In this case, Entity A determines that the contract duration is one year, with options to renew for each of the following three years because the customer can choose whether to receive the service during those years. That is, Entity A determines that enforceable rights and obligations do not exist throughout the entire stated contractual term because there is no substantive termination penalty. The options to renew are not material rights because they are offered at the stand-alone selling price of £100,000.

Illustration 4-5: Duration of a contract without a termination penalty

Entity A enters into a three-year contract with a customer to provide maintenance services. Entity A begins providing the services immediately. Consideration is payable in equal monthly instalments and each party has the unilateral right to terminate the contract without compensating the other party if it provides 30 days' notice.

While the stated contractual term is three years, Entity A's rights and obligations are enforceable only for 30 days. Therefore, under Section 23, the contract is accounted for as a one-month contract with a renewal option for additional months of maintenance services. This is because the customer or Entity A could cancel the agreement with 30 days' notice without paying a substantive termination payment.

Entity A also needs to evaluate the accounting for the renewal option(s) to determine whether it is a material right (see 3.4.6 below).

Question 4-7: How would an entity evaluate the contract term when only the customer has the right to cancel the contract without cause and how do termination penalties affect this analysis?¹²⁰

Enforceable rights and obligations exist throughout the term in which each party has the unilateral enforceable right to terminate the contract by compensating the other party. A customer-only right to terminate is generally not sufficient to warrant a different conclusion than one in which both parties have the right to terminate, as discussed in Question 4-6 above.

Generally, a substantive termination penalty payable by a customer to the entity is evidence of enforceable rights and obligations of both parties throughout the period covered by the termination penalty. For example, consider a four-year service contract in which the customer has the right to cancel without cause at the end of each year, but for which the customer would incur a termination penalty that decreases each year and is determined to be substantive. In this case, the arrangement generally would be treated as a four-year contract. See Illustration 4-4, Scenario B in Question 4-6 above.

There could also be situations in which a contractual penalty for not meeting contractual minimums would result in including optional goods or services in the accounting for the original contract (see Question 5-21 in 5.6 below).

The determination of whether a termination penalty is substantive, and what constitutes enforceable rights and obligations under a contract, would likely require judgement and consideration of the facts and circumstances. In addition, it is possible that payments that effectively act as a termination penalty and create or negate enforceable rights and obligations might not be labelled as such in a contract. Consider, as an example, an entity that sells equipment and consumables. The equipment is sold at a discount, but the customer is required to repay some or all of the discount if it does not purchase a minimum number of consumables. In this instance, it can be concluded that the penalty (i.e., repaying the upfront discount) is substantive and is evidence of enforceable rights and obligations up to the minimum quantity. This example is discussed further in Question 5-21 at 5.6 below.

If enforceable rights and obligations do not exist throughout the entire term stated in the contract, the customer cancellation rights would generally be treated as customer options. Examples include when there are no (or non-substantive) contractual penalties that compensate the entity upon cancellation and when the customer has the unilateral right to terminate the contract for reasons other than cause or contingent events outside the customer's control. Note that this is consistent with the Basis for Conclusions on IFRS 15 i.e., the IASB noted that a cancellation option or termination right can be similar to a renewal option. [IFRS 15.BC391]. An entity would need to determine whether a cancellation option indicates that the customer has a material right that would need to be accounted for as a performance obligation (e.g., there is a discount for goods or services provided during the cancellable period that provides the customer with a material right) (see 5.6 below for further discussion on customer options and the determination of whether an option represents a material right).

¹²⁰ Based on TRG Agenda paper no. 48, *Customer options for additional goods and services*, dated 9 November 2015.

Question 4-8: If an entity has a past practice of not enforcing termination payments, does this affect the duration of the contract (i.e., the contractual period)?¹²¹

The evaluation of the termination payment in determining the duration of a contract depends on whether the law (which might vary by jurisdiction) considers past practice as limiting the parties' enforceable rights and obligations. An entity's past practice of allowing customers to terminate the contract early without enforcing collection of the termination payment only affects the contract duration in cases in which the parties' legally enforceable rights and obligations are limited because of the lack of enforcement by the entity. If that past practice does not change the parties' legally enforceable rights and obligations, the contract duration equals the period throughout which a substantive termination penalty would be due (which could be the stated contractual term or a shorter duration if the termination penalty did not extend to the end of the contract).

Question 4-9: How would an entity account for a partial termination of a contract (e.g., a change in the contract term from three years to two years prior to the beginning of year two)?**How we see it**

We believe an entity accounts for the partial termination of a contract as a contract modification (see 4.4 below) because it results in a change in the scope of the contract.

Section 23 states that "a contract modification either creates new enforceable rights and obligations, or changes such rights and obligations that already exist". [FRS 102.23.13]. A partial termination of a contract results in a change to the enforceable rights and obligations in the existing contract (also see Question 4-20 in 4.4.2.C below regarding contract modifications that decrease the scope of a contract). Note that this conclusion is consistent with TRG's discussion in agenda paper no. 48, which states, "a substantive termination penalty is evidence of enforceable rights and obligations throughout the contract term. The termination penalty is ignored until the contract is terminated at which point it is accounted for as a modification".¹²²

Consider the following Illustration:

Illustration 4-6: Partial termination of a contract

An entity enters into a contract with a customer to provide monthly maintenance services for three years at a fixed price of £500 per month (i.e., total consideration of £18,000). The contract includes a termination clause that allows the customer to cancel the third year of the contract by paying a termination penalty of £1,000 (which is considered substantive for the purpose of this example). That is, the entity determines the contract duration is three years. However, at the end of the first year, the customer decides to cancel the third year of the contract and pays the £1,000 termination penalty specified in the contract.

In this example, the modification is not accounted for as a separate contract because it does not result in the addition of distinct goods or services (see 4.4.2 below). Since the remaining services are distinct, the entity applies the requirements in FRS 102.23.16(a) and accounts for the modification prospectively. The remaining consideration of £7,000 (£6,000 per year under the original contract for the second year, plus the £1,000 payment upon modification) is recognised over the remaining revised contract period of one year. That is, the entity recognises the £1,000 termination penalty over the remaining performance period.

In contrast, if the entity determined that the termination penalty was not substantive, the contract duration would be two years (not the three-year stated term). As discussed in Question 4-6 above, because the entity concluded that the contract duration was less than the stated term due to a termination clause, the termination penalty would need to be included in the transaction price at contract inception. The penalty would effectively result in an adjusted price per month of £542 for two years (i.e., total consideration of £13,000 ÷ 24 months). Determining whether a termination penalty is substantive will require judgement and consideration of the facts and circumstances.

Question 4-10: How is consideration that was received from a customer, but not yet recognised as revenue, accounted for when the contract is cancelled?

When a contract is cancelled (by either the customer or the entity), it is a contract modification that reduces the scope of the contract. As discussed in Question 4-9 above and Question 4-20 in 4.4.2.C below, such a modification would not be accounted for as a separate contract because it does not result in the addition of distinct goods or services. Rather, the accounting will depend on whether there are any remaining goods and services to be provided after the cancellation and, if so, whether they are distinct from the goods and services already provided as discussed in 4.4 below. That is, if a contract is cancelled but there are remaining goods and services to be provided, the entity applies the Section 23's contract modification requirements.

If there are no remaining goods and services to be provided after the cancellation, the accounting depends on whether the consideration is refundable or non-refundable. To determine whether consideration is refundable or non-refundable, entities might need to consider termination penalties, legal requirements for refund, customary business practices of providing refunds or statements made to customers that create a constructive or legal obligation to provide a refund.

If the consideration received from the customer is refundable and there are no remaining goods and services to be provided after the cancellation, the entity has a refund liability. This might require the entity to reclassify any existing contract liability to refund liability. In some cases, the entity might ask the customer to waive their right to a refund of the consideration in exchange for vouchers, for example, and/or discounts on future goods or services. The accounting for such offers (including the accounting for the liability) depends on the specific facts and circumstances and could require judgement.

How we see it

If the consideration received from the customer is non-refundable and there are no remaining goods and services to be provided after the cancellation, we believe that the entity can recognise revenue for the consideration received when the contract is cancelled, and the related contract liability would also be derecognised.

This accounting treatment is similar to the guidance for breakage (e.g., for gift cards, see 8.9 below) and the recognition of revenue for arrangements that fail the criteria required in paragraph 23.10 (see 4.5 below). In both of those situations, Section 23 provides guidance that permits an entity to derecognise a liability and recognise revenue, provided the relevant criteria are met, when:

- The entity expects the customer will not exercise its contractual rights (for breakage).
[FRS 102.23.130]
- Or
- The contract is effectively completed or cancelled (for contracts that do not meet the contract criteria in FRS 102.23.7). [FRS 102.23.10].

In some cases, an entity might be entitled to termination fees in the event of cancellation. The accounting for termination fees is discussed in Question 4-9 above.

Question 4-11: How does an entity account for services provided during a period after contract expiration in which enforceable rights and obligations do not exist until the contract is renewed?

How we see it

If an entity continues to provide services to a customer during a period when a contract does not exist because a previous contract has expired and the contract has not yet been renewed, we believe that the entity would need to recognise revenue for providing those services on a cumulative catch-up basis at the time the contract is renewed (i.e., when enforceable rights and obligations exist between the entity and its customer).

As discussed in 4.1 above, determining whether an enforceable contract exists under the model might require judgement and an evaluation of the relevant legal framework.

This approach to record revenue on a cumulative catch-up basis reflects the performance obligations that are partially satisfied at the time enforceable rights and obligations exist and is consistent with the overall principle of Section 23 that requires revenue to be recognised when (or as) an entity transfers control of goods or services to a customer under an enforceable contract. This conclusion is also consistent with the discussion in Question 8-20 in 8.1.4.E below on the accounting for goods or services provided to a customer before the contract establishment date.

121 Based on TRG Agenda paper no. 10, *Contract enforceability and termination clauses*, dated 31 October 2014.

122 TRG Agenda paper no. 48, *Customer options for additional goods and services*, dated 9 November 2015, paragraph 47a.

Consider the following Illustration:

Illustration 4-7: Services provided during a period after contract expiration

Entity A enters into a non-cancellable one-year contract with a customer on 1 January 20X6 to provide web-hosting services that are transferred to the customer over time. The total consideration of £1,200 is payable upfront and is non-refundable. After the expiration of the contract, at its discretion, Entity A continues to provide web-hosting services to the customer for a limited time to allow the customer to contemplate renewing the contract. If the customer renews the contract, the pricing would include the web-hosting services provided during the period between the original contract expiration and the contract renewal.

The customer agrees to renew the contract on 1 February 20X7. Entity A agrees to provide web-hosting services from 1 January 20X7 to 31 December 20X7 for total consideration of £1,200, which is payable on the renewal date. Entity A determines that enforceable rights and obligations exist on 1 February 20X7 and recognises revenue on a cumulative catch-up basis to reflect the entity's transfer of control of the web-hosting services for one month (i.e., January 20X7). Accordingly, Entity A recognises £100 on 1 February 20X7 for the web-hosting services provided to the customer before the renewal date. The remaining consideration of £1,100 is recognised from 1 February 20X7 to 31 December 20X7 as the entity performs.

An entity might receive consideration from the customer for the goods or services transferred before the existence of an enforceable contract. If so, the entity would need to follow the requirements in paragraphs 23.9 and 23.10 (discussed in 4.5 below). This requires that when an arrangement does not meet the criteria to be a contract under Section 23, an entity would recognise the non-refundable consideration received as revenue only if one of the two events has occurred (e.g., the entity has no remaining obligations to transfer goods or services to the customer and all, or substantially all, of the consideration promised by the customer has been received by the entity and is non-refundable).

4.3 Combining contracts

In most cases, entities apply the model to individual contracts with a customer. However, Section 23 requires entities to combine contracts entered into at, or near, the same time with the same customer (or related parties of the customer as defined in Appendix I to FRS 102) if they meet one or more of the following criteria: [FRS 102.23.12]

- The contracts are negotiated as a package with a single commercial objective
- The consideration to be paid for one contract is dependent on the price or performance of the other contract

Or

- The goods or services promised in the contracts are a single performance obligation (see 5 below)

Entities need to apply judgement to determine whether contracts are entered into at or near the same time because Section 23 does not provide a bright line for making this assessment. In the Basis for Conclusions on IFRS 15, the IASB noted that the longer the period between entering into different contracts, the more likely it is that the economic circumstances affecting the negotiations of those contracts will have changed. [IFRS 15.BC75].

Negotiating multiple contracts at the same time is not sufficient evidence to demonstrate that the contracts represent a single arrangement for accounting purposes. In the Basis for Conclusions on IFRS 15, the IASB also noted that there are pricing interdependencies between two or more contracts when either of the first two criteria (i.e., the contracts are negotiated as a package with a single commercial objective or the price in one contract depends on the price or performance of the other contract) are met, so the amount of consideration allocated to the performance obligations in each contract might not faithfully depict the value of the goods or services transferred to the customer if those contracts were not combined. The IASB also explained the third criterion (i.e., the goods or services in the contracts are a single performance obligation) was included to avoid any structuring opportunities that would effectively allow entities to bypass the requirements for identifying performance obligations. [IFRS 15.BC73]. That is, an entity cannot avoid determining whether multiple promises made to a customer at, or near, the same time need to be bundled into one or more performance obligations in accordance with Step 2 of the model (see 5 below) solely by including the promises in separate contracts.

4.3.1 Portfolio approach practical expedient

Under Section 23, the five-step model is applied to individual contracts with customers, unless the contract combination requirements discussed in 4.3 above are met. However, there might be situations in which it could be more practical for an entity to group contracts for revenue recognition purposes, rather than attempt to account for each contract separately. Specifically, Section 23 includes the following practical expedient: *[FRS 102.23.6]*

Extract from Section 23

23.6 This section specifies the accounting for an individual contract with a customer. An entity may apply this section to a portfolio of similar contracts (or performance obligations) if the entity reasonably expects that the result of doing so would not differ materially from the result of applying this section to the individual contracts (or performance obligations) within that portfolio.

In order to use the portfolio approach, an entity must reasonably expect that the accounting result will not be materially different from the result of applying Section 23 to the individual contracts. However, the Basis for Conclusions on IFRS 15 noted that the IASB did not intend for an entity to quantitatively evaluate every possible outcome when concluding that the portfolio approach is not materially different. Instead, they indicated that an entity would be able to take a reasonable approach to determine portfolios that are representative of its types of customers and that an entity needs to use judgement in selecting the size and composition of those portfolios. *[IFRS 15.BC69]*.

How we see it

Application of the portfolio approach will likely vary based on the facts and circumstances of each entity. An entity can choose to apply the portfolio approach to only certain aspects of the model (e.g., determining the transaction price in Step 3).

Frequently asked questions

Question 4-12: How would an entity assess collectability for a portfolio of contracts?

See response to Question 4-4 in 4.1.5.B above.

4.4 Contract modifications

Parties to an arrangement frequently agree to modify the scope or price (or both) of their contract. If that happens, an entity must determine whether the modification is accounted for as a new contract or as part of the existing contract. Generally, it is clear when a contract modification has taken place, but in some circumstances, that determination is more difficult. To assist entities when making this determination, Section 23 states the following: *[FRS 102.23.13, FRS 102.23.14]*

Extract from Section 23

23.13 A contract modification is a change in the scope or price (or both) of a contract that is approved by the parties to the contract. A contract modification either creates new enforceable rights and obligations, or changes such rights and obligations that already exist.

23.14 If the parties to a contract have approved a change in the scope of the contract but have not yet determined the corresponding change in price, an entity shall estimate the change to the transaction price arising from the modification in accordance with the requirements for estimating variable consideration (see paragraphs 23.44 to 23.48).

The extract above illustrates that these requirements focus on rights and obligations and therefore apply more broadly than only to finalised modifications. That is, Section 23 indicates that an entity might have to account for a contract modification prior to the parties reaching final agreement on changes in scope or pricing (or both). Instead of focusing on the finalisation of a modification, Section 23 focuses on the enforceability of the changes to the rights and obligations in the contract. Once an entity determines the revised rights and obligations are enforceable, it accounts for the contract modification. Contract terminations (either partial or full) are also considered a form of contract modification under Section 23. Illustration 4-8 below, which is based on Example 9 in IFRS 15, is an example to illustrate the accounting for an unapproved modification: *[IFRS 15.IE Example 9, IFRS 15.IE42-IE43]*

Illustration 4-8: Unapproved change in scope and price

An entity enters into a contract with a customer to construct a building on customer-owned land. The contract states that the customer will provide the entity with access to the land within 30 days of contract inception. However, the entity was not provided access until 120 days after contract inception because of storm damage to the site that occurred after contract inception. The contract specifically identifies any delay (including *force majeure*) in the entity's access to customer-owned land as an event that entitles the entity to compensation that is equal to actual costs incurred as a direct result of the delay. The entity is able to demonstrate that the specific direct costs were incurred as a result of the delay in accordance with the terms of the contract and prepares a claim. The customer initially disagreed with the entity's claim.

