on which there is less than three months remaining to its maturity. This is because the classification as cash equivalent is based on the maturity and the nature of the instrument at acquisition. The fact that the instrument is now approaching its maturity does not change its nature nor the purpose for which it was acquired.

In the final analysis, cash equivalents are short term, highly liquid investments and amounts can only be included in cash equivalents if they can be regarded as being nearly as accessible as cash and essentially as free from exposure to changes in value as cash.

For example, an entity might justify including in cash equivalents a fixed deposit with an original term longer than three months if it effectively functions like a demand deposit. Typically, a fixed deposit will carry a penalty charge for withdrawal prior to maturity. A penalty will usually indicate that the investment is held for investment purposes and for the longer term rather than being a short-term investment. However, some fixed deposits still offer interest at a prevailing demand deposit rate in the event of early withdrawal, with any penalty limited to the entity being required to forego the incremental higher interest that it would have received if the deposit were held to maturity. In this case, it may be arguable that there is effectively no significant penalty for early withdrawal, as the entity receives at least the same return that it otherwise would have in a demand deposit arrangement.

How we see it

In our view, investments in deposit accounts that upon withdrawal are subject to penalties of such significance, that the funds obtained are appreciably different than the funds that would have been obtained had a shorter-term investment been initially purchased, are not consistent with the assertion that the investment is a short-term investment.

Significance is viewed from the perspective of the entity, taking into consideration the environment in which it operates. If the investor would be indifferent to the penalty because the funds obtained are relatively consistent with the funds that would have been obtained had a shorter-term investment been initially purchased, the terms of the instrument may be consistent with the assertion that the investment will be held for only for a short-term.

3.2.2.D Bank overdrafts

Although bank borrowings are generally considered to be financing activities, there are circumstances in which bank overdrafts repayable on demand are included as a component of cash and cash equivalents. This is only in cases where bank overdrafts, in addition to being repayable on demand, forms an integral part of an entity's cash management. [FRS 102.7.2].

Including a bank overdraft as a component of cash and cash equivalents does not automatically mean the bank overdraft will be included in the cash and cash equivalents as presented on the face of statement of financial position unless the conditions in FRS 102 off set requirements are met. [FRS 102.11.38A]. See Chapter 15 at 3.3 for further discussion.

3.2.2.E Credit card receivables at the point of sale

In some industries, entities are paid in exchange for their goods or services at the point of sale through credit card payment systems. Since entities have no practical ability to access cash from the expected payments until the settlement date, they cannot recognize such payments as part of their cash balances before that date.

A question arises however as to whether credit card receivables at the point of sale would be eligible for classification as cash equivalents.

Section 7 defines cash equivalents as short-term, highly liquid investments that are readily convertible to known amounts of cash, and which are subject to an insignificant risk of changes in value. [FRS 102.7.2].

How we see it

Entities must consider all aspects of the definition of cash equivalents and exercise judgement to consider how a credit card receivable arising at the point of sale are classified. This analysis is done with reference to the contractual terms of each credit card payment system and the applicable laws and regulations in the relevant jurisdiction.

Factors to consider would include:

- Who bears the risk of payment if the ultimate customer defaults or the transaction is fraudulent.
 - The length of time that will elapse between the transaction and the receipt of the cash from the counterparty. For example, if the cash is received shortly (e.g., 5 to 10 days) after the transaction is initiated then there is less risk of a change in value.
 - How reputable the counterparty is.
 - How the counterparty is regulated.
- And
- The credit risk of the counterparty.

For example, there may be provisions in the contract between the entity and the credit card system provider such that the entity is not guaranteed to be paid by the credit card payment system provider, including in case of customer credit default or fraudulent use of the card. In this situation, this would be a strong indicator that the credit card receivables would not meet the definition of cash equivalent. These transactions would be accounted for as a sale on credit and the amount outstanding should be classified as a receivable until it has been settled.

Because each arrangement with a credit card system provider may have different contractual characteristics, management may come to different conclusions depending on each arrangement. If material, an entity must disclose and explain the judgement it has made in the process of applying its accounting policy and disclose the amount of the cash equivalents to which this judgement has been applied, in accordance with paragraphs 20 and 21 of Section 7. Where relevant, this must include the policy applied and judgements made in classifying credit card receivables.

3.2.3 Reassessment of cash and cash equivalents after initial recognition

There is no specific requirement in Section 7 for the re-assessment of the criteria for classification as cash or cash equivalents after initial recognition. However, it is implicit in the definition that the amounts must still meet those definitions at the end of each reporting period to be presented as such. Changes that may affect the criteria for classification could arise from contractual or non-contractual changes. For contractual changes, it will usually be clear when these changes are made and the nature of the changes. Such changes could affect the nature of the asset and require the new asset to be tested against the definition of cash and cash equivalents.

Other changes in facts and circumstances could also require careful consideration and the application of judgement. For cash equivalents, reassessment may be particularly relevant when looking at the requirements that cash equivalents are highly liquid and subject to an insignificant risk of changes in value.

For example, since initial recognition of an investment as a cash equivalent, there may have been adverse changes to the credit status of the counterparty to the investment or a significant decline in the economic stability of the jurisdiction in which the funds are invested. At the end of the reporting period, the investment may no longer meet the definition of cash equivalents since it is no longer highly liquid and readily convertible into known amounts of cash and is now subject to more than an insignificant risk of changes in value.

3.3 Classification in the statement of cash flows

The statement of cash flows reports inflows and outflows of cash and cash equivalents during the period classified under:

- Operating activities (see 3.3.1 below)
 - Investing activities (see 3.3.2 below)
- And
- Financing activities (see 3.3.3 below) [FRS 102.7.3]

This classification is intended to allow users to assess the impact of these three types of activities on the financial position of the entity and the amount of its cash and cash equivalents. Although the presentation is not required to follow this layout, we would expect it to be followed in practice. Comparative figures are required for all items in the statement of cash flows and the related notes. [FRS 102.3.14].

Where it's not clear how to classify a specific cash flow between operating, investing and financing activities, an entity will apply judgement to determine the appropriate presentation of material items based on the principles of Section 7. Additional disclosures may be needed to explain the judgements applied. [FRS 102.8.6].

3.3.1 Reporting cash flows from operating activities

Operating activities are the principal revenue-producing activities of the entity and other activities that are not investing or financing activities. [FRS 102.7.4, FRS 102 Appendix I]. This means that operating is the 'default' category, with all cash flows that do not fall within either the investing or financing classifications being automatically deemed to be operating.

Cash flows from operating activities generally result from transactions and other events that enter into the determination of profit or loss. Examples include: [FRS 102.7.4].

- Cash receipts from the sale of goods and the rendering of services.
- Cash receipts from royalties, fees, commissions and other revenue.
- Cash payments to suppliers for goods and services.
- Cash payments to and on behalf of employees.
- Cash payments or refunds of income tax, unless they can be specifically identified with financing and investing activities.
- Cash receipts and payments from investments, loans and other contracts held for dealing or trading purposes, which are similar to inventory acquired specifically for resale.
- Cash advances and loans made by financial institutions.

And

- Cash payments for short-term leases, payments for leases of low-value assets and variable lease payments not included in the measurement of the lease liability as required by Section 20 *Leases*.

An example of an item that enters into the determination of profit or loss that is not usually an operating cash flow is the proceeds from the sale of property, plant and equipment, which are usually included in cash flows from investing activities. [FRS 102.7.4].

Cash flows from operating activities may be presented using either:

- The indirect method
- Or
- The direct method. [FRS 102.7.7].

FRS 102 does not express a preference for the method to be used. The use of the direct or indirect method is an accounting policy choice and must be applied consistently from period to period. Any change in method must be reported following the requirements of Section 10. This would require comparatives to be restated, and additional disclosures given, including the reasons for the change in policy. [FRS 102.10.12].

3.3.1.A Indirect method

Under the indirect method, an entity presents a reconciliation determining the net cash flow from operating activities by adjusting a measure of profit or loss disclosed in the statement of comprehensive income (or separate income statement if presented) for the effects of:

- Changes during the period in inventories and operating receivables and payables.
- Non-cash items such as depreciation, provisions, deferred tax, accrued income/(expenses) not yet received/(paid) in cash, unrealised foreign currency gains and losses, undistributed profits of associates, and non-controlling interests.

And

- All other items for which the cash effects relate to investing or financing activities. [FRS 102.7.8].

Under the indirect method, paragraph 8 of Section 7 requires the reconciliation to start with “any measure of profit or loss disclosed in the statement of comprehensive income”. This means that entities are permitted to use any profit figure (including operating profit) as a starting point for the reconciliation, if that profit figure appears as a subtotal in their statement of comprehensive income. The reconciling items required will vary depending on which profit figure is used. The reconciliation of net cash flows from operating activities may be presented either on the face of the statement of cash flows or in a note.⁸⁶

The reconciliation of profit or loss to cash flow from operating activities will include the increase or decrease in receivables or payables, but only in respect of those elements thereof that relate to operating activities. For example, amounts owed in respect of the acquisition of property, plant and equipment (other than assets held for rental and subsequent sale), intangible assets, or non-operational investments will be excluded from the movement in payables included in this reconciliation.

Furthermore, when a group has acquired a subsidiary during the year, the change in working capital items will have to be split between the increase due to the acquisition (to the extent that the purchase consideration was settled in cash, this will be shown under investing activities) and the element related to post-acquisition operating activities which will be shown in the reconciliation.

⁸⁶ SEN 1, FRC, December 2013, footnote 4.

Illustration 3-1: The following is an illustration of a statement of cash flows and related notes prepared using the indirect method.
Group statement of cash flows

	20X6	20X5
	£000	£000
Net cash (outflow)/inflow from operating activities	(859)	3,964
<i>Investing activities</i>		
Dividends from joint venture	700	545
Dividends from associates	135	105
Interest received	993	345
Dividends received	200	160
Payments to acquire intangible fixed assets	(575)	(1,010)
Payments to acquire tangible fixed assets	(11,423)	(3,110)
Receipts from sales of tangible fixed assets	8,625	2,765
Payments to acquire investments	(465)	(230)
Receipts from sales of investments	125	-
Proceeds from sale of subsidiary undertaking (net of cash & cash equivalents disposed of)	2,172	-
Purchase of subsidiary undertaking (net of cash & cash equivalents acquired)	(270)	-
Net cash flow from investing activities	217	(430)
<i>Financing activities</i>		
Dividends paid to non-controlling interests	(30)	(30)
Dividends paid to preference shareholders	(175)	(175)
Interest paid	(973)	(1,075)
Interest element of lease rental payments	(40)	(50)
Issue costs on new long-term loans	(50)	(56)
Issue of ordinary share capital	175	-
Share issue costs	(100)	-
Purchase of own shares	(1,700)	-
Share purchase costs	(100)	-
New long-term loans	4,660	4,500
Repayment of long-term loans	(500)	-
Repayments of capital element of leases	(370)	(243)
Equity dividends paid	(1,431)	(1,170)
Net cash flow from financing activities	(634)	1,701
(Decrease)/Increase in cash and cash equivalents	(1,276)	5,235
Effect of exchange rates on cash and cash equivalents	(120)	(78)
Cash and cash equivalents at 1 January	7,560	2,403
Cash and cash equivalents at 31 December	6,164	7,560

Notes to the statement of cash flows**Reconciliation of profit to net cash (outflow)/inflow from operating activities**

	20X6	20X5
	£000	£000
Group profit for the year before taxation	8,694	7,547
Adjustments to reconcile profit for the year to net cash flow from operating activities		
Loss on revaluation of investment properties	350	474
Depreciation and impairment of tangible fixed assets	5,590	2,610
Amortisation of development expenditure	125	40
Amortisation of patents	50	10
Amortisation of goodwill	160	25
Share-based payment expense	412	492
Difference between pension charge and cash contributions	(46)	(196)
Increase in provision for maintenance warranties	200	50
Increase in provision for National Insurance contributions on share options	4	4
Provision for maintenance warranties utilised	(219)	(25)
Deferred government grants released	(1,012)	(530)
Share of income from associates and joint ventures	(2,910)	(1,262)
(Profit)/loss on disposal of tangible fixed assets	(1,250)	850
Loss on disposal of fixed asset investments	350	-
Loss on sale of discontinued operations	2,037	-
Net finance costs	167	820
Working capital movements		
Increase in debtors	(4,475)	(2,694)
Increase in stocks	(4,332)	(2,529)
Decrease in creditors	(1,917)	(389)
Taxation		
Corporation tax paid	(2,379)	(1,218)
Overseas tax paid	(458)	(115)
	<u>(9,553)</u>	<u>(3,583)</u>
Net cash (outflow)/inflow from operating activities	<u>(859)</u>	<u>3,964</u>

Cash and cash equivalents

Cash and cash equivalents comprise the following:

	At	Group At
	31 December	31 December
	20X6	20X5
	£000	£000
Cash at bank and in hand	5,441	9,291
Short-term deposits	1,483	2,039
	6,924	11,330
Bank overdrafts	(760)	(3,770)
Cash and cash equivalents	6,164	7,560

3.3.1.B Direct method

The direct method arrives at the same value for net cash flow from operating activities but does so by disclosing major classes of gross cash receipts and gross cash payments. Such information may be obtained either:

- From the accounting records of the entity.
- Or
- By adjusting sales, cost of sales (interest and similar income and interest expenses and similar charges for a financial institution) and other items in the statement of comprehensive income (or income statement if presented) for changes during the period in inventories and operating receivables and payables, other items for which the cash effects are investing or financing cash flows and other non-cash items. [FRS 102.7.9].

A statement of cash flows prepared under the direct method must include the same disclosures of gross cash receipts and gross cash payments irrespective of which approach has been used to determine their value. There is no requirement for entities to present a reconciliation showing the adjustments made between, for example, revenue in the statement of comprehensive income and cash receipts from customers.

3.3.2 Reporting cash flows from investing activities

Unless a net presentation is permitted under FRS 102 (see 3.5.1 below), an entity must present separately major classes of gross cash receipts and gross cash payments arising from investing and financing activities. [FRS 102.7.10].

Investing activities are defined as the acquisition and disposal of long-term assets and other investments not included in cash equivalents. [FRS 102.7.5]. This separate category of cash flows allows users of the financial statements to understand the extent to which expenditures have been made for resources intended to generate future income and cash flows. Cash flows arising from investing activities include:

- Payments to acquire, and receipts from the sale of, property, plant and equipment, intangibles and other long-term assets (including payments relating to capitalised development costs and self-constructed property, plant and equipment).
- Payments to acquire, and receipts from the sale of, equity or debt instruments of other entities and interests in joint ventures, including the net cash flows arising from obtaining or losing control of subsidiaries or other businesses (other than payments and receipts for those instruments considered to be cash equivalents or those held for dealing or trading purposes).
- Advances and loans made to, and repaid by, other parties (other than advances and loans made by a financial institution).
- And
- Payments for, and receipts from, futures contracts, forward contracts, option contracts and swap contracts, except when the contracts are held for dealing or trading purposes, or the cash flows are classified as financing activities.

When a contract is accounted for as a hedge, an entity must classify the cash flows of the contract in the same manner as the item being hedged. [FRS 102.7.5].

Major classes of gross receipts and gross payments arising from investing activities must be reported separately, except for those items that are permitted to be reported on a net basis, as discussed at 3.5.1 below. [FRS 102.7.10].

3.3.3 Reporting cash flows from financing activities

Financing activities are defined as those activities that result in changes in the size and composition of the contributed equity and borrowings of the entity. [FRS 102.7.6].

Cash flows arising from financing activities include:

- Proceeds from issuing shares or other equity instruments.
 - Payments to owners to acquire or redeem the entity's shares.
 - Proceeds from issuing, and outflows to repay, debentures, loans, notes, bonds, mortgages and other short or long-term borrowings.
- And
- Payments by a lessee for the principal portion of the lease liability. [FRS 102.7.6].

Major classes of gross receipts and gross payments arising from financing activities must be reported separately, except for those items that are permitted to be reported on a net basis, as discussed at 3.5.1 below. [FRS 102.7.10].

3.4 Allocating items to operating, investing and financing activities

Sometimes it is not clear how to classify cash flows amongst operating, investing and financing activities. Section 7 provides additional guidance on the classification of certain transactions, including interest, dividends and income taxes, while other questions are not addressed explicitly in the section. These, as well as some common areas where judgement may be required to classify cash flows, are discussed below.

Where the appropriate classification is not clear from Section 7 and an entity has therefore applied judgement to determine the appropriate presentation of material items based on the principles of Section 7, additional disclosure may be needed to explain these judgements. Section 8 - Notes to the Financial Statements requires disclosure of the judgements that management has made that have the most significant effect on the amounts recognised in the financial statements, [FRS 102.8.6], as well as information that is relevant to an understanding of any of the entity's financial statements. [FRS 102.8.2(c)]. (See Chapter 6 at 7.3).

3.4.1 Interest and dividends

Extract from Section 7

- 7.14** An entity shall present separately cash flows from interest and dividends received and paid. The entity shall classify these cash flows consistently from period to period as operating, investing or financing activities. [FRS 102.7.14].

Interest paid can either be classified as an operating cash flow (because it is included in profit and loss) or as a financing cash flow because it is a cost of obtaining financial resources.

Interest and dividends received can either be classified as operating cash flows, as they are included in profit and loss, or they may be classified as investing cash flows because they represent returns on investments. Interest paid includes cash payments made by a lessee for the interest portion of a lease liability measured in accordance with Section 20. [FRS 102.7.15].

Dividends paid can either be classified as a financing cash flow (because they are a cost of obtaining financial resources) or as a component of cash flows from operating activities because they are paid out of operating cash flows. [FRS 102.7.16].

The flexibility in the above paragraphs of Section 7 means that all of these treatments are equally acceptable. Nevertheless, it could be argued that entities which do not include interest or dividends received within revenue must not include interest or dividends in operating cash flows because cash flows from operating activities are primarily derived from the principal revenue-producing activities of the entity. [FRS 102.7.4]. On this basis, interest paid would be a financing cash flow and interest and dividends received

classified as investing cash flows. [FRS 102.7.15]. Such entities would also treat dividends paid as a financing cash flow, because they are a cost of obtaining financial resources. [FRS 102.7.16].

3.4.2 Taxes on income

Cash flows arising from taxes on income must be separately disclosed within operating cash flows unless they can be specifically identified with investing or financing activities. Where tax cash flows are allocated over more than one class of activity, FRS 102 requires that the total amount of taxes paid be disclosed. [FRS 102.7.17]. It is possible to match elements of tax expense to transactions for which cash flows are classified under investing or financing activities. However, taxes paid are usually classified as cash flows from operating activities because it is often impracticable to match tax cash flows with specific elements of tax expense and those tax cash flows may arise in a different period from the underlying transaction.

3.4.3 VAT and other non-income tax cash flows

Section 7 does not specifically address the treatment of cash flows relating to other taxes, such as value added tax (VAT) or other sales taxes and duty. FRS 102 reporters could leverage on an IFRS IC discussion which concluded that it was not appropriate to develop an interpretation and that, while different practices may emerge, they are not expected to be widespread.⁸⁷

How we see it

In our view, entities can choose to disclose sales taxes and other non-income tax receipts and payments separately in the statement of cash flows or as part of the related cash inflows and outflows. Even if presented separately, the tax cash flows are presented as operating, investing or financing in accordance with the classification of the underlying transactions that gives rise to the tax cash flows. [FRS 102.7.3].

Given the availability of alternative treatments, where material, entities must disclose whether cash flows are presented inclusive or exclusive of related VAT.

3.4.4 Cash contributions to a long-term employee benefit fund

As discussed in 3.3.1 above, the definition of operating activities in Section 7 includes as one of its examples “cash payments to and on behalf of employees”. [FRS 102.7.4(d)]. Such cash outflows would typically involve wages and salaries paid to employees, taxes paid on behalf of employees and any other employee benefit contributions made on behalf of employees. Where a company makes contributions to a long-term employee benefit fund on behalf of its employees, those cash outflows are part of the compensation for employment services and are classified as operating cash flows.

3.4.5 Cash flows from factoring of trade receivables

Section 7 does not address the classification of cash receipts arising from the factoring of trade receivables. In these circumstances, an entity uses a factoring structure to produce cash flows from trade receivables more quickly than would arise from normal collection from customers, generally by transferring rights over those receivables to a financial institution.

How we see it

In our view, the classification of the cash receipt from the financial institution depends on the accounting treatment of the trade receivables. Only to the extent that the factoring arrangement results in the derecognition of the original trade receivable would it be appropriate to regard the cash receipt in the same way as any other receipt from the sale of goods and rendering of services and classify it in operating activities.

In cases where the trade receivable is not derecognised and a liability is recorded, the nature of the arrangement is a borrowing secured against trade receivables and accordingly we believe that the cash receipt from factoring must be treated in the same way as any short-term borrowing and included in financing activities.

The later cash inflow from the customer for settlement of the trade receivable would be included in operating cash flows and the reduction in the liability to the financial institution would be a financing outflow and these two amounts would not be netted off in the statement of cash flows. However, it would

⁸⁷ [IFRIC Update](#), August 2005, available on the IFRS Foundation's website.

be acceptable for the entity to disclose the net borrowing receipts from, or repayments to, the financial institution, if it was determined that these relate to advances made for and the repayment of short-term borrowings such as those which have a maturity period of three months or less. [FRS 102.7.10C(c)].

In some cases, the factoring agreement requires customers to remit cash directly to the financial institution, but the arrangement does not result in the derecognition of the original trade receivables. As, discussed above, the initial cash receipt from factoring is included in financing activities. [FRS 102.7.6]. However, there is currently diversity as to whether, and how, the cash received by the financial institution from customers are presented in the entity's statement of cash flows.

When the transfer does not give rise to derecognition of the trade receivable by the reporting entity, the reporting entity may determine that the factoring entity is acting as its agent and is therefore collecting the cash on its behalf before drawing down amounts to settle the liability it is owed by the reporting entity. In this case the entity would report an operating cash inflow from the customer and a financing cash outflow to the financial institution when the financial institution collects the cash from the customers. See 3.5.3 below for further discussion of the presentation of cash paid or received on an entity's behalf. Alternatively, if the reporting entity determines that the factoring agent is not acting as its agent the entity will reflect the later settlement of the debt by the customer as a non-cash transaction with no cash flows reported at the time of the ultimate derecognition of the trade receivable and the related factoring liability

3.4.6 Cash flows from supply-chain financing arrangements

Supplier finance arrangements are characterised by one or more finance providers offering to pay amounts an entity owes its suppliers and the entity agreeing to pay according to the terms and conditions of the arrangements at the same date as, or a date later than, suppliers are paid. These arrangements provide the entity with extended payment terms, or the entity's suppliers with early payment terms, compared to the related invoice payment due date. Supplier finance arrangements are often referred to as supply chain finance, payables finance or reverse factoring arrangements. Arrangements that are solely credit enhancements for the entity (e.g., financial guarantee contracts) or instruments used to settle directly with a supplier the amounts owed (e.g., credit cards) are not supplier finance arrangements. [FRS 102.7.20B].

There is no specific requirement in Section 7 on how cash flows from supply-chain financing arrangements should be classified, although Section 7 does require certain disclosures to be made in relation to an entity's supply-chain financing which are detailed in 4.2 below.

FRS 102 reporters can leverage on the IFRS IC discussion on reverse factoring arrangements for guidance on how to classify the cash flows from such arrangements. The IFRS IC published an agenda decision⁸⁸ in December 2020, outlining how IFRS accounting standards are applied to the different aspects of accounting for such arrangements. The agenda decision considers the presentation in the statement of financial position, the derecognition of a financial liability, the presentation in the statement of cash flows and disclosure in the notes to the financial statements.

In respect of the presentation in the statement of cash flows, an entity that has entered into a supply chain financing arrangement would need to determine whether to classify cash flows under the arrangement as cash flows from operating activities or cash flows from financing activities.

This in turn poses the following challenges:

- Does the presentation of the liability to the financial institution in the statement of financial position impact the presentation of cash flows? For example, if the liability is presented outside of trade and other payables, must the ultimate payment to the financial institution be presented as a financing outflow? Or can it instead be presented as an operating cash flow based on the nature of the activities that initially led to the recognition of the trade payable that was settled through the supply-chain financing?
- Will the remittance of cash directly to the supplier by the financial institution be reflected at all in the statement of cash flow or is it a non-cash transaction?

With respect to the first question above, the IFRS IC agenda decision notes that "an entity's assessment of the nature of the liabilities that are part of the arrangement may help in determining whether the related cash flows arise from operating or financing activities. For example, if the entity considers the related liability to be a trade or other payable that is part of the working capital used in the entity's principal revenue-producing activities, the entity presents cash outflows to settle the liability as arising from operating activities in its statement of cash flows. In contrast, if the entity considers that the related liability is not a trade or other payable because the liability represents borrowings of the entity, the entity

88 [IFRIC Update](#), December 2020, available on the IFRS Foundation's website.

presents cash outflows to settle the liability as arising from financing activities in its statement of cash flows”.

How we see it

In our view, the agenda decision does not preclude an entity from presenting the repayment of the liability owed to the factor as an operating cashflow based on the nature of the transaction that led to the initial recognition of the liability to the entity's supplier, notwithstanding a presentation in the statement of financial position of the liability to the financial institution outside of trade and other payables. This is because there is no automatic link between the statement of financial position and the statement of cash flows.⁸⁹ In both cases, such presentations must be applied consistently and disclosed and explained in the notes.

As regards the identification of cash flows and the second question above, the agenda decision notes that investing and financing transactions that do not require the use of cash or cash equivalents are excluded from an entity's statement of cash flows in accordance with paragraph 43 of IAS 7. FRS 102 has a similar requirement in paragraph 7.18. Consequently, if a cash inflow and cash outflow occur for an entity when an invoice is factored as part of a reverse factoring arrangement, the entity presents those cash flows in its statement of cash flows. If no cash inflow or cash outflow occurs for an entity in a financing transaction, the entity discloses the transaction elsewhere in the financial statements in a way that provides all the relevant information about the financing activity. [FRS 102.7.18].

How we see it

In our view, the IFRS IC agenda decision does not go beyond confirming the requirements of IAS 7 (and hence Section 7 of FRS 102) when it states that if no cash flows are involved, then no cash flows are presented in the statement of cash flows. In practice, a careful analysis of the relationship between the entity and the financial institution is needed to determine whether the financial institution is acting as an agent on behalf of the entity and receiving and incurring cash flows on its behalf. This will inform the appropriate presentation in the statement of cash flows. We discuss this issue further in 3.5.3 below.

In its agenda decision, the IFRS IC rightly observed that, assessing how to present liabilities and cash flows related to reverse factoring arrangements may involve judgement and emphasised the requirement in IAS 1 to disclose judgements that management has made in this respect if they are among the judgements made that have the most significant effect on the amounts recognised in the financial statements, as well as any information that is relevant to an understanding of any of the entity's financial statements. Similar requirements apply in FRS 102 financial statements by virtue of the disclosure requirements in paragraph 6 of Section 8.

The agenda decision suggests that the issue is only about whether to classify the associated cash flows as operating or financing activities. However, we note that if the cost of the goods or services is capitalised into a longer-term asset such as property, plant and equipment, or possibly an intangible asset, the classification decision would be between investing and financing activities. This may be particularly relevant in asset intensive industries such as telecommunications or the extractive industries.

3.4.7 Cash received as compensation for an insured loss

As discussed in 3.3.2 above, cash flows arising from investing activities include receipts from the sale of property, plant and equipment and other long-term assets. [FRS 102.7.5(b)]. This classification would also be appropriate if the receipt of cash came from insurance proceeds received to cover for the loss or damage of such assets. It would not be appropriate to present the cash inflow as an operating cash flow as the insurance proceeds are not derived from the principal revenue-generating activities of the business. [FRS 102.7.4]. However, the nature of the claim giving rise to the cash inflow must be carefully considered. If the claim relates only partially to the loss of damage of a long-term asset, it may be necessary for the cash inflows to be allocated between cash flows from operating activities (e.g., for the compensation for business interruption) and cash flows from investing activities.

⁸⁹ [IASB Staff Paper](#), Project: Supply Chain Financing Arrangements-Reverse Factoring, Paper topic: Comment letters on tentative agenda decision, IFRS IC Meeting, December 2020, paragraph 50. Available on the IFRS Foundation's website.

3.4.8 Cash flows for service concession arrangements

3.4.8.A Accounting by grantors

Section 34 *Specialised Activities* requires a grantor to account for its interest in a service concession contract using a lease liability model. [FRS 102.34.12E].

Therefore, any cash flows paid or received by the grantor relating to the service concession contract must be presented in the statement of cash flows in line with the requirements for lessees as explained in 3.8.1 below.

3.4.8.B Accounting by operators

A service concession arrangement per Section 34 features two possible accounting models from the perspective of the operator, the intangible asset model or the financial asset model (see Chapter 36 at 4). Under both models, the service element relating to the construction of the infrastructure asset is accounted for in accordance with Section 23 *Revenue from Contracts with Customers* and the revenue recognised gives rise to an intangible or a financial asset. It is unclear whether cash flows incurred in the construction or upgrade phase must always be regarded as operating cash flows because they relate to the provision of construction services; or whether they are more accurately classified as investing activities, as they reflect cash outflows that result in the construction of a long-term asset.

In the case of an arrangement under the intangible asset model, the cash flows incurred during construction or upgrading could be classified in investing activities as they relate to the acquisition of an intangible asset that will generate future income and cash flows. Once the operating phase is reached, the cash inflows received would be most appropriately classified in operating activities as most operating and maintenance costs are likely to be executory and will be accounted for as incurred.

On the other hand, when the financial asset model applies, cash outflows during the construction phase may be considered to represent the provision of financing to the grantor and as such an investing outflow. The repayment by the grantor during the operating phase would be considered an investing cash flow (or potentially split between investing and operating cash flows for the capital and interest components respectively, depending on the policy of the entity).

Since there is no specific guidance relating to the classification of cash flows for service concession arrangements, current practice is mixed.

3.4.9 Treasury shares

Treasury shares are the equity instruments of an entity that have been issued and subsequently reacquired by the entity. An entity deducts from equity the fair value of the consideration given for the treasury shares. [FRS 102.22.16].

Cash payments to redeem an entity's shares are required to be classified as financing activities [FRS 102.7.6(b)]. Therefore, it follows that payments to acquire treasury shares must be classified within financing activities. Even where such treasury shares are acquired by the entity as part of an equity-settled share-based payment transaction, the cash outflow is classified under financing activities.

Whilst cash payments to and on behalf of employees are classified under operating activities, [FRS 102.7.4(d)], the acquisition of treasury shares does not settle a transaction between the entity and its employees. An equity-settled share-based payment transaction is completed when the entity transfers its equity instruments to employees in consideration for the services received.

When a subsidiary makes a recharge payment to its parent or a trust holding treasury shares as part of an equity-settled share-based payment arrangement for the subsidiary's employees, the payment is recorded as a deduction from equity in the subsidiary's separate financial statements. This is because the payment does not settle the transaction with the employees but rather returns the capital contribution recorded as a credit to equity required by Section 26, up to the amount of that contribution. Any amount beyond this is considered a distribution (see Chapter 28 at 13.2.7). The capital contribution repayment element must be classified as a financing activity, while the distribution thereafter can be classified as either operating or financing, depending on the entity's policy on dividends as discussed in 3.4.1 above.

3.4.10 Cash flows related to the costs of a share issue

Costs directly related to the issue of shares are required to be deducted from equity. [FRS 102.22.8]. As the costs reduce the amount of the proceeds received from the share issue, they are classified as a financing cash flow. [FRS 102.7.6(a)]. However, where a proposed share issue is cancelled, there would be no proceeds

from the issue to record, and the related expenses would be included in profit and loss rather than equity. As such, the definition of a financing cash flow would not be met, and the transaction costs would be classified in operating cash flows as they do not also meet the definition of an investing activity.

3.4.11 Cash flows paid or received under derivative contracts

Payments and receipts relating to derivative contracts can be classified within operating, investing or financing in different circumstances. Where the contract is held for dealing or trading purposes, the cash flows are classified under operating activities. [FRS 102.7.4(f)]. Section 7 requires payments for, and receipts from, futures contracts, forward contracts, option contracts and swap contracts are classified as cash flows from investing activities, except when the contracts are held for dealing or trading purposes, or the cash flows are classified as financing activities. [FRS 102.7.5(g)].

Section 7 adds that when a contract is accounted for as a hedge (see Section 12 *Other Financial Instruments Issues*), an entity must classify the cash flows of the contract in the same manner as the cash flows of the item being hedged. [FRS 102.7.5]. An example is an interest rate swap. An entity wishing to convert an existing fixed rate borrowing into a floating rate equivalent could enter into an interest rate swap under which it receives interest at fixed rates and pays at floating rates. All the cash flows under the swap are reported under the same cash flow heading as interest paid (i.e., as financing activities or operating activities, in accordance with the entity's determined policy, as discussed in 3.4.1 above), because they are equivalent to interest or are hedges of interest payments.

3.4.12 Debt instruments issued at a discount or premium

When a company issues a zero-coupon bond at nominal value, with a premium payable on redemption, the cash outflows that represent the repayment of the principal amount of a loan or other debt instrument are classified as financing activities. [FRS 102.7.6(d)]. As discussed in 3.4.1 above, interest paid may be classified under either operating or financing activities. Therefore, where an entity adopts a policy of classifying interest under operating activities, it may be necessary to consider carefully the nature of any payment to the lender to ensure the appropriate classification between operating and financing. This will be particularly relevant where the pattern of payments differs from the recognition of the interest expense in profit or loss.

For example, a company that issues a zero-coupon bond at nominal value, with a premium payable on redemption, will not make any interest payments over the life of the bond. However, in accounting for the financial liability at amortised cost under Section 11, the entity will recognise interest at the effective interest rate (EIR), calculated to reflect the premium payable on redemption, as explained in Chapter 13. This raises the question of how to present the cash paid on redemption. Is it appropriate to present the entire cash outflow within financing activities as the redemption of a debt instrument?

How we see it

In our view, when an entity adopts a policy of classifying interest under operating activities and the cash paid on redemption is presented in the statement of cash flows, a split must be made to show the amount that relates to the interest cost (within operating activities) and the amount that relates to the repayment of the principal (within financing activities). The same principles would be applied where a debt is issued at a discount or in any other situation where the pattern of cash flows relating to interest on a financial liability are not reflected in the pattern of recognition of the interest cost.

3.4.13 Early settlement of a debt instrument

A similar issue to that discussed in 3.4.12 above is how to present the cash payments on early settlement of a loan or other borrowing. As already noted in 3.3.3 above, cash flows arising from financing activities include outflows to repay borrowings. However, in some situations an element of the cash paid on early settlement could be viewed as compensation to the lender for lost interest.

Lenders will often include a prepayment penalty provision in loan agreements that can be based on a number of factors, including an approximation of the interest that will not be paid as a result of early settlement. This would support a split presentation of the cash outflow between repayment of borrowings and cash outflow for interest. Alternatively, the nature of the entire cash outflow may also be viewed as relating to a financing activity, being the extinguishment of a liability, which is then presented as one amount in the financing activities section of the statement.

3.4.14 Receipt of a government grant

The accounting requirements for government grants as set out in Section 24 *Government Grants* are covered in Chapter 26.

Neither Section 24 nor Section 7 provides guidance on where in the statement of cash flows to present the cash inflows from the receipt of government grants. Grants could be argued as being a source of financing to an entity, and consequently cash received would be part of the entity's financing activities. However, it could also be argued that a grant does not represent a borrowing activity because there is no expectation that the resource will be returned to the provider of finance.

Alternatively, cash flows received from government grants (or only those from grants related to income) could be presented as operating cash flows by default since they do not seem to meet the definition of financing activities and cash flows received from government grants related to assets could be presented as investing cash flows as they relate to an investing activity.

How we see it

Selecting the most appropriate presentation will be a matter of judgement. Once adopted, the presentation principles must be applied consistently and clear disclosure of the principles and the impact thereof on the statement of cash flows must be provided in accordance with Section 3 *Financial Statement Presentation*.

3.5 Other cash flow presentation matters

3.5.1 Reporting cash flows on a net basis

In general, major classes of gross receipts and gross payments must be reported separately, except to the extent that net presentation is specifically permitted. [FRS 102.7.10]. Operating, investing or financing cash flows may be reported on a net basis if they arise from:

- Cash flows that reflect the activities of customers rather than those of the entity and are thereby made on behalf of customers.
- Or
- Cash flows that relate to items in which the turnover is quick, the amounts are large, and the maturities are short. [FRS 102.7.10A].

Examples of cash receipts and payments that reflect the activities of customers rather than those of the entity include:

- The acceptance and repayment of demand deposits by a bank.
- Funds held for customers by an investment entity.
- And
- Rents collected on behalf of, and paid over to, the owners of properties. [FRS 102.7.10B].

Examples of cash receipts and payments in which turnover is quick, the amounts are large and the maturities are short include advances made for and the repayment of:

- Principal amounts relating to credit card customers.
- The purchase and sale of investments.
- And
- Other short-term borrowings, such as those with a maturity on draw down of three months or less. [FRS 102.7.10C].

Financial institutions may report certain cash flows on a net basis. [FRS 102.7.10D]. These cash flows are:

- Cash receipts and payments for the acceptance and repayment of deposits with a fixed maturity date.
- The placement of deposits with and withdrawal of deposits from other financial institutions.
- And
- Cash advances and loans made to customers and the repayment of those advances and loans. [FRS 102.34.33].

3.5.2 Material cash flows

Information is material if omitting, misstating or obscuring it could reasonably be expected to influence decisions that the users of general-purpose financial statements make on the basis of those financial statements, which provides financial information about a specific reporting entity. [FRS 102 Appendix I].

FRS 102 requires additional line items, headings and sub-totals to be presented on the face of the statement of financial position or of the statement(s) presenting profit or loss and other comprehensive income when this is relevant to an understanding of the entity's financial performance and position. [FRS 102.5.9, FRS 102.4.3]. Although Section 7 does not include equivalent requirements in respect of the presentation in the statement of cash flows, the more general requirements in Section 3 on materiality and aggregation do apply. [FRS 102.3.15, FRS 102.3.16]. Each material class of similar cash flows must be presented separately, as must items of a dissimilar nature or function unless they are immaterial. [FRS 102.3.15].

If a line item is not individually material, it is aggregated with other items either in the statement of cash flows or in the notes. An item that may not warrant separate presentation in those statements may warrant separate presentation in the notes. [FRS 102.3.16].

How we see it

In our view, where specific events and transactions significantly affect the amount of cash flows reported in the statement of cash flows, they must be disclosed and explained in the notes in accordance with Section 8 *Notes to the Financial Statements*, regardless of whether they are presented as separate line items on the face of the statement of cash flows.

Examples of such events and transactions are the receipt of significant government grants, a change in the pattern of payments to suppliers or from customers or in the contractual terms of payments, the introduction of trade receivables factoring arrangements, supply chain financing or extension of existing arrangements.

3.5.3 Non-cash transactions and presentation of cash paid or received on an entity's behalf

FRS 102 requires that transactions that do not require the use of cash or cash equivalents are excluded from an entity's statement of cash flows. Disclosure is required elsewhere in the financial statements in order to provide all relevant information about these investing and financing activities. [FRS 102.7.18]. Non-cash transactions only ever appear in a statement of cash flows as adjustments to profit or loss for the period when using the indirect method of presenting cash flows from operating activities as discussed in 3.3.1.A above. Examples of such non-cash transactions provided in the standard are the acquisition of assets either by assuming directly related liabilities or by means of a lease; the acquisition of an entity by means of an equity issue; and the conversion of debt to equity. [FRS 102.7.19].

Asset exchange transactions and the issue of bonus shares out of retained earnings are other examples of investing and financing transactions that do not involve cash or cash equivalents but require disclosure.

However, there is no broader guidance in Section 7, or elsewhere in FRS 102, to help determine whether cash flows must be included in the statement of cash flows because the entity has directed another party to pay and/or receive cash on its behalf and so, in substance, the cash flows are the entity's cash flows. This is a matter of judgement based on facts and circumstances. However, disclosure is required elsewhere in the financial statements in order to provide all relevant information about these investing and financing activities. [FRS 102.7.18].

There may be transactions that, in substance, involve cash flows of the entity, without the cash resources of the entity actually changing. For example, where an entity purchases an item of property and finances the purchase by borrowing the funds from a financial institution, it may arrange for the money to be paid directly by the financial institution to the seller rather than receive the cash inflow from the loan into its bank account and make a subsequent cash payment to the seller. The relationship between the entity and the financial institution may be determined to be fiduciary in nature with the financial institution acting as an agent of the entity and receiving and incurring cash flows on its behalf.

In all situations, the nature of the relationship with the third party will need careful examination, including assessment of the terms and conditions of each specific arrangement. Factors to consider as part of the consideration could include:

- Who is directing the payment or receipt? If the reporting entity is directing the movement of the cash, it is more likely that the third party will be acting as its agent and therefore the cash flows will be cash flows of the entity.
- Who controls the timing and amount of the payment or receipt? If the reporting entity has control over the timing and the amount this may suggest the third party is acting as its agent and that the payment or receipt is, in substance, the entity's cash flow.

- Why has the arrangement with the third party been established and who benefits from the arrangement? If the arrangement has been established for the convenience of the reporting entity (for example because they do not have a bank account in a certain jurisdiction) this may provide evidence that the cash flow is, in substance, the entity's cash flow.

How we see it

Where it is determined that cash flows made or received by a third party are, in substance, cash flows of the entity, these cash flows must be reported in the statement of cash flows of the entity.

Appropriate disclosures will be important, in particular, disclosure of the facts considered, and the judgements management has made in applying Section 7 in accordance with paragraph 6 of Section 8.

3.6 Foreign currency cash flows

Foreign currency cash flows can arise either when an entity enters into transactions where the cash payments or receipts are denominated in a foreign currency or when the consolidated financial statements of a group include the cash flows of a subsidiary whose functional currency is different from the presentation currency of the group (e.g., a foreign subsidiary).

The requirements for entities falling within the scope of Section 31 *Hyperinflation* are discussed in Chapter 33.

3.6.1 Foreign currency denominated transactions

Cash flows arising from transactions in a foreign currency must be reported in the entity's functional currency in the statement of cash flows by applying the exchange rate between the functional currency and the foreign currency at the date of the cash flow or an exchange rate that approximates the actual rate (for example, a weighted average exchange rate for the period). [FRS 102.7.11]. Similarly, the cash flows of a foreign subsidiary must be translated using the exchange rate between the group's presentation currency and the foreign currency of the subsidiary at the date of the cash flow or at an exchange rate that approximates the actual rate. [FRS 102.7.12].

3.6.2 Operating cash flows presented using the indirect method

For operating cash flows presented using the indirect method, the entity presents the net cash flows from operating activities by working back from amounts reported in the income statement (see 3.3.1.A above). The most common approach adjusts reported profit or loss for the effects of:

- Changes in inventories and operating receivables and payables during the period.
- Non-cash items such as depreciation, provisions, deferred taxes, accrued income (expenses) not yet received (paid) in cash, unrealised foreign currency gains and losses, and undistributed profits of associates and non-controlling interests.

And

- All other items for which the cash effects are investing or financing cash flows. [FRS 102.7.8].

The exchange differences reported in profit or loss may include realised and unrealised gains and losses arising from operating activities and investing and financing activities. Entities must therefore determine what adjustments to make to profit or loss to ensure that foreign currency items are only included in the operating cash flow reconciliation to the extent that cash flows have occurred and that they relate to operating activities. This is discussed 3.6.2.A and 3.6.2.B below.

3.6.2.A Realised and unrealised gains and losses relating to operating activities

For realised gains or losses that relate to operating items such as sales or purchases of inventory by an entity, no adjustment is needed to get from profit or loss to operating cash flows if the starting point for the reconciliation is profit before tax or profit after tax. This is because it will include both the amount recorded at the date of sale and the amount of the exchange difference on settlement, the combination of which gives the amount of the actual cash flow.

For unrealised gains or losses that relate to operating items, no adjustment will be needed as the unrealised exchange gain or loss is generally already reflected in the movement in the related payable or receivable included in the reconciliation to operating cash flows. Alternatively, some entities may choose to reflect these gains and losses as a reconciling item and then also include an equivalent adjustment in the movement in the related receivable or payable, however this method is rarely seen in practice.

3.6.2.B Realised and unrealised gains and losses relating to non-operating activities

For realised gains or losses arising on a settled transaction relating to investing or financing activities, an adjustment is needed to reconcile reported profit or loss to the net cash flow from operating activities.

For example, the foreign currency purchase of property, plant and equipment would be recorded at the rate prevailing on the date of the purchase and, if not paid for immediately, a creditor would be recorded for the same amount. Any exchange difference arising on final settlement of the creditor would be taken to profit or loss as an exchange gain or loss.

If left unadjusted, operating cash flows determined using the indirect approach would include this amount of exchange gain or loss. In addition, the investing cash flow for the asset purchase would be unadjusted and recorded at the purchase date exchange rate, rather than at the exchange rate prevailing at the date of settlement of the creditor. Therefore, this difference needs to be considered in calculating the cash flow to be shown under the relevant classification, in this case investing cash flows, so that the cash flow for the purchase of the asset reflects the exchange rate at the date of settlement of the related creditor. The difference also needs to be adjusted by subtracting or adding back the exchange gain or loss in the reconciliation of operating cash flows.

For unrealised gains or losses relating to investing or financing activities, an adjustment must be made to reconcile reported profit or loss to the net cash flow from operating activities. This is because the unrealised exchange differences will be reflected in the income statement as an exchange gain or loss. If left unadjusted, the reconciliation of operating cash flows prepared using the indirect approach would total to a figure for operating cash flows which would incorrectly include this amount of non-operating, unrealised exchange gain or loss.

3.6.3 Cash and cash equivalent balances denominated in foreign currencies

Unrealised gains and losses arising from exchange rate movements on foreign currency cash and cash equivalents are not cash flows. However, it is necessary to include these exchange differences in the statement of cash flows in order to reconcile the movement in cash and cash equivalents at the beginning and end of the reporting period. The effect of exchange rate movements on cash and cash equivalents is presented as a single amount at the foot of the statement of cash flows, separately from operating, investing and financing cash flows and includes the differences, if any, had those cash flows been reported at end of period exchange rates. [FRS 102.7.13]. This is illustrated in Illustration 3-1 in 3.3.1.A above.

This reconciling item reflects:

- The difference between the opening and closing exchange rate used multiplied by the foreign currency cash balances held at the beginning of the year.
- And
- The difference between the exchange rates used to translate foreign currency cash flows (e.g., an average rate) and the closing exchange rate multiplied by the net cash flow activity for the period measured in the foreign currency.

3.6.4 Consolidated financial statements including foreign subsidiaries

The general principles of preparing a consolidated statement of cash flows is discussed at 3.9.1 below. When the group contains a foreign subsidiary, the cash flows of that subsidiary must be translated into the presentation currency of the group using the exchange rates prevailing at the dates of the cash flows. [FRS 102.7.12]. This is similar to the treatment of foreign currency transactions discussed at 3.6.1 above. A rate that approximates the actual rate on the date of the cash flow (such as a weighted average for a period) can be used. [FRS 102.7.12]. However, this does not apply to the cash flows of a foreign subsidiary whose functional currency is the currency of a hyperinflationary economy as all amounts, including cash flows, are translated at the closing rate at the date of the most recent statement of financial position. See Chapter 33 for more discussion on translating amounts in a functional currency that is the currency of a hyperinflationary economy.

3.6.4.A The indirect method and foreign subsidiaries

Entities must exercise care when applying the indirect method at the 'more consolidated level' as described in 3.9.1 below when there are foreign subsidiaries. If the translated financial statements are used, exchange differences will be included in the movements between the opening and closing group balance sheets. For example, if inventories held by a US subsidiary of a UK parent increase from \$240 to \$270 during the year and the opening exchange rate of £1=\$1.60 becomes £1=\$1.80 by the year-end,

inventories will be reported as an unchanged amount of £150 in both balance sheets. This could result in the reconciliation showing no movement between opening and closing inventories which would be incorrect. In these circumstances it would be advisable for an entity to take the functional currency financial statements of the foreign subsidiary as the starting point or otherwise ensure the exchange differences have been correctly reflected.

3.6.4.B Exchange differences on retranslation of foreign subsidiaries reported in other comprehensive income.

All exchange differences arising on translation of foreign operations will have been recognised in other comprehensive income (see Chapter 32). Such exchange differences are not cash flows and will therefore not be reported as such in the consolidated statement of cash flows. However, any exchange differences relating to the translation of cash and cash equivalents held in foreign currencies by the foreign subsidiaries will be included in the reconciliation of cash and cash equivalents at the beginning and end of the period, as reported at the foot of the statements of cash flows. See 3.6.3 above.

3.7 Transactions on deferred terms

Some investing and financing activities do not have a direct impact on current cash flows even though they affect the entity's capital and asset. As discussed at 3.5.3 above, only transactions that require the use of cash or cash equivalents will be included in a statement of cash flows. Transactions on deferred payment terms are non-cash transactions until payments are made or received. Specific examples are discussed below.

3.7.1 Asset purchased on deferred terms from the supplier

When an asset is purchased on deferred terms granted by the supplier directly, it may not be clear whether the associated cash flows are to be classified within investing activities or within financing activities. Classification of the payment comes down to a judgement as to whether its nature relates to the acquisition of an asset or the repayment of a liability.

How we see it

The settlement of a short-term payable for the purchase of an asset is an investing cash flow. Where the period between acquisition and payment is significant, judgement must be applied to determine whether the definition of a financing cash flow has now been met.

The liability recorded for the deferred consideration would be classified and subsequently measured in accordance with Section 11 *Basic Financial Instruments* (see Chapter 13). When the liability is paid, the cash out flow may need to be split to separate the cash flows relating to payment of interest and payment of principal, depending on the policy of the entity - see 3.4.1 above.

Where an asset is acquired on deferred terms it would, where significant, require disclosure as a non-cash transaction elsewhere in the financial statements in a way that provides all the relevant information about those investing and financing activities. [FRS 102.7.18].

Where an entity acquires a right-of-use asset under a lease, per Section 20 the transaction is presumed to be a non-cash transaction. [FRS 102.7.19(a)]. The cash flow presentation of leasing transactions is discussed in 3.8 below.

3.7.2 Asset disposals on deferred terms

When an asset is sold but no payment is received in the period of the sale, there will be no amounts reported in the statement of cash flows. Where the arrangement is determined to be the provision of finance by the vendor, for example the derecognition of property, plant and equipment by the lessor under a finance lease, subsequent cash receipts to reduce the receivable from the purchaser would be investing cash flows, but appropriately described, for example as the receipt of deferred consideration rather than the proceeds on sale of property, plant and equipment. [FRS 102.7.5(a)].

3.7.3 Revenue contracts with deferred payment terms

If payment is deferred beyond normal business terms or is financed (by the entity) at a rate of interest that is not a market rate, the arrangement constitutes a financing transaction. The promised amount of

consideration must be adjusted for the effects of the time value of money and the interest revenue recognised in accordance with Section 11 or Section 12. [FRS 102.23.58].

The revenue component will be classified as cash flows from operating activities and the financing component classified consistently with the entity's choice to present cash flows from interest received (see 3.4.1 above). If the customer pays in advance, the sum of the cash amount and the accrued interest represent revenue, and thus there is only one cash flow component (being the advance payment) which must be classified as cash inflow from operating activities. [FRS 102.7.4(a)].

3.7.4 Variable and contingent consideration for asset acquisitions outside of a business combination

Contingent consideration paid on a business combination is discussed in 3.10.2 below. The purchase price of intangible assets or tangible assets acquired outside of a business combination also sometimes includes variable or contingent consideration, for example to resolve an uncertainty or a difference in views about the initial value of the asset transferred.

Accounting for the contingent consideration element of such asset purchases is discussed in Chapter 20 for property, plant and equipment, and Chapter 21 for intangible assets. As explained in those chapters, such transactions can be very complex and payment can be dependent on a number of factors, with no specific guidance provided in Section 18 *Intangible Assets* or Section 17 *Property, Plant and Equipment*. Therefore, an entity must develop and consistently apply an accounting policy for the initial and subsequent measurement of such assets that results in information that is relevant and reliable in its circumstances.

Once such an accounting policy is developed, the presentation in the statement of cash flows must be informed by the accounting treatment adopted in the statement of financial position.

How we see it

In our view, cash payments up to the amount capitalised in relation to the acquired assets would be classified in investing activities. Since variable and contingent consideration generally arises for reasons other than the provision of finance to the acquirer, any resulting payments would generally not seem to be eligible for classification as financing cash flows. As a result, any variable and contingent consideration in excess of the amount that has been capitalised as part of the cost of the asset (whether on initial recognition or to reflect changes in variable and contingent consideration that have been capitalised in line with the entity's accounting policy for such payments), would need to be presented as operating cash flows by default. However, if the accounting variability of the contingent consideration is driven from factors such as currency or time value of money that are within the scope of other standards (e.g., Section 30 *Foreign Currency Translation*, Section 12 or IFRS 9), the cash flow presentation must be consistent with the requirements of such sections.

3.8 Cash flows from leasing transactions

3.8.1 Accounting as lessee

When an entity acquires a right-of-use asset under a lease, the acquisition of the asset is clearly a non-cash transaction. [FRS 102.7.19(a)]. The requirements of lease accounting and disclosure requirements are covered in Section 20 and are discussed in Chapter 23. In relation to the cash flow presentation, a lessee classifies:

- Cash payments for the principal portion of the lease liability within financing activities. [FRS 102.7.6(e)].
- Cash payments for the interest portion of the lease liability as either operating or financing activities depending on the accounting policy of the entity. [FRS 102.7.15].

And

- Short-term lease payments, payments for leases of low-value assets and variable lease payments not included in the measurement of the lease liability within operating activities. [FRS 102.7.4(h)].

FRS 102 also requires disclosure of the total cash outflow for leases. [FRS 102.20.80(f)]. This will include lease payments for short-term leases and leases of low-value assets and variable lease payments (see Chapter 23).

A lessee must also include lease liabilities (and the related cash and non-cash movements) in the disclosures of changes in net debt from the beginning to the end of the reporting period. [FRS 102.7.22]. See 4.3 below for more details.

3.8.2 Payments made by the lessee before commencement date

Where a lessee makes a lease payment to the lessor at or before the commencement date, this payment is included in the initial measurement of the right-of-use asset (see Chapter 23). The nature of the activity giving rise to this cash outflow must be considered to determine how it is presented in the statement of cash flows.

For example, if the payment represents all or substantially all of the total lease payments to be made over the lease term, the lessee classifies the cash outflow as an investing activity, being the acquisition of the right of use asset. [FRS 102.7.5(a)]. In contrast, if the payment is only the first of the periodic lease payments that the lessee will make and is financing in nature, being a payment for the reduction of the lease liability, the cash outflow would then be classified as a financing activity. [FRS 102.7.6(e)].

3.8.3 Lease incentives

Lease incentives are defined as “Payments made by a lessor to a lessee associated with a lease, or the reimbursement or assumption by a lessor of costs of a lessee” and are discussed in Chapter 23.

[FRS 102 Appendix I].

Neither Section 7 nor Section 20 provides specific guidance on the presentation of the cash inflows from lease incentives. However, the definition of ‘lease payments’ in the standard is clear that any lease incentives are deducted from the value of any payments to be made by the lessee to the lessor relating to the right to use the underlying asset. [FRS 102 Appendix I].

How we see it

Considering the definition of lease payments in the context of FRS 102, in our view the appropriate presentation of cash flows from lease incentives would be to present the corresponding cashflows as part of financing activities in the statement of cash flows, regardless of whether they are received after the commencement date of the lease and are deducted from the lease liability or before the lease commencement date.

Where lease incentives are received in the same period that lease payments are made, these cash inflows and outflows must, where material, be separately presented and not netted. See 3.5.1 to 3.5.2 above.

3.8.4. Sale and leaseback transactions

A sale and leaseback transaction involves the transfer of an asset by an entity (the seller-lessee) to another entity (the buyer-lessor) and the leaseback of the same asset by the seller-lessee. Sale and leaseback transactions are discussed in Chapter 23.

In terms of presentation in the statement of cash flows, Section 7 only refers to leases, requiring the cash payments for the principal portion of the lease liability to be presented in financing activities and cash payments for the interest portion to be presented either as financing or operating activities depending on the entity’s accounting policy (see 3.4.1 above). Neither FRS 102 nor Section 7 include guidance with respect to cash flow presentation in the case of a sale and leaseback transaction.

Presentation of the cash flows relating to the sale and leaseback transaction for a seller-lessee will depend on how the transaction is accounted for under Section 23 *Revenue from Contracts with Customers*.

[FRS 102.20.123]. Specifically, whether the transfer of the asset is accounted for as a sale of the asset in accordance with the requirements of Section 23 of FRS 102.

If the transaction does not satisfy the requirements of Section 23 to be accounted for as a sale, the cash received is classified in the statement of cash flows as a cash inflow from financing activities because the substance of the transaction is that the lessee has raised finance, with the asset provided as security. Repayments of the principal are classified as financing cash flows, whereas interest must be presented in a manner consistent with the entity’s accounting policy (see 3.3.3 and 3.4.1 above).

If the transaction does satisfy the requirements of Section 23 to be accounted for as a sale, the analysis can be more complex, as the cash received may comprise an amount reflecting the fair value of the underlying asset plus the amount of any additional financing provided by the buyer-lessor to the seller-lessee. This will be reflected in the statements of cash flows by splitting the proceeds between investing cash flows and financing cash flows. However, there are different approaches as to how this split could be determined. From an economic standpoint, the seller-lessee has sold only its interest in the value of the underlying asset at the end of the leaseback - it has retained its right to use the asset for the duration of the leaseback. Therefore, the amount that would be shown as an investing cash inflow must reflect this.

How we see it

In our view there are two acceptable approaches for determining the split between investing cash flows and financing cash flows.

One approach is to present the investing cash inflow as the amount of the sale proceeds that reflects the proportion of the fair value of the underlying asset that is not retained by the seller-lessee. Any excess would be presented as part of cash flows from financing activities. This presentation in the statement of cash flows would be consistent with the requirement in Section 20 to recognise only the amount of any gain or loss on the sale and leaseback relating to the rights that have been transferred to the buyer-lessor and also to measure the right-of-use asset as a proportion of the previous carrying amount of the underlying asset.

Alternatively, the seller-lessee may present any excess of the sale proceeds over the fair value of the asset as financing cash inflows and the remaining proceeds as investing cash inflows.

3.8.5 Accounting as lessor

For lessors, Section 20 is silent on the presentation of cash flows arising from their leasing activities. In practice, the presentation of cash flows for lessors must be established and well understood. In summary, the cash inflows from operating leases will form part of the cash flows from operating activities.

[FRS 102.7.4]. The cash inflows from finance leases will follow the treatment set out at 3.7.2 above in relation to assets disposed of on deferred terms.

3.9 Additional considerations for groups

Section 7 does not distinguish between single entities and groups, and there is no specific guidance as to how an entity must prepare a consolidated statement of cash flows. In the absence of specific requirements, cash inflows and outflows would be treated in the same way as income and expenses under Section 9 *Consolidated and Separate Financial Statements*. Applying these principles, the statement of cash flows presented in the consolidated financial statements must reflect only the flows of cash and cash equivalents into and out of the group, i.e., consolidated cash flows are presented as those of a single economic entity.

On the same basis, the cash flows of a consolidated subsidiary must be included in the consolidated statement of cash flows for the same period as its results are reported in the consolidated statement of comprehensive income, i.e., from the date the group gains control until the date it loses control.

[FRS 102.9.18].

Cash flows that are internal to the group (such as payments and receipts for intragroup sales, management charges, dividends, interest and financing arrangements) must be eliminated. [FRS 102.9.15]. However, transactions with non-controlling interests as well as with associates, joint ventures and unconsolidated subsidiaries would not be eliminated and are discussed in greater detail below.

3.9.1 Preparing a consolidated statement of cash flows

In principle, the group statement of cash flows will be compiled from those prepared by individual subsidiaries with intra-group cash flows being eliminated as part of the aggregation process. This would generally be the case for entities presenting operating cash flows under the direct method, where information on gross cash receipts and payments has been obtained from each group entity's accounting records.

In practice, however, it may be possible to prepare a statement of cash flows at a more consolidated level, by starting with the disclosures in the consolidated statement of comprehensive income and statement of financial position and then applying the adjustments reflected as part of the financial statement consolidation process, together with information provided on external cash flows by individual subsidiaries. Thus, an entity adopting the direct method could use this information to derive the value of the major classes of gross cash receipts and gross cash payments. [FRS 102.7.9]. An entity presenting operating cash flows under the indirect method would use this information to calculate the values for movements in inventories, operating receivables and payables and other non-cash items that appear in the reconciliation of consolidated profit or loss to the group's cash flow from operating activities. [FRS 102.7.8].

As noted in 3.6.4.A above, groups with foreign subsidiaries will need to take extra care when using this method to ensure exchange differences are treated appropriately.

Cash flows from investing and financing activities could similarly be derived from a reconciliation of the relevant headings in the consolidated statement of comprehensive income to statement of financial position movements. However, for this to be possible, subsidiaries would have to provide supplementary information (as part of internal group reporting) to prevent gross cash flows from being netted off and to ensure that the cash flows are shown under the correct classifications. In particular, detailed information about receivables and payables would be essential to ensure that the movements in operating, investing and financing receivables and payables are identified.

3.9.2 Transactions with non-controlling interests

Dividends paid to non-controlling interest holders in subsidiaries are included under cash flows from financing activities or operating activities, in accordance with the entity's determined policy for dividends paid (see 3.4.1 above).

Section 9 *Consolidated and Separate Financial Statements* requires entities to distinguish between transactions that give rise to a change in control and those that do not, because a transaction where there is no change in control is effectively one with the owners in their capacity as owners. [FRS 102.9.20A]. Changes in ownership interests in a subsidiary that do not result in a loss of control are therefore accounted for as equity transactions, and the resulting cash flows would be classified as financing in the same way as any other cash flows that result in changes in the size and composition of equity. [FRS 102.7.6].

3.10 Acquisitions and disposals

The aggregate cash flows arising from obtaining or losing control of subsidiaries or other businesses are shown separately within investing activities. [FRS 102.7.10].

Such amounts must be shown net of cash acquired on acquisition of the subsidiary or disposed of with the subsidiary. [FRS 102.7.5(c), FRS 102.7.5(d)]. FRS 102 does not explicitly require the disclosure of the cash or overdrafts acquired as part of an acquisition. However, if the cash or overdraft acquired was material it may be regarded as a major class of gross cash receipts or payments and separate presentation would be required.⁹⁰

3.10.1 Deferred and other non-cash consideration

Not all acquisitions or disposals of businesses are satisfied in full by the exchange of cash. Any non-cash consideration, such as shares issued by either party or amounts to be paid or received by the entity later date, is not included in the amount presented under investing activities. [FRS 102.7.19(b)]. Instead, the non-cash element of the acquisition or disposal is disclosed. [FRS 102.7.18]. As explained in more detail in 3.7.2 above, the purchase of assets on deferred terms can be a complicated area because it may not be clear whether to classify the associated cash flows within investing activities or within financing activities, as the repayment of borrowings. Hence, judgement is required when determining the appropriate classification of the deferred payment in the statement of cash flows. These same principles apply on the acquisition of a business involving deferred consideration.

3.10.2 Contingent consideration paid on business combinations

FRS 102 requires recognition of any contingent consideration at the acquisition date subject to an adjustment (reflecting the time value of money, if material) and if the contingent consideration is 'probable and can be measured reliably'. [FRS 102.19.12]. If the potential adjustment is not recognised at the acquisition date, but subsequently becomes probable and can be measured reliably, the additional consideration is treated as an adjustment to the cost of the combination. [FRS 102.19.13]. Similarly, if the future events that, at the acquisition date, were expected to occur do not occur, or the estimate needs to be revised, the cost of the business combination is adjusted accordingly. [FRS 102.19.13A]. The unwinding of any discounting is recognised as a finance cost in profit or loss in the period it arises. [FRS 102.19.13B].

Because any changes to the estimate of the contingent consideration are treated as an adjustment to the cost of the business combination, it follows that, apart from any element of discounting to reflect the time value of money, the payment of the contingent consideration must be presented as an investing cash flow. The cash outflow relating to the finance cost arising from discounting would be classified as either operating or financing activities depending on the accounting policy adopted by the entity for the classification of interest paid. [FRS 102.7.15].

⁹⁰ SEN 1, FRC, December 2013, p.8.

The treatment under IAS 7 is different, because IFRS 3 - Business Combinations has different requirements for subsequent changes in measurement of contingent consideration. This means that any excess cash flow above the value of the contingent consideration recognised at the acquisition date is classified as an operating activity, as IAS 7 stipulates that only expenditures resulting in a recognised asset are eligible for classification as investing activities [IAS 7.16].

3.10.2.A Contingent consideration conditional on continuing employment

A transaction that remunerates employees or former owners of the acquiree for future services is excluded from the business combination accounting and accounted for separately. [FRS 102.19.11B]. Therefore, cash flows relating to payment of purchase consideration that is conditional on the continuing employment of the vendors in the business, or the existing employees of the business must be classified within operating activities and not within investing activities. This faithfully reflects the fact that these payments are not part of the consideration transferred on a business combination but are remuneration for post-combination services received. [FRS 102.7.4(d)].

3.10.2.B Contingent consideration received on disposals

When an entity disposes of a subsidiary, it presents the cash flows separately within investing activities. This will be the case even for the receipt of contingent consideration because the cash inflow is still an investing cash flow being the receipt from the sale of equity or debt instruments of another entity. (see 3.3.2 above). [FRS 102.7.5(d)].

3.10.3 Acquisition of a business that is not a subsidiary

A business combination may be enacted through the acquisition of a subsidiary (i.e., a business held in a separate legal entity) or through the acquisition of a group of assets and liabilities that constitute a business (sometimes referred to as 'a purchase of net assets and trade').

The cash flows arising from the acquisition and disposal of a group of assets and liabilities that constitute a business would be classified as investing activities. [FRS 102.7.5(c)]. In addition, the considerations set out in 3.10.1 to 3.10.2 above in respect of deferred and contingent consideration also be apply.

3.11 Cash flows of associates, joint arrangements and investment entities

3.11.1 Investments in associates and joint ventures

Cash flows in respect of an entity's acquisition and disposal of an investment in an associate or joint venture would also be classified as an investing activity. [FRS 102.7.5(c), FRS 102.7.5(d)]. Changes in cash and cash equivalents relating to associates or joint ventures accounted for under the equity or cost method will be reflected in the entity's statement of cash flows only to the extent of the cash flows between the group and the investee. Examples include cash dividends received and loans advanced or repaid.

Cash dividends received from equity accounted associates and joint ventures would be classified as operating or investing activities in accordance with the entity's determined policy for other dividends received (see 3.4.1 above). Loans advanced or repaid would be classified as investing activities. [FRS 102.7.5(e), FRS 102.7.5(f)]. Where the net cash inflow from operating activities is determined using the indirect method, the group's share of profits or losses from equity-accounted investments will appear as a non-cash reconciling item in the statement of cash flows (see 3.3.1.A above).

The considerations set out in 3.10.1 and 3.10.2 above in respect of deferred and contingent consideration on acquisition and disposal of a subsidiary must also be applied when determining the appropriate classifications of cash flows relating to the acquisition and disposal of associates and joint ventures.

3.11.2 Jointly controlled operations

Section 7 does not specifically deal with the treatment of the cash flows of joint operations. However, following the principles in Section 15 *Investments in Joint Ventures* all transactions must be reflected in the accounts of the joint operator's financial results to the extent of its interests in those transactions, the cash flows of the joint arrangement are already included in the operator's financial statements and no additional adjustments are required to reflect the activities of the joint operation. [FRS 102.15.5].

The treatment of cash flows for the acquisition and disposal of a joint operation is less clear as there is an argument for presentation either as a single net cash flow in investing activities (as is required for the cost

of a business combination, discussed in 3.10 above); or as separate cash flows, classified according to the nature of the underlying assets and liabilities acquired.

How we see it

In our view, an entity presents the cash flows for the acquisition and disposal of a joint operation consistently with the treatment of the joint operation as either a business or a group of assets and liabilities. Therefore, acquisitions and disposals of operations meeting the definition of a business in FRS 102 would give rise to a single investing cash flow, and acquisitions and disposals of operations not regarded as a business would give rise to cash flows presented according to the nature of the assets and liabilities acquired or disposed.

3.12 Cash flows in separate financial statements

3.12.1 Cash flows of subsidiaries, associates and joint ventures

The presentation of cash payments and receipts between a parent and its subsidiaries, associates and joint ventures in the statement of cash flows which forms part of the separate financial statements of the parent are presented in accordance with the general requirements in Section 7 for classification as operating, investing and financing cash flows, as explained in 3.3.1 to 3.3.3 above. For example, where a parent provides a loan to a subsidiary, an associate or a joint venture, it will be necessary to consider whether the cash outflow (and the subsequent cash inflow when the loan is repaid) meets the definition of operating activities or investing activities in respect of the separate financial statements of the parent. [FRS 102.7.4(f)], [FRS 102.7.5(e)]. Conversely, where a subsidiary, an associate or a joint venture provides a loan to the parent, this is much more clearly part of financing activities of the parent. [FRS 102.7.6(c)].

3.12.2 Group treasury arrangements

Some groups adopt treasury arrangements under which cash resources are held centrally, either by the parent company or by a designated subsidiary. Any excess cash is transferred to the central bank account which is in the name of the designated 'treasury entity'. In some cases, a subsidiary might not even have its own bank account, with all receipts and payments being made directly from the centrally controlled funds. Each individual group company will need to consider how to present the funds transferred to the treasury entity at the period end as cash, as cash equivalents or as a short-term intercompany receivable, by examining the specific facts and circumstances of each arrangement with reference to the definitions of cash and of cash equivalents as discussed in 3.2 above.

To meet the definition of cash, the individual company must be able to withdraw the funds from the treasury entity on demand without prior notice being required and without penalty. To meet the definition of cash equivalents, the funds must be a short-term highly liquid investment that is readily convertible into known amounts of cash and subject to insignificant risk of changes in value. [FRS 102.7.2].