The entity assesses the legal basis of the claim and determines, on the basis of the underlying contractual terms, that it has enforceable rights. Consequently, it accounts for the claim as a contract modification in accordance with paragraphs 23.13 to 23.16. The modification does not result in any additional goods and services being provided to the customer. In addition, all of the remaining goods and services after the modification are not distinct and form part of a single performance obligation. Consequently, the entity accounts for the modification in accordance with paragraph 23.16(b) by updating the transaction price and the measure of progress towards complete satisfaction of the performance obligation (see 4.4.2.B below). The entity considers the constraint on estimates of variable consideration in paragraph 23.46 when estimating the transaction price (see 6.2.3 below).

Once an entity has determined that a contract has been modified, the entity determines the appropriate accounting treatment for the modification. Certain modifications are treated as separate stand-alone contracts (discussed in 4.4.1 below), while others are combined with the original contract (discussed in 4.4.2 below) and accounted for in that manner. In addition, an entity accounts for some modifications on a prospective basis and others on a cumulative catch-up basis.

Section 23 includes the following requirements for determining the appropriate accounting treatment:
[FRS 102.23.15, FRS 102.23.16]

Extract from Section 23

23.15 An entity shall account for a contract modification as a separate contract if:

- (a) the modification increases the scope of the existing contract because of additional goods or services promised that are distinct from those in the existing contract; and
- (b) the modification increases the price of the existing contract by an amount of consideration that reflects the entity's stand-alone selling price of the additional goods or services and any appropriate adjustments to that price to reflect the circumstances of that contract.

23.16 If a contract modification is not accounted for as a separate contract, an entity shall account for the contract modification as follows:

- (a) If the remaining goods or services are distinct from the goods or services transferred on or before the date of the contract modification, an entity shall account for the contract modification as if it were a termination of the existing contract and the creation of a new contract. The transaction price for the new contract is the sum of:
 - (i) the consideration included in the estimate of the transaction price for the existing contract that had not been recognised as revenue; and
 - (ii) the consideration promised as part of the contract modification.
- (b) If the remaining goods or services are not distinct from the goods or services transferred on or before the date of the contract modification, an entity shall account for the contract modification as if it had always been part of the existing contract. The effect that the contract modification has on the transaction price, and on the entity's measure of progress towards complete satisfaction of the performance obligation, shall be recognised as an adjustment to revenue at the date of the contract modification (ie on a cumulative catch-up basis).
- (c) If the remaining goods or services are a combination of items (a) and (b), then the entity shall account for the effects of the modification on the unsatisfied (including partially unsatisfied) performance obligations in the modified contract in a manner that is consistent with the objectives of this paragraph.

The following flow chart illustrates these requirements:

Figure 4-1: Contract modifications

* A contract modification can be approved in writing, by oral agreement or implied by customary business practices. FRS 102.23.14 indicates that an entity may have to account for a contract modification prior to the parties reaching final agreement on changes in scope or pricing (or both), provided the rights and obligations that are created or changed by a modification are enforceable.

** In accordance with FRS 102.23.15, an entity may make appropriate adjustments to the stand-alone selling price to reflect the circumstances of the contract and still meet the criteria to account for the modification as a separate contract.

When determining how to account for a contract modification, an entity must consider whether any additional goods or services are distinct, giving consideration to whether those goods or services are distinct within the context of the modified contract (see 5.2.1 below for further discussion on evaluating whether goods or services are distinct). That is, although a contract modification might add a new good or service that would be distinct in a stand-alone transaction, that new good or service might not be distinct when considered in the context of the contract, as modified. For example, in a building renovation project, a customer might request a contract modification to add a new room. The construction firm might commonly sell the construction of an added room on a stand-alone basis, which would indicate that the service is

capable of being distinct. However, when that service is added to an existing contract and the entity has already determined that the entire project is a single performance obligation, the added goods or services would normally be combined with the existing bundle of goods or services.

In contrast to the construction example (for which the addition of otherwise distinct goods or services are combined with the existing single performance obligation and accounted for in that manner), a contract modification that adds distinct goods or services to a single performance obligation that comprise a series of distinct goods or services (see 5.2.2 below) is accounted for either as a separate contract or as the termination of the old contract and the creation of a new contract (i.e., prospectively).

In addition to determining whether any additional goods or services are distinct, an entity also needs to determine whether the additional goods or services are added at the stand-alone selling price that exists at the contract modification date. As stated in FRS 102.23.15, an entity might make appropriate adjustments to the stand-alone selling price to reflect the circumstances of the contract and still meet the criteria to account for the modification as a separate contract. See further discussion in 4.4.1 below.

Furthermore, as shown in Illustration 4-11 in 4.4.2.A below), a contract modification might include compensation to a customer for performance issues (e.g., poor service by the entity, defects present in transferred goods). An entity might need to account for the compensation to the customer as a change in the transaction price (see 7.4 below) separate from other modifications to the contract.

Frequently asked questions

Question 4-13: When would an entity evaluate a contract under the contract modification requirements?

An entity typically enters into a separate contract with a customer to provide additional goods or services. Hence, an entity would consider whether a new contract with an existing customer needs to be evaluated under the contract modification requirements.

A new contract with an existing customer needs to be evaluated under the contract modification requirements if the new contract results in a change in the scope or price of the original contract. FRS 102.23.13 states that “a contract modification either creates new enforceable rights and obligations, or changes such rights and obligations that already exist”. [FRS 102.23.13]. Therefore, an entity needs to evaluate whether a new contract with an existing customer represents a legally enforceable change in scope or price (or both) to an existing contract. A legally enforceable change in scope or price to an existing contract could also be accomplished by terminating the existing contract and entering into a new contract with the same customer. In those situations, entities also need to consider the contract modification requirements in Section 23.

In some cases, the determination of whether a new contract with an existing customer creates new or changes existing enforceable rights and obligations is straightforward because the new contract does not contemplate goods or services in the existing contract, including the pricing of those goods or services. Purchases of additional goods or services under a separate contract that do not modify the scope or price of an existing contract do not need to be evaluated under the contract modification requirements. Rather, they are accounted for as new (separate) contract.

How we see it

In other cases, the determination of whether a new contract is a modification of an existing contract requires judgement. In such circumstances, we believe an entity needs to consider the specific facts and circumstances surrounding the new contract in order to determine whether it represents a contract modification, which could include considering factors such as those included in the contract combination requirements discussed below.

The factors in the contract combination requirements (see 4.3 above) include:

- Whether the contracts were negotiated as a package with a single commercial objective (this might be the case in situations where the existing contract contemplates future modifications)
- Whether the amount of consideration to be paid in one contract depends on the price or performance of the other contract
- Whether the goods or services promised in the contracts (or some goods or services promised in each of the contracts) are a single performance obligation

If the pricing in the new contract is dependent on the original contract, or if the terms of the new contract are in some other way negotiated based on the original contract, it is likely that the new contract needs to be evaluated under the contract modification requirements.

Question 4-14: When an arrangement that has already been determined to meet the Section 23's contract criteria is modified, would an entity need to reassess whether that arrangement still meets the criteria to be considered a contract within the scope of the five-step model and/or the stand-alone selling prices of the underlying goods and services?

How we see it

Whether an entity needs to make these reassessments depends on the nature of the modification. For a contract modification that is accounted for by updating the transaction price and measure of progress for the single performance obligation in the modified contract (in accordance with paragraph 23.16 of FRS 102 - see 4.4.2.B below), an entity will need to apply judgement to determine whether to reassess the contract and determine whether it still meets the criteria to be considered a contract in the scope of the model. However, if a contract is modified, we believe that might indicate that "a significant change in facts and circumstances" has occurred (see 4.1 above) and that the entity must reassess the criteria in paragraph 23.7 for the modified contract.

Any reassessment is prospective in nature and would not change the conclusions associated with goods or services already transferred. That is, an entity would not reverse any receivables, revenue or contract assets already recognised under the contract because of the reassessment of the contract criteria in paragraph 23.7. However, due to the contract modification accounting, the entity might need to adjust contract assets or cumulative revenue recognised in the period of the contract modification, but it would not update the stand-alone selling prices of the goods and services underlying the existing, modified contract.

For a contract modification that is accounted for as a separate contract (in accordance with paragraph 23.15 - see 4.4.1 below), an entity needs to assess whether that separate contract meets the criteria to be considered a contract within the scope of the model in Section 23. If the separate contract meets the criteria to be considered a separate contract, the entity applies the requirements in Section 23 to account for the separate contract, including assessing the stand-alone selling price of the underlying goods and services as at the separate contract's inception date (i.e., the modification date). The accounting for the original contract would not be affected. That is, an entity would not need to reassess whether the original contract still meets the criteria to be considered a contract with the scope of the model in Section 23, and the stand-alone selling prices of the underlying goods and services in the original contract would also not be updated.

For a modification that is accounted for as a termination of the old contract and the creation of a new contract (in accordance with paragraph 23.16(a) - see 4.4.2.A below), an entity needs to assess whether the new contract meets the criteria to be considered a contract within the scope of the model. If the new contract meets the criteria to be considered a contract, the entity applies the requirements in Section 23 to account for the new contract, including assessing the stand-alone selling price of the remaining underlying goods and services as at the new contract's inception date (i.e., the modification date).

For a modification that is accounted for as a combination of a modification of the existing contract and the creation of a new contract (in accordance with paragraph 23.16(c) - see 4.4.2.C below), many of the considerations noted above are also relevant. Entities need to apply judgement to appropriately reassess the related contracts and stand-alone selling prices for these types of modifications.

For further discussion on updating stand-alone selling prices, see 7.1.3 below.

Question 4-15: How does an entity distinguish between a contract modification and a change in the estimated transaction price due to variable consideration after contract inception?

An entity might need to apply judgement to determine whether a change in the transaction price is the result of either:

- A contract modification (due to a change in the parties' enforceable rights and obligations after contract inception).
- Or
- New information obtained about variable consideration that existed (and was estimated) at contract inception.

While a contract modification might result in a change in the transaction price, not all changes in the transaction price are due to contract modifications. An entity needs to evaluate the facts and circumstances related to the change in the transaction price to assess whether it creates new, or changes existing, enforceable rights and obligations or is a change in the estimate of variable consideration. For example, a decision by both parties to reduce the amount of goods or services promised in the contract would generally represent a contract modification.

Conversely, a change in transaction price due to an update of the estimate of variable consideration does not create new or change existing enforceable rights and obligations. When a contract with a customer includes variable consideration (see 6.2 below), the entity is generally required to estimate, at contract inception and throughout the contract term, the amount of consideration to which it will be entitled in exchange for transferring promised goods or services.

Changes to the transaction price that are related to a change in estimates of variable consideration (because they result in the resolution of variability that existed at contract inception), are allocated to the performance obligations in the contract on the same basis as at contract inception (see 7.4 below). [FRS 102.23.76]. In contrast, changes in the transaction price that are related to a contract modification are accounted for in accordance with the contract modification requirements (as described above in paragraphs 13 to 23.16).

Question 4-16: How would an entity distinguish between a contract modification and a marketing offer when an entity provides customer incentives?

An entity might provide incentives to customers to encourage demand. Customer incentives might include free goods or services, options for additional goods and services at a discount (e.g., additional loyalty points, prospective coupons or discounts) or cash payments to customers. The accounting for these incentives will depend on the facts and circumstances of the offer. An offer to a current customer that creates new enforceable rights and obligations or changes the enforceable rights and obligations of the parties to an existing contract is accounted for as a contract modification. In some cases, an offer might not result in a contract modification and would be accounted for as a marketing offer (i.e., an expense).

How we see it

Entities need to carefully consider the terms and conditions of any customer incentive to determine whether the offer needs to be accounted for as a contract modification or a marketing offer, including consideration of the above circumstances.

In addition, as discussed in Question 4-13 above, we believe that the accounting principles for determining when contracts have to be combined under paragraph 23.12 of FRS 102 will be helpful when determining whether an offer of free goods or services to an existing customer is a contract modification.

An offer that is the result of negotiations with a specific customer or group of customers might indicate the addition of new enforceable rights and obligations to an existing contract or changes to existing enforceable rights and obligations. However, the following circumstances might indicate that the entity has made a marketing offer:

- The same offer is available to both existing customers and counterparties that do not meet the definition of a customer.
- The offer is available to a broad group of (or all) current customers and is not the result of negotiations with individual customers.
- The entity has the right to rescind the offer.

For any payments to customers, entities will need to consider the requirements for consideration paid or payable to a customer (see 6.7 below). Such payments would be accounted for as a reduction of the transaction price (and, therefore, revenue) unless the payment to the customer is in exchange for a distinct good or service that the customer transfers to the entity.

Question 4-17: How would an entity account for the exercise of a material right? That is, would an entity account for it as: a contract modification, a continuation of the existing contract or variable consideration?

See response to Question 5-27 in 5.6 below.

Question 4-18: How do entities account for modifications and other changes to licences of intellectual property?

See response to Question 9-1 in 9.1.4 below.

4.4.1 Contract modification represents a separate contract

Certain contract modifications are treated as separate, new contracts. [FRS 102.23.15]. For these modifications, the accounting for the original contract is not affected by the modification and the revenue recognised to date on the original contract is not adjusted. Furthermore, any performance obligations remaining under the original contract continue to be accounted for under the original contract. The accounting for this type of modification reflects the fact that there is no economic difference between a separate contract for additional goods or services and a modified contract for those same items, provided the two criteria required for this type of modification are met.

The first criterion that must be met for a modification to be treated as a separate contract is that the additional promised goods or services in the modification must be distinct from the promised goods or services in the original contract. [FRS 102.23.15(a)]. This assessment is done in accordance with Section 23's general requirements for determining whether promised goods or services are distinct (see 5.2.1 below). Only modifications that add distinct goods or services to the arrangement can be treated as separate contracts. Arrangements that reduce the amount of promised goods or services or change the scope of the original promised goods or services cannot, by their very nature, be considered separate contracts. Instead, they are modifications of the original contract (see 4.4.2 below).

The second criterion is that the amount of consideration expected for the added promised goods or services must reflect the stand-alone selling prices of those promised goods or services at the contract modification date. However, when determining the stand-alone selling price, entities have some flexibility to adjust the stand-alone selling price, depending on the facts and circumstances. [FRS 102.23.15(b)]. For example, an entity might give an existing customer a discount on additional goods because the entity would not incur selling-related costs that it would typically incur for new customers. In this example, the entity might determine that the additional transaction consideration meets the criterion, even though the discounted price is less than the stand-alone selling price of that good or service for a new customer. In another example, an entity might conclude that, with the additional purchases, the customer qualifies for a volume-based discount (see Questions 5-23 and 5-24 in 5.6 below on volume discounts).

The following Illustration shows considerations for determining whether the amount of consideration expected for the additional goods and services reflects the stand-alone selling price:

Illustration 4-9: Determining whether the amount of consideration reflects the stand-alone selling price of additional goods or services

Entity E agrees to construct a manufacturing facility on a customer's land for £10 million. During construction, the customer determines that a separate storage facility is needed at the location. The parties agree to modify the contract to include the construction of the storage facility, which is to be completed within three months of completing the manufacturing facility, for a total price of £11 million (i.e., when the contract is modified, an additional £1 million is added to the consideration Entity E will receive). Assume that Entity E determines that the construction of the separate storage facility is distinct (i.e., a performance obligation) and that it transfers control of each facility over time. Entity E must determine whether the £1 million represents the stand-alone selling price of the separate storage facility.

Scenario A

Entity E determines that £1.1 million is the stand-alone selling price at the contract modification date for the construction of a similar facility. However, much of the equipment and labour force necessary to complete construction of the storage facility is already onsite and available for use by Entity E. Thus, Entity E concludes that the additional £1 million reflects the stand-alone selling price at contract modification, adjusted for the circumstances of the contract.

Scenario B

Entity E determines that £1.5 million is the stand-alone selling price at the contract modification date for the construction of a similar facility. While Entity E can attribute some of the discount to its ability to use equipment and labour that are already onsite, the price reduction was primarily driven by other factors (e.g., a desire to maintain the customer relationship). Therefore, the additional £1 million does not reflect the stand-alone selling price at contract modification.

In situations with highly variable pricing, determining whether the additional consideration in a modified contract reflects the stand-alone selling price for the additional goods or services might not be straightforward. Entities need to apply judgement when making this assessment. Evaluating whether the price in the modified contract is within a range of prices for which the goods or services are typically sold to similar customers might be an acceptable approach.

Illustration 4-10 below, which is based on Case A within Example 9 in IFRS 15, illustrates a contract modification that represents a separate contract: *[IFRS 15.IE Example 5 Case A, IFRS 15.IE19-IE21]*

Illustration 4-10: Modification of a contract for goods - Additional products for a price that reflects the stand-alone selling price

An entity promises to sell 120 products to a customer for £12,000 (£100 per product). The products are transferred to the customer over a six-month period. The entity transfers control of each product at a point in time. After the entity has transferred control of 60 products to the customer, the contract is modified to require the delivery of an additional 30 products (a total of 150 identical products) to the customer. The additional 30 products were not included in the initial contract.

When the contract is modified, the price of the contract modification for the additional 30 products is an additional £2,850 or £95 per product. The pricing for the additional products reflects the stand-alone selling price of the products at the time of the contract modification (see 7.1 below) and the additional products are distinct (in accordance with FRS 102.23.21 - see 5.2.1 below) from the original products.

In accordance with paragraph 23.15, the contract modification for the additional 30 products is, in effect, a new and separate contract for future products that does not affect the accounting for the existing contract. The entity recognises revenue of £100 per product for the 120 products in the original contract and £95 per product for the 30 products in the new contract.

4.4.2 Contract modification is not a separate contract

If one or both of the criteria discussed in 4.4.1 above are not met (i.e., distinct goods or services are not added or the distinct goods or services are not priced at their stand-alone selling price), the contract modifications are accounted for as changes to the original contract and not as separate contracts. This includes contract modifications that modify or remove previously agreed-upon goods or services or reduce the price of the contract. An entity accounts for the effects of these modifications differently, depending on which of the three scenarios described in FRS 102.23.16 (see the extract in 4.4 above), and discussed in 4.4.2.A-4.4.2.C below, most closely aligns with the facts and circumstances of the modification.

[FRS 102.23.16].

4.4.2.A Modification is a termination of the existing contract and the creation of a new contract

If the remaining goods or services after the contract modification are distinct from the goods or services transferred on, or before, the contract modification (but the distinct goods or services added in the modification were not added at their stand-alone selling prices at the date of the contract modification), the entity accounts for the modification as if it were a termination of the old contract and the creation of a new contract. *[FRS 102.23.16(a)].*

For these modifications, the revenue recognised to date on the original contract (i.e., the amount associated with the completed performance obligations) is not adjusted. Instead, the remaining portion of the original contract and the modification are accounted for, together, on a prospective basis by allocating the remaining consideration (i.e., the unrecognised transaction price from the existing contract plus the additional transaction price from the modification) to the remaining performance obligations (or to the remaining distinct goods or services in a single performance obligation identified as a series, see 5.2.2 below), including those added in the modification. *[FRS 102.23.16(a)].*

When a contract where the performance obligation is a series of distinct goods or services is modified, the goods or services provided after the contract modification are distinct from those provided before the contract modification. An entity might consider Example 7 in IFRS 15 which illustrates the accounting for a contract modification of a services contract that is determined to be a series of distinct goods or services (see 5.2.2 below) and meets the criteria in paragraph 23.16(a) to be accounted for as a termination of the existing contract and the creation of a new contract. As the performance obligation is a series, the services provided after the contract modification are distinct from those provided before the contract modification. *[IFRS 15.IE Example 7, IFRS 15.IE33-IE36].*

Illustration 4-11 below, which is based on Case B within Example 9 in IFRS 15, also illustrates a modification that is treated as a termination of an existing contract and the creation of a new contract:

[IFRS 15 IE Example 5 Case B, IFRS 15.IE19, IFRS 15.IE22-IE24]

Illustration 4-11: Modification of a contract for goods - Additional products for a price that does not reflect the stand-alone selling price

An entity promises to sell 120 products to a customer for £12,000 (£100 per product). The products are transferred to the customer over a six-month period. The entity transfers control of each product at a point in time. After the entity has transferred control of 60 products to the customer, the contract is modified to require the delivery of an additional 30 products (a total of 150 identical products) to the customer. The additional 30 products were not included in the initial contract.

During the process of negotiating the purchase of an additional 30 products, the parties initially agree on a price of £80 per product. However, the customer discovers that the initial 60 products transferred to the customer contained minor defects that were unique to those delivered products. The entity promises a partial credit of £15 per product to compensate the customer for the poor quality of those products. The entity and the customer agree to incorporate the credit of £900 (£15 credit × 60 products) into the price that the entity charges for the additional 30 products. Consequently, the contract modification specifies that the price of the additional 30 products is £1,500 or £50 per product. That price comprises the agreed-upon price for the additional 30 products of £2,400, or £80 per product, less the credit of £900.

At the time of modification, the entity recognises the £900 as a reduction of the transaction price and, therefore, as a reduction of revenue for the initial 60 products transferred. In accounting for the sale of the additional 30 products, the entity determines that the negotiated price of £80 per product does not reflect the stand-alone selling price of the additional products (see 7.1 below). Consequently, the contract modification does not meet the conditions in FRS 102.23.15 to be accounted for as a separate contract (see 4.4.1 above). Because the remaining products to be delivered are distinct from those already transferred, the entity applies the requirements in FRS 102.23.16(a) and accounts for the modification as a termination of the original contract and the creation of a new contract.

Consequently, the amount recognised as revenue for each of the remaining products is a blended price of £93.33 $\{[(£100 \times 60 \text{ products not yet transferred under the original contract}) + (£80 \times 30 \text{ products to be transferred under the contract modification})] \div 90 \text{ remaining products}\}$.

In Illustration 4-11 above, the entity attributed a portion of the discount provided on the additional products to the previously delivered products because they contained defects. This is because the compensation provided to the customer for the previously delivered products is a discount on those products, which results in variable consideration (i.e., a price concession) for them. The new discount on the previously delivered products was recognised as a reduction of the transaction price (and, therefore, revenue) on the date of the modification. Changes in the transaction price after contract inception are accounted for in accordance with paragraphs 23.76-23.77 (see 7.4 below).

In similar situations, it might not be clear from the change in the contract terms whether an entity has offered a price concession on previously transferred goods or services to compensate the customer for performance issues related to those items (that would be accounted for as a reduction of the transaction price) or has offered a discount on future goods or services (that would be included in the accounting for the contract modification). An entity needs to apply judgement when performance issues exist for previously transferred goods or services to determine whether to account for any compensation to the customer as a change in the transaction price for those previously transferred goods or services.

4.4.2.B Modification is part of the existing contract

The remaining goods or services to be provided after the contract modification might not be distinct from those goods or services already provided and, therefore, form part of a single performance obligation that is partially satisfied at the date of modification. [FRS 102.23.16(b)].

If this is the case, the entity accounts for the contract modification as if it were part of the original contract. This would be the case regardless of whether the additional goods or services were added at their stand-alone selling prices at the contract modification date. The entity adjusts revenue previously recognised (either up or down) to reflect the effect that the contract modification has on the transaction price and update the measure of progress (i.e., the revenue adjustment is made on a cumulative catch-up basis). [FRS 102.23.16(b)]. This scenario is illustrated below, which is based on Example 8 in IFRS 15:

[IFRS 15.IE Example 8, IFRS 15.IE37-IE41]

Illustration 4-12: Modification resulting in a cumulative catch-up adjustment to revenue

An entity, a construction company, enters into a contract to construct a commercial building for a customer on customer-owned land for promised consideration of £1 million and a bonus of £200,000 if the building is completed within 24 months (a variable consideration - see 6.2 below). The entity accounts for the promised bundle of goods and services as a single performance obligation satisfied over time in accordance with FRS 102.23.81(b) because the customer controls the building during construction (see 8.1.2 below).

At the inception of the contract, the entity expects the following:

	£
Transaction price	1,000,000
Expected costs	<u>700,000</u>
Expected profit (30%)	<u>300,000</u>

At contract inception, the entity excludes the £200,000 bonus from the transaction price because it cannot conclude that it is highly probable that the entity will be entitled to cumulative amount of revenue recognised in the future in accordance with FRS 102.23.46 (see 6.2.3 below). Completion of the building is highly susceptible to factors outside the entity's influence, including weather and regulatory approvals. In addition, the entity has limited experience with similar types of contracts.

The entity determines that the input measure, on the basis of costs incurred, provides an appropriate measure of progress towards complete satisfaction of the performance obligation. By the end of the first year, the entity has satisfied 60% of its performance obligation on the basis of costs incurred to date (£420,000) relative to total expected costs (£700,000). The entity reassesses the variable consideration and concludes that the amount is still constrained in accordance with paragraph 23.46 (see 6.2.3 below). Consequently, the cumulative revenue and costs recognised for the first year are as follows:

	£
Revenue	600,000
Costs	<u>420,000</u>
Gross profit	<u>180,000</u>

In the first quarter of the second year, the parties to the contract agree to modify the contract by changing the floor plan of the building. As a result, the fixed consideration and expected costs increase by £150,000 and £120,000, respectively. Total potential consideration after the modification is £1,350,000 (£1,150,000 fixed consideration + £200,000 completion bonus). In addition, the allowable time for achieving the £200,000 bonus is extended by 6 months to 30 months from the original contract inception date. At the date of the modification, on the basis of its experience and the remaining work to be performed, which is primarily inside the building and not subject to weather conditions, the entity concludes that it is highly probable that including the bonus in the transaction price will not result in a reversal in the amount of cumulative revenue recognised and therefore, it is highly probable that the entity will be entitled to cumulative amount of revenue recognised in the future in accordance with paragraph 23.46 (see 6.2.3 below) and so, the entity includes the £200,000 in the transaction price. In assessing the contract modification, the entity evaluates FRS 102.23.16(b) and concludes (on the basis of the factors in paragraph 23.24 - see 5.2.1.B below) that the remaining goods and services to be provided using the modified contract are not distinct from the goods and services transferred on or before the date of contract modification; that is, the contract remains a single performance obligation. Consequently, the entity accounts for the contract modification as if it were part of the original contract (in accordance with paragraph 23.16(b)). The entity updates its measure of progress and estimates that it has satisfied 51.2% of its performance obligation (£420,000 actual costs incurred ÷ £820,000 total expected costs). The entity recognises additional revenue of CU91,200 [(51.2% complete × £1,350,000 modified transaction price) - £600,000 revenue recognised to date] at the date of the modification as a cumulative catch-up adjustment.

4.4.2.C Modification is part of the existing contract and the creation of a new contract

A change in a contract might also be treated as a combination of the two: a modification of the existing contract and the creation of a new contract. This would be the case when some, but not all, of the goods or services added in the modification are distinct from those already provided as at the date of the modification. In this case, an entity would not adjust the accounting treatment for completed performance obligations that are distinct from the modified goods or services. However, the entity would adjust revenue

previously recognised (either up or down) to reflect the effect of the contract modification on the estimated transaction price allocated to performance obligations that are not distinct from the modified portion of the contract and would update the measure of progress. [FRS 102.23.16(c)].

Frequently asked questions

Question 4-19: How would an entity account for a partial termination of a contract (e.g., a change in the contract term from three years to two years prior to the beginning of year two)?

See response to Question 4-9 in 4.2 above.

Question 4-20: How would an entity account for a contract modification that decreases the scope of a contract?

A modification that decreases the scope of a contract is not accounted for as a separate contract because it does not result in the addition of distinct goods or services (see 4.4.2 above). The accounting will depend on whether the remaining goods and services to be provided after the contract modification are distinct from the goods and services already provided. If the remaining goods and services are distinct (including goods or services that are part of a single performance obligation that is a series of distinct goods or services), the contract modification is accounted for as a termination of the old contract and the creation of a new contract (i.e., prospectively). If the remaining goods and services are not distinct, the contract modification is accounted for as if it were part of the original contract (i.e., cumulative catch-up). See Question 4-9 in 4.2 above regarding a partial termination of a contract.

How we see it

To modify a contract, a customer might agree to pay a fee to terminate, or decrease the scope of, some of the rights and obligations included in the original contract (e.g., a termination fee, one-time payment, lump-sum payment). We believe that such a fee is additional consideration that needs to be included in the modified transaction price and allocated to the remaining goods and services to be provided to the customer.

Consider the following Illustration:

Illustration 4-13: Contract modification that decreases the scope of the promised goods or services in a contract

Entity X enters into a non-cancellable contract with a customer to provide information technology (IT) outsourcing services continuously for a three-year period. Entity X determines that the arrangement contains a single performance obligation comprising a series of distinct services that is transferred to the customer over time. Entity X bills the customer a fixed price of £500 per month (i.e., the total consideration is £500 x 36 months = £18,000).

At the end of the second year, Entity X and the customer modify the contract to remove certain discrete services from the overall outsourcing service. As part of the modification, the customer agrees to pay a contract modification fee of £500 and reduce the monthly payments to £400 per month.

The services provided after the contract modification are distinct from those provided before the contract modification. This is because the performance obligation is a series of distinct services. Accordingly, Entity X applies the requirements in paragraph 23.16(a) and accounts for the modification prospectively (see 4.4.2.B above). The remaining consideration of £5,300 (£400 x 12 months = £4,800 for the services to be provided in the third year, plus the £500 payment upon modification) is recognised over the remaining contract period of one year. That is, Entity X recognises the £500 contract modification fee over the remaining performance period.

Question 4-21: How would an entity account for a 'blend-and-extend' contract modification?

A 'blend-and-extend' contract modification typically is one in which an entity, in exchange for a customer extending the term of the contract (and, therefore, purchasing additional units of a good or service), agrees to decrease the price per unit for all units to be provided (i.e., the new units, as well as the remaining units on the existing contract), resulting in a new blended price per unit. These types of contracts often occur in the power and utilities industry when market prices for the good or service decline after contract inception.

These arrangements are subject to the contract modification requirements in Section 23. Since these arrangements typically include the addition of distinct goods or services, the next step is for entities to evaluate whether the additional distinct goods or services are added at their stand-alone selling price in order to determine the accounting for the contract modification (i.e., as a separate contract or as a termination of the existing contract and the creation of a new contract).

When making this evaluation, a question that could arise is whether an entity needs to compare the blended contractual cash selling price or the overall contract price increase to the stand-alone selling price of the additional promised goods or services.

How we see it

We believe that entities need to establish an approach based on the facts and circumstances of their modifications and apply that approach consistently to similar fact patterns.

Consider the following Illustration:

Illustration 4-14: Blend-and-extend contract modification

Entity N enters into a four-year non-cancellable contract with Customer A to provide 100,000 widgets per year at a fixed price of £10 per widget. Each widget is a distinct good transferred at a point in time.

At the end of the second year, Entity N and Customer A modify the contract to extend the term of the contract by another two years (i.e., Entity N will continue to provide 100,000 widgets in years 5 and 6). The stand-alone selling price of the widget has declined and is now £8 per widget. As part of the modification, Entity N agrees to reduce the price to a blended rate of £9 per widget (based on £10 in years 3 and 4 and £8 in years 5 and 6) in exchange for Customer A extending the contract term.

Entity N determines that each widget provided after the modification date is distinct from the widgets provided before the modification date.

Approach A - Compare the overall contract price increase to the stand-alone selling price of the additional promised goods or services

Since the price of the contract increases by an amount of consideration that reflects the stand-alone selling prices of the additional widgets (i.e., £8 per widget in years 5 and 6), Entity N determines that the contract modification is accounted for as a separate contract in accordance with paragraph 23.15. Entity N will continue to recognise revenue of £10 per widget for the remaining period in the initial contract (i.e., years 3 and 4) and recognise revenue of £8 per widget in years 5 and 6.

Approach B - Compare the blended contractual cash selling price to the stand-alone selling price of the additional promised goods or services

Since the blended price of £9 per widget does not reflect the stand-alone selling price of widgets at the modification date (i.e., £8 per widget), Entity N applies the requirements in FRS 102.23.16(a) and accounts for the modification as if it were a termination of the original contract and the creation of a new contract (see 4.4.2.A above). Total consideration of £3,600,000 ($100,000 \times £10 \times 2 \text{ years} = £2,000,000$ for the widgets to be provided the years 3 and 4, plus $£1,600,000$ ($100,000 \times £8 \times 2 \text{ years}$) for the widgets to be provided in years 5 and 6) is allocated to each of the remaining widgets to be provided (400,000 widgets). Entity N will recognise revenue for each widget at a blended rate of £9 per widget ($£3,600,000 \div 400,000$ widgets).

The accounting will be different in contract modifications where an entity determines that the remaining goods or services to be provided after the modification date are not distinct from those goods or services provided before the modification date.

There is no presumption that such contract modifications contain effects of time value of money that needs to be recognised. That is, the mere act of blending the rate in connection with a contract extension in which the customer pays more cash consideration for the same amount of goods or services at the beginning of the contract than the end of the contract does not automatically create a financing transaction. However, each contract's facts and circumstances would need to be evaluated to determine whether a financing transaction exists (see 6.5 below for further discussion on time value of money).