A further question arises as to whether the subsidiary must prepare a statement of cash flows if there is no cash or cash equivalents balance held at each period end and in some cases, at any time during the year.

How we see it

In our view, the preparation of the statement of cash flows will be based upon the actual cash flows during the period regardless of cash and cash equivalents balance held directly by the entity. Where no cash flows through an entity, but rather all transactions flow through the group treasury function acting on behalf of the entity, the entity would still record receipts from debtors and payments to suppliers, albeit with an associated deposit to or withdrawal from a balance with another group company. Just as a bank processes payments and receipts as agent for the account holder, so the group treasury function is acting as agent for the entity, and these transactions will be reflected in a statement of cash flows.

For guidance to assist in the determination of whether another entity is acting on behalf of the reporting entity, as the entity's agent, see 3.5.3 above.

Where the subsidiary makes net deposits of funds to, or net withdrawals of funds from the designated group entity during the reporting period, a further question arises as to how to present these movements in the subsidiary's statement of cash flows. As explained above, these transactions normally give rise to intercompany balances. Therefore, the net deposits or net withdrawals must be shown as investing activities or financing activities, respectively. Further consideration may be made as to whether these cash flows meet the criteria for net presentation as discussed in 3.5.1 above.

3.12.3 Group cash pooling and cash sharing arrangements

Many groups use some form of cash pooling or cash sharing arrangement to manage the group's cash position on a consolidated basis, effectively concentrating the group's cash in one place. Such arrangements seek to maximise the return for the group as a whole on its cash, minimise the cost of funding and give visibility to the group of its combined cash and currency position.

The terms and conditions of such arrangements vary, and it is important to understand the specific nature of the pooling or sharing arrangement in place, in order to determine the appropriate accounting treatment. In 3.12.3.A to 3.12.3.C below we discuss three of the most common types of arrangements.

3.12.3.A Cash pooling

Groups often use what are commonly known as cash pooling arrangements. Typically, these will involve a number of subsidiaries within a group each having a legally separate bank account with the same bank, but these accounts are managed, with the agreement of the bank, on a consolidated basis. For example, interest will normally be determined on a notional basis using the net balance of all accounts; similarly, any overdraft limit will normally apply to the net balance. Typical characteristics of notional cash pooling and physical cash pooling are discussed below however arrangements vary. Therefore the terms and conditions of each arrangement must be reviewed carefully to ensure that the accounting treatment adopted is appropriate for that specific arrangement.

3.12.3.B Notional cash pooling

Notional cash pooling arrangements allow the group to net off the balances of different accounts across jurisdictions, without physically moving the cash to a header or master account, but with each individual entity continuing to have access to the cash it has deposited in its individual account, sometimes called a 'memo' or 'mirror' account. This is, in essence, an interest rate adjustment, and the ownership of the cash does not change.

In such cases, therefore, each entity will continue to report its cash as 'cash and cash equivalents'.

3.12.3.C Physical cash pooling

Typically, in these arrangements, which are also known as zero balancing, cash concentration or physical cash sweeping, the group physically sweeps excess cash out of the individual bank accounts to a 'header account' on a daily basis. In these arrangements, the ownership of the cash changes: the relationship moves from a deposit with a third-party bank to a loan to the group entity that is the holder of the 'header account'. As in the group treasury arrangements discussed above, the individual companies will need to consider how to present these balances at the period end as cash, as cash equivalents or as a short-term intercompany receivable.

4 Disclosures

Section 7 of FRS 102 contains some specific disclosure requirements to supplement the information that is presented in the statement of cash flows. In addition, disclosure may be needed to explain the judgements management has made during the preparation of the statement of cash flows, especially where the appropriate classification of an item is not clear from Section 7.

FRS 102 states that a complete set of financial statements must include in the notes a summary of significant accounting policies, which would include a policy on how an entity determines its cash equivalents and any significant judgement made in classifying cash flows in the statements of cash flows. [FRS 102.3.17(e), FRS 102.8.6].

4.1 Disclosure of components of cash and cash equivalents

Section 7 contains specific disclosures requirements relating to the composition of cash and cash equivalents. These cover:

- The components of cash and cash equivalents and a reconciliation to the amounts in the statement of financial position (see 4.1.1 below).
- The cash held by the entity but which is not available for use (see 4.1.2 below).

4.1.1 The components of cash and cash equivalents and a reconciliation to the amounts in the statement of financial position

Extract from Section 7

7.20 An entity shall present the components of cash and cash equivalents and shall present a reconciliation of the amounts presented in the statement of cash flows to the equivalent items presented in the statement of financial position. However, an entity is not required to present this reconciliation if the amount of cash and cash equivalents presented in the statement of cash flows is identical to the amount similarly described in the statement of financial position.

Cash and cash equivalents is one of the required line items that must be presented on the face of the statement of financial position for an entity choosing to apply paragraph 1A(1) of Schedule 1 to the Regulations and adapt one of the balance sheet formats. [FRS 102.4.2A(k)]. However, items forming part of cash and cash equivalents may not all be shown as a single line item in the statement of financial position. Therefore, disclosure is required to reconcile the line items in the statement of financial position to the amount of cash and cash equivalents in the statement of cash flows.

For example, as discussed in 3.2.2.D above, there are circumstances in which bank overdrafts repayable on demand are included as a component of cash and cash equivalents. In the statement of financial position, the bank overdrafts will be presented as financial liabilities, separate from cash, unless a legal right of set off exists. Therefore, a reconciliation will be needed.

4.1.2 Cash held by the entity, but which is not available for use by the entity

Extract from Section 7

7.21 An entity shall disclose, together with a commentary by management, the amount of significant cash and cash equivalent balances held by the entity that are not available for use by the entity. Cash and cash equivalents held by an entity may not be available for use by the entity because of, among other reasons, foreign exchange controls or legal restrictions.

It is possible for an entity to have amounts held in a bank account that meet the definition of cash but for which use is restricted. Examples include cash and cash equivalents held by a subsidiary operating under exchange controls or other legal restrictions that prevent their general use by the parent or other subsidiaries.

In addition, there may be other circumstances that restrict how cash and cash equivalents can be used by an entity such as those discussed in 3.2.1.A above.

In these circumstances, the standard requires disclosure of the amount of significant cash and cash equivalent balances held by an entity that are not available for use by the entity, together with a commentary by management to explain the circumstances of the restriction. [FRS 102.7.21].

4.2 Disclosure of supplier finance arrangements

The 2024 Periodic Review of FRS 102 introduced new disclosure requirements in respect of supplier finance arrangements which are applicable for reporting periods beginning on or after 1 January 2025. [FRS 102.BC.A.83]. Transitional requirements are dealt with in 4.2.5 below. The new disclosure requirements are similar, but not identical, to the disclosures that were brought into IAS 7 for periods beginning on or after 1 January 2024. There are disclosure exemptions for qualifying entities under FRS 102, provided equivalent disclosures have been included in the consolidated financial statements in which the qualifying entity is included. [FRS 102.1.12]. See Chapter 3 for more details.

Supplier finance arrangements are characterised by one or more finance providers offering to pay amounts an entity owes its suppliers and the entity agreeing to pay according to the terms and conditions of the arrangements at the same date as, or a date later than, suppliers are paid. These arrangements provide the entity with extended payment terms, or the entity's suppliers with early payment terms, compared to the related invoice payment due date. Supplier finance arrangements are often referred to as supply chain finance, payables finance or reverse factoring arrangements. Arrangements that are solely credit enhancements for the entity (e.g., financial guarantee contracts) or instruments used to settle directly with a supplier the amounts owed (e.g., credit cards) are not supplier finance arrangements. [FRS 102.7.20B].

See 3.4.5 above for discussion of the presentation of cash flows arising from supplier finance arrangements.

Extract from Section 7

7.20C An entity shall disclose in aggregate for its supplier finance arrangements:

- (a) the key terms and conditions of the arrangements (e.g., extended payment terms, interest charges, and security or guarantees provided). However, an entity shall disclose separately the key terms and conditions of arrangements that have dissimilar key terms and conditions.
- (b) as at the end of the reporting period:
 - (i) the carrying amounts and associated line items presented in the entity's statement of financial position of the financial liabilities that are part of a supplier finance arrangement.
and
 - (ii) the range of payment due dates (e.g., 30-40 days after the invoice date) for both the financial liabilities disclosed under sub-paragraph (i) and comparable trade payables that are not part of a supplier finance arrangement. Comparable trade payables are, for example, trade payables within the same line of business or jurisdiction as the financial liabilities disclosed under sub-paragraph (i). If ranges of payment due dates are wide, an entity shall disclose explanatory information about those ranges or disclose additional ranges (eg stratified ranges).
- (c) the type and effect of non-cash changes in the carrying amounts of the financial liabilities disclosed under sub-paragraph (b)(i). Examples of non-cash changes include the effect of business combinations, exchange differences or other transactions that do not require the use of cash or cash equivalents (see paragraph 7.18).

4.2.1 Disclosure of the terms and conditions of the arrangements

This disclosure is to inform users of the financial statements that such arrangements are in place and to explain their nature. An entity must disaggregate information about terms and conditions of significant individual arrangements when they are dissimilar. This may include the extended payment terms, security or guarantees provided, and any other terms and conditions that will enable users of financial statements to assess the effects of those arrangements on the entity's liabilities, cash flows and on the entity's exposure to liquidity risk.

4.2.2 Disclosure of carrying amounts

An entity must provide quantitative information about the carrying amount of supplier finance arrangement financial liabilities and the line items in the statement of financial position in which those liabilities are presented. See 4.2.5 below for discussion of transitional reliefs that apply in the first year of application.

4.2.3 Disclosure of the range of payment due dates

An entity is required to disclose the range of payment due dates (for example, 30 to 40 days after the invoice date) for payables within the supplier finance arrangements and for comparable trade payables. The comparable trade payables are the trade payables with the same line of business or jurisdiction, but which have not been included in any supply finance agreements. When those payment due date ranges are wide, explanatory information about those ranges or additional ranges, must be provided. [FRS 102.7.20C(b)(ii)]. See 4.2.5 below for discussion of transitional reliefs that apply in the first year of application.

Illustration 3-2 below is based on an example in the IASB's "Investor Perspectives: Supplier finance - New disclosure requirements to aid investors" document,⁹¹ which shows one possible way of how a company might satisfy the requirements. [FRS 102.7.20C(b)(ii)].

Illustration 3.2: Range of payments due dates

Range (days) of payment due dates	20X6	20X5
Liabilities that are part of the arrangement	85-90 days after invoice date	80-90 days after invoice date
Compare trade payable that are not part of an arrangement	60-70 days after invoice date	60-65 days after invoice date

4.2.4 Disclosure of the type and effect of non-cash changes

The disclosure of the type and effect of non-cash changes in the carrying amounts of the financial liabilities that are part of a supplier finance arrangement are non-cash changes which includes the effect of business combinations, exchange differences or other transactions that do not require the use of cash or cash equivalents. [FRS 102.7.20C(c)]. Disclosure of this information enables users of financial statements to assess the carrying amounts of financial liabilities on a more comparable basis from one reporting period to the next and to understand how these non-cash changes affect the entity's cash flows.

See 3.4.5 above for discussion of the presentation of cash flows arising from supplier finance arrangements.

4.2.5 Effective date and transitional arrangements

The supplier finance arrangement disclosure requirements are effective for annual reporting periods beginning on or after 1 January 2026; early adoption is permitted if disclosed. [FRS 102.1.38]. The amendments contain some transitional reliefs from disclosures in the first year of application, meaning that in the annual reporting period in which the amendments are first applied comparative information is not required for the disclosures in paragraphs 7.20C(a), 7.20C(b)(ii) or 7.20C(c). [FRS 102.1.42]. There is no transitional exemption for the disclosure required by paragraph 7.20C(b)(i) of the carrying amounts and associated line items presented in the entity's statement of financial position of the financial liabilities that are part of a supplier finance arrangement. Therefore, this information must be presented in the first year of application, for both the current period and the comparative period.

⁹¹ [Investors Perspectives - Supplier finance: new disclosure requirements to aid investors](#), May 2023, available on the IFRS Foundation's website.

4.3 Disclosure of analysis of changes in net debt

Extract from Section 7

- 7.22** An entity shall disclose an analysis of changes in net debt from the beginning to the end of the reporting period showing changes resulting from:
- (a) the cash flows of the entity;
 - (b) the acquisition and disposal of subsidiaries;
 - (c) new leases entered into;
 - (d) other non-cash changes; and
 - (e) the recognition of changes in market value and exchange rate movements.
- When several balances (or parts thereof) from the statement of financial position have been combined to form the components of opening and closing net debt, sufficient detail shall be shown to enable users to identify these balances. This analysis need not be presented for prior periods

Net debt consists of the borrowings of an entity, together with any related derivatives and obligations under leases, less any cash and cash equivalents. [FRS 102 Appendix I].

Illustration 3.3:⁹² The example below demonstrates one way in which the analysis of changes in net debt could be presented.

	At 1 Jan 20X1	Cash flows	New leases	Other non-cash change	At 31 Dec 20X1
	CU'000'	CU'000'	CU'000'	CU'000'	CU'000'
Cash and cash equivalents					
Cash	536	(112)	-	-	424
Overdrafts	(256)	44	-	-	(212)
Cash equivalents	250	165	-	-	415
	530	97	-	-	627
Borrowings					
Leases due within one year	(149)	58	(70)	(49)	(210)
Leases due after one year	(175)	-	(130)	45	(260)
Bank loans due within one year	(100)	108	-	(208)	(200)
Bank loans due after one year	(900)	-	-	200	(700)
	(1,324)	166	(200)	(12)	(1,370)
Total	(794)	263	(200)	(12)	(743)

4.4 Disclosure requirements of other standards

4.4.1 Direct cash flows arising from insurance contracts

FRS 103 - Insurance Contracts - requires that, when an insurance entity presents its operating cash flows using the direct method, it must separately disclose cash flows arising from insurance contracts.

[FRS 103.4.5(a)].

4.4.2 Cash flows arising from the exploration of mineral resources

An entity applying FRS 102 which is engaged in the exploration for and/or evaluation of mineral resources must apply IFRS 6 - Exploration for and Evaluation of Mineral Resources. IFRS 6 requires that an entity discloses the amounts of operating and investing cash flows arising from the exploration for and evaluation of mineral resources. [IFRS 6.24(b)].

⁹² FRC Factsheets: FRS 102 Factsheet 3 - Statement of Cash Flows.

5 Summary of GAAP differences

The following table shows the differences between FRS 102 and IFRS.

	FRS 102	IFRS
Entities exempt from preparing a statement of cash flows.	▪ Qualifying entities. ▪ mutual life assurance companies. ▪ retirement benefit plans. And ▪ investment funds that meet certain conditions. ▪ In addition, financial institutions that undertake insurance contracts must include cash flows in respect of their long-term business only to the extent of cash transferred and available to meet the obligations of the company or group as a whole. ▪ Small entities are not required to comply with the requirements of Section 7.	No exemptions available.
Alternative presentation of indirect method	Not permitted.	IAS 7 allows an alternative presentation for the indirect method whereby net cash flows from operating activities may be presented by showing revenues and expenses disclosed in the statement of comprehensive income and changes in inventories and operating receivables and payables.
Presentation of cash flows from discontinued operations	No specific disclosure requirements.	Net cash flows attributable to operating, investing and financing cash flows of discontinued operations must be disclosed.
Supplier finance arrangements	New disclosure requirements about supplier finance arrangements effective 1 January 2025 which are similar (although not identical) to the amendments made to IAS 7. Disclosure exemptions are available for qualifying entities, provided equivalent disclosures have been included in the consolidated financial statements in which the qualifying entity is included.	For annual reporting periods beginning on or after 1 January 2024, with earlier application permitted, an entity is required to disclose information about its supplier finance arrangements that enables users of financial statements to assess the effects of those arrangements on the entity's liabilities and cash flows and on the entity's exposure to liquidity risk. These disclosures include information on: ▪ Terms and conditions of the arrangements. ▪ Carrying amounts of the liabilities. ▪ Payment due dates. ▪ Non-cash changes in the liabilities.

FRS 102		IFRS
Net debt disclosure	Requirement to disclose an analysis of changes in net debt from the beginning to the end of the reporting period, showing changes resulting from specified categories of cash flows and non-cash changes. Net debt is defined as the borrowings of an entity, together with any related derivatives and obligations under finance leases, less any cash and cash equivalents. This analysis need not be presented for prior periods	Requirement to provide disclosures that enable users of financial statements to evaluate changes in liabilities arising from financing activities, including both changes arising from cash flows and non-cash changes, with changes presented by categories specified in IAS 7. Comparative information is required.
Contingent consideration paid on business combinations	Apart from any element of discounting to reflect the time value of money, the payment of the contingent consideration must be presented as an investing cash flow.	The treatment under IAS 7 is different, because IFRS 3 - Business Combinations has different requirements for subsequent changes in measurement of contingent consideration. This means that any excess cash flow above the value of the contingent consideration recognised at the acquisition date is classified as an operating activity, as IAS 7 stipulates that only expenditures resulting in a recognised asset are eligible for classification as investing activities.

Appendix A - Defined terms

Extract from FRS 102 Appendix I Glossary

Definitions

cash	Cash on hand and demand deposits
cash equivalents	Short-term, highly liquid investments that are readily convertible to known amounts of cash and that are subject to an insignificant risk of changes in value.
cash flows	Inflows and outflows of cash and cash equivalents.
financing activities	Activities that result in changes in the size and composition of the contributed equity and borrowings of the entity.
operating activities	The principal revenue-producing activities of the entity and other activities that are not investing or financing activities
investing activities	The acquisition and disposal of long-term assets and other investments not included in cash equivalents
statement of cash flows	Financial statement that provides information about the changes in cash and cash equivalents of an entity for a period, showing separately changes during the period from operating, investing and financing activities.

Overview

Section 9 *Consolidated and Separate Financial Statements* addresses the preparation of consolidated financial statements and the accounting for investments in subsidiaries, associates and jointly controlled entities in individual and separate financial statements. It also includes indicators of control of special purpose entities and the accounting for intermediate payment arrangements. The accounting for associates and joint ventures in consolidated financial statements is addressed in Chapter 17 Investments in associates and Chapter 18 Investments in Joint ventures respectively.

What you need to know

- A parent entity is required to present consolidated financial statements in which it consolidates all its subsidiaries unless exempt. A subsidiary is an entity controlled by the parent, i.e., the parent has the power to govern its financial and operating policies so as to obtain benefits from its activities. The consolidated financial statements present financial information about the group as a single economic entity. However, Section 9 permits or requires the exclusion of certain subsidiaries from the consolidated financial statements.
- The exemptions from preparation of consolidated financial statements mirror those available in UK company law. A parent entity reporting under the Companies Act 2006 need only prepare consolidated financial statements if it is a parent at the year end. A company not reporting under the Companies Act 2006 need not prepare consolidated financial statements if not required under its statutory framework.
- A parent, investor or venturer preparing separate or individual financial statements accounts for its investments in subsidiaries, associates and jointly controlled entities in its separate financial statements at either:
 - Cost less impairment
 - Fair value with gains or losses through other comprehensive income (OCI) or profit and loss (the same model as used for revaluations of property, plant and equipment)
 - Or
 - Fair value through profit or loss

1 Introduction

Section 9 addresses the preparation of consolidated financial statements, including guidance on consolidation of special purpose entities, and guidance on consolidation of special purpose entities. It also describes how to account for investments in subsidiaries, associates and jointly controlled entities in individual and separate financial statements and the specific scenarios of exchanging businesses or assets for an interest in a subsidiary, jointly controlled entity or associate and intermediate payment arrangements.

Section 9 is based on the IFRS for SMEs, amended to comply with the requirements of UK Company Law, and expanded to reflect guidance contained in several sources of previous UK GAAP and UK Company Law. By using the IFRS for SMEs as its basis, Section 9 incorporates some IFRS guidance that existed prior to the issuance of IFRS 10 *Consolidated Financial Statements*, being IAS 27 *Consolidated and Separate Financial Statements* (IAS 27 (2012)) and SIC 12 *Consolidation Special Purpose entities*.

As part of the *Amendments to FRS 102 Triennial review 2017 Incremental improvements and clarifications* (Triennial review 2017), issued in December 2017, the FRC considered making amendments to update FRS 102 for the control model in IFRS 10. However, following feedback, the FRC concluded that no changes should be made other than an additional disclosure requirement regarding unconsolidated structured entities (see 3.9.1 below). [FRS 102.BC.B9.2]. The FRC did not consider this matter further for the Periodic Review 2024.

Therefore, in contrast to most sections of FRS 102, the requirements of Section 9 are not based on current IFRS.

2 Comparison between Section 9 and IFRS

As explained above, Section 9 is an amalgamation of requirements that existed in previous UK GAAP and IFRS extant before the issuance of IFRS 10. This means that there are several significant differences compared with IFRS. These are discussed below.

2.1 Requirement to prepare consolidated financial statements

Section 9 contains various exemptions from the basic requirement that a parent prepare consolidated financial statements. These exemptions are aligned with UK Company Law (see 3.1.1 below).

IFRS 10 has different exemptions from consolidation compared to those exemptions permitted by Section 9. [IFRS 10.4]. In particular, the financial statements in which an intermediate parent is consolidated must be prepared under IFRS (although, in certain circumstances, the exemption is available more widely). In contrast, the UK Company Law exemption (see 3.1.1 below) requires these financial statements to be prepared in an 'equivalent GAAP'. IFRS also has no exemption from consolidation for small groups.

Under FRS 102, a parent is required to prepare consolidated financial statements only if it is a parent at the end of the financial year. [FRS 102.9.2]. It is our view, under IFRS 10, that consolidated financial statements must be prepared if an entity is a parent at any time during its financial year (unless otherwise exempt), even if it is no longer a parent at the end of the reporting period (see the EY publication, International GAAP®).

More parents are, therefore, likely to be exempt from preparing consolidated financial statements under FRS 102 than under IFRS.

2.2 Investment entities

Section 9 states that a subsidiary held as part of an investment portfolio is not consolidated but, instead, recognised at fair value through profit or loss (see 3.4.2 below). [FRS 102.9.9C(a)].

IFRS 10 states that a parent must determine whether it is an investment entity. [IFRS 10.27]. An investment entity measures all subsidiaries (other than certain subsidiaries providing investment-related services) at fair value through profit or loss. [IFRS 10.31, IFRS 10.32]. IFRS 10 also has more detailed conditions for the use of the exception to consolidation than Section 9. [IFRS 10.B85A].

There could be differences between FRS 102 and IFRS in respect of investment entities since the Section 9 exception applies to a subsidiary whereas the IFRS exception applies to a parent. IFRS 10 also has more detailed conditions for the use of the exception than Section 9.

2.3 Definition of control

Section 9 defines control as the power to govern the financial and operating policies of an entity so as to obtain benefits from its activities. [FRS 102.9.4].

IFRS 10 states that an investor controls an investee when it is exposed, or has rights, to variable returns from its involvement with the investee and has the ability to affect those returns through its power over the investee. [IFRS 10.6].

The difference in the definition of control (and related application guidance) results in circumstances when an entity is controlled by a parent under FRS 102 and not controlled under IFRS 10 (and *vice versa*). Likely areas of difference include potential voting rights, control exercised through an agent, control of special purpose entities (see 2.4 below), interests held as trustee or fiduciary and *de facto* control.

2.4 Special purpose entities and structured entities

Section 9 describes circumstances that indicate control of a special purpose entity, which is an entity created to establish a narrow objective (see 3.3 below). [FRS 102.9.10]. A risks and rewards model applies for special purpose entities which is different from the single control model in IFRS 10. Disclosure of the nature and extent of, and risks associated with, interests in unconsolidated special purpose entities is required. [FRS 102.9.23(f)].

IFRS 12 *Disclosure of Interests in Other Entities* defines a structured entity as an entity designed so that voting or similar rights are not the dominant factor in deciding who controls the entity. [IFRS 12 Appendix A]. No specific guidance is given on circumstances that indicate when an entity may control a structured entity because reporting entities are expected to apply the single control model in IFRS 10 in determining the entities they control. Detailed disclosures are required in respect of structured entities in which a reporting entity has an interest. [IFRS 12.14, IFRS 12.15, IFRS 12.16, IFRS 12.17].

A special purpose entity under FRS 102 will not always be a structured entity under IFRS and *vice versa*, and the entity might be consolidated under FRS 102 but not consolidated under IFRS 10 (and *vice versa*). IFRS 12 is likely to lead to more extensive disclosure than FRS 102.

2.5 Subsidiaries excluded from consolidation

Section 9 states that subsidiaries are excluded from consolidation if they operate under severe long-term restrictions or are held exclusively with a view to subsequent resale (see 3.4 below). [FRS 102.9.9]. These exceptions are aligned with UK Company Law.

IFRS 10 does not have similar exceptions. However, a subsidiary that operates under severe long-term restrictions might fail to meet the definition of a subsidiary in IFRS 10 (due to lack of control) and therefore the effect might be the same. Differences between IFRS 10 and Section 9 in respect of investment entities (subsidiaries held as part of an investment portfolio are included in Section 9's definition of subsidiaries held exclusively with a view to resale) are discussed at 2.2 above.

2.6 Accounting for a retained interest in a disposal where control is lost in consolidated financial statements

Section 9 states that when a parent loses control of a subsidiary, but the former parent continues to hold an investment in that entity then the carrying amount of the net assets (and goodwill) attributable to the investment at the date that control is lost is regarded as the cost on initial measurement of the retained investment (see 3.6.3.A below). [FRS 102.9.19].

IFRS 10 states that when a parent loses control of a subsidiary any retained interest in the former subsidiary must be recognised at fair value on the date that control is lost. [IFRS 10.25(b)].

2.7 Accounting for exchange differences on the disposal of a foreign operation in consolidated financial statements

Section 9 states that the cumulative amount of any exchange differences that relate to a foreign subsidiary recognised in equity are not recycled to profit or loss on disposal (i.e., loss of control) of the subsidiary (see 3.6.3 below). [FRS 102.9.18A].

IAS 21 *The Effects of Changes in Foreign Exchange Rates* states that exchange differences that relate to a foreign subsidiary recognised in equity are reclassified to profit or loss on disposal (i.e., loss of control). [IAS 21.48].

2.8 Initial measurement of NCI in consolidated financial statements

Section 9 states that NCI is initially recognised and measured as the NCI's share in the identifiable net assets as recognised and measured in accordance with the requirements for a business combination (see 3.7.1 below). [FRS 102.9.13(d), FRS 102.19.14A].

IFRS 3 *Business Combinations* allows an accounting policy choice (for each business combination) for the acquirer to recognise NCI (that are present ownership interests and entitle their holders to a proportionate share of the entity's net assets in the event of liquidation) initially at either the net amount of the identifiable assets or at fair value. All other components of NCI are initially measured at their acquisition-date fair values unless another measurement basis is required by IFRSs. [IFRS 3.19].

There is no policy choice under FRS 102 to measure NCI at fair value. Neither does FRS 102 distinguish between different categories of NCI and so implies that all NCIs are measured the same way based on present ownership interest (see 3.7.1 below).

2.9 Accounting for exchanges of business or other non-monetary assets for an interest in a subsidiary in consolidated financial statements

Section 9 addresses the accounting where a reporting entity exchanges a business or other non-monetary assets for an interest in another entity, which thereby becomes a subsidiary of the reporting entity. See Chapter 17 at 2.5 and Chapter 18 at 2.6 where the interest in another entity thereby becomes an associate or joint venture.

To the extent that the reporting entity retains an ownership interest in the business or other non-monetary assets exchanged, that retained interest is treated as having been owned by the reporting entity throughout the transaction and included at its pre-transaction carrying amount.

A gain is recognised to the extent that the fair value of the consideration received exceeds the carrying value of the part of the business or other non-monetary assets exchanged and no longer owned by the reporting entity, together with any related goodwill and cash given up. Any unrealised gains arising are reported in OCI.

A loss is recognised to the extent that the fair value of the consideration received is less than the carrying value of the part of the business or other non-monetary assets exchanged no longer owned by the reporting entity, together with any related goodwill and cash given up (see 3.8 below). [FRS 102.9.31].

IFRS does not contain explicit guidance for the scenario in which a business (or other non-monetary assets) is exchanged for an interest in an entity that becomes a subsidiary as a result of the transaction. However, IFRS 10 contains guidance on loss of control of a subsidiary, which, although not directly relevant, does not distinguish between realised and unrealised gains and requires the gain or loss, realised or unrealised, to be recognised in profit or loss. [IFRS 10.B98]. In the context of a business combination in which the acquirer transfers assets as part of consideration transferred, assets that remain controlled by the acquirer after the business combination are measured at their carrying amount immediately before the transfer and no gain or loss is recognised. [IFRS 3.38]. This differs from the FRS 102 requirement to recognise a gain or loss to the extent that the business (or other non-monetary assets) contributed is no longer owned.

2.10 Cost of investment in a subsidiary in separate financial statements

When an investment in subsidiary is measured using the cost model and merger relief or group reconstruction relief is available in respect of shares issued as consideration, these reliefs can be applied to the initial carrying amount of the investment. This results in the investment being stated initially at either:

- The previous carrying amount of the investment in the transferor's books (if group reconstruction relief is available).

Or

- The nominal value of the shares issued (if merger relief is available). [FRS 102.A3.24]. See 4.2.1.A below

In certain types of group reorganisation when a new parent is established, IAS 27 *Separate Financial Statements* requires the new parent to measure the cost of its investment in a subsidiary at the carrying amount of its share of the equity items shown in the separate financial statements of the original parent (or original entity). [IAS 27.13, IAS 27.14]. Otherwise, 'cost' is normally interpreted as defined by the Glossary to IFRS (i.e., the amount of cash equivalents paid or the fair value of the consideration given). There is no option to use the nominal value of the shares issued, nor generally the previous carrying amount of the investment in the transferor's books, as cost. However, one situation where we believe it would be acceptable to measure cost based on the carrying amount of the investment in the transferor's books under IFRS is in a common control transaction where an investment in a subsidiary constituting a business is acquired in a share-for-share exchange.

This means that, in circumstances when an entity using the cost model for measuring investments in subsidiaries is entitled to use group reconstruction relief or merger relief, the 'cost' is likely to be different under FRS 102 and IFRS.

2.11 Use of the equity method for accounting for investments in subsidiaries, associates and jointly controlled entities in separate or individual financial statements

FRS 102 does not permit the use of the equity method for accounting for investments in subsidiaries, associates and jointly controlled entities in separate financial statements. [FRS 102.BC.A.28(a)].

IAS 27 permits the use of the equity method for accounting for investments in subsidiaries, associates and joint ventures in separate financial statements. [IAS 27.10(c)]. See 2.12 below.

2.12 Accounting for classes of investments in separate financial statements

FRS 102 requires an entity to apply the same accounting policy (i.e., cost less impairment, fair value through OCI or fair value through profit or loss) to all investments in a single class. Examples of classes of investments are investments in subsidiaries held as part of an investment portfolio, investments in subsidiaries not held as part of an investment portfolio, associates and jointly controlled entities. [FRS 102.9.26]. Although the examples given for separate classes of investments differentiate between subsidiaries held as part of an investment portfolio and those that are not so held, in our view, this does not preclude the election of a different accounting policy for different classes of subsidiaries bringing closer alignment with IAS 27, see 4.2 below.

IAS 27 requires an entity to apply the same accounting policy (i.e., cost, in accordance with IFRS 9 *Financial Instruments* or using the equity method) for each category of investments. [IAS 27.10]. The term 'category' is not defined. However, it is our view that investments in subsidiaries, associates, and joint ventures can be further divided into more granular categories, only if a category can be defined clearly and objectively and results in information that is relevant and reliable. Judgement is exercised to define criteria to identify categories more granularly and should be consistently applied. See the EY publication, International GAAP®.

2.13 Intermediate payment arrangements in separate financial statements

Section 9 describes an intermediate payment arrangement. When an entity has control, or *de facto* control, of such an arrangement the entity accounts for it as an extension of its own business in its separate financial statements (see 4.5 below). [FRS 102.9.34, FRS 102.9.35].

IFRS has no guidance on accounting for intermediate payment arrangements. A specific example of an intermediate payment arrangement is an employee benefit trust. It is our view that, in the separate financial statements of the entity that has *de facto* control of the employee benefit trust, it can be accounted for either as an extension of the entity or as an investment in a subsidiary. See the EY publication, International GAAP®,

2.14 Disclosure differences

Disclosure differences between FRS 102 and IFRS are discussed at 5 below.

3 Consolidated financial statements

Consolidated financial statements extend the reporting entity to include other entities subject to its control. They treat the net assets and activities of subsidiaries held by the parent entity as part of the parent entity's own net assets and activities. The aim is to present the results and position of the group as a single entity.

Key terms in Section 9 are defined in the Glossary. [FRS 102 Appendix I]. See Appendix A below.

3.1 Requirement to present consolidated financial statements

The basic legal framework for consolidated financial statements in the UK is found in the Companies Act 2006 (CA 2006). A company that is a parent company at the end of a financial year is required to prepare group accounts for that year unless it is exempt from the requirement. [s399(2)]. The group accounts are consolidated and must give a true and fair view of the state of affairs as at the end of the financial year and the profit or loss for the financial year of the undertakings included in the consolidation as a whole. [s404(1), s404(2)].

Section 9 replicates the requirements of the CA 2006 by requiring that, unless exempt, an entity that is a parent at its reporting date presents consolidated financial statements in which it consolidates all its subsidiaries in accordance with FRS 102. [FRS 102.9.2]. An entity that was a parent at the beginning of a year and sold all of its subsidiaries during the year is not required to present consolidated financial statements for that year. It would prepare individual financial statements for that year with comparatives from the separate financial statements prepared for the previous year, not the consolidated financial statements for the previous year.

Parents that do not report under the CA 2006 (e.g., overseas entities) are required to comply with the requirements of Section 9 and those of the CA 2006 that are referred to in Section 9, except to the extent these requirements are not permitted by any statutory framework under which such entities report.

[FRS 102.9.1].

Consolidated financial statements are the financial statements of a parent and its subsidiaries presented as a single economic entity.

Extract from Section 9

9.4 A subsidiary is an entity that is controlled by the parent. Control is the power to govern the financial and operating policies of an entity so as to obtain benefits from its activities.
[FRS 102.9.4].

The CA 2006 defines a subsidiary slightly differently from Section 9 although the FRC clearly intended that the same conclusion would be reached except in very exceptional circumstances. This is discussed at 3.2 below.

When an entity is not controlled by an investor, but that investor has an interest in the entity, the investment in that entity will be accounted for as follows:

- Where the investing entity does not have significant influence or joint control the investment will be accounted for as a financial instrument using one of the accounting policy choices permitted under Section 11 *Basic Financial Instruments* or Section 12 *Other Financial Instruments Issues*.
 - Where the investing entity has significant influence but not joint control the investment will be accounted for as an associate under Section 14 *Investments in Associates*.
- And
- Where the investing entity has joint control, the investment will be accounted for under Section 15 *Investments in Joint Ventures*.

3.1.1 Exemptions from preparing consolidated financial statements

There are several provisions that exempt parent companies from having to prepare consolidated financial statements. Most of these exemptions replicate those permitted under the CA 2006 and specific reference is made by Section 9 to the legislation. An entity reporting under the CA 2006 is not exempt from preparing consolidated financial statements if any of its transferable securities are admitted to trading on a UK regulated market. [FRS 102.9.3A]

A parent entity (including an intermediate parent entity) is exempt from the requirement to prepare consolidated financial statements if one or more of the following situations apply: [FRS 102.9.3, FRS 102.9.3A]

- The parent entity, and the group headed by it, qualify as small as set out in section 383 of the CA 2006 and are eligible for the exemption as determined by reference to sections 384 and 399(2A) of the CA 2006 (see 3.1.1.D below). [FRS 102.9.3(a)].
- All the parent entity's subsidiaries are either required to be excluded from consolidation by paragraph 9 of section 9 or permitted to be excluded from consolidation by paragraph 9A of section 9 (see 3.4 below) (referring to section 402 of the CA 2006, see 3.1.1.E below). [FRS 102.9.3(b)].
- For a parent entity not reporting under the CA 2006, if its statutory framework does not require the preparation of consolidated financial statements (see 3.1.1.F below). [FRS 102.9.3(c)].

An immediate parent reporting under the CA 2006 is exempt from the requirement to prepare consolidated financial statements if one or more of the following situations applies (provided that the intermediate parent entity complies with further conditions set out in company law) (see 3.1.1.A, 3.1.1B and 3.1.1.C below):

- Its intermediate parent is established under the law of any part of the UK and: [s400(2), FRS 102.9.3A(a)]
 - The intermediate parent entity is a wholly-owned subsidiary of that immediate parent.
 - The immediate parent entity's immediate parent holds 90% or more of the allotted shares in the entity and the remaining shareholders have approved the exemption.
 - The intermediate parent entity's immediate parent holds more than 50% (but less than 90%) of the allotted shares in the intermediate parent entity, and notice requesting the preparation of consolidated financial statements has not been served on the intermediate parent entity by shareholders holding in aggregate at least 5% of the allotted shares in the intermediate parent entity (such notice must be served at least six months before the end of the financial year to which it relates). [s400(1)(c)].
- Its parent is not established under the law of any part of the UK and: [s400(2), FRS 102.9.3A(b)]
 - The intermediate parent entity is a wholly-owned subsidiary of that parent.
 - The intermediate parent entity's parent holds 90% or more of the allotted shares in the intermediate parent entity and the remaining shareholders have approved the exemption.
 - The intermediate parent entity's parent holds more than 50% (but less than 90%) of the allotted shares in the intermediate parent entity, and notice requesting the preparation of consolidated financial statements has not been served on the intermediate parent entity by shareholders holding in aggregate at least 5% of the allotted shares in the intermediate parent entity (such notice must be served at least six months before the end of the financial year to which it relates). [s401(1)(c)].

When an immediate parent (section 400) or parent (section 401) holds more than 90% but less than 100% of the allotted shares, the wording above implies that all the other shareholders must approve the exemption from preparing consolidated financial statements otherwise the exemption cannot be applied. Neither section 400 nor section 401 explain the form of the approval required.

For this purpose, shares held by a wholly-owned subsidiary of the parent or held on behalf of the parent undertaking or a wholly-owned subsidiary, are attributed to the parent undertaking. [s400(3), s401(3)]. Shares held by directors of a company for the purpose of complying with any share qualification requirement are disregarded for determining whether the company (seeking exemption) is a wholly-owned subsidiary. [s400(5), s401(5)].

The term 'allotted shares' is not restricted and includes all classes of shares and not just ordinary shares or voting shares, including shares that are classified as a liability under FRS 102 (see Chapter 12 at 4.2). The term 'allotted shares' rather than 'allotted share capital' suggests that it is the number of shares rather than their monetary amount that should be considered although this is not clear.

As noted above, the exemptions in respect of sections 400 and 401 of CA 2006 referred to above do not apply if any of the entity's transferable securities are admitted to trading on a UK regulated market (i.e., a 'traded company' as defined by section 474(1) of CA 2006). [FRS 102.9.3A]. This requirement repeats a restriction already contained within both sections 400 and 401 although not within sections 400(2) and 401(2) referred to in 3.1.1.A to 3.1.1.B below. [s400(4), s401(4)].

3.1.1.A Parent that is a subsidiary of an immediate UK parent

The exemption from preparing consolidated financial statements for intermediate parents that are wholly or majority owned subsidiaries of an immediate UK parent is conditional on compliance with certain further conditions as set out below: [s400(2)]

- (a) The company must be included in consolidated accounts for a larger group drawn up to the same date, or to an earlier date in the same financial year, by a parent undertaking (referred to below as 'parent') established under the law of any part of the UK.
- (b) Those accounts must be drawn up and audited, and that parent's annual report must be drawn up:
 - (i) If the parent is a company, in accordance with the requirements of Part 15 of the CA 2006, or, if the parent is not a company, the legal requirements that apply to the preparation of consolidated accounts for that parent.
 - Or
 - (ii) In accordance with UK-adopted international accounting standards (see 3.1.1.C).
- (c) The company must disclose in the notes to its individual accounts that it is exempt from the obligation to prepare and deliver group accounts.
- (d) The company must state in its individual accounts the name of the parent that draws up the group accounts referred to above, and:
 - (i) The address of the parent's registered office.
 - Or
 - (ii) If it is unincorporated, the address of its principal place of business.
- (e) The company must deliver to the registrar, within the period for filing its accounts and reports for the financial year in question, copies of:
 - (i) Those group accounts.
 - And
 - (ii) The parent's annual report, together with the auditor's report on them
- (f) There must be a certified translation of any document delivered to the registrar under (e) above if they are not in English.

UK company law states that 'included in the consolidation', in relation to group accounts, or 'included in consolidated group accounts' means that the undertaking is included in the accounts by the method of full (and not proportional) consolidation, and references to an undertaking excluded from consolidation are determined accordingly. [s474(1)]. Therefore, if a parent is included at fair value through profit or loss in the financial statements of an investment entity parent it would not be entitled to the exemption.

The exemption might not be available in the accounting period when a parent company becomes a subsidiary of another UK company. Under the legislation, the exemption is available only if the company has been included in a set of consolidated accounts of the new parent prepared to the same, or an earlier, reporting date as the company. [s400(2)(a)]. I.e., it is not sufficient that the company will be included in the new parent's consolidated accounts at a future reporting date, see Illustration 3-1 below.

Illustration 3-1: Accounting period in which parent entity becomes a subsidiary

Entity A (a parent) is acquired by Entity B (a parent undertaking established in the UK) in October 20X6. Entity A has an accounting period ending 31 December 20X6. Entity B has an accounting period ending 31 March 20X7.

Entity A is unable to use the section 400 exemption from preparing consolidated financial statements for its accounting period ending 31 December 20X6 because it has not been included in consolidated accounts drawn up to 31 December 20X6 or earlier in that financial year.

Even where the year ends of the intermediate parent company and the parent company are the same, problems can arise. The intermediate parent company must state in its individual financial statements that it is exempt from the obligation to prepare consolidated financial statements. However, some of the necessary conditions might not have been met at the time the directors approve the financial statements of the intermediate parent. For example, the consolidated accounts in which the intermediate parent is to be included might not have been prepared and audited, say if the intermediate parent company has a timetable that requires audited accounts to be submitted prior to the audit report on the consolidated accounts being signed.

3.1.1.B Intermediate parents that are subsidiaries of non-UK parents

The exemption from preparing consolidated financial statements for intermediate parents that are wholly or majority owned subsidiaries of non-UK parents is conditional on compliance with certain further conditions as set out below: [s401(2)]

- (a) The company and all of its subsidiary undertakings must be included in consolidated accounts for a larger group drawn up to the same date, or to an earlier date in the same financial year, by a parent undertaking.
- (b) Those accounts and, where appropriate, the group's annual report, must be drawn up:
 - (ii) In a manner equivalent to consolidated accounts and consolidated annual reports drawn up in accordance with Part 15 of the CA 2006.
 - (iii) In accordance with UK-adopted international accounting standards.

Or

 - (iv) In accordance with accounting standards which are equivalent to such international accounting standards, as determined pursuant to Commission Regulation (EC) No. 1569/2007 of 21 December 2007 (the 2007 Commission Regulation) establishing a mechanism for the determination of equivalence of accounting standards applied by third country issuers of securities pursuant to Directives 2003/71/EC and 2004/109/EC of the European Parliament and of the Council.
- (c) The group accounts must be audited by one or more persons authorised to audit accounts under the law under which the parent undertaking which draws them up is established.
- (d) The company must disclose in its individual accounts that it is exempt from the obligation to prepare and deliver group accounts.
- (e) The company must state in its individual accounts the name of the parent undertaking that draws up the group accounts referred to above and:
 - (i) The address of the undertaking's registered office (whether in or outside the United Kingdom).

Or

 - (ii) If it is unincorporated, the address of its principal place of business.
- (f) The company must deliver to the registrar, within the period for filing its accounts and reports for the financial year in question, copies of:
 - (i) The group accounts.

And

 - (ii) Where appropriate the consolidated annual report, together with the auditor's report on them.
- (g) There must be a certified translation of any document delivered to the registrar under (f) above if they are not in English.

The condition described at (a) above is different from the equivalent condition for intermediate parents that are subsidiaries of a UK parent (see 3.1.1.A above) because it requires all subsidiaries of the intermediate parent to be included in the larger consolidation. As discussed at 3.1.1.A above, UK company law states that 'included in the consolidation' means included by way of full consolidation.

The comments at 3.1.1.A above, including Illustration 3-1, apply here also.

The concept of equivalence for the purposes of (b)(ii) and (b)(iv) above is discussed at 3.1.1.C below.

3.1.1.C Equivalence for the purposes of the section 401 exemption for intermediate parents that are subsidiaries of non-UK parents

The exemption from preparing consolidated financial statements for intermediate parents that are subsidiaries of non-UK parents is conditional on the higher parent's consolidated financial statements being drawn up either:

- (a) In a manner equivalent to the requirements of Part 15 of the Act.
 - (b) In accordance with UK-adopted international accounting standards.
- Or
- (a) In accordance with accounting standards which are *equivalent* to such international accounting standards as determined pursuant to the 2007 Commission Regulation.

The Application Guidance to FRS 100 *Application of Financial Reporting Requirements* states that use of the exemptions requires an analysis of whether the framework (or specified elements of it) applied in practice is equivalent to another framework (or specified elements of it). The Application Guidance aims to assist companies and their auditors in this assessment and avoid an overly cautious approach in response to uncertainty about whether exemptions can be used. [FRS 100.AG5].

It is generally accepted that references to equivalence to another framework do not mean compliance with every detail of that framework. Rather, it is necessary to consider whether the basic requirements of that framework are met (such as the requirement to give a true and fair view), without implying strict conformity with each and every provision. A qualitative approach is more in keeping with the deregulatory nature of the exemption than a requirement to consider the detailed requirements on a checklist basis. [FRS 100.AG6].

Whether the condition in (b) above is met is straight-forward to determine, since it is a matter of fact. [FRS 100.AG7].

In relation to condition (c), the test of equivalence with international accounting standards, the UK government has recognised the equivalence to UK-adopted international accounting standards of the following GAAPs. [FRS 100.AG9]. This means that these GAAPs are equivalent to UK-adopted international accounting standards as a matter of law.

Equivalent GAAP

GAAP of Japan

GAAP of the United States of America

GAAP of the People's Republic of China

GAAP of Canada

GAAP of the Republic of Korea

EU-adopted IFRS

IFRS as issued by the IASB

If neither of the conditions (b) or (c) are met, the directors can assess the consolidated financial statements of the higher parent for equivalence with condition (a), the test of equivalence with Part 15. [FRS 100.AG11]. The assessment must include whether those financial statements meet the basic requirements of Part 15 of the Act, in particular the requirement to give a true and fair view. [FRS 100.AG13]. Consolidated financial statements of the higher parent will meet this test if they are intended to give a true and fair view and are prepared: [FRS 100.AG14]

- In accordance with FRS 102.
- Or
- Using GAAPs which are closely related to IFRS accounting standards, subject to the consideration of the effect of any differences from UK-adopted international accounting standards.

Consolidated financial statements of the higher parent prepared in any other manner are assessed for equivalence with Part 15 of the Act based on the particular facts, including the similarities to and differences from the requirements of Part 15 of the Act. However, meeting the condition of equivalence for use of the exemption does not depend on equivalence have been formally granted by the UK government. Directors may make their own assessment of equivalence in determining whether the company qualifies for the exemption. [FRS 100.AG8].

3.1.1.D Exemption from preparing consolidated financial statements for small groups

A company is exempt from the requirement to prepare group accounts if, at the end of its financial year, the company: [s399(2A)(a)]

- Is subject to the small companies regime.
- Or
- Would be subject to the small companies regime but for being a public company.

This exemption is further conditional on the company not being a member of a group which, at any time during the financial year, includes an undertaking falling within section 399(2B) as a member (see Chapter 5 at 3.2 for a list of these ineligible undertakings). [s399(2A), s399(2B)].

Consequently, a parent is exempt from preparing consolidated financial statements if both the parent and the group headed by it qualify as small as set out in section 383 and the parent and the group are considered eligible for the exemption as determined by reference to sections 384 and 399(2A) - (2B). [FRS 102.9.3(a)]. This means that some companies subject to the small companies regime will not be able to take advantage of the exemption.

The detailed criteria for a small company and a small group are discussed in Chapter 5 at 2.

3.1.1.E Exemption due to all subsidiaries excluded from consolidation

A company is exempt from the requirement to prepare group accounts if all of the entity's subsidiaries are either required to be excluded from consolidation by paragraph 9 of section 9 of or permitted to be excluded from consolidation by paragraph 9A of section 9. [FRS 102.9.3(b)]. This exemption is similar to the exemption in the CA 2006 which states that a parent is exempt from the requirement to produce group accounts if, under section 405, all of its subsidiary undertakings could be excluded from consolidation in Companies Act group accounts. [s402].

The circumstances in which subsidiaries can be excluded from consolidation, including differences between the CA 2006 and FRS 102, are discussed at 3.4 below.

3.1.1.F Exemption under statutory framework

This exemption applies to those entities not required to report under the CA 2006. It applies only if preparation of consolidated financial statements is not required by the applicable statutory framework.

[FRS 102.9.3(c)].

3.2 The definition of a subsidiary

The definition of a subsidiary is fundamental to the concept of consolidated financial statements and also to the subject of off-balance sheet financing, i.e., whether or not to include certain assets and liabilities that management might wish to exclude from the consolidated financial statements.

Section 9 states:

Extract from Section 9

9.4 A subsidiary is an entity that is controlled by the parent. Control is the power to govern the financial and operating policies of an entity so as to obtain benefits from its activities.
[FRS 102.9.4]

The definition comprises of two criteria:

- Power over the financial and operating policies.
- And
- Benefits from the entity's activities to be obtained from that power.

Although FRS 102 does not define what financial and operating policies are, they are generally understood to include such areas as budgeting, capital expenditure, treasury management, dividend policy, production, marketing, sales and human resources.

How we see it

Although no guidance is given as to what 'benefits' means, in our view, these are not restricted to gains resulting from the entity's activities such as dividends or increases in the value of the investment in the entity, but could also include benefits, such as cross-selling, received by the investor as a result of its power over the entity.

There is no requirement for the investor to utilise its power and exercise control. The requirement is to have the power to do so. Hence, a passive investor that has the necessary power still controls a subsidiary.

There is a rebuttable presumption that control exists when the parent owns, directly or indirectly, more than half of the voting power of an entity. That presumption can be overcome in exceptional circumstances if it can be clearly demonstrated that such ownership does not constitute control. [FRS 102.9.5]. No examples of such exceptional circumstances are provided, and it appears to be a high hurdle to overcome this presumption.

Control also exists when the parent owns half or less of the voting power, but it has power: [FRS 102.9.5]

- Over more than half of the voting rights by virtue of an agreement with other investors.
- To govern the financial and operating policies of the entity under a statute or an agreement.
- To appoint or remove the majority of the members of the board of directors or equivalent governing body and control of the entity is by that board or body.

Or

- To cast the majority of votes at meetings of the board of directors or equivalent governing body and control of the entity is by that board or body.

These points above extend the control concept from control of a company in a general meeting to control of the board, or control of an entity by other means.

Control can also be achieved by having options or convertible instruments that are currently exercisable. [FRS 102.9.6]. See 3.2.1 below.

Control can also be exercised by having an agent with the ability to direct the activities for the benefit of the controlling entity. [FRS 102.9.6]. See 3.2.2 below.

Control can also exist when the parent has the power to exercise, or actually exercises, dominant influence or control over the undertaking or it and the undertaking are managed on a unified basis. [FRS 102.9.6A]. No further guidance is provided by FRS 102 in respect of dominant influence. However, the CA 2006 states that an undertaking shall not be regarded as having the right to exercise a dominant influence over another undertaking unless it has a right to give directions with respect to the operating and financial policies of that other undertaking which its directors are obliged to comply with whether or not they are for the benefit of that other undertaking. [7 Sch 4(1)].

Entities that are not controlled by voting or similar rights or those that are created with legal arrangements that impose strict requirements over their operations pose special problems. As a result, Section 9 provides guidance on determining who controls these types of entity, described as 'special purpose entities'. See 3.3 below.

For UK companies, the CA 2006 defines an entity as a parent undertaking in relation to another undertaking, a subsidiary undertaking, if it: [s1162(2)]

- Holds a majority of the voting rights in the undertaking.
- Is a member of the undertaking and has the right to appoint or remove a majority of its board of directors.
- Has the right to exercise a dominant influence over the undertaking:
 - By virtue of provisions contained in the undertaking's articles.
 Or
 - By virtue of a control contract.
 Or
- Is a member of the undertaking and controls alone, pursuant to an agreement with other shareholders or members, a majority of the voting rights in the undertaking.

For this purpose, an entity is treated as a member of another undertaking if any of its subsidiary undertakings is a member of that undertaking or if any shares in that other undertaking are held by a person acting on behalf of the undertaking or any of its subsidiary undertakings. [s1162(3)].

An undertaking is also a parent undertaking in relation to a subsidiary undertaking if: [s1162(4)]

- It has the power to exercise, or actually exercises, dominant influence or control over it
- Or
- It and the subsidiary undertaking are managed on a unified basis

A parent undertaking shall be treated as the parent undertaking of undertakings in relation to which any of its subsidiary undertakings are, or are to be treated as, parent undertakings and references to its subsidiary undertakings shall be construed accordingly. [s1162(5)].

Schedule 7 to CA 2006 provides supplementary guidance supporting the definition of a subsidiary.

How we see it

Although there are slight differences in wording emphasis between the CA 2006 definition of a subsidiary and the requirements in FRS 102, in our view, it is unlikely that many conflicts will arise in practice between FRS 102 and the CA 2006 that would require the use of a true and fair override.

3.2.1 Potential voting rights

Control can be achieved by having options or convertible instruments that are currently exercisable. [FRS 102.9.6]. These instruments may be shares, warrants, share call options, debt or equity instruments that are convertible into instruments that have the potential, if exercised or converted, to give the entity power or reduce another party's voting power over the financial and operating policies of another entity.

The existence and effect of potential voting rights must be considered when assessing whether an entity has the power to govern the financial and operating policies of another entity so as to obtain benefits from its activities. When an option to acquire a controlling interest in an entity has not yet been exercised but can be freely exercised by its holder (that is, it could be exercised and, if exercised, would give the holder control), the holder in effect has the power of veto and has the power to govern the entity's financial and operating policies.

Potential voting rights are not currently exercisable or convertible when they cannot be exercised or converted until a future date or until the occurrence of a future event. Illustration 3-2 shows the meaning of currently exercisable.

Illustration 3-2: Potential voting rights - meaning of currently exercisable

An entity (A) holds 40% of another entity (B). It also holds loan notes in B convertible, at A's option, into further shares in B, which if issued would give A a 60% interest in B. A can require conversion of its loan notes into shares at any time on or after the fifth anniversary of their issue.

Until that fifth anniversary occurs, A cannot exercise its conversion rights. Therefore, before that date, they are not currently exercisable and B is not (absent other circumstances) controlled by A and therefore not a subsidiary of A. Once the fifth anniversary has occurred, A's option to convert the loan into shares of B is currently exercisable. Therefore, at that date, A has control over the majority of the voting rights of B, such that B therefore becomes a subsidiary of A at that date.

An entity exercises judgement when determining whether potential voting rights are currently exercisable. A literal reading might suggest that unless the potential voting right is exercisable immediately, the entity ignores the potential voting right when assessing control. In practice, however, many potential voting rights are not exercisable immediately but only after giving notice (e.g., options over the shares of unlisted entities often include a notice period of several days or a week). A short notice period is usually ignored when assessing whether the rights are currently exercisable.

FRS 102 provides no guidance on whether the intention of management or the financial ability to exercise or convert a potential voting right are considerations when assessing whether those rights give control. In the absence of guidance, under the hierarchy in Section 10 *Accounting Policies, Estimates and Errors* an entity could look to the requirements and guidance in adopted IFRS relating to similar issues. In this case, there are two possible sources of reference, IFRS 10 (the extant standard) and IAS 27 (2012) (the standard on which much of Section 9's control model is based). Both IFRS 10 and IAS 27 (2012) are clear that the intention of management should be ignored in assessing whether potential voting rights give control. [IFRS 10.B22, IAS 27(2012).15]. In respect of the financial ability to exercise or convert a potential voting right, IFRS 10 states that the financial ability of an investor to pay the exercise price should be considered when evaluating whether an option is substantive. [IFRS 10.B23(a)]. In contrast, IAS 27(2012) stated that the financial ability to exercise or convert a potential voting right is not considered in assessing control. [IAS 27(2012).15].

3.2.2 Control exercised through an agent

Control can be achieved by having an agent with the ability to direct the activities for the benefit of the controlling entity. [FRS 102.9.6].

The overall relationship between the investor and the agent must be assessed to determine whether the 'agent' is acting as an agent for the controlling entity or as a principal in its own right.

3.2.3 Interests held as trustee or fiduciary, or as security

A reporting entity might hold, as a trustee or fiduciary on behalf of others, an interest in another entity that either on its own or when combined with any interest held on its own account, gives the reporting entity control of the majority of the voting rights in, or the ability to appoint or remove a majority of the members of the board of, the other entity. This raises the question of whether the reporting entity controls that other entity.

How we see it

In our view, interests held in another entity on behalf of others generally do not give a reporting entity control over that other entity.

Control is “the power to govern the financial and operating policies of an entity so as to obtain benefits from its activities” (emphasis added). [FRS 102.9.4]. A trustee or other fiduciary exercises any decision-making powers relating to assets under its management so as to obtain benefits not for itself, but for those on whose behalf it exercises the powers. The CA 2006 states that rights held by a person in a fiduciary capacity shall be treated as not held by that person. Similarly, rights held by a person as nominee for another (if such rights are exercisable only on that other person’s instructions or with that other person’s consent or concurrence), are regarded as held by the other. [7 Sch 6, 7 Sch 7].

Rights attached to shares by way of a security are normally treated as held by the person providing the security if, apart from the ability to exercise them for the purpose of preserving the value of the security, rights are only exercisable upon that person’s instructions. The same applies when shares are held in connection with the granting of loans as part of normal business activities. [7 Sch 8, 7 Sch 9(2), 7 Sch 9(3)].

Rights are treated as held by a parent undertaking if they are held by any of its subsidiary undertakings. [7 Sch 9(1)].

As demonstrated in Illustration 3-3, consolidation is still required if an entity legally owns and controls an investment, even if the risks and rewards have been passed on to a third party. Determining whether an entity controls an investment or merely holds an interest in a fiduciary capacity requires a careful assessment of the facts and circumstances.

Illustration 3-3: Control over investment vehicle by an insurance entity

An insurance entity makes certain investments on behalf of unit-linked contract holders. One of those investments is an interest of more than 50% in an investment fund. The unit-linked contract holders are not the legal owner of the investment in the fund. In addition, the insurance entity is under no obligation to return the shares in the underlying investment to the unit-linked contract holders upon termination of the contract. The insurance entity is the legal owner and the unit-linked contract holders have no direct relationship with (and decision-making powers over) the investment fund.

The unit-linked contracts do not diminish the insurance entity’s ability to control the investment fund. Therefore, the presumption is that the insurance entity consolidates the investment fund unless it can be demonstrated that it does not have control. While the insurance entity holds a matched position of units in the investment fund and unit-linked contracts, it is under no obligation to hold an investment in the units of the investment fund. Conversely, the unit-linked contract holders have no direct legal rights that entitle them to the units in the investment fund that are owned by the insurance entity. In other words, the insurance entity does not hold the units in the investment fund in a fiduciary capacity.

3.2.4 De facto control

De facto control over an entity by a minority shareholder (e.g., a shareholder holding less than a majority of the voting rights) could arise in several ways. A common example is when other shareholders are widely dispersed and when enough of them regularly fail to exercise their rights as shareholders (e.g., to vote at general meetings), such that the minority shareholder wields the majority of votes actually cast.

Although mentioned in the context of intermediate payment arrangements (see 4.5 below), *de facto* control is not explained by FRS 102. The definition of control refers to the power to govern the financial and operating policies of an entity and power is explained as representing the ability to do or effect something, whether actively or passively (see 3.2 above). It follows from the definition of control that it involves the ability to:

- Make decisions without the support or consent of other shareholders.
- And
- Give directions with respect to the operating and financial policies of the entity concerned, with which directions the entity’s directors are obliged to comply.

Accordingly, control does not exist where an investor must obtain the consent of one or more other shareholders in order to govern the operating and financial policies of the investee.

To have the ability to govern the financial and operating policies of an entity, an investor must be able to hold the management of the entity accountable. It is therefore unlikely that *de facto* control over an entity can exist unless the investor has the power to appoint and remove a majority of its governing body (i.e., normally the board of directors in the case of a company). This power is normally exercisable by holders of the voting shares in a general meeting.

How we see it

In our view, FRS 102 does not necessarily require consolidation of entities subject only to *de facto* control, unless the investor can demonstrate it has the ability to govern the financial and operating policies of an entity.

In practice, *de facto* control is most likely to be evidenced where an investor with less than a 50% voting interest can have its chosen candidates (re)nominated for election to an entity's board of directors and its votes exceed 50% of the votes typically cast in the entity's election of directors. For example, if typically only 70% of the eligible votes are cast on resolutions for the appointment of directors, a minority holding of 40% might give *de facto* control if the remaining shares are widely held (for example, no party has an interest of sufficient size either of itself or with a small number of others, to block decisions).

It is highly unlikely that *de facto* control exists when a minority voting interest represents less than 50% of votes typically cast in elections of directors. For example, a voting interest of 30% where, typically, 70% of the eligible votes are cast in elections. As control is unilateral, when assessing whether *de facto* control exists, the entity does not consider the possibility that other shareholders will cast their votes in the same way as the entity.

The determination of whether *de facto* control exists is based on facts and circumstances. It is unlikely to be sufficiently certain that *de facto* control exists until actions taken provide evidence of control, i.e., control must be actively exercised. In general, the more the legal or contractually-based powers held in relation to an entity fall short of 50% of the total powers, the greater is the need for evidence of actively exercised *de facto* control.

3.3 Special purpose entities (SPEs)

FRS 102 describes an SPE:

Extract from Section 9

9.10 An entity may be created to accomplish a narrow objective (e.g., to effect a lease, undertake research and development activities, securitise financial assets or facilitate employee shareholdings under remuneration schemes, such as Employee Share Ownership Plans (ESOPs)). Such a special purpose entity (SPE) may take the form of a corporation, trust, partnership or unincorporated entity. Often, SPEs are created with legal arrangements that impose strict requirements over the operations of the SPE. [FRS 102.9.10]

The requirements for SPEs do not apply to a post-employment benefit plan or other long-term employee benefit plans to which Section 28 *Employee Benefits* applies. [FRS 102.9.12].

An intermediate payment arrangement, a type of SPE, is discussed at 4.5 below.

How we see it

In our view, the description of an SPE is broader than a separate legal entity. For example, a parcel of 'ring fenced' assets and liabilities within a larger legal entity, such as a cell in a protected cell entity, might be an SPE. A portfolio of securitised assets and the related borrowings might also be an SPE.

The sponsor (or entity on whose behalf the SPE was created) frequently transfers assets to the SPE, obtains the right to use assets held by the SPE or performs services for the SPE, while other parties ('capital providers') may provide funding to the SPE. An entity that engages in transactions with an SPE (frequently the creator or sponsor) may in substance control the SPE. For example, an entity might have a beneficial interest in an SPE, which may take the form of a debt instrument, an equity instrument, a participation right, a residual interest or a lease. Some beneficial interests provide the holder with a fixed or stated rate of return, while others give the holder rights or access to other future economic benefits of the SPE's activities. In most cases, the creator or sponsor (or the entity on whose behalf the SPE was created) retains a significant beneficial interest in the SPE's activities, even though it may own little or none of the SPE's equity.

Unless a parent is not required to prepare consolidated financial statements (see 3.1 above), a parent entity prepares consolidated financial statements that include the entity and any SPEs that are controlled by that entity. In addition to the circumstances described at 3.2 above, the following circumstances may indicate that an entity controls an SPE (this is not an exhaustive list): [FRS 102.9.11]

- The activities of the SPE are being conducted on behalf of the entity according to its specific business needs.
- The entity has ultimate decision-making powers over the activities of the SPE even if the day-to-day decisions have been delegated.
- The entity has rights to obtain the majority of the benefits of the SPE and therefore may be exposed to risks incidental to the activities of the SPE.

And

- The entity retains the majority of the residual or ownership risks related to the SPE or its assets.

Activities are likely to be conducted on behalf of the entity according to its specific business needs when the reporting entity created the SPE, directly or indirectly.

Day to day decisions might be delegated by, for example, setting up an auto pilot mechanism. Ultimate decision-making powers might still be retained in this circumstance by, for example, having the power to unilaterally dissolve the SPE or the power to change, or veto proposed changes to, the SPE's charter or byelaws.

Rights to obtain benefits and exposure to risks incidental to the activities of the SPE might arise through statute, contract, agreement, trust deed or any other scheme, arrangement or device. Such rights to benefits in an SPE might be indicators of control when they are specified in favour of an entity that is engaged in transactions with an SPE and that entity stands to gain those benefits from the financial performance of the SPE.

Residual or ownership risks might arise through the guarantee of a return or credit protection directly or indirectly through the SPE to outside investors who provide substantially all of the capital to the SPE. As a result of the guarantee, the entity could retain residual or ownership risks and the investors are, in substance, only lenders because their exposure to gains and losses is limited.

No relative weight is given to the various indicators when determining whether an SPE is consolidated. However, control of an entity comprises the ability to govern the entity's financial and operating policies so as to obtain benefits from the activities of the entity. [FRS 102.9.4]. The ability to control decision-making alone is not sufficient to establish control, it must be accompanied by the objective of obtaining benefits from the entity's activities. For example, a third party such as a charitable trust might own all the voting rights in an SPE. However, if the trust does not obtain any real benefit from the SPE, (which is typically the case) this indicates that the trust does not control the SPE.

3.3.1 Benefits need not necessarily be financial

As discussed at 3.3 above, the first indicator of an SPE is that its activities are being conducted on behalf of the reporting entity according to its specific business needs.

How we see it

In our view, this indicator does not necessarily require that the reporting entity has any direct financial benefit. The 'benefit' might be the avoidance of negative outcomes, or operational benefits.

3.3.2 Majority of the benefits and risks

The third and fourth indicators at 3.3 above refer to the majority of benefits and risks.

How we see it

In our view, the reference to the majority of benefits and risks means the majority of those likely to arise in practice, rather than the majority of all theoretically possible benefits and risks.

This is demonstrated by Illustration 3-4.

Illustration 3-4: Assessment of majority of benefits and risks of an SPE

An SPE is established to undertake a securitisation of financial assets. The SPE has only nominal equity, but issues £1,000 of debt: £100 subordinated debt to the reporting entity and £900 senior debt to a financial institution. The SPE buys £1,000 of receivables from the reporting entity.

The terms of the two classes of debt have the effect that the reporting entity bears the first £100 of any credit losses and the financial institution the remainder. This could suggest that the financial institution is bearing the majority of the risks, since it has £900 of the possible £1,000 bad debt risk. However, if bad debt risk falls within a typical range of, say, 5% to 7%, all the losses that are likely to occur will be borne by the reporting entity as the holder of the subordinated debt. Therefore, the reporting entity bears the majority of residual or ownership risks of the SPE.

3.3.3 Subsequent reassessment of control of an SPE

FRS 102 is silent on whether an entity reassesses control of an SPE after inception.

How we see it

Ordinarily, control of an SPE does not change after inception. However, in our view, a reporting entity reassesses whether it continues to control an SPE when:

(a) There is a change in the contractual arrangements between the parties to the SPE.

Or

(b) Any one of the parties takes steps to strengthen its position and, in doing so, acquires a greater level of control.

Reassessment of which party controls an SPE requires judgement, each situation is assessed based on its facts and circumstances.

Illustration 3-5: Action by the liquidity provider to an SPE triggers reassessment of control

An SPE experiences a period of financial difficulty in which commercial paper cannot be reissued for longer than a certain period. The SPE's governing agreement requires the assets to be liquidated in this circumstance. The liquidity provider, knowing that a sale of the assets in that difficult environment is likely to result in losses, decides to extend the life of the structure by buying a new issue of commercial paper. This action was not anticipated in the original agreement between the SPE and the liquidity provider and might indicate that the liquidity provider has changed the relative contractual positions of the parties to the SPE and taken control of it.

So long as the initial control assessment is not called into question (e.g., because it was based on incomplete or inaccurate information), subsequent changes in the relationship due to changes in risk profile or market events do not necessarily indicate a transfer of control between the parties. For example, reassessment of control is not necessarily triggered by:

- Impairment of the assets owned by an SPE.

Or

- Losses incurred by an SPE exceeding the capital provided to it (such that the residual risk now lies with another party, for example the SPE sponsor).

However, when events like these occur, the party bearing the residual risk often takes steps to protect its position, which in turn might trigger a reassessment of whether that party controls, and therefore consolidates, the SPE.

3.3.4 Securitisation transactions

SPEs are commonly found in, but are not unique to, the financial services sector, where they are used as vehicles for securitisation of financial assets such as mortgages or credit card receivables. The effect of these requirements combined with the derecognition provisions of Section 11 might be that an asset is not derecognised. This is because, although a securitisation transaction might qualify as a sale of the financial asset (which is, in principle, derecognised), the 'buyer' is an SPE set up by the entity which sold the financial asset. Therefore, the asset is immediately re-recognised through consolidation of the SPE.

3.4 Subsidiaries excluded from consolidation

In general, a parent consolidates all subsidiaries in its consolidated financial statements. However, there are various circumstances in which it is appropriate not to consolidate particular subsidiaries and instead either deal with them in some other manner or exclude them from the consolidated financial statements altogether.

The CA 2006 permits subsidiaries to be excluded from consolidation on certain grounds. [s405]. Within the constraints of the CA 2006, FRS 102 requires exclusion from consolidation on certain grounds and interprets how the CA 2006 is to be applied.