Question 4-22: How would an entity account for a contract asset that exists when a contract is modified if the modification is treated as the termination of an existing contract and the creation of a new contract?

See response to Question 11-5 in 11.1.5 below.

4.5 Arrangements that do not meet the definition of a contract under Section 23

If an arrangement does not meet the criteria to be considered a contract under Section 23, it must be accounted for as follows: [FRS 102.23.9, FRS 102.23.10]

Extract from Section 23

- 23.9** If a contract with a customer does not meet the criteria in paragraph 23.7, an entity shall continue to reassess the contract until the criteria are met. The entity shall recognise any consideration received from the customer as a liability until those criteria are met or until one of the events in paragraph 23.10 occurs.
- 23.10** When a contract with a customer does not meet the criteria in paragraph 23.7, an entity shall recognise any consideration received from the customer as revenue when either:
- (a) the entity has no remaining obligations to transfer goods or services to the customer and all, or substantially all, of the consideration promised by the customer has been received and is non-refundable; or
 - (b) the contract is terminated and the consideration received is non-refundable.

The following flow chart illustrates this requirement:

Figure 4-2: Arrangements that do not meet the definition of a contract under Section 23

* Entities need to continue to assess the criteria in FRS 102.23.7 throughout the term of the arrangement to determine whether they are subsequently met.

If a contract does not initially meet the criteria in paragraph 23.7 (as discussed in 4.1 above), an entity continues to assess the criteria throughout the term of the arrangement to determine whether they are subsequently met. Once the criteria are met, the model in Section 23 applies, rather than the requirements discussed below. [FRS 102.23.9]. If an entity determines that the criteria in paragraph 23.7 are subsequently met, revenue is recognised on a cumulative catch-up basis as at the date when a contract exists within the scope of the model (i.e., at the 'contract establishment date', reflecting the performance obligations that are partially, or fully, satisfied at that date). This accounting is consistent with the discussion in Question 8-20 in 8.1.4.E below.

If an arrangement does not meet the criteria in paragraph 23.7 (and until the criteria are met), an entity only recognises non-refundable consideration received as revenue when one of the events outlined above has occurred (i.e., full performance and all (or substantially all) consideration received or the contract has been terminated) or the arrangement subsequently meets the criteria in paragraph 23.7.

Until one of these events happens, any consideration received from the customer is initially accounted for as a liability (not revenue) and the liability is measured at the amount of consideration received from the customer.

Frequently asked questions

Question 4-23: When is a contract considered terminated for purposes of applying FRS 102.23.10(b)?

Determining whether a contract is terminated might require significant judgement.

In the Basis for Conclusions on IFRS 15, "the IASB noted that contracts often specify that an entity has the right to terminate the contract in the event of non-payment by the customer and that this would not generally affect the entity's rights to recover any amounts owed by the customer. The IASB also noted that an entity's decision to stop pursuing collection would not typically affect the entity's rights and the customer's obligations under the contract with respect to the consideration owed by the customer. On this basis, ... the existing requirements in IFRS 15 are sufficient for an entity to conclude ... that a contract is terminated when it stops providing goods or services to the customer." [IFRS 15.BC46H].

5 Step 2 – Identify the performance obligations in the contract

To apply Section 23, an entity is required to identify the promised goods or services within the contract and determine which of those goods or services are separate performance obligations. Because Section 23 requires entities to allocate the transaction price to performance obligations, identifying the correct unit of account is fundamental to recognising revenue on a basis that faithfully depicts the entity's performance in transferring the promised goods or services to the customer.

Section 23 provides the following requirements with respect to identifying the performance obligations in a contract: [FRS 102.23.17, FRS 102.23.18]

Extract from Section 23

- 23.17** At contract inception, an entity shall assess the goods and services promised in a contract with a customer and shall identify as a performance obligation each promise to transfer to the customer either:
- (a) a distinct good or service (or a distinct bundle of goods or services); or
 - (b) a series of distinct goods or services that are substantially the same and that have the same pattern of transfer to the customer.
- 23.18** A series of distinct goods or services has the same pattern of transfer to the customer if both of the following criteria are met:
- (a) each distinct good or service in the series that the entity promises to transfer to the customer would meet the criteria in paragraph 23.81 to be a performance obligation satisfied over time; and
 - (b) in accordance with paragraphs 23.98 to 23.104, the same method would be used to measure the entity's progress towards complete satisfaction of the performance obligation to transfer each distinct good or service in the series to the customer.

5.1 Identifying the promised goods or services in the contract

As a first step in identifying the performance obligation(s) in the contract, Section 23 requires an entity to identify, at contract inception, the promised goods or services in the contract. Section 23 provides guidance on the types of items that could be goods or services promised in the contract, as follows: [FRS 102.23.19, FRS 102.23.20]

Extract from Section 23

- 23.19** A contract with a customer generally explicitly states the goods or services that an entity promises to transfer. However, promises may be implied by an entity's customary business practices, published policies or specific statements if these create a valid expectation of the customer that the entity will transfer a good or service to the customer.
- 23.20** Performance obligations do not include activities that an entity must undertake to fulfil a contract unless those activities transfer a good or service to the customer. For example, set-up activities and administrative tasks which do not transfer a good or service to the customer would be disregarded for the purposes of identifying performance obligations in a contract.

In order for an entity to identify the promised goods or services in a contract, Section 23 indicates that an entity considers whether there is a valid expectation on the part of the customer that the entity will provide a good or service. [FRS 102.23.19]. If the customer has a valid expectation that it will receive certain goods or services, it is likely that the customer would view those promises as part of the negotiated exchange. This expectation is most commonly created from an entity's explicit promise in a contract to transfer a good(s) or service(s) to the customer.

However, in other cases, promises to provide goods or services might be implied by the entity's customary business practices or standard industry norms (i.e., outside of the written contract). As discussed in 4 above, while the contract must be legally enforceable to be within the scope of the revenue model, not all of the promises (explicit or implicit) have to be legally enforceable to be considered when determining the entity's performance obligations. That is, a performance obligation can be based on a customer's valid expectations (e.g., due to the entity's business practice of providing an additional good or service that is not specified in the contract).

Promised goods or services might include items such as 'free' handsets provided by telecommunication entities, 'free' maintenance provided by automotive manufacturers and customer loyalty points awarded by supermarkets, airlines and hotels. Some might suggest that these types of promised goods or services would be excluded from the scope and accounted for as marketing expenses or incidental obligations, even though the promises would meet the definition of a performance obligation. However, while an entity might not consider those goods or services to be the 'main' items that the customer contracts to receive, they are goods or services for which the customer pays and to which the entity allocates consideration for the purpose of recognising revenue.

Section 23 states that promised goods or services do *not* include activities that an entity must undertake to fulfil a contract unless those activities transfer control of a good or service to a customer. [FRS 102.23.20]. For example, internal administrative activities that an entity must perform to satisfy its obligation to deliver the promised goods or services, but do not transfer control of a good or service to a customer, would not be promised goods or services.

How we see it

An entity might have to apply judgement when determining whether an activity it will perform is a promised good or service that will be transferred to a customer. The following questions could be relevant for an entity to consider when making this judgement:

- Is the activity identified as a good or service to be provided in the contractual arrangement with the customer? Activities that are not specifically identified could relate to an internal process of the entity, but they could also relate to implicit promises to the customer.
- Does the activity relate to the entity establishing processes and procedures or training its employees, so that it can render the contracted goods or services to the customer (e.g., set-up activities)?
- Is the activity administrative in nature (e.g., tasks performed to determine whether to accept or reject a customer, establishing the customer's account, invoicing the customer)?
- Is the customer aware of when the activity will be performed?

The FRC's FRS 102 Factsheet 10 *Revenue from Contracts with Customers*¹²³ notes that there are no restrictions on the goods or services that an entity might promise in a contract with customer. It also set out the following examples of goods or services that an entity might promise (the list is not exhaustive):

- (a) Sale of goods produced by an entity (for example, inventory of a manufacturer)
 - (b) Resale of goods purchased by an entity (for example, merchandise of a retailer)
 - (c) Resale of rights to goods or services purchased by an entity (for example, a ticket resold by an entity acting as a principal)
 - (d) Performing a contractually agreed-upon task (or tasks) for a customer
 - (e) Providing a service of standing ready to provide goods or services (for example, unspecified updates to software that are provided on a when-and-if-available basis) or of making goods or services available for a customer to use as and when the customer decides
 - (f) Providing a service of arranging for another party to transfer goods or services to a customer (for example, acting as an agent of another party)
 - (g) Granting rights to goods or services to be provided in the future that a customer can resell or provide to its customer (for example, an entity selling a product to a retailer promises to transfer an additional good or service to an individual who purchases the product from the retailer)
 - (h) Constructing, manufacturing or developing an asset on behalf of a customer
 - (i) Granting licences
- And
- (j) Granting options to purchase additional goods or services (when those options provide a customer with a material right)

¹²³ [FRS 102 Factsheet 10 Revenue from Contracts with Customers](#), FRC, issued on 27 November 2024, Section 2 The five-step revenue recognition model, Step 2 - Identify the contract(s) with a customer, page 8.

Item (e) in the above list describes a stand-ready obligation as a promised service that consists of standing ready to provide goods or services or making goods or services available for a customer to use as and when it decides to use it. That is, a stand-ready obligation is the promise that the customer has access to a good or service, rather than a promise to transfer the underlying good or service itself. Stand-ready obligations are common in the software industry (e.g., unspecified updates to software on a when-and-if-available basis) and might be present in other industries. See Questions 5-2 and 5-3 below for further discussion on stand-ready obligations.

Item (g) notes that a promise to a customer might include granting rights to goods or services to be provided in the future that the customer can resell or provide to its own customers. Such a right might represent promises to the customer if it existed at the time that the parties agreed to the contract. Accordingly, a performance obligation might exist for a promise to provide a good or service in the future (e.g., when an entity makes a promise to provide goods or services to its customer's customer). These types of promises exist in distribution networks in various industries and are common in the automotive industry.

After identifying the promised goods or services in the contract, an entity then determines which of these promised goods or services (or bundle of goods or services) represent separate performance obligations. The following flowchart illustrates the guidance an entity uses to assess whether the activities it will perform are promised goods or services and whether they are accounted for as performance obligations under Step 2 of the five-step model in Section 23:

Figure 5-1: Identifying the performance obligation(s) in the contract

Illustration 5-1 below is based on Illustrative Example 12 in IFRS 15 which shows how an entity would identify the promised goods or services in a contract (including both explicit and implicit promises). The example also evaluates whether the identified promises are performance obligations, which is further discussed in 5.2 below. [IFRS 15.IE Example 12, IFRS 15.IE59-IE65A]. The IFRS IC also discussed the assessment of whether there is an implicit promise in a contract as part of a principal versus agent assessment during its April 2022 meeting. See Illustration 5-18 in 5.4.2 below for further details.

Illustration 5-1: Explicit and implicit promises in a contract

An entity, a manufacturer, sells a product to a distributor (i.e., its customer) who will then resell it to an end customer.

Scenario A - Explicit promise of service

In the contract with the distributor, the entity promises to provide maintenance services for no additional consideration (i.e., 'free') to any party (i.e., the end customer) that purchases the product from the distributor. The entity outsources the performance of the maintenance services to the distributor and pays the distributor an agreed-upon amount for providing those services on the entity's behalf. If the end customer does not use the maintenance services, the entity is not obliged to pay the distributor.

The contract with the customer includes two promised goods or services - (a) the product and (b) the maintenance services. The promise of maintenance services is a promise to transfer goods or services in the future and is part of the negotiated exchange between the entity and the distributor. The entity assesses whether each good or service is distinct in accordance with paragraph 23.21. The entity determines that both the product and the maintenance services meet the criterion in paragraph 23.21(a). The entity regularly sells the product on a stand-alone basis, which indicates that the customer can benefit from the product on its own. The customer can benefit from the maintenance services together with a resource the customer already has obtained from the entity (i.e., the product).

The entity further determines that its promises to transfer the product and to provide the maintenance services are separately identifiable (in accordance with paragraph 23.21(b)) on the basis of the principle and the factors in paragraph 23.24. The product and the maintenance services are not inputs to a combined item in the contract. The entity is not providing a significant integration service because the presence of the product and the services together in this contract do not result in any additional or combined functionality. In addition, neither the product nor the services modify or customise the other. Lastly, the product and the maintenance services are not highly interdependent or highly interrelated because the entity would be able to fulfil each of the promises in the contract independently of its efforts to fulfil the other (i.e., the entity would be able to transfer the product even if the customer declined maintenance services and would be able to provide maintenance services in relation to products sold previously through other distributors). The entity also observes, in applying the principle in paragraph 23.24, that the entity's promise to provide maintenance is not necessary for the product to continue to provide significant benefit to the customer. Consequently, the entity allocates a portion of the transaction price to each of the two performance obligations (i.e., the product and the maintenance services) in the contract.

Scenario B-Implicit promise of service

The entity has historically provided maintenance services for no additional consideration (i.e., 'free') to end customers that purchase the entity's product from the distributor. The entity does not explicitly promise maintenance services during negotiations with the distributor and the final contract between the entity and the distributor does not specify terms or conditions for those services.

However, on the basis of its customary business practice, the entity determines at contract inception that it has made an implicit promise to provide maintenance services as part of the negotiated exchange with the distributor. That is, the entity's past practices of providing these services create valid expectations of the entity's customers (i.e., the distributor and end customers) in accordance with paragraph 23.19. Consequently, the entity assesses whether the promise of maintenance services is a performance obligation. For the same reasons as in Scenario A, the entity determines that the product and maintenance services are separate performance obligations.

Scenario C-Services are not a promised service

In the contract with the distributor, the entity does not promise to provide any maintenance services. In addition, the entity typically does not provide maintenance services and, therefore, the entity's customary business practices, published policies and specific statements at the time of entering into the contract have not created an implicit promise to provide goods or services to its customers. The entity transfers control of the product to the distributor and, therefore, the contract is completed. However, before the sale to the end customer, the entity makes an offer to provide maintenance services to any party that purchases the product from the distributor for no additional promised consideration.

The promise of maintenance is not included in the contract between the entity and the distributor at contract inception. That is, in accordance with paragraph 23.19, the entity does not explicitly or implicitly promise to provide maintenance services to the distributor or the end customers. Consequently, the entity does not identify the promise to provide maintenance services as a performance obligation. Instead, the obligation to provide maintenance services is accounted for in accordance with Section 21 *Provisions and Contingencies*.

Although the maintenance services are not a promised service in the current contract, in future contracts with customers the entity would assess whether it has created a business practice resulting in an implied promise to provide maintenance services.

Frequently asked questions

Question 5-1: How would an entity assess whether pre-production activities are a promised good or service?¹²⁴

Manufacturing and production entities in various industries might perform activities and incur costs before they produce goods. Some arrangements (including long-term supply arrangements) require an entity to incur upfront costs, such as non-recurring engineering and design costs or costs related to set-up activities, to create new technology or adapt existing technology to the needs of the customer.

These pre-production activities are often a prerequisite to delivering any units under a production contract. For example, a manufacturer might incur costs to perform certain services related to the design and development of products it will sell under long-term supply arrangements. It might also incur costs to design and develop moulds, dies and other tools that will be used to produce those products. A contract might require the customer to reimburse the manufacturer for these costs. Alternatively, reimbursement might be implicitly guaranteed as part of the price of the product or by other means.

The determination of whether pre-production activities are a promised good or service or fulfilment activities generally requires judgement and consideration of the facts and circumstances. When assessing whether pre-production activities are promises in a contract with a customer (and potentially performance obligations under Section 23), entities need to determine whether the activities transfer a good or service to a customer. If an entity determines that these activities are promised goods or services, it applies the requirements in Section 23) to those goods or services. Also see Questions 10-14 and 10-15 in 10.3.2 below for a discussion of how an entity accounts for costs related to pre-production activities and pre-contract or set-up activities, respectively.

If an entity is having difficulty determining whether a pre-production activity is a promised good or service in a contract, the entity generally needs to consider whether control of that good or service transfers to the customer. For example, if an entity is performing engineering and development services as part of developing a new product for a customer and the customer will own the resulting intellectual property (e.g., patents), it is likely that the entity would conclude that it is transferring control of the intellectual property and that the engineering and development activities are a promised good or service in the contract.

Assessing whether control transfers in such arrangements might be challenging. In some arrangements, legal title of the good or service created from the pre-production activity is transferred to the customer. However, an entity generally has to consider all indicators of control transfer under Section 23 and that the transfer of legal title is not a presumptive indicator.