A subsidiary is excluded from consolidation when: [FRS 102.9.9]

- Severe long-term restrictions substantially hinder the exercise of the rights of the parent over the assets or management of the subsidiary (see 3.4.1 below).
- Or
- The interest in the subsidiary is held exclusively with a view to subsequent resale and the subsidiary has not previously been consolidated in the consolidated financial statements prepared in accordance with FRS 102 (see 3.4.2 below).

In addition, aligning FRS 102 with the identical exclusion permitted by section 405(2) of the CA 2006. [s405(2), FRS 102.9.9A].

Extract from Section 9

9.9A A subsidiary may be excluded from consolidation when its inclusion is not material for the purpose of giving a true and fair view (but two or more subsidiaries may be excluded only if they are not material taken together).

The CA 2006 permits subsidiaries to be excluded from consolidation in extremely rare circumstances when the information necessary for the preparation of group accounts cannot be obtained without disproportionate expense or undue delay. [s405(3)(b)]. However, FRS 102 does not permit a subsidiary to be excluded for this reason alone unless its inclusion is not material (individually or collectively for more than one subsidiary) for the purpose of giving a true and fair view in the context of the group. [FRS 102.9.8A]. Therefore, in this scenario, exclusion is permitted only on materiality grounds as described in paragraph 9A of section 9.

A subsidiary is not excluded from consolidation because its business activities are dissimilar to those of other entities within the consolidation. In the opinion of the FRC, relevant information is provided by consolidating such subsidiaries and disclosing additional information in the consolidated financial statements about the different business activities of subsidiaries. [FRS 102.9.8].

3.4.1 Subsidiaries excluded from consolidation due to severe long-term restrictions

A subsidiary excluded from consolidation because of severe long-term restrictions is accounted for in the consolidated financial statements as if it is an investment in a subsidiary in separate financial statements unless the parent exercises significant influence over the subsidiary, in which case it is treated as an associate. [FRS 102.9.9B].

When the investment excluded from consolidation is a subsidiary, the parent has an accounting policy choice (see 4.2 below) to measure the subsidiary at: [FRS 102.9.26]

- Cost less impairment.
- Fair value with changes in fair value recognised through OCI (or profit or loss, to the extent that it reverses revaluation movements in profit or loss or where the revaluation reserve would otherwise be negative).
- Or
- Fair value with changes in fair value recognised in profit and loss.

If the investment excluded from consolidation is treated as an associate, the equity method is used in the consolidated financial statements.

How we see it

In our view, consistent with the requirements for disposal when control is lost (see 3.6.3 below), the initial cost of the investment in the subsidiary in these circumstances is the carrying amount of the net assets (and goodwill) attributable to the investment on the date that the severe long term restrictions affected the parent's exercise of its rights over the subsidiary.

A true and fair override might be required for subsidiaries excluded from consolidation that are held at fair value through profit or loss as this accounting is not permitted by the CA 2006 in circumstances in which it would not be permitted by IFRS 10. [FRS 102.A3.17, 1 Sch 36].

FRS 102 does not provide any examples of situations in which a subsidiary might be subject to severe long-term restrictions that hinder the exercise of the parent's rights over the assets or management of the subsidiary. However, examples might include:

- Insolvency or administration of the subsidiary.
 - Veto powers held by a third party (e.g., powers held by a lender due to covenant breaches).
- And
- The existence of severe restrictions over remittance of funds (e.g., dividends) if they prevent the parent from obtaining benefits of the subsidiary.

FRS 102 provides no guidance as to the accounting if the severe long-term restrictions cease and the parent's rights are restored.

How we see it

In our view, consistent with the guidance contained in previous UK GAAP, when the severe long-term restrictions cease and the parent's rights are restored, the amount of the unrecognised profit or loss that accrued during the period of restriction for that subsidiary should be separately disclosed in the consolidated profit and loss account of the period in which control is resumed. Similarly, any amount previously charged for impairment that needs to be written back in profit or loss in the period in which control is resumed, as a result of restrictions ceasing, is separately disclosed.

This is different from the accounting for a subsidiary in which control has been lost whereby the regaining of control would be treated as a business combination achieved in stages (a step acquisition) under Section 19 *Business Combinations and Goodwill* (see Chapter 22 at 3.11).

3.4.2 Subsidiaries held exclusively with a view to subsequent resale

A subsidiary held exclusively with a view to subsequent resale is an interest: [FRS 102 Appendix I]

- For which a purchaser has been identified or is being sought, and which is reasonably expected to be disposed of within approximately one year of its date of acquisition.
 - That was acquired as a result of the enforcement of a security, unless the interest has become part of the continuing activities of the group or the holder acts as if it intends the interest to become so.
- Or
- Which is held as part of an investment portfolio (see 3.4.2.A below).

For a subsidiary to be classified as held exclusively with a view to subsequent resale it must not have been consolidated previously in the consolidated financial statements prepared under FRS 102. [FRS 102.9.9(b)].

A subsidiary excluded from consolidation on the grounds that is held exclusively for resale is accounted for in the consolidated financial statements as follows: [FRS 102.9.9C]

- A subsidiary held as part of an investment portfolio is measured at fair value with changes in fair value recognised in profit or loss.
- And
- A subsidiary not held as part of an investment portfolio is measured using an accounting policy choice in accordance with paragraph 26 of section 9 (i.e., as if it was an investment in a subsidiary in separate financial statements, see 4.2 below).

A true and fair override might be required for subsidiaries excluded from consolidation that are held at fair value through profit or loss (whether or not these are subsidiaries held as part of an investment portfolio) as this accounting is not permitted by the CA 2006 in circumstances in which it would not be permitted by IFRS 10. [FRS 102.A3.17, 1 Sch 36].

FRS 102 provides no guidance if a subsidiary is no longer considered to be held exclusively with a view to subsequent resale.

How we see it

In our view, if a subsidiary is no longer considered to be held exclusively with a view to subsequent resale, it is consolidated from the date of the change in circumstances, using the fair values of the identifiable assets and liabilities of the subsidiary at the date of the original acquisition with a catch-up adjustment to reflect subsequent movements up to the date that the subsidiary is no longer held exclusively with a view to subsequent resale. This is because the subsidiary has always been controlled by the parent from the date of the original acquisition. This is also consistent with the requirement in the Regulations that identifiable assets and liabilities acquired are included in the consolidated balance sheet at their fair values at the date of the acquisition.

3.4.2.A Subsidiary held as part of an investment portfolio

A subsidiary is held as part of an investment portfolio if its value to the investor is through fair value as part of a directly or indirectly held basket of investments rather than as media through which the investor carries out business. A basket of investments is indirectly held if an investment fund holds a single investment fund in a second investment fund which, in turn, holds a basket of investments. In some circumstances, it may be appropriate for a single investment to be considered an investment portfolio, for example when an investment fund is first being established and is expected to acquire additional investments. [FRS 102 Appendix I].

The concept that an interest held as part of an investment portfolio meets the definition of an interest held exclusively with a view to subsequent resale is an interpretation of company law. The Basis for conclusions which accompanies FRS 102 explains it as a means for investment entities to avoid having to prepare EU-adopted IFRS in order to be exempt from consolidating their investments. [FRS 102.BC.B9.6].

The entities most likely to be affected by this exception are:

- Subsidiaries of private equity or venture capital funds.
- And
- Investment fund subsidiaries of banks, insurers, asset managers and property managers.

The investment portfolio exception from consolidation is considerably different from the investment entity exception in IFRS 10. It applies to an individual subsidiary rather than to a parent, contains no requirement for the parent to have an exit strategy for its investment portfolio and the definition explicitly refers to indirectly held investments.

How we see it

It is likely that the investment portfolio exception from consolidation will have a wider application than the investment entity exception in IFRS 10 and there could be considerable diversity in practice, especially in the financial services industry, as to what is considered to be an interest in an investment portfolio.

The last sentence of the definition of a subsidiary 'held as part of an investment portfolio' clarifies that, in some circumstances (e.g., when an investment fund is first established), it might be appropriate for a single investment to be considered an investment portfolio. This clarification is consistent with IFRS 10, which does not preclude an entity from meeting the definition of an investment entity simply because it has only one investment. [IFRS 10.B85P].

Many investment group structures have intermediate holding companies that are established for tax optimisation purposes or to provide investment-related services and activities. There is no explicit guidance as to whether such intermediate holding companies are treated as interests held as part of an investment portfolio (and therefore measured at fair value through profit or loss) or whether they are not considered as such (and therefore consolidated). For a subsidiary to be held as part of an investment portfolio, FRS 102 requires the value of the interest to the investor to be through fair value, rather than as a media through which the investor carries out business.

How we see it

In our view, if an entity is holding an investment in a subsidiary as a means of carrying on business, it appears not to be holding it with a view to resale. Similarly, if an intermediate holding company is performing substantial investment-related services and activities it appears not to be held as part of an investment portfolio. When an intermediate holding company within an investment group structure is considered to be a media through which the parent carries on business it would be consolidated by the parent, but the parent would look through the intermediate holding company and account for the underlying investments in the subsidiaries of the intermediate holding company as indirectly held portfolio investments.

3.4.3 Limited partnerships

A limited partnership is made up of one or more 'general partners' and one or more 'limited partners'. Limited partnerships that are 'qualifying partnerships' are required to prepare statutory financial statements in accordance with the CA 2006. FRS 102 has no specific consolidation guidance for limited partnerships. Under the Limited Partnership Act 1907, a limited partner is prevented from taking an active role in the affairs of the entity. Therefore, when a company is the sole general partner of a limited partnership, the limited partnership might meet the definition of a subsidiary (see 3.2 above). However, the general partner's investment in a limited partnership is often only nominal in amount and the funding is often provided by the limited partners.

How we see it

In our view, determining whether the general partner consolidates a limited partnership requires judgement and consideration of the facts and circumstances. Guarantees given by the limited partnership which might, if called, fall due to the general partner might indicate that consolidation is appropriate if the general partner is subject to the majority of risks of the partnership. Conversely, if the general partner can be dismissed without cause by the limited partner, this might indicate that consolidation is not appropriate.

3.5 Consolidation procedures

FRS 102 describes the process of consolidation: [FRS 102.9.13]

Extract from Section 9

- 9.13** The consolidated financial statements present financial information about the group as a single reporting entity. In preparing consolidated financial statements, an entity shall:
- (a) combine the financial statements of the parent and its subsidiaries line by line by adding together like items of assets, liabilities, equity, income and expenses;
 - (b) eliminate the carrying amount of the parent's investment in each subsidiary and the parent's portion of equity of each subsidiary;
 - (c) measure and present non-controlling interest in the profit or loss of consolidated subsidiaries for the reporting period separately from the interest of the owners of the parent; and
 - (d) measure and present non-controlling interest in the net assets of consolidated subsidiaries separately from the parent shareholders' equity in them. Non-controlling interest in the net assets consists of:
 - (i) the amount of the non-controlling interest's share in the identifiable net assets (consisting of the identifiable assets, liabilities and contingent liabilities as recognised and measured in accordance with Section 19 *Business Combinations and Goodwill*, if any) at the date of the original combination; and
 - (ii) the non-controlling interest's share of changes in equity since the date of the combination or other acquisition.

The proportions of profit or loss and changes in equity allocated to owners of the parent and to the NCI are determined on the basis of existing ownership interests and do not reflect the possible exercise or conversion of options or convertible instruments. [FRS 102.9.14]. Therefore, although a parent might have control of an entity through the ability to exercise a currently exercisable option (see 3.2.1 above) the parent's and NCI's allocation of profit and loss and equity are not affected until the option is exercised. Illustration 3-6 demonstrates this principle.

Illustration 3-6: Potential voting rights

Entities A and B hold 40% and 60%, respectively, of the equity of Entity C. A also holds a currently exercisable option over one third of B's shareholding in C, which, if exercised, would give A a 60% interest in C. This would, absent exceptional circumstances, lead to the conclusion that C is a subsidiary of A. However, in preparing its consolidated financial statements, A attributes 60% of the results and net assets of C to NCI.

The following is discussed in more detail below:

- Intragroup balances and transactions - see 3.5.1
- Uniform reporting dates and reporting period - see 3.5.2
- Uniform accounting policies - see 3.5.3
- Consolidating foreign operations - see 3.5.4

Accounting for NCI is discussed further at 3.7 below.

3.5.1 Intragroup balances and transactions

Intragroup balances and transactions, including income, expenses and dividends, are eliminated in full. Profits and losses resulting from intragroup transactions that are recognised in assets, such as inventory and property, plant and equipment, are also eliminated in full. [FRS 102.9.15]. Illustration 3-7 below shows this.

Illustration 3-7: Eliminating intragroup transactions

Entity A holds a 75% interest in Entity B. A sold inventory with a cost of £100 to B for £200 (i.e., a profit of £100). B held the inventory at the reporting date.

As well as the intragroup sale between A and B, the unrealised profit of £100 is eliminated from the group's point of view in consolidation (the consolidation adjustment is DR turnover in A £200, CR inventory in B £100, CR cost of sales in A £100). The profit from the sale of inventory of £100 is reversed against the group profit or loss. As the parent made the sale, no amount of the eliminated profit is attributed to the NCI.

If the fact pattern were reversed such that B sold inventory to A, and A held the inventory at reporting date, the same consolidation journal entries above would be reversed in the consolidated financial statements. However, in this instance, as the subsidiary made the sale, £25 of the eliminated profit (i.e., the NCI's 25% share of the £100 profit) would be allocated to the NCI.

If the inventory held by B had been sold to a third party for £300 before the end of the reporting period (resulting in a profit in A of £100 for the sale to B at £200 and a profit in B of £100 for the sale to a third party at £300) no intragroup elimination of profit is required. The group has sold an asset with a cost of £100 for £300 creating a profit to the group of £200. In this case, the intra-group elimination is limited to the sale between A and B (Dr turnover in A £200, Cr cost of sales in B £200).

Even though losses on intragroup transactions are eliminated in full, they might still indicate an impairment under Section 27 *Impairment of Assets* that requires recognition in the consolidated financial statements. [FRS 102.9.15]. For example, if a parent sells a property to a subsidiary at fair value and this is lower than the carrying amount of the asset, the transfer might indicate that the property (or the cash-generating unit to which that property belongs) is impaired in the consolidated financial statements, unless the asset's value-in-use is sufficient to support the higher carrying value. See Chapter 29 at 4.1.

Intragroup transactions give rise to a tax expense or benefit in the consolidated financial statements under Section 29 *Income Tax* which applies to timing differences that arise from the elimination of profits and losses arising from intragroup transactions. [FRS 102.9.15]. See Chapter 31 at 6.1.

3.5.2 Uniform reporting dates and reporting period

The directors of a parent company have an obligation under the CA 2006 to secure that, except where in their opinion there are good reasons against it, the financial year of each of its subsidiary undertakings coincides with the company's own financial year. [s390(5)].

Similarly, FRS 102 requires that the financial statements of the parent and its subsidiaries are prepared at the same reporting date and for the same reporting period, unless it is impracticable to do so. [FRS 102.9.16]. Impracticability is discussed in Chapter 9 at 3.3.2.

When the reporting date and reporting period of a subsidiary are not the same as the parent's reporting date and reporting period, the consolidated financial statements must be made up from: [FRS 102.9.16]

- The financial statements of the subsidiary as of its last reporting date before the parent's reporting date, adjusted for the effects of significant transactions or events that occur between the date of those financial statements and the date of the consolidated financial statements, provided that the reporting date is no more than three months before that of the parent.

Or

- Interim financial statements prepared by the subsidiary as at the parent's reporting date.

This is consistent with the requirements of the Regulations. [6 Sch 2(2)].

3.5.3 Uniform accounting policies

Consolidated financial statements are prepared using uniform accounting policies for like transactions and other events and conditions in similar circumstances. Therefore, if a member of the group uses accounting policies other than those adopted in the consolidated financial statements for like transactions and events in similar circumstances, appropriate adjustments are made to its financial statements in preparing the consolidated financial statements. [FRS 102.9.17].

However, as an exception to this rule, using non-uniform accounting policies for insurance contracts (and related deferred acquisition costs and related intangible assets, if any) is permitted if this is a continuation of an accounting policy used under previous GAAP. [FRS 103.2.6(c)].

Other than for insurance contracts, non-uniform accounting policies are not permitted (unless the directors invoke a true and fair override) by FRS 102. The Regulations are more lenient and allow non-uniform accounting policies if it appears to the directors that there are special reasons for it and these reasons and their effect are disclosed, but an entity must comply with both FRS 102 and the Regulations. [6 Sch 3(2)].

3.5.4 Consolidating foreign operations

Section 9 does not address how to consolidate subsidiaries that are foreign operations. Section 30 *Foreign Currency Translation* states that when a group contains individual entities with different functional currencies, the items of income and expense and financial position of each entity are expressed in a common currency so that consolidated financial statements may be presented. [FRS 102.30.17].

How we see it

No guidance is given as to whether the financial statements of a foreign operation are translated directly into the presentation currency of the group (known as the direct method) or translated into the functional currency of any intermediate parent and then translated into the presentation currency of the group (known as the step-by-step method). In our view, either method is acceptable provided it is applied consistently.

Normal consolidation procedures are followed, such as the elimination of intragroup balances and intragroup transactions, when consolidating a foreign operation. However, an intragroup monetary asset, whether short-term or long-term, cannot be eliminated against the corresponding intragroup liability (or asset) without reflecting the foreign exchange gain or loss in the consolidated financial statements in either profit or loss or OCI as appropriate. [FRS 102.30.22].

3.6 Acquisitions and disposals of subsidiaries

In consolidated financial statements, the income and expenses of a subsidiary are included from the acquisition date until the date on which the parent ceases to control the subsidiary (except when a business combination is accounted for using the merger accounting method (see Chapter 22 at 5.3) and certain public benefit entity combinations accounted for under Section 34 *Specialised Activities*. [FRS 102.9.18].

A parent might cease to control a subsidiary with or without a change in absolute or relative ownership levels, for example, when a subsidiary becomes subject to the control of a government, court, administrator or regulator. [FRS 102.9.18]. Deemed disposals that could result in loss of control also arise for other reasons, including when:

- A group does not take up its full allocation in a rights issue by a subsidiary in the group.

- A subsidiary declares scrip dividends that are not taken up by its parent, so that the parent's proportional interest is diminished.
 - Another party exercises its options or warrants issued by a subsidiary.
 - A subsidiary issues shares to a third party.
- And
- A contractual arrangement by which a group obtained control over a subsidiary is terminated or changed.

Illustration 3-11 at 3.6.3.A below shows an example of a deemed disposal.

The Basis for conclusions states that FRS 102's requirements for acquisitions and disposals of subsidiaries in consolidated financial statements are based on the 2004 version of IFRS 3. These are considered to provide a coherent model for increases and decreases in stakes held in another entity that is consistent with UK company law. [FRS 102.BC.B9.11].

3.6.1 Accounting for an acquisition where control is achieved in stages

When a parent acquires control of a subsidiary in stages, the requirements of paragraphs 11A and 14 of section 9 are applied at the date control is achieved. [FRS 102.9.19B]. Therefore, when control is achieved in stages, the cost of the business combination is the aggregate of the fair values of the assets given, liabilities assumed and equity instruments issued by the acquirer at the date of each transaction in the series. [FRS 102.19.11A]. See Chapter 22 at 3.11.

3.6.2 Accounting for an increase in a controlling interest in a subsidiary

When a parent increases its controlling interest in a subsidiary, the identifiable assets and liabilities and a provision for contingent liabilities of the subsidiary are not revalued to fair value and no additional goodwill is recognised at the date the controlling interest is increased. [FRS 102.9.19C].

The increase is accounted for as a transaction between equity holders and the NCI is adjusted to reflect the change in the parent's interest in the subsidiary's net assets and any difference between that amount and the fair value of the consideration paid is recognised directly in equity and attributed to equity holders of the parent. No gain or loss is recognised on these changes in equity, nor any change in the carrying amounts of assets (including goodwill) or liabilities. [FRS 102.9.19D, FRS 102.9.20A]. Illustration 3-8 shows the accounting for increasing a controlling interest in a subsidiary.

Illustration 3-8: Increase in controlling interest in subsidiary

A parent with a 70% controlling interest in a subsidiary purchases an additional 20% interest in that subsidiary for cash proceeds of £250. Following the purchase, the parent has a 90% controlling interest in the subsidiary. The carrying value of the subsidiary's net assets excluding goodwill is £450 and there is £50 of goodwill remaining from the subsidiary's acquisition.

The parent accounts for the acquisition of the additional 20% interest as follows:

	Dr	Cr
Cash		£250
NCI (20% of £450)	£90	
Equity	£160	

The guidance on reattribution of items of OCI and accounting for transaction costs discussed at 3.6.4 below applies here also.

3.6.3 Accounting for a disposal of a subsidiary when control is lost

When a parent ceases to control a subsidiary, a gain or loss is recognised in profit or loss calculated as the difference between: [FRS 102.9.18A]

- The proceeds from the disposal (or the event that resulted in the loss of control).
- And
- The proportion of the carrying amount of the subsidiary's net assets, including any related goodwill, disposed of (or lost) as at the date of disposal (or date control is lost).

The gain or loss includes amounts that have been recognised in OCI in relation to that subsidiary, where those amounts are required to be reclassified to profit or loss upon disposal in accordance with other sections of FRS 102. This is commonly referred to as recycling. Amounts that are not required to be reclassified to profit or loss upon disposal of the related assets or liabilities are transferred directly to retained earnings. [FRS 102.9.18B].

The cumulative amount of any exchange differences that relate to a foreign subsidiary recognised in equity in accordance with Section 30 is not recognised in profit or loss as part of the gain or loss on disposal of the subsidiary and is transferred directly to retained earnings. [FRS 102.9.18A].

FRS 102 permits only the following unrealised gains and losses recognised in OCI to be recycled through profit or loss upon disposal of a subsidiary:

- Unrealised gains and losses on available-for-sale (AFS) investments (if the entity has elected to use IAS 39 *Financial Instruments: Recognition and Measurement* for recognition and measurement of financial instruments). [FRS 102.11.2(b), FRS 102.12.2(b)].
- Unrealised gains and losses on debt instruments at fair value through OCI (if the entity has elected to use IFRS 9 for recognition and measurement of financial instruments). [FRS 102.11.2(c), FRS 102.12.2(c)].
- Unrealised gains and losses on cash flow hedges (except for the portion attributable to a hedge of a net investment in a foreign operation). [FRS 102.12.23, FRS 102.12.24].

And

- Unrealised gains and losses arising from the application of shadow accounting for insurance contracts. [FRS 103.2.11].

No other unrealised gains and losses that have been recognised in OCI are recycled upon disposal of a subsidiary.

How we see it

FRS 102 does not specify the amount to be recycled when there is a disposal of the NCI in a subsidiary. One approach is to recycle only the parent's interest in the relevant amount recognised in OCI. An alternative is to recycle the full amount recognised in OCI, including the NCI's interest.

Illustration 3-9 shows the two approaches:

Illustration 3-9: Recycling OCI when there is an NCI in the subsidiary disposed of

A parent sells its entire 90% interest in a subsidiary to a third party for a cash consideration of £31,000.

At the date of disposal, the net assets of the subsidiary were £30,000. Included within those net assets, the subsidiary had recognised, in its own financial statements, derivative financial assets of £3,200 (designated in a cash flow hedge) that have resulted in a cash flow hedge reserve of £3,000.

In the parent's consolidated financial statements, the parent has recognised 90% of this reserve in an equivalent equity reserve balance, with the 10% attributable to the NCI included as part of the carrying amount of the NCI.

The impact of the subsidiary on the statement of financial position included in the parent's consolidated financial statements immediately prior to the disposal is as follows:

	Dr	Cr
Net assets	£30,000	
Equity attributable to the parent:		
Cash flow hedge reserve		£2,700
Other equity		£24,300
NCI		£3,000

Recycling the parent's interest only in the cash flow hedge reserve, the impact of the disposal on the parent's consolidated accounts is as follows:

	Dr	Cr
Cash proceeds	£31,000	
Derecognition of NCI	£3,000	
Derecognition of net assets of subsidiary		£30,000
Reserves reclassified to profit or loss:		
Cash flow hedge reserve	£2,700	
Gain on disposal attributable to parent		£6,700

Using the alternative approach, the entire cash flow hedge reserve including NCI component (total £3,000) is recycled, with the £300 NCI portion allocated to NCI profit (not profit or loss attributable to the parent). Other entries remain as shown above.

3.6.3.A Loss of control with a retained interest

If an entity ceases to be a subsidiary but the former parent continues to hold:

- An investment that is not an associate or a jointly controlled entity, that investment is accounted for as a financial asset in accordance with Section 11 or Section 12 (see Chapter 13) from the date the entity ceases to be a subsidiary.
- An associate, it is accounted for in accordance with Section 14 (see Chapter 17).

Or

- A jointly controlled entity, it is accounted for in accordance with Section 15 (see Chapter 18).

The carrying amount of the net assets (and goodwill) attributable to the subsidiary at the date that control is lost is regarded as cost on initial measurement of the financial asset, investment in associate or jointly controlled entity, as appropriate. In applying the equity method to investments in associate or jointly controlled entities as required above, the requirements to recognise implicit goodwill and fair value adjustments (see Chapter 17 at 3.3.1.A) are not applied. [FRS 102.9.19].

When the retained interest is a financial asset measured at fair value through profit or loss, an immediate gain or loss might arise as a result of remeasurement to fair value, as shown in Illustration 3-10 below:

Illustration 3-10: Disposal of a subsidiary

A parent sells an 85% interest in a wholly owned subsidiary as follows:

- After the sale the parent accounts for its remaining 15% interest at fair value as an other financial instrument under Section 12
- The subsidiary did not recognise any amounts in OCI
- Net assets of the subsidiary before the disposal including goodwill are £500
- Cash proceeds from the sale of the 85% interest are £750

The parent accounts for the disposal of the 85% interest as follows:

	Dr	Cr
Other financial instrument (15% of the net assets before disposal of £500)	£75	
Cash	£750	
Net assets of the subsidiary derecognised (summarised)		£500
Gain on loss of control of subsidiary		£325

The gain recognised on the loss of control of the subsidiary is calculated as follows:

Cash proceeds on disposal of 85% interest	£750
Carrying amount of 85% interest (85% × £500)	(£425)
	<u>£325</u>

In this example, the cost on initial measurement of the financial instrument is not its fair value. Therefore, when that financial instrument is subsequently measured at fair value, there will be a 'Day 2' gain or loss as the cost of the investment is adjusted to fair value.

A deemed disposal that results in loss of control of a subsidiary is accounted for as a regular disposal. This is shown in Illustration 3-11 below.

Illustration 3-11: Deemed disposal through share issue by subsidiary

A parent entity P owns 600,000 of the 1,000,000 shares issued by its subsidiary S, giving it a 60% interest. The carrying value of S's net identifiable assets in the consolidated financial statements of P is £120 million. The NCI is £48 million (40% of £120 million). In addition, goodwill with a carrying value of £15 million remains from the acquisition.

Subsequently, S issues 500,000 shares to a new investor for £80 million. As a result, P's 600,000 shares now represent 40% of the 1,500,000 shares issued by S in total and S becomes an associate of P.

This results in a gain of £3 million on disposal, calculated as follows:

	Dr	Cr
Interest in S ⁽¹⁾	£90m	
NCI	£48m	
Gain on disposal		£3m
Net assets of S (previously consolidated)		£120m
Goodwill (previously shown separately)		£15m

(1) 40% of increased net assets of £200 million plus 40/60 of goodwill of £15 million

As this is a deemed disposal resulting from the share issue of a subsidiary, P considers whether the profit resulting is realised or unrealised. If unrealised, the profit would be taken to OCI and not to profit or loss.

3.6.4 Accounting for a part disposal of a subsidiary when control is retained

Where a parent reduces its holding in a subsidiary and control is retained, it is accounted for as a transaction between equity holders and the carrying amount of the NCI is adjusted to reflect the change in the parent's interest in the subsidiary's net assets. Any difference between that amount and the fair value of the consideration paid or received, if any, is recognised directly in equity and attributed to equity holders of the parent. No gain or loss is recognised at the date of disposal, nor any change in the carrying amounts of assets (including goodwill) or liabilities. [FRS 102.9.19A, FRS 102.9.20A].

FRS 102 is not clear whether a portion of goodwill should be regarded as now being attributable to the NCI in computing the difference to be taken to equity in these circumstances.

How we see it

In our view, the most logical treatment is for the parent to reallocate a proportion of the goodwill between parent equity and NCI when there is a decrease in the parent's ownership interest without loss of control. Otherwise, any gain or loss recognised upon a subsequent loss of control or goodwill impairment would not reflect the ownership interest applicable to that NCI.

Illustration 3-12 below demonstrates the accounting for a disposal where control is retained.

Illustration 3-12: Disposal of a subsidiary where control is retained

A parent sells a 20% interest in a wholly owned subsidiary for cash proceeds of £250. Parent retains an 80% controlling interest in the subsidiary. The carrying value of the subsidiary's net assets excluding goodwill is £450 and there is £50 of goodwill remaining from the subsidiary's acquisition.

In the consolidated financial statements, the parent accounts for this transaction as follows, reallocating goodwill to the NCI:

	Dr	Cr
Cash	£250	
NCI ⁽¹⁾		£100
Equity		£150

(1) 20% of £500, i.e., including goodwill

FRS 102 is silent as to whether amounts recognised in OCI and equity should be reattributed to or from NCI when a change in ownership in a subsidiary occurs that does not result in the loss of control.

How we see it

In our view, it is logical to reattribute amounts recognised in OCI and equity. This is consistent with the requirement in Section 30 for a foreign operation that is consolidated but not wholly-owned, that the accumulated exchange differences arising from translation that are attributable to the NCI are allocated to, and recognised as part of, NCI.

Although FRS 102 is clear that changes in a parent's ownership interest in a subsidiary that do not result in loss of control of the subsidiary are equity transactions, it does not specifically address how to account for related transaction costs.

How we see it

In our view, any directly attributable costs incurred to sell NCI in a subsidiary (in a transaction without loss of control) are deducted from equity. Whether the costs are attributable to the parent or to the NCI depends on whether the costs have been incurred by the parent (in which case the costs are attributable to parent equity) or the subsidiary with the NCI (in which case the cost would be allocated between parent equity and NCI based on their respective shares).

3.7 NCI in subsidiaries

NCI is the equity in a subsidiary not attributable, directly or indirectly, to a parent. [FRS 102 Appendix I]. The reference to 'equity' in the definition of NCI refers to those 'equity instruments' of a subsidiary that are not held, directly or indirectly, by its parent. This also means that financial instruments that are legally equity but classified as a liability in accordance with Section 22 *Liabilities and Equity* are not included within the definition of NCI.

The principle underlying accounting for NCI is that all residual economic interest holders of any part of the consolidated entity have an equity interest in that consolidated entity. This principle applies regardless of the decision-making ability of that interest holder and where in the group that interest is held. Therefore, any equity instruments issued by a subsidiary that are not owned by the parent (apart from those that are required to be classified as financial liabilities) are NCI, including:

- Ordinary shares
- Convertible debt and other compound financial instruments
- Preference shares (including both those with, and without, an entitlement to a *pro rata* share of net assets on liquidation)
- Warrants
- Options over own shares
- And
- Options under share-based payment transactions

Options and warrants are NCI, regardless of whether they are vested and of the exercise price (e.g., whether they are 'in-the-money').

The definition of NCI in FRS 102 is wider than the definition in the Regulations which states that NCI in the statement of financial position must show the amount of capital and reserves attributable to shares in subsidiary undertakings (i.e., the definition in the CA 2006 is restricted to shares). [6 Sch 17(2)]. When differences arise between the definitions used in FRS 102 and the Regulations, it might be necessary to disclose both FRS 102 and CA 2006 amounts for NCI. See Chapter 6 at 3.5.

3.7.1 Accounting and presentation of NCI

NCI in the net assets of a subsidiary is initially measured at the NCI's share of the identifiable net assets (consisting of the identifiable assets, liabilities and contingent liabilities as recognised and measured in accordance with the requirements for a business combination, if any, see Chapter 22 at 3.8 and Illustration 3-17) at the date of the original combination. [FRS 102.9.13(d), FRS 102.19.14A]. There is no option under FRS 102 to measure NCI at fair value.

FRS 102 does not distinguish between NCI that is a present ownership interest and entitles holders of that interest to a proportionate share of the entity's net assets in the event of liquidation and other components of NCI (e.g., perpetual debt classified as equity under Section 22). The implication is that all NCI is measured the same way based on present ownership interest. This means that any NCI, such as options, are valued at nil if they are not entitled to a present ownership interest. See Chapter 22 at 3.8.

NCI is presented within equity, separately from equity of the owners of the parent, in the consolidated financial statement of financial position. [FRS 102.9.20].

NCI in the profit or loss of the group is required to be disclosed separately in the statement of comprehensive income (or income statement, if presented). [FRS 102.9.21].

Profit or loss and each component of OCI is attributed to the owners of the parent and to NCI. Total comprehensive income is attributed to the owners of the parent and to NCI even if this results in NCI having a deficit balance. [FRS 102.9.22]. This approach is consistent with the fact that the parent and NCI participate proportionately in the risks and rewards of an investment in the subsidiary. When the NCI in a subsidiary is in deficit, there is no requirement to make a provision in the group financial statements for any legal or commercial obligation (whether formal or implied) to provide for finance that may not be recoverable in respect of the accumulated losses attributable to the NCI.

A proportion of profit or loss, OCI and changes in equity is only attributed to those ownership instruments included within NCI if they give rise to an existing (or present) ownership interest. NCI that includes potential voting rights that require exercise or conversion (such as options, warrants, or share-based payment transactions) generally does not receive an allocation of profit or loss (see 3.2.1 above). [FRS 102.9.14, FRS 102.9.22].

Where a subsidiary has granted options over its own shares under an equity-settled share-based payment transaction, the share-based payment expense recognised in profit or loss will be attributable to the parent and any other NCI that has a present legal ownership in the subsidiary.

FRS 102 is silent on the accounting for shares of profit or loss on undeclared dividends in respect of outstanding cumulative preference shares classified as equity that are held by an NCI.

How we see it

In our view, an entity has an accounting policy choice in respect of dividends on outstanding cumulative preference shares classified as equity, to allocate to the NCI a portion of the profit or loss after adjusting for:

- Dividends, whether or not declared
- Or
- Declared dividends only

The first option is the one required by IFRS 10.

3.7.1.A Measurement of NCI when an associate holds an interest in a subsidiary

FRS 102 does not explain how to account for NCI when the group owns an associate which has a holding in a subsidiary. It is therefore unclear whether NCI is computed based on the ownership interests held by the group (i.e., by the parent and any consolidated subsidiary), or whether it also reflects the indirect ownership of the subsidiary held by the associate. The reciprocal interests can also give rise to a measure of double-counting of profits and net assets between the investor and its associate.

How we see it

In our view, there are two possible approaches to determine the amount of NCI in the subsidiary:

- (a) The NCI is determined after considering the associate's ownership of the subsidiary ('look through approach').
- Or
- (b) The NCI is determined based on the holdings of the group in the subsidiary ('black box approach').

An entity applies the chosen approach consistently.

In applying the 'look through approach', the parent does not recognise the share of the subsidiary's results recognised by the associate applying the equity method, in order to avoid double-counting. The 'black box approach' often leads to reporting higher consolidated net assets and results than when using the 'look through approach' because this adjustment is not made, although the amounts attributed to owners of the parent must be the same under both approaches. The two approaches are shown in Illustration 3-13 below.

Illustration 3-13: Measurement of NCI when an associate accounted using the equity method holds an interest in a subsidiary

Parent P owns directly 60% of subsidiary S. P also directly owns 40% of associate A that in turn holds a 30% interest in S. S has earned profits of £1,000,000 in the period and has net assets of £3,000,000 (which are consolidated in both P's consolidated financial statements and equity accounted by A) at the reporting date. A has net assets of £1,100,000 (excluding its share of the net assets of S). There are no transactions between A and S (which was not acquired in a business combination).

Approach 1 ('look through approach')

This approach involves determining the ownership attributable to the NCI after considering A's ownership of S. This approach views the equity method as primarily a method of consolidation (albeit on a single line).

Therefore, under the 'look through' approach, P's total ownership interest in S is 72% (and the NCI's interest is 28%). P's effective ownership interest of 72% in S represents 60% held directly and an additional effective interest of 12% ($40\% \times 30\%$) via A.

Therefore, P consolidates the profits of S of £1,000,000, with:

Profits of S attributable to owners of P	£720,000 ($£1,000,000 \times 72\%$)

Profits of S attributable to the NCI	£280,000 ($£1,000,000 \times 28\%$)

However, when equity accounting for A, P does not recognise its share of S's results recognised by the associate A of £120,000 ($£1,000,000 \times (40\% \times 30\%)$). This is to avoid double counting as S's results have already been consolidated and P's effective ownership of 12% of S that is indirectly held via A has been attributed to owners of the parent.

The assets and liabilities of S are consolidated, with:

Net assets of S attributable to owners of P	£2,160,000 ($72\% \times £3,000,000$)

Net assets of S attributable to the NCI	£840,000 ($28\% \times £3,000,000$)

Investment in A ⁽¹⁾	£440,000

(1) When equity accounting for A, P does not recognise its share of S's net assets recognised by A of £360,000 ($£3,000,000 \times (40\% \times 30\%)$) to avoid double-counting as the net assets of S owned by A have already been included in the amounts attributable to the owners of P. Therefore, the investment in A is reported at P's 40% share of A's net assets (excluding A's share of S), i.e., $40\% \times £1,100,000$.

Approach 2 ('black box approach')

Under this approach (the 'black box approach'), when determining NCI, P considers the ownership interests in S not held by the group (i.e., by P and its subsidiaries). This approach views the equity method as primarily a method of valuing an investment.

Accordingly, P's ownership interest is 60% and the NCI's ownership interest is 40%.

Therefore, P consolidates the profits of S of £1,000,000, with:

Profits of S attributable to owners of P	£600,000 ($60\% \times £1,000,000$)

Profits of S attributable to the NCI	£400,000 ($40\% \times £1,000,000$)

The assets and liabilities of S are consolidated, with:

Net assets of S attributable to owners of P	£1,800,000 ($60\% \times £3,000,000$)

Net assets of S attributable to the NCI	£1,200,000 ($40\% \times £3,000,000$)

Investment in A ⁽²⁾	£800,000

- (2) When equity accounting for A, P does not eliminate its share of S's results of £120,000 and net assets of £360,000. Therefore, the investment in A is reported at P's 40% share of A's net assets (including the associate's share of S), i.e., $40\% \times (£1,100,000 + (30\% \times £3,000,000))$.

The results and net assets in respect of S that are attributed to owners of P are the same as in Approach 1. However, the total consolidated results and net assets exceed those reported in Approach 1 by £120,000 and £360,000 respectively (being P's effective ownership interest of 12% in S's profits and net assets that are equity accounted in Approach 2). While this approach has the merit that the attribution of S's profits and net assets to NCI reflects the 40% ownership interests in S not held by the group, a downside is the double counting of 12% of S's profits that are equity accounted by A.

3.7.2 Call and put options over NCI

Some business combinations involve options over some or all of the outstanding shares. For example, the acquirer might have a call option, i.e., the right to acquire the outstanding shares at a future date for a particular price. Alternatively, the acquirer might have granted a put option to other shareholders whereby they have the right to sell their shares to the acquirer at a future date for a particular price. In some cases, there may be a combination of put and call options, the terms of which may be equivalent or different.

FRS 102 gives no guidance on how to account for such options when entered into as part of, or following, a business combination. Therefore, when determining the appropriate accounting in such situations, Sections 9, 11, 12 and 22 must be considered.

How we see it

Sometimes, the operation of put and/or call options over NCI are subject to employment conditions. Typically, such put and/or call options over NCI arise as part of a business combination. The guidance in 3.7.2.A to 3.7.2.C below is intended to apply to put and/or call options over NCI held in the holder's capacity as a shareholder.

Accounting for put and/or call options over NCI subject to employment conditions (holders of such instruments are referred to below as 'employee-shareholders') involves a careful analysis of how the requirements of FRS 102 apply to the specific transaction. Such arrangements could, in whole or in part, constitute an employee benefit (accounted under Section 28, see Chapter 30) or share-based payment arrangement (accounted under Section 26 *Share-based Payment*, see Chapter 28). In addition, Section 19 contains guidance on distinguishing payments to acquire a business from remuneration, see Chapter 22 at 2.5.3.

Judgement is often required in determining whether and to what extent there is a remuneration element to be accounted for and whether the company or the NCI have a present ownership interest in the shares that are legally owned by the NCI.

Examples of situations which might indicate a remuneration element include where:

- There is a discount on the NCI put exercise price if the employee-shareholder leaves before completing a specified period of service.
- The entity can exercise a call at a lower exercise price than the exercise price on the NCI put if the employee-shareholder leaves.

In certain arrangements, an employee-shareholder is entitled to a minimum amount even if no service was provided and it might be appropriate to account for part of the arrangement in line with the guidance for NCI puts and calls (in sections 3.7.2.A to 3.7.2.C below), and part as an employee benefit or share-based payment arrangement. See Chapter 30 at 3.1, and Chapter 28 at 11.3 for a discussion of when cash-settled awards may fall within the scope of Section 28 or Section 26.

Even if the NCI put held by employee-shareholders has an exercise price equal to fair value of the shares at the date of exercise, this does not necessarily mean that the NCI has a present ownership interest in the shares legally owned at the date of the business combination. For example, it might be the case that the NCI are able to benefit from dividends and/or fair value gains accreting to the shares only after completion of a period of service. In such cases, it might be considered that the shares have not economically vested in the NCI at the date of the business combination. This assessment will be very dependent on the particular facts and circumstances.

3.7.2.A Call options only

Call options are considered when determining whether an entity has obtained control as discussed at 3.2.1 above. This discussion, and at 3.7.2.B below, focuses on call and put options entered into at the same time as control of the subsidiary is obtained.

Once it is determined whether an entity has control over another entity, the proportions of profit or loss and change in equity allocated to the parent and NCI are based on the existing (or present) ownership interests and do not reflect the possible exercise or conversion of potential voting rights under call options. [FRS 102.9.14].

A call option is likely to give the acquiring entity present access to returns associated with the ownership interest only in limited circumstances:

- The option price is fixed with an exercise price sufficiently low in relation to the fair value of the underlying shares (that substantially all expected variations in the fair value of the underlying shares will be realised by the acquirer) and either (i) it is agreed between the parties that no dividends will be paid to the other shareholders (or the acquiring entity can control that no dividends will be paid prior to the exercise of the option) or (ii) the dividend payments lead to an adjustment of the option exercise price.

Or

- The terms are set such that the other shareholders effectively receive only a lender's return.

The acquiring entity has present access to the returns associated with ownership interest in these circumstances because any accretion in the fair value of the underlying ownership interest under the option (for example, due to improved financial performance of the acquiree subsequent to the granting of the call option) is likely to be realised by the acquirer.

How we see it

If a call option gives the acquiring entity present access to returns over all of the shares held by non-controlling shareholders, then there will be no NCI presented in equity. The acquirer accounts for the business combination as though it acquired a 100% interest. The acquirer also recognises a financial liability for the present value of the exercise price to the non-controlling shareholders under the call option.

Changes in the carrying amount of the financial liability are recognised in profit or loss. If the call option expires unexercised, then the acquirer has effectively disposed of a partial interest in its subsidiary in return for the amount recognised as the liability at the date of expiry. If the entity continues to control the subsidiary, it accounts for the transaction as a change in ownership interest without a loss of control, as discussed at 3.6.4 above. If the lapse of the call option leads to a loss of control, this is accounted for as discussed at 3.6.3, above.

A call option is not expected to give the acquirer present access to the returns associated with that ownership interest in the shares subject to the call where, for example, the option's terms contain one or more of the following features:

- The option exercise price has not yet been determined or will be the fair value (or an amount that approximates fair value) of the underlying shares at the date of exercise.
- The option exercise price is not sufficiently low in relation to the fair value of the underlying shares (that substantially all expected variations in the fair value of the underlying shares will be realised by the acquirer).
- The option exercise price is based on expected future results or net assets of the subsidiary at the date of exercise.
- It has been agreed between the parties that, prior to the exercise of the option, all retained profits are to be freely distributed to the existing shareholders according to their current shareholdings (and there is no adjustment to the option exercise price for dividends paid).

If a call option does not give the acquirer present access to the returns associated with the ownership interest in the shares subject to the call, the instruments containing the potential voting rights are accounted for as a derivative financial asset by the holder in accordance with Sections 11 and 12 unless the derivative meets the definition of an equity instrument of the entity in Section 22.

Where settlement is not exclusively by an exchange of a fixed number of shares for a fixed amount of cash (or another financial asset), the purchased call option does not meet the definition of an equity instrument in Section 22 and is treated as a derivative financial asset. [FRS 102.22.3, FRS 102.22.3(b)(ii)]. Therefore, the option is a financial asset, unless both the fixed-for-fixed criterion is met and the option is gross-settled in the subsidiary's equity instruments.

Financial asset - A purchased call option is initially recognised as a financial asset at its fair value, with any subsequent changes in its fair value recognised in profit or loss. If the call option is exercised, the fair value of the option at that date is included as part of the consideration paid for the acquisition of the NCI (see 3.6.2 above). If it lapses unexercised, any carrying amount is expensed in profit or loss.

Equity instrument - A call option over the NCI's shares will be gross settled, so the initial fair value of the option is recognised as a debit to equity (and is not subsequently remeasured). If the call option is exercised, this initial fair value is included as part of the consideration paid for the acquisition of the NCI (see 3.6.2 above). If a call option lapses unexercised, there is no entry required within equity.

The above discussion addresses the initial debit entry on recognising the call option at fair value (as a financial asset, or within equity). However, the related initial credit entry will depend on the transactions giving rise to the call option. For example, the entity may have paid consideration for the option in a separate transaction or as part of a larger transaction (such as where a business combination involves an outright purchase of shares as well as the acquisition of a call option over the remaining shares). In the latter case, part of the consideration paid in the larger transaction needs to be allocated to the acquisition of the call option. [FRS 102.19.11, FRS 102.19.11B].

3.7.2.B Put options only

In the context of the consolidated financial statements, a put option held by the NCI is a form of puttable instrument because it gives the holder the right to sell the shares in the subsidiary (presented as equity of the group) back to the group. A put option is usually recognised as a liability and the following matters must also be determined:

- The measurement of the liability under the NCI put.
 - Whether or not the terms of the NCI put give the parent a present ownership interest in the shares subject to the put.
- And
- Whether or not NCI continues to be recognised if the liability is measured based on its redemption amount, i.e., whether the parent recognises both the NCI and the financial liability for the NCI put.

Section 22 offers no guidance as to how the put option liability is measured. Section 22 does not contain the requirement in IAS 32 *Financial Instruments: Presentation* that an obligation for an entity to purchase its own equity instruments for cash or another financial asset gives rise to a financial liability for the present value of the redemption amount (for example, the present value of the forward purchase price, option price or other redemption amount). [IAS 32.23]. However, a put option is a derivative and Section 12 sets out the accounting for derivatives (see Chapter 12 at 2.1.1). Derivatives are measured at fair value and so will generally result in a smaller liability for the put option compared to measurement at the present value of the redemption amount.

How we see it

In our view, the financial liability for the put option is a derivative that is measured at fair value according to Sections 11 and 12, except when the substance of the transaction is a purchase of NCI with deferred consideration. An example of this is described below. [FRS 102.2.14]

In the same way as for call options, in determining appropriate accounting, we believe that an entity considers whether the terms of the transaction give it present access to the returns associated with the shares subject to the put option.

Factors to consider in determining whether the NCI put might provide a present ownership interest to the acquirer include:

- **Pricing** - to the extent that the price is fixed or determinable, rather than being at fair value (or an amount that approximates fair value) of the underlying share, so that substantially all the variations in fair value of the underlying share accrete to the acquirer. However, in situations where there is only an NCI put, the level of the exercise price needs to be sufficiently high compared to the fair value of the underlying shares to exceed likely fair value variations in order to provide a present ownership interest. If the exercise price is low compared to fair value of the underlying shares, it is unlikely that the NCI will exercise the put. Even if the exercise price exceeds fair value of the underlying shares at the outset, reasonably possible upward fair value movements might mean that the NCI put does not provide a present ownership interest to the acquirer.
- **Voting rights and decision-making** - to the extent that the voting rights or decision-making connected to the shares concerned are restricted.

- *Dividend rights* - to the extent that the dividend rights attached to the shares concerned are restricted. It is likely that the NCI retains a present ownership interest where it has been agreed between the parties that, prior to the exercise of the option, all retained profits are to be freely distributed to the existing shareholders according to their current shareholdings (and there is no adjustment to the option exercise price for dividends paid). However, in many cases, dividend rights do not affect the assessment as the parent (through its control) can generally prevent distributions to the NCI prior to exercise or the exercise price of the NCI put is adjusted downwards for payment of any dividends to the NCI.
- *Issue of call options* - a combination of NCI puts and calls, with the same period of exercise and same or similar pricing indicates that the arrangement has the nature of a forward contract. Therefore, the instrument is highly likely to be exercised by one of the counterparties in situations where the exercise price is not at fair value (or an amount that approximates fair value) of the underlying shares.

The parent generally obtains a present ownership interest if there is an NCI put and call with matching terms and a fixed exercise price (or a fixed price forward contract to purchase the entity's shares held by the NCI). Where the pricing of the NCI put and call is at fair value (or an amount that approximates fair value), the present ownership generally remains with the NCI. Other situations, including where the exercise price is based on a formula, are likely to require further analysis, based on the factors outlined above.

How we see it

If the acquirer has a present ownership interest in the shares subject to the put, the substance of the transaction is an acquisition of NCI with deferred consideration. Thus, if the acquirer has granted a put option over all of the remaining shares as part of a business combination, the business combination is accounted for as if the acquirer has obtained a 100% interest in the acquiree. [FRS 102.2.14]

In our view, in this scenario, the acquirer:

- Reflects the acquisition of those underlying shares and does not recognise NCI when completing the purchase price allocation and determining goodwill.
- And
- Recognises a liability for the present value of the amount required to be paid under the put option to obtain the interest (i.e., the redemption amount), rather than measuring it as a derivative.

Changes in the carrying amount of the financial liability are recognised in profit or loss. If the put option is exercised, the financial liability is extinguished by the payment of the exercise price. If the put option is not exercised, then the entity has effectively disposed of a partial interest in its subsidiary, without loss of control, in return for the amount recognised as the financial liability at the date of expiry. The entity accounts for the transaction as discussed at 3.6.4 above and measures the NCI as of the date that the put option expires.

When the terms of the transaction do not provide a present ownership interest in the shares subject to the put option, the entity initially recognises both the NCI based on present ownership interest and the financial liability under the put at fair value as a derivative. If the put option is exercisable at fair value, then the fair value of the derivative liability is zero. All subsequent changes in the liability are recognised in profit or loss.

3.7.2.C Combination of put and call options

In some business combinations, there might be a combination of call and put options, the terms of which might be equivalent or might be different.

How we see it

The appropriate accounting for a combination of call and put options over NCI is determined based on the discussions in 3.7.2.A and 3.7.2.B above. However, where there is a call and put option with matching terms, particularly at a fixed price, the combination of the options is more likely to mean that they give the acquirer a present ownership interest. Where the exercise price is at fair value (or an amount that approximates fair value), however, the returns of ownership arising from fair value movements will accrete to the NCI and consequently, this situation is unlikely to give the acquirer a present ownership interest.

In cases where the combination of call and put options gives the acquirer a present ownership interest and when the options are over all of the shares not held by the parent, the acquirer has effectively acquired a 100% interest in the subsidiary at the date of the business combination. The entity is likely to be economically in a similar position as if it had acquired a 100% interest in the subsidiary with either deferred consideration (where the exercise price is fixed) or contingent consideration (where the settlement amount is not fixed but is dependent upon a future event).

3.7.2.D Call and put options entered into in relation to existing NCI

The discussion at 3.7.2.A to 3.7.2.C above focused on call and put options entered into at the same time as control is gained of the subsidiary. However, an entity might enter into the options with non-controlling shareholders after gaining control.

How we see it

The appropriate accounting policy for call and put options over existing NCI is based on the discussions at 3.7.2.A to 3.7.2.C above.

Where the entity already has a controlling interest and the option(s) result in a present ownership interest in the remaining shares concerned, the NCI is no longer recognised within equity. The transaction is accounted for as an acquisition of the NCI, i.e., it is accounted for as an equity transaction (see 3.6.2 above), because such acquisitions are not business combinations under Section 19.

3.8 Exchanges of businesses or other non-monetary assets for an interest in a subsidiary, jointly controlled entity or associate

A reporting entity might exchange a business, or other non-monetary assets, for an interest in another entity and that other entity becomes a subsidiary, jointly controlled entity or associate of the reporting entity. The reporting entity needs to determine whether to use fair value or previous book values to account for the interest acquired and how any gain on the transaction is reported.

The following accounting treatment applies in the consolidated financial statements of the reporting entity. For ease, this guidance refers to an exchange of a business, but applies equally to an exchange of non-monetary assets: [FRS 102.9.31]

- No remeasurement to fair value of any retained interest: to the extent that the reporting entity retains an ownership interest in the business exchanged (even if held through the other entity), that retained interest, including any related goodwill, is included at its pre-transaction carrying amount. I.e., it is treated as having been owned by the reporting entity throughout the transaction.
- Goodwill arises on the reporting entity's new ownership interest: goodwill is recognised as the difference between:
 - The fair value of the consideration given
 - And
 - The fair value of the reporting entity's share of the pre-transaction identifiable net assets of the other entity
- Consideration given might be best estimated via the value of what is acquired: the consideration given for the interest acquired in the other entity includes that part of the business exchanged and no longer owned by the reporting entity. The consideration might also include cash or monetary assets to achieve equalisation of values. If it is difficult to value the consideration given, the best estimate of its value might be the value of what is acquired.
- Any unrealised gain arising on the exchange is recognised in OCI: to the extent that the fair value of the consideration received exceeds what is given up, being:
 - The carrying value of the part of the business exchanged and no longer owned
 - Any related goodwill
 - And
 - Cash

The reporting entity recognises an unrealised gain in OCI because qualifying consideration has not been received.

- Losses are recognised in profit or loss: to the extent that the fair value of the consideration received is less than what is given up (as described above), the reporting entity recognises a loss. Any impairment loss is recognised first in accordance with Section 27 and any further loss in profit or loss.

The accounting treatment is shown in Illustration 3-14 and Illustration 3-15 below:

Illustration 3-14: Creation of subsidiary by contribution of existing business (1)

A and B are two pharmaceutical companies, which agree to form a new company (Newco) to hold a particular part of each of their businesses. B will own 60% of Newco, which is a controlling interest. A will own 40%. The parties agree that the total value of the new business is £250m.

B's contribution to Newco is one of its businesses, the net assets of which are included in B's consolidated balance sheet at £85m (including remaining unamortised goodwill of £15m). The fair value of the identifiable net assets of the business contributed by B is £120m, which consists of £140m of gross assets less a £20m bank loan. The implicit fair value of the business contributed is £150m (60% of total fair value £250m).

The identifiable net assets of the business to be contributed by A have a carrying amount of £50m, but their fair value is considered to be £80m. A also has unamortised goodwill remaining of £10m. The implicit fair value of the business contributed is £100m (40% of total fair value £250m).

The book and fair values of the businesses contributed by A and B can therefore be summarised as follows:

(in £m)	A		B	
	Book value	Fair value	Book value	Fair value
Identifiable net assets	50	80	70	120
Goodwill	10	20	15	30
Total	60	100	85	150

How should B account for this transaction in its consolidated financial statements?

B's accounting reflects that it has retained 60% of its existing business and has exchanged a 40% interest in that business for a 60% interest in the business contributed by A. It continues to record the 60% retained at book value and recognises a gain or loss on disposal of the 40%, calculated as the difference between the book value of the net assets and the consideration received (being the fair value of the 60% interest in A's business). The difference between the fair value of the 40% interest in the business given up and the new net assets acquired (i.e., the 60% of A's former assets) represents goodwill.

This gives rise to the following accounting entries.

	Dr	Cr
Net assets of Newco ⁽¹⁾	£150m	
NCl in Newco ⁽²⁾		£60m
Goodwill ⁽³⁾	£21m	
Net assets contributed to Newco ⁽⁴⁾		£85m
OCI (gain on disposal) ⁽⁵⁾		£26m

(1) Book value of B's identifiable net assets + fair value of A's identifiable net assets (£70m + £80m) = £150m. These would be consolidated on a line-by-line basis.

(2) 40% of (book value of B's identifiable net assets + fair value of A's identifiable net assets) i.e., $40\% \times (£70m + £80m) = £60m$.

(3) Fair value of business given up by B less fair value of identifiable net assets of A's business acquired, i.e., 40% of £150m less 60% of £80m = £12m, plus 60% of B's goodwill of £15m retained (£9m) = £21m.

(4) Previous carrying amount of net assets contributed by B (including goodwill), now deconsolidated (although now reconsolidated in accounting for Newco). These would be deconsolidated on a line-by-line basis.

(5) Fair value of business received, less book value of assets disposed of, 60% of £100m - 40% of £85m = £26m.

The gain on the transaction in Illustration 3-14 is unrealised because qualifying consideration has not been received. Therefore, the gain is accounted for in OCI as only realised profits can be recognised in profit or loss. [1 Sch 13]. Where part or all of the gain is realised then that portion can be taken to profit and loss. This is illustrated in Illustration 3-15 below:

Illustration 3-15: Creation of subsidiary by contribution of existing business (2)

Assume the same fact pattern as in Illustration 3-14 above, except that B receives only 50% in Newco (but still has control) and that A pays £25m direct to B in compensation for the reduction in the stake from 60% to 50%. As in Illustration 3-14 above, the identifiable net assets of B (book value of £120m) include a bank loan of £20m which is equal to its fair value.

How should B account for this transaction in its consolidated financial statements?

B's accounting reflects that it has retained 50% of its existing business and has exchanged a 50% interest in that business for a 50% interest in the business contributed by A plus cash of £25m. It continues to record the 50% retained at book value and recognises a gain or loss on disposal of the 50%, calculated as the difference between the book value of the net assets and the consideration received (being the fair value of the 50% interest in A's business plus cash of £25m). The difference between the fair value of the 50% interest in A's business given up and the new net assets acquired (i.e., the 50% of A's former assets) represents goodwill.

This gives rise to the following accounting entries.

	Dr	Cr
Net assets of Newco ⁽¹⁾	£150m	
NCl in Newco ⁽²⁾		£75m
Cash	£25m	
Goodwill ⁽³⁾	£17.5m	
Net assets contributed to Newco ⁽⁴⁾		£85m
Profit and loss (gain on disposal) ⁽⁵⁾		£5m
OCI (gain on disposal) ⁽⁵⁾		£27.5m

(1) Book value of B's identifiable net assets + fair value of A's identifiable net assets (£70m + £80m) = £150m. These would be consolidated on a line-by-line basis.

(2) 50% of (book value of B's identifiable net assets + fair value of A's identifiable net assets) i.e., $50\% \times (£70m + £80m) = £75m$.

(3) Fair value of business given up by B (net of amount of cash of £25m received from A to achieve equalisation of values) less fair value of identifiable net assets of A's business acquired, i.e., 50% of £150m less £25m, less 50% of £80m = £10m, plus 50% of B's goodwill of £15m retained (£7.5m) = £17.5m.

(4) Previous carrying amount of net assets (including goodwill) contributed by B, now deconsolidated (although now consolidated in accounting for Newco). These would be deconsolidated on a line-by-line basis.

(5) Fair value of business received (50% of £100m) plus cash received of £25m less book value of assets disposed of i.e., (50% of £85m), The gain on disposal of £32.5m has been split based on an allocation between 'realised' and 'unrealised' as explained below.

FRS 102 does not explain how to distinguish a realised gain from an unrealised gain. Illustration 3-15 above uses a 'top slicing' approach whereby the proportion of the total gain that is backed by net cash is treated as realised (i.e., £5m). 'Top slicing' is the recommended approach to determining realised profits for exchanges of assets in paragraph 3.18 of the ICAEW/ICAS Technical Release 02/17BL - *Guidance on Realised and Distributable Profits under the Companies Act 2006* (TECH 02/17BL). Paragraph 3.18A of TECH 02/17BL states that when the consideration received comprises a combination of assets and liabilities, the profit will be realised only to the extent of any net balance (i.e., cash less liabilities) of qualifying consideration received. In Illustration 3-15 above, the realised profit of £5m consists of the cash received of £25m less the bank loan assumed of £20m.

No gain or loss is recognised in those rare cases where the artificiality or lack of substance of the transaction is such that a gain or loss on the exchange cannot be justified. In this scenario, disclosure of the circumstances is required. [FRS 102.9.32]. There is no elaboration as to the circumstances where this might be applicable.

3.9 Disclosures in consolidated financial statements

3.9.1 Disclosures in consolidated financial statements required by Section 9 of FRS 102

The following disclosures in respect of consolidated financial statements, which supplement those already required by the Regulations (see 3.9.2 below), are required by Section 9 of FRS 102: [FRS 102.9.23]

Extract from Section 9

9.23 The following disclosures shall be made in consolidated financial statements:

- (a) the fact that the statements are consolidated financial statements;
- (b) the basis for concluding that control exists when the parent does not own, directly or indirectly through subsidiaries, more than half of the voting power;
- (c) any difference in the reporting date of the financial statements of the parent and its subsidiaries used in the preparation of the consolidated financial statements;
- (d) the nature and extent of any significant restrictions (e.g., resulting from borrowing arrangements or regulatory requirements) on the ability of subsidiaries to transfer funds to the parent in the form of cash dividends or to repay loans;
- (e) the name of any subsidiary excluded from consolidation and the reasons for its exclusion; and
- (f) the nature and extent of its interests in unconsolidated special purpose entities, and the risks associated with such entities.

In addition, where a gain or loss on an exchange of a business or other non-monetary asset for an investment in a subsidiary, associate or jointly controlled entity has not been recognised because of the artificiality or lack of substance of the transaction, these circumstances must be explained (see 3.8 above). [FRS 102.9.32].

The disclosure regarding unconsolidated special purpose entities is a principle-based disclosure derived from IFRS 12. [FRS 102.BC.B9.4]. IFRS 12 refers to disclosure of information that enables users of the financial statements to understand the nature and extent of interests in unconsolidated structured entities and to evaluate the nature of, and changes in, risks associated with those interests. [IFRS 12.24]. This principle-based requirement is followed by detailed disclosure requirements in paragraphs 25 - 31 of IFRS 12. Considering the different wording in FRS 102, which omits a requirement to disclose 'changes in risk' and the reference in the Basis for conclusions to a 'principle-based disclosure', the intention seems to be less detailed disclosure under FRS 102 compared to IFRS 12. However, management might consider the requirements and guidance in IFRS 12 useful in determining what type of detail to provide. Unlike IFRS, FRS 102 does not require any specific disclosures in respect of consolidated structured entities, nor is this disclosure required in separate or individual financial statements.

3.9.2 Disclosures in consolidated financial statements in respect of subsidiary undertakings required by the Regulations

The following disclosures are required by the Regulations in consolidated financial statements in respect of subsidiaries:

- The name of each subsidiary undertaking and the address of the undertaking's registered office (whether in or outside the United Kingdom) and, if unincorporated, the address of its principal place of business. There is no relief available to limit this disclosure to those of the principal subsidiaries if it is of excessive length. This applies to both direct and indirect subsidiaries. [4 Sch 1]
- For each subsidiary, there must be stated the identity of each class of shares held and the proportion of the nominal value of that class of shares held, with separate information on the interest held by the parent and by the group, if different. [4 Sch 17]
- For entities that are subsidiaries other than because the immediate parent holds a majority of the voting rights which are in the same proportion of the shares held, the reasons why the subsidiary has been consolidated. [4 Sch 16(3)]
- For each subsidiary not included in the consolidation the reasons for excluding the subsidiary from the consolidation. [4 Sch 16(2)]
- For each subsidiary not included in the consolidated accounts: [4 Sch 2]

- The aggregated amount of its capital and reserves as at the end of its relevant financial year
And
- Its profit or loss for that year

This information is not required if the subsidiary is included in the consolidated accounts under the equity method of accounting or if the subsidiary is not required by the CA 2006 to deliver a copy of its balance sheet for its relevant financial year and does not otherwise publish its balance sheet anywhere in the world and the company's holding is less than 50% of the nominal value of the shares (or if the information is not material).

- When during the financial year, there has been a disposal of an undertaking or group which significantly affects the figures in the group accounts: *[6 Sch 15]*
 - The name of the undertaking or of the parent undertaking of the disposed group
And
 - The extent to which the profit or loss shown in the group accounts is attributable to profit or loss of that undertaking or group

This disclosure need not be given for an undertaking which is either established outside the United Kingdom or carries on business outside the United Kingdom if the disclosure is seriously prejudicial to the business of that undertaking or of the parent company or any of its subsidiary undertakings and the Secretary of State agrees. *[6 Sch 16]*

- Any differences of accounting rules as between a parent's individual accounts for a financial year and its group accounts, and the reason for the differences. *[6 Sch 4].*
- The number, description and amount of shares in the parent company held by or on behalf of subsidiary undertakings. *[4 Sch 3].*

See Chapter 17 at 4.2.4 and Chapter 18 at 3.10.3.A for disclosures required by the Regulations in consolidated financial statements for investments in associates and jointly controlled entities.

Requirements for business combinations are provided in Chapter 22.

4 Individual and separate financial statements

The CA 2006 requires accounts to be prepared for each financial year. These are referred to as the company's individual accounts. [s394]. Other statutory frameworks apply to those entities not required to produce Companies Act individual accounts. [FRS 102.9.23A].

The key terms, 'individual financial statements' and 'separate financial statements' are defined in the FRS 102 Glossary, [FRS 102 Appendix I], see Appendix A below.

Both individual and separate financial statements as defined by FRS 102 are Companies Act individual accounts.

An entity that is not a parent (i.e., an entity that does not have subsidiaries) prepares individual financial statements and not separate financial statements. [FRS 102.9.24].

4.1 Accounting for associates and jointly controlled entities in individual financial statements of an entity that is not a parent

An entity that is not a parent accounts for investments in associates and jointly controlled entities using either: [FRS 102.9.25, FRS 102.14.4, FRS 102.15.9]

- A cost model, i.e., at cost less impairment
 - A fair value model, i.e., at fair value with changes in fair value recognised in OCI (or profit or loss to the extent that it reverses revaluation movements in profit or loss or where the revaluation reserve would otherwise be negative)
- Or
- At fair value with changes in fair value recognised in profit or loss

There is no option to use equity accounting in individual financial statements prepared under FRS 102 (although this option exists under IFRS and Schedule 1 to the Regulations). [FRS 102.BC.A.28(a)]. However, the individual financial statements of an investor that is not a parent disclose summarised financial information about investments in associates and jointly controlled entities, along with the effect of equity accounting for those investments. Investing entities that are exempt from preparing consolidated financial statements, or would be exempt if they had subsidiaries, are exempt from this requirement. [FRS 102.14.15A, FRS 102.15.21A].

In its individual financial statements, an entity that is not a parent need not measure associates using the same accounting model as jointly controlled entities. However, Sections 14 and 15 do not explicitly address whether all associates or all jointly controlled entities must be accounted for using the same model. There is an explicit requirement in Section 9 for an entity that is a parent to apply the same accounting policy to all investments in a single class. [FRS 102.9.26].

How we see it

As discussed at 4.2 below, in our view, associates or jointly controlled entities held as part of an investment portfolio could be considered as a separate class from other associates or jointly controlled entities in the separate financial statements of a parent. While Sections 14 and 15 do not specifically refer to different classes of associates and jointly controlled entities, we believe that an entity that is not a parent may similarly adopt a different accounting policy in accounting for associates and jointly controlled entities held as part of an investment portfolio to that applied to other associates and jointly controlled entities in its individual financial statements.

The cost and fair value measurements for associates and jointly controlled entities are further discussed in Chapter 17 and Chapter 18.

4.2 Accounting for subsidiaries, associates and jointly controlled entities in separate financial statements of an entity that is a parent

Separate financial statements are those presented by a parent in which the investments in subsidiaries, associates or jointly controlled entities are accounted for at either cost or fair value, rather than on the basis of the reported results and net assets of the investees. [FRS 102.9.24].

A parent preparing separate financial statements adopts a policy of accounting for investments in subsidiaries, associates and jointly controlled entities at either: [FRS 102.9.26]

- Cost less impairment
- Fair value with changes in fair value recognised in OCI (or profit or loss) in accordance with paragraphs 15E and 15F of Section 17 *Property, Plant and Equipment*

Or

- Fair value with changes in fair value recognised in profit or loss

Guidance on fair value is provided in Section 2A *Fair Value Measurement* (see Chapter 10). A policy of measuring subsidiaries, associates and jointly controlled entities at fair value through profit or loss is permitted by paragraph 36(4) of Schedule 1 to Regulations (and its equivalents in Schedules 2 and 3) without the use of a true and fair override. However, additional disclosures are required, see 4.6.1 below.

There is no option to use equity accounting in separate financial statements prepared under FRS 102 (although this option exists under IFRS and Schedule 1 to the Regulations). [FRS 102.BC.A.28(a)].

A parent that is exempt from the requirement to prepare consolidated financial statements (see 3.1.1 above) and therefore presents separate financial statements as its only financial statements also accounts for its investments in subsidiaries, associates and jointly controlled entities as above. [FRS 102.9.26A].

A parent must apply the same accounting policy for all investments in a single class (for example subsidiaries that are held as part of an investment portfolio, those subsidiaries not held as part of an investment portfolio, associates or jointly controlled entities) but it can elect different policies for different classes. [FRS 102.9.26]. Although not mentioned as an example of a class of investments, it appears that associates and jointly controlled entities which are held as part of an investment portfolio (and therefore required to be measured at fair value through profit or loss) could also be a separate class from associates and jointly controlled entities which are not held as part of an investment portfolio. Otherwise, an investor with, say, an associate held as part of an investment portfolio - that wished to maintain the same accounting in the consolidated and separate financial statements - would be required to measure all associates at fair value through profit or loss.