When an entity is determining whether control transfers to a customer in such arrangements, one of the three over time revenue recognition criteria could be applicable to pre-production activities. That criterion is whether the customer simultaneously receives and consumes the benefits provided by the entity's performance as the entity performs. [FRS 102.23.81(a)]. As further discussed in 8.1.1 below, paragraph 23.81(a)) notes that if an entity cannot readily identify whether this criterion is met, it considers whether another entity would need to re-perform the work the entity had completed to date if that other entity were required to fulfil the remaining performance obligation. [FRS 102.23.81(a)].

For example, assume an entity is performing engineering and development as part of developing a new product for a customer. If the entity provided the customer with periodic progress reports in a level of detail that would not require the customer to contract with another entity to re-perform the work, or if the entity were required to provide the customer with the design information completed to date in the case of a termination, it is likely that the entity would conclude that control of that service transfers to the customer as the entity performs.

If a pre-production activity is determined to be a promised good or service, an entity allocates a portion of the transaction price to that good or service (as a single performance obligation or as part of a combined performance obligation that includes the pre-production activities along with other goods or services). If the pre-production activities are included in a performance obligation satisfied over time, they are considered when measuring progress toward satisfaction of that performance obligation (see 8.1.4 below).

¹²⁴ Based on TRG Agenda paper no. 46, *Pre-Production Activities*, dated 9 November 2015.

If a pre-production activity does not result in the transfer of control of a good or service to a customer, an entity considers other requirements that might be applicable (e.g., Section 17 *Property, Plant and Equipment*, Section 18 *Intangible Assets other than Goodwill*, paragraphs 23.116 to 23.118 of Section 23 on costs to fulfil a contract with a customer).

Question 5-2: What is the nature of the promise in a 'typical' stand-ready obligation?¹²⁵

Generally, the nature of the promise in a stand-ready obligation is the promise that the customer will have access to a good or service, not the delivery of the underlying good or service. Item '(e)' in FRC's FRS 102 Factsheet 10¹²⁶ (as set out in 5.1 above) describes a stand-ready obligation as a promised service that consists of standing ready to provide goods or services or making goods or services available for a customer to use as and when it decides to do so.

The following are types of promises to a customer that could be considered stand-ready obligations, depending on the facts and circumstances:

- Obligations for which the delivery of the good, service or intellectual property is within the control of the entity, but is still being developed (e.g., a software entity's promise to transfer unspecified software upgrades at its discretion).
- Obligations for which the delivery of the underlying good or service is outside the control of the entity and the customer (e.g., an entity's promise to remove snow from an airport runway in exchange for a fixed fee for the year).
- Obligations for which the delivery of the underlying good or service is within the control of the customer (e.g., an entity's promise to provide periodic maintenance on a when-and-if needed basis on a customer's equipment after a pre-established amount of usage by the customer).
- Obligations to make a good or service available to a customer continuously (e.g., a gym membership that provides unlimited access to a customer for a specified period of time).

An entity needs to carefully evaluate the facts and circumstances of its contracts to appropriately identify whether the nature of a promise to a customer is the delivery of the underlying good(s) or service(s) or the service of standing ready to provide goods or services. Entities also have to consider other promises in a contract that includes a stand-ready obligation to appropriately identify the performance obligations in the contract. Generally, all contracts with a stand-ready element do not necessarily include a single performance obligation (see Question 5-3 below).

See Question 5-13 in 5.2.2 below for a discussion on whether stand-ready obligations are generally considered to be a series of distinct goods or services.

Stand-ready obligations are common in the software industry and might be present in other industries. For example, a software entity's promise to provide an unspecified number of software updates on a when-and-if-available basis typically represents a stand-ready obligation. In contrast, a promise to provide certain specified software updates would generally not be a stand-ready obligation.

Furthermore, an arrangement that requires the customer to make additional purchasing decisions (e.g., through the submission of a purchase order) is generally not a stand-ready obligation. This is because the entity is not obligated to fulfil the purchase order until it is submitted. Therefore, the nature of the promise to the customer is the delivery of the underlying goods or service and not a promise to stand ready to provide goods or services.

For the discussion on measuring progress toward satisfaction for a stand-ready obligation that is satisfied over time, see Question 8-14 in 8.1.4.E below.

Question 5-3: Do all contracts with a stand-ready element include a single performance obligation that is satisfied over time?¹²⁷

Generally, the stand-ready element in a contract does not always represent a single performance obligation satisfied over time. This conclusion is consistent with the discussion in Question 5-2 above that, when identifying the nature of a promise to a customer, an entity might determine that a stand-ready element exists, but it is not the promised good or service for revenue recognition purposes. Instead, the underlying goods or services are the goods or services promised to the customer and accounted for by the entity.

Consider the following Illustration:

¹²⁵ Based on TRG Agenda paper no. 16, *Stand-Ready Performance Obligations*, dated 26 January 2015.

¹²⁶ [FRS 102 Factsheet 10 Revenue](#) from *Contracts with Customers*, FRC, issued on 27 November 2024, Section 2 The five-step revenue recognition model, Step 2 - Identify the contract(s) with a customer, page 8.

¹²⁷ Based on TRG Agenda paper no. 48, *Customer options for additional goods and services*, dated 9 November 2015.

Illustration 5-2: Determining the nature of the promise in a contract with a stand-ready element

An entity is required to stand ready to produce a part for a customer under an MSA. The customer is not obligated to purchase any parts (i.e., there is no minimum guaranteed volume). However, it is highly likely the customer will purchase parts because the part is required to manufacture the customer's product and it is not practical for the customer to buy parts from multiple suppliers. The nature of the promise in this example is most likely to be the delivery of the parts, rather than a service of standing ready. When the customer submits a purchase order under the master supply arrangement, it is contracting for a specific number of distinct goods and the purchase order creates new performance obligations for the entity. However, if the entity determined that the nature of the promise is a service of standing ready, the contract would be accounted for as a single performance obligation satisfied over time. In that situation, the entity might be required to estimate the number of purchases to be made throughout the contract term (i.e., make an estimate of variable consideration and apply the constraint on variable consideration) and continually update the transaction price and its allocation among the transferred goods or services.

Also, in this example, the entity is not obligated to transfer any parts until the customer submits a purchase order (i.e., the customer makes a separate purchasing decision). This contrasts with a stand-ready obligation, which requires the entity to make a promised service available to the customer and does not require the customer to make any additional purchasing decisions.

See Question 5-20 in 5.6 below for further discussion on determining whether a contract involving variable quantities of goods or services is accounted for as variable consideration (i.e., if the nature of the promise is to transfer one overall service to the customer, such as a stand-ready obligation) or a contract containing customer options (i.e., if the nature of the promise is to transfer the underlying distinct goods or services).

Question 5-4: How would an entity evaluate whether an exclusivity provision in a contract with customer represents a promised good or service?

How we see it

We generally believe that an exclusivity provision does not represent a promised good or service.

Contracts with customers involving the sale of products or services might contain exclusivity clauses whereby the entity agrees that it will not provide the products or services to others or will do so only on a limited basis. Such provisions could restrict the distribution of the products or services in certain geographical areas and/or prohibit the sale of the products or services to a customer's competitors. For example, an entity that provides advertising on its website might agree to run a banner advertisement for one customer for a specified period of time and exclude advertisements for similar products or services from the advertiser's competitors.

Also, as explained in 9.1.3 below, the IASB discussed exclusivity in relation to licences of intellectual property and concluded that exclusivity is a restriction that represents an attribute of a licence, rather than the nature of the underlying intellectual property or the entity's promise in granting the licence. That is, exclusivity provisions define the scope of the customer's rights to intellectual property and would not be accounted for separately.

As explained above, we believe that the same principles would apply when evaluating exclusivity provisions in contracts that do not contain a licence of intellectual property. That is, exclusivity is an attribute of the promise to the customer, rather than a separate promised good or service. This is because exclusivity does not change the nature of the entity's performance to provide the underlying goods or services to the customer.

Any upfront payment received from a customer related to an exclusivity provision would need to be evaluated to determine whether it represents a material right (see further discussion in 6.8 below). Conversely, an entity might make a payment to a customer for being the customer's exclusive provider for certain goods or services. Any payment made by the entity to the customer would need to be evaluated in accordance with the requirements for consideration paid or payable to a customer (see further discussion in 6.7 below).

Question 5-5: Does a guarantee to defend or maintain a patent represent a promised good or service?

A guarantee to defend or maintain a patent does not represent a promised good or service - see discussion in 9.1.4 below.

5.2 Determining when promises are performance obligations

After identifying the promised goods or services within a contract, an entity determines which of those goods or services will be treated as separate performance obligations. That is, the entity identifies the individual units of account. Promised goods or services represent separate performance obligations if the goods or services are distinct (by themselves, or as part of a bundle of goods or services) (see 5.2.1 below) or if the goods or services are part of a series of distinct goods or services that are substantially the same and have the same pattern of transfer to the customer (see 5.2.2 below).

If a promised good or service is not distinct, an entity is required to combine that good or service with other promised goods or services until it identifies a bundle of goods or services that, together, is distinct. An entity is required to account for all the goods or services promised in a contract as a single performance obligation if the entire bundle of promised goods or services is the only performance obligation identified. [FRS 102.23.25]. See 5.3 below for further discussion. The following flow chart illustrates these requirements:

Figure 5-2: Determining when promises are performance obligations

A single performance obligation could include a licence of intellectual property and other promised goods or services. It is worth noting that IFRS 15 identifies two examples of licences of intellectual property that are not distinct from other promised goods or services in a contract: (1) a licence that is a component of a tangible good and that is integral to the functionality of the tangible good; and (2) a licence that the customer can benefit from only in conjunction with a related service (e.g., an online hosting service that enables a customer to access the content provided by the licence of intellectual property). [IFRS 15.B54]. See 9.1.2 below for further discussion on these two examples.

Section 23 also specifies that the following items are performance obligations:

- Customer options for additional goods or services that provide material rights to customers (see 5.6 below) [FRS 102.23.31-23.35]
- Service-type warranties (see 10.1 below) [FRS 102.23.26-23.28]

Entities do not apply the general model to determine whether these goods or services are performance obligations because the Section 23 deemed them to be performance obligations if they are identified as promises in a contract.

Note that under IFRS 15, the IASB noted that an entity is not precluded from accounting for distinct goods or services that are delivered concurrently and have the same pattern of transfer, as a single performance obligation, if the outcome would be the same as accounting for the goods and services as individual performance obligations. [IFRS 15.BC116]. A similar observation can be made under Section 23, i.e., an entity would not be precluded from accounting for a series of distinct goods or services as a single performance obligation if the outcome would be the same as accounting for the goods and services as individual performance obligations (see 5.2.2 below).

5.2.1 Determination of 'distinct'

Section 23 provides the following requirements: [FRS 102.23.21]

Extract from Section 23

- 23.21** A good or service that is promised by an entity to a customer is distinct if both of the following criteria are met:
- (a) the customer can benefit from the good or service either on its own or together with other resources that are readily available to the customer (ie the good or service is capable of being distinct); and
 - (b) the entity's promise to transfer the good or service is separate from other promises in the contract (see paragraph 23.24).

Section 23 outlines a two-step process for determining whether a promised good or service (or a bundle of goods or services) is distinct: [FRS 102.23.21]

- Consideration at the level of the individual good or service of whether the customer can benefit from the good or service on its own or with other readily available resources (i.e., the good or service is capable of being distinct)
- Consideration of whether the good or service is separately identifiable from other promises in the contract (i.e., the promise to transfer the good or service is distinct within the context of the contract)

Both of these criteria must be met to conclude that the good or service is distinct. If these criteria are met, the individual good or service must be accounted for as a separate unit of account (i.e., a performance obligation).

Both steps are important in determining whether a promised good or service is accounted for separately. The first criterion (i.e., capable of being distinct) establishes the minimum characteristics for a good or service to be accounted for separately. However, even if the individual goods or services promised in a contract are capable of being distinct, it might not be appropriate to account for each of them separately because doing so would not result in a faithful depiction of the entity's performance in that contract or appropriately represent the nature of an entity's promise to the customer. Therefore, an entity also needs to consider the interrelationship of those goods or services to apply the second criterion (i.e., distinct within the context of the contract) and determine the performance obligations within a contract.

The IFRS IC received a request about the identification of performance obligations in a contract for the sale of a real estate unit that includes the transfer of land, which is discussed in 5.2.1.G below.

5.2.1.A Capable of being distinct

The first criterion requires that a promised good or service must be capable of being distinct by providing a benefit to the customer either on its own or together with other resources that are readily available to the customer.

Section 23 provides the following requirements on how to determine whether a promised good or service is capable of being distinct: [FRS 102.23.22, FRS 102.23.23]

Extract from Section 23

- 23.22** The criterion in paragraph 23.21(a) is satisfied for goods or services that are regularly sold separately.
- 23.23** For the purposes of applying the criterion in paragraph 23.21(a), readily available resources are:
- (a) goods or services sold separately (by the entity or another entity); or
 - (b) goods or services that the customer has already obtained from the entity (including goods or services transferred to the customer under the contract) or from other transactions or events.

Determining whether a good or service is capable of being distinct is straightforward in many situations. For example, if an entity regularly sells a good or service separately, this fact demonstrates that the good or service provides benefit to a customer on its own or with other readily available resources.

The evaluation might require more judgement in other situations, particularly when the good or service can only provide benefit to the customer with readily available resources provided by other entities. These are resources that meet either of the following conditions:

- They are sold separately by the entity (or another entity).
- The customer has already obtained them from the entity (including goods or services that the entity has already transferred to the customer under the contract) or from other transactions or events.

The Basis for Conclusions on IFRS 15 further noted that the assessment of whether the customer can benefit from the goods or services (either on its own or with other readily available resources) is based on the characteristics of the goods or services themselves, instead of how the customer might use the goods or services. [IFRS 15.BC100]. Consistent with this notion, an entity disregards any contractual limitations that might prevent the customer from obtaining readily available resources from a party other than the entity when making this assessment. This is illustrated in Case D within Example 11 in IFRS 15. [IFRS 15.IE Example 11 Case D, IFRS 15.IE58A-IE58K]. The IFRS IC also reiterated this point during its March 2018 meeting (see 5.2.1.G below for further discussion).

The Basis for Conclusions on IFRS 15 further explained that it is not necessary for a delivered item to have 'value to the customer on a stand-alone basis' for an entity to account for that item separately. This is to avoid implying that an entity must assess a customer's intended use for a promised good or service when it is identifying performance obligations because it would be difficult, if not impossible, for an entity to know a customer's intent. [IFRS 15.BC101].

5.2.1.B Distinct within the context of the contract

Once an entity has determined whether a promised good or service is capable of being distinct based on the individual characteristics of the promise, the entity considers the second criterion of whether the good or service is separately identifiable from other promises in the contract (i.e., whether the promise to transfer the good or service is distinct within the context of the contract).

Section 23 provides the following requirements for making this determination: [FRS 102.23.24]

Extract from Section 23

- 23.24** The purpose of the criterion in paragraph 23.21(b) is to determine whether the nature of the entity's promise, within the context of the contract, is to transfer the good or service individually, rather than to transfer a combined item or items to which the good or service is an input. Factors that indicate that two or more goods or services promised in a contract are inputs to a combined item or items and are therefore not distinct include, but are not limited to, the following:
- (a) The entity provides a significant service of integrating the goods or services with other goods or services promised in the contract into a bundle of goods or services that represent the combined output or outputs for which the customer has contracted. In other words, the entity is using the goods or services as inputs to produce or deliver the combined output or outputs specified by the customer. A combined output or outputs might include more than one phase, element or unit. An example is a construction contract when an entity provides an integration (or contract management) service to manage and co-ordinate the various construction tasks necessary for the construction of an **asset**.
 - (b) One or more of the goods or services significantly modifies or customises, or is significantly modified or customised by, one or more of the other goods or services promised in the contract. An example is a software contract when an entity promises to provide existing software and to customise that software, if the customisation service significantly modifies the software.
 - (c) The goods or services are highly interdependent or highly interrelated. In other words, each of the goods or services is significantly affected by one or more of the other goods or services in the contract. For example, in some cases, two or more goods or services are significantly affected by each other because an entity would not be able to fulfil its promise by transferring each of the goods or services independently.

5.2.1.C Distinct within the context of the contract: separately identifiable principle

To determine whether promised goods or services are separately identifiable (i.e., whether a promise to transfer a good or service is distinct within the context of the contract), an entity needs to evaluate whether its promise is to transfer each good or service individually or a combined item (or items) that comprises the individual goods or services promised in the contract. Therefore, an entity would evaluate whether the promised goods or services in the contract are outputs or whether they are inputs to a combined item (or items). In many cases, a combined item (or items) is more than (or substantially different from) the sum of the underlying promised goods or services.

The evaluation of whether an entity's promise is separately identifiable considers the relationship between the various goods or services in the context of the process to fulfil the contract. Therefore, an entity considers the level of integration, interrelation or interdependence among the promises to transfer goods or services.