This restriction means that a parent cannot use a different accounting policy for a class of investments even where individual investments within that class have different characteristics. A subsidiary excluded from consolidation which is held as part of an investment portfolio is a separate class of investment. [FRS 102.9.26]. Subsidiaries that are excluded from consolidation because they are held as part of an investment portfolio are measured at fair value through profit or loss. [FRS 102.9.9C(a)]. While the term 'class' has not been referenced to Appendix I: Glossary to FRS 102, generally, a class is taken to mean a grouping of assets of a similar nature and use in an entity's operations.

How we see it

Although the examples given for separate classes of investments differentiate between subsidiaries held as part of an investment portfolio and those that are not so held, in our view, this does not preclude the election of a different accounting policy for different classes of subsidiaries. For example, an entity might consider it appropriate to account for investments in subsidiaries held exclusively with a view to resale (including those not held as part of an investment portfolio) at fair value, while applying the cost model to other investments in subsidiaries.

If an entity measures subsidiaries at fair value but the fair value of one or more subsidiaries is not reliably measurable its carrying amount at the last date the asset was reliably measurable becomes its new cost. The entity measures the asset at this cost less impairment, if any, until a reliable measure of fair value becomes available. [FRS 102.2A.23].

There is no option under FRS 102 to use a directors' valuation (typically, net assets), an out-of-date market value (except when a reliable measure of fair value is no longer available for an asset measured at fair value) or current cost to value an investment in a subsidiary, associate or jointly controlled entity in individual or separate financial statements where such measurements are not the equivalent of fair value at the reporting date.

FRS 102 does not distinguish between different types of entity (e.g., banking entities, insurance entities and other entities). The cost model is not permitted by Schedule 3 to the Regulations for individual or separate financial statements, so an insurer is able to use only fair value measurement for investments in subsidiaries. [3 Sch 21].

4.2.1 Cost of investment in a subsidiary, associate or jointly controlled entity

Section 9 does not define 'cost' of investment. However, Section 2 *Concepts and Pervasive Principles* states that the historical cost of an asset when it is acquired or created is the value of the costs incurred in acquiring or creating the asset, comprising the consideration paid to acquire or create the asset plus transaction costs. [FRS 102.2.69]. The Regulations state that the purchase price of an asset is determined by adding to the actual price paid any expenses incidental to its acquisition (and then subtracting any incidental reductions in the cost of acquisition). [1 Sch 27(1)]. This definition in the Regulations is consistent with Section 17 and the requirements for exchanges of businesses or other non-monetary assets for an interest in a subsidiary, jointly controlled entity or associate (see 3.8 above), which describe cost as normally either the purchase price paid (including directly attributable costs) or the fair value of non-monetary assets exchanged. [FRS 102.9.31, FRS 102.17.10]. The purchase price generally represents the fair value of the consideration given to purchase the investment consistent with the guidance in respect of exchanges of businesses or other non-monetary assets (see 3.8 above) and the requirements in respect of measuring the cost of a business combination (see Chapter 22 at 3.6).

4.2.1.A Cost of investment in a subsidiary, associate or jointly controlled entity acquired in exchange for shares

When shares have been issued as consideration for the investment and the cost model is adopted, sections 611 to 615 of the CA 2006 set out the treatment where 'merger relief' or 'group reconstruction relief' is available. These reliefs are primarily concerned with the recognition of share premium on the issue of shares, but also affect the amount recognised as cost of investment in a subsidiary, associate or jointly controlled entity in certain circumstances. [s615].

Extract from the CA 2006

s615 The amount of the premium which is not included in the share premium account by virtue of either group reconstruction relief or merger relief may also be disregarded in determining the amount at which any shares or other consideration provided for the shares issued is to be included in the company's balance sheet. [s615].

When using the cost model, section 615 permits the initial carrying amount of the investment to be adjusted downwards so it is equal to either the previous carrying amount of the investment in the transferor's books (in most circumstances) or the nominal value of the shares issued, depending on which relief applies. This relief is not available where the fair value model is used, so in that case, the investment's carrying amount cannot be reduced, although the effect of the reliefs on share premium remains relevant. [FRS 102.A3.24].

How we see it

In our view, the decision whether or not to use this relief in the CA 2006 to measure cost is an accounting policy choice that must be applied consistently for all transactions of this type. When the relief is not taken, consistent with the discussion at 4.3 below, we believe that the initial cost of the investment is its fair value.

Section 615 permits the relief to be reflected in determining the amount at which the shares or other consideration provided for the shares issued are recognised. Therefore, when applying the cost method, any non-cash consideration other than shares transferred can also be measured at an amount which reflects the relief available. [FRS 102.A3.24A].

Merger relief and group reconstruction relief are reliefs from the basic rule that a company issuing shares accounts for the issue at the value of the consideration received. Where this includes a premium (i.e., the value of the consideration received exceeds the nominal amount of the shares issued) the premium on those shares is transferred to a share premium account. [s610].

Group reconstruction relief applies when the company issuing shares is:

- A wholly owned subsidiary of another company (the holding company)
- And
- Allots shares:
 - To the holding company
- Or

- To another wholly-owned subsidiary of the holding company in consideration for the transfer of non-cash assets of a company (the transferor company) that is a member of the group of companies that comprises the holding company and all its wholly-owned subsidiaries

When the shares in the issuing company allotted in consideration are issued at a premium, the issuing company (i.e., the subsidiary) is not required to transfer any amount in excess of the minimum premium value (i.e., the amount, if any, by which the base value of the consideration exceeds the aggregate nominal value of the shares) to the share premium account.

The base value of the consideration for the shares allotted is the amount by which the base value of the assets transferred (i.e., the cost of the assets to the transferor company or, if less, the amount at which those assets are stated in the transferor company's accounting records immediately before the transfer) exceeds the base value of any liabilities (i.e., the amount at which they are stated in the transferor company's accounting records immediately before the transfer) of the transferor company as part of the consideration for the assets transferred. [s611].

In many cases, the subsidiary issuing shares recognises share capital and premium equal to the transferor's carrying value of the non-cash assets given in exchange for the shares, and any additional amount is credited to either share premium or another reserve (because group reconstruction relief is optional). This is shown at Illustration 4-1.

Merger relief applies when a company that issues shares (the issuing company) has secured at least a 90% equity holding in another company in pursuance of an arrangement providing for the allotment of equity shares in the issuing company on terms that the consideration for the share allotted is to be provided: [s612]

- By the issue or transfer to the issuing company of equity shares in the other company.
- Or

- By the cancellation of any such shares not held by the issuing company.

If the equity shares (i.e., shares in a company's equity share capital [s548]) in the issuing company allotted pursuant to this arrangement are issued at a premium the requirements of the CA 2006 relating to the establishment of a share premium account do not apply to the premiums on those shares.

In a share-for-share exchange, any credit that would normally be recognised as share premium is credited to another reserve. Merger relief is mandatory, so, in contrast to group reconstruction relief, the credit subject to the relief cannot be taken to share premium.

In addition, when the arrangement also provides for the allotment of any shares in the issuing company on terms that the consideration for those shares is to be provided:

- By the issue or transfer to the issuing company of non-equity shares in the other company.
- Or
- By the cancellation of any such shares in that company not held by the issuing company.

The relief relating to the establishment of the share premium account extends to any shares in the issuing company on those terms in pursuant of the arrangement. E.g., if the issuing company is receiving both non-equity shares and equity shares of the acquiree in exchange for its own issue, merger relief applies to its full issue of shares and not just the proportion issued in exchange for the equity shares of the acquiree.

Merger relief cannot be used in a transaction falling within the scope of group reconstruction relief. I.e., where both would apply, group reconstruction relief takes precedence.

For the purpose of determining the 90% equity holding for the purposes of merger relief: [s613]

- It does not matter whether any of the shares acquired in the other company were in pursuance of the arrangement. I.e., merger relief applies in a transaction that takes the issuing company's interest from below to above 90%.
- Shares in the other company held as treasury shares are excluded in determining the nominal amount of that other company's share capital.
- Where there is more than one class of shares, a 90% or more equity holding must be met in relation to each class.
- Shares in the other company held by the issuing company's holding company, subsidiary, or a subsidiary of the issuing company's holding company or by its nominees are treated as being held by the issuing company.
- Illustration 4-1 and Illustration 4-2 show the application of group reconstruction relief and merger relief on the cost of an investment in a subsidiary.

Illustration 4-1: Group reconstruction relief and cost of investment

Company B (a wholly owned subsidiary of Company A) issues 100 £1 ordinary shares to its holding company, A, in return for an investment in Company C held by A. The investment in C was previously carried by A as its original cost of £400. The fair value of C (and the shares issued by A) at the date of the transaction is £1,000. How does B account for this transaction in its separate financial statements?

If B's accounting policy is to carry its investments in subsidiaries at cost less impairment, then B has an accounting policy choice to determine cost as either the previous carrying value of the investment in the transferor's books (by taking group reconstruction relief) or at fair value as follows:

	Dr	Cr
Investment in subsidiary	£400	
Share capital		£100
Share premium		£300
OR		
Investment in subsidiary	£1,000	
Share capital		£100
Share premium		£300
Merger reserve		£600

If B's accounting policy is to carry its investments at fair value (whether or not gains and losses on remeasurement are taken through profit and loss or through other comprehensive income) then the investment in subsidiary must be measured initially at fair value.

As discussed above, regardless of the accounting policy election, section 611 permits the investor to restrict the amount transferred to share premium to the minimum premium value (i.e., the amount by which the base cost of assets transferred exceeds the base value of any liabilities transferred). In this example, B has elected to restrict the amount transferred to share premium in this way.

Illustration 4-2: Merger relief and cost of investment

Company A issues 100 £1 ordinary shares to a third party for 100% of the ordinary shares of Company B and pays cash of £200. The fair value of Company B (and the total consideration paid by Company A) is £1,000. How does A account for this transaction in its separate financial statements?

If A's accounting policy is to carry its investments in subsidiaries at cost less impairment, then A has an accounting policy choice as follows:

	Dr	Cr
Investment in subsidiary	£300	
Share capital		£100
Cash		£200
OR		
Investment in subsidiary	£1,000	
Share capital		£100
Merger reserve		£700
Cash		£200

As discussed above, Appendix III of FRS 102 states that where the cost model is applied section 615 allows the initial carrying amount to be adjusted downwards so that it reflects the nominal value of the shares issued (and any minimum share premium required by group reconstruction relief) depending on the relief applied. Alternatively, an entity could ignore this option to reduce the carrying amount and use the fair value of B as its cost.

If A's accounting policy is to carry its investments at fair value (whether or not gains and losses on remeasurement are taken through profit and loss or through other comprehensive income) then the investment in subsidiary must be measured initially at fair value.

In the illustrations above, when the investment is initially measured at its fair value, the excess of the consideration is described as a 'merger reserve'. Neither the CA 2006 nor FRS 102 specify the title of this reserve.

How we see it

Given that the share premium requirements of the CA 2006 do not apply when merger relief is used, in our view, it is not appropriate to describe a merger reserve as 'share premium'.

4.2.1.B Contingent consideration

Section 9 provides no guidance on accounting for contingent consideration on the acquisition of a subsidiary, associate or jointly controlled entity in individual or separate financial statements.

How we see it

In our view, the guidance on contingent consideration (and adjustments to the cost of the combination) in a business combination discussed in Chapter 22 at 3.6.2 is applied to the cost of investment in subsidiary in the parent's separate financial statements.

This means that the cost at the acquisition date includes the estimated amount of the contingent consideration if it is probable and can be measured reliably. [FRS 102.19.12]. If contingent consideration is not recognised at the acquisition date but subsequently becomes probable and can be measured reliably, the additional consideration is treated as an adjustment to the cost of the investment. [FRS 102.19.13]. If future events that at the acquisition date were expected to occur do not occur, or the estimate needs to be revised, the cost of the investment is adjusted accordingly. [FRS 102.19.13A].

4.2.1.C Cost of investment in a subsidiary, associate or jointly controlled entity acquired in stages

An investment in a subsidiary, associate or jointly controlled entity might be acquired in stages so that, up to the date on which control, significant influence or joint control is first achieved the initial investment is accounted for as a financial asset at fair value under one of the accounting policy choices for recognition and measurement of financial instruments (i.e., Sections 11 and 12, IFRS 9 or IAS 39 - see Chapter 13 at 3). [FRS 102.11.2, FRS 102.12.2]. This raises the question of what the initial carrying amount of the subsidiary, associate or jointly controlled entity is in the separate financial statements when the cost method is applied.

How we see it

In our view, the cost of the investment is the sum of the consideration given for each tranche. This is because 'historical cost' of an asset when it is acquired or created is the value of the costs incurred in acquiring or creating the asset, comprising the consideration paid to acquire or create the asset plus transaction costs.

Any difference between the sum of the consideration given and the fair value of the investment is reversed and reflected in OCI resulting in an adjustment to the component of equity containing the cumulative valuation gains and losses, (see Chapter 13 at 3), i.e.,:

- Retained earnings if the investment had been treated as at fair value through profit or loss.
- The 'available-for-sale reserve' where the investment has been treated as available-for-sale by an entity using the recognition and measurement provisions of IAS 39.

Or

- The revaluation reserve where the investment has been measured at fair value through OCI using the recognition and measurement provisions of IFRS 9.

If changes to the carrying amount of the investment had resulted from an impairment charge, this charge is not necessarily reversed because the investment is considered for impairment in the separate financial statements of the investor. Therefore, the investor determines whether Section 11 or Section 27 permit reversals of impairment and whether there are indicators that the impairment can be reversed, based on the classification of the investment.

4.2.1.D Returns of capital

Returns of capital are not directly addressed by Section 9. They are an example of a 'distribution', the broader term applied when an entity gives away its assets to its members. FRS 102 contains no guidance on the distinction between a dividend (a return on capital) and a return of capital. However, guidance in IFRS 9 (which can be referred to via the hierarchy at paragraph 6 of section 10) distinguishes between a dividend from an equity investment that is recognised in profit or loss and one that 'clearly represents a recovery of part of the cost of the investment', which is effectively credited directly to the equity investment.

How we see it

A return of capital is accounted for as a direct credit to the carrying value of the investment in the separate financial statements. Dividend income is reflected in profit or loss or other comprehensive income (depending on whether the dividend income represents a realised profit or not). Whether a payment is dividend income or a return of capital is a matter of judgement and depends on the facts and circumstances. The two frequently cannot be easily distinguished.

Subsequent to the receipt of a dividend, a parent tests its investment in the subsidiary for impairment under Section 27.

4.3 Group reorganisations

Group reorganisations involve the restructuring of the relationships between companies in a group by, for example, setting up a new holding company, changing the direct ownership of a subsidiary with a group or transferring businesses from one company to another. FRS 102 provides no explicit guidance on how to account for group reorganisations in separate financial statements, although some common scenarios that arise in separate financial statements are in scope of FRS 102's group reconstruction guidance, see Chapter 22 at 5. When the group reorganisation involves investments in subsidiaries, the requirements of Section 9 to account for investment in subsidiaries at either cost or fair value (see 4.2 above) apply. When the cost model is applied, the discussion at 4.2.1A to 4.2.1.C above is relevant.

Illustration 4-3 below shows three scenarios for the accounting in the separate financial statements of a parent which measures investments in subsidiaries at cost less impairment and transfers one subsidiary to another subsidiary.

Illustration 4-3: Cost of investment in subsidiary following transfer of subsidiary to another subsidiary

Parent A has two direct, wholly owned subsidiaries, B and C, measured at cost less impairment. Both Subsidiary B and Subsidiary C have a carrying amount of £30 prior to the transaction.

Parent A transfers Subsidiary B to Subsidiary C.

In these scenarios, it is assumed that Subsidiary B has a recoverable amount of not less than £30 prior to the transaction, and that the increased investment in Subsidiary C is also recoverable.

Scenario 1 - transfer for nil consideration

The total cost of Parent A's investment in its subsidiaries does not change. Parent A's investment in Subsidiary B is not impaired as Parent A still owns and controls Subsidiary B (indirectly) via Subsidiary C.

Therefore, the accounting entries for Parent A are:

	Dr	Cr
Investment in Subsidiary C	£30	
Investment in Subsidiary B		£30

Parent A's total cost of investment in Subsidiary C is now £60 which reflects the commercial substance of the transaction.

Scenario 2 - transfer for fair value, £40 consideration (intragroup receivable)

Parent A has received a financial asset as consideration for the sale of Subsidiary B to Subsidiary C. In accordance with Section 11 of FRS 102, Parent A recognises the financial asset at transaction price (also its initial fair value) of £40, derecognises the investment in Subsidiary B and recognises a gain of £10 in profit or loss if the receivable is considered to be qualifying consideration (if not, the gain is recognised in OCI).

Therefore, the accounting entries for Parent A are:

	Dr	Cr
Receivable from Subsidiary C	£40	
Investment in Subsidiary B		£30
Profit or loss		£10

Scenario 3 - transfer for an amount less than fair value, £20 consideration (intragroup receivable)

Parent A has received a financial asset as consideration for the sale of Subsidiary B to Subsidiary C. In accordance with Section 11 of FRS 102, Parent A recognises the financial asset at transaction price (also its initial fair value) of £20, derecognises the investment in Subsidiary B of £30 and recognises an increase in its investment in Subsidiary C of £10. No loss is recognised by Parent A because Parent A still owns and controls Subsidiary B (indirectly).

Therefore, the accounting entries for Parent A are:

	Dr	Cr
Receivable from Subsidiary C	£20	
Investment in Subsidiary B		£30
Investment in Subsidiary C	£10	

Accounting for a group reorganisation that is the acquisition of an unincorporated business is discussed in Chapter 22 at 5.4.

4.4 Common control transactions in individual and separate financial statements

Transactions often take place between a parent entity and its subsidiaries, or between subsidiaries within a group, that may or may not be carried out at fair value. FRS 102 provides no accounting guidance on such transactions.

The CA 2006 states that where a company makes a distribution consisting of or including, or treated as arising in consequence of, the sale, transfer or other disposition of a non-cash asset such a distribution can be made at an undervalue only if the company has positive distributable reserves at the time of the distribution. [s845]. When a company makes a distribution of a non-cash asset, any part of that asset which represents an unrealised profit, can be treated as a realised profit for the purpose of determining the lawfulness of the distribution. [s846].

In addition, group reconstruction relief can be applied when a subsidiary issues shares in exchange for a non-cash asset (see 4.2.1.A above).

The following sections deal with typical transactions between entities under common control. See also Chapter 22 at 5.4 for accounting for group reconstructions in individual financial statements.

4.4.1 Capital contributions

One form of transaction which is sometimes made within a group is a 'capital contribution', where one company injects funds in another (usually its subsidiary) in the form of a non-returnable gift. Capital contributions can result in complex tax considerations to be addressed.

Capital contributions have no legal status in the UK - the term is not used anywhere in the CA 2006 or in FRS 102. This has led to uncertainty over the appropriate accounting treatment in the financial statements of both the giver and the receiver of the capital contribution.

4.4.1.A Treatment in the financial statements of the paying company

In the most common situation, where the contribution is made by a parent to one of its subsidiaries, the amount of the contribution is added to the cost of the investment in the subsidiary. As with any fixed asset, it assessed for impairment, particularly when subsequent dividends are received from the subsidiary. The dividend could be regarded as having been met out of the capital contribution and hence representing a return of it.

How we see it

When the contribution is made by a subsidiary to a fellow-subsubsidiary, the paying company determines whether it is made at the direction of the entities' common parent. If so, consistent with the guidance issued by the FRC in FRS 102 Factsheet 4 in respect of fixed term loans with no interest or a below market rate of interest (see Chapter 13 at 7.2.2 and Chapter 13 at 7.2.3), we believe the paying subsidiary accounts for the transaction in equity as if it were a distribution to the parent. If not, then the contribution is accounted for as an expense through profit or loss.

It is not possible to regard the contribution as an asset of any kind; it is neither an investment in the other company, nor can it be treated as a monetary receivable, since by definition there is no obligation on the part of the recipient to return it.

There may be circumstances in which the nature of the transaction gives rise to a funding commitment and therefore the recognition of a liability. Funding commitments are discussed in Chapter 24 at 3.10.

4.4.1.B Treatment in the financial statements of the receiving company

A subsidiary recognises a capital contribution received from its parent within equity, commonly as a credit to a separate reserve, such as 'capital contribution', or 'capital reserve'.

Depending on the nature of the contribution, it may or may not be regarded as a realised profit and available for distribution. TECH 02/17BL regards the contribution of assets from owners in their capacity as such as giving rise to a 'profit', but whether it is realised or not depends on whether the assets contributed meet the definition of qualifying consideration. Therefore, a contribution received in the form of a non-monetary asset is unlikely to represent a realised profit. When a contribution is regarded for distribution purposes as a realised profit, it might be appropriate to reclassify the reserve to retained earnings, although established practice is to maintain a separate reserve.

How we see it

When a capital contribution is received by a subsidiary from a fellow-subsubsidiary, the receiving company determines whether it is made at the direction of the entities' common parent. If so, consistent with the guidance issued by the FRC in FRS 102 Factsheet 4 in respect of fixed term loans with no interest or a below market rate of interest, we believe the receiving company accounts for the transaction in equity as if it were a capital contribution from the parent. If not, then the contribution is accounted for as income through profit or loss (if the contribution is a realised profit for distribution purposes) or OCI (if the contribution is not a realised profit).

4.4.1.C Treatment in the common parent

When a capital contribution is made between fellow subsidiaries, in the common parent of the paying and receiving companies, it is established practice to recognise no entry. This is on the basis that it is not party to the transaction.

4.4.1.D Contribution and distribution of non-monetary assets

These transactions involve transfers of inventory, property, plant and equipment, intangible assets, investment property and investments in subsidiaries, associates and joint ventures from one entity to another for no consideration, sometimes referred to as 'in specie' transactions (since not cash). These arrangements are not contractual but are equity transactions: either in specie capital contributions (an asset is gifted by a parent to a subsidiary) or non-cash distributions (an asset is given by a subsidiary to its parent). This guidance does not apply to assets transferred as part of a group reconstruction to which merger accounting is applied, see Chapter 22 at 5.4.2.

The relevant sections of FRS 102 (Section 13 *Inventories*, Section 16 *Investment Property*, Section 17 and Section 18 *Intangible Assets other than Goodwill*) refer to assets being recognised at cost. Similarly, investments in subsidiaries, associates and jointly controlled entities may be recognised at cost as discussed at 4.1 and 4.2 above.

How we see it

In our view, cost is determined by recognising the transaction at:

- The consideration agreed between the parties (i.e., at zero).
Or
- At fair value, regardless of the agreed consideration of zero, with the difference between zero and fair value recognised as an equity transaction (capital contribution).

It is more common for an entity that has received an asset in an equity transaction to recognise it at fair value.

When fair value is used to determine cost, part of the difference between fair value and zero might reflect additional goods and services but, once they have been accounted for, any remaining difference is a contribution or distribution of equity for a subsidiary or an increase in the investment held, or distribution received by the parent.

The paying entity must reflect the transaction. A parent that makes a capital contribution to its subsidiary recognises an increase in investment in that subsidiary provided the increase does not result in impairment. The amount of the increase in investment, at either carrying amount or fair value of the non-monetary asset given up, depends on whether the transaction is considered to have substance or not, since the parent has simply swapped a direct investment in a non-monetary asset for an indirect investment in the same asset via its subsidiary. If the subsidiary is newly incorporated or wholly owned, this might indicate that the transaction lacks substance. Consequently, the parent recognises the additional cost of investment in the subsidiary at the carrying amount of the non-monetary asset given up. If the transaction has substance to the parent, it could recognise its additional investment in the subsidiary at the fair value of the consideration given, i.e., the fair value of the non-monetary asset given up. Any gain recognised would be unrealised and recognised in OCI, since the additional investment received in the subsidiary, an unquoted subsidiary, would not be regarded as qualifying consideration (see also Chapter 22 at 5.4.4.A).

A subsidiary that makes a distribution in specie to its parent accounts for the transaction by derecognising the distributed asset at its carrying value against retained earnings. The Basis for conclusions explains that a distribution to a shareholder does not generate a profit and therefore FRS 102 does not include a requirement to recognise a liability to pay a dividend at fair value (as opposed to carrying value).

[FRS 102.BC.B22.1]. However, disclosure of the fair value of dividends is required (except when the non-cash assets are ultimately controlled by the same parties both before and after the distribution - as would generally be the case for a dividend from a subsidiary to a parent). [FRS 102.22.18]. As the distribution received by the parent is a non-monetary asset, it is unlikely to represent 'qualifying consideration' under TECH 02/17BL and so is an unrealised profit and therefore reflected in the parent's OCI rather than the income statement.

Consistent with the treatment of capital contributions discussed at 4.4.1.A and 4.4.1.B above, contributions and distributions of non-monetary assets between fellow subsidiaries are generally made at the direction of the entities' common parent and are therefore also accounted for as equity transactions.

4.4.1.E Incurring expenses and settling liabilities without recharges

Entities frequently incur costs that provide a benefit to fellow group entities, e.g., audit, management or advertising fees, and do not recharge the costs. The beneficiary is not party to the transaction and does not directly incur an obligation to settle a liability. It can elect to recognise the cost, in which case it will charge profit or loss and credit retained earnings with equivalent amounts; there will be no change to its net assets. If the expense is incurred by the parent, the parent could elect to increase the investment in the subsidiary rather than expensing the amount. This could lead to a carrying value that might be impaired. However, if the expense relates to a share-based payment, there is no policy choice; expenses incurred for a subsidiary must be added to the carrying amount of the parent and recognised by the subsidiary (see Chapter 28 at 13). Consistent with the treatment of transactions discussed at 4.4.1.A to 4.4.1.D above, incurring expenses without recharges on behalf of fellow subsidiaries is often at the direction of the entities' parent and therefore, if recognised, are also accounted for as equity transactions.

Many groups recharge expenses indirectly, by making management charges, or recoup the funds through intra-group dividends, and in these circumstances, it is inappropriate to recognise the transaction in any entity other than the one that makes the payment.

A parent or other group entity might settle a liability on behalf of a subsidiary. If this is not recharged, the liability will have been extinguished in the subsidiary's accounts, resulting in a gain and a question of where to recognise it, profit or loss or equity. Except in unusual circumstances, the forgiveness of debt is a contribution from owners and therefore recognised in equity. It is usually appropriate for a parent to add the payment to the investment in the subsidiary as a capital contribution, subject to any impairment of the investment.

How we see it

If one subsidiary settles a liability of its fellow subsidiary, the settling company determines whether it is made at the direction of the entities' common parent. If so, consistent with the guidance at 4.4.1.A above, we believe the settling subsidiary accounts for the transaction in equity as a distribution to the parent. If not, then the settlement is accounted for as an expense through profit or loss.

4.4.2 Transactions involving non-monetary assets

4.4.2.A The parent exchanges property, plant and equipment for a non-monetary asset of the subsidiary

The exchange of an asset for another non-monetary asset is accounted for by recognising the received asset at fair value unless the transaction lacks commercial substance or the fair value of neither the asset received, nor the asset given up is reliably measurable. [FRS 102.17.14].

An exchange of assets with dissimilar values indicates that the transaction includes an equity contribution (unless the difference means that other goods and services are being provided, e.g., a management fee). When there is an equity contribution, the entity has the following accounting choice to recognise the transaction as an exchange of assets:

- At fair value with an equity transaction. Any difference between the fair value of the asset received and the fair value of the asset given up is an equity transaction (or capital contribution) while the difference between the carrying value of the asset given up and its fair value is recognised in OCI as it is not a realised profit.
- Or
- At fair value of the asset received. Any difference between the fair value of the asset received and the carrying value of the asset given up is recognised in OCI as it is not a realised profit.

When the first alternative is used, the difference is accounted by the subsidiary as a contribution or distribution of equity; and by the parent as an increase in the investment held in the subsidiary or a distribution received. As discussed at 4.4.1.C, a distribution received by the parent is recognised in OCI as it is not a realised profit. Consistent with the treatment of capital contributions discussed at 4.4.1.A and 4.4.1.B above, contributions and distributions of non-monetary assets between fellow subsidiaries are often made at the direction of the entities' common parent and are therefore also accounted for as equity transactions.

4.4.2.B Acquisition and sale of assets for shares

These transactions include the transfer of inventory, property, plant and equipment, intangible assets and investment property by one entity in return for the shares of the other entity. These transactions are usually between a parent and subsidiary where the subsidiary issues shares to the parent in exchange for the assets received. The requirements when the asset transferred in exchange for shares is an investment in subsidiary, jointly controlled entity or associate are discussed at 4.2.1.A above and are not repeated here.

Accounting treatment by the subsidiary

For the subsidiary, transactions that involve the transfer of inventory, property, plant and equipment, intangible assets and investment property in exchange for shares are usually within the scope of Section 26. Accordingly, the assets are recognised at fair value unless that fair value cannot be estimated reliably. In that case, the entity measures the assets' value, and the corresponding increase in equity, by reference to the fair value of the equity instruments granted. [FRS 102.26.7].

However, some subsidiaries that are wholly owned are entitled to group reconstruction relief on the shares issued (see 4.2.1.A above) and therefore the question arises as to whether the asset received can be recorded at a cost net of group reconstruction relief (usually the previous carrying amount of the transferor) rather than fair value (the usual approach for share-based payments), by applying s615 of the

Act. As explained at 4.2.1.A above, s615 is a determination of cost that is permitted when the asset transferred is an investment in subsidiary, jointly controlled entity or associate. The Appendix on Legal Requirements to FRS 102 refers to using group reconstruction relief only in terms of the 'cost' of investments in subsidiaries. [FRS 102.A3.24]. Although paragraph A3.24A refers to 'other consideration' for the issue of shares, this quotes the law and is not a clear reference to asset transfers of this nature.

How we see it

In our view, s615 cannot be applied to the initial measurement of the inventory, property, plant and equipment, intangible asset or investment property because:

- Section 26 requires measurement at fair value and s615 is a determination of cost
- And
- Application of s615 is not mandatory and hence there is no conflict with applying Section 26

Therefore, the subsidiary recognises the asset received at fair value. In equity, the entity recognises share capital at the nominal value of shares issued, share premium up to the minimum premium amount required, and any excess credit is taken either to share premium or to another reserve, usually a merger reserve, if group reconstruction relief is taken. Group reconstruction relief is explained further at 4.2.1.A above.

Accounting treatment by the parent

For the parent, based on 4.2.1 above, the cost of the new investment is recorded at the fair value of the consideration given (i.e., the fair value of the asset sold). However, if the transaction lacks substance for the parent, it recognises the additional cost of investment in the subsidiary at the carrying amount of the non-monetary asset given up. This accounting is generally appropriate if the subsidiary is a newly incorporated company or wholly owned. If the transaction has substance to the parent, it could recognise its additional investment in the subsidiary at the fair value of the consideration given, i.e., the fair value of the non-monetary asset given up. Any gain recognised would be unrealised and recognised in OCI, since the additional investment received in the subsidiary, an unquoted subsidiary, would not be regarded as qualifying consideration.

4.4.2.C Acquisition and sale of assets for cash (or equivalent)

These transactions include the transfer of inventory, property, plant and equipment, intangible assets, investment property and investments in subsidiaries, jointly controlled entities and associates by one entity in return for cash or an equivalent consideration such as an intercompany loan. The transactions can be between a parent and a subsidiary or between fellow subsidiaries. Often in these transactions the consideration received is not fair value but the carrying value of the transferred asset in the transferee entity.

How we see it

In our view, consistent with the guidance at 4.4.1.C above, the entity acquiring the asset has a choice to determine cost as either:

- The consideration agreed between the parties.
- Or
- Fair value, regardless of the agreed consideration, with the difference between the consideration and fair value recognised as an equity transaction (or capital contribution).

When fair value is used to determine cost, the difference is a contribution or distribution of equity for the subsidiary and an increase in the investment held in the subsidiary or a distribution received by the parent. As discussed at 4.4.1.D, a distribution received by the parent is recognised in OCI as it is not a realised profit. Consistent with the treatment of capital contributions discussed at 4.4.1.A and 4.4.1.B above, contributions and distributions of non-monetary assets between fellow subsidiaries are often made at the direction of the entities' common parent and are therefore also accounted for as equity transactions.

The consideration received (or paid) is likely to be a financial asset (or financial liability) that is recognised in accordance with the entity's accounting policy choice under Sections 11 or 12 - see 4.4.3 below.

4.4.3 Financial instruments within the scope of Sections 11 and 12

Section 11 requires the initial recognition of financial assets and financial liabilities to be transaction price unless the arrangement constitutes a financing arrangement when it is measured at the present value of future payments discounted at a market interest rate. [FRS 102.11.13].

A loan provided or received at zero (or a below market) rate of interest constitutes a financing transaction. For loans that are not repayable on demand, a difference arises between the amount of the cash received or advanced and the present value of the loan. This also occurs in relation to certain loans, such as public benefit entity concessionary loans and certain loans to small entities. [FRS 102.PBE34.88, FRS 102.11.13A]. This difference reflects the lower than market rate of interest, which is a benefit to the borrower. When the lender and the borrower are related parties because one owns the other or the lender and the borrower are owned by the same person, the difference arising on initial recognition of the loan is generally accounted for in equity as a distribution or capital contribution for a subsidiary (or fellow subsidiary) and an increase in the investment held in the subsidiary or a distribution received by the parent. The accounting for these transactions is discussed in Chapter 13 at 7.2.2 and Chapter 13 at 7.2.3.

When an entity has elected to apply IAS 39 and/or IFRS 9 to recognise and measure financial instruments (as permitted by Sections 11 and 12) the initial recognition is fair value. Any difference between the fair value and the terms of the agreement is recognised as an equity transaction (i.e., either as a distribution or a capital contribution) for a subsidiary (or fellow subsidiary) and an increase in the investment held or a distribution received by a parent. See Chapter 13 at 7.2.3.

4.4.4 Financial guarantee contracts - parent guarantee issued on behalf of subsidiary

Financial guarantee contracts are included in the scope of Section 21 *Provisions and Contingencies* unless: [FRS 102.21.1A]

- An entity has chosen to apply IAS 39 and/or IFRS 9 to its financial instruments.
- Or
- An entity has elected under FRS 103 *Insurance contracts* to continue the application of insurance contract accounting.

When an entity has elected to apply IAS 39 and/or IFRS 9 to its financial instruments, financial guarantees are initially recognised at fair value. Otherwise, they are recognised under Section 21 which means that a liability is not recognised if it is not probable.

When a financial guarantee is initially recognised at fair value, it is normally appropriate for a parent that gives a guarantee to treat the debit that arises on recognising the guarantee at fair value as an additional investment in its subsidiary. The same treatment applies to the debit entry when a guarantee is recognised in accordance with Section 21, when probable. The subsidiary or fellow subsidiary that is the beneficiary of the guarantee does not recognise the financial guarantee unless:

- It is provided to the lender separate and apart from the original borrowing.
- Does not form part of the overall terms of the loan.
- And
- It would not transfer with the loan if it were to be assigned by the lender to a third party.

This means that few guarantees will be reflected separately in the financial statements of the entities that benefit from the guarantees.

4.5 Intermediate payment arrangements

The requirements in respect of intermediate payment arrangements are, in substance, designed to 'consolidate' an employee benefit trust (EBT) or employee share option trust (ESOP) in individual or separate financial statements. It is explained in the Basis for conclusions that these requirements (derived from previous UK GAAP) have been added to Section 9 to avoid an entity that has no entities that it controls other than an intermediate payment arrangement from having to prepare consolidated financial statements. [FRS 102.BC.B9.5].

FRS 102 does not define intermediate payment arrangements. However, Section 9 explains that:
[FRS 102.9.33]

Extract from Section 9

9.13 Intermediate payment arrangement may take a variety of forms:

- (a) The intermediary is usually established by a sponsoring entity and constituted as a trust, although other arrangements are possible.
- (b) The relationship between the sponsoring entity and the intermediary may take different forms. For example, when the intermediary is constituted as a trust, the sponsoring entity will not have a right to direct the intermediary's activities. However, in these and other cases the sponsoring entity may give advice to the intermediary or may be relied on by the intermediary to provide the information it needs to carry out its activities. Sometimes, the way the intermediary has been set up gives it little discretion in the broad nature of its activities.
- (c) The arrangements are most commonly used to pay employees, although they are sometimes used to compensate suppliers of goods and services other than employee services. Sometimes, the sponsoring entity's employees and other suppliers are not the only beneficiaries of the arrangement. Other beneficiaries may include past employees and their dependants, and the intermediary may be entitled to make charitable donations.
- (d) The precise identity of the persons or entities that will receive payments from the intermediary, and the amounts that they will receive, are not usually agreed at the outset.
- (e) The sponsoring entity often has the right to appoint or veto the appointment of the intermediary's trustees (or its directors or the equivalent).
- (f) The payments made to the intermediary and the payments made by the intermediary are often cash payments but may involve other transfers of value.

Examples of intermediate payment arrangements are ESOPs and EBTs that are used to facilitate employee shareholders under remuneration schemes. In a typical employee trust arrangement for share-based payments, an entity makes payments to a trust or guarantees borrowing by the trust and the trust uses those funds to purchase shares to settle the employee's award under the remuneration scheme.

'Consolidation' of the intermediary in the separate financial statements of the sponsoring entity is appropriate because in many typical cases, the sponsoring entity has *de facto* control. I.e., although the trustees of an intermediary must act in accordance with the interests of the beneficiaries of the intermediary (e.g., employees in relation to an EBT), most intermediaries are specifically designed to serve the purposes of the sponsoring entity and minimise the risk of conflict between the duties of the trustees and the interest of the sponsoring entity. Therefore, in practice, the sponsoring entity's wishes are implemented. Where this is the case, the sponsoring entity has *de facto* control. [FRS 102.9.33].

It is possible for an entity to be owned by a trust established for the benefit of employees without the entity controlling the trust. Section 9 provides the example of a co-operative entity, owned by its employees, in which all of the shares are held in trust for the individual employees, but the shares never vest in individual employees. Dividends from the company are distributed to employees in accordance with the provisions of the trust deed. [FRS 102.9.33A].

4.5.1 Accounting for intermediate payment arrangements in the sponsoring entity

When a sponsoring entity makes payments (or transfers assets) to an intermediary, there is a rebuttable presumption that it has exchanged one asset for another and so the payment itself is not an immediate expense. To rebut this presumption at the time the payment is made, the entity must demonstrate that:
[FRS 102.9.34]

- It will not obtain future economic benefit from the amounts transferred.
- Or
- It does not have control of the right or other access to future economic benefit it is expected to receive.

When a payment to an intermediary is an exchange of one asset for another, any asset the intermediary acquires in a subsequent transaction will also be under the control of the entity. Accordingly, assets and liabilities of the intermediary are accounted for by the sponsoring entity as an extension of its own business and recognised in its own individual financial statements. An asset ceases to be recognised as an asset of

the sponsoring entity when, for example, the asset of the intermediary vests unconditionally with the beneficiaries of the intermediary. [FRS 102.9.35].

When a sponsoring entity has control, or *de facto* control, of the assets and liabilities of the intermediary and it distributes its own equity instruments, or other equity instruments to an intermediary, the sponsoring entity is, for all practical purposes, in the same position as if it had purchased the shares directly. [FRS 102.9.36].

When an intermediary holds the sponsoring entity's equity instruments, the sponsoring entity accounts for the assets and liabilities of the intermediary in its individual (or separate) financial statements as follows: [FRS 102.9.37]

- The consideration paid for the equity instruments of the sponsoring entity is deducted from equity until such time that the equity instruments vest unconditionally with employees (like a purchase of treasury shares).
- Consideration paid or received for the purchase or sale of the sponsoring entity's own equity instruments are shown as separate amounts in the statement of changes in equity.
- Other assets and liabilities of the intermediary are recognised as assets and liabilities of the sponsoring entity.
- No gain or loss is recognised in profit or loss or OCI on the purchase, sale, issue or cancellation of the entity's own equity instruments.
- Finance costs and any administration expenses are recognised on an accrual basis rather than as funding payments are made to the intermediary.
- Any dividend income arising on the sponsored entity's own equity instruments is excluded from profit or loss and deducted from the aggregate of dividends paid.

Illustration 4-4 below shows the application of these requirements.

Illustration 4-4: EBTs in individual or separate financial statements of sponsoring entity

A sponsoring entity lends its EBT £1,000,000 which the EBT uses to make a market purchase of 200,000 shares in the entity. Employees of the entity are beneficiaries of the trust and, a short while after purchase, the shares vest unconditionally with the identified beneficiaries in exchange for a payment of £200,000. During the period the EBT pays £100,000 of administration costs.

In the separate or individual financial statements of the entity, on the basis that the sponsoring entity accounts for the EBT as an extension of its own business the following accounting entries result:

	Dr	Cr
	£'000	£'000
Equity	1,000	
Cash (market purchase of shares)		1,000
Equity		200
Cash (Shares vest to employees)	200	
Profit or loss	100	
Cash (administration expenses)		100

No entries are made for the 'loan' between the sponsoring entity and the EBT as this is considered to be a transaction by the sponsoring entity with itself.

Any share-based payment charges incurred by the sponsoring employee in respect of the shares granted to the employees are accounted for separately under Section 26.

4.6 Disclosures in individual and separate financial statements

4.6.1 Disclosures required by Section 9 in separate financial statements

The following disclosures are required when a parent prepares separate financial statements:

- That the statements are separate financial statements.
- A description of the methods used to account for investments in subsidiaries, associates and jointly controlled entities. [FRS 102.9.27].
- A parent that uses one of the exemptions from presenting consolidated financial statements (described in 3.1 above) discloses the grounds on which the parent is exempt. [FRS 102.9.27A].

- When a parent adopts a policy of accounting for its subsidiaries, associates or jointly controlled entities at fair value with changes in fair value recognised in profit or loss, it must make the disclosures required by Section 11 (see Chapter 15 at 4.1.2.H) in order to comply with the requirements of paragraph 36(4) of Schedule 1 to the Regulations (and the equivalent paragraphs in Schedules 2 and 3). [FRS 102.9.27B]. These disclosures must be made even if the parent is a qualifying entity (see Chapter 1) since they are required by the Regulations.

4.6.2 Disclosures required by Section 9 in individual and separate financial statements in respect of intermediate payment arrangements

When a sponsoring entity recognises the assets and liabilities held by an intermediary, it discloses sufficient information in the notes to its financial statements to enable users to understand the significance of the intermediary and the arrangement in the context of the sponsoring entity's financial statements. This includes: [FRS 102.9.38]

- A description of the main features of the intermediary including the arrangements for making payments and for distributing equity instruments.
- Any restrictions relating to the assets and liabilities of the intermediary.
- The amount and nature of the assets and liabilities held by the intermediary which have not yet vested unconditionally with the beneficiaries of the arrangement.
- The amount that has been deducted from equity and the number of equity instruments held by the intermediary, which have not yet vested unconditionally with the beneficiaries of the arrangement.
- For entities that have their equity instruments listed or publicly traded on a stock exchange or market, the market value of the equity instruments held by the intermediary which have not yet vested unconditionally with employees.
- The extent to which the equity instruments are under options to employees, or have been conditionally gifted to them.

And

- The amount that has been deducted from the aggregate dividends paid by the sponsoring entity.

4.6.3 Additional disclosures in respect of investments in subsidiaries in separate financial statements required by the CA 2006 and the Regulations

The following disclosures are required by the CA 2006 and the Regulations in respect of subsidiaries, in separate financial statements:

- The name of each subsidiary undertaking and the address of the undertaking's registered office (whether in or outside the United Kingdom) and, if unincorporated, the address of its principal place of business. There is no relief available to limit this disclosure to those of the principal subsidiaries if it is of excessive length. This applies to both direct and indirect subsidiaries. [4 Sch 1].

- For each subsidiary not included in the consolidated accounts: [4 Sch 2]

- The aggregated amount of its capital and reserves as at the end of its relevant financial year

And

- Its profit or loss for that year

This information is not required if the subsidiary is included in the consolidated accounts under the equity method of accounting or if the subsidiary is not required by the CA 2006 to deliver a copy of its balance sheet for its relevant financial year and does not otherwise publish its balance sheet anywhere in the world and the company's holding is less than 50% of the nominal value of the shares (or if the information is not material).

- The number, description and amount of shares in the parent company held by or on behalf of subsidiary undertakings must be disclosed. [4 Sch 3].

If the company is not required to prepare group financial statements:

- The reasons why that is the case. [4 Sch 10(1)].
- If the reason is that all the subsidiaries fall within the exclusions provided in section 405 (see 3.1.1.E and 3.4 above), with respect to each subsidiary, which of the exclusions applies. [4 Sch 10(2)].
- For each subsidiary, the identity of each class of shares held and the proportion of the nominal value of that class of shares held, with shares held directly by the company itself distinguished from those attributed to the company held by subsidiaries. [4 Sch 11].

- When a subsidiary undertaking's financial year does not end with that of the company, the date on which the last financial year ended (last before the end of the company's financial year). *[4 Sch 12]*.
- If exempt by virtue of section 400 (see 3.1.1 and 3.1.1.A above) or section 401 (see 3.1.1 and 3.1.1.B above), the fact that it is exempt from the obligation to prepare and deliver group accounts and, in respect of the undertaking in whose consolidated financial statements it is included, the name, the address of the undertaking's registered office (whether in or outside the UK) and, if unincorporated, address of its principal place of business. *[s400(2Xc), s400(2Xd), s401(2Xd), s401(2Xe)]*.

Disclosures in respect of investments in associates and jointly controlled entities in separate financial statements are discussed in Chapter 17 at 4.2.5 and Chapter 18 at 3.10.3.B respectively.

5 Summary of GAAP differences

The key differences between FRS 102 and IFRS are set out below.

	FRS 102	IFRS
Requirement to prepare consolidated financial statements	Required only if an entity is a parent at the reporting date.	Required if an entity was a parent at any time during the reporting period.
Exemptions from consolidation for parents	Companies subject to the small companies' regime are exempt provided they are not a member of a group which, at any time during the financial year, has an ineligible member. A UK entity that is an intermediate parent is exempt under section 400 (where it has a UK immediate parent) or section 401 (where it has a non-UK parent) of the Companies Act 2006 if included in the consolidated financial statements of a higher parent. There are several conditions that must be met including restrictions over which GAAP is used in the consolidated financial statements of the higher parent. There are other exemptions from preparing consolidated financial statements, including where all subsidiaries are required to be excluded from consolidation.	No exemption for small companies. Under IFRS 10, intermediate parents are exempt but only if included in consolidated financial statements of a parent prepared under IFRS that are available for public use (and subject to further conditions). However, despite IFRS 10, a UK intermediate parent subject to the Companies Act 2006 that prepares its accounts under UK-adopted international accounting standards (or EU-adopted IFRS) may still take advantage of the exemptions from preparing consolidated financial statements available under UK company law which allow the higher parent to prepare consolidated financial statements under additional GAAPs (so not restricted to IFRS). This exemption is not available to entities preparing IFRS as issued by the IASB. All subsidiaries are consolidated, except for certain subsidiaries held by an investment entity (see below). An investment entity parent that applies the exception to consolidation for all of its subsidiaries in the current and comparative periods presents separate financial statements as its only financial statements.
Definition of control	Control is the power to govern the financial and operating policies of an entity so as to obtain benefits from its activities. Limited application guidance.	An investor controls an investee if and only if: (a) It has power over the investee (existing rights that give it the current ability to direct the relevant activities) (b) it has exposure, or rights, to variable returns from its involvement with the investee, and (c) has the ability to affect those returns through its power over the investee (d) More detailed application guidance.

FRS 102		IFRS
Subsidiaries excluded from consolidation	Subsidiaries are excluded from consolidation if they operate under severe long-term restrictions or are held exclusively with a view to subsequent resale.	No similar concepts. However, a subsidiary which operates under severe long-term restrictions may fail to meet the IFRS definition of a subsidiary due to lack of control.
Investment entities	Subsidiaries held as part of an investment portfolio are not consolidated but recognised at fair value through profit or loss.	A parent that is an investment entity must measure all subsidiaries (other than those providing investment management services that are not investment entities) at fair value through profit or loss.
Special purpose entity/Structured entity	A special purpose entity is an entity created to establish a narrow objective. Control of a special purpose entity is a risks/reward model.	A structured entity is an entity designed so that voting or similar rights are not the dominant factor in deciding who controls it. Same control criteria as for other entities.
Initial measurement of NCI in a business combination	Measured at the NCI's share of the net amount of the identifiable assets, liabilities and contingent liabilities recognised.	Accounting policy choice for acquirer to recognise NCI (that are present ownership interests and entitle the holder to a proportionate share of net assets in the event of a liquidation) at either their share of net amount of identifiable assets or at fair value. Other NCI must be recognised at fair value.
Accounting for retained interest on loss of control of a subsidiary	Carrying amount of net assets (and goodwill) is cost on initial measurement of retained investment.	Retained investment must be recognised at fair value on date that control is lost.
Cumulative exchange differences on disposal of a foreign operation when control of a subsidiary is lost	Not recycled to profit or loss.	Recycled to profit or loss.
Cumulative exchange differences on partial disposal of a foreign operation without loss of control	No specific guidance on the accounting for amounts recognised in OCI (such as cumulative exchange differences) and whether they would be reattributed to NCI within equity. In our view, it is logical that such a reattribution would occur. But in any event, cumulative exchange differences are not reclassified on a subsequent loss of control (see above).	Recycled to NCI on a proportionate basis.
Exchanges of business or other non-monetary assets for an interest in a subsidiary in consolidated financial statements	FRS 102 recognises a gain only on the part of the business/non-monetary assets that is no longer owned by the reporting entity. Gains that are not realised are reported in OCI.	The accounting could differ from FRS 102, depending on the particular facts and circumstances and the requirements of IFRS. No distinction between realised and unrealised gains and all gains/losses reported in profit or loss.

FRS 102		IFRS
Investments in subsidiaries, associates and jointly controlled entities in individual and separate financial statements	Accounting policy choice for each class (subsidiaries which are held as part of an investment portfolio, subsidiaries that are not held as part of an investment portfolio, associates and jointly controlled entities) to measure at either cost, fair value through OCI or fair value through profit or loss. The equity method of accounting is not permitted.	Accounting policy choice for each category to measure at either cost, fair value through OCI, fair value through profit or loss or under the equity method of accounting.
Cost of investment in a subsidiary in separate financial statements	Merger relief and group reconstruction relief is available, in certain circumstances, that permits cost to be equal to the nominal value of shares issued (merger relief) or cost to the transferor (or if lower, the previous carrying amount of the investment) in the transferor's books (group reconstruction relief).	IAS 27 does not specifically define 'cost' except in certain circumstances. As detailed in the EY Publication, International GAAP®, we believe it is acceptable to measure the costs of the investment acquired in a share-for-share exchange based on the carrying amount of the investment in the subsidiary in the transferor entity's separate financial statements rather than the fair value of the shares given as consideration. A new parent must measure cost at the carrying amount of its share of the equity items of the original parent for certain group reconstructions.
Intermediate payment arrangements	Accounted for as an extension of the parent's own business in its separate financial statements.	No guidance. In practice, an entity could use either the parent extension method or treat as an investment in subsidiary.
Disclosures in consolidated financial statements (key differences)		
NCI that are material to the reporting entity	Summarised financial information is not required.	Summarised financial information is required for each subsidiary with material NCI.
Interests in consolidated special purpose or structured entities	No specific disclosures required for consolidated special purpose entities (would be included within the general disclosure requirements for subsidiaries).	Disclosures required in respect of contractual arrangements, obligations and intentions to provide financial support to consolidated structured entities.
Investments in unconsolidated special purpose/structured entities	Disclosure of the nature and extent of interests and the risks associated with those entities. Basis for conclusions refers to disclosure as 'principle based'. No additional guidance.	Disclosure of nature and extent of interests and nature of and changes in the risks associated with those entities. Extensive additional guidance and mandated disclosures (in addition to disclosures required by other IFRSs).
Significant restrictions and financial support provided to subsidiaries	Disclosure of significant restrictions on ability to transfer funds to parent.	As well as disclosure of significant restrictions, disclosures required of guarantees, provisions of financial support (contractual and non-contractual) and current tends to provide financial support.

FRS 102		IFRS
Changes in ownership interest of a subsidiary that do not result in loss of control	No separate schedule required.	Separate schedule required showing the effects on equity attributable to owners of the parent of any changes.
Unconsolidated subsidiaries	The Regulations require disclosure of the capital and reserves and profit and loss for each material subsidiary not included in the consolidated financial statements.	Separate disclosure required of significant restrictions and financial support. No requirement to disclose the capital and reserves and profit and loss for each material subsidiary not included in the consolidated financial statements.
Differences of accounting rules as between a parent's group and individual accounts	Disclosure required by the Regulations.	No disclosure requirement.
Disclosures in individual and separate financial statements (key differences)		
Investments in unconsolidated special purpose/structured entities	No specific disclosures required (in addition to those required by other sections of FRS 102).	Extensive disclosures required (in addition to disclosures required by other IFRSs).
Intermediate payment arrangements	Various disclosures required.	No specific disclosures required for intermediate payment arrangements (although these may be structured entities - see above).

Appendix A - Defined terms

Extract from FRS 102

Appendix I

Glossary

consolidated financial statements	The financial statements of a parent and its subsidiaries presented as those of a single reporting entity.
control (of an entity)	The power to govern the financial and operating policies of an entity so as to obtain benefits from its activities.
fair value	The price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. In the absence of any specific guidance provided in the relevant section of this FRS, the guidance in Section 2A <i>Fair Value Measurement</i> shall be used in determining fair value.
held as part of an investment portfolio	An interest is held as part of an investment portfolio if its value to the investor is through fair value as part of a directly or indirectly held basket of investments rather than as media through which the investor carries out business. A basket of investments is indirectly held if an investment fund holds a single investment in a second investment fund which, in turn, holds a basket of investments. In some circumstances, it may be appropriate for a single investment to be considered an investment portfolio, for example when an investment fund is first being established and is expected to acquire additional investments.
held exclusively with a view to subsequent resale	An interest: (a) for which a purchaser has been identified or is being sought, and which is reasonably expected to be disposed of within approximately one year of its date of acquisition; or (b) that was acquired as a result of the enforcement of a security, unless the interest has become part of the continuing activities of the group or the holder acts as if it intends the interest to become so; or (c) which is held as part of an investment portfolio.
individual financial statements	The accounts that are required to be prepared by an entity in accordance with the Act or relevant legislation, for example: (a) 'individual accounts' as set out in section 394 of the Act; (b) 'statement of accounts', as set out in section 132 of the Charities Act 2011; or (c) 'individual accounts' as set out in section 72A of the Building Societies Act 1986.
non-controlling interest	Separate financial statements are included in the meaning of this term. The equity in a subsidiary not attributable, directly or indirectly, to a parent.
parent	An entity that has one or more subsidiaries.
separate financial statements	Those presented by a parent in which the investments in subsidiaries, associates or jointly controlled entities are accounted for either at cost or fair value rather than on the basis of the reported results and net assets of the investees. Separate financial statements are included within the meaning of individual financial statements.
subsidiary	An entity, including an unincorporated entity such as a partnership, that is controlled by another entity (known as the parent).

Overview

This chapter addresses the requirements of Section 10 *Accounting Policies, Estimates and Errors*. Section 10 provides guidance on how to develop accounting policies in a general and conceptual way; the section covers how to select and apply accounting policies used in preparing financial statements, whereas other individual sections within FRS 102 set out specific accounting requirements for the areas with which they deal. Section 10 sets out the difference between accounting policies and accounting estimates, how to address changes in accounting estimates, as well as explaining how errors are corrected. General principles on which accounting policies are based are addressed in Section 2 *Concepts and Pervasive Principles* (see Chapter 4).

What you need to know

Section 10 applies to:

- Selecting and applying accounting policies.
 - Accounting for changes in accounting policies which are usually accounted for retrospectively by way of a prior period adjustment.
 - Changes in accounting estimates which are accounted for prospectively in the current reporting period.
- And
- Corrections of prior period errors which are accounted for retrospectively by way of a prior period adjustment.

In the absence of specific requirements relating to a transaction, event or condition, Section 10 introduces a hierarchy of sources to consider when developing an accounting policy to address such items.

1 Introduction

Section 10 sets out the requirements for: (a) selecting and applying the accounting policies used in preparing financial statements; (b) accounting for changes in accounting estimates; and (c) accounting for corrections of errors in prior period financial statements. [FRS 102.10.1].

Overall, Section 10 is similar to IAS 8 *Accounting Policies, Changes in Accounting Estimates and Errors*: the definitions of 'accounting policy' and 'accounting estimate' respectively are identical, but IAS 1 *Presentation of Financial Statements* provides further guidance on how to implement the requirements.

For periods beginning on or after 1 January 2027, IAS 1 is replaced by IFRS 18 *Presentation and Disclosure in Financial Statements*. Some of the requirements from IAS 1 have been moved to IAS 8, which will be entitled IAS 8 *Basis of Preparation of Financial Statements*. Therefore, IAS 8 will contain requirements for additional topics compared to those covered in Section 10 - see 2.3 below. Where references are made to IAS 8 in this Chapter, references are relevant to both the existing standard and the revised standard.

2 Comparison between Section 10 and IFRS

The principal differences between Section 10 and IFRS are in respect of:

- The hierarchy established where the accounting for a transaction is not specifically addressed within the standard (see 2.1 below).
- Disclosure of the impact of accounting standards issued but not effective and not applied (see 2.2 below).

And

- Presentation of a third statement of financial position (see 2.3 below).

2.1 Hierarchy for selecting accounting policies

Where a section or standard does not specifically address a transaction, other event or condition, Section 10 permits but does not require an entity's management to refer to adopted IFRS in the hierarchy established to determine how judgement is used in developing and applying an accounting policy.

[FRS 102.10.6]. IAS 8's equivalent wording refers to any other standard setting body that uses a similar conceptual framework (to IFRS). [IAS 8.12]. This may result in different accounting policies being applied under FRS 102 for a particular transaction, event or condition compared to IFRS.

2.2 Disclosure of the impact of accounting standards issued but not effective and not applied

Section 10 does not require disclosure of the existence of, or possible impact on, the financial statements of future changes to FRS 102 that have been issued but are not yet effective and not applied. This would apply both to changes to individual sections of FRS 102 and changes to IFRS standards which are being applied by a reporting entity under paragraphs 1.4, 1.5 and 1.7 or 11.2(b) and 11.2(c) of FRS 102 (for example IAS 33 *Earnings per Share*).

IAS 8 requires disclosure of the existence of and known or reasonable estimable information of the possible impact of, a new IFRS which is not effective and not applied, on the reporting period of initial application.

[IAS 8.30].

2.3 Presentation of a third statement of financial position

Section 10 does not require a third statement of financial position as at the beginning of the preceding period to be presented whenever an accounting policy is applied retrospectively, or a retrospective restatement or reclassification is made in the financial statements.

IAS 1 (and subsequently IFRS 18) require a third statement of financial position in such circumstances.

[IAS 1.40A, IFRS 18.37].

2.4 Topics covered in IAS 8 which are not addressed in Section 10

As noted above, following the issuing of IFRS 18, certain topics have been moved from IAS 1 to IAS 8. As a result, the scope of the amended IAS 8 is wider than that of Section 10. The following topics are not addressed in Section 10, but are covered in other sections of FRS 102, marked below in brackets:

- Fair presentation ('true and fair') (Section 3 - see Chapter 6 at 3)
- Going concern (Section 3 - see Chapter 6)
- Accrual basis of accounting (Section 2 - see Chapter 4)
- Disclosure of material accounting policy information (Section 8 - See Chapter 6)
- Disclosure of judgements (Section 8 - see Chapter 6)

And

- Disclosure of sources of estimation uncertainty (Section 8 - see Chapter 6)

3 Requirements of Section 10 for accounting policies, estimates and errors

Section 10 sets out the requirements for selecting and applying accounting policies, as well as accounting for changes in accounting estimates and corrections of errors in prior period financial statements.

[FRS 102.10.1].

3.1 Selection and application of accounting policies

Accounting policies are defined as the specific principles, bases, conventions, rules and practices applied by an entity in preparing and presenting financial statements. [FRS 102 Appendix I, FRS 102.10.2]. This means that an accounting policy does not only address how to measure a transaction but also how to classify and present items in the financial statements. For example, an entity makes an accounting policy choice as to whether to adopt a single statement of comprehensive income or a two statement presentation. Similarly, an entity makes an accounting policy choice as to whether to present operating cash flows under the direct or indirect method.

The starting point of Section 10 is that if a section of FRS 102 specifically addresses a transaction, other event or condition, an entity must apply that section. However, the concept of materiality applies equally to accounting policies as to other areas of the financial statements and therefore a specific requirement need not be followed if the effect of doing so would not be material. [FRS 102.10.3]. See Chapter 4 at 3.3.1.B for a discussion of the concept of materiality.

There will be circumstances where a particular event, transaction or other condition is not specifically addressed by a section of the standard. When this is the case, Section 10 sets out a hierarchy of guidance to use in order to develop and apply an accounting policy. A policy developed applying the hierarchy will necessitate management to use judgement and resulting information must be: [FRS 102.10.4]

- Relevant to the economic decision-making needs of users
- Reliable, in that the financial statements:
 - Represent faithfully the financial position, financial performance and cash flows of the entity
 - Reflect the economic substance of transactions, other events and conditions, and not merely the legal form
 - Are neutral, i.e., free from bias
 - Are prudent
- And
- Are complete in all material respects

The hierarchy of guidance which must be considered, and guidance which may be considered, is set out below. Management is required to refer to and consider the applicability of the following sources in descending order of authority:

- The requirements and guidance in an FRS dealing with similar and related issues.
- Where an entity's financial statements are within the scope of a Statement of Recommended Practice (SORP), the requirements and guidance in that SORP dealing with similar and related issues.
- And
- The definitions, recognition criteria and measurement concepts for assets, liabilities, income and expenses and the pervasive principles in Section 2. [FRS 102.10.5].

Management may also consider the requirements and guidance in adopted IFRS dealing with similar and related issues. Section 1 *Scope* requires certain entities to apply IAS 33 (as adopted in the relevant jurisdiction), IFRS 8 *Operating Segments* (as adopted in the relevant jurisdiction) or IFRS 6 *Exploration for and Evaluation of Mineral Resources* (as adopted in the relevant jurisdiction) and therefore, where applicable, the accounting policies required by those standards must be followed. [FRS 102.10.6].

Section 10 does not state that an entity may refer to any GAAP other than adopted IFRS.

How we see it

In our opinion, where FRS 102 does not specifically address a matter, an entity would not be prevented from continuing to apply an accounting policy for a transaction that was applied under a third party GAAP, or previously extant UK GAAP, provided the policy was consistent with the guidance, definitions, criteria and concepts contained in the sources referred to by the hierarchy above.

The hierarchy implies that it is not possible to apply an accounting policy for a transaction using the criteria in Section 2 where the accounting for that transaction is specifically addressed by FRS 102 or a relevant SORP (since Section 2 can only be consulted in the absence of specific guidance). However, Section 3 *Financial Statement Presentation* states that there may be special circumstances where management concludes that compliance with FRS 102 would be so misleading that it would conflict with the objective of financial statements of entities as set out in Section 2. In such circumstances, an entity can depart from the specific requirements of FRS 102 by using a true and fair override. [FRS 102.3.4]. See Chapter 6 at 8.2.2 for discussion of the use of the true and fair override.

The hierarchy in Section 10 does not refer to UK Company Law. The implication from Section 10 is that, where choice is available, an accounting policy must be selected on its merits based on the criteria in FRS 102 (relevance and reliability) rather than to comply with the law (for example, The Large and Medium-sized Companies and Groups (Accounts and Reports) Regulations 2008 (SI 2008/410) (the Regulations). Some accounting policy choices permitted or required by FRS 102, for example measuring certain financial liabilities at fair value through profit or loss, are not allowed by the Regulations. However, Section 3 requires an entity to make disclosures when it has departed from a requirement of applicable legislation. [FRS 102.3.5, FRS 102.3.6].

3.2 Consistency of accounting policies

FRS 102 sets out requirements which address the selection and application of accounting policies.

Extract from FRS 102

- 10.7** An entity shall select and apply its accounting policies consistently for similar transactions, other events and conditions unless an FRS specifically requires or permits categorisation of items for which different policies may be appropriate. If an FRS requires or permits such categorisation, an appropriate accounting policy shall be selected and applied consistently to each category. [FRS 102.10.7].

There is no requirement in FRS 102 for each entity within a group to have consistent accounting policies in their separate or individual financial statements. Indeed, FRS 102 anticipates that this will not be the case by requiring consolidated financial statements to be adjusted where a member of the group uses accounting policies other than those adopted in the consolidated financial statements for like transactions and events. [FRS 102.9.17]. The Regulations also do not require each entity within a group to have consistent accounting policies. However, Section 10 requires an entity to select accounting policies that are both relevant to the economic decision-making needs of its users and reliable. [FRS 102.10.4]. Therefore, factors that one group entity takes into account in setting its accounting policies will normally also apply to other group entities.

3.3 Changes in accounting policies

Entities are only permitted to change an accounting policy in two specified circumstances:

Extract from FRS 102

- 10.8** An entity shall change an accounting policy only if the change:
- (a) is required by an FRS; or
 - (b) results in the financial statements providing reliable and more relevant information about effects of transactions, other events or conditions on the entity's financial position, financial performance or cash flows. [FRS 102.10.8]

This means that a change in accounting policy cannot be made on an arbitrary basis.

Reliability is defined as the quality of information that makes it free from material error and bias and represents faithfully that which it either purports to represent or could reasonably be expected to represent. [FRS 102 Appendix I]. In previous versions of FRS 102, reliability constituted one of the qualitative characteristics of information in financial statements. However, since the alignment of the concepts in Section 10 with those in the IFRS Conceptual Framework, reliability is no longer identified as either a fundamental or enhancing qualitative characteristic and is only defined in the Appendix. Despite this omission as a characteristic, the definition of reliability is closely aligned to that of faithful representation and the term is still widely used throughout FRS 102. In Section 10, reliability remains a central concept in assessing whether a change in accounting policy is acceptable.

Relevant financial information is defined as information capable of making a difference in the decisions made by users by helping them evaluate past, present or future events or confirming, or correcting, their past evaluations. Information may be capable of making a difference in a decision even if some users choose not to take advantage of it or are already aware of it from other sources. [FRS 102.2.10].

If an FRS allows a choice of accounting treatment (including the measurement basis) for a specified transaction or other event or condition and an entity changes its previous choice, then that is a change in accounting policy. [FRS 102.10.10].

As noted at 3.1 above, an accounting policy is not restricted to the measurement of a transaction but also encompasses how items are classified and presented in the financial statements. Therefore, changes in presentation, such as a decision to change from a single statement of comprehensive income approach to a two statement approach is a change in accounting policy. [FRS 102.5.3].

The following are stated specifically not to be changes in accounting policies: [FRS 102.10.9]

- The application of an accounting policy for transactions, other events and conditions that differ in substance from those previously occurring.
- The application of a new accounting policy for transactions, other events or conditions that did not occur previously or were not material.

And

- A change to the cost model when a reliable measure of fair value is no longer available (or vice versa) for an asset that an FRS would otherwise require or permit to be measured at fair value.

There are two exceptions to the usual application of the requirements for changes in accounting policies as follows:

- First time application of a policy to revalue assets (in accordance with Section 17 *Property, Plant and Equipment* or Section 18 *Intangible Assets other than Goodwill*) constitutes a change in accounting policy to be dealt with as a revaluation in accordance with those sections. [FRS 102.10.10A]. This means that the revaluation is accounted for prospectively using the fair value at the date of the revaluation. [FRS 102.17.15B, FRS 102.18.18B].
- A change in the measurement of a class of biological assets and its related agricultural produce from the cost model to the fair value model in accordance with Section 34 *Specialised Activities* is a change in accounting policy dealt with as a change in fair value less costs to sell in accordance with section 34. [FRS 102.10.10B].

Section 11 *Basic Financial Instruments* provides an accounting policy choice between applying the requirements of either sections 11 and 12, IAS 39 or IFRS 9 (see Chapter 11 at 4). However, once the accounting policy choice has been made, an entity can only change from either Section 11 or 12 or IFRS 9 *Financial Instruments* to IAS 39 *Financial Instruments: Recognition and Measurement* if the change is to make the entity's accounting policies consistent with those adopted in the consolidated financial statements in which it is included. In other words, an entity does not have a free choice to change its accounting policy to IAS 39 to provide more reliable and relevant information and can only do so in the single circumstance specified above.

3.3.1 Applying changes in accounting policies

An entity must account for changes in accounting policies as follows:

- A change in an accounting policy resulting from a change in the requirements of an FRS are accounted for in accordance with the transitional provisions, if any, specified in that amendment.
- Where an entity has elected under paragraph 2 of Section 11 to follow IAS 39 and/or IFRS 9 and the requirements of IAS 39 and/or IFRS 9 change, the entity accounts for that change in accounting policy in accordance with the transitional provisions, if any, specified in the revised IAS 39 and/or IFRS 9.
- Where, under paragraphs 1.4, 1.5 or 34.11 of FRS 102, an entity is required or has elected to apply IAS 33, IFRS 8 or IFRS 6 and the requirements of those standards change, the entity accounts for the change in accordance with the transitional provisions, if any, specified in those standards as amended. And
- All other changes in accounting policy are accounted for retrospectively (see 3.3.2 below). [FRS 102.10.11].

When an entity applies an accounting policy based on an IFRS, other than the specific IFRSs referred to above (IFRS 6, IFRS 8, IFRS 9, IAS 33 and IAS 39), and that IFRS changes, the issue arises of whether the entity is obliged to change its accounting policy to align to the amended IFRS.

How we see it

We consider that when an entity applies an accounting policy based on an IFRS (other than IFRS 6, IFRS 8, IFRS 9, IAS 33 and IAS 39) and that IFRS changes, such a change is at the discretion of the entity, but is appropriate only if it satisfies the relevance and reliability criteria and is not otherwise inconsistent with the FRS 102 hierarchy (see 3.1 above).