Section 23 includes three factors (discussed individually in 5.2.1.D - 5.2.1.F below) that are intended to help entities identify when the promises in a bundle of promised goods or services are not separately identifiable and, therefore, need to be combined into a single performance obligation. [FRS 102.23.24]. These three factors are not an exhaustive list and that not all of the factors need to exist to conclude that the entity's promises to transfer goods or services are not separately identifiable. As emphasised by the IFRS IC during its March 2018 meeting (see the discussion in 5.2.1.G below), the three factors also are not intended to be criteria that are evaluated independently of the separately identifiable principle.

Given the wide variety of arrangements that are within the scope of Section 23, it is expected that there are some instances in which certain factors are less relevant to the evaluation of the separately identifiable principle. Entities might need to apply significant judgement to evaluate whether a promised good or service is separately identifiable. The evaluation requires a thorough understanding of the facts and circumstances present in each contract. Entities would generally consider the following questions, which summarise what is discussed in the Basis for Conclusions on IFRS 15: [IFRS 15.BC116J, IFRS 15.BC116K, IFRS 15.BC116L]

- Is the combined item greater than, or substantively different from, the sum of the promised goods or services?
- Is an entity, in substance, fulfilling a single promise to the customer?
- Is the risk an entity assumes to fulfil its obligation to transfer a promised good or service inseparable from the risk relating to the transfer of the other promised goods or services in the bundle?
- Do two or more promised goods or services each significantly affect the other?
- Does each promised good or service significantly affect the other promised good or service's utility to the customer?

Further discussions on 'separately identifiable' principle within the context of the contract are available in the EY publication, International GAAP®.

5.2.1.D Distinct within the context of the contract: significant integration service

The first factor (described in 5.2.1.B above) is the presence of a significant integration service. When an entity provides a significant service of integrating the goods or services with other goods or services promised in a contract into a bundle of goods or services, the bundle of integrated goods or services represents a combined output or outputs for which the customer has contracted. In other words, the entity is using the goods or services as inputs to produce or deliver the combined output or outputs specified by the customer [FRS 102.23.24(a)]. In line with this, the Basis for Conclusions on IFRS 15 added that when an entity provides a significant integration service, the risk of transferring individual goods or services is inseparable from the bundle of integrated goods or services because a substantial part of an entity's promise to the customer is to make sure the individual goods or services are incorporated into the combined output or outputs. [IFRS 15.BC107]. When evaluating this factor, entities need to consider whether they are providing a significant integration service that effectively *transforms* the individual promised goods or services (the inputs) into a combined output(s) (as discussed in Case E within Example 11 in IFRS 15). When more than one party is involved in providing goods or services to a customer, entities could refer to Example 46 in IFRS 15. [IFRS 15.IE Example 11 Case E, IFRS 15.IE58G-IE58K, IFRS 15.IE Example 46, IFRS 15.IE234-IE238].

This factor applies even if there is more than one output. Furthermore, as described in Section 23, a combined output or outputs might include more than one phase, element or unit. An example is a construction contract when an entity provides an integration (or contract management) service to manage and co-ordinate the various construction tasks necessary for the construction of an asset. [FRS 102.23.24(a)].

Usually, an integration service provided by the contractor often includes coordinating the activities performed by any subcontractors and making sure the quality of the work performed is in compliance with contract specifications and that the individual goods or services are appropriately integrated into the combined item that the customer has contracted to receive. For this type of construction contract and an analysis of whether it contains a significant integration service, an entity could consider the illustration in Case A within Example 10 in IFRS 15, [IFRS 15.IE Example 10, IFRS 15.IE45-IE48C], and in Illustration 5-3 below. In addition, when more than one party (e.g., a subcontractor) is involved in providing goods or services to a customer, Section 23 requires the entity to determine whether it is a principal or an agent in these transactions (see 5-4 below).

Illustration 5-3: Significant integration service

Contractor Q, a construction firm, enters into a contract with a customer to design and construct a concert hall. The project has two phases, design and construction and the contract provides separate compensation for each phase.

For purposes of this example, assume that the individual goods and services provided in each phase are capable of being distinct. Contractor Q must then determine whether each of the individual goods and services in each phase are distinct in the context of the contract. Contractor Q provides a significant service of: (1) integrating the various design services to produce project plans in the design phase; and (2) integrating the various materials and construction services to build the concert hall in the construction phase. Contractor Q then evaluates whether the aggregated goods and services in the design phase (i.e., project plans) and aggregated goods and services in the construction phase (i.e., concert hall) are distinct in the context of the contract and, therefore, are two performance obligations or whether together they represent a single performance obligation.

In this Illustration, the design and construction of a concert hall is necessary to satisfy Contractor Q's contract with the customer. Given the complex nature of the project, assume Contractor Q will be required to frequently alter the design of the concert hall during construction and to continually assess the propriety of the materials to be used. These changes might cause Contractor Q to rework the construction of the concert hall. Contractor Q determines it is providing a significant service of integrating goods and services into the combined output for which the customer has contracted (i.e., a completed concert hall). Contractor Q concludes that the design services and construction services are not distinct in the context of the contract and instead are combined and accounted for as one performance obligation.

5.2.1.E Distinct within the context of the contract: significant modification or customisation

The second factor (described in 5.2.1.B above) is the presence of significant modification or customisation. [FRS 102.23.24(b)]. In the Basis for Conclusions on IFRS 15, the IASB explained that in some industries, the notion of inseparable risks is more clearly illustrated by assessing whether one good or service significantly modifies or customises another. This is because if a good or service modifies or customises another good or service in a contract, each good or service is being assembled together (as an input) to produce a combined output. [IFRS 15.BC109].

Section 23 provided an example which the following Illustration is based on: [FRS 102.23.24(b)]

Illustration 5-4: Significant customisation service

Assume that an entity promises to provide a customer with software that it will significantly customise to make the software function with the customer's existing infrastructure. Based on its facts and circumstances, the entity determines that it is providing the customer with a fully integrated system and that the customisation service requires it to significantly modify the software in such a way that the risks of providing it and the customisation service are inseparable (i.e., the software and customisation service are not separately identifiable).

The *significance* of modification or customisation services can affect an entity's conclusion about the number of identified performance obligations for similar fact patterns. An entity could consider Case A and Case B within Example 11 in IFRS 15. In Case A, each of the promised goods or services are determined to be distinct because the installation services being provided to the customer do not significantly modify the software. In Case B, two of the promised goods or services are combined into one performance obligation because one promise (the installation) significantly customises another promise (the software). [IFRS 15.IE Example 11 Case A-Case B, IFRS 15.IE49-IE58].

5.2.1.F Distinct within the context of the contract: highly interdependent or highly interrelated

The third factor (described in 5.2.1.B above) is whether the promised goods or services are highly interdependent or highly interrelated. [IFRS 102.23.24(c)]. This is often the most difficult distinct factor for entities to assess. Promised goods or services are highly interdependent or highly interrelated if each of the promised goods or services is significantly affected by one or more of the other goods or services in the contract. For example, in some cases, two or more goods or services are significantly affected by each other because an entity would not be able to fulfil its promise by transferring each of the goods or services independently. [IFRS 102.23.24(c)]. As discussed above, an entity would evaluate how two or more promised goods or services affect each other and not just evaluate whether one item, by its nature, depends on the other. That is, an entity needs to evaluate whether there is a significant two-way dependency or transformative relationship between the promised goods or services to determine whether the promises are highly interdependent or highly interrelated. Determining whether a two-way dependency is significant such that the promises are highly interdependent or highly interrelated with each other is a judgement that requires careful consideration.

The following illustration is based on an example provided in the Basis for Conclusions on IFRS 15. [IFRS 15.BC112].

Illustration 5-5: Highly interdependent and highly interrelated

An entity promises to design an experimental new product for a customer and to manufacture ten prototype units of that product. Because the product and manufacturing process is unproven, the entity is required to continue to revise the design of the product during the construction and test of the prototypes and make any necessary modifications to in-progress or completed prototypes. The entity expects that most, or all, of the units to be produced will require some rework because of design changes made during the production process. That is, the customer is not likely to be able to choose whether to purchase only the design service or the manufacturing service without one significantly affecting the other. The entity determines that the design and manufacturing promises are highly interdependent on, and highly interrelated with, the other promises in the contract. Consequently, although each promise might provide a benefit on its own, the promises are not separately identifiable within the context of the contract.

Conversely, if the design was similar to that of a previous product and/or the entity did not expect to have to rework the prototypes due to design changes, the entity might determine that the two promises are not highly interdependent or highly interrelated and might conclude the contract contains multiple performance obligations.

Goods or services might not be separately identifiable if they are so highly interdependent on, or highly interrelated with, other goods or services under the contract. This might occur when the customer's decision not to purchase one promised good or service would significantly affect the other promised goods or services. In other words, the promised goods or services are so highly interrelated or highly interdependent with each other that the entity could not fulfil an individual promise independently from the other promises in the contract.

One aspect on which this evaluation must focus is the specific utility that can only be delivered through the combination of the goods or services. That is, it is important to establish that the utility each good or service can provide on its own is significantly less than the utility of the combined goods or services. Often, gaining sufficient understanding of the specific utility of the individual goods or services, as well as the combined offering, might involve discussion with employees from various departments (e.g., engineering, sales), in addition to those in the accounting and finance departments. An entity also needs to consider how its products and services are described in publicly available information (e.g., the entity's website, investor relations reports, financial statement filings). Those descriptions might indicate which functionalities are critical to the overall offering and influence customer expectations and whether those functionalities significantly affect the utility of other goods or services in the contract. Overall, the specific facts and circumstances of each offering and contract have to be carefully considered.

An entity could consider the concept regarding an entity's ability to separately fulfil a promise to a customer highlighted in Case E within Example 11 in IFRS 15. This example includes a contract for the sale of equipment and specialised consumables to be used with the equipment. In this example, the entity determines that the equipment and consumables are not highly interdependent or highly interrelated because the two promises do not significantly affect each other. As part of its analysis, the entity concludes that it would be able to fulfil each of its promises in the contract independently of the other promises.

[IFRS 15.IE Example 11 Case E, IFRS 15.IE58A-IE58K].

5.2.1.G Distinct within the context of the contract: March 2018 IFRS IC discussion and frequently asked questions

In 2017, the IFRS IC received a request regarding the identification of performance obligations in a contract for the sale of a real estate unit that includes the transfer of land. The request also asked about the timing of revenue recognition for each performance obligation (either over time or at a point in time), which is discussed in Question 8-11 in 8.1.3.B below. At its March 2018 meeting, the IFRS IC concluded that the principles and requirements in IFRS 15 provide sufficient guidance for an entity to recognise revenue in a contract for the sale of a real estate unit that includes the transfer of land. Consequently, the IFRS IC decided not to add this matter to its agenda.¹²⁸

In considering this request, the IFRS IC noted that the assessment of the distinct criteria requires judgement. Furthermore:

- The assessment of the first criterion is based on the characteristics of the goods or services themselves. Accordingly, an entity disregards any contractual limitations that might preclude the customer from obtaining readily available resources from a source other than the entity (see 5.2.1.A above). [IFRS 15.BC100].
- The objective underlying the second criterion is to determine the nature of the promise within the context of the contract. That is, whether the entity has promised to transfer either the promised goods or services individually or a combined item to which those goods or services are inputs. IFRS 15 also includes some factors that indicate that two or more promises to transfer goods or services are not separately identifiable. [IFRS 15.29]. However, these factors are not intended to be criteria that an entity evaluates independently of the 'separately identifiable' principle because, in some instances, one or more of the factors might be less relevant to the evaluation of that principle (see 5.2.1.C above). [IFRS 15.BC116N].

In the Basis for Conclusions on IFRS 15, the IASB indicated that the separately identifiable concept is influenced by the idea of separable risks. That is, whether the risk assumed to fulfil the obligation to transfer one of the promised goods or services to the customer is separable from the risk relating to the transfer of the other promised goods or services. Evaluating whether an entity's promise is separately identifiable considers the interrelationship between the goods or services within the contract in the context of the process to fulfil the contract. Accordingly, an entity considers the level of integration, interrelation or interdependence among the promises in the contract to transfer goods or services. An entity evaluates whether, in the process of fulfilling the contract, there is a transformative relationship between the promises, rather than considering whether one item, by its nature, depends upon another (i.e., whether the promises have a functional relationship). [IFRS 15.BC105, IFRS 15.BC116J, IFRS 15.BC116K]. That is, the conclusion about whether the promised goods or services are separately identifiable hinges on whether there is a *significant two-way dependency* between the items. Determining whether a two-way dependency is significant such that the promises are separately identifiable is a judgement that requires careful consideration (this is discussed further in 5.2.1.F above).

The following Illustration is based on the example from the IFRS IC agenda paper used by the IFRS IC when it discussed the identification of performance obligations in its March 2018 meeting¹²⁹:

Illustration 5-6: Identification of performance obligations in a contract for the sale of a real estate unit that includes the transfer of land

Entity A enters into a non-cancellable contract with a customer for the sale of a real estate unit that involves the transfer of a plot of land and a building that Entity A constructs on that land. The land represents all of the area on which the building will be constructed and the contract is for the entire building.

At contract inception, Entity A transfers the legal title of the land and the customer pays the price specified in the contract for it. The transfer of legal title to the customer cannot be revoked, regardless of what happens during the construction of the building. Throughout the construction period, the customer makes milestone payments that do not necessarily correspond to the amount of work completed to date.

The design and specification of the building were agreed between the counterparties before the contract was signed. However, during the construction of the building, the customer can request changes to the design and specification that are priced by Entity A based on a methodology specified in the contract. If the customer

¹²⁸ [IFRIC Update](#), March 2018, available on the IFRS Foundation's website.

¹²⁹ [IASB Staff Paper 2D](#): Project: *Revenue recognition in a real estate contract that includes the transfer of land (IFRS 15)*, IFRS IC Meeting, Paper topic: *Agenda decision to finalise*, March 2018; and [IFRIC Update](#), March 2018. Available on the IFRS Foundation's website.

decides to proceed with the proposed changes, Entity A can reject them only for a limited number of reasons (e.g., when the change would breach planning permission). Entity A can only request changes if not doing so would lead to an unreasonable increase in costs or delay construction. However, the customer must approve those changes.

Entity A first assesses whether the land and the building are each capable of being distinct in accordance with paragraph 23.21(a) (see 5.2.1.A above). Entity A determines that the customer could benefit from the land on its own or together with other resources readily available to it (e.g., by hiring another developer to construct a building on the land). Also, Entity A determines that the customer could benefit from the construction of the building on its own or together with other resources readily available to it (e.g., by obtaining the construction services from Entity A or another developer without transferring the land). Therefore, Entity A concludes that the land and the building are each capable of being distinct.

The criterion in paragraph 23.21(b) is then assessed by Entity A in order to determine whether the land and the building are distinct in the context of the contract (see 5.2.1.B above). In making this assessment, Entity A considers the factors in paragraph 23.24, including the following (see 5.2.1.B above):

- (a). Whether it provides a significant service of integrating the land and the building into a combined output. Entity A analyses the transformative relationship between the transfer of the land and the construction of the building in the process of fulfilling the contract. As part of this analysis, it considers whether its performance in constructing the building would be different if it did not also transfer the land and *vice versa*. Despite the functional relationship between the land and the building (because the building cannot exist without the land on which its foundations will be built), the risks assumed by Entity A in transferring the land might, or might not, be separable from those assumed in constructing the building.
- (b). Whether the land and the building are highly interdependent or highly interrelated. Entity A determines whether its promise to transfer the land could be fulfilled if it did not also construct the building and *vice versa*.

Based on the above, the two promises would be separately identifiable if Entity A concluded that (a) its performance in constructing the building would be the same regardless of whether it also transferred the land; and (b) it would be able to fulfil its promise to construct the building even if it did not also transfer the land, and would be able to fulfil its promise to transfer the land even if it did not also construct the building.

5.2.1.H Distinct within the context of the contract: examples

IFRS 15 and Section 23 have consistent requirements when identifying performance obligations. The IASB included some examples in IFRS 15 that illustrate the application of the requirements for identifying performance obligations. The examples include analysis of how an entity might determine whether the promises to transfer goods or services are distinct within the context of the contract (see 5.2.3 below).

How we see it

The assessment of whether a good or service is distinct must consider the specific contract with a customer. That is, an entity cannot assume that a particular good or service is distinct (or not distinct) in all instances. The manner in which promised goods or services are bundled within a contract can affect the conclusion of whether a good or service is distinct. As a result, entities might account for the same goods or services differently, depending on how those goods or services are bundled within a contract.

Frequently asked questions

Question 5-6: How does an entity determine whether 'connected' hardware sold with cloud services represent one or more performance obligations?