All such accounting policy changes are accounted for retrospectively regardless of the specific transitional rules that may apply in the IFRS, because the change does not meet any of the exceptions from retrospective application listed above.

3.3.2 Retrospective application of accounting policy changes

When a change in accounting policy is applied retrospectively in accordance with 3.3.1 above, the entity applies the new accounting policy to comparative information for prior periods at the earliest date for which it is practicable, as if the new accounting policy had always been applied. [FRS 102.10.12].

The following Illustration shows how to apply retrospective accounting.

Illustration 3-1: Retrospective application of change in accounting policy (ignoring tax)

Entity A makes a voluntary change in its accounting policy for measuring its investment in an associate in its separate financial statements to change the measurement basis from cost less impairment to fair value through profit or loss. Fair value through profit and loss is considered by Entity A to be more relevant than cost less impairment. The change is made in Entity A's annual reporting period ending 31 December 20X5. The fair value of the investment was £9,500 at 31 December 20X5, £10,000 at 31 December 20X4 and £9,000 at 31 December 20X3, respectively. The cost less impairment of the investment in associate was £5,000 at 31 December 20X5, 31 December 20X4 and 31 December 20X3, respectively.

In its statement of changes in equity, Entity A restates its equity at 1 January 20X4 by £4,000 to account for the difference between fair value and cost less impairment of the investment in associate at that date. This difference is credited to retained earnings*.

Entity A restates its profit and loss account for the year-ended 31 December 20X4 to recognise the fair value gain of £1,000 on the investment in associate during the year**.

Entity A records a fair value loss of £500 in profit or loss for the year ended 31 December 20X5.

* If the unrealised fair value gain is not a distributable profit, Entity A may wish, instead of crediting retained earnings, to create a separate non-distributable reserve within equity.

** If the unrealised fair value gain is not a distributable profit, Entity A may wish to make a transfer of the unrealised gain in the statement of changes in equity from retained earnings to a separate non-distributable reserve within equity.

As discussed above, applying a new accounting policy retrospectively means applying it as if that policy had always been applied. This implies that hindsight must not be used when applying a new accounting policy, either in making assumptions about what management's intentions would have been in a prior period or estimating the amounts recognised, measured or disclosed in a prior period. Hence, retrospectively applying a new accounting policy requires distinguishing information that provides evidence of circumstances that existed on the prior period date(s) from information which would have been available when the financial statements for that prior period(s) were authorised for issue.

In certain circumstances, it might be impracticable to restate the financial statements of prior years for a change in accounting policy. Applying a requirement is impracticable when the entity cannot apply it after making every reasonable effort to do so. [FRS 102 Appendix I]. Impracticability could arise when the relevant information for the prior years, for example fair value that is not based on an observable price or input, is not available and the entity is unable to calculate the amount after making every reasonable effort.

When it is impracticable to determine the individual-period effects of a change in accounting policy on comparative information for one or more prior periods presented, the entity applies the new accounting policy to the carrying amounts of assets and liabilities as at the beginning of the earliest period for which retrospective application is practicable, which may be the current period, and makes a corresponding adjustment to the opening balance of each affected component of equity for that period. [FRS 102.10.12].

IAS 8 contains additional guidance on impracticability which is not included in Section 10 but which might be helpful to users and which could be applied via the hierarchy (see 3.1 above). This guidance states that it is impracticable to apply a change in accounting policy retrospectively or to correct an error retrospectively (see 3.5 below) if:

- The effects of the retrospective application or retrospective restatement are not determinable.
- The retrospective application or retrospective restatement requires assumptions about what management's intent would have been in that period.

Or

- The retrospective application or retrospective restatement requires significant estimates of amounts and that it is impossible to distinguish objectively information about those estimates that:
 - Provides evidence of circumstances that existed on the date(s) as at which those amounts are to be recognised, measured or disclosed.

And

- Would have been available when the financial statements for that prior period were authorised for issue, from other information. [IAS 8.5].

3.4 Accounting estimates

FRS 102 observes that measurement uncertainty may arise when applying an accounting policy to certain items in financial statements. This happens in cases where the monetary amounts cannot be observed directly and are subject to estimate. In these cases, an entity develops an accounting estimate which will achieve the objective set out by the accounting policy. Developing accounting estimates involves the use of judgements or assumptions based on the latest available, reliable information. Section 10 provides the following examples of accounting estimates:

- The fair value of an asset or liability, applying Section 2A *Fair Value Measurement*.
 - The estimated selling price less costs to sell of an item of inventory, applying Section 13 *Inventories*.
 - The depreciation expense for an item of property, plant and equipment applying Section 17 *Property, Plant and Equipment*.
 - A provision for warranty obligations, applying Section 21 *Provisions and Contingencies*.
- And
- The recoverable amount of an item of property, plant and equipment, applying Section 27 *Impairment of Assets*. [FRS 102.10.14A].

In developing an accounting estimate, an entity uses measurement techniques and inputs which include estimation techniques and valuation techniques. [FRS 102.10.14B]. Section 10 clarifies that the term 'estimate' in FRS 102 sometimes refers to an estimate that is not an 'accounting estimate' as defined in Section 10, for example, an input used in developing an accounting estimate. [FRS 102.10.14C].

3.4.1 Changes in accounting estimates

Estimates will need revision as changes occur in the circumstances on which they are based or as a result of new information, new developments or more experience. [FRS 102.10.14D]. A change in an input or a change in a measurement technique impacting an accounting estimate are changes in accounting estimates, unless they result from the correction of prior period errors. Errors do not result from changes in circumstances or the availability of new information. See 3.5 below. [FRS 102.10.15].

However, a change in the measurement basis applied is a change in accounting policy and not a change in accounting estimate. [FRS 102.10.15]. There is one exception to this - if a reliable measure of fair value is no longer available for an asset which an FRS requires to be measured at fair value, a change to the cost model does not constitute a change in accounting policy. The reverse of this also applies; if a reliable fair value hitherto unavailable becomes available, the change from the cost model to the fair value model is similarly not a change in accounting policy.

The distinction between an accounting policy and an accounting estimate is important because a different accounting treatment is applied when there are changes in accounting policies or accounting estimates. When it is difficult to distinguish a change in an accounting policy from a change in an accounting estimate, the change is treated as a change in an accounting estimate. [FRS 102.10.15].

By its nature, a change in an accounting estimate is not caused by a prior period event. Consequently, the effect of a change in accounting estimate is required to be recognised prospectively in profit or loss by including it in:

- The period of the change, if the change affects that period only.

Or

- The period of the change and future periods, if the change affects both. [FRS 102.10.16].

An example of a change in estimate which would affect the current period only is a change in an estimate of the impairment charge relating to receivables recognised in the previous period. An example of a change which would affect both current and future periods is a change in the estimated useful life of a depreciable asset.

Some changes in accounting estimates will give rise to changes in assets and liabilities or relate to an item of equity. In those circumstances, the reporting entity adjusts the carrying amount of the related asset, liability or equity item in the period of the change. [FRS 102.10.17].

3.5 Corrections of prior period errors

Errors can arise in respect of the recognition, measurement, presentation or disclosure of elements of financial statements. Such errors include the effects of mathematical mistakes, mistakes in applying accounting policies, oversights or misinterpretations of facts, and fraud. [FRS 102.10.20].

Extract from FRS 102

- 10.19** Prior period errors are omissions from, and misstatements in, an entity's financial statements for one or more prior periods arising from a failure to use, or misuse of, reliable information that:
- (a) was available when financial statements for those periods were authorised for issue; and
 - (b) could reasonably be expected to have been obtained and taken into account in the preparation and presentation of those financial statements.

[FRS 102.10.19]. When it is discovered that material prior period errors have occurred, Section 10 requires that they be corrected in the first set of financial statements prepared after the discovery. The correction is excluded from the statement of comprehensive income for the period in which the error is discovered. Rather, it is corrected retrospectively by adjusting prior periods. This is done by: [FRS 102.10.21]

- Restating the comparative amounts for the prior period(s) presented in which the error occurred.
- Or
- If the error occurred before the earliest period presented, restating the opening balances of assets, liabilities and equity for the earliest prior period presented.

This process corrects the recognition, measurement and disclosure of amounts of elements of financial statements, as if a prior year error had never occurred.

The same caution on the use of hindsight in applying a new accounting policy (see 3.3.2 above) applies to correction of prior period errors. As is the case for the retrospective application of a change in accounting policy, retrospective restatement for the correction of prior period material errors is not required to the extent that it is impracticable to determine the period-specific effects on comparative information for one or more periods presented. In that case, the entity restates the opening balances of assets, liabilities and equity for the earliest period for which retrospective statement is practicable (which may be the current period). [FRS 102.10.22]. As discussed at 3.3.2 above, IAS 8 contains additional guidance on impracticability.

3.6 Disclosure of a change in accounting policy, a change in accounting estimate and prior period errors

3.6.1 Disclosure of a change in accounting policy

The disclosure requirements distinguish between a change in accounting policy that is mandatory (i.e., caused by a change to an FRS) and a change that is voluntary.

For changes in an accounting policy caused by an amendment to an FRS that have an effect on the current period, any prior period or which might have an effect on future periods, an entity must disclose:

- The nature of the change in accounting policy.

- For the current period and each prior period presented, to the extent practicable, the amount of the adjustment for each financial statement line item presented.
 - The amount of the adjustment relating to periods before those presented, to the extent practicable.
- And
- An explanation if it is impracticable to determine the amounts to be disclosed above. [FRS 102.10.13].

Therefore, the nature of an accounting policy change that has been made and is expected to impact future periods must be disclosed but the financial impact of such a change need not be quantified.

Financial statements of subsequent periods need not repeat these disclosures.

When a voluntary change in accounting policy has an effect on the current period or any prior period, an entity discloses the following:

- The nature of the change in accounting policy
- The reasons why applying the new accounting policy provides reliable and more relevant information
- To the extent practicable, the amount of the adjustment for each financial statement line item affected, showing separately the amounts:
 - For the current period
 - For each prior period presented

And

 - In the aggregate for periods before those presented

And
- An explanation if it is impracticable to determine the amounts to be disclosed for each financial statement line item above. [FRS 102.10.14].

Financial statements of subsequent periods need not repeat these disclosures.

3.6.2 Disclosure of a change in accounting estimate

Disclosure is required of the nature of any change in an accounting estimate and the effect of the change on assets, liabilities, income and expense for the current period and, if practicable, the effect of the change on one or more future periods. [FRS 102.10.18].

This means that where a change in accounting estimate affects future periods, such as a change in the estimated useful life of a depreciable asset, the reporting entity must provide users of the accounts with information regarding the future impact of that change, if practicable.

In contrast to a change in accounting policy, there is no requirement to disclose the impact of a change in accounting estimate on each financial statement line item.

3.6.3 Disclosure of prior period errors

The following is required to be disclosed in respect of material prior period errors:

- The nature of the prior period error.
 - For each prior period presented, to the extent practicable, the amount of the correction for each financial statement line item affected.
 - To the extent practicable, the amount of the correction at the beginning of the earliest prior period presented.
- And
- An explanation if it is impracticable to determine the amounts to be disclosed above. [FRS 102.10.23].

Financial statements of subsequent periods need not repeat these disclosures.

These disclosures are similar to those required for a change in accounting policy. There is no exemption from disclosure of a prior period error on the grounds that such information might prejudice seriously the position of the reporting entity.

The following Illustration shows the disclosures required for a retrospective restatement of a prior period error.

Illustration 3-2: Retrospective restatement of prior period error

During 20X5, Beta Co discovered that some products that had been sold during 20X4 were incorrectly included in inventory at 31 December 20X4 at £6,500.

Beta's accounting records for 20X5 show sales of £104,000, cost of goods sold of £86,500 (including £6,500 for the error in opening inventory), and income taxes of £5,250.

In 20X4, Beta reported:

	£
Sales	73,500
Cost of goods sold	<u>(53,500)</u>
Profit before income taxes	20,000
Income taxes	<u>(6,000)</u>
Profit	<u>14,000</u>

The 20X4 opening retained earnings were £20,000 and closing retained earnings were £34,000.

Beta's income tax rate was 30% for 20X5 and 20X4. It had no other income or expenses.

Beta had £5,000 of share capital throughout, and no other components of equity except for retained earnings. Its shares are not publicly traded and it does not disclose earnings per share.

Beta Co
Extract from the statement of comprehensive income

	(restated)	
	20X5	20X4
	£	£
Sales	104,000	73,500
Cost of goods sold	<u>(80,000)</u>	<u>(60,000)</u>
Profit before income taxes	24,000	13,500
Income taxes	<u>(7,200)</u>	<u>(4,050)</u>
Profit	<u>16,800</u>	<u>9,450</u>

Beta Co
Statement of Changes in Equity

	Share capital	Retained earnings	Total
	£	£	£
Balance at 1 January 20X4	5,000	20,000	25,000
Profit for the year ended 31 December 20X4 as restated	<u>-</u>	<u>9,450</u>	<u>9,450</u>
Balance at 31 December 20X4	5,000	29,450	34,450
Profit for the year ended 31 December 20X5	<u>-</u>	<u>16,800</u>	<u>16,800</u>
Balance at 31 December 20X5	<u>5,000</u>	<u>46,250</u>	<u>51,250</u>

Extracts from the Notes

- Some products that had been sold in 20X4 were incorrectly included in inventory at 31 December 20X4 at £6,500. The financial statements of 20X4 have been restated to correct this error. The effect of the restatement on each financial statement line item affected is shown below.

	Effect on 20X4
	£
Increase in cost of goods sold	(6,500)
Decrease in income tax expense	<u>1,950</u>
Decrease in profit	<u>(4,550)</u>
Decrease in inventory	(6,500)
Decrease in income tax payable	<u>1,950</u>
Decrease in equity	<u>(4,550)</u>

4 Company law matters

4.1 Corrections of prior period errors and defective accounts

If a company's previous annual report and accounts did not comply with the Companies Act 2006 (for example due to an error), s454 of the Act permits the directors to revise any such reports and accounts; this is often referred to as the Defective Accounts regime. If an entity corrects errors by way of a prior year adjustment in its latest financial statements, the directors might consider whether to revise the earlier financial statements, although it is common practice not to do so.

5 Summary of GAAP differences

The following table shows the differences between FRS 102 and IFRS.

	FRS 102	IFRS
Hierarchy reference to other standard setters	May refer to adopted IFRS, but no reference to other standard setting bodies.	May refer to other standard setting bodies with similar conceptual framework.
Biological assets and its related agricultural produce: change from cost model to fair value model	If the measurement of a class of biological assets and its related agricultural produce is changed from the cost model to the fair value model, this change in accounting policy is to be dealt with as a change in fair value less costs to sell, rather than retrospectively as a change in accounting policy in accordance with Section 10.	There is a presumption in IAS 41 <i>Agriculture</i> that the fair value of all biological assets can be measured reliably. This presumption can only be rebutted on initial recognition for a biological asset (not agricultural produce). Once fair value becomes reliably measurable, the fair value model is applied from that date.
Impracticability	Relief for prior year restatements if impracticable.	Relief for prior year restatements if impracticable (more guidance compared to FRS 102).
Disclosures: IFRS issued but not effective	Disclose nature of changes to FRS 102 that are issued but not effective. Not required to disclose the impact on the financial statements of future periods or description and impact of transitional provisions.	Disclose both nature and impact of IFRS accounting standards issued but not effective and a description of the transitional provisions if applicable and whether those provisions might have an effect on future periods.
Disclosures: third balance sheet	Third balance sheet not required for prior period restatements.	Third balance sheet required for prior period restatements.

Appendix A - Defined terms

Extract from FRS 102

Appendix I

Glossary

accounting estimates	Monetary amounts in financial statements that are subject to measurement uncertainty
accounting policies	The specific principles, bases, conventions, rules and practices applied by an entity in preparing and presenting financial statements
errors	Omissions from, and misstatements in, the entity's financial statements for one or more prior periods arising from a failure to use, or misuse of, reliable information that: (a) was available when financial statements for those periods were authorised for issue; and (b) could reasonably be expected to have been obtained and taken into account in the preparation and presentation of those financial statements.
impracticable	Applying a requirement is impracticable when the entity cannot apply it after making every reasonable effort to do so.
reliability	The quality of information that makes it free from material error and bias and represents faithfully that which it either purports to represent or could reasonably be expected to represent.

Overview

This chapter deals with the requirements of Section 2A *Fair Value Measurement*.

What you need to know

- Section 2A is a new section added to FRS 102 as a result of the Periodic Review 2024 which replaces guidance contained previously in an Appendix to Section 2 *Concepts and Pervasive Principles*. The section addresses the measurement of fair value whilst the disclosures of fair value are covered by other applicable sections of FRS 102.
- Fair value is defined as “the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.” [FRS 102.2A.2]. This is an ‘exit’ price.
- Fair value is determined based on assumptions made by market participants, including considerations of the asset’s condition, location and any restrictions on its sale or use.
- Entities must identify the principal market for the asset or liability, and in some cases, the most advantageous market.
- For non-financial assets, fair value measurement considers the asset’s highest and best use.
- A fair value hierarchy is used in estimating fair value:
 - The best evidence of fair value is an unadjusted quoted price in an active market for the identical (or comparable asset) or liability.
 - When an unadjusted market price is not available, the price of a recent orderly transaction for the identical (or comparable) asset or liability is used.
 - Otherwise, if prices are unavailable, another valuation technique is used.
- If a reliable measure of fair value is not available, an entity is precluded from measuring the asset at fair value.

1 Introduction

Section 2A *Fair Value Measurement* applies when another section of FRS 102 requires or permits measurement or disclosure about fair value measurement. The objective of a fair value measurement is to estimate the price at which an orderly transaction to sell an asset or to transfer a liability would take place between market participants at the measurement date. [FRS 102.2A.2].

- The Periodic Review 2024 introduced more detailed guidance compared to the 2022 version of FRS 102, achieving greater alignment with IFRS. The key changes are summarised as follows:
- The Appendix to Section 2 *Concepts and Pervasive Principles* was replaced and a new Section 2A *Fair Value Measurement* was added to FRS 102.
- The definition of fair value and the guidance on fair value measurement are aligned with IFRS 13. Fair value is now defined as “The price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.” [FRS 102 Appendix I]. This is an exit price notion.
- Fair value is determined based on assumptions made by market participants, including considerations of the asset’s condition, location and any restrictions on its sale or use. Asset specific characteristics are considered rather than those that are transaction specific.
- Entities must identify the principal market for the asset or liability, and in some cases, the most advantageous market.
- For non-financial assets, fair value measurement considers the asset’s highest and best use.
- The fair value hierarchy remains unchanged and must be considered in estimating fair value.
- Valuation techniques comprise a market, cost or income approach and are applied consistently from period to period (in general).
- As a practical expedient, mid-market pricing for fair value measurements within a bid-ask spread is permitted.
- If a reliable measure of fair value is not available, the entity is precluded from measuring the asset at fair value and this is aligned with the previous version of the standard.
- The fair value of a liability must reflect non-performance risk.
- The fair value of financial liabilities due on demand is now addressed by Section 2A rather than Section 12 *Other Financial Instruments Issues*.

2 Comparison between Section 2A and IFRS

The comparable IFRS accounting standard is IFRS 13 *Fair Value Measurement*. The main differences between FRS 102 and IFRS are discussed below. Following the Periodic Review 2024, there are fewer differences to IFRS than previously.

2.1 Definition

The definition of fair value and the methodology for measuring fair value are aligned with IFRS, however, IFRS 13 provides significantly more guidance. This could give rise to divergence in practice as some entities may adopt the detailed guidance in IFRS as part of an accounting policy choice (see 4.10.1 below for discussion of one of these potential differences).

2.2 Measurement

Section 2A contains limited guidance on fair valuing liabilities whilst IFRS 13 contains extensive guidance and additionally includes guidance on fair valuing an entity's own equity. The Section 2A requirements for fair valuing liabilities are discussed in 4.9 below.

2.3 The portfolio exception

IFRS 13 contains an exception to measuring fair value of a group of financial assets and liabilities with offsetting risk exposures, referred to as 'the portfolio exception'. A reporting entity that manages a group of financial assets and financial liabilities with offsetting risks on the basis of its net exposure to market or credit risks is allowed to measure the group based on the price that would be received to sell its net long position, or paid to transfer its net short position, for a particular risk. The objective of the valuation is to determine the price that market participants would pay (or receive) in a single transaction for the entire net risk exposure. There is no similar exception in Section 2A.

2.4 Reliable measurement

Section 2A precludes an entity from measuring items at fair value if fair value cannot be reliably measured. In contrast IFRS 13 provides no such exemption, requiring entities to prioritise observable data and where necessary, apply valuation techniques to measure fair value.

2.5 Disclosure

Section 2A does not include disclosures about fair value. These disclosures are included in the relevant section of FRS 102 that requires measurement at fair value. For instance, Section 34 *Specialised Activities* requires financial institutions to disclose the fair value of financial instruments. Furthermore, the Companies Act 2006 imposes additional disclosure requirements related to fair value measurement. Overall, FRS 102's disclosure requirements are less extensive than those in IFRS 13, which includes enhanced disclosures for level 3 instruments (instruments valued using significant unobservable inputs).

3 The requirements of Section 2A

Prior to the Periodic Review 2024, fair value was defined as “the amount for which an asset could be exchanged, a liability settled, or an equity instrument granted could be exchanged, between knowledgeable, willing parties in an arm’s length transaction”. [FRS 102(2022) Appendix I]. This was an ‘entry’ price notion and different to IFRS 13’s ‘exit’ price.

Following the post-implementation review of IFRS 13 in 2018 affirming that the standard was functioning as intended and considering the time that had passed since IFRS 13 was first introduced, the FRC incorporated amendments into FRS 102 as part of the Periodic Review 2024. These changes bring the definition of fair value and the associated measurement guidance in line with IFRS 13 effective from 1 January 2026. [FRS 102.B2A.2].

3.1 Scope

Section 2A contains scope exceptions which are largely consistent with those in IFRS 9 *Financial Instruments*, IAS 39 *Financial Instruments: Recognition and Measurement* and IAS 32 *Financial Instruments: Presentation*. The guidance in Section 2A is applied whenever another section of FRS 102 requires or permits fair value measurements or disclosures about fair value measurements, except: [FRS 102.2A.1]

- Share-based payment transactions within the scope of Section 26 *Share-based Payment*.

And

- Leasing transactions within the scope of Section 20 *Leases*.

The section prescribes ‘how’ to measure fair value but not ‘what’ must be measured at fair value, ‘when’, or the accounting for subsequent changes in fair value. An entity must consider other relevant sections of FRS 102 for each of these requirements.

There are two other special circumstances:

- Some sections of FRS 102 require or permit measurements based on fair value, such as fair value less costs to sell. This includes, for example, where the recoverable amount for an asset or cash-generating unit determined in accordance with Section 27 *Impairment of Assets*, is its fair value less costs to sell.
- Biological assets and agricultural produce at the point of harvest are measured at fair value less costs to sell in accordance with Section 34 *Specialised Activities - Agricultural Activities* (see Chapter 36 at 2)

In each of these situations, the fair value component is measured in accordance with Section 2A. Costs to sell or costs of disposal are determined in accordance with the applicable section of FRS 102. Adjustments made to determine a measurement based on fair value excludes factors that have already been considered when determining that fair value. For example, transportation costs taken into account when measuring fair value are not to be adjusted for again when measuring fair value less costs to sell. [FRS 102.2A.24].

3.1.1 Share-based payments

The extant definition of fair value has been retained for Section 26 in order to avoid unintended consequences. This approach is consistent with the approach taken in IFRS 2, upon which Section 26 is based. [FRS 102.B26.13]. For example, Section 26 requires certain share-based payments to be measured at grant date fair value (see Chapter 28). However, the objective of a Section 26 fair value measurement is not entirely consistent with Section 2A. The grant date fair value of such share-based payments is, therefore, measured and disclosed in accordance with Section 26, not Section 2A.

3.1.2 Lease transactions

Section 2A does not apply to any leasing transactions accounted for in accordance with Section 20. The fair value measurement and disclosure requirements in Section 20 apply instead (see Chapter 23).

4 Measurement

4.1 Objective

The objective of a fair value measurement is to estimate the price at which an orderly transaction to sell an asset or to transfer a liability would take place between market participants at the measurement date. [FRS 102.2A.2].

A fair value measurement does not consider management's intent to hold an asset or to settle or otherwise hold a liability at the measurement date. Instead, it represents a market-based measurement that contemplates a hypothetical transaction between market participants at the measurement date. It is measured using the assumptions that market participants would use when pricing the asset or liability and therefore, is a market-based measurement rather than being specific to the entity (these concepts are discussed further below). [FRS 102.2A.3].

4.2 Unit of account

The identification of exactly what asset or liability is being measured is fundamental to determining its fair value. Fair value may need to be measured for either:

- A stand-alone asset or liability (e.g., a financial instrument or an operating asset).
- Or
- A group of assets, a group of liabilities, or a group of assets and liabilities (e.g., a cash-generating unit (CGU) or a business).

The unit of account defines what is being measured for financial reporting purposes. It is an accounting concept that determines the level at which an asset or liability is aggregated or disaggregated for the purpose of applying Section 2A, as well as other sections. [FRS 102.2.45, FRS 102.2.46]. The appropriate unit of account is determined by the applicable section of FRS 102 that permits or requires the fair value measurement or disclosure, rather than by Section 2A.

4.2.1 The valuation premise

In valuing non-financial assets, the concepts of 'unit of account' and 'valuation premise' are distinct, even though both concepts deal with determining the appropriate level of aggregation (or disaggregation) for assets and liabilities. The unit of account identifies what is being measured for financial reporting and drives the level of aggregation (or disaggregation) for presentation and disclosure purposes. Valuation premise is a valuation concept that addresses how a non-financial asset derives its maximum value to market participants, either on a stand-alone basis or through its use in combination with other assets and liabilities.

Since financial instruments do not have alternative uses and their fair values typically do not depend on their use within a group of other assets or liabilities, the concepts of highest and best use and valuation premise are not relevant for financial instruments. As a result, the fair value for financial instruments is largely based on the unit of account prescribed by the section that requires (or permits) the fair value measurement.

The distinction between these two concepts becomes clear when the unit of account of a non-financial asset differs from its valuation premise. Consider an asset (e.g., customised machinery) that was acquired other than by way of a business combination, along with other assets as part of an operating line. Although the unit of account for the customised machinery may be as a stand-alone asset (i.e., it is presented for financial reporting purposes at the individual asset level in accordance with Section 17 *Property, Plant and Equipment*), the determination of the fair value of the machinery may be derived from its use with other assets in the operating line (see 4.8.1 below).

4.3 Characteristics of the asset or liability

When measuring fair value, Section 2A requires an entity to consider the characteristics of the asset or liability. Examples of such characteristics include: [FRS 102.2A.4]

- The condition and location of an asset.
- Or
- Restrictions, if any, on the sale or use of an asset.

The fair value of the asset or liability must take into account those characteristics that market participants would take into consideration when pricing the asset or liability at the measurement date. [FRS 102.2A.4]. For example, when valuing individual shares in an unlisted company, market participants might consider factors such as the nature of the company's operations; its performance to date and forecast future performance; and how the business is funded, including whether it is highly leveraged.

4.3.1 Condition and location

An asset may not be in the condition or location that market participants would require for its sale at an observable market price. In order to determine the fair value of the asset as it currently exists, the market price needs to be adjusted to the price market participants would be prepared to pay for the asset in its current condition and location. This includes deducting the cost of transporting the asset to the market if location is a characteristic of the asset being measured, and may include deducting the costs of converting or transforming the asset, as well as a normal profit margin.

For non-financial assets, condition and location considerations may influence, or be dependent on, the highest and best use of an asset (see 4.8.1 below). That is, an asset's highest and best use may require an asset to be in a different condition. However, the objective of a fair value measurement is to determine the price for the asset in its current form. Therefore, if no market exists for an asset in its current form, but there is a market for the converted or transformed asset, an entity could adjust this market price for the costs a market participant would incur to re-condition the asset (after acquiring the asset in its current condition) and the compensation they would expect for the effort.

Illustration 4-1 below provides an example of how costs to convert or transform an asset might be considered in determining fair value based on the current use of the asset.

Illustration 4-1: Adjusting fair value for condition and location

An entity owns a pine forest. The pine trees take approximately 25 years to mature, after which they can be cut down and sold. The average age of the trees in the forest is 14 years at the end of the reporting period. The current use of the forest is presumed to be its highest and best use.

There is no market for the trees in their current form. However, there is a market for the harvested timber from trees aged 25 years or older. To measure the fair value of the forest, the entity uses an income approach and uses the price for 25-year-old, harvested timber in the market today as an input. However, since the trees are not yet ready for harvest, the cash flows must be adjusted for the costs a market participant would incur. Therefore, the estimated cash flows include costs to manage the forest (including silviculture activities, such as fertilising and pruning the trees) until the trees reach maturity; costs to harvest the trees; and costs to transport the harvested logs to the market. The entity estimates these costs using market participant assumptions. The entity also adjusts the value for a normal profit margin because a market participant acquiring the forest today would expect to be compensated for the cost and effort of managing the forest for the period (i.e., 11 years) before the trees will be harvested and the timber is sold (i.e., this would include compensation for costs incurred and a normal profit margin for the effort of managing the forest).

4.3.2 Restrictions on assets or liabilities

Section 2A requires that the effect on fair value of a restriction on the sale or use of an asset is incorporated within the fair value if a market participant would consider the effect. [FRS 102.2A.4]. A restriction that would transfer with the asset in a sale would generally be deemed a characteristic of the asset and, therefore, would likely be considered by market participants when pricing the asset. Conversely, a restriction that is specific to the entity holding the asset would not transfer with the asset in an assumed sale and, therefore, would not be considered when measuring fair value. Determining whether a restriction is a characteristic of the asset or of the entity holding the asset may be contractual in some cases. In other cases, this determination may require judgement based on the specific facts and circumstances.

IFRS 13 has different treatments for restrictions on assets and those over liabilities. A liability may be subject to restrictions that prevent the transfer of the item. When measuring the fair value of a liability in most instances, IFRS 13 does not allow an entity to include a separate input (or an adjustment to other inputs) for such restrictions because the effect of the restriction is either implicitly or explicitly included in other inputs to the fair value measurement. This is not addressed in Section 2A, however, the usual principles of fair value measurement remain applicable. Specifically, any restriction is reflected in the fair value measurement if it would be taken into account by a market participant and has not already been reflected in the transaction price.

How we see it

If an entity is aware that a restriction on transfer of a liability is not already reflected in the price (or in the other inputs used in the measurement), it would adjust the price or inputs to reflect the existence of the restriction. However, in our view this would be rare because nearly all liabilities include a restriction and, when measuring fair value, market participants are assumed to be sufficiently knowledgeable about the liability to be transferred.

4.4 The principal (or most advantageous) market

A fair value measurement contemplates an orderly transaction to sell the asset or transfer the liability in either: *[FRS 102.2A.5]*

- The principal market for the asset or liability.

Or

- In the absence of a principal market, the most advantageous market for the asset or liability.

If there is a principal market for the asset or liability, the fair value measurement represents the price in that market at the measurement date even if the price in a different market is potentially more advantageous. *[FRS 102.2A.5]*.

4.4.1 The principal market

The principal market is the market that has the greatest volume or level of activity for the asset or liability. *[FRS 102 Appendix I]*. There is a general presumption that the principal market is the one in which the entity would normally enter into a transaction to sell the asset or transfer the liability, unless there is evidence to the contrary. *[FRS 102.2A.6]*.

Management is not required to perform an exhaustive search of all possible markets to identify the principal (or most advantageous) market; however, it cannot ignore evidence that is reasonably available when considering which market has the greatest volume and level of activity. *[FRS 102.2A.6]*.

The entity must be able to access the principal market (or the most advantageous market) to transact at the measurement date, even in a hypothetical transaction. If there is no such market to which the entity has access at the measurement date, entities must assume that a transaction takes place at the measurement date as a basis for determining fair value. *[FRS 102.2A.7]*.

In practice, an entity would first consider the markets it can access. Then it would determine which of those markets has the greatest volume and liquidity in relation to the particular asset or liability to decide what the principal market is. Management's intent to transact in a particular market is not a factor in this determination.

4.4.2 The most advantageous market

The most advantageous market is the one that maximises the amount that would be received to sell the asset or minimises the amount that would be paid to transfer the liability, after considering transaction costs and transport costs. *[FRS 102 Appendix I]*.

If there is a principal market for the asset or liability being measured, fair value is determined using the price in that market even if the price in a different market is more advantageous at the measurement date. Only in situations where there is no principal market for the asset or liability being measured, can an entity consider the most advantageous market. *[FRS 102.2A.5]*.

When determining the most advantageous market, an entity must take into consideration the transaction costs and transportation costs it would incur to sell the asset or transfer the liability. The market that would yield the highest price after deducting these costs is the most advantageous market. However, it must be noted that whilst transaction costs and transport costs are considered in determining the most advantageous market, fair value is only adjusted for transportation costs (see 4.7.2 below). *[FRS 102.2A.8]*.

4.5 Market participants

When measuring fair value, an entity is required to use the assumptions that market participants would use when pricing the asset or liability. However, Section 2A does not require an entity to identify specific market participants. Instead, an entity must identify the characteristics of market participants that would generally transact for the asset or liability being measured and this may require judgement.

FRS 102 defines market participants as “buyers and sellers in the principal (or most advantageous) market for the asset or liability”. [FRS 102 Appendix I].

FRS 102 assumes that market participants have all of the following characteristics: [FRS 102 Appendix I]

- They are independent of each other, that is, they are not related parties, as defined in Section 33 *Related Party Disclosures* (see Chapter 35).
- They are knowledgeable, having a reasonable understanding about the asset or liability using all available information.
- They are able to enter into a transaction for the asset or liability.

And

- They are willing to enter into a transaction for the asset or liability, that is, they are motivated but not forced or otherwise compelled to do so.

Since market participants are independent of each other, the hypothetical transaction is assumed to take place between market participants at the measurement date, not between the reporting entity and another market participant. [FRS 102.2A.2].

Market participants in the principal (or most advantageous) market are assumed to have sufficient knowledge about the asset or liability for which they are transacting. The appropriate level of knowledge does not necessarily need to come from publicly available information, but could be obtained in the course of a normal due diligence process.

When determining potential market participants, the legal capability and the operating and financial capacity of the market participant to purchase the asset or assume the liability are considered. Market participants must have both the willingness and the ability to transact for the item being measured.

Fair value is not the value specific to the reporting entity and it is not the specific value to one market participant whose risk assessment or specific synergies may differ from other market participants. The reporting entity needs to consider those factors that market participants, in general, would consider. Fair value is not measured based on a single market participant's assumptions or their specific intent or use of the asset or liability. For example, assume a single market participant, Market Participant A, is willing to pay a higher price for an asset than the remaining market participants, due to specific synergies that only Market Participant A could achieve. In such a situation, fair value would not be the price that Market Participant A would be willing to pay for the asset. Instead, fair value would be the price that typical market participants would pay for the asset.

4.6 The transaction

As at the measurement date, the transaction to sell an asset or transfer a liability is, by definition, a hypothetical transaction for the particular asset or liability being measured at fair value.

Section 2A assumes this hypothetical transaction will take place in the principal (or most advantageous) market (see 4.4 above) and will: [FRS 102.2A.2]

- Be orderly in nature.
- Take place between market participants that are independent of each other, but knowledgeable about the asset or liability (see 4.5 above for additional discussion on market participants).

And

- Occur on the measurement date.

These assumptions are important in ensuring that the estimated exit price in the hypothetical transaction is consistent with the objective of a fair value measurement. For example, the concept of an orderly transaction is intended to distinguish a fair value measurement from the exit price in a distressed sale or forced liquidation. Unlike a forced liquidation, an orderly transaction assumes that the asset or liability is exposed to the market prior to the measurement date for a period that is usual and customary to allow for information dissemination and marketing. That is, the hypothetical transaction assumes that market participants have sufficient knowledge and awareness of the asset or liability, including that which would be obtained through customary due diligence even if this process may not have begun yet (or may never occur at all, if the entity does not sell the asset or transfer the liability).

The hypothetical transaction between market participants does not consider whether management actually intends to sell the asset or transfer the liability at the measurement date; nor does it consider the reporting entity's ability to enter into the transaction on the measurement date. [FRS 102.2A.3].

A fair value measurement considers market conditions as they exist at the measurement date and is intended to represent the current value of the asset or liability, not the potential value of the asset or liability at some future date. The transaction is therefore assumed to take place on the measurement date and the entity assumes that the marketing activities and due diligence activities have already been performed.

4.7 The price

FRS 102 defines fair value as "The price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date." [FRS 102 Appendix I].

IFRS 13 requires the entity to estimate fair value based on the price that would be received to sell the asset or transfer the liability being measured (i.e., an exit price). While the determination of this price may be straightforward in some cases (e.g., when the identical instrument trades in an active market), in others it will require significant judgement. Section 2A makes it clear that the price used to measure fair value must not be adjusted for transaction costs, but would consider transportation costs. [FRS 102.2A.8].

4.7.1 Transaction costs

Transaction costs are defined as the costs to sell an asset or transfer a liability in the principal (or most advantageous) market for the asset or liability that are directly attributable to the disposal of an asset or the transfer of the liability. In addition, these costs must be incremental, i.e., they would not have been incurred by the entity had the decision to sell the asset or transfer the liability not been made and must be necessary for and result directly from the transaction. [FRS 102 Appendix I]. Examples of transaction costs include commissions or certain due diligence costs. Transaction costs do not include transportation costs.

Fair value is not adjusted for transaction costs because transaction costs are not a characteristic of an asset or a liability; they are a characteristic of the transaction. While not deducted from fair value, an entity considers transaction costs in the context of determining the most advantageous market in the absence of a principal market (see 4.4.2 above) because in this instance the entity is seeking to determine the market that would maximise the net amount that would be received for the asset.

4.7.2 Transport costs

Transport costs represent those that would be incurred to transport an asset or liability to (or from) the principal (or most advantageous) market. [FRS 102.2A.8]. If location is a characteristic of the asset or liability being measured (e.g., as might be the case with a commodity), the price in the principal (or most advantageous) market is adjusted for transportation costs.

Illustration 4-2: Transport costs

Entity A holds a physical commodity measured at fair value in its warehouse in Europe. For this commodity, the London exchange is determined to be the principal market as it represents the market with the greatest volume and level of activity for the asset that the entity can reasonably access.

The exchange price for the asset is £25. However, the contracts traded on the exchange for this commodity require physical delivery to London. Entity A determines that it would cost £5 to transport the physical commodity to London and the broker's commission would be £3 to transact on the London exchange.

Since location is a characteristic of the asset and transportation to the principal market is required, the fair value of the physical commodity would be £20 - the price in the principal market for the asset of £25, less transportation costs of £5. The £3 broker commission represents a transaction cost that would not adjust the price in the principal market.

4.8 Application to non-financial assets

4.8.1 Highest and best use

The fair value measurement of non-financial assets must reflect the highest and best use of the asset from a market participant's perspective. Highest and best use is a valuation concept that considers how market participants would use a non-financial asset to generate and maximise the economic benefits or sell to another market participant who would use the asset in its highest and best use. [FRS 102.2A.9]. The maximum value of a non-financial asset to market participants may come from its use: [FRS 102.2A.12]

- In combination with other assets or with other assets and liabilities.
- Or
- On a stand-alone basis

This is the valuation premise and might be its current use or some alternative use. However, there is a presumption that an entity's current use is the highest and best use unless there are factors that suggest a different use by market participants would maximise the value of that asset. [FRS 102.2A.11]. For example, market participants may maximise the value of land, currently used as a site for a manufacturing facility, by using it for residential housing instead.

The concepts of highest and best use and valuation premise are only relevant for non-financial assets and not financial assets and liabilities. This is explained in the basis for conclusions for IFRS 13 in paragraph 63.

In determining the highest and best use of a non-financial asset, Section 2A indicates that uses that are physically possible, legally permissible and financially feasible are to be considered. [FRS 102.2A.10]. As such, when assessing alternative uses, entities must consider the physical characteristics of the asset, any legal restrictions on its use and whether the value generated provides an adequate investment return for market participants.

How we see it

In our view, an entity would need to have sufficient evidence to support its assumption about the potential for an alternative use, particularly in light of Section 2A's presumption that the highest and best use is an asset's current use. Provided there is sufficient evidence to support these assertions, alternative uses that would enable market participants to maximise value are considered.

If there are multiple types of market participants who would use the asset differently, these alternative scenarios must be considered before concluding on the asset's highest and best use.

A careful assessment is particularly important when the highest and best use of a non-financial asset is in combination with other assets and liabilities as a group. In this case, the fair value of the non-financial asset is determined assuming that a market participant already holds the complementary assets and associated liabilities. Assets and liabilities within a group are all valued using the same valuation premise.

[FRS 102.2A.12]. For example, if the fair value of a piece of machinery on a manufacturing line is measured assuming its highest and best use is in conjunction with other equipment in the manufacturing line, those other non-financial assets in the asset group (i.e., the other equipment on the manufacturing line) would also be valued using the same premise, regardless of whether any individual asset within the group would have a higher fair value on a stand-alone basis.

4.9 Application to liabilities

Section 2A applies to liabilities, both financial and non-financial, whenever another section of FRS 102 requires those liabilities to be measured at fair value.

4.9.1 Fair value of a liability

The fair value measurement of a liability contemplates the transfer of the liability to a market participant at the measurement date. [FRS 102.2A.2]. This applies, even if in practice, the entity has no intention of transferring the liability or if there are restrictions in place that prevent its transfer. [FRS 102.2A.3]. The liability is assumed to continue (i.e., it is not settled or extinguished), and the market participant to whom the liability is transferred would be required to fulfil the obligation.

4.9.2 Non-performance risk

The fair value of a liability must reflect the effect of non-performance risk. [FRS 102.2A.13]. Non-performance risk is the risk that an obligation will not be fulfilled. This risk includes, but may not be limited to, the entity's own credit risk, for example, settlement risk. [FRS 102 Appendix I]. In the case of non-financial instruments, such as commodity contracts, non-performance risk could represent the risk associated with physically extracting and transferring an asset to the point of delivery.

Non-performance risk remains unchanged before and after the transfer implying that the liability is hypothetically transferred to a market participant of equal credit standing. [FRS 102.2A.13]. As explained in IFRS 13, one reason for this is because a market participant taking on the obligation would not enter into the transaction without reflecting a difference in credit risk in the price. [IFRS 13.BC94].

No further guidance is provided in FRS 102 on how the requirement is to be applied in practice. For example, when valuing a derivative contract, an entity would need to consider the effect of its own credit risk, often referred to as a debit valuation adjustment (DVA). The concept and valuation methods are discussed further in the most recent version of the EY publication, International GAAP®.

4.9.3 Financial liability with a demand feature

The fair value of a financial liability that is due on demand is deemed to be not less than the amount payable on demand, discounted from the first date that the amount could be required to be paid. [FRS 102.2A.14]. The logic is that a rational lender would demand repayment if the fair value were ever less than the net present value of the amount repayable, even though in practice many people do not withdraw their demand deposits in such circumstances. No guidance is provided in this context as to the appropriate discount rate, however, discount rates generally reflect the time value of money and risks specific to the liability. [FRS 102.21.7, FRS 102.27.20]. This requirement is identical to that in IFRS 13.47; hence, further information can be found in the most recent version of the EY publication, International GAAP®.

4.10 The fair value hierarchy

Section 2A contains a hierarchy of inputs to be used when determining a fair value for which the best evidence of fair value is a quoted price in an active market. [FRS 102.2A.15(a)]. Figure 4-1 below shows the fair value hierarchy to be used. [FRS 102.2A.15].

Figure 4-1: Fair value hierarchy

FRS 102 is explicit that the best evidence of fair value is an unadjusted quoted price for an identical or comparable asset or liability in an active market. Only when an unadjusted quoted price is unavailable, does an entity use the price of a recent orderly transaction for an identical or comparable asset or liability and failing both of those techniques, an estimation using another valuation technique. [FRS 102.2A.15]. Section 34 refers to a fair value hierarchy for disclosure purposes and categorises the measurement into three levels: Level 1, 2 and 3 (see Chapter 15). Whilst Section 2A does not label the hierarchy in this manner, the approach is similar in that application of the hierarchy in both sections requires an entity to prioritise observable inputs over those that are unobservable when measuring fair value.

4.10.1 Unadjusted quoted price in an active market

When determining fair value, entities are required to maximise the use of inputs determined by reference to a market price in an 'active market'. [FRS 102.2A.15]. 'Active market' is defined as "A market in which transactions for the asset or liability take place with sufficient frequency and volume to provide pricing information on an ongoing basis." [FRS 102 Appendix I].

Section 2A states that the best evidence of fair value is an unadjusted quoted price in an active market for the identical or comparable asset or liability. [FRS 102.2A.15]. If a quoted price in an active market is available, an entity must use this price to measure fair value without adjustment.

Adjustments may be necessary in some limited instances, for example, when a quoted price in an active market does not represent fair value at the measurement date. This may be the case if significant events (e.g., transactions in a principal-to-principal market, trades in a brokered market or announcements), take place after the close of a market, but before the measurement date. An entity must establish and consistently apply a policy for identifying those events that might affect fair value measurements.

Based on the above definition of an active market, most equities and bonds that are listed on an exchange for which there is a liquid secondary market in terms of regular trading will be considered to be traded in an active market. In addition, instruments that are frequently traded in over-the-counter markets (i.e., instruments that are not listed on an exchange), such as interest rate swaps and options, foreign exchange derivatives and credit default swaps, and for which there are available quotes may also be traded in an active market if closing prices are published.

How we see it

The requirement that the best evidence of fair value is a quoted price for an identical asset in an active market is similar to that in IFRS 13. However, FRS 102 does not reproduce the additional guidance contained in IFRS 13 that the fair value of a portfolio of financial instruments is the product of the number of units of the instrument and its quoted market price, known as 'p times q'. P times q means that an entity which has a very large holding of an actively traded financial instruments is unable to adjust the quoted price to reflect any discount or premium that might arise if the holding were to be unloaded onto the market. Given that p times q guidance is not contained in FRS 102, in our view it is not required unless an entity uses the requirements and guidance of adopted IFRS in setting an accounting policy as permitted by paragraph 10.6 of FRS 102.

4.10.2 Price of a recent transaction

When an unadjusted quoted price is not available, a recent orderly transaction is considered. The term 'orderly' is not defined in FRS 102 but is understood to refer to transactions that are not forced, for example, a liquidation or distress sale. Further guidance can be found in the most recent version of the EY publication, International GAAP®.

How we see it

When a market has undergone a significant decrease in volume, there may be increased instances of transactions that are not orderly. However, it is not appropriate to assume that all transactions that occur in a market during a period of dislocation are distressed or forced. This determination is made at the individual transaction level and requires the use of judgement based on the specific facts and circumstances.

The use of the price of a recent transaction for an identical instrument is a simple valuation technique. However, judgement is required in determining whether that price is a reliable estimate of fair value. In addition to the use of the price of a recent transaction for an identical instrument, other valuation techniques could include reference to the current fair value of another instrument that is comparable or substantially the same as the instrument being measured. However, if there has been a significant change in economic circumstances or a significant lapse in time between the transaction and the measurement date, the price may not be a reliable fair value, in which case, another valuation technique is used.

[FRS 102.2A.15(b)].

FRS 102 requires that for an asset or a liability that has a bid price and an ask price (e.g., an input from a dealer market), the price within the bid-ask spread that is most representative of fair value in the circumstances is used to measure fair value. The use of bid prices to measure assets and ask prices to measure liabilities is permitted, but not required. [FRS 102.2A.18]. Therefore, an inception loss could be experienced by an entity due to a difference in the price within the bid-ask spread that the entity could hypothetically exit the instrument and the price within the bid-ask spread that the entity actually transacted.

As a practical expedient, FRS 102 allows the use of mid-market pricing or other pricing conventions that are used by market participants when measuring fair value within the bid-ask spread. [FRS 102.2A.18]. Use of a mid-market pricing convention results in a valuation of an asset or liability at the mid-point of the bid-ask spread.

4.10.3 Other valuation techniques

In circumstances where unadjusted quoted prices or recent orderly transactions are unavailable or unreliable, another valuation technique is used to estimate fair value. The objective of using a valuation technique is to establish what the transaction price would have been on the measurement date in an orderly transaction between market participants. [FRS 102.2A.15(c)].

Many entities applying FRS 102 will not enter into instruments that are required to be recorded at fair value through profit or loss and for which a quoted price in active markets is not available. However if they do invest in, or issue complex instruments that must be fair valued but do not have quoted prices in active markets, they may have to draw upon the larger body of guidance within IFRS 13 in making judgements regarding how to measure fair value, especially regarding the use of valuation techniques. Further information regarding IFRS 13 can be found in the most recent version of the EY publication, International GAAP®.

4.11 Valuation techniques

Section 2A recognises the following three valuation approaches to measure fair value: [FRS 102.2A.16]

- Market approach: based on market transactions involving identical or similar assets or liabilities.
 - Cost approach: based on the amount required to replace the service capacity of an asset (frequently referred to as current replacement cost).
- Or
- Income approach: based on expectations of future performance (e.g., cash flows or income and expenses).

An entity uses valuation techniques that are consistent with one or more of the above valuation approaches. [FRS 102.2A.16]. Selecting a single valuation technique may be appropriate in some circumstances, for example, when measuring a financial asset or liability using a quoted price in an active market. However, in other situations, more than one valuation technique may be deemed appropriate and multiple approaches would be applied, producing a range of values. For example, it may be appropriate to use multiple valuation techniques when measuring fair value less costs of disposal for a CGU to test for impairment. However, determining the point in a range of values that is most representative of fair value can be subjective and requires management to exercise judgement, considering both qualitative and quantitative factors relevant to the measurement. [FRS 102.2A.20].

On the other hand, financial assets that frequently trade in active markets are often valued using only a market approach given the availability and relevance of observable data.

Even when the entity uses a single technique, entities need to be aware of changing circumstances that could indicate using a different or multiple approaches may be more appropriate if the change results in a measurement that is equally or more representative of fair value. For example, this might be the case if new markets develop or new information becomes available. Observable transactions that once formed the basis for the fair value estimate may cease to exist altogether or may not be determinative of fair value and, therefore, require an adjustment to the fair value measurement (this is discussed further in 4.10.1 above). As such, the use of a different or multiple valuation techniques may be more appropriate. FRS 102 notes that any change in these circumstances is a change in an accounting estimate, although the disclosures required by paragraph 18 of Section 10 *Accounting Policies, Estimates and Errors* for changes in accounting estimates do not need to be provided (see Chapter 9). [FRS 102.2A.17].

There is not a hierarchy of valuation techniques because one valuation technique might be more appropriate in some circumstances than in others. Instead the standard prioritises the inputs used in the application of these techniques (see 4.11 below). [FRS 102.2A.15].

4.11.1 Market approach

Section 2A describes the market approach as: [FRS 102.2A.16(a)]

Extract from FRS 102

2A.16(a) The market approach uses prices and other relevant information generated by market transactions involving identical or comparable assets, liabilities or a group of assets and liabilities, such as a business.

The market approach uses prices that market participants would pay or receive for the transaction, for example, a quoted market price. The market price may be adjusted to reflect the characteristics of the item being measured, such as its current condition and location, and could result in a range of possible fair values.

Valuation techniques consistent with the market approach use prices and other market data derived from observed transactions for the same or similar assets, for example, revenue, or EBITDA multiples.

Another example of a market approach is matrix pricing. Matrix pricing is a mathematical technique used principally to value certain types of financial instruments, such as debt securities, where specific instruments (e.g., CUSIPs) may not trade frequently. The method derives an estimated price of an instrument using transaction prices and other relevant market information for benchmark instruments with similar features (e.g., coupon, maturity or credit rating).

4.11.2 Cost approach

The cost approach is used typically to measure the fair value of tangible assets, such as plant or equipment. FRS 102 states: [FRS 102.2A.16(b)]

Extract from FRS 102

2A.16(b) The cost approach reflects the amount that would be required currently to replace the service capacity of an asset (often referred to as current replacement cost).

From the perspective of a market participant seller, the price that would be received for the asset is based on the cost to a market participant buyer to acquire or construct a substitute asset of comparable utility, adjusted for obsolescence. Obsolescence encompasses physical deterioration, functional (technological) obsolescence and economic (external) obsolescence. The adjustment for obsolescence ensures that the asset's value is based on its present condition including factors such as the level of wear and tear.

4.11.3 Income approach

IFRS 13 states the following about the income approach: [FRS 102.2A.16(c)]

Extract from FRS 102

2A.16(c) The income approach reflects expectations of future performance (eg cash flows or income and expenses). Valuation techniques using the income approach include present value techniques, option pricing models, and the multi-period excess earnings method.

Option pricing models include the Black-Scholes-Merton formula or a binomial model (i.e., a lattice model), that incorporate present value techniques and reflect both the time value and the intrinsic value of an option into the valuation. These models convert expected future amounts to a single present amount. That is, a present value technique uses the projected future cash flows of an asset or liability and discounts those cash flows at a rate of return commensurate with the risk(s) associated with those cash flows. Present value techniques, such as discounted cash flow analyses, are frequently used to estimate the fair value of business entities, non-financial assets and non-financial liabilities, but are also useful for valuing financial instruments that do not trade in active markets. Further details and examples of applying the present value technique can be found in the latest version of the EY publication, International GAAP®.

The multi-period excess earnings method is often used to value intangible assets that generate cash independently. The method isolates the contribution of the asset being valued by deducting the cash flows that can be attributed to complementary assets, ensuring that only the excess earnings attributable to the intangible asset are considered. The excess cash flows are then discounted to calculate a present value.

4.11.4 Broker quotes and pricing services

When quoted prices from brokers or pricing services are used to measure fair value, it is the entity's responsibility to understand the source and nature of this information to accurately assess its relevance. When there has been a significant decrease in the volume or level of activity for the asset or liability, management need to evaluate whether the prices received from brokers or pricing services are based on current information from orderly transactions or valuation techniques that appropriately reflect market participant assumptions regarding risk. This will determine the weight to place on these data points, compared to other value indications.

4.11.5 Reliable measure of fair value

For instruments that do not have a quoted market price in an active market, a valuation technique is considered to produce a reliable measure of fair value if it appropriately reflects how the market would likely price the asset and if its inputs reasonably represent market expectations and the risk return factors inherent in the asset. [FRS 102.2A.19].

Valuation techniques, including the use of multiple techniques often result in a range of reasonable valuations. Determining the most appropriate fair value within this range requires professional judgement, considering both quantitative and qualitative factors relevant to the measurement. [FRS 102.2A.20]. A fair value selected from within a range is deemed reliable if the range of reasonable fair value estimates is not significant or the probabilities of the various estimates within the range can be reasonably assessed and used in estimating fair value. [FRS 102.2A.21]. There are many situations in which the range of reasonable fair value estimates of assets that do not have a quoted market price is unlikely to be significant. Normally it is possible to estimate the fair value of an asset that an entity has acquired from an outside party. However, if the range of reasonable fair value estimates is significant, and the probabilities of the various estimates cannot be reasonably assessed, an entity is precluded from measuring the asset at fair value.

[FRS 102.2A.22].

How we see it

No further guidance is provided to assess significance or probabilities in this context. Therefore, entities will need to exercise judgement. However, we believe that the bar for determining that a fair value measurement is not reliably measurable is relatively high and is limited to investments such as equity holdings in private companies, for which the investee has no comparable peers.

If, initially, fair value can be reliably measured, but such measurement ceases to be reliable at a subsequent date, an asset's carrying amount at the last date it was reliably measurable becomes its new cost. Going forward, the instrument is measured at its new cost less impairment until a reliable measure of fair value becomes available again. [FRS 102.2A.23].

5 Summary of GAAP differences

The following table shows the differences between FRS 102 and IFRS.

	FRS 102	IFRS
Definition of fair value	The definition is aligned with IFRS but limited guidance is provided.	Extensive guidance is provided on each aspect of the definition.
Measurement	The methodology for estimating fair value is aligned with IFRS although less detail is provided compared with IFRS. Section 2A includes limited guidance on application to liabilities.	Extensive guidance is provided on applying the measurement principles. IFRS 13 contains detailed guidance on each aspect of measurement including the application to liabilities and an entity's own equity instruments, dealing with restrictions and 'orderly' transactions.
Portfolio exception	Not addressed.	Contains an exception to measuring fair value of a group of financial assets and liabilities with offsetting risk exposures (the portfolio exception). An entity can measure the group on the basis of the net exposure.
Reliable measure of fair value	If fair value cannot be measured reliably, an entity is precluded from measuring the item at fair value.	No exceptions to measuring at fair value under IFRS 13. The approach is to use observable data in the first instance, valuation techniques and to provide disclosure (enhanced disclosures for significant unobservable inputs). Other standards provide exceptions in some instances.
Disclosures	Disclosures about fair value are contained within the relevant Sections of FRS 102 that requires the fair value measurement. Fair value levelling disclosures are contained within section 34 of FRS 102 and apply only to financial institutions. These disclosures are less extensive than those required by IFRS.	Extensive disclosures contained within both IFRS 7 and IFRS 13. Fair value levelling disclosures in IFRS 13 apply to all entities and are more extensive than those in Section 34 of FRS 102.

Appendix A - Defined terms

Extract from FRS 102

Appendix I

Glossary

active market	A market in which transactions for the asset or liability take place with sufficient frequency and volume to provide pricing information on an ongoing basis.
fair value	The price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. In the absence of any specific guidance provided in the relevant section of this FRS, the guidance in Section 2A <i>Fair Value Measurement</i> shall be used in determining fair value
market participant	Buyers and sellers in the principal (or most advantageous) market for the asset or liability that have all of the following characteristics: (a) they are independent of each other, that is they are not related parties; (b) they are knowledgeable, having a reasonable understanding about the asset or liability and the transaction using all available information; (c) they are able to enter into a transaction for the asset or liability; and (d) they are willing to enter into a transaction for the asset or liability, that is, they are motivated but not forced or otherwise compelled to do so
most advantageous market	The market that maximises the amount that would be received to sell the asset or minimises the amount that would be paid to transfer the liability, after taking into account transaction costs and transport costs.
non-performance risk	The risk that an entity will not fulfil an obligation. Non-performance risk includes, but may not be limited to, the entity's own credit risk.
principal market	The market with the greatest volume and level of activity for the asset or liability
transaction costs (fair value measurement)	The costs to sell an asset or transfer a liability in the principal market (or most advantageous market) for the asset or liability that are directly attributable to the disposal of the asset or the transfer of the liability and meet both of the following criteria: (a) they result directly from and are essential to that transaction; and (b) they would not have been incurred by the entity had the decision to sell the asset or transfer the liability not been made

Overview

The sections which address financial instruments under FRS 102 are Section 11 *Basic Financial Instruments*, Section 12 *Other Financial Instruments Issues* and Section 22 *Liabilities and Equity*. Section 11 applies to basic financial instruments and is relevant to all entities, while Section 12 applies to other, more complex financial instruments and transactions. Section 22 sets out the classification and accounting requirements for liabilities and equity. This chapter deals with the definitions and scope requirements of these sections. The chapter also introduces the accounting policy choices that are available under FRS 102 for the recognition and measurement of an entity's financial instruments. Instead of applying the recognition and measurement requirements of Section 11 and 12, FRS 102 reporters have the choice of applying the recognition and measurement provisions of IAS 39 *Financial Instruments: Recognition and Measurement* (as adopted in the relevant jurisdiction) or IFRS 9 *Financial Instruments* (as adopted in the relevant jurisdiction) (see 4 below). The accounting policy choices are not discussed in detail in this chapter, for further details see Chapter 13 at 3. In addition, this chapter compares the scope and definitions of Sections 11, 12 and 22, with those of IFRS.

In many cases it will be clear whether an asset, liability, equity instrument, or other similar instrument must be accounted for in accordance with one or more of these sections. However, at the margins, determining whether these sections must be applied may not be always easy. Firstly, one needs to determine whether the definition of a financial instrument is met; secondly, not all financial instruments are within the scope of each of these sections - some are within the scope of other sections or standards (for instance insurance contracts are within the scope of FRS 103 *Insurance Contracts*), and some are not within the scope of any standard; and finally, certain contracts that do not meet the definition of a financial instrument are within the scope of some of these sections.

What you need to know

This chapter addresses the definition and scope of financial instruments and covers the following areas:

- Comparison between the scope of FRS 102 and IFRS (see 2 below).
- The definitions used in FRS 102 relevant to understanding financial instruments (see Appendix A).
- Scope exceptions of Sections 11, 12 and 22 of FRS 102 (see 3.1 below).
- Introduction to the accounting policy choices available under FRS 102 (See 4 below).

1 Introduction

Section 11, Section 12 and Section 22 contain the accounting and disclosure requirements for financial instruments.

Section 34 *Specialised Activities* contains additional disclosure requirements for financial instruments that apply to financial institutions. Public benefit entities and other members of a public benefit entity group that make or receive public benefit entity concessionary loans must refer to the relevant paragraphs of Section 34 for the accounting requirements for such loans, irrespective of the accounting policy choice made concerning applying Sections 11 and 12 or the recognition and measurement provisions of IAS 39 or IFRS 9. See 4 below for further details on the accounting policy choices.

Section 11 deals with what are termed 'basic' financial instruments, which are certain non-complex debt instruments and equity securities. It sets out the criteria for basic financial instruments and how they are measured, along with the impairment requirements. It also includes the derecognition requirements for financial instruments, and various disclosure provisions for all financial instruments. This section has been structured to provide all the financial instrument accounting requirements for many entities, who do not enter into more complex transactions. [FRS 102.11.1].

Section 12 applies to all other financial instruments, which need to be measured at fair value through profit or loss, and addresses hedge accounting requirements. It also contains associated disclosure requirements. [FRS 102.12.1].

Section 22's requirements for classifying issued instruments as either liabilities or equity are closely modelled on those in IAS 32 *Financial Instruments: Presentation*, but without the detailed guidance. The requirements also cover the issue of equity instruments, distributions to individuals or other parties acting in their capacity as investors in equity instruments (i.e., in their capacity as owners) and the accounting for purchases of own equity.

The classification and measurement requirements in Sections 11 and 12 are simpler and less stringent compared to IFRS 9, where instruments are classified as either basic or other, and measurement is at amortised cost, cost or fair value.

The impairment requirements in Section 11 have been drawn from IAS 39's incurred loss model. The FRC has delayed amending FRS 102 to adopt an expected loss impairment approach similar to that of IFRS 9.

The FRS 102 hedge accounting requirements are similar to those in IFRS 9, but with some simplifications and without the detailed guidance of IFRS 9. Also, FRS 102 incorporates a more principles-based approach to hedge accounting compared to IAS 39.

The FRC issued an updated version of FRS 102 in September 2024, following the issue in March 2024 of the Amendments to FRS 102 - *The Financial Reporting Standard applicable in the UK and Republic of Ireland - Periodic Review 2024* ('the Periodic Review 2024'). The Periodic Review 2024 includes amendments to Sections 11, 12 and 22 of FRS 102 as issued in January 2022. These amendments are mandatory for accounting periods beginning on or after 1 January 2026.

The main amendments relevant to the definitions and scope of Sections 11, 12 and 22 are as follows:

- The amendments now include within the scope exceptions to Sections 11 and 12 rights and obligations that within the scope of Section 23 *Revenue from Contracts with Customers* which are financial instruments, except for receivables and impairment of contract assets. [FRS 102.11.7(j), FRS 102.12.3(m)].
- The definition of fair value was also amended to align with that in IFRS 13. Under the previous version of FRS 102, fair value was defined as "the amount for which an asset could be exchanged, a liability settled, or an equity instrument granted could be exchanged, between knowledgeable, willing parties in an arm's length transaction". The new definition states that "fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date". [FRS 102 Appendix I].
- In addition, the definition of an active market has also been amended and is now aligned with IFRS 13. Under the previous version of FRS 102, an active market was defined as "a market in which all the following conditions exist:
 - The items traded in the market are homogeneous.
 - Willing buyers and sellers can normally be found at any time.
 And
 - Prices are available to the public.
- The new definition, which states that an "active market is a market in which transactions for the asset or liability take place with sufficient frequency and volume to provide pricing information on an ongoing basis" is aligned with IFRS 13. [FRS 102 Appendix I].

2 Comparison between Sections 11, 12, 22 and IFRS

The comparable extant IFRSs are IAS 32, IFRS 9 and IFRS 7 *Financial Instruments: Disclosures*. The main differences between FRS 102 and IFRS, from a definitions and scope perspective are discussed below.

2.1 Comparison between Sections 11, 12, 22 and IFRS (scope differences only)

2.1.1 Comparison between Sections 11, 12, 22 and IFRS - Scope

The differences in the scope of FRS 102 compared to that of IFRS are:

- Certain loan commitments are scoped out of IFRS 9 and scoped into IAS 37 *Provisions, Contingent Liabilities and Contingent Assets* while, under FRS 102, all loan commitments are within the scope of either Section 11 or 12. When applying IFRS 9, loan commitments that are otherwise out of the scope of this standard are still subject to the impairment requirements of IFRS 9. We do not expect this scope difference to have a significant impact in practice. [FRS 102.11.5(g), FRS 102.11.6(d)].
- Financial guarantee contracts are scoped out of Sections 11, 12 and 22 and are accounted for under Section 21 *Provisions and Contingencies*. Under IFRS, financial guarantee contracts are accounted for in accordance with IFRS 9 and are generally measured at fair value on initial recognition (subject to certain exemptions), regardless of whether or not it is considered probable that the guarantee will be called. This is unless the entity has previously asserted explicitly that it regards such contracts as insurance contracts and has elected, under IFRS 17 *Insurance Contracts*, to continue the application of insurance contract accounting. [FRS 102.11.7(i), FRS 102.12.3(l), FRS 102.22.2(g)]
- Contracts for contingent consideration in a business combination (acquirer only). Unlike IFRS, where such contracts can be within the scope of IFRS 9, contracts for contingent consideration in a business combination are scoped out of Sections 11, 12 and 22 of FRS 102, and instead accounted for under Section 19 *Business Combinations and Goodwill*. [FRS 102. 12.3(g), FRS 102.22.2(c)]
- Certain leases such as those that could as a result of non-typical contractual terms, result in a loss to the lessor or the lessee are scoped in under Section 12 of FRS 102. [FRS 102.12.3(f)]. However, leases are generally scoped out of IFRS 9, except for the related receivables and lease liabilities which are within scope under both IFRS 9 and Section 11 of FRS 102. [FRS 102.11.7(c), FRS 102. 12.3(f)]

See 3.2 below for further details of the scope of FRS 102.

3 Scope of Sections 11, 12 and 22

3.1 Scope

Sections 11, 12 and 22 contain scope exceptions which are largely consistent with those in IFRS 9 and IAS 32. The guidance in Sections 11, 12 and 22 must be applied to all financial instruments except for the following:

- Investments in subsidiaries, associates and joint ventures, (see Section 9 *Consolidated and Separate Financial Statements*, Section 14 *Investments in Associates* and Section 15 *Investments in Joint Ventures* respectively).
- Employers' rights and obligations under employee benefit plans, to which Section 28 *Employee Benefits* applies, except for the determination of the fair value of plan assets.
- Insurance contracts (including reinsurance contracts) that the entity issues and reinsurance contracts that the entity holds, which are subject to FRS 103.
- Leases (see Section 20 *Leases*), except for certain aspects such as derecognition of related receivables and lease liabilities and impairment of finance lease receivables, or if the lease could, as a result of non-typical contractual terms, result in a loss to the lessor or the lessee (see Chapter 23 at 3.1.1).
- Contracts for contingent consideration in a business combination to which Section 19 applies. This exemption applies only to the acquirer.
- Any forward contract between an acquirer and a selling shareholder to buy or sell an acquiree that will result in a business combination at a future acquisition date. The terms of the forward contract must not exceed a reasonable period normally necessary to obtain the required approval and to complete the transaction.
- Financial instruments, contracts and obligations to which Section 26 *Share-based Payment* applies, except that the classification requirements discussed in Chapter 12 must be applied to treasury shares issued, purchased, sold, transferred or cancelled in connection with share-based payment arrangements.
- Financial instruments issued by an entity with a discretionary participation feature (see Chapter 38).
- Reimbursement assets (see Chapter 24).
- Financial guarantee contracts to which Section 21 applies. [FRS 102.11.7(i), FRS 102.12.3(l), FRS 102.22.2(g)].
- Rights and obligations within the scope of Section 23 are financial instruments, except for receivables and the impairment of contract assets which are scoped into Sections 11 and 12.
- Contracts to buy or sell non-financial items such as commodities, inventory or property, plant and equipment are excluded from the scope of Section 12 (as they are not financial instruments), unless:
 - The contract imposes risks on the buyer/seller that are not typical of such contracts. For example, Section 12 may apply when the buyer/seller is required to absorb losses unrelated to price movements of the underlying non-financial items, to default by one of the counterparties or to fluctuations in foreign exchange rates. [FRS 102.12.4].
 - Or
 - The contract can be settled net in cash or another financial instrument and it does not meet the 'own use' exception. That is, Section 12 does apply to contracts for non-financial instruments that can be net settled and that were not entered into for, and continue to be held without, the purpose of the receipt or delivery of a non-financial item in accordance with an entity's expected purchase, sale or usage requirements. [FRS 102.12.5].

4 Recognition and measurement: accounting policy choice

As discussed at 1 above, entities can choose for recognition and measurement to apply either:

- Sections 11 or 12.
Or
- IAS 39 (as adopted in the relevant jurisdiction) as the standard applies prior to the application of IFRS 9. An entity must apply the version of IAS 39 that applied immediately prior to IFRS 9 superseding IAS 39. Entities must also apply what is commonly referred to as 'EU carve-out of IAS 39', which amended paragraph 81A and related Application Guidance in IAS 39, with respect to the fair value hedge of interest rate exposures of a portfolio of financial assets and liabilities.
Or
- IFRS 9 (as adopted in the relevant jurisdiction), and IAS 39 (as amended following the publication of IFRS 9) as far as it remains applicable once IFRS 9 is applied. [FRS 102.11.2, FRS 102.12.2]. On application of IFRS 9 entities are permitted to continue to apply the IAS 39 hedge accounting requirements with respect to the fair value hedge of interest rate exposures of a portfolio of financial assets and liabilities. Hence, following the publication of IFRS 9, IAS 39 was amended to include only the guidance necessary to continue to apply such a hedge relationship. [IFRS 9.6.1.3].