To identify performance obligations in contracts containing connected hardware and cloud services, entities must determine whether the hardware and cloud services are each capable of being distinct and whether they are distinct within the context of the contract (as discussed in 5.2.1 above). An increasing number of connected hardware devices are now available (e.g., security cameras, home equipment). In contracts where a customer purchases hardware, the hardware might require the installation of an app or the purchase of a cloud service subscription in order to be used. Alternatively, the hardware might provide additional functionalities when paired with the cloud service.

In evaluating the distinct criteria, entities need to consider: whether the hardware can be used without the cloud service; how the hardware and cloud service affect each other (e.g., whether the cloud service enables the hardware to 'learn' or perform its intended function better over time); whether there are additional functionalities that result from using the hardware with the cloud service; and other details of how the hardware and cloud services function and are sold.

Consider the following Illustration where an entity concludes that the connected hardware and cloud services are separately identifiable:

Illustration 5-7: Hardware sold with cloud services

Entity L enters into a contract with a customer to provide a smart home security camera bundled with cloud services, which enable the customer to view live images from the camera in an app on internet-connected devices (e.g., tablets, phones). Entity L also provides the cloud services to customers who purchase the camera through secondary markets.

Entity L concludes that the customer can benefit from each of the goods and services either on its own or together with other goods or services that are readily available. That is, each good or service is capable of being distinct under paragraph 23.21(a).

The camera is capable of being distinct because the customer can benefit from it together with the cloud services, which are a readily available resource since they can be obtained separately. Furthermore, the customer can benefit from the camera because it can be resold through secondary markets for more than scrap value.

The cloud services are capable of being distinct because the customer can benefit from them together with the camera transferred at the outset of the contract or the customer can purchase the camera separately through the secondary markets and obtain the cloud services from the entity.

Entity L then considers the factors in paragraph 23.24 and determines that the promise to transfer each good and service is distinct within the context of the contract. In reaching this conclusion, the entity notes that it does not provide a significant service of integrating the cloud services with the camera into a combined output, and the cloud services and the camera do not significantly modify or customise one another.

Entity L also determines that the camera and the cloud services are not highly interdependent or highly interrelated because it can fulfil its promise to transfer the cloud services independently from its promise to provide the camera (i.e., since customers can purchase the camera in secondary markets).

The cloud services provide only the basic functionality of connecting the camera to a personal device using Wi-Fi (instead of a traditional electrical cable). Therefore, the utility the customer can derive from the camera and the cloud services (when transferred together) is not greater than, or substantially different from, the utility the customer would receive if the camera and cloud services had been transferred separately.

As a result, Entity L identifies two performance obligations: the camera and the cloud services.

Entities will need to evaluate the specific features and functionality of the cloud services in arrangements that include connected hardware devices. Evaluating whether hardware and cloud services are separate performance obligations in arrangements for connected devices might be complex and require significant judgement when the cloud service has sophisticated features or functionality that the device cannot do independently. In these cases, there might be a high degree of interdependency between the hardware and the cloud service or a significant integration service might be present.

How we see it

To conclude that hardware and a cloud service are a single performance obligation, entities will need to demonstrate that the functionality of both the hardware and the service is significantly elevated when they are used together. Many technology entities have concluded that they have separate performance obligations because the hardware and the cloud service do not significantly affect each other and because the hardware can be sold separately from the cloud service.

Question 5-7: How would entities determine whether implementation services are distinct?

Entities will need to assess their implementation services and consider all relevant facts and circumstances to determine whether they are separate performance obligations (i.e., they are capable of being distinct and are distinct within the context of a contract, as discussed in 5.2.1 above).

Entities might include promises to provide implementation services to customers as part of their product or service contracts (i.e., the implementation activities have been determined to transfer a service to the customer, as discussed in 5.1 above). For example, these services might include training of customer personnel and data conversion.

When assessing whether implementation services are capable of being distinct, an entity first considers whether the customer can benefit from those services on their own. There is strong evidence to suggest that implementation services are capable of being distinct if third party vendors offer (or are capable of offering) implementation services for the entity's products or services, or if the customer could perform

these services on its own. This evidence would demonstrate that the implementation services provide benefit to the customer on their own (i.e., apart from the other promised products or services purchased from the entity).

If an entity concludes that the customer is not able to benefit from the implementation services on their own, the entity considers whether the customer can benefit from the services together with other readily available resources. Readily available resources include the other promised products or services from the contract if they are sold separately by the entity or if they are transferred to the customer before the implementation services. An entity disregards any contractual limitations that prevent the customer from obtaining readily available resources from a party other than the entity when making this assessment. That is, contractually restricting a customer from using another vendor to perform the installation services would not preclude an entity from determining that the implementation services are capable of being distinct.

In assessing whether the implementation services are distinct within the context of the contract, an entity needs to consider whether: the implementation services modify or customise the other promised products or services; the entity is providing a significant service of integrating the promised products or services with the implementation services into one combined output; or the entity would be able to fulfil its promise to transfer the other promised products or services in the contract independently from its promise to provide the implementation services (i.e., whether the implementation services are highly interdependent or interrelated with the other products or services). This evaluation might require judgement and is based on the facts and circumstances of the entity's contracts.

The following Illustrations depict implementation services that are distinct and are not distinct, respectively:

Illustration 5-8: Implementation services are distinct

Technology entity P enters into an arrangement with a customer to perform implementation services and to provide software as a service (SaaS) for a three-year period. The entity sells the SaaS and implementation services separately. The implementation services include changing the layout of the main dashboard for each type of user (e.g., marketing, finance) and do not alter the source code of the underlying software or add any new functionality. The implementation service is routinely performed by third parties and does not significantly modify or customise the SaaS.

Technology entity P evaluates the promised goods and services to determine which promises would be accounted for as separate performance obligations.

Technology entity P concludes that the implementation services are capable of being distinct because they can be used with the SaaS, a readily available resource, and because they can be purchased from third parties. Furthermore, the implementation services are distinct within the context of the contract for the following reasons: they are routine; they do not significantly modify or customise the SaaS; they are not integrated with the SaaS into a combined output; and they are not highly interdependent or interrelated with the SaaS since the entity can fulfil its promise to transfer the SaaS independently from its promise to provide the implementation services.

Based on this assessment, Technology entity P identifies two performance obligations: the SaaS and the implementation services.

Illustration 5-9: Implementation services are not distinct

Consider the same promised goods or services as in Illustration 5-8 above, except that the nature of the implementation services is to set up data feeds and interfaces with third-party applications and to connect the customer's SaaS account to Technology entity P's infrastructure.

Technology entity P does not sell the SaaS without the implementation services, and the customer cannot use the SaaS until the implementation services are complete, which might be up to nine months after entering into a contract. The implementation services cannot be provided by other entities because they require access to Technology entity P's systems.

Technology entity P evaluates the promised goods and services to determine which promises would be accounted for as separate performance obligations. The SaaS is capable of being distinct because it can be used together with the implementation services that are provided at the outset of the contract. However, the implementation services are not capable of being distinct because: they are not sold separately by the Technology entity P; they cannot be provided by a third party; and they do not provide benefit to the customer without SaaS (which is not a readily available resource).

Based on this assessment, Technology entity P identifies one performance obligation: the implemented SaaS (comprised of the SaaS and implementation services).

Question 5-9: Does a licence to a content library include more than one performance obligation?

See response to Question 9-4 in 9.1.4 below.

5.2.2 Series of distinct goods or services that are substantially the same and have the same pattern of transfer

As discussed in 5 above, paragraph 23.17(b) defines, as a second type of performance obligation, a promise to transfer to the customer a series of distinct goods or services that are substantially the same and that have the same pattern of transfer, if both of the following criteria from paragraph 23.18 are met: [FRS 102.23.17(b), FRS 102.23.18]

- Each distinct good or service in the series that the entity promises to transfer represents a performance obligation that would be satisfied over time, in accordance with paragraph 23.81 (see below and 8.1 below), if it were accounted for separately.
- The entity would measure its progress toward satisfaction of the performance obligation using the same measure of progress for each distinct good or service in the series (see 8.1.4 below).

Figure 5-3: The series requirement criteria

If a series of distinct goods or services meets the criteria in paragraphs 23.17(b) and 23.18 (i.e., the series requirement), an entity is required to treat that series as a single performance obligation (i.e., it is not optional). Generally, repetitive services (e.g., cleaning, transaction processing and delivering electricity) would meet the series requirement. Without the series requirement, applying the revenue model might present operational challenges because an entity would have to identify multiple distinct goods or services, allocate the transaction price to each distinct good or service on a stand-alone selling price basis and then recognise revenue when those performance obligations are satisfied. The series requirement simplifies application of the revenue model because an entity would identify a single performance obligation and allocates the transaction price to that performance obligation. It will then recognise revenue by applying a single measure of progress to that performance obligation.

Distinct goods and services that are “substantially the same”

For distinct goods or services to be accounted for as a series, one of the criteria is that they must be substantially the same. This is often the most difficult criterion for entities to assess. In addition, in its meeting related to IFRS 15 application, the TRG members generally agreed that when determining whether distinct goods or services are substantially the same, entities need to first determine the nature of their promise. This is because a series could consist of either specified quantities of the underlying good or service delivered (e.g., each unit of a good) or distinct time increments (e.g., an hourly service), depending on the nature of the promise. That is, if the nature of the promise is to deliver a specified quantity of service (e.g., monthly payroll services over a defined contract period), the evaluation considers whether each service is distinct and substantially the same. In contrast, if the nature of the entity’s promise is to stand ready or provide a single service for a period of time (i.e., because there is an unspecified quantity to be delivered), the evaluation considers whether each time increment (e.g., hour, day), rather than the underlying activities, is distinct and substantially the same.¹³⁰

The following flow chart illustrates how the determination of the nature of the promise might affect whether the series requirement applies:

¹³⁰ TRG Agenda paper no. 39, *Application of the Series Provision and Allocation of Variable Consideration*, dated 13 July 2015.

Figure 5-4: The series requirement: determining the nature of the promise

It is important to highlight that even if the underlying activities an entity performs to satisfy a promise vary significantly throughout the day and from day to day, that fact, by itself, does not mean the distinct goods or services are not substantially the same. Consider an example where the nature of the promise is to provide a daily hotel management service (i.e., an obligation to provide an unspecified quantity of a service for 20 years). Therefore, the entity evaluates whether each time increment is distinct and substantially the same. The service is comprised of activities that might vary each day (e.g., cleaning services, reservation services or property maintenance). However, the entity determines that the daily hotel management services are substantially the same because the nature of the entity's promise is the same each day and the entity is providing the same overall management service each day. Furthermore, each day of service is distinct because the management services provided on any day during the 20-year contract period are not dependent on, or interrelated with, the management services provided on any other day during the period. See Question 5-11 below for further discussion on determining the nature of an entity's promise and evaluating the 'substantially the same' criterion.

Satisfied over time

When considering the nature of the entity's promise and the applicability of the series requirement (including whether a good or service is distinct), it might be helpful for an entity to consider which over time criterion in paragraph 23.81 was met (i.e., why the entity concluded that the performance obligation is satisfied over time). As discussed further in 8.1 below, a performance obligation is satisfied over time if one of three criteria are met. For example, if a performance obligation is satisfied over time because the customer simultaneously receives and consumes the benefits provided as the entity performs (i.e., the first over time criterion in paragraph 23.81(a)), that might indicate that each increment of service is capable of being distinct. If that is the case, the entity would need to evaluate whether each increment of service is separately identifiable (and substantially the same).

If a performance obligation is satisfied over time based on the other two criteria in paragraph 23.81 (i.e., (1) the entity's performance creates or enhances an asset that the customer controls as the asset is created or enhanced; or (2) the entity's performance does not create an asset with an alternative use to the entity and the entity has an enforceable right to payment for performance completed to date), the nature of that promise might be to deliver a single specified good or service (e.g., a contract to construct a single piece of equipment), which would not be considered a series because the individual goods or services within that performance obligation are not distinct.

An entity's determination of whether a performance obligation is a single performance obligation comprising a series of distinct goods or services or a single performance obligation comprising goods or services that are not distinct from one another affects the accounting in the following areas: (1) allocation of variable consideration (see 7.3 below); (2) contract modifications (see 4.4 above); and (3) changes in transaction price (see 7.4 below). That is, an entity considers the underlying distinct goods or services in the contract, rather than the single performance obligation identified under the series requirement, when applying the requirements for these three areas of the model. Note that this is also consistent with the discussion in Basis for Conclusions on IFRS 15. [IFRS 15.BC115].

The following Illustration, which is based on the example included in a March 2015 TRG agenda paper¹³¹, shows how the allocation of variable consideration might differ for a single performance obligation identified under the series requirement and a single performance obligation comprising non-distinct goods and/or services:

Illustration 5-10: Allocation of variable consideration for a series versus a single performance obligation comprising non-distinct goods and/or services

Consider a five-year service contract that includes payment terms of a fixed annual fee plus a performance bonus upon completion of a milestone at the end of year two. If the entire service period is determined to be a single performance obligation comprising a series of distinct services, the entity might be able to conclude that the variable consideration (i.e., the bonus amount) is allocated directly to its efforts to perform the distinct services up to the date that the milestone is achieved (e.g., the underlying distinct services in years one and two). This could result in the entity recognising the entire bonus amount at the end of year two (when it is highly probable that the entity will be entitled to the cumulative amount of revenue recognised – see 6.2.3 below). See Question 5-10 below for several examples of services for which it would be reasonable to conclude that they meet the series requirement.

In contrast, if the entity determines that the entire service period is a single performance obligation that is comprised of non-distinct services, the bonus would be included in the transaction price (subject to the constraint on variable consideration see 6.2.3 below) and recognised based on the measure of progress determined for the entire service period. For example, assume the bonus becomes part of the transaction price at the end of year two (when it is highly probable that the entity will be entitled to the cumulative amount of revenue recognised – see 6.2.3 below). In that case, a portion of the bonus would be recognised at that the end of year two based on performance completed to date and a portion would be recognised as the remainder of the performance obligation is satisfied. As a result, the bonus amount would be recognised as revenue through to the end of the five-year service period.

How we see it

We believe that entities might need to apply significant judgement when determining whether a promised good or service in a contract with a customer meets the criteria to be accounted for as a series of distinct goods or services. As illustrated in Question 5-10 below, promised goods or services that meet the series criteria are not limited to a particular industry and can encompass a wide array of promised goods or services.

Frequently asked questions

Question 5-9: In order to apply the series requirement, must the goods or services be consecutively transferred?¹³²

Generally, a series of distinct goods or services need not be consecutively transferred. That is, the series requirement must be applied even when there is a gap or an overlap in an entity's transfer of goods or services, provided that the criteria in paragraph 23.18, are met. Entities might need to carefully consider whether the series requirement applies, depending on the length of the gap between an entity's transfer of goods or services.

Consider the following Illustration:

Illustration 5-11: A series in which the goods or services need not be consecutively transferred

An entity has a contract with a customer to provide a manufacturing service for the production of 24,000 units of a product over a two-year period. The units produced under the service arrangement are distinct, substantially the same and manufactured in accordance with the customer's specifications.

The entity determines that the service is satisfied over time (see 8.1 below) because the performance of the service does not create an asset with an alternative use to the entity (since the units are manufactured in accordance with the customer's specifications). Furthermore, if the contract were to be cancelled, the entity would have an enforceable right to payment for performance completed to date (cost plus a reasonable profit margin). Therefore, the criteria for the series requirement in paragraph 23.18 have been met.

¹³¹ TRG Agenda paper no. 27, *Series of Distinct Goods or Services*, dated 30 March 2015.

¹³² Based on TRG Agenda paper no. 27, *Series of Distinct Goods or Services*, dated 30 March 2015.

The conclusion is not influenced by whether the entity would perform the service evenly over the two-year period (e.g., produce 1,000 units per month). That is, the entity could produce 2,000 units in some months and none in others, but this would not be a determining factor in concluding whether the contract met the criteria to be accounted for as a series.

Question 5-10: In order to apply the series requirement, does the accounting result need to be the same as if the underlying distinct goods or services were accounted for as separate performance obligations?¹³³

Generally, the accounting result does not need to be the same. Furthermore, an entity is not required to prove that the result would be the same as if the goods or services were accounted for as separate performance obligations.

Consider the Illustration below to illustrate this point:

Illustration 5-12: A series for which the accounting result would be different if not treated as a series

An entity contracts with a customer to perform a manufacturing service that results in the production of 10 widgets. The manufacturing service will be performed over a three-year period. The contract price is £100 million and the stand-alone selling price for each widget is £10 million.

Total expected costs are £80 million. The service the entity will provide to the customer in producing each widget is substantially the same. However, the design is new, so the entity expects a decline in production costs over time. Production of the first five units is expected to cost £9 million per widget. The costs to produce the other five widgets are expected to be £7 million per widget.