The above choice of guidance represents an 'accounting policy choice' that only applies for 'recognition and measurement' of financial instruments. [FRS 102.11.2, FRS 102.12.2]. See Chapter 13 for further details.

5 Summary of GAAP differences

The following table shows the differences between FRS 102 and IFRS.

	FRS 102	IFRS 9/IAS 32
Financial guarantee contracts	Excluded from the scope of Section 11, 12 and 22 of FRS 102.	Scoped in under IFRS 9 except where accounted for under IFRS 17.
Accounting policy choices	Option to apply the recognition and measurement requirements of Sections 11 or 12, IAS 39 or IFRS 9. No matter the option chosen, entities must apply disclosure requirements of Sections 11 and 12.	Option to apply hedge accounting requirements of IAS 39 in full.
Loan commitments	Loan commitments are scoped in under both Section 11 and 12 of FRS 102.	IFRS 9 generally excludes loan commitments other than: ▪ Loan commitments that an entity designates as financial liabilities at fair value through profit and loss. ▪ Loan commitments that can be settled net in cash or by delivering or issuing another financial Instrument. Or ▪ Commitments to provide a loan at a below-market interest rate cost.
Contracts for contingent consideration in a business combination (acquirer only)	Contracts for contingent consideration in a business combination are scoped out of Sections 11, 12 and 22 of FRS 102, and instead accounted for under Section 19.	Within the scope of IFRS 9/IAS 32.
Leases that could as a result of non-typical contractual terms result in a loss to the lessor or the lessee	Scoped in under Section 12 of FRS 102.	Leases are generally scoped out of IFRS 9, except for the related receivables and lease liabilities.

Appendix A - Defined terms

Extracts from FRS 102

Appendix I Glossary

active market	A market in which transactions for the asset or liability take place with sufficient frequency and volume to provide pricing information on an ongoing basis.
amortised cost (of a financial asset or financial liability)	The amount at which the financial asset or financial liability is measured at initial recognition minus principal repayments, plus or minus the cumulative amortisation using the effective interest method of any difference between that initial amount and the maturity amount, and minus any reduction (directly or through the use of an allowance account) for impairment or uncollectability.
compound financial instrument	A financial instrument that, from the issuer's perspective, contains both a liability and an equity element.
credit risk	The risk that one party to a financial instrument will cause a financial loss for the other party by failing to discharge an obligation.
derecognition	The removal of all or part of a previously recognised asset or liability from an entity's statement of financial position.
derivative	A financial instrument or other contract with all three of the following characteristics: (a) its value changes in response to the change in a specified interest rate, financial instrument price, commodity price, foreign exchange rate, index of prices or rates, credit rating or credit index, or other variable (sometimes called the 'underlying'), provided in the case of a non-financial variable that the variable is not specific to a party to the contract; (b) it requires no initial net investment or an initial net investment that is smaller than would be required for other types of contracts that would be expected to have a similar response to changes in market factors; and (c) it is settled at a future date.
effective interest method	A method of calculating the amortised cost of a financial asset or a financial liability (or a group of financial assets or financial liabilities) and of allocating the interest income or interest expense over the relevant period.
effective interest rate	The rate that exactly discounts estimated future cash payments or receipts through the expected life of the financial instrument or, when appropriate, a shorter period to the carrying amount of the financial asset or financial liability.
equity	The residual interest in the assets of the entity after deducting all its liabilities.
fair value	The price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. In the absence of any specific guidance provided in the relevant section of FRS 102, the guidance in Section 2A Fair Value Measurement shall be used in determining fair value.

financial asset	Any asset that is: (a) cash; (b) an equity instrument of another entity; (c) a contractual right: (i) to receive cash or another financial asset from another entity, or (ii) to exchange financial assets or financial liabilities with another entity under conditions that are potentially favourable to the entity; or (d) a contract that will or may be settled in the entity's own equity instruments and is: (i) a non-derivative for which the entity is or may be obliged to receive a variable number of the entity's own equity instruments; or (ii) a derivative that will or may be settled other than by the exchange of a fixed amount of cash or another financial asset for a fixed number of the entity's own equity instruments. For this purpose the entity's own equity instruments do not include instruments that are themselves contracts for the future receipt or delivery of the entity's own equity instruments.
financial instrument	A contract that gives rise to a financial asset of one entity and a financial liability or equity instrument of another entity.
financial liability	Any liability that is: (a) a contractual obligation: (i) to deliver cash or another financial asset to another entity; or (ii) to exchange financial assets or financial liabilities with another entity under conditions that are potentially unfavourable to the entity, or (b) a contract that will or may be settled in the entity's own equity instruments and is: (i) a non-derivative for which the entity is or may be obliged to deliver a variable number of the entity's own equity instruments; or (ii) a derivative that will or may be settled other than by the exchange of a fixed amount of cash or another financial asset for a fixed number of the entity's own equity instruments. For this purpose, the entity's own equity instruments do not include instruments that are themselves contracts for the future receipt or delivery of the entity's own equity instruments.
financial risk	The risk of a possible future change in one or more of a specified interest rate, financial instrument price, commodity price, foreign exchange rate, index of prices or rates, credit rating or credit index or other variable, provided in the case of a non-financial variable that the variable is not specific to a party to the contract.
firm commitment	Binding agreement for the exchange of a specified quantity of resources at a specified price on a specified future date or dates.
forecast transaction	An uncommitted but anticipated future transaction.
hedging gain or loss	Change in fair value of a hedged item that is attributable to the hedged risk.

highly probable	Significantly more likely than probable.
liquidity risk	The risk that an entity will encounter difficulty in meeting obligations associated with financial liabilities that are settled by delivering cash or another financial asset.
market risk	The risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices. Market risk comprises three types of risk: currency risk, interest rate risk and other price risk. Interest rate risk - the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates. Currency risk - the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in foreign exchange rates. Other price risk - the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices (other than those arising from interest rate risk or currency risk), whether those changes are caused by factors specific to the financial instrument or its issuer, or factors affecting all similar financial instruments traded in the market.
most advantageous market	The market that maximises the amount that would be received to sell the asset or minimises the amount that would be paid to transfer the liability, after taking into account transaction costs and transport costs.
non-controlling interest	The equity in a subsidiary not attributable, directly or indirectly, to a parent.
ordinary share	An equity instrument that is subordinate to all other classes of equity instrument.
prevailing market rate	The rate of interest that would apply to the entity in an open market for a similar financial instrument.
principal market	The market with the greatest volume and level of activity for the asset or liability.
probable	More likely than not.
publicly traded (debt or equity instruments)	Traded, or in process of being issued for trading, in a public market (a domestic or foreign stock exchange or an over-the-counter market, including local and regional markets).
transaction costs (financial instruments)	Incremental costs that are directly attributable to the acquisition, issue or disposal of a financial asset or financial liability, or the issue or reacquisition of an entity's own equity instrument. An incremental cost is one that would not have been incurred if the entity had not acquired, issued or disposed of the financial asset or financial liability, or had not issued or reacquired its own equity instrument.
treasury shares	An entity's own equity instruments, held by that entity or other members of the consolidated group.

Overview

This chapter addresses the requirements for classifying issued instruments as either liabilities or equity. The distinction between equity and liability, from the perspective of an issuer can be complex. Some instruments, while being legally equity can have the characteristics that are in substance those of a financial liability, while other instruments can have a number of different features of both debt and equity.

To provide consistent classification of such instruments, Section 22 *Liabilities and Equity* lays out principles for presenting financial instruments as liabilities or equities from the perspective of the issuer. These principles are closely modelled on those used within IAS 32 *Financial Instruments: Presentation*, but without the detailed guidance in IAS 32. The overriding principle being that if the issuer does not have an unconditional right to avoid delivering cash or another financial asset to settle a contractual obligation, the instrument will be a liability for the issuer. However, exceptions can apply, such as when a transaction will be settled in the issuer's own shares, where the classification will generally depend on whether the number of shares to be delivered is fixed or variable. In other cases, instruments may have some features which meet the definition of equity and others which meet the definition of a liability. Section 22 sets out the principles for the classification and measurement of such 'compound' instruments.

Section 22 also discusses the definition, initial recognition and subsequent measurement of an entity's own equity instruments and the accounting for treasury shares.

What you need to know

- Section 22 establishes the principles for classifying financial instruments as liabilities or equity from the perspective of the issuer.
- Classification principles are based on the contractual terms of the instrument.
- Some complex financial instruments contain features of both financial liabilities and equity, and therefore determining the classification can require considerable analysis and judgement.
- Where financial instruments contain both liability and equity components, Section 22 sets out the principles for splitting the instrument between equity and liability.
- Section 22 also provides guidance on the accounting treatment of treasury shares.

1 Introduction

Section 22 contains the requirements for classifying issued financial instruments as either liabilities or equity. Financial instruments are contracts that give rise to a financial asset of one entity and a financial liability or equity of another entity. Section 22 sets out the requirements for:

- Classifying financial instruments as either liabilities or equity and the accounting for compound financial instruments.
- The issue of equity instruments, distributions to individuals or other parties acting in their capacity as investors in equity instruments (i.e., in their capacity as owners) and the accounting for purchases of own equity.

And

- Section 22 states that the accounting for non-controlling interests in consolidated financial statements is in the scope of this Section, however that is now no longer the case as the relevant paragraph has been moved to Section 9 *Consolidated and Separate Financial Statements*. [FRS 102.22.1]. We consider this a drafting error that does not have an impact on the accounting treatment for non-controlling interest. Entities should apply the paragraph in Section 9 instead.

The FRC issued an updated version of FRS 102 in September 2024, following the issue of the Amendments to FRS 102 - *The Financial Reporting Standard applicable in the UK and Republic of Ireland and other FRSs- Periodic Review* ('the Periodic Review 2024'). The Periodic Review 2024 includes amendments to Section 22 of FRS 102. These amendments are mandatory for accounting periods beginning on or after 1 January 2026, when an entity first applies the Periodic Review 2024 amendments below and retrospective application is required. [FRS 102.1.19].

The main amendments are as follows:

- Adding the definition of a liability, for the purposes of section 22, as a present obligation of the entity arising from past events, the settlement of which is expected to result in an outflow from the entity of resources embodying economic benefits.
- Amending and removing paragraph 19, concerning the accounting for non-controlling interests in a subsidiary and moving this to section 9 (see Chapter 8 at 3.7).

2 Comparison between Sections 22 and IFRS

The comparable extant IFRS is IAS 32. The main differences between FRS 102 and IAS 32 are discussed below.

2.1 Differences between Section 22 and IAS 32

A contractual obligation or even a potential obligation for an entity to purchase its own equity instruments for cash or another financial asset is generally treated as a derivative within the scope of Section 12 and measured at fair value through profit or loss. In contrast, IAS 32 requires measurement at the present value of the financial liability's (gross) redemption amount. This is further discussed at 2.1.1 below.

Another potential difference arises in relation to the classification of contracts that will or may be settled by the exchange of a fixed amount of cash or another financial asset for a fixed number of the entity's own equity instruments. The IFRS Interpretations Committee concluded that any obligation denominated in a foreign currency represents a variable amount of cash and, consequently, a contract settled by an entity delivering a fixed number of its own equity instruments in exchange for a fixed amount of foreign currency must be classified as a liability. There is no similar explicit interpretation under FRS 102, and therefore, a judgement must be made on whether a fixed amount of foreign currency represents a fixed amount of cash or not, which in turn will affect the conclusion on the classification of such instrument (see 2.1.2 below).

FRS 102 contains explicit accounting requirements for the initial measurement of equity instruments issued to settle a financial liability in particular circumstances that are excluded from the scope of IFRIC 19 *Extinguishing Financial Liabilities with Equity Instruments* leading to the potential for divergence in the accounting (see 2.1.3 below).

2.1.1 Obligation to repurchase own equity

Under IAS 32, contracts that contain an obligation or even a potential obligation for an entity to pay cash, or another financial asset, to purchase its own equity instruments will give rise to a liability for the present value of the redemption amount (e.g., the present value of the forward repurchase price or option exercise price). [IAS 32.23]. Section 22 does not contain this requirement and in such cases, the obligation/potential obligation meets the definition of a derivative that must be measured at fair value through profit or loss under Section 12. This could result in a potentially significant measurement difference. There is an exception to derivative accounting for put options over NCI in certain circumstances, see Chapter 8 at 3.7.2.B.

For example, if a listed entity grants a written put option to a counterparty to sell the entity's own shares back to the entity for a fixed price at some point in the future, under IAS 32, the listed entity measures that potential obligation at the present value of that fixed price, with a corresponding reduction in equity. This is regardless of whether that option is likely to be exercised by the counterparty. In contrast, under FRS 102, the option would be treated as a derivative, measured at fair value through profit or loss, with no reduction in equity.

2.1.2 Derivatives contracts to acquire a fixed number of own equity instruments

Other potential differences arise in relation to the classification of contracts that will or may be settled by the exchange of a fixed amount of cash or another financial asset for a fixed number of the entity's own equity instruments. The potential differences are as follows:

- In April 2005, the IFRS Interpretations Committee considered whether the reference to 'fixed amount of cash' included a fixed amount of foreign currency. The Interpretations Committee noted that although this matter was not directly addressed in IAS 32, it was clear that, when the question is considered in conjunction with guidance in other international accounting standards at the time, particularly IAS 39, any obligation denominated in a foreign currency represents a variable amount of cash. Consequently, the Interpretations Committee concluded that a contract settled by an entity delivering a fixed number of its own equity instruments in exchange for a fixed amount of foreign currency must be classified as a liability. Even though this conclusion was reached based on the guidance in IAS 39, we believe the same answer applies when considering IFRS 9. There is no similar explicit interpretation under FRS 102, and therefore, a judgement could be made on whether a fixed amount of foreign currency represents a fixed amount of cash or not, which in turn will affect the conclusion on the classification of such instrument.

How we see it

In our view, this judgement needs to be treated as an accounting policy choice which must be applied consistently in the assessment of instruments with this feature.

- Amending and removing paragraph 19, concerning the accounting for non-controlling interests in a subsidiary IAS 32 further clarifies that rights, options or warrants to acquire a fixed number of the entity's own equity instruments for a fixed amount of 'any currency' are equity instruments if the entity offers those instruments 'pro rata' to all of its existing owners of the same class of its own non-derivative equity instruments. [IAS 32.22]. This clarification is only relevant when a fixed amount of foreign currency is not considered to be a fixed amount of cash, as such contracts must otherwise be classified as a liability. FRS 102 does not explicitly address this point due to the fact that it is also silent on the treatment of contracts involving a fixed amount of foreign currency as discussed above; hence an FRS 102 reporting entity could reach the same result by interpreting that a fixed amount of foreign currency represents a fixed amount of cash.

2.1.3 Settlement of a financial liability with equity instruments

Section 22 has explicit accounting requirements for the initial measurement of equity instruments issued to settle a financial liability in particular circumstances [FRS 102.22.8A]. The circumstances covered by this paragraph in Section 22, are specifically excluded from the scope of IFRIC 19. This leads to a situation where FRS 102 mandates a specific accounting outcome for circumstances where under IFRS there is no equivalent guidance and therefore an accounting policy choice. This could lead to a potential GAAP difference on the initial measurement of the equity issued. We further discuss this issue at 4.4.2.B below.

3 Scope of Section 22

This section covers the scope of Sections 22.

3.1 Scope

Section 22 contains scope exceptions which are largely consistent with those in IAS 32. The guidance in Section 22 must be applied to all financial instruments except for the following: [FRS 102.12.2]

- Investments in subsidiaries, associates and joint ventures, (see Section 9, Section 14 *Investments in Associates* and Section 15 *Investments in Joint Ventures* respectively).
- Employers' rights and obligations under employee benefit plans, to which Section 28 *Employee Benefits* applies.
- Insurance contracts (including reinsurance contracts) that the entity issues and reinsurance contracts that the entity holds, which are subject to FRS 103 *Insurance Contracts*.
- Contracts for contingent consideration in a business combination to which Section 19 *Business Combinations and Goodwill* applies. This exemption applies only to the acquirer.
- Financial instruments, contracts and obligations to which Section 26 *Share-based Payment* applies, except that the classification requirements discussed at 5 below must be applied to treasury shares issued, purchased, sold, transferred or cancelled in connection with share-based payment arrangements.
- Financial instruments issued by an entity with a discretionary participation feature (see FRS 103).
- Financial guarantee contracts to which Section 21 applies.

4 Financial liabilities and equity

4.1 Introduction

The classification of issued instruments as either debt or equity is within the scope of Section 22 which contains the principles for classifying an instrument, or its components, as a liability or equity by the issuer. Unlike Section 11 *Basic Financial Instruments* and Section 12 *Other Financial Instrument Issues*, there is no accounting policy choice available to apply IAS 32. Section 22 must be applied regardless of the choice in relation to recognition and measurement of financial instruments.

The overriding principle in Section 22 is that those instruments, or components of an instrument, with terms such that the issuer does not have an unconditional right to avoid delivering cash or another financial asset to settle a contractual obligation represent a financial liability. Classification between liability and equity is a complex matter and requires identifying and assessing the components of the instrument and their terms.

In addition, Section 22 discusses the initial recognition and subsequent measurement requirements for an entity's own equity instruments. The initial recognition and subsequent measurement from the point of view of the holder of the instrument is covered by Sections 11 and 12 and are further discussed in Chapter 13.

4.2 Scope and definitions

Equity is defined as the residual interest in the assets of an entity after deducting all its liabilities. This is identical to the definition in IAS 32, but Section 22 elaborates further by stating that "equity includes investments by the owners of an entity plus retained profits, or minus losses and distributions to owners". [FRS 102.22.3].

A liability, for the purposes of Section 22, is defined as a present obligation of the entity arising from past events, the settlement of which is expected to result in an outflow from the entity of resources embodying economic benefits. A financial liability is any liability that is:

- A contractual obligation:
 - To deliver cash or another financial asset to another entity.
 - Or
 - To exchange financial assets or financial liabilities with another entity under conditions that are potentially unfavourable to the entity.
- Or
- A contract that will or may be settled in the entity's own equity instruments and is:
 - A non-derivative for which the entity is or may be obliged to deliver a variable number of the entity's own equity instruments.
 - Or
 - A derivative that will or may be settled other than by the exchange of a fixed amount of cash or another financial asset for a fixed number of the entity's own equity instruments. For this purpose, the entity's own equity instruments do not include instruments that are themselves contracts for the future receipt or delivery of the entity's own equity instruments. [FRS 102.22.3].

The basic premise of FRS 102 is similar to IAS 32 in the sense that an instrument can only be classified as equity under FRS 102 if the issuer has an unconditional right to avoid delivering cash or another financial instrument, or, if it is settled through own equity instruments, it is an exchange of a fixed amount of cash for a fixed number of the entity's own equity instruments. In all other cases, it would be classified as a financial liability.

FRS 102 provides some examples of instruments that are classified as financial liabilities as there is a contractual obligation to make payments and the issuer has no discretion to avoid them:

- Instruments that oblige the issuer to make payments to the holder before liquidation (e.g., a mandatory dividend). [FRS 102.22.5(c)].
- And
- Preference shares that provide for mandatory redemption by the issuer for a fixed or determinable amount at a fixed or determinable future date, or the holder has the right to require the issuer to redeem the instrument at or after a particular date for a fixed or determinable amount. [FRS 102.22.5(e)].

Although in many cases the classification of an instrument as equity or liability will be straightforward, certain instruments may contain terms that can be more problematic. We further discuss these issues at 4.3 to 4.6 below.

4.3 Contingent settlement provisions

Some financial instruments contain contingent settlement provisions whereby settlement is dependent on the occurrence or non-occurrence of uncertain future events beyond the control of both the issuer and the holder, and the issuer does not have the unconditional right to avoid settling in cash or by delivery of another financial asset when such an event happens. This could be the case where settlement is dependent on events such as amendments to tax legislation, regulatory requirements or changes in interest rates or price indices, or even changes in the credit rating of the issuer. These are events which the issuer and the holder cannot prevent from happening; consequently, such instruments must be classified as financial liabilities unless they are included in the following exclusions: [FRS 102.22.3A, FRS 102.22.4]

- (i) The part of the contingent settlement provision that could require settlement in cash or another financial asset is not 'genuine'.
Or
- (ii) The issuer can be required to settle the obligation in cash or another financial asset only in the event of liquidation of the issuer.
Or
- (iii) The instrument can be put by the holder back to the issuer and meets the criteria described at 4.3.3 below.
Or
- (iv) The instrument contains obligations arising only on liquidation and meets the criteria described at 4.3.2 below.

4.3.1 Contingencies that are 'not genuine'

FRS 102 does not contain any guidance as to what constitutes a contingent settlement provision that is 'not genuine'. The guidance within IAS 32 states that 'not genuine' refers to the occurrence of an event that is extremely rare, highly abnormal or very unlikely to occur. [IAS 32.AG28]. Terms that are contained within a contract are normally intended to have a commercial effect, thus, a high hurdle must apply to demonstrate that a specific term is not genuine. Nevertheless, individual facts and circumstances would need to be evaluated on a case-by-case basis.

4.3.2 Instruments that contain obligations only on liquidation

In respect of (ii) at 4.3 above, a contingent settlement provision that is only effective on liquidation of the issuer may be ignored and the instrument would be treated as an equity instrument, as different rights and obligations apply in the event of liquidation. However, if the instrument provides for settlement on the occurrence of events that could lead to liquidation such as insolvency, the exclusion does not apply, and the instrument would be a financial liability.

The exclusion noted in (iv) at 4.3 above, is only applicable to financial instruments, or components of instruments, that are subordinate to all other classes of instruments; when such instruments impose on the entity an obligation to deliver to another party a 'pro rata' share of the net assets of the entity, only on liquidation, they are classified as equity. [FRS 102.22.4(b)]. It could be interpreted that these instruments are equity based purely on the exclusion in (ii) discussed in the preceding paragraph. Hence, at first sight, the additional exclusion in (iv) for these instruments appears irrelevant.

IAS 32 includes guidance that clarifies that the equivalent exclusion in (ii) does not apply to circumstances where the obligation arises because liquidation is either certain to occur and beyond the control of the entity (e.g., a limited life entity) or is not certain to occur but the holder of the instrument has the option to enforce liquidation. [IAS 32.16C, IAS 32.16D].

How we see it

Although not explicitly included within the guidance in FRS 102, we believe that the FRC wrote exclusions (ii) and (iv) with the IAS 32 guidance in mind. We therefore consider that in the circumstances described (i.e., when liquidation is either certain to occur and beyond the control of the entity, or is not certain to occur but the holder of the instrument has the option to enforce liquidation), the financial instruments, or its components, would be classified as a liability unless they meet the criteria of being the most subordinate class of instrument and the obligation is to deliver a 'pro rata' share of the net assets in accordance with the exclusion in (iv). This assertion is supported by the example of preference shares that provide for mandatory redemption at 4.2 above.

Another example of the application of the requirements of the exclusion in (iv) is given in FRS 102. If on liquidation the holders of an instrument receive a 'pro rata' share of the net assets, but this amount is subject to a maximum amount (a ceiling) and the excess net assets are distributed to a charity organisation, the instrument would be classified as a financial liability. [FRS 102.22.5(a)]. This is because such terms have the effect of fixing or restricting the residual return, which is not in line with the definition of equity. This example highlights the importance of meeting the exact criteria given in the standard.

4.3.3 Puttable instruments

'Puttable instruments' are defined as financial instruments that give the holder the right to sell that instrument back to the issuer for cash or another financial asset or are automatically redeemed or repurchased by the issuer on the occurrence of an uncertain future event or the death or retirement of the instrument holder. [FRS 102.22.4(a)]. In most cases, puttable instruments would meet the definition of a financial liability, such as a corporate bond that provides the holder with the option to require the issuer to redeem the instrument for cash or another financial asset at a future date. The option held by the holder means that the issuer does not have an unconditional right to avoid delivering cash, thus, the puttable instrument meets the definition of a financial liability. However, if a puttable instrument meets all the five criteria stated below, it will, as an exception, be classified as an equity instrument:

- The instrument entitles the holder to a pro rata share of an entity's net assets on liquidation (i.e., those assets that remain after deducting all other claims on assets).
- The instrument is in the class of instruments that is most subordinate to all other classes of instruments (i.e., it is the most junior class of instrument in the hierarchy to be applied if the entity were to be liquidated).
- All puttable instruments in the most subordinate class have identical features.
- Apart from the put feature, the instrument does not contain any other liability features and is not a contract that will or may be settled in the entity's own equity instruments, as set out at 4.2 above.
- The total expected cash flows attributable to the instrument over the instrument's life are based substantially on the profit or loss, the change in the recognised net assets or the change in the fair value of the recognised and unrecognised net assets of the entity over the instrument's life (excluding any effects of the instrument). [FRS 102.22.4(a)].

If all the criteria mentioned above are met, a puttable instrument will be classified by exception as an equity instrument. These criteria are intended to prevent an inappropriate classification of such instruments in the financial statements of entities such as some open-ended mutual funds, unit trusts, limited life entities, partnerships and co-operative entities. FRS 102 provides the following examples of application of this classification requirement:

- A puttable instrument is classified as equity if, when the put option is exercised, the holder receives a pro rata share of the net assets of the entity, determined by dividing the entity's net assets on liquidation into units of equal amounts and multiplying the resulting amount by the number of the units held by the financial instrument holder. However, if the holder is entitled to an amount measured on some other basis the instrument is classified as a liability. [FRS 102.22.5(b)].
- A puttable instrument classified as equity in a subsidiary's financial statements is classified as a liability in the consolidated financial statements of its parent, as they will not be the most subordinate instrument issued by the consolidated group. [FRS 102.22.5(d)].
- Members' shares in co-operative entities are classified as equity if the entity has an unconditional right to refuse redemption of the members' shares or the redemption is unconditionally prohibited by local law, regulation or the entity's governing charter. [FRS 102.22.6].

We would not expect many FRS 102 adopters to have issued puttable instruments. Thus, we do not elaborate upon them any further in this book, but further information can be found in the EY publication, International GAAP®.

4.4 Recognition and measurement of issued equity instruments

FRS 102 contains accounting recognition criteria for equity instruments, including options and warrants over equity instruments, unlike IAS 32 which only addresses the treatment of transaction costs. At 4.4.1 to 4.4.3 below we address the recognition requirements for equity instruments issued by the reporting entity. The initial recognition and measurement requirements for the holder of investments in equity instruments and for financial liabilities are discussed in Chapter 13.

4.4.1 Initial recognition

Section 22 states that an entity must recognise the issue of shares or other equity instruments as equity when it issues those instruments and another party is obliged to provide cash or other resources to the entity in exchange for those instruments:

- If the entity receives cash before the equity instruments are issued and it cannot be required to repay the cash, the entity must recognise an increase in equity for the consideration received.
- If the equity instruments are subscribed for, but have not been issued or called up, and the entity has not yet received the cash or other resources, the entity cannot recognise an increase in equity.

[FRS 102.22.7].

4.4.2 Initial measurement

The general rule is that equity instruments must initially be measured at the fair value of the cash or other resources received or receivable, net of transaction costs. Any income tax related to those transaction costs must be accounted for in accordance with Section 29 *Income Tax* (see Chapter 31). If payment is deferred and the time value of money is material, the initial measurement must be on a present value basis. [FRS 102.22.8, FRS 102.22.9]. No guidance is provided in this context as to the appropriate discount rate, although the guidance on financing transactions set out in Chapter 13 would be appropriate. This would require the use of a market rate of interest for the amount receivable.

There are two exceptions to this general rule. These are discussed below at 4.4.2.A and 4.4.2.B.

4.4.2.A Merger relief or group reconstructions relief under the Companies Act

The general rule at 4.4.2 does not apply when merger relief or group reconstruction relief under the Companies Act 2006 are applied. [FRS 102.22.8]. Merger relief and group reconstruction relief have an impact on the accounting considerations for capital and reserves of the issuer for certain group reconstructions. The requirements for these reliefs and the considerations for the related accounting are further discussed in Chapter 22 at 5.5.1 for consolidated financial statements and in Chapter 8 at 4.2.1A for separate financial statements.

As the use of these reliefs affects the accounting for capital and reserves of the issuer, they have an impact on the overall initial measurement of the equity instruments issued. The Companies Act indicates that when the reliefs are applied, the amount that is not required to be included in share premium can be disregarded in determining the value of the assets received as consideration provided for the shares issued. [s615]. Therefore, depending on whether acquisition accounting or merger accounting is applied, the point of reference to determine the value of the consideration received will vary, and so will the measurement of the equity instruments issued.

4.4.2.B Settlement of financial liability with equity instrument

The general rule at 4.4.2 above must not be applied to transactions in which a financial liability is extinguished (partially or in full) by the issue of equity instruments in any of the following circumstances:

- The creditor is also a direct or indirect shareholder and is acting in its capacity as a direct or indirect existing shareholder.
- Or
- The creditor and the entity are controlled by the same party or parties before and after the transaction and the substance of the transaction includes an equity distribution by, or contribution to, the entity.
- Or

- The extinguishment is in accordance with the original terms of the financial liability. [FRS 102.22.8A]. In these circumstances there is no gain or loss recognised in profit or loss as the result of such a transaction. [FRS 102.22.8A].

This exception is consistent with the scope exclusions in IFRIC 19. However, FRS 102 addresses the accounting for those circumstances excluded from the scope of IFRIC 19, where no equivalent IFRS guidance exists. This could lead to a potential GAAP difference on the initial measurement of the equity issued.

4.4.3 Presentation

Exactly how the increase in equity arising on the issue of shares or other equity instruments is presented is determined by applicable laws. For instance, the nominal value of the shares may need to be presented separately from any premium received. [FRS 102.22.10].

4.5 Other topics

Section 22 also includes provisions that deal with the accounting for certain instruments and transactions involving equity instruments issued by the reporting entity. These are described at 4.5.1 to 4.5.6 below. The FRS 102 accounting requirements in respect of compound instruments, treasury shares and distributions to owners are based on the explicit guidance included in IAS 32. The other topics are not explicitly addressed by IAS 32 but are consistent with practice under IFRS.

4.5.1 Exercise of options, right and warrants

Equity issued by means of exercise of options, rights, warrants and similar equity instruments must be accounted for according to the principles discussed at 4.4 above. [FRS 102.22.11].

4.5.2 Bonus issues and share splits

Capitalisation or bonus issues of shares (sometimes referred to as stock dividend) entail the issue of new shares to shareholders in proportion to their existing holdings. For example, an entity might give its shareholders one bonus share for every four shares held.

Another common transaction is a share or stock split, which involves dividing an entity's existing shares into multiple shares. For example, in a share split, shareholders may receive five additional shares for each share held and, in certain cases, the previously outstanding shares may be cancelled and replaced by the new shares.

Bonus issues and stock splits do not change total equity; however, an entity must reclassify amounts within equity as required by applicable laws. [FRS 102.22.12]. These transactions must be permitted by an entity's articles of association as well as comply with provisions of the applicable laws. For instance, for a bonus issue the entity may utilise one of its existing reserves such as the share premium account, retained earnings or capital redemption reserve to issue the bonus shares. The relevant reserve is debited with the nominal value of the shares issued while issued share capital is credited with an equivalent amount, if the bonus shares meet the criteria to be accounted for as equity. [s610(4), s628(3), s733(6)].

4.5.3 Compound instruments

Some issued financial instruments cannot be classified in their entirety as either an equity instrument or a financial liability. These instruments subject to a single contract that contain both a liability and equity component are known as compound instruments.

A typical example is a convertible bond, whereby the issuer is obligated to pay principal and interest, but the holder also has an option to convert their holding into a fixed number of equity shares of the issuer. Consequently, from the issuer's perspective, the bond contains two components, a financial liability represented by the obligation to deliver cash payments and an equity element, represented by the obligation to deliver a fixed number of equity shares (see discussion at 4.2 above).

However, not all convertible debt instruments are considered to be compound financial instruments. For example, a convertible bond that allows for conversion into a variable number of shares: since the obligation on conversion is to deliver a variable number of shares, there is no equity element. Thus, the entire liability would be recorded at fair value through profit or loss, as it would not be a basic debt instrument (see Chapter 13 at 4).

4.5.3.A Initial recognition and measurement

The proceeds from issuing a compound instrument must be allocated between the two components. To perform that allocation, the issuer must:

- First calculate the liability component by computing the fair value of a similar bond that does not have the conversion option. In essence, the entity would need to work out the fair value of the bond assuming it had issued it without the option to convert to its own equity. See Chapter 10 for further information on how to calculate fair value.
 - Calculate the equity element as the residual amount (i.e., the difference between the proceeds received and the fair value of the liability).
- And
- Transaction costs arising from the instrument's issue are allocated to the liability and equity components on the basis of their relative fair values.

This allocation must not be revised subsequently. *[FRS 102.22.13, FRS 102.22.14].*

4.5.3.B Subsequent measurement

The subsequent measurement of the liability component of a compound instrument will depend on whether it meets the criteria to be accounted for as a basic financial instrument (i.e., at amortised cost). If not, it has to be subsequently measured at fair value through profit or loss. *[FRS 102.22.15]*. Subsequent measurement of financial liabilities is further discussed at Chapter 13 at 6.

After initial recognition, the equity component is not re-measured.

4.5.4 Treasury shares

Treasury shares are equity instruments of an entity that have been issued and subsequently reacquired by the entity. When acquiring treasury shares, the entity must deduct from equity the fair value of the consideration given. No gain or loss can be recognised in profit or loss arising from the purchase, sale, transfer or cancellation of treasury shares. *[FRS 102.22.16]*.

4.5.5 Distributions to owners

Distributions to owners (i.e., holders of an entity's equity instruments) are accounted for as a reduction in equity. *[FRS 102.22.17]*.

An entity must disclose the fair value of any non-cash assets that have been distributed to its owners during the reporting period, except when the non-cash assets are ultimately controlled by the same parties both before and after the distributions. *[FRS 102.22.18]*.

5 Summary of GAAP differences

The following table shows the differences between FRS 102 and IFRS.

	FRS 102	IFRS
Obligations to repurchase own equity	Similar principle to IFRS but less guidance. A contractual obligation to purchase own equity instruments for cash or another financial asset is considered to be a derivative.	IAS 32 requires a contractual obligation to purchase own equity instruments for cash or another financial asset to be measured at the present value of the gross redemption amount.
Derivative contracts to acquire a fixed number of own equity instruments	Contracts to exchange a fixed amount of equity instrument for a fixed amount of foreign currency could be classified as a liability or equity depending on interpretation.	Contracts to exchange a fixed amount of equity instrument for a fixed amount of foreign currency are classified as a liability.
Settlement of a financial liability with equity instruments	Contains guidance when a financial liability is extinguished by the issue of equity instruments in specific circumstances that are excluded from the scope of IFRIC 19.	Under IFRS there is no equivalent guidance and therefore an accounting policy choice.

Appendix A - Defined terms

Extract from FRS 102

Appendix I

Glossary

Active market	A market in which transactions for the asset or liability take place with sufficient frequency and volume to provide pricing information on an ongoing basis.
Amortised cost (of a financial asset or financial liability)	The amount at which the financial asset or financial liability is measured at initial recognition minus principal repayments, plus or minus the cumulative amortisation using the effective interest method of any difference between that initial amount and the maturity amount, and minus any reduction (directly or through the use of an allowance account) for impairment or uncollectability.
Compound financial instrument	A financial instrument that, from the issuer's perspective, contains both a liability and an equity element.
Contract	An agreement between two or more parties that create enforceable rights and obligations
Derecognition	The removal of all or part of a recognised asset or liability from an entity's statement of financial position.
Derivative	A financial instrument or other contract with all three of the following characteristics: (a) its value changes in response to the change in a specified interest rate, financial instrument price, commodity price, foreign exchange rate, index of prices or rates, credit rating or credit index, or other variable (sometimes called the 'underlying'), provided in the case of a non-financial variable that the variable is not specific to a party to the contract; (b) it requires no initial net investment or an initial net investment that is smaller than would be required for other types of contracts that would be expected to have a similar response to changes in market factors; and (c) it is settled at a future date.
Effective interest method	A method of calculating the amortised cost of a financial asset or a financial liability (or a group of financial assets or financial liabilities) and of allocating the interest income or interest expense over the relevant period.
Equity	The residual interest in the assets of the entity after deducting all its liabilities.
Fair value	The price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. In the absence of any specific guidance provided in the relevant section of this FRS, the guidance in Section 2A - <i>Fair Value Measurement</i> shall be used in determining fair value.
Financial asset	Any asset that is: (a) cash; (b) an equity instrument of another entity; (c) a contractual right: (i) to receive cash or another financial asset from another entity, or (ii) to exchange financial assets or financial liabilities with another entity under conditions that are potentially favourable to the entity; or

	(d) a contract that will or may be settled in the entity's own equity instruments and is: (i) a non-derivative for which the entity is or may be obliged to receive a variable number of the entity's own equity instruments; or (ii) a derivative that will or may be settled other than by the exchange of a fixed amount of cash or another financial asset for a fixed number of the entity's own equity instruments. For this purpose the entity's own equity instruments do not include instruments that are themselves contracts for the future receipt or delivery of the entity's own equity instruments.
Financial instrument	A contract that gives rise to a financial asset of one entity and a financial liability or equity instrument of another entity.
Financial liability	Any liability that is: (a) a contractual obligation: (i) to deliver cash or another financial asset to another entity; or (ii) to exchange financial assets or financial liabilities with another entity under conditions that are potentially unfavourable to the entity, or (b) a contract that will or may be settled in the entity's own equity instruments and is: (i) a non-derivative for which the entity is or may be obliged to deliver a variable number of the entity's own equity instruments; or (ii) a derivative that will or may be settled other than by the exchange of a fixed amount of cash or another financial asset for a fixed number of the entity's own equity instruments. For this purpose the entity's own equity instruments do not include instruments that are themselves contracts for the future receipt or delivery of the entity's own equity instruments.
Non-controlling interest	The equity in a subsidiary not attributable, directly or indirectly, to a parent.
Publicly traded (debt or equity instruments)	Traded, or in process of being issued for trading, in a public market (a domestic or foreign stock exchange or an over-the-counter market, including local and regional markets).
Transaction costs (financial instruments)	Incremental costs that are directly attributable to the acquisition, issue or disposal of a financial asset or financial liability, or the issue or reacquisition of an entity's own equity instrument. An incremental cost is one that would not have been incurred if the entity had not acquired, issued or disposed of the financial asset or financial liability, or had not issued or reacquired its own equity instrument.
Treasury shares	An entity's own equity instruments, held by that entity or other members of the consolidated group.

Chapter 13 Financial instruments: Recognition, Measurement and Derecognition

Contents

Overview	530
1 Introduction	531
2 Comparison between Sections 11, 12 and IFRS	532
2.1 Classification and measurement	532
2.2. Impairment	534
2.3 Subsequent measurement	534
2.3.1 Subsequent measurement: IFRS 9	534
2.3.2 Subsequent measurement: IAS 39	535
2.4 Derecognition	535
2.4.1 What is a transfer?	536
2.4.2 Continuing involvement	536
2.4.3 Derecognition date of financial assets and liabilities	536
3 Recognition and measurement: accounting policy choice	537
3.1 Impact of the accounting policy choice	537
3.2 Changes in accounting policy choice for recognition and measurement of financial instruments	538
3.2.1 Mandatory changes in accounting policy	538
3.2.2 Voluntary changes	538
4 Classification	539
4.1 'Basic' financial instruments	539
4.1.1 Basic equity instruments	539
4.1.2 Basic debt instruments	540
4.1.2.A Condition 1 - Contractual return to the holder	541
4.1.2.B Condition 2 - Link to inflation	542
4.1.2.C Condition 3 - Variation of the return	543
4.1.2.D Condition 4 - Loss of principal or interest	545
4.1.2.E Condition 5 - Prepayment options	545
4.1.2.F Condition 6 - Extension options	547
4.1.3 Basic loan commitments	547
4.1.4 Embedded derivatives	547
4.2 Other financial instruments	548

4.3	Reclassifications	548
4.4	Financial instruments not permitted to be measured at fair value through profit or loss by UK Company Law	548
4.4.1	Legal requirements	548
4.4.2	Impact of the legal restrictions	549
4.4.2.A	Impact on entities that choose to apply Sections 11 and 12 of FRS 102	550
4.4.2.B	Impact on entities that choose to apply IAS 39	551
4.4.2.C	Accounting for fair value gains and losses in other comprehensive income for entities that choose to apply IFRS 9	551
5	Initial recognition and measurement	553
5.1	Initial recognition	553
5.2	Initial measurement	553
5.2.1	General rule	553
5.2.2	Exception: financing transactions	553
5.2.3	Financing transactions with simplified accounting	558
5.2.4	Difference between fair value and transaction price	558

Overview

This chapter deals with the recognition, derecognition and measurement requirements of Section 11 *Basic Financial Instruments* and Section 12 *Other Financial Instruments Issues* of FRS 102.

What you need to know

- Entities can make an accounting policy choice for recognition and measurement to apply either:
 - Sections 11 and 12 of FRS 102
 - Or
 - IAS 39 *Financial Instruments: Recognition and Measurement* (as adopted in the relevant jurisdiction) as the standard applied immediately prior to IFRS 9 *Financial Instruments* superseding IAS 39
 - Or
 - IFRS 9 (as adopted in the relevant jurisdiction), and IAS 39 (as amended following the publication of IFRS 9) as far as it remains applicable when IFRS 9 is applied [FRS 102.11.2, FRS 102.12.2]
- Although an entity can continue with an existing accounting policy of applying IAS 39, an entity must not change its accounting policy from either Sections 11 and 12 or IFRS 9 to IAS 39 except to make the entity's accounting policies consistent with those adopted in the consolidated financial statements in which the entity is included.
- This chapter discusses Sections 11 and 12 of FRS 102. IFRS 9 and IAS 39 are discussed in the EY publication, International GAAP®.
- Sections 11 and 12 distinguish between 'basic' and 'non-basic' financial instruments. In general, basic financial instruments are usually measured at amortised cost or cost and non-basic financial instruments are measured at fair value through profit or loss. Unlike IFRS, Sections 11 and 12 do not contain an option to present fair value gains and losses on financial instruments in other comprehensive income.
- To qualify as a basic debt instrument under Section 11, certain conditions need to be met. If one of the conditions is not satisfied, a debt instrument may still meet the definition of 'basic' if it is consistent with the principle-based description of a 'basic' financial instrument. Debt instruments that are not 'basic' are accounted for under Section 12 at fair value through profit or loss with limited exceptions.
- Equity instruments are usually measured at fair value through profit or loss under Section 12 although there are some exceptions for investments in related parties.
- Under section 11, at the end of each reporting period, if there is objective evidence of impairment of any financial assets that are measured at cost or amortised cost, then an impairment loss is recognised.
- Whilst largely aligned with IFRS 9 and IAS 39, the derecognition guidance for financial assets is less comprehensive under FRS 102, as it is less likely that complex transactions will be entered into by FRS 102 reporters. The guidance for derecognition of financial liabilities is more aligned with IFRS 9 and IAS 39. However, the May 2024 Amendments to IFRS 9 clarify the settlement date for financial liabilities and introduce an accounting policy choice where financial liabilities are deemed to be discharged before the settlement date if initiated using an electronic payment system (if specific conditions are met), which are changes that impact IFRS reporters only.

1 Introduction

Section 11 *Basic Financial Instruments* and Section 12 *Other Financial Instruments Issues* contain the recognition and measurement requirements for financial instruments when an entity has applied the accounting policy choice to use those sections instead of applying the requirements of IFRS 9 or IAS 39. Additional information on scoping is included in Chapter 11 at 3.1. [FRS 102.11.7].

Section 11 deals with what are termed 'basic' financial instruments, which are certain non-complex debt instruments and equity securities. It sets out the criteria for basic financial instruments and how they are measured, along with the impairment requirements. It also includes the derecognition requirements for financial instruments, and various disclosure provisions. Section 11 has been structured to provide all the financial instrument accounting requirements for many entities who do not enter into more complex transactions.

Section 12 applies to all other financial instruments, which need to be measured at fair value through profit or loss, and addresses the hedge accounting requirements. It also contains associated disclosure provisions.

The classification and measurement requirements in Sections 11 and 12 are simpler and less stringent compared to IAS 39 and IFRS 9: instruments are classified as either basic or other, and measurement is at amortised cost, cost or fair value.

The impairment requirements in Section 11 have been drawn from IAS 39's incurred loss model. As part of the FRC's Periodic Review 2024, the FRC did not make any amendments to incorporate the expected credit loss model into FRS 102 (see 6.5.1 below).

The FRC issued an updated version of FRS 102 in September 2024, following the issue of the Amendments to FRS 102 - *The Financial Reporting Standard applicable in the UK and Republic of Ireland - Periodic Review 2024* - issued in March 2024 ('the Periodic Review 2024'). These amendments are mandatory for accounting periods beginning on or after 1 January 2026.

The main amendment made by the Periodic Review 2024 is that entities can only change their accounting policy for recognition and measurement from applying Section 11 and Section 12 or a combination of IFRS 9 and IAS 39, to solely applying IAS 39 if it makes their policies consistent with the consolidated financial statements in which the entity is included. [FRS 102.11.2].

2 Comparison between Sections 11, 12 and IFRS

The comparable extant IFRS accounting standards are IAS 39 and IFRS 9. The main differences between FRS 102 and IFRS 9 are discussed below. The discussion also includes a comparison to IAS 39 which is relevant for those entities that choose the option to apply IAS 39 for the purposes of recognition and measurement.

2.1 Classification and measurement

FRS 102 has a three-tiered measurement model: amortised cost, cost or fair value through profit or loss. That is, debt instruments must be measured at amortised cost if they meet the criteria or, if they do not, at fair value through profit or loss, while equities (and certain derivatives on equities) must be measured at fair value through profit or loss and only at cost in limited circumstances. Hence, entities which prefer to recognise debt or equity securities at fair value through other comprehensive income may choose to opt to apply IAS 39 or IFRS 9.

Section 11 and 12		IAS 39	IFRS 9
Financial assets			
Debt instrument	Amortised cost if the conditions in Section 11 are met, otherwise fair value through profit or loss.	Amortised cost, unless: (a) Held for trading. (b) Designated at FVTPL upon initial recognition both categories leading to measurement at fair value through profit or loss. (c) Available for sale, leading to measurement at fair value through other comprehensive income.	Depending on the business model and contractual cash flow characteristics of the asset (SPPI test) debt instruments can be at amortised cost, fair value through other comprehensive income (FVOCI) or fair value through profit or loss.
Equity instrument	Fair value through profit or loss, unless fair value cannot be measured reliably then cost.	Fair value through profit or loss, unless designated as available for sale, leading to measurement at fair value through other comprehensive income.	Fair value through profit or loss unless designated irrevocably upon initial recognition at FVOCI (without recycling of fair value movements).
Financial liabilities			
All instruments	Under FRS 102 there is no difference between assets and liabilities in terms of subsequent measurement. However, entities must consider legal requirements.	Amortised cost, unless it is: (a) Held for trading. (b) Designated at FVTPL upon initial recognition. (c) A financial liability that arises when a transfer of a financial asset does not qualify for derecognition or when the continuing involvement approach applies. (d) A financial guarantee contract.	Same as IAS 39.

Section 11 and 12		IAS 39	IFRS 9
		(e) A below-market loan commitment. (f) Designated as a hedged item in a qualifying hedging relationship. (g) Contingent consideration recognised by an acquirer in a business combination to which IFRS 3 applies.	
Embedded derivatives			
Embedded derivatives	No separation of embedded derivatives	Separation of embedded derivatives within financial assets and financial liabilities is required unless: (i) The embedded derivative is considered to be closely related to the host contract. (ii) The embedded derivative does not meet the definition of a derivative on its own. And (iii) The host contract and embedded derivative are together accounted for as a hybrid instrument, measured at fair value through profit or loss.	Separation of embedded derivatives within financial liabilities is required unless: (i) The embedded derivative is considered to be closely related to the host contract. (ii) The embedded derivative does not meet the definition of a derivative on its own. And (iii) The host contract and embedded derivative are together accounted for as a hybrid instrument, measured at fair value through profit or loss. Embedded derivatives within financial assets are not separated but affect the classification of the instrument as they may not meet the definition of a basic lending arrangement.

For basic debt securities, the criteria to recognise them at amortised cost under FRS 102 are less stringent than under IFRS 9, as explained at 2.3.1 below. Unlike under IFRS, there is no concept in FRS 102 of 'held for trading'. Basic debt instruments that are held for trading purposes are not automatically required to be recorded at fair value, and entities will need to elect to use the 'fair value option', as explained at 6.4 below, if they wish to record these instruments at fair value rather than at amortised cost.

In the case of investments in equity instruments, FRS 102 requires measurement at fair value through profit or loss (unless fair value cannot be measured reliably, in which case they must be measured at cost less impairment). Unless such investments are held for trading, IFRS provides the option to designate these investment as: a) at fair value through other comprehensive income under IFRS 9, in which case changes in fair value are recognised in other comprehensive income with no impact on profit or loss; or b) available for sale under IAS 39, in which case changes in fair value are recognised in other comprehensive income, with recycling to profit or loss in case of impairment or de-recognition.

The complex embedded derivative separation rules in paragraph 11 of IAS 39 (both assets and liabilities) and IFRS 9 (liabilities only) do not exist in FRS 102 and many financial instruments containing embedded derivatives, including financial liabilities, will need to be measured at fair value through profit or loss under FRS 102.

2.2. Impairment

Section 11 uses the same principles and criteria as the incurred loss model under IAS 39 with one major difference: under FRS 102, assets which have been individually assessed for impairment and found not to be impaired, are not subsequently required to be included in a collective assessment of impairment.

By contrast, the IFRS 9 expected credit loss model is complex. Entities are required to recognise either 12-month or lifetime expected credit losses, depending on whether there has been a significant increase in credit risk since initial recognition. The measurement of expected credit losses reflects:

- An unbiased and probability-weighted amount that is determined by evaluating a range of possible outcomes.
 - The time value of money.
- And
- Reasonable and supportable information that is available without undue cost or effort at the reporting date about past events, current conditions and forecasts of future economic conditions. [IFRS 9.5.5.17].

2.3 Subsequent measurement

The requirements for subsequent measurement are fundamentally different between IAS 39 and IFRS 9, and are therefore treated in two different sections.

2.3.1 Subsequent measurement: IFRS 9

The classification of financial assets and liabilities under FRS 102 is generally symmetrical, that is, instruments classified as basic financial assets by the holder are usually classified as basic financial liabilities by the issuer.

By contrast, IFRS 9 requires two different approaches for the classification of financial assets and financial liabilities. Under IFRS 9, the classification of financial assets is based on two tests:

- (a) The contractual characteristics test

And

- (b) The business model test

Only those debt instruments that both pass the contractual characteristics test and are held within a business model with the objective to collect contractual cash flows can be carried at amortised cost. Under FRS 102, debt instruments that qualify as basic under Section 11 should also pass the IFRS 9 contractual characteristics test; however, FRS 102 has no business model test and therefore, regardless of whether they are held for trading or for purposes other than collecting cash flows, basic debt instruments are not prevented from being carried at amortised cost.

In addition, under IFRS 9 there are two categories of financial assets carried at fair value through other comprehensive income, for which there are no equivalent categories available under FRS 102:

- (a) Debt instruments that pass the contractual characteristics test and are held within a business model for which the purpose is collecting contractual cash flows and selling, in which case, gains or losses recognised in other comprehensive income are recycled into profit or loss upon impairment or derecognition.

And

- (a) Equity instruments that are not held for trading can be designated irrevocably at initial recognition at fair value through other comprehensive income, in which case gains or losses recognised in other comprehensive income are never recycled into profit or loss.

Under IFRS 9, the classification of financial liabilities prescribes the use of amortised cost, unless the fair value option is applied (which is explained in 6.4 below) or they are designated at fair value through profit or loss. Under FRS 102, the classification of financial liabilities follows the same criteria as for financial assets, and any instrument for which the terms are not consistent with the principle-based description of a basic debt instrument would be classified as an 'other' financial instrument in accordance with Section 12 of FRS 102 and carried at fair value through profit or loss.

Furthermore, in the case of financial liabilities with embedded derivatives, under IFRS 9 there is a requirement to separate certain embedded derivatives and carry the host financial liability at amortised cost, while under FRS 102 such an instrument must be treated as a single financial liability and carried at fair value through profit or loss.

There are two main differences for the fair value option under FRS 102 and IFRS 9:

- Under IFRS 9, a financial liability that contains an embedded derivative that requires separation as discussed in the preceding paragraph can be instead designated at fair value through profit or loss. When this designation occurs, the accounting will be consistent with FRS 102.
- Under FRS 102, financial assets can be designated at fair value if they are managed and their performance is evaluated on a fair value basis. Under IFRS 9, no fair value option is necessary since financial assets managed on a fair value basis would fail the business model test for amortised cost accounting and must be measured at fair value through profit or loss.

Under IFRS 9, when financial liabilities are designated at fair value through profit or loss, the effect of changes in own credit risk on its fair value must be recognised in other comprehensive income. This requirement does not exist in Sections 11 and 12 of FRS 102.

In May 2024, the IASB issued amendments to IFRS 9 that address, among other topics, two areas relevant to subsequent measurement. These are only applicable to FRS 102 preparers that apply IFRS 9 as an accounting policy choice: [FRS 102.11.2(c)]

- (a) **SPPI Test for Contingent Features (including ESG-linked loans):** The amendments provide guidance on the application of the SPPI test to financial assets with contingent features, such as ESG-linked loans. In contrast, FRS 102 does not include specific guidance in this area, therefore the requirements in paragraphs 9 and 9A of Section 11 of FRS 102 should be followed when accounting for both financial assets and financial liabilities. See 4.1.2.C below.
- (b) **Non-recourse Features and Contractually Linked Instruments:** The amendments also introduce additional guidance for financial assets with non-recourse features and for contractually linked instruments, which are a subset of such assets. FRS 102 does not provide specific requirements for these instruments; therefore, entities should refer to paragraphs 9 and 9A of Section 11 of FRS 102. See 4.1.2.D below.

Further guidance on the treatment under IFRS 9 on this topic is provided in the most recent version of the EY publication, International GAAP®.

2.3.2 Subsequent measurement: IAS 39

Section 11 contains less stringent conditions for a debt instrument to be measured at amortised cost than IAS 39. Under IAS 39, only financial assets that are classified as loans and receivables or held to maturity can be subsequently measured at amortised cost. For the former category, the financial asset must not be quoted in an active market and must contain fixed or determinable payments while for the latter category, in addition to the financial asset having fixed or determinable payments, the entity must have the positive intention and ability to hold it to maturity. [IAS 39.9]. This means that, for example, most quoted debt securities, which could not be classified as a loan and receivable under IAS 39, will probably qualify for measurement at amortised cost under Section 11. Furthermore, under Section 11 entities are not required to hold debt securities to maturity to achieve amortised cost accounting.

Another difference is that FRS 102 does not have the concept of the 'trading book' contained in IAS 39, so all basic debt instruments will be recorded at amortised cost, irrespective of the reason they were acquired or the purpose for which they are held, unless the entity makes use of the 'fair value option' (see 6.4 below).

2.4 Derecognition

The FRS 102 derecognition principles for financial assets are broadly similar to those in IFRS 9 and IAS 39 but they have been simplified and do not contain the full body of guidance that can be found in IFRS 9 and IAS 39. In below paragraphs we address three differences between IFRS and FRS 102.

2.4.1 What is a transfer?

Section 11 provides no guidance on what is meant by a 'transfer of risks and rewards' within paragraph 33(b) of Section 11 of the standard. Nor does it define the meaning of the word 'transfer'. Whereas, under IFRS, an entity transfers all or a part of a financial asset (the transferred financial asset) if, and only if, it either: *[IFRS 9.3.2.4, IAS 39.18]*

(a) Transfers the contractual rights to receive the cash flows of that financial asset.

Or

(b) Retains the contractual rights to receive the cash flows of that financial asset but assumes a contractual obligation to pay the cash flows to one or more recipients in an arrangement (pass through arrangements).

IFRS 9 and IAS 39 also address in some detail many complex arrangements that do not qualify for derecognition because they do not meet their transfer criteria. In particular, IFRS 9 and IAS 39 have additional guidance on the treatment of pass-through arrangements. *[IAS 39.19, IFRS 9.3.2.5]*. FRS 102 does not contain guidance for any of these complex arrangements; therefore, a preparer has to develop an appropriate accounting policy if it deals with such transactions, *[FRS 102.10.4]*, and may want to look at IFRS. *[FRS 102.10.6]*.

Further guidance on the treatment under IFRS on this topic is provided in the most recent version of the EY publication, International GAAP®.

2.4.2 Continuing involvement

Situations in which the transferor has retained some, but not substantially all, risks and rewards of ownership and has retained control over the asset give rise to another difference from the IFRS derecognition requirements.

Under IFRS the assets would only be recognised to the extent of the transferor's 'continuing involvement', that is, the extent that the transferor is exposed to changes in the value of the transferred asset.

[IFRS 9.3.2.16, IAS 39.30]. Under FRS 102, derecognition would not be appropriate and the asset continues to be recognised, as it only allows for derecognition if control has been transferred. *[FRS 102.11.33(c)]*.

2.4.3 Derecognition date of financial assets and liabilities

In May 2024, the IASB issued amendments to IFRS 7 *Financial Instruments: Disclosures* and IFRS 9, which clarify that financial assets are derecognised when the entity's rights to the contractual cash flows expire or are transferred. Financial liabilities are derecognised when the obligations specified in the contract are discharged, cancelled or expire, or the liability otherwise qualifies for derecognition, which is the settlement date. *[IFRS 9.B3.1.2A]*. The amendments also introduce an accounting policy choice where financial liabilities are deemed to be discharged before the settlement date if initiated using an electronic payment system (if specific conditions are met). *[IFRS 9.B3.3.8]*. These amendments are not reflected in FRS 102.

Further information regarding the impact of these amendments in IFRS 9 can be found in the most recent version of the EY publication, International GAAP®.

3 Recognition and measurement: accounting policy choice

As discussed at 2 above, entities can choose for recognition and measurement to apply either:

- (i) Sections 11 and 12

Or

- (ii) IAS 39 (as adopted in the relevant jurisdiction) as the standard applies prior to the application of IFRS 9

An entity must apply the version of IAS 39 that applied immediately prior to IFRS 9 superseding IAS 39. This means that, for UK and Irish entities, the so-called 'EU carve-out of IAS 39' must be applied. The EU carve-out of IAS 39 amended paragraph 81A and related Application Guidance in IAS 39, with respect to the fair value hedge of interest rate exposures of a portfolio of financial assets and liabilities.

Once the Periodic Review 2024 changes are adopted, an entity is not permitted to choose IAS 39 as a new accounting policy unless the change makes its policies consistent with the consolidated financial statements in which the entity is included. See 3.2.2 below. Entities are permitted to continue applying IAS 39.

Or

- (iii) IFRS 9 (as adopted in the relevant jurisdiction), and IAS 39 (as amended following the publication of IFRS 9) as far as it remains applicable when IFRS 9 is applied. [FRS 102.11.2, FRS 102.12.2].

On application of IFRS 9 entities are permitted to continue to apply the IAS 39 hedge accounting requirements with respect to the fair value hedge of interest rate exposures of a portfolio of financial assets and liabilities. Hence, following the publication of IFRS 9, IAS 39 was amended to include only the guidance necessary to continue to apply such a hedge relationship. [IFRS 9.6.1.3].

The above choice of guidance represents an accounting policy choice that only applies for recognition and measurement of financial instruments. [FRS 102.11.2, FRS 102.12.2]. The disclosure requirements of paragraph 38A in Section 11 and presentation requirements of paragraph 25W in Section 12 of the standard for offsetting on the statement of financial position are still applicable regardless of the accounting policy choice above.

3.1 Impact of the accounting policy choice

In applying this accounting policy choice, preparers of financial statements have to bear in mind the consequences implied in choosing the application of IAS 39 or IFRS 9. Below there is a list of the most significant ones:

- a. **Applicability:** The choice must be made for all financial instruments, [FRS 102.11.2, FRS 102.12.2], and be applied for classification and measurement, impairment and hedge accounting. Entities cannot decide to elect to use IAS 39 or IFRS 9 with IAS 39 to the extent it remains applicable only for certain items.
- b. **Scope:** When an entity chooses to apply IAS 39 or IFRS 9, it applies the scope of the relevant standard to its financial statements. [FRS 102.11.2, FRS 102.12.2]. Therefore, there could be situations where instruments that are out of the scope of Sections 11 and 12 could be within the scope of IAS 39 or IFRS 9; examples of this are embedded derivatives in non-financial contracts (which are discussed at 4.1.4 below) and financial guarantees (which are discussed in Chapter 24 at 2.1). Furthermore, entities have to bear in mind that IAS 39 and IFRS 9 have their own exclusions from the scope; in such cases, the references to other IFRSs should be interpreted as to the relevant sections of FRS 102.
- c. **Definitions:** IAS 39 and IFRS 9 have their own definitions which in some cases differ from those in FRS 102, including the definition of fair value (see 6.4 below) and derecognition date of financial assets and liabilities (see 2.4.3 above).
- d. **Disclosure requirements:** As mentioned at 4 above, the disclosure requirements of Sections 11 and 12 are applicable regardless of the accounting policy choice for recognition and measurement. However, such disclosure requirements are written based on the definitions and scope of FRS 102. Entities that apply IAS 39 and IFRS 9 refer to the corresponding definitions provided in IFRS when interpreting the disclosure requirements in FRS 102.

Disclosure requirements under FRS 102 are less onerous than those in IFRS 7. Entities applying IAS 39 and IFRS 9 are not required to comply with the additional disclosures of IFRS 7 although they should consider whether any additional disclosures are to be made to enable users of the financial statements to evaluate the significance of financial instruments for their financial position and performance.

[FRS 102.11.42].

The recognition and measurement requirements of Sections 11 and 12 are discussed in the rest of this chapter.

3.2 Changes in accounting policy choice for recognition and measurement of financial instruments

Section 10 *Accounting Policies, Estimates and Errors* contains the requirements for determining when a change in accounting policy is appropriate, how such a change should be accounted for and what information should be disclosed. Chapter 9 discusses in detail the requirements of Section 10. Below we discuss the relevant aspects resulting from the application of the accounting policy choice described at 3.1 above. [FRS 102.11.2, FRS 102.12.2].

3.2.1 Mandatory changes in accounting policy

When an entity has elected to apply the recognition and measurement provisions of IFRS 9 and the requirements of IFRS 9 change, the entity must account for that change in accounting policy in accordance with the transitional provisions, if any, specified in the revised IFRS 9. [FRS 102.10.11(b)].

The accounting policy choice described at 3 above allows the use of IAS 39 (as adopted in the relevant jurisdiction). Even though IFRS 9 has superseded IAS 39, the FRC decided to maintain the option of continuing to apply IAS 39 (in the form applicable immediately prior to the effective date of IFRS 9). Hence there is no requirement for entities to change to IFRS 9 from IAS 39 for classification and measurement of financial instruments.

3.2.2 Voluntary changes

An entity can voluntarily change its accounting policy only if the change results in the financial statements providing reliable and more relevant information about the effects of transactions, other events or conditions on the entity's financial position, financial performance or cash flows. [FRS 102.10.8(b)].

In the case of a change from IAS 39 to IFRS 9, it would appear logical to apply the transition provisions of IFRS 9. A change from IAS 39 or IFRS 9 to Sections 11 and 12 is not discussed in FRS 102, hence as there are no specific transitional provisions any change must be applied retrospectively. [FRS 102.10.11(d)]. The transition rules of Section 35 *Transition to this FRS* will not apply in these circumstances as they apply only upon first-time adoption of FRS 102. Following the FRC's Periodic Review 2024, entities can only change their accounting policy for recognition and measurement from applying full Section 11 and Section 12 or a combination of IFRS 9 and IAS 39, to applying IAS 39 if it makes their policies consistent with consolidated financial statements in which the entity is included. [FRS 102.11.2].

4 Classification

Section 11 provides a definition of a financial instrument as follows: a financial instrument is a contract that gives rise to a financial asset of one entity and a financial liability or equity instrument of another entity. [FRS 102.11.3]. This is identical to the definition in IAS 32 *Financial Instruments: Presentation*.

FRS 102 introduces two categories of financial instruments:

(i) Basic financial instruments

And

(ii) Other financial instruments

All financial instruments within the scope of Sections 11 and 12 (see Chapter 11 at 3.2) must be categorised as either a 'basic' or 'other' financial instrument. This categorisation will drive whether the accounting guidance in Section 11 or 12, respectively, must be applied.

The category of basic financial instruments is not defined. Instead, a list of conditions that basic instruments would ordinarily satisfy, and examples of instrument types that normally satisfy those conditions is provided. 'Other' or non-basic financial instruments are defined as a default category of all financial instruments that fail to meet the conditions to be a basic financial instrument.

4.1 'Basic' financial instruments

Section 11 deals with the classification and accounting for basic financial instruments. It introduces the term 'basic financial instrument' by providing a list of financial instruments that must be accounted for as basic financial instruments. [FRS 102.11.8].

Extract from Section 11

- 11.8** An entity shall account for the following financial instruments as basic financial instruments in accordance with this section:
- (a) cash;
 - (b) a debt instrument (such as an account, note, or loan receivable or payable) that meets the conditions in paragraph 11.9 and is not a derivative financial instrument;
 - (bA) a debt instrument that, whilst not meeting the conditions in paragraph 11.9, nevertheless is consistent with the description in paragraph 11.9A, and is not a derivative financial instrument;
 - (c) commitments to receive or make a loan to another entity that:
 - (i) cannot be settled net in cash; and
 - (ii) when the commitment is executed, are expected to meet the conditions in paragraph 11.9 or be consistent with the description in paragraph 11.9A;
 and
 - (d) an investment in a non-derivative financial instrument that is equity of the issuer (eg most ordinary shares and certain preference shares).

FRS 102 additionally provides a list of examples that normally satisfy the conditions of paragraph 11.8 above, these are shown below: [FRS 102.11.5]

Extract from Section 11

- 11.5** Basic financial instruments within the scope of Section 11 are those that satisfy the conditions in paragraph 11.8. Examples of financial instruments that normally satisfy those conditions include:
- (a) cash;
 - (b) demand and fixed-term deposits when the entity is the depositor, eg bank accounts;
 - (c) commercial paper and commercial bills held;
 - (d) accounts, notes and loans receivable and payable;
 - (e) bonds and similar debt instruments;
 - (f) investments in non-derivative financial instruments that are equity of the issuer (eg most ordinary shares and certain preference shares); and
 - (g) commitments to receive a loan and commitments to make a loan to another entity that meet the conditions of paragraph 11.8(c).

4.1.1 Basic equity instruments

Section 11 includes as 'basic', investments in non-derivative financial instruments that are equity of the issuer. [FRS 102.11.8(d)]. Defining basic equity instruments in this fashion ensures consistency in the treatment from the point of view of the issuer and the holder.

Investments in subsidiaries, associates and joint ventures that are accounted for in accordance with Section 9 *Consolidated and Separate Financial Statements*, Section 14 *Investments in Associates* or Section 15 *Investments in Joint Ventures* are outside the scope of Sections 11 and 12 and therefore are not considered basic equity instruments.

4.1.2 Basic debt instruments

The term 'debt instrument' is not defined in FRS 102. Instead, examples of debt instruments are given of an account, note or loan receivable or payable. [FRS 102.11.8(b)]. A debt instrument can be a financial asset or a financial liability, depending on whether the entity is the debtor or creditor in the instrument. However, the assessment must first be made as to whether the issued instrument is a liability or equity from the point of view of the issuer (see Chapter 12).

FRS 102 sets out six conditions a debt instrument must satisfy in order to be classified as 'basic'. If one of the conditions is not satisfied, it will still meet the definition of 'basic' if it is consistent with the principle-based description of a 'basic' financial instrument. The description requires a 'basic' debt instrument to give rise to cash flows on specified dates that constitute reasonable compensation for the time value of money, credit risk and other basic lending risks and costs (e.g., liquidity risk, administrative costs associated with holding the instrument and lender's profit margin). Such reasonable compensation is dependent on the prevailing economic conditions and monetary policies in operation. [FRS 102.11.9A, FRS 102.BC.B11.11, FRS 102.BC.11.12].

Most 'plain vanilla' debt instruments will satisfy either the six conditions or the principle-based description of a 'basic' debt instrument and can therefore be accounted for at amortised cost. These include, *inter alia*:

- (a) Trade accounts and notes receivable/payable, and loans from banks or third parties [FRS 102.11.10(a)]
- (b) Accounts payable in a foreign currency (however, any change in the amount payable because of a change in the exchange rate is recognised in profit or loss) [FRS 102.11.10(b)]
- (c) Loans to or from subsidiaries or associates that are due on demand [FRS 102.11.10(c)]
- (d) A debt instrument that would become immediately receivable if the issuer defaults on an interest or principal payment [FRS 102.11.10(d)]
- (e) Commercial paper and commercial bills [FRS 102.11.5(c)]

And

- (f) Bonds and similar instruments [FRS 102.11.5(e)]

Contractual terms that introduce exposure to unrelated risks or volatility (e.g., changes in equity prices or commodity prices) are inconsistent with the principle-based description of a 'basic' debt instrument.

[FRS 102.11.9A], and therefore debt instruments with such terms would be within the scope of Section 12. These instruments include, *inter alia*, derivatives (such as options, rights, warrants, future contracts, forward contracts and interest rate swaps that can be settled in cash or by exchanging another financial instrument) and investments in convertible debt. [FRS 102.11.6(b), FRS 102.11.11].

The six conditions for and the description of, a basic financial instrument and how these interact in assessing classification is discussed at 4.1.2.A to 4.1.2.F below.

Condition	Paragraph
Condition 1 - Contractual return to the holder	4.1.2.A
Condition 2 - Link to inflation	4.1.2.B
Condition 3 - Variation of the return	4.1.2.C
Condition 4 - Loss of principal or interest	4.1.2.D
Condition 5 - Prepayment options	4.1.2.E
Condition 6 - Extension options	4.1.2.F

4.1.2.A Condition 1 - Contractual return to the holder

In order for a debt instrument to be classified as 'basic', the contractual return to the holder, assessed in the currency in which the debt instrument is denominated, must be:

- (i) A fixed amount
- (ii) A positive fixed rate or a positive variable rate
- Or
- (iii) A combination of a positive variable rate and a positive or a negative fixed rate (e.g., SONIA plus 200 basis points or SONIA less 50 basis points, but not 500 basis points less SONIA) [FRS 102.11.9(a)]

A variable rate is defined for this purpose as a rate which varies over time and is linked to a single observable interest rate, or to a single relevant observable index of general price inflation of the currency in which the instrument is denominated - see Condition 2 below - provided such links are not leveraged. [FRS 102.11.9fn46].

FRS 102 does not provide a definition of leverage. However, FRS 102 gives the example of interest on a loan that is referenced to 2 times the bank's standard variable rate and explains that such a leveraged instrument should be measured in accordance with Section 12.

Illustration 4-1: Interest on a loan is referenced to 2 times the bank's standard variable rate

A bank's standard variable rate is an observable rate and meets the definition of a variable rate, but the rate in this example is 2 times the bank's standard variable rate and therefore the link to the observable interest rate is leveraged. As a result of the leverage, the rate in this example is not a variable rate as described in paragraph 11.9(a).

A leveraged link to an observable interest rate is also inconsistent with the description in paragraph 11.9A because it increases the variability of cash flows so that they do not represent reasonable compensation for the time value of money, credit risk or other basic lending risks and costs. The instrument is measured at fair value in accordance with Section 12. [FRS 102.11.9A.E5].

The contractual return must be assessed in the currency in which the debt instrument is denominated. [FRS 102.11.9fn46]. We believe this clarification is included to avoid concluding that a return would not be determinable (as required by Condition 3 below) when subject to foreign currency fluctuations. When a debt instrument is denominated in a currency other than the functional currency, the impact of the changes in the exchange rate are accounted for as required by Section 30 *Foreign Currency Translation* (see Chapter 32).

The following contractual returns meet Condition 1:

- (a) A fixed amount: FRS 102 provides the example of a zero-coupon loan.

Illustration 4-2: A zero-coupon loan

For a zero-coupon loan, the holder's return is the difference between the nominal value of the loan and the issue price. The holder (lender) receives a fixed amount when the loan matures and the issuer (borrower) repays the loan. The return to the holder meets the condition in paragraph 11.9(a)(i). [FRS 102.11.9A.E1].

- (b) A positive fixed rate or a positive variable rate: This is the case when a single interest rate is specified in the debt instrument.

How we see it

In our view, examples of variable rates would be a bank's standard variable rate ('SVR'), IBOR, SONIA, Euribor and the Bank of England base rate, but this is not an exhaustive list.

- (c) A negative variable rate: This is the case when that variable rate reflects prevailing economic conditions and monetary policies.

Illustration 4-3: A loan with interest payable at the bank's standard variable rate plus 1% throughout the life of the loan - the bank's standard variable rate is negative

The combination of a positive bank's standard variable rate plus a fixed interest rate of 1% meets the condition in paragraph 11.9(a)(iv). However, the conditions in paragraph 11.9(a) do not explicitly address the case when the bank's standard variable rate is negative and such a rate may not meet the conditions. The interest rate is consistent with the description in paragraph 11.9A provided the bank's standard variable rate reflects prevailing economic conditions and monetary policies. In this case the negative interest rate represents reasonable compensation for basic lending risks. [FRS 102.11.9A.E3A].

How we see it

In our view, even though the example refers to a negative variable rate, the same considerations and conclusion would apply to a fixed negative rate that reflects the prevailing conditions in the market.

- (d) A combination of a positive variable rate and a positive or a negative fixed rate: FRS 102 provides the example of a loan with interest payable at the bank's SVR plus 1% throughout the life of the loan.

Illustration 4-4: A loan with interest payable at the bank's standard variable rate plus 1% throughout the life of the loan

As discussed in Example 2 above, a bank's standard variable rate is a permitted variable rate in accordance with the definition of variable rate. The combination of a positive fixed rate (i.e., plus 1%) and a positive variable rate is a permitted return under paragraph 11.9(a)(iv). The combination of a bank's standard variable rate plus a fixed interest rate of 1% therefore meets the condition in paragraph 11.9(a)(iv). [FRS 102.11.9A.E3].

FRS 102 also provides an example of an 'inverse floater' and explains that such an instrument must be measured in accordance with Section 12.

Illustration 4-5: Interest on a loan is charged at 10% less 6-month interbank offered rate (IBOR) over the life of the loan

The effect of deducting a variable rate from a positive fixed rate is that the interest on the loan increases as and when the variable rate decreases and vice versa (so called inverse floating interest).

In accordance with paragraph 11.9(a)(iv) the combination of positive or negative fixed rate and positive variable rate is a permitted return. The variable rate (6-month IBOR) meets the definition of a variable rate, as the rate is a quoted interest rate. However, since the variable rate is negative (minus 6-month IBOR), the rate is in breach of the condition in paragraph 11.9(a)(iv).

The inverse floating interest rate is also inconsistent with the description in paragraph 11.9A because the interest charged increases when reasonable compensation for the time value of money, credit risk or other basic lending risks and costs would decrease, and vice versa. The instrument is measured at fair value in accordance with Section 12. [FRS 102.11.9A.E6].

4.1.2.B Condition 2 - Link to inflation

The contract may provide for repayments of the principal or the return to the holder (but not both) to be linked to a single relevant observable index of general price inflation of the currency in which the debt instrument is denominated, provided such links are not leveraged. [FRS 102.11.9(aA)].

The three main aspects of this condition are:

- (i) The link to inflation can be for either the repayment of principal or the return of the holder but should not be such that the inflation adjusted interest rate is applied to the inflation adjusted principal, as this would imply leverage.
- (ii) The inflation index must be a single relevant observable index of general price inflation and must be denominated in the currency of the debt instrument. Common examples would be the Retail Price Index (RPI) and the Consumer Price Index (CPI) in the UK. Other indexes that do not measure general price inflation of goods and services would not be acceptable.

FRS 102 provides the example of interest on a Sterling denominated mortgage that is linked to the UK Land Registry House Price Index (HPI) plus 3% and explains that such an instrument should be measured in accordance with Section 12.

Illustration 4-6: Interest on a GBP denominated mortgage is linked to the UK Land Registry House Price Index (HPI) plus 3%

In accordance with paragraph 11.9(aA) the holder's return may be linked to an index of general price inflation of the currency of the debt instrument. The mortgage is denominated in GBP and a permitted inflation index would be an index that measures general price inflation of goods and services denominated in GBP.

As the HPI measures inflation for residential properties in the UK and is not a measure of general price inflation, the return to the holder breaches the condition in paragraph 11.9(aA).

The mortgage is also inconsistent with the description in paragraph 11.9A because the linkage to the HPI introduces exposure to a risk that is not consistent with a basic lending arrangement. The instrument is measured at fair value in accordance with Section 12. [FRS 102.11.9A.E7].

- (iii) The link to inflation must not be leveraged. Similar to the condition discussed at 4.1.2.A above, a term that amplifies the inflation impact on the return is likely to make the instrument fail the 'basic' definition.

4.1.2.C Condition 3 - Variation of the return

The contract may provide for a determinable variation of the return to the holder during the life of the instrument, provided that:

- (i) The new rate satisfies Condition 1 and the variation is not contingent on future events other than:
- (a) A change of a contractual variable rate.
 - (b) To protect the holder against credit deterioration of the issuer.
 - (c) Changes in levies applied by a central bank or arising from changes in relevant taxation or law.
- Or

- (ii) The new rate is a market rate of interest and satisfies Condition 1. [FRS 102.11.9(aB)].

The crux of Condition 3 is that variations in the rate after initial recognition are permitted provided that:

- The variations are not contingent on future events, except in the limited scenarios mentioned above. These limited scenarios are designed to allow variations in the return driven by changes in the credit risk of the borrower and costs of lending, both of which are inherent to the determination of interest rates. Increasing the interest rate due to a decline in the borrower's credit worthiness would be acceptable. For example, if a borrower breaches a debt covenant that was stipulated in the loan agreement, the bank would be entitled to increase the interest rate to ensure that its return from the loan mitigates its increased credit risk. Finally, if a rate change is required due to changes in levies or legislation or regulations, this would be permitted.
- Variations in the rate other than those discussed above are only allowed when the new rate is a market rate of interest.

Contractual terms that give the lender the unilateral option to change the terms of the contract are not 'determinable' for this purpose. [FRS 102.11.9(aB)].

How we see it

In our view, when the lender has the unilateral option to change the terms of the contract without stipulating which rate it can change to, it would fail to meet the conditions of a basic instrument. In this respect, we do not believe that the unilateral right of a bank to change its SVR represents a change in the terms of the contract. If the option to change the terms was restricted to a market rate of interest, then the terms would also pass this condition.

FRS 102 does not include guidance on how to deal with the issue of financial assets with ESG-linked contractual features. Therefore, provided the accounting policy choice to apply IFRS 9 or IAS 39 has not been made, the guidance in paragraphs 9 and 9A of Section 11 of FRS 102 should be followed when dealing with both financial assets and liabilities.

Further guidance on the treatment under IFRS on this topic is provided in the most recent version of the EY publication, International GAAP®.

How we see it

The existence of a contractually specified variation of interest depending on whether a carbon emission target is met, is not dealt with in paragraph 9(aB)(i) of Section 11. In our view, a preparer therefore needs to consider whether the new rate is a market rate of interest and therefore satisfies paragraph 9(aB)(ii) of Section 11 or whether it can be considered a basic financial instrument under paragraph 9A of Section 11. In the case of non-basic financial liabilities, a preparer will also need to consider the impact of the Regulations in determining the measurement basis, which has been discussed at 4.4.2.A below.

Some examples of the application of condition 3 are provided below:

Illustration 4-7: A fixed interest rate loan with an initial tie-in period which reverts to the bank's standard variable interest rate after the tie-in period

The initial fixed rate is a return permitted by paragraph 11.9(a)(ii). A bank's standard variable interest rate is an observable interest rate and, in accordance with the definition of a variable rate, is a permissible link and so meets the condition in paragraph 11.9(a)(ii).

The variation of the interest rate after the tie-in period is non-contingent and, since the new rate (i.e., the bank's standard variable rate) meets the conditions in paragraph 11.9(a), the conditions in paragraph 11.9(aB)(i) are met. [FRS 102.11.9A.E2].

Illustration 4-8: A loan with interest payable at the bank's standard variable rate less 1% throughout the life of the loan, with the condition that the interest rate can never fall below 2%

Paragraph 11.9(aB)(i)(1) permits variation of a return to a holder (lender) that is contingent on a change of a contractual variable rate. In this example the contractual variable rate is the bank's standard variable rate. The variation of the return to the holder is between the bank's standard variable rate less 1% and 2%, depending on the bank's standard variable rate. For example, if the bank's standard variable rate is less than 3%, the return to the holder is fixed at 2%; if the bank's standard variable rate is higher than 3%, the return to the holder is the bank's standard variable rate less 1%. The contractual variation meets the condition in paragraph 11.9(aB)(i)(1).

The holder is protected against the risk of losing the principal amount of the loan via the interest rate floor of 2%. The condition in paragraph 11.9(b) is therefore also met. [FRS 102.11.9A.E4].

Illustration 4-9: A loan with a condition that the interest rate is reset to a higher rate if a set number of payments is missed.

In this case the change in interest rate is contingent on a set number of payments being missed. The missed payments are an indicator of credit deterioration of the issuer. The interest rate reset condition therefore meets the condition in paragraph 11.9(aB)(i)(2) (provided the new rate meets the conditions in paragraph 11.9(a)), and the interest rate reset condition would not result in the loan being measured at fair value in accordance with Section 12. [FRS 102.11.9A.E4A].

Another situation related to credit exists in the case of an instrument with a variable interest rate that changes based on variations in the credit rating of the issuer, i.e., if the credit rating deteriorates, the rate increases, and if it improves, the rate decreases.

The change in interest rate is contingent on a future event. Condition (3)(i)(b) allows changes contingent on future events to protect against credit deterioration of the issuer, but it does not mention changes based on credit improvement.

How we see it

We believe the fact that the rate could decrease when the credit rating improves does not contradict the principle that variations in the return caused by contingent future events should only occur to protect against the deterioration of credit risk. This is because variations in the return driven by credit risk are considered to be consistent with a basic lending arrangement and therefore with the principle-based description of a 'basic' debt instrument (see 4.1.2 above). Therefore, provided that the variable interest rate satisfies Condition 1, we believe this arrangement also satisfies Condition 3(i)(b) above.

FRS 102 does not include guidance on how to deal with the issue of financial assets with ESG-linked contractual features.

4.1.2.D Condition 4 - Loss of principal or interest

The focus of this condition is the possibility of losing principal or interest for the holder as a result of a contractual provision. Subordination of the debt instrument to other debt instruments does not affect the contractual right of the holder to the principal repayment. [FRS 102.11.9(b)]. Furthermore, the possibility of the issuer not repaying the amounts because of financial difficulties is not a contractual provision of the instrument and therefore should not be considered in assessing this condition.

FRS 102 provides an example of applying this condition in practice [FRS 102.11.9A.E4]. In that example, which is discussed at 4.1.2.C above, it is determined that the existence of the floor protects the holder against the risk of losing the principal amount of loan in circumstances where the negative fixed spread exceeds the positive variable rate. Without the floor, Condition 4 may not be met. [FRS 102.11.9.E4]. This could be interpreted as an indication that any negative market interest rate would fail this condition. However, as discussed at 4.1.2.A above, a negative rate would be consistent with the principle-based description of a basic debt instrument, when that variable rate reflects prevailing economic conditions and monetary policies, and would therefore not prevent the instrument from being classified as 'basic'. [FRS 102.11.9.E3A].

In assessing Condition 4, an entity must differentiate between debt instruments with terms that are contractually linked to the performance of an underlying asset or basket of assets without any other sources of repayment, (e.g., a securitisation or a non-recourse loan) and other debt instruments where the assets of the borrower are merely concentrated in one asset or a limited group of assets.

Where the cash flows of a debt instrument are contractually limited to the cash flows generated by an underlying asset or basket of assets, the risk of loss of principal due to losses on the underlying assets derives from a contractual term; therefore, the instrument would generally fail Condition 4 and be classified as non-basic, unless it is considered a basic financial instrument per paragraph 9A of Section 11 of the standard. However, the assessment is more complicated when there are several tranches of debt linked to the performance of the underlying asset or basket of assets through a 'waterfall' mechanism.

How we see it

Depending on their subordination in the waterfall, the resulting contractual risk of losing principal or interest will affect the assessment of the instrument's classification as a basic debt instrument. In our view, all tranches in the structure would fail Condition 4. However senior tranches in the structure are more likely to still be considered a basic debt instrument depending on the assessment of paragraph 9A of Section 11 as, on initial recognition, they may be expected to never experience losses of principal or interest. As more junior tranches are designed to absorb the first credit losses in the underlying portfolio, we would not expect such tranches to be considered basic debt instruments.

In the case of the concentration of assets of the borrower, there may be a similar economic effect without the contractual linkage, i.e., there is credit risk associated with whether the concentrated assets will be able to generate enough cash flows to service the debt instrument payments. For example, if an entity issues two loans, one more senior than the other and has no assets and liabilities other than a property, the question arises whether both or either of the loans in substance fail Condition 4.

How we see it

In our view, the more senior loan does not fail Condition 4 provided it is likely that the lower ranking loan is sufficient to absorb the expected losses on the property. In our view, even though the subordinated loan is not contractually linked, it is in substance constructed to absorb the first losses on the underlying assets in a similar manner to a contractually linked loan, in which case it fails Condition 4. Consequently, debt instruments where the borrower has a concentration of assets may not be consistent with a basic lending arrangement and judgement will be required to conclude on their classification.

4.1.2.E Condition 5 - Prepayment options

Contractual provisions that permit the issuer (the borrower) to prepay a debt instrument, or permit the holder (the lender) to put it back to the issuer before maturity, must not be contingent on future events, other than to protect:

- (i) The holder against the credit deterioration of the issuer (for instance, as a consequence of defaults, credit downgrades or loan covenant breaches), or a change in control of the issuer.
- Or
- (ii) The holder or the issuer against changes in levies applied by a central bank or arising from changes in relevant taxation or law.

The inclusion of contractual terms that as a result of the early termination require reasonable compensation from either the holder or the issuer for the early termination does not constitute, in itself, a breach of Condition 5. [FRS 102.11.9(c)].

How we see it

In our view, even though FRS 102 refers to contractual provisions that permit prepayment, automatic prepayment provisions (i.e., those provisions that require, rather than permit, prepayment) must also be assessed on the same basis. Therefore, automatic prepayment provisions that would trigger prepayment in circumstances other than those listed above would cause the debt instrument to fail to meet this condition.

The following paragraphs discuss the key terms necessary to understand this Condition.

Contingent event considerations

Determining what is considered to be a contingent future event and whether the event meets the conditions above, particularly in relation to events under the control of the parties to the contract is a matter of judgement.

How we see it

If the lender has the right to require prepayment upon an event under the control of the borrower, such a provision would not be considered to be contingent on future events, as it represents a choice of the borrower, and hence would not contravene Condition 5. This is consistent with the approach for contingent settlement provisions applied to the classification of equities and liabilities (see Chapter 12 at 4.3).

In this regard, FRS 102 provides the following example:

Illustration 4-10: Early repayment on subordinated debt contingent on repayment of senior debt

Bank A lends CU10 million to Entity S. Entity S has an option to repay this loan at any time. Entity S's parent, Entity P, also lends it CU10 million. The loans have the same maturity date but the loan from Bank A is senior to the loan from Entity P. Entity S has the right to repay the loan to Entity P at par plus accrued interest at any time after the loan from Bank A has been repaid.

Early repayment terms that are within the control of the issuer are not contingent on future events. Therefore if early repayment of both loans is within Entity S's control then the prepayment option in the loan from Entity P is not considered to be contingent, does not breach the condition in paragraph 11.9(c) and does not therefore cause the loan from Entity P to be measured at fair value in accordance with Section 12.

If the terms were such that early repayment of the loan from Bank A was not within the control of Entity S, then the prepayment option in the loan from Entity P would be contingent on a future event other than those listed in paragraph 11.9(c). The nature of the contingent event may be an indicator when assessing whether a debt instrument is consistent with the description in paragraph 11.9A, but is not in itself a determinative factor. The restriction on the prepayment feature in the loan from Entity P would be consistent with the description in paragraph 11.9A because it exists simply to enforce its subordination relative to another debt instrument. The restriction on Entity S's ability to exercise the prepayment option in the loan from Entity P would not therefore cause the loan from Entity P to be measured at fair value in accordance with Section 12 by Entity S.

Reasonable compensation

Compensation in the event of prepayment may be payable by either party that chooses to exercise the early termination option. However, no guidance is provided as to what would be considered a reasonable amount of compensation. In this regard, we believe that entities will have a fair degree of discretion and that judgement will need to be exercised.

How we see it

In our view, if the amount of the prepayment compensation to the lender substantially represents the fair value of the instrument at that point, the compensation would normally be considered reasonable. That is, the prepayment amount represents the present value of the remaining contractual interest and principal payments at the point of prepayment, discounted by the current market interest rate for the remaining tenure.

For example, if a six-year bond is prepaid at the end of the third year, the prepayment amount will be approximately the sum of the contractual interest and principal amounts due over the remaining three years, discounted using the current market interest rate for a bond with similar characteristics.

A penalty on prepayment that is contractually pre-determined would not automatically fail to meet this condition but should be assessed in order to conclude whether such compensation in essence represents a reasonable amount of compensation or not. An example would be a mortgage loan with a prepayment penalty clause where the amount is intended to represent present value of lost interest, even if calculated in a different manner.

Examples of payments that would not be considered reasonable compensation for early termination could include penalty payments that are something other than lost interest, e.g., when it is linked to an index other than a general inflation index.

4.1.2.F Condition 6 - Extension options

Contractual provisions may permit the extension of the term of the debt instrument, provided that the return to the holder and any other contractual provisions applicable during the extended term satisfy Conditions 1 to 5. *[FRS 102.11.9(e)]*.

In assessing compliance with this condition, entities must consider the fact that the extension option is a contingent event and its exercise will most likely cause a variation of return. In such a case, Condition 3(ii) would be applicable since the contingent event does not correspond to the three circumstances allowed under Condition 3(i); in order for the instrument to be considered as 'basic', the rate of interest for the extended period would need to be a prevailing market rate of interest at the time of exercising the option.

How we see it

In our view, extension options for which the rate applicable to the extended period are based on an agreed fixed rate or fixed amount would be consistent with the principle-based description of a 'basic' debt instrument, and hence the instrument could be classified as 'basic'.

4.1.3 Basic loan commitments

Loan commitments are not defined in FRS 102 but they are essentially firm commitments to provide credit under pre-specified terms and conditions, as defined in IFRS 9 and IAS 39. *[IFRS 9.BC22.2, IAS 39.BC15]*. Accordingly, loan commitments are financial instruments and therefore within the scope of Section 11 (see 3.1 above). *[FRS 102.11.8(c)]*. Examples would include a mortgage offer to an individual or a committed borrowing facility granted to a company. Within the terms of the loan commitment, the borrower could have the option or the obligation to borrow from the lender.

For a loan commitment to qualify as basic debt instrument, the following two conditions must be met:

- (i) The commitment cannot be settled net in cash.
- And
- (ii) The loan to be received/paid when the commitment is executed, is expected to be a basic financial instrument under Section 11 (see discussion at 4.1.2 above). *[FRS 102.11.8(c)]*.

4.1.4 Embedded derivatives

Unlike IAS 39 and IFRS 9, Sections 11 and 12 do not contain the concept of separating embedded derivatives. An embedded derivative is a component of a hybrid (combined instrument) that also includes a non-derivative host contract with the effect that some of the cash flows of the combined instrument vary in a way similar to a standalone derivative. *[IAS 39.10, IFRS 9.4.3.1]*. As the rules for separating embedded derivatives have not been included in Sections 11 and 12, it is likely that many financial instruments that contain embedded derivatives that are not closely related to the host instrument will not meet the conditions for basic financial instruments. Hence the whole instrument will be considered in the scope of Section 12. This is different from IFRS which requires an embedded derivative that is not closely related to the host instrument to be separated and measured at fair value through profit or loss, while the host instrument can be measured at amortised cost:

- (i) Only by the issuer in the case of IFRS 9
- Or
- (ii) By both the issuer and the holder in the case of IAS 39

4.2 Other financial instruments

All financial instruments that are not 'basic' are dealt with in Section 12. Examples of financial instruments that do not normally meet the conditions for classification as basic, and are therefore within the scope of Section 12, include:

Extract from Section 11

- 11.6** Examples of financial instruments that do not normally meet the conditions for classification as basic, and are therefore within the scope of Section 12, include:
- (a) asset-backed securities, such as collateralised mortgage obligations, repurchase agreements and securitised packages of receivables;
 - (b) derivatives (eg options, rights, warrants, futures contracts, forward contracts and interest rate swaps);
 - (c) financial instruments that qualify and are designated as hedging instruments in accordance with the requirements in Section 12; and
 - (d) commitments to make a loan to another entity and commitments to receive a loan, if the commitment can be settled net in cash. [FRS 102.11.6].

Even though FRS 102 mentions repurchase agreements as an example of financial instruments that would usually fail the conditions to be classified as basic, in practice most such contracts would fail to meet the de-recognition criteria and would be accounted for as basic collateralised loans.

Other financial instruments are mostly required to be measured at fair value through profit or loss. Their accounting treatment is discussed further at 5.2 and 6.1 below.

4.3 Reclassifications

FRS 102 states that the initial classification assessment of a financial instrument should take into account the relevant contractual terms dealing with the returns and any subsequent contractual variations relating to returns, prepayments and extensions of terms, etc. Once the classification of a financial instrument is determined at initial recognition, re-assessment is only required at subsequent dates if there is a modification of the contractual terms that is relevant to an assessment of the classification [FRS 102.11.6A].

4.4 Financial instruments not permitted to be measured at fair value through profit or loss by UK Company Law

4.4.1 Legal requirements

Notwithstanding whether they are basic or non-basic, financial instruments must be measured at amortised cost if they are not permitted by law to be measured at fair value through profit or loss. [FRS 102.12.8(c), 1 Sch 36 (SC), 1 Sch 36, 2 Sch 44, 3 Sch 30, 1 Sch 36 (LLP SC), 1 Sch 36 (LLP)].

The financial instruments in the list below may be included in the financial statements at fair value through profit or loss only if fair value is permitted in accordance with UK-adopted IFRS:

- (i) Financial liabilities, unless they are held as part of a trading portfolio or are derivatives (see definition of derivatives in Appendix A below).
 - (ii) Financial instruments to be held to maturity, other than derivatives.
 - (iii) Loans and receivables originated by the company unless they are held for trading.
 - (iv) Interests in subsidiary undertakings, associated undertakings and joint ventures.
 - (v) Equity instruments issued by the company (outside the scope of Sections 11 and 12).
 - (vi) Contracts for contingent consideration in a business combination (outside the scope of Sections 11 and 12).
- And
- (vii) Other financial instruments with such special characteristics that the instruments, according to generally accounting principles or practice must be accounted for differently from other financial instruments. [FRS 102.A3.12].

In addition, the law stipulates that a financial instrument can only be held at fair value when its fair value can be reliably measured. [1 Sch 36(5)(SC), 1 Sch 36(5), 2 Sch 44(5), 3 Sch 30(5), 1 Sch 36(5)(LLP SC), 1 Sch 36(5)(LLP)].

The fair value accounting rules in the Regulations require that all fair value gains on financial instruments measured at fair value be recognised in the profit or loss account except when the financial instrument is a hedging instrument or an available-for-sale security. [1 Sch 40 (SC), 1 Sch 40, 2 Sch 48, 3 Sch 34, 1 Sch 40 (LLP SC), 1 Sch 40 (LLP)].

The Small Companies Regulations, the Regulations, the LLP (SC) and the LLP Regulations were written with the application of IAS 39 in mind and terms such as 'loans and receivables', 'held to maturity', 'held for trading' and 'available for sale' are not defined in FRS 102, although it would be logical to apply the same definitions as set out in IAS 39.

4.4.2 Impact of the legal restrictions

IFRS 9 is the point of reference for determining which financial instruments may be accounted for at fair value through profit or loss under UK-adopted IFRS.

The following financial instruments are either required or allowed to be carried at fair value through profit or loss according to IFRS 9:

1. *Financial assets that fail the business model or contractual cash flows assessment:* IFRS 9 requires financial instruments to be recognised at fair value through profit or loss unless they pass both the following so called tests:

- (a) The contractual terms of the financial asset give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding.

And

- (b) The financial asset is not held within a business model whose objective is either to hold financial assets in order to collect contractual cash flows, or to collect contractual cash flows and sell the financial assets. [IFRS 9.4.1.4].

These usually include investments in equity instruments, derivatives and debts instruments held for trading.

2. *Financial liabilities held for trading*
3. *Hybrid contracts:* when an embedded derivative that is required by IFRS 9 to be separated from its host contract cannot be measured separately either at acquisition or at the end of the reporting period, IFRS 9 requires that the hybrid contract is designated at profit or loss. [IFRS 9.4.3.6].
4. *Fair value option:* IFRS 9 also permits designation at fair value through profit or loss (the fair value option) on initial recognition of a financial liability in any of the following circumstances:
 - (a) Where doing so eliminates or reduces a measurement or recognition inconsistency, i.e., 'an accounting mismatch'.
 - (b) A group of financial instruments is managed and their performance evaluated on a fair value basis.

Or

 - (c) For a hybrid financial instrument which contains an embedded derivative, unless the embedded derivative does not significantly modify the cash flows or it is clear, with little or no analysis, that separation of that derivative would be prohibited. [IFRS 9.4.2.2, IFRS 9.4.3.5, FRS 102.A3.12A]. In this case, the main point is that the fair value option is available for a hybrid instrument but only as long as the embedded derivative could be recognised separately.

IFRS 9 also permits designation of the fair value option on initial recognition of a financial asset in circumstance a) above.

Given that the comparison is to IFRS 9, entities that choose to apply IFRS 9 for recognition and measurement as an accounting policy choice under FRS 102 will not be subject to any legal restrictions (see 4.1 above). However, the legal restrictions could have an impact on entities that instead choose Sections 11 and 12 or IAS 39 for recognition and measurement of financial instruments. We discuss the potential impact in more detail at 4.4.2.A and 4.4.2.B below. We also discuss the restriction on recognition of gains and losses through other comprehensive income for entities choosing to apply IFRS 9 at 4.4.2.C.

4.4.2.A Impact on entities that choose to apply Sections 11 and 12 of FRS 102

Due to the legal restrictions, as set out above, a debt financial instrument that fails to be classified as 'basic' under FRS 102 can only be recorded at fair value through profit or loss if fair value is permitted in accordance with UK-adopted IFRS - which is IFRS 9.

We expect in most cases those financial instruments which would fail to be classified as 'basic' under FRS 102 would be required or permitted to be recorded at fair value through profit or loss under IFRS 9. Therefore, the impact of the restrictions is expected to be limited.

The basis for conclusions to FRS 102 highlights as one of those limited areas of impact from the restrictions the example of financial instruments for which the cash flows are linked to non-financial variables specific to one party to the contract. The examples below arise from analysing hybrid contracts with a host that contains one or more embedded instruments linked to non-financial variables.

Hybrid contracts - Financial assets

The holders of debt instruments that are linked to non-financial variables specific to one party to the contract would usually fail the assessment of contractual cash flows characteristics under IFRS 9 and therefore would be required to be carried at fair value through profit or loss. FRS 102 would require financial assets that are similarly linked to non-financial variables specific to one party to the contract to be classified as 'other' and measured at fair value through profit or loss. Therefore, there would be no divergence, so the issue has limited impact on financial assets.

The basis for conclusions to FRS 102 clarifies that measuring the hybrid instrument at fair value is only allowed if this is also permitted under UK-adopted IFRS, which in some cases is restricted to fair value through other comprehensive income [FRS 102.BC.B11.24].

How we see it

This clarification was initially written in the context of IAS 39. However, under IFRS 9, we would expect that most financial assets linked to non-financial variables would fail to pass the required contractual characteristics test and would be required to be carried at fair value through profit or loss. Thus, only in rare occasions would the legal restrictions prevent debt instruments from being carried at fair value through profit or loss under Sections 11 and 12.

Hybrid contracts - financial liabilities

A financial liability arising from a hybrid contract is not problematic when:

(a) The hybrid contract is held for trading.

Or

(b) The fair value option is applied on the basis that 1) fair value is used to address an accounting mismatch, or that 2) the instruments are managed on a fair value basis. This is because the fair value option in FRS 102 (see 6.4. below) is consistent with these two routes under the fair value option in IFRS 9.

But the analysis of the legal restrictions applicable to a financial liability arising from a hybrid contract under different circumstances requires additional considerations. The only other route available under the fair value option in IFRS 9 (see 4(c) at 4.4.2 above) requires the embedded instrument in the hybrid contract to meet, amongst others, the following two conditions:

- i) A separate instrument with the same terms as the embedded feature would meet the definition of a derivative, and for that purpose.
And
- ii) The underlying to that embedded instrument should not be a non-financial variable specific to one of the parties to the contract.

The FRC has acknowledged the existence of divergent views on what constitutes a non-financial variable. For example, there is no clear consensus on whether measures of performance such as turnover, profits or EBITDA are 'non-financial variables ... specific to a party to the contract' (or whether they are financial variables). The FRC was unable to resolve this divergence as to do so would involve interpreting UK-adopted IFRS on an issue on which the IFRS Interpretations Committee had so far not reached a definitive conclusion. [FRS 102.BC.B11.23]. The assessment of whether the underlying in the embedded instrument is a non-financial variable specific to one of the parties to the contract may have an impact on the ability of the entity to use the fair value option for that hybrid instrument under IFRS 9 and hence may prohibit a fair value through profit or loss classification under FRS 102.

Given the wording in the law and the lack of clarity as to what constitutes a non-financial variable specific to one of the parties to the contract, there is diversity in practice in the assessment of when non-basic debt instruments are required by law, and hence by FRS 102, to be recorded at amortised cost. Hence it is likely that situations may arise such that entities conclude that financial liabilities classified as non-basic debt instruments under FRS 102, contain an embedded derivative for which the underlying is a 'non-financial variable' specific to one of the parties to the contract, which must therefore be recorded at amortised cost, unless held for trading or one of other two routes for the fair value option (to address an accounting mismatch or when managed on a fair value basis) is applicable.

How we see it

In practice, we believe that an entity may make an accounting policy choice as to whether the entity's turnover, EBITDA or other measures taken or derived from the entity's financial statements, are financial or non-financial variables. Once an entity elects a particular policy, it must consistently apply that approach to all similar transactions.

The below is an example of the analysis required to apply the legal restrictions discussed above.

Illustration 4-11: A loan with interest equal to a percentage of the profits of the issuer

Bank A has given Entity X a loan for which the interest payable equals a percentage of the profits of Entity X. The contractual return is neither a fixed rate or amount, nor a variable rate linked to a single observable interest rate or index of general price inflation. Therefore, the return breaches Condition 1.

In addition, the loan is inconsistent with the principle-based description of a 'basic' debt instrument because the linkage to the profits of Entity X introduces exposure to a risk that is not consistent with a basic lending arrangement.

The instrument would therefore be classified as 'other' financial instrument and would be measured at fair value by the holder (Bank A). However, Entity X will need to consider whether measurement of the liability at fair value is permitted by the Regulations. The Regulations prohibit the measurement of financial liabilities at fair value, except for those held as part of a trading portfolio, those that are derivatives and when permitted by UK-adopted IFRS.

If the loan has an embedded derivative that requires separation, Entity X would be permitted under IFRS 9 to apply the fair value option and accounting for the debt at fair value through profit or loss. However, if the terms of the debt include 'a non-financial variable specific to a party to a contract', then separation of the associated embedded derivative is prohibited, and the fair value option is similarly not available for that reason.

Therefore, if the issuer concludes that their profits are 'a non-financial variable specific to a party to a contract', then under UK-adopted IFRS they are not able to measure the instrument at fair value.

[IFRS 9.4.3.5(b)]. As a result, a preparer applying Section 11 and 12 must measure the instrument at amortised cost, rather than at fair value. [FRS 102.11.9.E10].

Non-hybrid contracts

The basis for conclusions also acknowledges that though there may be other non-basic financial instruments that UK-adopted IFRS and the Regulations would not permit to be measured at fair value through profit or loss, it is expected such instruments would be rare in practice. [FRS 102.BC.B11.25].

4.4.2.B Impact on entities that choose to apply IAS 39

IFRS 9 became effective for accounting periods beginning on or after 1 January 2018. Entities choosing to continue to apply IAS 39 for periods starting on or after 1 January 2018 may need to assess whether there are any restrictions to the use of fair value when compared to IFRS 9. However, we expect that only in rare circumstances would IFRS 9 not allow an instrument to be carried at fair value through profit or loss when IAS 39 allows it.

4.4.2.C Accounting for fair value gains and losses in other comprehensive income for entities that choose to apply IFRS 9

The endorsement of IFRS 9 eliminated any legal restrictions discussed at 4.4.1 above on the inclusion in the financial statements of financial instruments at fair value through profit or loss for entities choosing to apply IFRS 9 as an accounting policy choice under FRS 102. [FRS 102.12.8(c), 1 Sch 36 (SC), 1 Sch 36, 2 Sch 44, 3 Sch 30, 1 Sch 36 (LLP SC), 1 Sch 36 (LLP)].

However, under the current wording of the law, the fair value accounting rules in the Regulations permit the use of other comprehensive income for fair value gains and losses only for a financial instrument that is a hedging instrument or an available-for-sale security. [FRS 102.A3.12C, 1 Sch 40 (SC), 1 Sch 40, 2 Sch 48, 3 Sch 34, 1 Sch 40 (LLP SC), 1 Sch 40 (LLP)]. In other words, the Regulations have not been updated for IFRS 9.

IFRS 9 has the following circumstances in which fair value gains or losses are recorded in other comprehensive income:

- (i) When fair value changes in respect of financial liabilities attributable to changes in own credit risk are recorded in other comprehensive income unless that treatment would create or enlarge an accounting mismatch in profit or loss. [IFRS 9.5.7.7, IFRS 9.5.7.8, IFRS 9.5.7.9].
- (ii) If, on initial recognition, an entity makes an irrevocable election to present in other comprehensive income subsequent changes in the fair value of an equity instrument that is neither held for trading nor contingent consideration. [IFRS 9.5.7.5, IFRS 9.5.7.6].

And

- (iii) Investment in debt instruments measured at fair value through other comprehensive income which are held within a business model whose objective is achieved by both collecting contractual cash flows and selling financial assets and the contractual terms of the financial assets give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding. [IFRS 9.4.1.2A].

The Note on Legal Requirements to FRS 102 states that accounting for fair value gains and losses on financial liabilities attributable to changes in credit risk in other comprehensive income in accordance with IFRS 9 will usually be a departure from the requirement of the Regulations and will therefore require the use of a true and fair override if such accounting is applied in the financial statements. [FRS 102.A3.12C]. This implies the FRC expect a true and fair override to be used in order to comply with IFRS 9 and override the prohibition from accounting for fair value gains and losses in other comprehensive income for changes in credit risk of financial liabilities in the Regulations.

The Note on Legal Requirements is silent about the other two circumstances in IFRS 9, described above, in which fair value gains and losses are recorded in other comprehensive income.

How we see it

In our view:

- (a) Accounting for changes in the fair value of an equity instrument through other comprehensive income (without recycling of fair value changes to profit or loss) makes use of the alternative accounting rules in the Small Company Regulations, the Regulations, the LLP (SC) and LLP Regulations and does not therefore require the use of a true and fair override (see Chapter 6 at 8.2.2).

And

- (b) The model used for accounting for changes in the fair value of a debt instrument through other comprehensive income is similar, but not identical, to the available-for-sale asset model under IAS 39. In our view, it is inferred from the Accounting Council's silence on the matter that this model is included within the fair value accounting rules in the Small Company Regulations, the Regulations, the LLP (SC) and the LLP Regulations and does not therefore require the use of a true and fair override to apply.

5 Initial recognition and measurement

5.1 Initial recognition

An entity must recognise a financial asset or a financial liability only when the entity becomes a party to the contractual provisions of the instrument. [FRS 102.11.12, FRS 102.12.6].

Planned future transactions (forecast transactions), no matter how likely, must not be recognised as financial assets or liabilities since the entity has not become a party to a contract.

5.2 Initial measurement

5.2.1 General rule

Basic financial instruments within the scope of Section 11 are measured initially at the transaction price, adjusted for transaction costs, unless they are subsequently measured at fair value through profit or loss (see exception in 5.2.2 below).

For basic financial instruments designated as at fair value through profit or loss and other financial instruments within the scope of Section 12, initial measurement is at fair value, which is normally the transaction price. [FRS 102.11.13, FRS 102.12.7].

In essence, the main difference in the initial measurement is in the treatment of transaction costs. Transaction costs are capitalised as part of the initial carrying value for those financial instruments subsequently measured at amortised cost or cost and expensed in profit or loss for those instruments that are subsequently measured at fair value through profit or loss.

5.2.2 Exception: financing transactions

There is one exception to the general rule of initially measuring a financial instrument measured at amortised cost at its transaction price, in the case of 'financing transactions'. In November 2024 the FRC issued FRS 102 *Fact Sheet 4 - Financial Instruments*⁹³ ('Fact Sheet 4'), which provides guidance on the measurement requirements applicable to financing transactions and replaced 'Staff Education Note 16 - *Financing Transactions*'.

A financing transaction is an arrangement for which payment is deferred beyond normal business terms or is financed at a rate of interest that is not a market rate. FRS 102 provides the example of a seller providing interest-free credit to a buyer for the sale of goods or an interest-free or below market interest rate loan made to an employee. [FRS 102.11.13, FRS 102.12.7].

Sections 11 and 12 require financing transactions to be initially measured at the present value of the future payments, discounted at a market rate of interest for a similar debt instrument as determined at initial recognition and adjusted for transaction costs. [FRS 102.11.13, FRS 102.12.7]. By requiring the instrument to be recorded initially at its net present value, the future yield will be approximately the market rate. When there is no initial payment at the time of the transaction, the difference between the net present value and the transaction price is effectively interest income or expense and is accounted for in the subsequent measurement of the receivable/payable by applying the effective interest method under the amortised cost model.

In applying this requirement to the sale of goods or services on deferred payment terms, an entity may use the current cash price of the goods or services on an arm's length basis as an estimate for the present value of the future payments. However, if there is no cash sale alternative or the cash selling price is the same as the price when buying on credit, the entity must calculate the present value of the future cash flows.

The present value of a financial asset or financial liability that is repayable on demand is equal to the undiscounted cash amount payable reflecting the lender's right to demand immediate payment. This does not constitute a financing transaction.

Consider the following examples:

Illustration 5-1: The sale of goods on deferred payment terms

Fact Sheet 4 provides the example of a manufacturer that sells a piece of machinery to a customer on credit for £1,000 on 1 January 20X0, agreeing with the customer that full payment is due in two years' time on 31

⁹³ [FRS 102 Factsheet 4 - Financial instruments](#), November 2024, available on the FRC's website (accessed on 21 October 2025).

December 20X1. Under normal business terms the piece of machinery is sold for cash and the current cash selling price is £900, the cost price of the machinery was £450. Sales taxes are ignored in this example.

Accounting by manufacturer

On 1 January 20X0, the manufacturer recognises the revenue from the sale at the cash selling price of the piece of machinery of £900. The trade receivable is also measured at the cash selling price of £900 as an estimate of the present value of the future receipts. The manufacturer records the following accounting entries when the piece of machinery is sold:

Dr Trade receivable	£900	
Cr Revenue		£900
+		
Dr Cost of sales	£450	
Cr Inventory		£450

Each subsequent year, the manufacturer recognises the interest earned based on the annual effective interest rate of 5.4%^(a) in the period with the following accounting entries.

For the year ended 31 December 20X0, interest income is calculated applying the effective interest rate (5.4%) on the opening balance (£900):

Dr Trade receivable	£49	
Cr Interest income		£49

For the year ended 31 December 20X0, interest income is calculated applying the effective interest rate (5.4%) on the opening balance of the year (£949):

Dr Trade receivable	£51	
Cr Interest income		£51

When the cash is received, the manufacturer will record the following journal entry:

Dr Cash	£1,000	
Cr Trade receivable		£1,000

Accounting by customer

On 1 January 20X0 the purchase of the piece of machinery is recorded by the customer at the cash selling price of £900. The customer also records a trade payable measured at the cash selling price of £900 as an estimate of the present value of the future payments. The customer records the following accounting entries when the piece of machinery is purchased:

Dr Property, plant and equipment	£900	
Cr Trade payable		£900

Each subsequent year, the customer recognises the finance cost for the period with the following accounting entries based on the calculations described above for the seller.

For the year ended 31 December 20X0:

Dr Interest expense	£49	
Cr Trade payable		£49

For the year ended 31 December 20X1:

Dr Interest expense	£51	
Cr Trade payable		£51

When the customer settles the obligation, it will record the following journal entry:

Dr Trade payable	£1,000	
Cr Cash		£1,000

(a) The effective interest rate was calculated as the annual compound rate that discounts the transaction price of £1,000 payable in 2 years to the £900 cash price.

In Illustration 5-1 above, after initial recognition both the manufacturer and the customer account for this basic debt instrument at amortised cost using the effective interest method; the difference of £100 between the present value of £900 and the transaction price of £1,000 is therefore recorded as interest income (for the manufacturer) or interest expense (for the customer) over the two years until payment is due from the customer, at which time the amortised cost will match the transaction price of £1,000 as shown in the Illustration 5-1 above.

Illustration 5-2: Parent company provides a loan to its subsidiary at an off-market interest rate

A parent lends £100,000 to its subsidiary at 4% per annum for three years. Interest is payable annually in arrears, while the principal repayment is due at maturity. If the subsidiary were to borrow the same amount from a bank, it would be charged 5%. Hence, 5% would represent the market interest rate and this would constitute a financing transaction as the parent has lent to the subsidiary at an off-market rate. The calculation of the present value would take into account the sum of the annual interest payments of £4,000 and the principal repayment at the end of three years, discounted by 5% as follows:

Present value = $£4,000/1.05 + £4,000/1.05^2 + (£4,000 + £100,000)/1.05^3 = £97,277$

In this example, the parent would record a loan receivable from its subsidiary of £97,277 in its separate financial statements. Fact Sheet 4 explains that to determine the accounting treatment for the difference, an entity should assess the particular facts and circumstances of each arrangement. In that regard it is particularly important to establish the reasons a lender decided to make a loan at a non-market rate of interest. For example, a lender may make the loan because of an ownership interest in the borrower. If so, the lender is, in its capacity as the owner, effectively making an additional investment in the entity when making a loan at a below market rate of interest. This is the assumption we have taken for the below journal entries.

Accounting by the parent

The parent records the following journal entries when the cash is advanced:

Dr Loan receivable from subsidiary	£97,277
Dr Investment in subsidiary	£2,723
Cr Cash	£100,000

At the end of the first reporting period, the parent will record the following journal entries:

Dr Cash	£4,000
Dr Loan receivable from subsidiary	£864
Cr Interest income	£4,864

At the end of the second reporting period, parent will record the following journal entries:

Dr Cash	£4,000
Dr Loan receivable from subsidiary	£907
Cr Interest income	£4,907

At the end of the third reporting period, parent will record the following journal entries:

Dr Cash	£104,000
Dr Loan receivable from subsidiary	£952
Cr Interest income	£4,952
Cr Loan receivable from subsidiary	£100,000

Accounting by the subsidiary

The subsidiary records the following journal entries when the cash is received:

Dr Cash	£100,000
Cr Loan payable to parent	£97,277
Cr Equity - capital contribution	£2,723

At the end of the first reporting period, the subsidiary will record the following journal entries:

Dr Interest expense	£4,864
Cr Loan payable to parent	£864
Cr Cash	£4,000

At the end of the second reporting period, the subsidiary will record the following journal entries:

Dr Interest expense	£4,907
Cr Loan payable to parent	£907
Cr Cash	£4,000

At the end of the third reporting period, the subsidiary will record the following journal entries:

Dr Loan payable to parent	£100,000
Dr Interest expense	£4,952
Cr Loan payable	£952
Cr Cash	£104,000

The accounting for financing transactions raises the question of how to account for the difference between the initial measurement and the transaction price. When the transaction is a fixed term loan with no interest or with a below market rate of interest, the cash exchanged upon initial recognition will differ from present value calculated in accordance with the initial measurement rules for financing transactions discussed above (as shown in Illustration 5-2 above). This difference reflects that the lender has made a loan at a lower than market rate of interest and thereby has provided an additional benefit to the borrower. FRS 102 does not set out specific accounting requirements for that difference on initial recognition of the financing transaction, instead entities avail themselves of the guidance provided by the FRC in Fact Sheet 4.

In this Fact Sheet, the FRC explains that to determine the accounting treatment for the difference, an entity needs to assess the particular facts and circumstances of each arrangement. In that regard it is particularly important to establish the reasons a lender decided to make a loan at a non-market rate of interest.

In most cases, these types of loans take place between related parties. When that is the case, Fact Sheet 4 states that the accounting for the difference will be determined by the nature of the related party relationship:

- a. Fixed term loans between a parent and a subsidiary: Loans between parents and their subsidiaries are often made on interest-free terms. It can be presumed that a loan is made on these terms because the parent owns and controls its subsidiary. The difference between the amount initially paid or received and the present value of a fixed-term loan at a market rate of interest represents in essence a capital contribution from the parent to the subsidiary (when the parent is the lender) or a distribution from the subsidiary to the parent (when the subsidiary is the lender).
- b. Fixed term loans between fellow subsidiaries: In a situation where fellow subsidiaries enter into a loan which constitutes a financing transaction, it can generally be presumed that the loan was made on the direction of their parent. However, sometimes the facts and circumstances may indicate otherwise, for example when a fixed term interest-free loan is made in return for receiving goods or services at a discounted price, in which case the recognition of the financing component may have an impact on the accounting for the related goods or services acquired.

If an interest-free loan is made on the direction of the parent, the subsidiaries account for the transaction as if it had been conducted through the parent. The lending subsidiary accounts for the measurement difference as a distribution to its parent (i.e., as if it had made a loan to its parent) and the borrowing subsidiary accounts for the loan as a contribution from its parent (i.e., as if it had received a loan from its parent). The transaction is not required to be reflected in the parent's own financial statements because the parent is not directly involved.

- c. Fixed term loans between entities owned by the same person: In some instances, a fixed term interest-free loan is made between entities that are not members of the same group, but the entities are related parties because they are owned and controlled by the same person. Unless the facts and circumstances indicate that the loan is made on these terms for a reason other than that the entities are controlled by the same owner, the accounting for the loan will be the same as shown above for a fixed term interest-free loan between fellow subsidiaries.

- d. Fixed-term loans between entities and their directors: A fixed term interest-free loan may be made between an entity and its director(s). The accounting for the measurement difference arising on the initial recognition of the loan will depend on whether the loan was made in the director's capacity as a shareholder or for another reason. For example, in a situation where a director is the majority shareholder it can be presumed that the loan was made in the director's capacity as a shareholder. This presumption can be rebutted, if, for example, loans between the entity and other third parties without an ownership interest in the entity (e.g., employees) are made on the same or similar terms.

If a fixed term interest-free loan is made between the entity and a director in its capacity as a shareholder, the accounting for the loan is similar to the accounting for a fixed term interest-free loan between a parent and its subsidiary shown above.

If an interest-free loan is made between an entity and a director who has no direct ownership interest in the entity, the terms of the loan and the reasons for making it need to be assessed carefully as this is relevant for determining the appropriate accounting under FRS 102. For example, an entity may offer interest-free loans to all employees, including its directors, as an additional employee benefit. Often these loans are made for a specific purpose, for example to purchase a travel season ticket. In this situation the entity accounts for the measurement difference as an employee benefit cost in accordance with Section 28 *Employee Benefits*.

When a director without ownership interest makes a loan to the entity, the director's motives have to be identified, as the director would not normally directly benefit from making a loan on these terms. The appropriate accounting for the measurement difference will be dependent on the individual circumstances of each transaction.

If the reporting entity is a small entity, there is some relief in the accounting of these types of loans. We further discuss this situation at 5.2.3 below.

In all of the scenarios of fixed term loans between related parties described above, the debits and credits for the cash exchanged and the resulting basic debt instrument are the same. Taking the information in Illustration 5-2 above:

For the lender:

Dr Loan receivable	£97,277	
Cr Cash		£100,000

For the borrower:

Dr Cash	£100,000	
Cr Loan payable		£97,277

The table below shows how the difference of £2,723 would be accounted for in each of the scenarios discussed above:

	Lender	Borrower	Lender books (Dr)	Borrower books (Cr)
a)	Parent	Subsidiary	Investment in subsidiary ¹	Capital contribution (equity)
a)	Subsidiary	Parent	Distribution to parent (equity) ²	Distribution received from subsidiary (P&L or OCI) ³
b)	Subsidiary	Subsidiary	Distribution to parent (equity) ²	Capital contribution from parent (equity)
c)	Entities owned by the same person		Distribution (equity) ²	Capital contribution (equity)
d)	Director (as Shareholder)	Entity		Capital contribution (equity)
d)	Entity	Director (as shareholder)	Distribution to owner (equity) ²	
d)	Entity	Director (as Director)	Employee benefits (P&L)	

- 1 Investments in subsidiaries are subject to impairment under Section 27 *Impairment of Assets*. An entity must apply the relevant accounting requirements in FRS 102 to determine whether an investment is impaired.
- 2 A distribution is recorded as a reduction of equity. A distribution recorded in the financial statements in accordance with FRS 102 may not be a distribution as a matter of law. The legal requirements on distributable profits are not addressed here. For limited companies subject to CA 2006, the ICAEW/ICAS Technical Release TECH 02/17BL - *Guidance on Realised and Distributable Profits under the Companies Act 2006* ('TECH 02/17BL') considers issues concerning the determination of distributable profits and entities may refer to this or any successor document for more guidance.
- 3 For limited companies subject to the CA 2006, only profits realised at the reporting date are included in profit or loss. Therefore, depending on whether the distribution corresponds to realised gains and losses or not, the distribution received from the subsidiary could be reflected in the income statement or as OCI respectively. The legal requirements on realised profits are not addressed here. TECH 02/17BL considers issues concerning the determination of realised profits and entities may refer to this or any successor document for more guidance.

After initial recognition both the lender and the borrower will account for this basic debt instrument at amortised cost using the effective interest method over the term of the loan, at the end of which the amortised cost will match the transaction price. The effective interest rate used for this purpose will reflect a market rate of interest. [FRS 102.11.14(a)(iii)].

5.2.3 Financing transactions with simplified accounting

The FRC continues to believe that the accounting for financing transactions as discussed at 5.2.2 above is generally appropriate accounting as it reflects the fact that such transactions contain both an interest-bearing loan and the transfer of value representing the benefit compared to market rates of interest. [FRS 102.BC.B11.32]. However, it recognises that occasional specific exemptions may be granted in order to meet the principle of providing proportionate and practical solutions.

The simplified accounting is intended to provide relief to small owner-managed businesses. In determining the scope of the simplified accounting, the FRC took into consideration that some small businesses are operated and financed by a group of family members who may have varying interests in the business. It also extended a similar relief to small limited liability partnerships. [FRS 102.BC.B11.39].

The resulting relief allows a basic financial liability of a small entity to be carried at transaction price (with no subsequent recognition of interest expense) if specific conditions in paragraph 13A(a) of Section 11 of the standard are met. [FRS 102.11.13A(a)]. For a further discussion on the exemption, including when a small entity becomes or ceases to be eligible for the exemption, [FRS 102.11.13B, FRS 102.11.13B], see Chapter 5 at 3.1.1 and 3.1.2. There is also simplified accounting available for public benefit entities, which is discussed in Chapter 36 at 6.6.

5.2.4 Difference between fair value and transaction price

As noted at 5.2.1 above, even though financial instruments within the scope of Section 12 are required to be initially measured at fair value, Section 12 acknowledges that the initial fair value is 'normally' the transaction price [FRS 102.12.7]. A difference will only arise in rare circumstances where fair value does not equate to the transaction price.

One such example is the wholesale markets for dealers in financial instruments, where such dealers are able to recognise a profit, being the margin that has been 'locked in' as a result of the differential between the price charged to a customer and the prices available to the dealer in wholesale markets.

In addition, in some markets, dealers charge minimal or no explicit transaction costs but instead quote differential prices for purchases and sales. Such prices are often referred to as 'bid' and 'asking' (or 'offer') prices. The term bid-ask spread is normally interpreted as the difference between the quoted bid and offer prices. The following Illustration 5-3 demonstrates this point:

Illustration 5-3: Application of a bid-ask spread in the initial measurement of a financial instrument to be measured at fair value through profit or loss

A company acquires a quoted bond in an active market, where no explicit transaction costs are charged but separate bid and offer prices are quoted. On acquisition, the bond has an asking price of £102,000, which is the amount the purchaser is required to pay, and a bid price of £97,000, which is what the seller would receive were it to sell the bond. The company has determined that the bid price is the most representative of fair value in these circumstances and therefore it will initially measure the bond at £97,000. This would result in an immediate loss of £5,000, the difference between the initial fair value and the cash paid. Section 11 does not address the accounting for the £5,000 loss.

How we see it

In our view, the £5,000 loss must be treated as a transaction cost (in which case it would be included in the initial measurement if the bond is not carried at fair value through profit or loss) rather than a dealing loss, which would be consistent with the accounting under IFRS.

6 Subsequent measurement

6.1 Introduction

The subsequent measurement of financial instruments depends on the type of instrument:

- Basic debt instruments are measured at amortised cost using the effective interest method with the following exceptions:
 - (i) The amortised cost for non-interest bearing basic debt instruments payable or receivable within one year on normal business terms (i.e., that do not constitute a financing transaction) is calculated as the undiscounted amount expected to be paid or received instead of using the effective interest method. See 6.2.1 below.
 - (ii) Basic debt instruments that are financing transactions (see 5.2.2 above) but qualify for either of the three exceptions below are carried at transaction price:
 - (a) A basic financial liability of a small entity that is a loan from a person who is within a director's group of close family members, when that group contains at least one shareholder or member in the entity (see 5.2.3 above).
 - (b) A public benefit entity concessionary loan (see Chapter 36 at 6.6). *[FRS 102.11.13A(b), FRS 102.11.14].*
And
 - (c) A trade receivable or contract asset when, at contract inception, payment is expected within 12 months or less from when the entity transfers the good or service. *[FRS 102.11.13A(c)].*
- Basic commitments to receive or make a loan are measured at cost less impairment. *[FRS 102.11.14(c)].*
- All basic debt instruments and basic commitments to receive or make a loan may be designated as at fair value through profit or loss upon initial recognition when certain criteria are met. *[FRS 102.11.14(b)].* We further discuss this 'fair value option' at 6.4 below.
- Investments in non-derivative instruments that are equity of the issuer and the issuer is not a member of the same group as the holder and derivatives linked to such instruments that, if exercised, will result in the delivery of such instruments, must be measured at fair value through profit or loss; however if fair value cannot be measured reliably, they must be measured at cost less impairment. *[FRS 102.11.14(d), FRS 102.12.8(a)].*
- Investments in non-derivative instruments that are equity of the issuer, and the issuer is a member of the same group as the holder must be accounted for in line with an accounting policy choice which is required to be applied to all investments in a single class:
 - (i) Cost less impairment.
 - (ii) Fair value with changes recognised in other comprehensive income, except for the following changes that are required to be recognised in profit or loss:
 - (a) Decreases that exceed cumulative fair value gains accumulated in other comprehensive income in respect of those instruments.
And
 - (b) Increases that reverse decreases previously recognised in profit or loss in accordance with (a) in respect of the same instrument.
 - (iii) Fair value with changes in fair value recognised in profit or loss. *[FRS 102.11.14(d), FRS 102.17.15E, FRS 102.17.15F].*
- All other instruments within the scope of Section 12 are measured at fair value through profit or loss, in accordance with Section 2A *Fair Value Measurement*, *[FRS 102.12.10]*, with the exception of:
 - (a) Financial instruments that are not permitted to be measured at fair value through profit or loss by the Small Company Regulations, the Regulations, the Small LLP Regulations or the LLP Regulations; such instruments will be measured at amortised cost. *[FRS 102.12.8(c)].* These legal restrictions are discussed at 4.4 above.
 - (b) Hedging instruments in a designated hedging relationship accounted for in accordance with the cash flow hedge rules (see Chapter 14). *[FRS 102.12.8(b)].*

Instruments can only be measured at fair value if this can be reliably established. If a reliable measure of fair value is no longer available for a financial asset or financial liability that is not publicly traded but is measured at fair value through profit or loss, its fair value at the last date the instrument was reliably measurable is treated as the cost of the instrument. The entity shall measure the instrument at this cost amount less impairment until a reliable measure of fair value becomes available. *[FRS 102.12.9].*

6.2 Amortised cost and the effective interest method

The amortised cost of a financial instrument is defined as the amount at which it was measured at initial recognition minus principal repayments, plus or minus the cumulative amortisation using the 'effective interest method' of any difference between that initial amount and the maturity amount, and minus any reduction (directly or through the use of an allowance account) for impairment or uncollectability.

[FRS 102.11.15].

The effective interest method is a method of calculating the amortised cost of a financial instrument (or group of instruments) and of allocating the interest income or expense over the relevant period.

[FRS 102 Appendix I].

The effective interest rate is the rate that exactly discounts estimated future cash payments or receipts through the expected life of the financial instrument or, when appropriate, a shorter period, to the carrying amount of the financial asset or financial liability. [FRS 102 Appendix I]. The effective interest rate is determined on the basis of the carrying amount of the financial asset or liability at initial recognition. Under the effective interest method:

- (a) The amortised cost of a financial asset (liability) is the present value of future cash receipts (payments) discounted at the effective interest rate.

And

- (b) In the absence of capital repayments, the interest expense (income) in a period equals the carrying amount of the financial liability (asset) at the beginning of a period multiplied by the effective interest rate for the period. [FRS 102.11.16(b)].

Estimated cash flows

The effective interest rate is normally based on estimated, not contractual cash flows and there is a presumption that the cash flows and the expected life of a group of similar financial instruments can be estimated reliably. When calculating the effective interest rate at initial recognition, an entity must estimate cash flows considering all contractual terms of the financial instrument (e.g., prepayment, call and similar options) and known credit losses that have already been incurred. For variable rate financial assets and variable rate financial liabilities, the current market rate of interest or index of general price inflation may be used when estimating the contractual cash flows. These cash flows must also include any related fees, finance charges paid or received, transaction costs and other premiums or discounts. It must not include possible future credit losses not yet incurred. [FRS 102.11.17, FRS 102.11.18].

Future credit losses will be accounted for in line with the impairment model of FRS 102 that is based on incurred credit losses (see 6.5 below). The requirement to consider incurred credit losses on initial recognition in the calculation of the effective interest rate may be particularly important for financial assets acquired at a deep discount, as such a discount will likely reflect incurred credit losses. FRS 102 requires such incurred credit losses to be included in the estimated cash flows when computing the effective interest rate on initial recognition. The estimated cash flows should reflect the impact of the incurred credit losses in the form of expected repayments lower than the contractual cash flows and additional costs required for settlement (e.g., foreclosure costs for a collateralised loan).

Costs and fees

FRS 102 states that entities are required to include related costs or fees into the calculation of the effective interest rate [FRS 102.11.18]. It does however not specify what is meant with 'related'. A similar issue exists within IFRS where costs and fees are only included in the effective interest rate if they are considered 'integral' [IFRS 9.B5.4.2, IFRS 9.B5.4.3]. IFRS includes some examples that show the difference between costs and fees that are included within the effective interest rate calculation and those that are not, which must be accounted for under IFRS 15 *Revenue from Contracts with Customers*. These examples are not in FRS 102, but FRS 102 reporters could look to IFRS and determine whether this guidance, and any principles that are drawn from them, are appropriate for their entity, considering the requirements of Section 10. [FRS 102.10.4, FRS 102.10.6].

Extract from IFRS 9

B5.4.2 Fees that are an integral part of the effective interest rate of a financial instrument include:

- (a) origination fees received by the entity relating to the creation or acquisition of a financial asset. Such fees may include compensation for activities such as evaluating the borrower's financial condition, evaluating and recording guarantees, collateral and other security arrangements, negotiating the terms of the instrument, preparing and processing documents and closing the transaction. These fees are an integral part of generating an involvement with the resulting financial instrument.
- (b) commitment fees received by the entity to originate a loan when the loan commitment is not measured in accordance with paragraph 4.2.1(a) and it is probable that the entity will enter into a specific lending arrangement. These fees are regarded as compensation for an ongoing involvement with the acquisition of a financial instrument. If the commitment expires without the entity making the loan, the fee is recognised as revenue on expiry.
- (c) origination fees paid on issuing financial liabilities measured at amortised cost. These fees are an integral part of generating an involvement with a financial liability. An entity distinguishes fees and costs that are an integral part of the effective interest rate for the financial liability from origination fees and transaction costs relating to the right to provide services, such as investment management services.

B5.4.3 Fees that are not an integral part of the effective interest rate of a financial instrument and are accounted for in accordance with IFRS 15 include:

- (a) fees charged for servicing a loan;
- (b) commitment fees to originate a loan when the loan commitment is not measured in accordance with paragraph 4.2.1(a) and it is unlikely that a specific lending arrangement will be entered into; and
- (c) loan syndication fees received by an entity that arranges a loan and retains no part of the loan package for itself (or retains a part at the same effective interest rate for comparable risk as other participants).

Expected life

The effective interest rate has to be calculated over the expected life of the instrument, consistent with the estimated cash flows approach. [FRS 102.11.16].

Prepayment, call and similar options that allow the debt instrument to be settled prior to its contractual maturity can have a significant impact in estimating the expected life. The assessment of the impact of these options on the expected life should be considered at initial recognition and at the subsequent measurement dates. [FRS 102.11.17, FRS 102.11.20].

Whilst payments, receipts, discounts and premiums included in the effective interest method calculation are normally amortised over the expected life of the instrument, there may be situations when they are amortised over a shorter period. This will be the case when the variable to which they relate reprices to market rates before the expected maturity of the instrument. In such cases, the appropriate amortisation period is the period to the next re-pricing date. [FRS 102.11.18].

Changes in cash flows

For variable rate financial assets and liabilities, periodic re-estimation of cash flows to reflect changes in market rates of interest or an index of general price inflation alters the effective interest rate. If such instruments are recognised initially at an amount equal to the principal receivable or payable at maturity, re-estimating the future interest payments normally has no significant effect on the carrying amount of the asset or liability. [FRS 102.11.19]. This is typically interpreted to mean that entities should simply account for periodic floating rate payments on an accruals basis in the period to which they relate. However, there is a view that entities should forecast all future cash flows and so estimate the floating rate payments over the instrument life, with an adjustment to this rate whenever expectations change, treated in accordance with the approach described in the next paragraph. We would not expect most FRS 102 reporters to take the latter view.

In contrast to the treatment of variable rates, in cases where estimates of payments or receipts (e.g., expectations of prepayments) are revised, an adjustment is required to the carrying amount of the financial asset or financial liability (or group of financial instruments) to reflect actual and revised estimated cash flows. The revised carrying amount is recalculated by computing the present value of the revised estimated future cash flows at the financial instrument's original effective interest rate (assuming it is a fixed rate instrument) or at the most recent effective interest rate if it is a variable rate instrument. The adjustment is recognised as income or expense in profit or loss at the date of the revision. [FRS 102.11.20].

These requirements are identical to those in paragraphs B5.4.5 and B5.4.6 of IFRS 9 (and paragraphs AG7 and AG8 of IAS 39). The point to note is that changing cash flow assumptions such as, for instance, estimates of prepayments, has potentially a significant impact on profit or loss, as this involves booking 'catch up' adjustments to the recorded value of the financial instrument through profit or loss.

Examples

A simple example for determining the amortised cost for a five-year bond is shown below. This Illustration 6-1 is based on the example included in Section 11. [FRS 102.11.20].

Illustration 6-1: Determining the effective interest rate and its application to the measurement of amortised cost

A bond is acquired for £95,000 on 1 January 20X6 and transaction costs amount to £1,000. The interest rate on the bond is 4%, paid annually in arrears, and the redemption value at maturity, which is in five years, is £100,000. The expected cash flows are the annual interest payments of £4,000 (i.e., 4% multiplied by the redemption value of £100,000) and a final bullet repayment of £100,000. The initial carrying amount is the acquisition price of £95,000 and £1,000 of transaction costs, equating to £96,000. The effective interest rate of 4.922% is the rate that discounts the expected cash flows to the initial carrying amount.

The formula is as follows:

$$\frac{£4,000}{(1 + 4.922\%)} + \frac{£4,000}{(1 + 4.922\%)^2} + \frac{£4,000}{(1 + 4.922\%)^3} + \frac{£4,000}{(1 + 4.922\%)^4} + \frac{£100,000 + £4,000}{(1 + 4.922\%)^5} = £96,000$$

Year	Carrying amount at the beginning of the period (£)	Interest income @ 4.922% (£)*	Cash inflow (£)	Carrying amount at the end of the period (£)
20X6	96,000	4,725	(4,000)	96,725
20X7	96,725	4,761	(4,000)	97,486
20X8	97,486	4,798	(4,000)	98,284
20X9	98,284	4,838	(4,000)	99,122
20X0	99,122	4,878	(104,000)	-

* Interest income for each period has been calculated by applying the effective interest rate of 4.922% on the carrying amount at the beginning of the period.

The accounting for amortised cost in the case of financing transactions (see 5.2.2 above) is usually straightforward once the effective interest rate is determined and follows a pattern similar to that presented in Illustration 6-1 above. However, certain circumstances or terms could require more consideration. Illustration 6-2 below discusses the instance of certain more problematic terms observed in intra-group loans.

Illustration 6-2: Rolling intra-group loans

A subsidiary has received an interest free inter-company loan from its parent which has a rolling 367-day notice period. There are no other characteristics that would affect its classification as a basic debt instrument. If the loan is not called before the reporting date, the loan will remain in place for more than a year.

As the instrument is not repayable within one year, FRS 102 does not allow it to be measured at the undiscounted cash flow and requires the use of amortised cost. Since at each reporting date it would be at least 367 days until the payment is due, the entities should continue to measure the loan at an amount that takes account of the 367-day discount. Until notice is given, in order to determine the amortised cost at each reporting date the subsidiary will estimate the cash flows (which would be the bullet payment of the full amount of the loan) and will discount the cash flows using the effective interest rate. In practice, this means that at each reporting date the carrying value of the loan will remain the same. However, between each reporting date, interest would be charged on the loan on an ongoing basis. How should the resulting interest be accounted for?

Following the logic at 5.2.2 above for financing transactions, the interest resulting from applying amortised cost to a contractually interest-free loan between a parent and a subsidiary would result in a capital contribution. Until notice is given, the resulting interest would continually be added to the carrying amount of the investment of the parent in the subsidiary:

On initial recognition:

In the subsidiary's books:

Dr Cash	100	
Cr Loan payable		90
Cr Equity		10

In the parent's books:

Dr Loan receivable	90	
Dr Investment in subsidiary	10	
Cr Cash		100

Between reporting periods:

In the subsidiary's books:

Dr Interest expense	10	
Cr Loan payable		10

In the parent's books:

Dr Loan receivable	10	
Cr Interest income		10

However, at each reporting date, the carrying amount (which would reflect the initial measurement plus any accrued interest from the last reporting date) would need to be adjusted to reflect the amortised cost at that date taking into consideration the treatment of changes in cash flows. As discussed at 6.2 above, the resulting adjustment must be recognised in profit or loss.

In the subsidiary's books:

Dr Loan payable	10	
Cr Interest expense		10

In the parent's books:

Dr Interest income	10	
Cr loan receivable		10

This adjustment would offset the interest charged during the period. The net effect is that no interest is charged until notice is given. This is consistent with the accounting for a loan that is repayable on demand, where no interest is charged regardless of the ultimate duration. Once notice is given, the resulting interest is included in the amortised cost which at the maturity date will match the maturity amount.

Use of contractual terms

FRS 102 is silent on the rare cases when it is not possible to estimate reliably the cash flows or the expected life of a financial instrument (or group of instruments).

How we see it

In our view, in those rare cases when it is not possible to estimate the cash flows or the expected life of a financial instrument (or group of financial instruments) reliably, the contractual cash flows over the full contractual term of the financial instrument (or group of instruments) may be used as a reasonable proxy, by applying IFRS requirements under the Section 10 hierarchy.

6.2.1 Debt instruments due within 1 year

Basic non-interest bearing debt instruments that at initial recognition are payable or receivable within one year must be measured at their undiscounted amount expected to be paid or received, unless the arrangement is a financing transaction as explained at 5.2.2 above. [FRS 102.11.14(a)(ii)]. FRS 102 refers to this method as amortised cost but clarifies that in calculating the amortised cost for these instruments, the amortisation using the effective interest method does not apply. [FRS 102.11.15]. The underlying objective of the one-year rule was to simplify the measurement basis for trade receivables, which are by their nature, normally short-term and interest free. On the other hand, basic interest-bearing debt instruments due within one year are not excluded from the general rules on amortised cost, hence amortisation using the effective interest method is required.

6.2.2 Interest rate benchmark reform

As a result of the reforms mandated by the Financial Stability Board following the Financial Crisis, regulators pushed for Interbank Offered Rates (IBORs) to be replaced by new 'official' benchmark rates, known as Risk Free Rates (RFRs), a process referred to as 'IBOR Reform'. For instance, in the UK, the new official benchmark is Sterling Overnight Interest Average (SONIA) and banks are no longer required to quote LIBOR. IBOR Reform is substantially complete as the most significant IBORs, including all the LIBORs, have now ceased and have been replaced. However, there remain some local IBORs for which the work to replace them is still in progress or has only very recently been completed. For those remaining IBORs still in the process of change, the change affects future cash flows in both contractual floating rate financial instruments currently referenced to IBOR.

IBOR Reform raises a number of accounting questions, many of which relate to hedge accounting, but also in relation to the accounting for the subsequent measurement of debt instruments. The IASB responded with two separate amendments to IFRS: Phase 1 and Phase 2 Amendments addressing the accounting consequences that arise during the period before and after financial instruments transition from referencing IBORs to referencing replacement benchmark interest rates. Once IBOR Reform is complete and the RFRs have become established in the market, the Phase 1 and Phase 2 amendments will cease to be required.

In line with the IASB's approach, the FRC issued corresponding amendments to FRS 102. These amendments provide a practical expedient for the accounting for financial assets and financial liabilities when contractual cash flows change because interest rate benchmarks are being replaced [FRS 102.11.20A, FRS 102.11.20B, FRS 102.11.20C, FRS 102.11.20D, FRS 102.11.20E].

These amendments reflect the temporary reliefs introduced by the IASB. For further details, please refer to the EY publication, International GAAP®.

6.3 Measurement at cost

Loan commitments within the scope of Section 11 and equity instruments for which a fair value cannot be reliably measured are measured at cost less impairment. [FRS 102.11.14(c), FRS 102.11.14(d), FRS 102.12.8(a)]. At 6.3.1 and 6.3.2 below we discuss certain considerations in determining cost for financial instruments carried at cost less impairment. The calculation of impairment is discussed at 6.5 below.

6.3.1 Loan commitments

Basic commitments to receive a loan and to make a loan that are within the scope of Section 11 (see 6.1 above) must be measured at cost (which may sometimes be nil) less impairment. [FRS 102.11.14(c)]. The reference to cost is presumably in respect of any fees or premiums that have been paid by the borrower (representing a financial asset) and received by the lender (representing a financial liability).

FRS 102 is silent on how such costs should be accounted for once the loan is effectively withdrawn or if it is never utilised. Therefore, the entity will have to use judgement in developing and applying an accounting policy that results in reliable and relevant information. It could consider following the guidance in IFRS 9 to develop such a policy, although other judgements could also be acceptable. [FRS 102.10.6]. In the below paragraph we consider the IFRS treatment in further detail.

The guidance in IFRS 9 in relation to commitment fees received by the entity to originate a loan is as follows:

- (a) If it is probable that the entity will enter into a specific lending arrangement, the commitment fee received is regarded as compensation for an ongoing involvement with the acquisition of a financial instrument. Together with the related transaction costs, the commitment fee is deferred and recognised as an adjustment to the effective interest rate when the loan is drawn. If the commitment expires without the entity making the loan, the fee is recognised as revenue on expiry. [IFRS 9.B.5.4.2(b)].
- (b) If it is unlikely that a specific lending arrangement will be entered into, the commitment fee is recognised as revenue on a time-proportionate basis over the commitment period. [IFRS 9.B.5.4.3(b)]. An FRS 102 preparer applying this paragraph in IFRS by analogy, would apply Section 23 *Revenue from Contracts with Customers* instead of IFRS 15.

How we see it

We expect the accounting treatment for loan commitments by the issuer (i.e., the lender) as prescribed in IFRS 9 to be symmetrical for the holder (i.e., the borrower). This means that in the situation described at (b) above, the resulting charge would represent compensation for the service received (i.e., the availability of cash during the commitment period), resulting in a charge on a time-proportionate basis over the commitment period.

6.3.2 Investments in equity instruments

As long as a reliable measure of fair value is available, investments in equity instruments must be measured at fair value through profit or loss. [FRS 102.11.14(d)(iv), FRS 102.12.8]. However, when a reliable measure of fair value is not available, investments in equity instruments are measured at cost less impairment. [FRS 102.11.14(d)(v), FRS 102.12.8(a)].

As discussed at 4.4.1 above, the requirement to use cost less impairment for those equity investments that cannot be reliably measured is similar to that in IAS 39 (but not IFRS 9). The hurdle to overcome before concluding on the unreliability of the fair value measurement in a market that is not active is high, since FRS 102 assumes that normally it is possible to estimate the fair value of equity instruments that an entity has acquired from an outside party (see Chapter 10 at 4.11.5).

Dividends from these investments are recognised in profit or loss when the right to receive payment is established, the amount of the dividend can be measured reliably and it is probable that economic benefits will flow to the entity. [FRS 102.11.14A, 102.12.9A]. However, if the dividend clearly represents a recovery of part of the cost of the investment, it is not recognised in profit and loss (see Chapter 8 at 4.2.1.D). Determining when a dividend does or does not clearly represent a recovery of the cost of the investment can be highly judgemental, and a thorough understanding of the particular facts and circumstances is needed.

6.4 The fair value option

Basic debt financial instruments and basic commitments to receive or make a loan may, upon initial recognition, be designated as at fair value through profit or loss, provided that doing so results in more relevant information. This will be because either:

- (i) Use of fair value eliminates or significantly reduces a measurement or recognition inconsistency (sometimes referred to as 'an accounting mismatch') that would otherwise arise.

Or

- (ii) A group of debt instruments or debt instruments and other financial assets is managed and its performance is evaluated on a fair value basis, in accordance with a documented risk management or investment strategy, and information is provided on that basis to the entity's key management personnel (as defined in Section 33 *Related Party Disclosures*), for example, members of the entity's board of directors and its chief executive officer. [FRS 102.11.14(b)].

This is similar to the fair value option under IAS 39 (for financial assets and liabilities) and under IFRS 9 (for financial liabilities), where designation is only possible at initial recognition of a financial instrument and not thereafter. However, unlike IAS 39 and IFRS 9, FRS 102 does not contain the further provision that the designation at initial recognition is irrevocable. [IAS 39.50(b), IFRS 9.4.4.2]. Having said that, we do not believe that it was the FRC's intention for the designation to be revocable.

The fair value option has a greater relevance under FRS 102 than under IAS 39 or IFRS 9, as there is no concept in the measurement rules of 'held for trading'. Basic debt instruments that are held for trading purposes are not automatically measured at fair value through profit or loss. To do so requires the use of the fair value option, on the grounds that such instruments are managed and their performance is evaluated on a fair value basis. This means that entities have a choice of whether to apply amortised cost or fair value for such instruments.

One of the reasons for including the fair value option in FRS 102 was to mitigate some of the anomalies that would result from a mixed measurement model. It eliminates problems arising where financial assets are measured at fair value and related financial liabilities are measured at amortised cost, or *vice versa*. Its use can eliminate the burden of designating hedges, tracking and analysing hedge effectiveness, which is discussed in Chapter 14.

An example is the issuance of debt to fund the acquisition of trading assets such as bonds or equities. As the trading assets are bought and sold frequently to maximise/minimise their profits/losses, it may make sense to measure the assets, together with their funding at fair value through profit or loss. This would avoid an accounting mismatch that would otherwise arise by measuring the assets at fair value through profit or loss and the liabilities at amortised cost.

In respect of the second situation in which the fair value option may be applied, the requirement is that the group of instruments must be managed and its performance evaluated on a fair value basis and information is provided on that basis to key management personnel. As a result, the accounting would be consistent with the underlying business objective for the portfolio as that is how its performance is assessed. It is unlikely that outside the financial services or commodity trading sectors, there will be many entities that use the fair value option in this situation.

6.5 Impairment of financial assets measured at cost or amortised cost

6.5.1 Introduction

The concept of impairment is relevant to financial assets that are measured at cost or amortised cost. FRS 102 uses the same principles and criteria as the incurred loss model under IAS 39, but with one major difference. Unlike IAS 39, under FRS 102, there is no requirement for assets that have been individually assessed for impairment and found not to be impaired, to be subsequently included in a collective assessment of impairment. [IAS 39.64]. The FRS 102 requirements are set out at 6.5.2 below.

Sections 11 and 12 of FRS 102 do not use the expected credit loss model. As part of the FRC's Triennial Review 2017, the FRC confirmed that further evidence-gathering and analysis will be undertaken before a decision is made on reflecting the principles of the expected credit loss model of IFRS 9 in FRS 102, if at all. [FRS 102.BC.B11.49]. Subsequently, as part of the Periodic Review 2024, the FRC made no amendment to incorporate the expected credit loss model into FRS 102. The FRC intends to reconsider this matter in due course, taking into account the IASB's third edition of the *IFRS for SMEs Accounting Standard* when finalised. New disclosure requirements were inserted in paragraphs 48ZA and 48ZB of Section 11 of the standard for entities already applying the expected credit loss model from IFRS 9. [FRS 102.BC.B11.49ZA]. However, if entities would like to use the expected credit loss model, they are able to choose to apply IFRS 9 for recognition and measurement purposes as discussed at 3 above.

The effect of moving from the current incurred loss model of FRS 102 and IAS 39 to the IFRS 9 expected loss approach is that entities recognise impairment losses earlier. Under IFRS 9, entities are required to recognise either 12-month or lifetime expected credit losses, depending on whether there has been a significant increase in credit risk since initial recognition. The measurement of expected credit losses must reflect a probability-weighted amount, the time value of money and be based on reasonable and supportable information. Further information regarding impairment under IFRS 9 can be found in the most recent version of the EY publication, *International GAAP*®.

In the sections below, comparisons and references to IFRS are mostly made to IAS 39 as its principles and criteria are also based on incurred credit losses. We do not further discuss differences with the expected credit loss approach in IFRS 9 as it is substantially different.

6.5.2 Recognition of impairment

Under FRS 102, an entity assesses at the end of each reporting period whether there is objective evidence of impairment of any financial assets that are measured at cost or amortised cost. [FRS 102.11.21, FRS 102.12.13]. If there is objective evidence of impairment, the entity recognises an impairment loss in profit or loss immediately. [FRS 102.11.21].

Financial assets carried at fair value through profit or loss are not subject to an impairment assessment, since decreases in value are reflected in the fair value and related profit or loss.

6.5.2.A Objective evidence of impairment

Objective evidence that a financial asset or group of assets is impaired includes observable data that come to the attention of the holder of the asset about the following loss events:

- (i) Significant financial difficulty of the issuer or obligor.
- (ii) A breach of contract, such as a default or delinquency in interest or principal payments.
- (iii) The creditor, for economic or legal reasons relating to the debtor's financial difficulty, granting to the debtor a concession that the creditor would not otherwise consider.
- (iv) It has become probable that the debtor will enter bankruptcy or other financial reorganisation.

And

- (v) Observable data indicating that there has been a measurable decrease in the estimated future cash flows from a group of financial assets since the initial recognition of those assets, even though the decrease cannot yet be identified with the individual financial assets in the group, such as adverse national or local economic conditions or adverse changes in industry conditions. [FRS 102.11.22].

The above is not an exhaustive list and other factors may also be evidence of impairment, including significant changes with an adverse effect that have taken place in the technological, market, economic or legal environment in which the issuer operates. [FRS 102.11.23].

6.5.2.B Individual and group assessment

All equity instruments recorded at cost, regardless of their significance, and other financial assets that are individually significant must be assessed individually for impairment. [FRS 102.11.24(a), FRS 102.11.24(b)].

How we see it

There is no guidance in FRS 102 as to how 'individually significant' is interpreted, and therefore, will require judgement.

All other financial assets that are not individually significant are assessed either individually or grouped on the basis of similar credit risk characteristics. [FRS 102.11.24]. As previously mentioned at 2.2 and 6.5.1 above, assets that have been individually assessed for impairment and found not to be impaired, are subsequently not required to be included in a collective assessment of impairment. Even though this appears to be a difference with IAS 39, in practice, the same conclusion might be reached.

How we see it

Grouping financial assets based on similar credit risk characteristics will be a matter of judgement for entities. For example, a bank might split its loans to customers into several categories such as unsecured retail loans, secured retail loans, corporate loans and mortgages. Further stratification of these groupings might be appropriate; for example, mortgages might be split based on their loan-to-value ratios, or the location of the properties, while smaller corporate loans might be split based on the industry in which the borrower operates. A non-financial institution might stratify their trade receivables based on their country of operation, lines of business or even brand names.

6.5.3 Measurement of impairment

6.5.3.A Financial assets measured at amortised cost

For debt instruments measured at amortised cost (see 4.1.2 and 6.1 above) for which there is objective evidence of impairment, the impairment loss is measured as the difference between the asset's carrying amount and the present value of estimated cash flows, discounted at the asset's original effective interest rate. If it is a variable interest rate, the discount rate for measuring the impairment loss is the current effective interest rate determined under the contract. [FRS 102.11.25(a)]. Subsequently, the amortised cost of an impaired financial asset is calculated by applying the effective interest rate on the carrying amount net of impairment. [FRS 102.11.15(d)].

The following Illustration builds on Illustration 6-1 above to show the measurement of impairment.

Illustration 6-3: Calculating the impairment loss for amortised cost debt instruments

For a bond measured at amortised cost, at the end of 20X7, due to continuing deterioration in the borrower's financial performance, the lender assesses that 25% of all future cash flows (in 20X8 to 20X0) will not be recoverable. The future cash flows that were due were the 4% coupon per annum (i.e., £100,000 × 4%) and the principal repayment of £100,000 at the end of 20X0, which works out to £4,000 in 20X8 and 20X9 respectively and £104,000 in 20X0. If the 25% default rate were to be applied to these cash flows, the revised cash inflows would be £3,000 in 20X8 and 20X9 and £78,000 in 20X0. As mentioned above, the impairment loss will be the difference between the present value of the revised future cash flows less the carrying amount before the impairment, which was £97,486. The present value of the revised future cash flows is £73,114 after discounting by the original effective interest rate of 4.922%. This is worked out as:

$\text{£3,000}/(1 + 4.922\%) + \text{£3,000}/(1 + 4.922\%)^2 + \text{£78,000}/(1 + 4.922\%)^3 = \text{£73,114}$. Hence, the impairment loss is £24,372, being the difference between £97,486 and £73,114.

Year	Carrying amount at the beginning of the period (£)	Interest income @ 4.922% * (£)	Cash inflow (£)	Impairment loss (£)	Carrying amount at the end of the period (£)
20X6	96,000	4,725	(4,000)	-	96,725
20X7 (pre-impairment)	96,725	4,761	(4,000)	-	97,486
20X7 (post-impairment)	97,486	-	-	(24,372)	73,114
20X8	73,114	3,599	(3,000)	-	73,713
20X9	73,713	3,628	(3,000)	-	74,341
20X0	74,341	3,659	(78,000)	-	-

* Interest income for each period has been calculated by applying the effective interest rate of 4.922% on the carrying amount at the beginning of the period, which includes any impairment provision.

6.5.3.B Financial assets measured at cost

For investments in equity instruments (see 4.1.1, 6.1 and 6.3.2 above) and basic loan commitments to receive or make a loan (see 4.1.3 and 6.3.1 above) measured at cost, the impairment loss will be the difference between the asset's carrying amount and the best estimate of the amount that the entity would receive for the asset if it were sold at the reporting date. The best estimate will inevitably be an approximation and might be zero. [FRS 102.11.25(b)].

In the case of investments in equity instruments carried at cost denominated in a foreign currency, the assessment for impairment is carried out in the functional currency of the reporting entity, as the cost of such investments is not remeasured after initial recognition (see Chapter 32 at 3.4.8). Therefore, a change in exchange rates could have an impact on their impairment.

6.5.3.C Commitments to receive or make a loan

Section 11 requires that basic commitments either to receive a loan or to make a loan to another party are measured at cost (which sometimes is nil) less impairment. [FRS 102.11.14(c)]. As discussed at 6.3.1 above, in the case of a basic commitment to make a loan, the reference to cost is presumably in respect of any fees or premiums received from the borrower, in which case the cost will represent a financial liability to the lender.

Given that the impairment rules in Section 11 for loan commitments state that the impairment loss is the difference between the asset's carrying amount and the best estimate (which will necessarily be an approximation) of the amount (which might be zero) that the entity would receive for the asset if it were to be sold at the reporting date, [FRS 102.11.25(b)], this is problematic. First, as already mentioned, the loan commitment will be a liability and not an asset and second, the entity will need to pay to be relieved of the commitment.

How we see it

For loan commitments that are impaired, we assume that entities are expected to substitute the references to 'asset' and 'receive' with 'liability' and 'pay'.

Financial institutions that apply IAS 39 are required to measure impairment on commitments to make a loan in accordance with IAS 37 *Provisions, Contingent Liabilities and Contingent Assets*, which is also similar in its requirements to Section 21. [IAS 39.2(h)]. This differs from the treatment under IFRS 9, where loan commitments are subject to the assessment of expected credit losses. [IFRS 9.2.1(g)].

6.5.4 Reversal of impairment

If, in a subsequent period, the amount of the impairment loss decreases and the decrease can be related objectively to an event occurring after the impairment was recognised (such as an improvement in the debtor's credit rating), the previously recognised impairment loss is reversed and recognised in profit or loss, either directly or by adjusting an allowance account. However, the reversal must not result in a carrying amount of the financial asset (net of any allowance account) that exceeds what the carrying amount would have been had the impairment not previously been recognised. [FRS 102.11.26].

FRS 102 does not specifically prohibit the reversal of impairment in the case of investments in equity instruments. This constitutes a difference compared to IAS 39, since the IASB could not find an acceptable way to distinguish reversals of impairment losses from other increases in fair value of available-for-sale equity instruments. Therefore, the IASB decided to preclude such reversals for equity instruments. [IAS 39.BC129, IAS 39.BC130]. Similarly, equity instruments are normally measured at fair value rather than at cost under IFRS 9, and as such are not subject to impairment. [IFRS 9.5.7.1, IFRS 9.5.7.5].

7 Derecognition

7.1 Introduction

The FRS 102 derecognition requirements are located in paragraphs 33 to 38 of Section 11, however, they are also applicable to:

- (a) Financial assets and financial liabilities within the scope of Section 12. *[FRS 102.12.14]*.
And
- (b) Receivables recognised by a lessor and payables recognised by a lessee. *[FRS 102.11.7(c)]*.

7.2 Derecognition of financial assets

The FRS 102 derecognition principles for financial assets are similar to those in IFRS 9 and IAS 39 but they have been simplified and do not contain the full body of guidance that can be found in IFRS 9 and IAS 39.

Under FRS 102, a financial asset is derecognised only when:

- (a) The contractual rights to the cash flows from the financial asset expire or are settled.
Or
- (b) The entity transfers to another party substantially all of the risks and rewards of ownership of the financial asset.
Or
- (c) The entity, despite having retained some, but not substantially all, risks and rewards of ownership, has transferred control of the asset to another party and the other party has the practical ability to sell the asset in its entirety to an unrelated third party and is able to exercise that ability unilaterally and without needing to impose additional restrictions on the transfer. *[FRS 102.11.33]*.

How we see it

In our view, the derecognition guidance in FRS 102 should be viewed as broadly equivalent to the model set out in IFRS 9 and IAS 39, with the exception of pass-through arrangements which is not addressed in FRS 102 (see 2.2.4.A above).

As such, there are three derecognition situations:

- (i) Where the transferor has transferred substantially all the risks and rewards, as set out in (b) above, in which case it must derecognise the asset.
Or
- (ii) Where the transferor has neither transferred nor retained substantially all the risks and rewards, in which case the accounting treatment depends on whether control has been transferred, as set out in (c) above.
Or
- (iii) Where the transferor has retained substantially all the risks and rewards, in which case the asset should not be derecognised.

This third situation will include transactions such as repurchase obligations (i.e., repos), stock lending agreements and factoring arrangements when the transferee has recourse to the transferor and hence has retained substantially all the risks and rewards.

FRS 102 includes two examples that illustrate the situation (i) and (iii) above, the accounting for situation (ii) will depend on whether the entity has transferred control. If it has, it would follow (i), and (iii) if it has not.

Illustration 7-1: Transfer that qualifies for derecognition

An entity sells a group of its accounts receivable to a bank at less than their face amount. The entity continues to handle collections from the debtors on behalf of the bank, including sending monthly statements, and the bank pays the entity a market rate fee for servicing the receivables. The entity is obliged to remit promptly to the bank any and all amounts collected, but it has no obligation to the bank for slow payment or non-payment by the debtors.

In this case, the entity has transferred to the bank substantially all of the risks and rewards of ownership of the receivables. Accordingly, it removes the receivables from its statement of financial position (i.e., derecognises them), and it shows no liability in respect of the proceeds received from the bank. The entity recognises a loss calculated as the difference between the carrying amount of the receivables at the time of sale and the proceeds received from the bank. The entity recognises a liability to the extent that it has collected funds from the debtors but has not yet remitted them to the bank. [FRS 102.11.35].

Illustration 7-2: Transfer that does not qualify for derecognition

The facts are the same as the preceding example except that the entity has agreed to buy back from the bank any receivables for which the debtor is in arrears as to principal or interest for more than 120 days. In this case, the entity has retained the risk of slow payment or non-payment by the debtors – a significant risk with respect to receivables. Accordingly, the entity does not treat the receivables as having been sold to the bank, and it does not derecognise them. Instead, it treats the proceeds from the bank as a loan secured by the receivables. The entity continues to recognise the receivables as an asset until they are collected or written off as uncollectible [FRS 102.11.35].

Where financial assets are transferred, the derecognition assessment first needs to consider the extent to which the entity is still exposed to the risk and rewards associated with the asset following the transfer. If the entity has retained some of the risks and rewards, it will also need to consider whether it still has control over the asset. In essence, the substance of the transaction needs to be evaluated in assessing derecognition; the mere transfer of legal ownership is not sufficient.

In most cases, we would expect the application of these requirements by FRS 102 reporters to be straightforward. That is, in the case of a financial asset such as a loan which is settled on its scheduled maturity date or is redeemed before maturity by the borrower in accordance with the stipulated terms of the loan, the loan would be derecognised on settlement. Another simple example would be the unconditional sale of a financial asset for a fixed price. It is only when an entity embarks on more complex transactions, such as factoring or securitisations, that the application of the requirements become more challenging.

7.2.1 Transfer of risks and rewards of ownership of the asset

FRS 102 does not provide any guidance as to what constitutes the transfer to another party of substantially all the risks and rewards of ownership. [FRS 102.11.33(b)]. The analysis needs to consider all facts and circumstances and the most common risks to be evaluated will usually include credit risk, foreign exchange risk, late payment risk and price risk.

In the case of trade receivables, which are usually short-term in nature, the main risks are normally late payment risk (e.g., the debtor does not settle within the stipulated credit period such as 30 days or 90 days, but does eventually make payment in full for the amount due) or credit risk (i.e., the debtor is unable to make full payment for the amount owing and it results in a bad debt for the creditor).

7.2.1.A Sale with option to buy back or sell back at some point in the future

The analysis is more challenging when the asset is sold but either party or both have an option to buy/sell back the asset at some point in the future. As there is no specific guidance included in FRS 102, an entity could look to Section 10 and develop an appropriate policy, such as by considering what is contained in IFRS. [FRS 102.10.6]. In this section we consider the applicable guidance in IFRS 9.

Extract from IFRS 9

B3.2.16 (f) *Put options and call options that are deeply in the money.* If a transferred financial asset can be called back by the transferor and the call option is deeply in the money, the transfer does not qualify for derecognition because the transferor has retained substantially all the risks and rewards of ownership. Similarly, if the financial asset can be put back by the transferee and the put option is deeply in the money, the transfer does not qualify for derecognition because the transferor has retained substantially all the risks and rewards of ownership.

(g) *Put options and call options that are deeply out of the money.* A financial asset that is transferred subject only to a deep out-of-the-money put option held by the transferee or a deep out-of-the-money call option held by the transferor is derecognised. This is because the transferor has transferred substantially all the risks and rewards of ownership.

In order to analyse the implications of the option on the risk and rewards assessment, the exercise price of the option relative to the current fair value of the asset would need to be considered, together with the term of the option.

In the case of a call option that is deeply in the money (i.e., the exercise price of the option is favourable when compared to the current market price of the asset and is expected to remain so), it is highly likely that the option will be exercised by the transferor before expiry. Consequently, derecognition would not be appropriate based on 7.2(iii) above, as the transferor has retained substantially all the risks and rewards. However, if the circumstances were reversed, that is, the option is deeply out of the money and is highly unlikely to go into the money before maturity, derecognition would be appropriate as the transferor has transferred substantially all risks and rewards. In these situations, it is almost impossible to set bright lines as to when an option is considered deeply in or out of the money, hence, judgement is required by evaluating all relevant facts and circumstances on a case-by-case basis.

7.2.1.B Sale of trade receivables

The same assessment will need to be made in respect of the sale of trade receivables, by analysing the extent to which the seller has retained any risks and rewards following the sale. If the seller has not retained substantially any of the risks and rewards, derecognition would be appropriate. However, if the seller agrees to reimburse the buyer for all likely bad debts and late payments that will occur, the seller has retained substantially all risks and rewards, thus, derecognition would not be appropriate. Both scenarios have been illustrated in 7.2 above.

The determination of whether the seller has transferred or retained substantially all the risks and rewards will be more difficult in situations where the seller retains, for example, the risk associated to the first £10m of future credit losses. The answer will depend on an assessment of the quality of the receivables that were sold. If it is likely that the first £10m of future losses represent a substantial portion of the total losses that are expected to occur, derecognition would not be appropriate as the seller has retained substantially all the risks and rewards. On the other hand, if the first £10m represents an immaterial portion of the total expected future losses, derecognition may be appropriate, as it is clear that the seller has transferred substantially all the risks and rewards.

7.2.2 Transfer of control of the financial asset

In between the two extremes of transferring or retaining substantially all the risks and rewards, the transferor may have retained some risks and rewards. The derecognition assessment is then dependent on whether the transferor has retained control of the asset or not. This will depend on whether the transferee has the practical ability to sell the asset in its entirety to an unrelated third party and whether the transferee is able to exercise that ability unilaterally and without needing to impose additional restrictions on the transfer. [FRS 102.11.33(c)].

There is no further guidance given in FRS 102 on what is meant by 'practical ability'. Consequently, an entity could look to Section 10 and develop an appropriate policy, such as by considering what is contained in IFRS. [FRS 102.10.6]. In this section we consider the applicable guidance in IFRS 9, which we expect most FRS 102 reporters will use when assessing the practical ability test.

Paragraph B3.2.7 of IFRS 9 contains the following guidance, which is identical to paragraph AG42 of IAS 39:

Extract from IFRS 9

B3.2.7 An entity has not retained control of a transferred asset if the transferee has the practical ability to sell the transferred asset. An entity has retained control of a transferred asset if the transferee does not have the practical ability to sell the transferred asset. A transferee has the practical ability to sell the transferred asset if it is traded in an active market because the transferee could repurchase the transferred asset in the market if it needs to return the asset to the entity. For example, a transferee may have the practical ability to sell a transferred asset if the transferred asset is subject to an option that allows the entity to repurchase it, but the transferee can readily obtain the transferred asset in the market if the option is exercised. A transferee does not have the practical ability to sell the transferred asset if the entity retains such an option and the transferee cannot readily obtain the transferred asset in the market if the entity exercises its option.

Consider the following example, which helps illustrate these requirements:

Illustration 7-3: The sale of quoted bonds subject to a call option to buy them back

Company Y holds 8,000 corporate bonds issued by a listed company, Company X. Similar to Company X's equity shares, the corporate bonds are listed on an exchange and are subject to regular trading in the market. The market price of the bonds at 31 December 20X6 is at par £100, thus, the investment's fair value is £800,000. The bonds meet the criteria to be classified as basic financial instruments and are thus measured at amortised cost. However, there is currently no material difference between the amortised cost and the fair value of the bonds. On the same day, Company Y sells the bonds to a hedge fund for £750,000 but simultaneously obtains a call option to buy back the bonds on 31 December 20X7 for £850,000. The sale agreement does not prevent the hedge fund from selling, exchanging or pledging the bonds to another party. In these circumstances, due to the existence of the option, it is assessed that Company Y has retained some, but not substantially all risk and rewards of ownership of the bonds. This is because it will be able to benefit from fair value movements above the call option exercise price of £850,000 by exercising the option, however, it is not exposed to fair value movements below the call option exercise price.

In addition, because the bonds are listed and traded on an active market, (see Chapter 10 for the definition of an active market), it is considered that the hedge fund has the practical ability to sell the bonds. Even if the hedge fund sells the bonds and Company Y decides to exercise its call option, the hedge fund can repurchase the bonds in the market in order to sell them back to Company Y. Therefore, Company Y has transferred control of the bonds to the hedge fund. Consequently, Company Y derecognises the bonds and recognises an option asset, which is a new right that has arisen following the transfer. At 31 December 20X6 the call option is 'out of the money' because the exercise price of £850,000 is greater than the fair value of £800,000. The premium paid on the option is £50,000, being the difference between the fair value of the bonds of £800,000 and the sale consideration of £750,000. The following accounting entries would be made by Company Y:

Dr Cash received from sale	£750,000
Dr Fair value of call option	£50,000
Cr Bond holding in Company X	£800,000

The call option is a derivative, which falls within the scope of Section 12 and thus would need to be measured at fair value through profit or loss until it expires (see 6.1 above). In this example, the practical ability test has been satisfied as the bonds are listed on an exchange and they are regularly traded; however, being exchange-listed is not necessarily itself a requirement, it is sufficient for there to be an active market.

In the example above, if the corporate bonds were not traded in an active market, with all other things being equal, the transaction would have failed the practical ability test, and the corporate bonds would not have been derecognised. See further discussion on the accounting in this situation at 7.2.3.A and 7.2.3.B below.

7.2.3 Accounting for derecognition of financial assets

7.2.3.A Transfers that qualify for derecognition

When it is concluded that the transfer qualifies for derecognition, the asset should be derecognised and any rights and obligations retained or created should be recognised separately. The carrying amount of the transferred asset must be allocated between the rights or obligations retained and those transferred on the basis of their relative fair values at the transfer date. Newly created rights and obligations must be measured at their fair values at that date. Any difference between the consideration received and the amounts recognised and derecognised is recognised in profit or loss. [FRS 102.11.33(c)].

These accounting requirements are explained by Illustration 7-2 at 7.2 above.

7.2.3.B Transfers that do not qualify for derecognition

If a transfer does not result in derecognition because the entity has retained substantially all risks and rewards of ownership of the transferred asset, the entity should continue to recognise the transferred asset in its entirety and should recognise a financial liability for the consideration received. The asset and liability should not be offset. In subsequent periods, the entity should recognise any income on the transferred asset and any expense incurred on the financial liability. [FRS 102.11.34]. This describes the gross presentation of assets and liabilities in the statement of financial position and their related income and expenses in the income statement to represent the substance of a collateralised borrowing transaction.

FRS 102 only refers to transactions where the entity has retained substantially all risks and rewards. For transactions where the transferor has retained some, but not substantially all the risks and rewards, but has retained control of the financial assets (see 7.2.2 above), we would also expect a financial liability to be recognised. These are transactions where there is a continuing involvement with the assets, which are not addressed by FRS 102. We further discuss these transactions at 2.4.2 above.

7.3 Accounting for collateral

FRS 102 also deals with the accounting consequences of transactions where a transferor provides non-cash (such as debt or equity instruments) collateral to the transferee. The accounting for non-cash collateral by the transferor and the transferee depends on:

- (a) Whether the transferee has the right to sell or repledge the collateral.

And

- (b) Whether the transferor has defaulted.

If the transferee has the right by contract to sell or re-pledge the collateral, the transferor should reclassify that asset in its statement of financial position separately from other assets. For example, it could be disclosed as a loaned asset or pledged asset.

If the transferee sells collateral pledged to it, it should recognise the proceeds from the sale and a liability measured at fair value for its obligation to return the collateral.

If the transferor defaults under the terms of the contract and is no longer entitled to redeem the collateral, it should derecognise the collateral, and the transferee should recognise the collateral as its asset, initially measured at fair value or, if it has already sold the collateral, derecognise its obligation to return the collateral.

In all circumstances, the transferor must continue to recognise the collateral as its asset, unless the transferor has defaulted and is no longer entitled to redeem the collateral. [FRS 102.11.35].

7.4 Derecognition of financial liabilities

7.4.1 General rule: extinguishment

The derecognition requirements in FRS 102 require reporters to derecognise a financial liability or part of a financial liability only when it is extinguished. In essence, a financial liability or a part of it is only extinguished when the obligations specified in the contract are discharged, are cancelled or expire.

[FRS 102.11.36].

Unlike IFRS 9 (see 2.4.1.C above), FRS 102 does not further elaborate on the moment when the discharge of a liability has occurred. Therefore, an entity needs to have a developed their own accounting policy that aligns with FRS 102.11.36 and addresses the particulars of the payment method, such as the use of cheques. This policy needs to be followed consistently.

7.4.2 Exchange and modification

If an existing borrower and lender exchange financial instruments with substantially different terms or substantially modify the terms of an existing financial liability, the transaction must be accounted for as an extinguishment of the original financial liability and the recognition of a new one. [FRS 102.11.37].

FRS 102 does not contain the additional guidance on what constitutes 'substantially different'. As there is no specific guidance included in FRS 102, an entity could look to Section 10 and develop an appropriate policy, such as by considering what is contained in IFRS. [FRS 102.10.6].

The subsequent accounting for exchanges or modifications that fail derecognition is discussed at 7.5 below.

7.4.3 Gains and losses on derecognition

Any difference that may arise between the carrying amount of the financial liability that has been extinguished or transferred to another party and the consideration paid, including any non-cash assets transferred or liabilities assumed, is recognised in profit or loss. [FRS 102.11.38].

7.5 Exchange or modification that does not qualify for derecognition

FRS 102 does not provide specific guidance on the subsequent accounting where it is determined that an exchange of financial instruments with different terms is not a substantial modification of the terms of the existing financial asset or liability. FRS 102 does not contain the additional guidance in IAS 39 and IFRS 9 on what constitutes 'substantially different'. As there is no specific guidance included in FRS 102, an entity could look to Section 10 and develop an appropriate policy, such as by considering what is contained in IFRS. [FRS 102.10.6]. Further information on accounting for an exchange or modification that does not qualify for derecognition can be found in the most recent version of the EY publication, International GAAP®.

How we see it

We believe that entities have an accounting policy choice to either:

- (a) Account for the changes in cash flows prospectively through a revised effective interest rate.
Or
- (b) Adjust the carrying amount of the financial liability to reflect the modified cash flows, discounted at the original effective interest rate of the existing financial liability (see 6.2 above), which is aligned with paragraph 5.4.3 of IFRS 9.

8 Offsetting of financial instruments

8.1 Offsetting requirements

The rules regarding offsetting, sometimes called 'netting', of a financial asset and a financial liability are contained in both Sections 11 and 12. However, the guidance is identical. A financial asset and a financial liability must be offset and the net amount presented in the statement of financial position when and only when, an entity:

- (a) Currently has a legally enforceable right to set off the recognised amounts.

And

- (b) Intends either to settle on a net basis, or to realise the asset and settle the liability simultaneously.

[FRS 102.11.38A, FRS 102.12.25B].

The offsetting requirements set out above are identical to that in IAS 32 but without the additional guidance contained in IAS 32. The IASB decided to incorporate additional guidance into IAS 32 to deal with historical ambiguities as well as emerging practical application issues arising from the growth in the clearing of financial instruments. The additional guidance has helped to clarify aspects such as current legal enforceability and simultaneous settlement.

As there is no specific guidance included in FRS 102 to deal with more complex offsetting situations, such as when a central counterparty clearing house (CCP) is used to clear financial instruments, an entity could look to Section 10 and develop an appropriate policy, such as by considering what is contained in IAS 32.

[FRS 102.10.6]. Further information on offsetting under IAS 32 can be found in the most recent version of the EY publication, International GAAP®.

The effect of the offsetting rules described above is that, when the requirements are met, in effect the entity presents a single financial asset or liability which represents the net cash flow intended to be received or paid. When the requirements are not met, the financial asset and the financial liability need to be presented separately.

8.2 Interaction with derecognition rules

Offsetting and derecognition are different. Offsetting does not result in derecognition of the financial asset or liability from the statement of financial position, but in their net presentation on the statement of financial position as either a net financial asset or a net financial liability. Offsetting does not have an impact on the income statement as there is no gain or loss arising from the net presentation.

When a transfer of financial assets does not qualify for derecognition, the entity has to recognise an associated liability as discussed at 7.2.3.B above. In such cases, the financial asset retained in the statement of financial position and the resulting financial liability cannot be offset. *[FRS 102.11.34].*

9 Summary of GAAP differences

The following table shows the differences between FRS 102 and IFRS.

	FRS 102	IFRS 9/IAS 32/IAS 39
Accounting policy choice	Option to apply the recognition and measurement requirements of Sections 11 and 12, IAS 39 or IFRS 9. No matter the option chosen, entities must apply disclosure requirements of Sections 11 and 12.	Option to apply hedge accounting requirements of IAS 39 in full.
Classification and Measurement	Instruments are classified as basic or other. All basic instruments other than investments in equity instruments are carried at amortised cost or cost less impairment. Investments in equity instruments and all other instruments must be carried at fair value, except when not reliably measured or prohibited by law. No concept of held for trading, thus, such instruments could theoretically be measured at amortised cost unless the fair value option is elected. No concept of fair value through other comprehensive income.	Under IFRS 9, classification of financial assets is based on a contractual characteristics test and business model test leading to the following classifications: 1. Amortised cost 2. Fair value through OCI (with or without recycling) 3. Fair value through profit or loss Financial liabilities can be carried at amortised cost, although the fair value option is available under certain circumstances (and for financial assets but in more restricted circumstances). Changes in fair value due to own credit risk of financial liabilities designated at fair value are recognised through OCI.
Derivatives	No concept of embedded derivatives. Derivatives recognised and measured at fair value through profit or loss.	Derivatives and certain embedded derivatives in financial liabilities or non-financial items are recognised and measured at fair value through profit or loss.
Impairment	Incurred loss model with assessment of objective evidence of impairment. Credit losses for impaired assets are calculated based on the difference between the asset's carrying amount and the present value of discounted cash flows or the best estimate of the amount receivable if the assets were sold.	IFRS 9 impairment requirements is based on an expected credit loss model. Credit losses for impaired assets are calculated based on the difference between the discounted contractual cashflows and the expected cashflows. Recognition of 12-month expected credit losses until there is a significant increase in credit risk at which point lifetime expected credit losses are recognised.
Derecognition	Similar principles to IFRS but less guidance. No concept of 'continuing involvement' or 'pass through' unlike IFRS 9, no accounting policy exception for electronic payment systems.	Complex rules.
Disclosures	Disclosures as set out in Sections 11 and 12 and additional disclosures if considered a financial institution (Section 34 <i>Specialised Activities</i>).	Extensive disclosures (IFRS 7 and IFRS 13 <i>Fair Value Measurement</i>).

Appendix A - Defined terms

Extract from FRS 102

Appendix I

Glossary

active market	A market in which transactions for the asset or liability take place with sufficient frequency and volume to provide pricing information on an ongoing basis.
amortised cost (of a financial asset or financial liability)	The amount at which the financial asset or financial liability is measured at initial recognition minus principal repayments, plus or minus the cumulative amortisation using the effective interest method of any difference between that initial amount and the maturity amount, and minus any reduction (directly or through the use of an allowance account) for impairment or uncollectability.
derecognition	The removal of all or part of a recognised asset or liability from an entity's statement of financial position.
derivative	A financial instrument or other contract with all three of the following characteristics: (a) its value changes in response to the change in a specified interest rate, financial instrument price, commodity price, foreign exchange rate, index of prices or rates, credit rating or credit index, or other variable (sometimes called the 'underlying'), provided in the case of a non-financial variable that the variable is not specific to a party to the contract; (b) it requires no initial net investment or an initial net investment that is smaller than would be required for other types of contracts that would be expected to have a similar response to changes in market factors; and (c) it is settled at a future date.
effective interest method	A method of calculating the amortised cost of a financial asset or a financial liability (or a group of financial assets or financial liabilities) and of allocating the interest income or interest expense over the relevant period.
effective interest rate	The rate that exactly discounts estimated future cash payments or receipts through the expected life of the financial instrument or, when appropriate, a shorter period to the carrying amount of the financial asset or financial liability.
equity	The residual interest in the assets of the entity after deducting all its liabilities.
fair value	The price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. In the absence of any specific guidance provided in the relevant section of FRS 102, the guidance in Section 2A <i>Fair Value Measurement</i> shall be used in determining fair value.
financial asset	Any asset that is: (a) cash; (b) an equity instrument of another entity; (c) a contractual right: (i) to receive cash or another financial asset from another entity, or (ii) to exchange financial assets or financial liabilities with another entity under conditions that are potentially favourable to the entity; or

	(d) a contract that will or may be settled in the entity's own equity instruments and is: (i) a non-derivative for which the entity is or may be obliged to receive a variable number of the entity's own equity instruments; or (ii) a derivative that will or may be settled other than by the exchange of a fixed amount of cash or another financial asset for a fixed number of the entity's own equity instruments. For this purpose the entity's own equity instruments do not include instruments that are themselves contracts for the future receipt or delivery of the entity's own equity instruments.
financial instrument	A contract that gives rise to a financial asset of one entity and a financial liability or equity instrument of another entity.
financial liability	Any liability that is: (a) a contractual obligation: (i) to deliver cash or another financial asset to another entity; or (ii) to exchange financial assets or financial liabilities with another entity under conditions that are potentially unfavourable to the entity, or (b) a contract that will or may be settled in the entity's own equity instruments and is: (i) a non-derivative for which the entity is or may be obliged to deliver a variable number of the entity's own equity instruments; or (ii) a derivative that will or may be settled other than by the exchange of a fixed amount of cash or another financial asset for a fixed number of the entity's own equity instruments. For this purpose the entity's own equity instruments do not include instruments that are themselves contracts for the future receipt or delivery of the entity's own equity instruments.
firm commitment	Binding agreement for the exchange of a specified quantity of resources at a specified price on a specified future date or dates.
forecast transaction	Uncommitted but anticipated future transaction.
probable	More likely than not.
publicly traded (debt or equity instruments)	Traded, or in process of being issued for trading, in a public market (a domestic or foreign stock exchange or an over-the-counter market, including local and regional markets).
transaction costs (financial instruments)	Incremental costs that are directly attributable to the acquisition, issue or disposal of a financial asset or financial liability, or the issue or reacquisition of an entity's own equity instrument. An incremental cost is one that would not have been incurred if the entity had not acquired, issued or disposed of the financial asset or financial liability, or had not issued or reacquired its own equity instrument.

Appendix B - Index of Illustrations

Illustration 4-1:	Interest on a loan is referenced to 2 times the bank's standard variable rate	541
Illustration 4-2:	A zero-coupon loan	541
Illustration 4-3:	A loan with interest payable at the bank's standard variable rate plus 1% throughout the life of the loan - the bank's standard variable rate is negative	541
Illustration 4-4:	A loan with interest payable at the bank's standard variable rate plus 1% throughout the life of the loan	542
Illustration 4-5:	Interest on a loan is charged at 10% less 6-month interbank offered rate (IBOR) over the life of the loan	542
Illustration 4-6:	Interest on a GBP denominated mortgage is linked to the UK Land Registry House Price Index (HPI) plus 3%	543
Illustration 4-7:	A fixed interest rate loan with an initial tie-in period which reverts to the bank's standard variable interest rate after the tie-in period	544
Illustration 4-8:	A loan with interest payable at the bank's standard variable rate less 1% throughout the life of the loan, with the condition that the interest rate can never fall below 2%	544
Illustration 4-9:	A loan with a condition that the interest rate is reset to a higher rate if a set number of payments is missed.	544
Illustration 4-10:	Early repayment on subordinated debt contingent on repayment of senior debt	546
Illustration 4-11:	A loan with interest equal to a percentage of the profits of the issuer	551
Illustration 5-1:	The sale of goods on deferred payment terms	553
Illustration 5-2:	Parent company provides a loan to its subsidiary at an off-market interest rate	555
Illustration 5-3:	Application of a bid-ask spread in the initial measurement of a financial instrument to be measured at fair value through profit or loss	558
Illustration 6-1:	Determining the effective interest rate and its application to the measurement of amortised cost	563
Illustration 6-2:	Rolling intra-group loans	564
Illustration 6-3:	Calculating the impairment loss for amortised cost debt instruments	569
Illustration 7-1:	Transfer that qualifies for derecognition	572
Illustration 7-2:	Transfer that does not qualify for derecognition	572
Illustration 7-3:	The sale of quoted bonds subject to a call option to buy them back	574

Chapter 14 Financial Instruments: Hedge accounting

Contents

Overview	584
1 Introduction	585
2 Comparison between Sections 11, 12, 22 and IFRS	586
2.1 Hedged items - risk components	586
2.2 Hedging instruments - non-derivatives	586
2.3 Hedge effectiveness assessment	586
2.4 Hedges of a net investment	586
3 Scope of Sections 11 and 12	587
4 Hedge accounting	588

	Appendix A - Defined terms	618
	Appendix B - Index of Illustrations	619

Overview

This chapter deals with the requirements of Section 12 *Other Financial Instruments Issues* in relation to hedge accounting.

This includes the various criteria that must be met in order to apply hedge accounting, as well as the associated accounting when hedge accounting is applied. There are three permitted types of hedge relationships: a fair value hedge, a cash flow hedge and the hedge of a net investment in a foreign operation. In order to apply hedge accounting the hedge relationship must be formally documented up front and must include only eligible hedged item(s) and hedging instrument(s). The qualification criteria for the application of hedge accounting must be met at inception of the hedge relationship and on an ongoing basis.

The application of hedge accounting is incremental to the usual treatment for the hedged item and/or hedging instrument in accordance with FRS 102. The accounting treatment of financial instruments as required by FRS 102 is dealt with in earlier chapters. In particular, Chapter 11 deals with derivatives and Chapter 13 deals with the subsequent measurement of financial instruments.

The accounting entries for the application of hedge accounting are driven by the change in fair value of the hedging instrument and the change in present value of the hedged item. There is an expectation that such changes in value will largely offset, however to the extent this is not the case, it is likely to result in hedge ineffectiveness being recorded in profit or loss.

What you need to know

- Hedge accounting changes either the accounting for the hedged item or the hedging instrument in order to better represent an entity's risk management activities in the financial statements.
- There are strict criteria for the application of hedge accounting, such as what qualifies as a hedging instrument or a hedged item to achieve hedge accounting. Meeting the criteria for both the initial and ongoing application of hedge accounting can be complex.
- The application of hedge accounting is driven by the hedge documentation and can only be applied prospectively. The use of hindsight is not permitted.
- Although the application of hedge accounting may reduce levels of profit or loss volatility from instruments transacted for risk management purposes, such as derivatives, it does not always follow that profit or loss volatility will be eliminated completely. It depends on the existence of any sources of ineffectiveness within the hedge relationship.
- Under UK GAAP, Section 12 of FRS 102 contains the requirements for hedge accounting.
- Entities can make an accounting policy choice for recognition and measurement of financial instruments to apply either:
 - Sections 11 and 12.
Or
 - IAS 39 (as adopted in the EU) as the standard applies prior to the application of IFRS 9. First-time adopters can only apply this policy choice if this would make the entity's accounting policies consistent with those adopted in the consolidated financial statements in which the entity is included.
Or
 - IFRS 9, and IAS 39 (as amended following the publication of IFRS 9) as far as it remains applicable when IFRS 9 is applied. [FRS 102.11.2, FRS 102.12.2]. On application of IFRS 9 entities are permitted to continue to apply the IAS 39 hedge accounting requirements with respect to the fair value hedge of interest rate exposures of a portfolio of financial assets and liabilities. (Following the publication of IFRS 9, IAS 39 was amended to include only the guidance necessary to continue to apply such a hedge relationship.)
- The choice of framework can have a significant implication for the qualifications criteria, documentation and effectiveness testing of hedging relationships.
- The presentation and disclosure requirements of Sections 11 and 12 are still applicable regardless of the accounting policy choice above. In addition, the disclosure requirements of Section 34 are also applicable for financial institutions. In cases where the risks arising from financial instruments are particularly significant to the business which may be the case for entities with material hedging relationships, more detailed disclosures may be needed to meet the objectives of the standard.

1 Introduction

Section 11 *Basic Financial Instruments* and Section 12 *Other Financial Instruments Issues* contain the accounting and disclosure requirements for financial instruments. Section 34 *Specialised Activities* contains additional disclosure requirements for financial instruments that apply to financial institutions.

Section 11 deals with what are termed 'basic' financial instruments, which are certain non-complex debt instruments and equity securities. It sets out the criteria for basic financial instruments and how they are measured, along with the impairment requirements. It also includes the derecognition requirements for financial instruments, and various disclosure provisions for all financial instruments. Section 11 has been structured to provide all the financial instrument accounting requirements for many entities, who do not enter into more complex transactions.

Section 12 applies to all other financial instruments, which need to be measured at fair value through profit or loss, and addresses the hedge accounting requirements. It also contains associated disclosure provisions (see Chapter 15).

However, instead of applying the recognition and measurement requirements of Section 11 and 12, FRS 102 reporters have the choice of applying the recognition and measurement provisions of IAS 39 *Financial Instruments: Recognition and Measurement* (as adopted in the EU) or IFRS 9 *Financial Instruments* and IAS 39 (as amended following the publication of IFRS 9 as far as it remains applicable when IFRS 9 is applied). This accounting policy choice applies to all financial instruments - entities cannot decide to elect to use IAS 39 or IFRS 9 only for certain items. Consistent with any change in accounting policy, a subsequent change in this accounting policy choice is allowed only when the change will lead to more reliable and relevant information. [FRS 102.10.8(b)]. Note that on first-time adoption of FRS 102, an entity can only choose to apply IAS 39 for recognition and measurement if this would make the entity's accounting policies consistent with those adopted in the consolidated financial statements in which the entity is included.

[FRS 102.35.8C].

The FRS 102 hedge accounting requirements are similar to those in IFRS 9, but with some simplifications and without the detailed guidance of IFRS 9. Accordingly, FRS 102 incorporates a more principles-based approach to hedge accounting compared to IAS 39.

The Periodic Review 2024 includes amendments to Sections 11, 12 and 22 to FRS 102 as issued in January 2022. These amendments are mandatory for accounting periods beginning on or after 1 January 2026.

The key change affecting Sections 11, 12, 22 and 34 of FRS 102 in relation to hedge accounting is that entities are no longer permitted to change their accounting policy for recognition and measurement of financial instruments from applying full Section 11 and Section 12 or a combination of IFRS 9 and IAS 39 to applying IAS 39 alone, except to make the policies consistent with consolidated financial statements in which the entity is included.

Apart from this restriction, there are no changes to the hedge accounting requirements other than temporary amendments specific to interest rate benchmark reform (see 4.10.3 below).

When an entity first applies the Periodic Review 2024 amendments above, retrospective application is required unless specified otherwise (see Chapter 37). [FRS 102.1.39].

2 Comparison between Sections 11, 12, 22 and IFRS

The comparable extant IFRSs are IAS 32, IFRS 9 and IFRS 7. FRS 102 contains an accounting policy choice for the recognition and measurement of financial instruments for entities to apply either:

- Sections 11 and 12 in full.
Or
- IAS 39 (as adopted in the EU) as the standard applies prior to the application of IFRS 9. First-time adopters of FRS 102 can only apply this policy choice if this would make the entity's accounting policies consistent with those adopted in the consolidated financial statements in which the entity is included.
Or
- IFRS 9 (as adopted in the EU), and IAS 39 (as amended following the publication of IFRS 9) as far as it remains applicable when IFRS 9 is applied. [FRS 102.11.2, FRS 102.12.2].

On application of IFRS 9, entities are permitted to continue to apply the IAS 39 hedge accounting requirements with respect to the fair value hedge of interest rate exposures of a portfolio of financial assets and liabilities. [FRS 102.12.15A]. Following the publication of IFRS 9, IAS 39 was amended to include only the guidance necessary to continue to apply such a hedge relationship.

The main differences between FRS 102 and IFRS in relation to hedge accounting are discussed below.

The FRS 102 hedge accounting requirements are similar to those in IFRS 9, but with some simplifications and without the detailed guidance of IFRS 9. For example, certain complexities present in IFRS 9, such as rebalancing, aggregated exposures and costs of hedging are not incorporated within FRS 102.

Accordingly, FRS 102 incorporates a more principles-based approach to hedge accounting compared to IAS 39.

An important difference relates to discontinuation of hedge accounting - under FRS 102 (and IAS 39), entities have the option to voluntarily discontinue hedge accounting. Under IFRS 9, hedge accounting is continued as long as the qualifying criteria are met.

2.1 Hedged items - risk components

A significant difference to IAS 39 is that, consistent with IFRS 9, it is possible to designate risk components of non-financial items where these are separately identifiable and reliably measurable.

2.2 Hedging instruments - non-derivatives

Under FRS 102, the requirements for qualifying hedging instruments are based on a simplified version of IFRS 9, such that non-derivative financial assets or liabilities at FVTPL are eligible to be designated hedging instruments. Additionally, the foreign currency (FX) risk component of a non-derivative financial instrument may also qualify as a hedging instrument under FRS 102.

Under IAS 39, non-derivatives can only be used as hedging instruments for hedges of FX risk.

2.3 Hedge effectiveness assessment

The requirements for assessing hedge effectiveness for hedge accounting are based on a simplified version of the IFRS 9 requirements and are significantly different compared to IAS 39. Entities are not required to perform an onerous quantitative effectiveness assessment to demonstrate that the hedge relationship in any period was highly effective, using the 80%-125% bright line. Instead, the FRS 102 effectiveness test uses a different approach based on IFRS 9 that focuses on the existence of an economic relationship between the hedged item and hedging instrument. IFRS 9 has additional effectiveness requirements that are not replicated within FRS 102. However, there is a need to measure any actual hedge ineffectiveness and record it in the same way as under IFRS 9 and IAS 39.

2.4 Hedges of a net investment

Under FRS 102, the gain or loss arising from a hedge of a net investment in a foreign operation that is accumulated in equity is not recycled to profit or loss on disposal or partial disposal of the foreign operation. In contrast, both IFRS 9 and IAS 39 require that such gains and losses be recycled from equity to profit or loss when the foreign operation is disposed of.

3 Scope of Sections 11 and 12

Sections 11, 12 and 22 contain scope exceptions which are largely consistent with those in IFRS 9, IAS 39 and IAS 32. Section 12 applies to hedge accounting for qualifying items when an entity chooses to apply hedge accounting. Certain financial instruments, such as insurance contracts, share based payments and some own use contracts are excluded from the scope of these sections - see Chapter 11 for more detail.

4 Hedge accounting

4.1 Introduction

The hedge accounting model in FRS 102 is designed to allow entities to reflect their hedging activities in the financial statements in a manner that is consistent with the entity's risk management objectives. The hedge accounting approach in FRS 102 is based on a simplified version of that in IFRS 9. Hedge accounting is optional, and an entity can choose not to designate exposures it is economically hedging. In that case the normal measurement rules in Sections 11 and 12 will apply.

Of course, if the entity has chosen to apply IAS 39 or IFRS 9 to its financial instruments, then it will apply the hedge accounting requirements of those standards (see 1 above).

The two main elements of a hedging relationship are the hedging instrument and the hedged item. Provided the qualifying conditions in Section 12 are met, hedge accounting can be applied prospectively from the date all of the conditions are met and documented. [FRS 102.12.15]. The below focuses on the definitions and criteria for hedge accounting under FRS 102.

4.1.1 What is hedge accounting?

Every entity is exposed to business risks from its daily operations. Many of those risks have an impact on the cash flows or the value of assets and liabilities, and therefore, ultimately affect profit or loss. In order to manage these risk exposures, companies often enter into derivative contracts (or, less commonly, other financial instruments) to hedge these risks. 'Hedging' can therefore be seen as a risk management activity in order to change an entity's risk profile.

Applying FRS 102 to those risk management activities can result in accounting mismatches when the gains or losses on a hedging instrument are not recognised in the same period(s) and/or in the same place in the financial statements as gains or losses on the hedged exposure. The idea of hedge accounting is to reduce this mismatch by changing either the measurement or (in the case of certain firm commitments) recognition of the hedged exposure, or alternatively, the accounting for the hedging instrument.

Under FRS 102, all derivatives are recorded on the balance sheet at fair value with subsequent fair value changes recorded in the profit and loss account. [FRS 102.11.6(b), FRS 102.12.8]. The impact on profit or loss from derivatives may be reduced if the hedge accounting criteria are met. FRS 102 describes three types of hedging relationships:

- Fair value hedges (see 4.7 below)
- Or
- Cash flow hedges (see 4.8 below)
- Or
- Hedges of net investments in foreign operations (see 4.9 below). [FRS 102.12.19].

The resultant hedge accounting entries depend on the type of hedge accounting relationship.

For example, an entity with sterling functional currency may expect highly probable future revenue of US\$200 in 3 months' time. As £/US\$ foreign currency exchange rates change, the revenue recognised by the entity in profit or loss will also change, as the entity's cash flows are exposed to foreign exchange risk. To reduce this potential profit or loss volatility, the entity may enter into a forward currency contract to pay US\$200 and receive a fixed sterling equivalent. Under FRS 102, the forward currency contract will be recorded at fair value through profit or loss, and the forecast revenue will not be recognised until it occurs, resulting in a measurement and timing mismatch in profit or loss. If FRS 102 hedge accounting is applied, the forward currency contract would be accounted for differently, to reduce the mismatch. This is an example of a cash flow hedge, as the hedging instrument is reducing variability in the cash flows of the hedged item. The associated hedge accounting is to remove the effective portion of the change in fair value of the hedging derivative from profit or loss and recognise it initially in other comprehensive income (OCI), thereby reducing volatility in profit or loss. The amounts recorded in OCI are then recycled to be reflected in profit or loss at the same time as the forecast revenue is recognised, so that the revenue is recorded at the hedged rate (see 4.8.3 below).

Figure 4-1: Cash flow hedge accounting model

The special treatment for hedge accounting of a net investment in a foreign operation is consistent with that described above for a cash flow hedge (see 4.9 below).

An entity may also transact a derivative that converts a fixed exposure into a variable one. This is described as a fair value hedge. An example of a fair value hedge would be where an entity that has issued fixed rate debt and enters into an interest rate swap in which it receives a fixed rate and pays a variable rate of interest on an underlying notional value. The entity might view this as converting the fixed interest flow into a variable interest flow, but this activity is described in the standard as eliminating variability in fair value with respect to interest rate risk. On application of FRS 102 (without hedge accounting) the interest rate swap is accounted for at fair value through profit or loss whilst the debt would be held at amortised cost, resulting in an accounting mismatch. If FRS 102 hedge accounting is applied to this fact pattern, an adjustment is made to the carrying amount of the debt and to profit or loss, to reflect the revaluation of the debt with respect to interest rate risk. This hedge accounting adjustment mitigates some of the volatility in profit or loss from fair value changes in the derivative (see 4.7.3 below).

Figure 4-2: Fair value hedge accounting model

4.1.2 Hedge accounting overview

An entity may choose to designate a hedging relationship between a hedging instrument and a hedged item in order to achieve hedge accounting. [FRS 102.12.18]. Prior to hedge accounting being applied, all of the following steps must have been completed:

- Identification of eligible hedged item(s) and hedging instrument(s) (see 4.2 and 4.3 below).
- Ensuring that the hedge relationship meets the definition of one of the permitted types (a fair value, cash flow or net investment hedge) (see 4.7, 4.8 and 4.9 below).
- Ensuring that the hedge relationship is consistent with the entity's risk management objective for undertaking the hedges (see 4.4.2 below).
- Assessing that there is an economic relationship between the hedged item(s) and hedging instrument(s) (see 4.4.3 below).
- Formal designation of the hedge relationship, including identification of the hedged risk (see 4.4.4 below).

And

- The sources of hedge ineffectiveness are determined and documented (see 4.5 below).

Once these requirements are met, hedge accounting can be applied prospectively, but the ongoing qualifying criteria and assessments must continue to be met, otherwise hedge accounting will cease (see 4.10 below).

The table below summarises the application of hedge accounting for the three types of hedge relationships:

Figure 4-3: Accounting for hedge relationships

Hedge type	Fair value	Cash flow	Net investment
Hedged item	Carrying amount adjusted for changes in fair value with respect to the hedged risk. Adjusted through profit or loss.	N/A	N/A
Hedging instrument	N/A	No change to carrying amount, but effective portion of change in fair value is recorded in OCI.	No change to carrying amount, but effective portion of change in fair value is recorded in OCI.
Resultant profit or loss	Ineffective portion	Ineffective portion	Ineffective portion

As it can be seen from the above, for a fair value hedge, an adjustment is made to the carrying value of the hedged item to reflect the change in value of the hedged risk since designation, also adjusting profit or loss to provide an offset to profit or loss for the change in value of the hedging instrument. Where the offset is not complete, this will result in ineffectiveness to be recorded in profit or loss (see 4.5 below).

However, for both a cash flow and net investment hedge, the carrying amount of the hedged item, which for a cash flow hedge may not even yet be recognised, is unchanged. The effect of cash flow and net investment hedge accounting is to defer the effective portion of the change in value of the hedging instrument in OCI. Any ineffective portion will remain in profit or loss as ineffectiveness.

4.2 Hedged items

4.2.1 Introduction

A hedged item can be a recognised asset or liability, an unrecognised firm commitment, a highly probable forecast transaction, a net investment in a foreign operation, or a component of any such item, provided the item is reliably measurable. [FRS 102.12.16].

Recognised assets and liabilities can include financial items and non-financial items such as inventory. Eligible hedged items under FRS 102 are not limited to financial instruments within the scope of Section 11 and 12. For example, lease liabilities recognised under Section 20 Leases, although outside of the scope of these sections, can qualify as hedged items where relevant such as for foreign currency risk. This consideration may become more relevant as entities apply the revised Section 20 which brings operating leases onto the balance sheet. As a result, lease liabilities that were previously off-balance sheet operating leases may now be eligible hedged items.

Only assets, liabilities, firm commitments and forecast transactions with a party external to the reporting entity can qualify as hedged items. This means that hedge accounting can only be applied to transactions between entities in the same group in the individual financial statements of those entities, and not in the consolidated financial statements. Three exceptions to this rule are given: [FRS 102.12.16A]

- Transactions with subsidiaries, where the subsidiaries are not consolidated in the consolidated financial statements.
- Foreign currency risk of an intragroup monetary item if that foreign currency risk affects consolidated profit or loss. By way of example, foreign currency risk from intra group monetary items will usually affect consolidated profit or loss when the intra group monetary item is transacted between two group entities that have different functional currencies, as it will not be eliminated on consolidation.

Or

- Foreign currency risk of a highly probable forecast intragroup transaction denominated in a currency other than the functional currency of the entity entering into the transaction, if the foreign currency risk affects consolidated profit or loss. For example, a forecast sale or purchase of inventory between members of the same group will affect profit or loss if there is an onward sale of the inventory to a party external to the group. The designated hedged item is the forecast intragroup transaction, which is therefore subject to the usual eligibility criteria for hedge accounting. However, the highly probable criterion is also relevant for the existence of the external transaction in order to meet the requirement that the forecast foreign currency risk will affect consolidated profit or loss.

The exceptions apply solely to the eligibility of the intragroup items as hedged item in the consolidated financial statements. An equivalent exception does not exist to allow such items to be designated as hedging instruments in the consolidated financial statements.

Transactions in an entity's own equity instruments (including distributions to holders of such instruments) are generally recognised directly in equity by the issuer and do not affect profit or loss. [FRS 102.12.19]. Therefore, such instruments cannot be designated as a hedged item. Similarly, a forecast transaction in an entity's own equity instruments (e.g., a forecast dividend payment) cannot qualify as a hedged item. However, a declared dividend that qualifies for recognition as a financial liability, e.g., because the entity has become legally obliged to make the payment, could qualify as a hedged item. For example, a recognised liability to pay a dividend in a foreign currency gives rise to foreign currency risk.

4.2.2 Components

FRS 102 permits components of an item to be hedged (including combinations of components). For example, rather than having to consider all risks within a hedged item, an item may be hedged with respect to the risks associated with only a portion of its cash flow variability or fair value change, as long as the risk component is separately identifiable and reliably measurable. [FRS 102.12.16C]. For example, if an entity issued debt paying a coupon of SONIA + 2%, it would be possible to only include the SONIA component of the total interest rate exposure within the hedge accounting relationship. Similarly, for fixed rate debt, it would also be possible to identify, say, a 5% coupon component of debt paying a 6% fixed rate coupon.

If a risk component is contractually specified, as in the above SONIA debt issued example, it would usually be considered separately identifiable. In this circumstance, the contractually specified risk component would usually be referenced to observable data, such as a published price index. Therefore, the risk component would usually also be considered reliably measurable.

FRS 102 permits an entity to hedge specific risk components while choosing not to hedge other risk components inherent in the hedged item. Similarly, it is possible to designate more than one risk component of the hedged item within a single hedge relationship. These concepts are demonstrated in Illustration 14-1 below.

Illustration 14-1: Cash flow hedge of specified risk component

On 31 Dec 20X6, Company A, which has Sterling as its functional currency, hedges the highly probable anticipated purchase of 50 tonnes of aluminium on 31 March 20X7 by buying 50 tonnes of aluminium futures on the LME. Although A's aluminium purchase price is determined in US\$, A does not wish to eliminate the associated foreign currency risk as it expects to have sufficient US\$ funds available from anticipated US\$ sales also in March 20X3.

Given the market structure in which A purchases the aluminium, A has identified the US\$ LME aluminium price as an eligible risk component in the highly probable anticipated purchase of aluminium. A designates the futures contract as the hedging instrument in a cash flow hedge of changes in the LME US\$ aluminium price risk component of the anticipated purchases. Other changes in A's anticipated purchase price for the 50 tonnes of aluminium are not considered within the hedge relationship, as hedge accounting is restricted to changes in the eligible risk component, in this case the US\$ LME aluminium price.

In this example, A has chosen to hedge the aluminium price risk. Instead, it could have chosen to hedge the foreign currency risk or both the price risk and the foreign currency risk depending on its risk management strategies. [FRS 102.12.16C].

Ordinary purchase or sales agreements sometimes contain clauses that determine the contract price via a specified formula linked into a benchmark commodity price. Accordingly, these contracts may also contain components that are separately identifiable and reliably measurable. Examples of contractually specified risk components in purchase and sale contracts are as follows:

- The price of wires contractually linked in part to a copper benchmark price and in part to a variable tolling charge reflecting energy costs.
- And

- The price of coffee contractually linked in part to a benchmark price of Arabica coffee and in part to transportation charges that include a diesel price indexation.

While it is certainly easier to determine that a risk component is separately identifiable and reliably measurable if it is specified in the contract, it is not a requirement that a component must be contractually specified in order for it to be eligible as a hedged item. For example, under IFRS it has been common practice to identify a non-contractually specified risk-free interest rate or other benchmark interest rate component of the total interest rate exposure of a fixed rate financial instrument. This approach is supported by an example provided within the application guidance of IFRS 9, and IAS 39 also provides support for this approach as follows: “for a fixed rate financial instrument hedged for changes in fair value attributable to changes in a risk-free or benchmark rate, the risk-free or benchmark rate is normally regarded as both a separately identifiable component of the financial instrument and reliably measurable”. [IFRS 9.B6.3.10(d), IAS 39.AG99F(a)]. This rationale is equally valid under FRS 102.

How we see it

We believe that in order to determine that the risk component is separately identifiable and reliably measurable and qualify for hedging, it must have a distinguishable effect on changes in the value or the cash flows that an entity is exposed to. For example, if the price of a fixed rate financial instrument varies directly in response to changes in a risk-free interest rate or other benchmark interest rate, it could be determined that the rate is a separately identifiable and reliably measurable risk component of the fixed rate debt.