For purposes of this example, the entity determines that each service that it will provide to produce one of the 10 widgets is distinct and meets the criteria to be satisfied over time, and that the same cost-based measure of progress would be used (i.e., the series requirement criteria in paragraph 23.18 are met). The following table demonstrates the difference in accounting between concluding that the series requirement applies and concluding that the contract is for 10 separate performance obligations:

(in £ millions)	Total contract	Series requirement (one performance obligation)		10 separate performance obligations	
		Units 1-5	Units 6-10	Units 1-5	Units 6-10
Revenue	100	56	44	50	50
Cost	(80)	(45)	(35)	(45)	(35)
Margin	20	11	9	5	15

Although £20 million in margin is recognised for the contract under both scenarios, there is a difference in the timing of revenue recognition (and margin) because more revenue is recognised in relation to the service to produce the first five widgets (and less in relation to its service to produce the final five widgets) when the series is accounted for as a single performance obligation using a single measure of progress towards complete satisfaction.

Also see Question 10-16 below on how the effect of learning curve costs are addressed in Section 23.

Question 5-11: In order to apply the series requirement, how does an entity consider whether a performance obligation consists of distinct goods or services that are 'substantially the same'?¹³⁴

When making the evaluation of whether goods or services are distinct and substantially the same, an entity first needs to determine the nature of the entity's promise in providing services to the customer. That is, if the nature of the promise is to deliver a specified quantity of service (e.g., monthly payroll services over a defined contract period), the evaluation considers whether each specified quantity of the underlying service is distinct and substantially the same. In contrast, if the nature of the entity's promise is to stand ready or provide a single service for a period of time (i.e., because there is an unspecified quantity to be delivered), the evaluation would consider whether each time increment (e.g., hour, day), rather than the underlying activities, is distinct and substantially the same. It could also be noted that the IASB intended that a series could consist of either specified quantities of the underlying good or service delivered (e.g., each unit of a good) or distinct time increments (e.g., an hourly service), depending on the nature of the promise. For example, paragraph BC285 of the Basis for Conclusions on IFRS 15

133 Based on TRG Agenda paper no. 27, *Series of Distinct Goods or Services*, dated 30 March 2015 and TRG Agenda paper no. 34, *March 2015 Meeting - Summary of Issues Discussed and Next Steps*, dated 13 July 2015.

134 Based on TRG Agenda paper no. 39, *Application of the Series Provision and Allocation of Variable Consideration*, dated 13 July 2015.

discusses a hotel management performance obligation that is a series of distinct days of service which clarifies the IASB did not intend to restrict a series to quantities of goods or services.

As discussed in 5.2.2 above, it is important to highlight that the underlying activities an entity performs to satisfy a performance obligation could vary significantly throughout a day and from day to day. However, this is not determinative in the assessment of whether a performance obligation consists of goods or services that are distinct and substantially the same. Consider an example where the nature of the promise is to provide a daily hotel management service (i.e., an obligation to provide an unspecified quantity of a service for 20 years). Therefore, the entity evaluates whether each time increment is distinct and substantially the same. The hotel management service comprises various activities that might vary each day (e.g., cleaning services, reservation services, property maintenance). However, the entity determines that the daily hotel management services are substantially the same because the nature of the entity's promise is the same each day and the entity is providing the same overall management service each day. Furthermore, each day of service is distinct because the management services provided on any day during the 20-year contract period are not dependent on, or interrelated with, the management services provided on any other day during the period.

Illustrated below are some examples of promised goods or services that might meet the series requirement and the analysis that supports that conclusion. The evaluation of the nature of the promise for each example is consistent with Illustration 8-1 in 8.1.1 below on monthly payroll processing.

Illustration 5-13: IT outsourcing - series provision is met

A vendor and customer execute a 10-year IT outsourcing arrangement in which the vendor continuously delivers the outsourced activities over the contract term (e.g., it provides server capacity, manages the customer's software portfolio, runs an IT help desk). The total monthly invoice is calculated based on different units consumed for the respective activities. The vendor concludes that the customer simultaneously receives and consumes the benefits provided by its services as it performs (meeting the over time recognition criterion in paragraph 23.81(a)).

The vendor first considers the nature of its promise to the customer. Because the vendor has promised to provide an unspecified quantity of activities, rather than a defined number of services, the vendor could reasonably conclude that the nature of the promise is an obligation to stand ready to provide the integrated outsourcing service each day. If the nature of the promise is the overall IT outsourcing service, each day of service could be considered distinct because the customer can benefit from each day of service on its own and each day is separately identifiable. Also, the vendor could reasonably conclude that each day of service is substantially the same. That is, even if the individual activities that comprise the performance obligation vary from day to day, the nature of the overall promise is the same from day to day. Accordingly, it would be reasonable for an entity to conclude that this contract meets the series requirement.

Illustration 5-14: Transaction processing - series provision is met

A vendor enters into a 10-year contract with a customer to provide continuous access to its system and to process all transactions on behalf of the customer. The customer is obliged to use the vendor's system, but the ultimate quantity of transactions is unknown. The vendor concludes that the customer simultaneously receives and consumes the benefits as it performs (meeting the over time recognition criterion in paragraph 23.81(a)).

If the vendor concludes that the nature of its promise is to provide continuous access to its system, rather than process a particular quantity of transactions, it might conclude that there is a single performance obligation to stand ready to process as many transactions as the customer requires. If that is the case, it would be reasonable to conclude that there are multiple distinct time increments of the service. Each day of access to the service provided to the customer could be considered substantially the same since the customer is deriving a consistent benefit from the access each day, even if a different number of transactions are processed each day.

If the vendor concludes that the nature of the promise is the processing of each transaction (i.e., a specified quantity of transactions), each transaction processed could be considered substantially the same even if there are multiple types of transactions that generate different payments. Furthermore, each transaction processed could be a distinct service because the customer could benefit from each transaction on its own and each transaction could be separately identifiable. Accordingly, it would be reasonable for an entity to conclude that this contract meets the series requirement.

Illustration 5-15: Hotel management - series provision is met

A hotel manager (HM) enters into a 20-year contract to manage properties on behalf of a customer. HM receives monthly consideration of 1% of the monthly rental revenue, as well as reimbursement of labour costs incurred to perform the service and an annual incentive payment. HM concludes that the customer simultaneously receives and consumes the benefits of its services as it performs (meeting the over time recognition criterion in paragraph 23.81(a)).

HM considers the nature of its promise to the customer. If the nature of its promise is the overall management service (because the underlying activities are not distinct from each other), each day of service could be considered distinct because the customer can benefit from each day of service on its own and each day of service is separately identifiable.

Assuming the nature of the promise is the overall management service (i.e., an unspecified quantity of service), the service performed each day could be considered distinct and substantially the same. This is because, even if the individual activities that comprise the performance obligation vary significantly throughout the day and from day to day, the nature of the overall promise to provide the management service is the same from day to day. Accordingly, it would be reasonable for an entity to conclude that this contract meets the series requirement.

Illustration 5-16: Determining whether promised goods and services represent a series - series provision is met

A SaaS provider enters into a three-year contract with Customer X to provide access to its SaaS basic customer relationship management (CRM) application for £300,000. The contract also includes professional services that will personalise the user's interface based on the user's role. These services are sold separately from the CRM application and can be provided by third party vendors. The customer can benefit from the CRM application without the professional services, which do not significantly customise or modify the CRM application.

The SaaS provider determines that the CRM application and professional services are distinct (i.e., the CRM application and the professional services must not be combined into a single performance obligation). The two services are each capable of being distinct because Customer X can benefit from them on their own. The services are distinct within the context of the contract because they are not highly interdependent or interrelated and each service does not significantly modify or customise the other.

The SaaS provider first determines that the nature of the CRM application promise is to provide continuous access to its CRM application for the three-year period (i.e., an unspecified quantity of service). Although the activities that Customer X might be able to perform via the CRM application might vary from day to day, the overall promise is to provide continuous access to the CRM application to Customer X for a period of three years.

The SaaS provider determines that access to the CRM application represents a series of distinct services that are substantially the same and have the same pattern of transfer to Customer X. Each day of service is capable of being distinct because Customer X benefits each day from access to the CRM application. Each day is distinct within the context of the contract because there are no significant integration services, each day does not modify or customise another day and each day is not highly interdependent or interrelated. Each day of service is substantially the same because Customer X derives a consistent benefit from the access to the CRM application and has the same pattern of transfer over the term of the contract. Each distinct service represents a performance obligation that is satisfied over time and has the same measure of progress (e.g., time-elapsed). Therefore, the criteria to account for access to the CRM application as a series of distinct services (i.e., a single performance obligation) are met.

The SaaS provider also considers whether the professional services meet the criteria to be accounted for as a series. As part of this assessment, the entity considers whether each day of the professional services is distinct from the other days or whether the nature of the promise for the professional services is for a combined output from all of the days. The entity also considers the complexity of the professional services and whether the activity of each day builds on one another or if each day is substantially the same. This analysis requires judgement and is based on the facts and circumstances of the professional services performed.

Question 5-12: Can an entity choose whether to apply the series requirement?

As discussed above, if a series of distinct goods or services meets the criteria in paragraphs 23.17(b) and 23.18, an entity is required to treat that series as a single performance obligation (i.e., it is not an optional requirement). [FRS 102.23.17(b), FRS 102.23.18].

Question 5-13: Do all stand-ready obligations meet the criteria to be accounted for as a series?**How we see it**

We generally believe that stand-ready obligations (i.e., when the nature of the entity's promise is to provide an unspecified quantity of a service over time) will meet the criteria and, therefore, need to be accounted for as a series of distinct goods or services.

As discussed in Questions 5-2 and 5-3 in 5.1 above, entities might need to apply judgement to determine whether the nature of a promise to a customer is the service of standing ready to provide goods or services (i.e., a stand-ready obligation) or the delivery of the underlying goods or services (i.e., not a stand-ready obligation).

5.2.3 Examples of identifying performance obligations

Section 23 and IFRS 15 have consistent requirements when identifying performance obligations, however Section 23 does not provide examples to illustrate how requirements might be applied. IFRS 15 includes several examples that illustrate the application of the requirements for identifying performance obligations. The examples explain the judgements made to determine whether the promises to transfer goods or services are capable of being distinct and distinct within the context of the contract.

Refer to the EY publication, International GAAP® for these IFRS 15 examples and additional guidance.

5.3 Promised goods or services that are not distinct

If a promised good or service does not meet the criteria to be considered distinct, an entity is required to combine that good or service with other promised goods or services until the entity identifies a bundle of goods or services that, together, is distinct. This could result in an entity combining a good or service that is not considered distinct with another good or service that, on its own, would meet the criteria to be considered distinct (see 5.2.1 above). [FRS 102.23.25].

An entity could consider Case A and Case B within Example 10 in IFRS 15. These illustrate two examples of contracts with promised goods or services that, while capable of being distinct, are not distinct in the context of the contract because of a significant integration service that combines the inputs (the underlying goods or services) into a combined output. [IFRS 15.IE Example 10, IFRS 15.IE45-IE48C].

5.4 Principal versus agent considerations

When more than one party is involved in providing goods or services to a customer, Section 23 requires an entity to determine whether it is a principal or an agent in these transactions by evaluating the nature of its promise to the customer. For example, an entity that issues loyalty points to its customers that are redeemable for another entity's goods or services needs to assess whether it is a principal or an agent in relation to the redemption of the points.

An entity is a principal (and, therefore, records revenue on a gross basis) if it controls a promised good or service before transferring that good or service to the customer. [FRS 102.23.37, FRS 102.23.39]. An entity is an agent (and, therefore, records as revenue the net amount that it retains for its agency services) if its role is to arrange for another entity to provide the goods or services. [FRS 102.23.40].

Accordingly, for an entity to conclude that it is providing the good or service to the customer, it must first control that good or service. The entity cannot provide the good or service to a customer if the entity does not first control it. If an entity controls the good or service, the entity is a principal in the transaction. If an entity does not control the good or service before it is transferred to the customer, the entity is an agent in the transaction. It is therefore expected that an entity that itself manufactures a good or performs a service is always a principal if it transfers control of that good or service to another party. There is no need for such an entity to perform further evaluation because it transfers control of or provides its own good or service directly to its customer without the involvement of another party. For example, if an entity transfers control of a good to an intermediary that is a principal in providing that good to an end-consumer, the entity records revenue as a principal in the sale of the good to its customer (the intermediary).

An entity applies judgement in making its overall assessment of whether it is a principal or agent. Therefore, appropriate disclosures are important, in particular: (a) significant judgements in accordance with paragraph 8.6 of Section 8 *Notes to the Financial Statements*; and (b) information required by Section 23, including information about its performance obligations (see 11.4.1.D).

How we see it

Entities need to carefully evaluate whether they are acting as a principal or as an agent. As a reminder, the guidance in Section 23 focuses on control of the specified goods or services as the overarching principle for entities to consider in determining whether they are acting as a principal or an agent. That is, an entity first evaluates whether it controls the specified good or service before reviewing Section 23's principal indicators. As discussed above, appropriate disclosure in accordance with Section 8 and Section 23 will be required.

As part of understanding the relationships between the parties involved in the transaction, it might be helpful to understand the flow of consideration between the parties. However, whether the entity receives consideration from one or more parties involved in the transaction on a gross or net basis is not determinative in the principal versus agent analysis.

Section 23 states the overall principle for the principal versus agent evaluation, as follows: [FRS 102.23.36, FRS 102.23.37]

Extract from Section 23

23.36 When another party is involved in providing goods or services to a customer, an entity shall determine whether the nature of its promise is to provide the specified goods or services itself (ie the entity is a principal) or to arrange for those goods or services to be provided by the other party (ie the entity is an agent). A specified good or service is a distinct good or service (or a distinct bundle of goods or services) to be provided to the customer (see paragraphs 23.21 to 23.25). An entity shall determine whether it is a principal or an agent for each performance obligation in a contract.

The following flow chart illustrates the process for performing a principal versus agent evaluation:

Figure 5-5: Principal versus agent evaluation

How we see it

The principal versus agent guidance applies regardless of the type of transaction under evaluation or the industry in which the entity operates. Entities that: (a) do not stock inventory and might employ independent warehouses or fulfilment houses to drop-ship merchandise to customers on their behalf; or (b) offer services to be provided by an independent service provider (e.g., travel agents, magazine subscription brokers and retailers that sell goods through catalogues or that sell goods on consignment) might need to apply significant judgement when applying this guidance.

Frequently asked questions

Question 5-14: Can an entity make an accounting policy choice to report revenue from contracts with customers on a gross or net basis?

The principal versus agent assessment is not something about which an entity can make a policy choice. Entities must carefully consider the facts and circumstances of each contract to determine the appropriate accounting.

5.4.1 Identifying the specified good or service

As described in 5.4 above, when performing principal versus agent evaluation, it is important for an entity to determine the nature of its promise. [FRS 102.23.36]. Therefore, an entity must first identify the specified good or service (or unit of account for the principal versus agent evaluation) to be provided to the customer in order to determine the nature of its promise (i.e., whether it is to provide the specified goods or services to the end-consumer as a principal or to arrange for those goods or services to be provided by another party as an agent). A specified good or service is defined as “a distinct good or service (or a distinct bundle of goods or services) to be provided to the customer”. [FRS 102.23.36]. That is, specified goods or services are the distinct goods or services (or a distinct bundle of goods or services) identified using the requirements in paragraphs 23.21 to 23.25 (see 5.2 above) that are transferred to the end-consumer. Because the specified goods or services are determined from the perspective of the end-consumer, they will not always be the same as the entity’s performance obligation - particularly when the entity is an agent.

While the definition of specified goods or services is similar to that of a performance obligation, a new term ‘specified goods or services’ is used to distinguish the principal’s performance obligation from an agent’s performance obligation because using ‘performance obligation’ would have been confusing in agency relationships. That is, an agent’s performance obligation is to arrange for goods or services to be provided by another party; providing the specified goods or services to the end-consumer is not the agent’s performance obligation. For example, consider Illustration 5-19 in 5.4.2.E below, in which an entity operates a website that enables users to purchase goods from a range of suppliers who then deliver the goods directly to the users. In this example, the entity concludes that the specified goods to be provided to the users of the website (i.e., the end-consumer) are the goods provided by the suppliers, and no other goods or services are promised to the end-consumer by the entity. The entity further concludes that it does not control the specified goods before they are transferred to the end-consumer, and it is an agent in the transaction. Its performance obligation is to arrange for the provision of goods to the end-consumer by the supplier (i.e., not the provision of the specified goods themselves).

As discussed above, a specified good or service might also be a distinct bundle of goods or services. In line with the discussion in 5.2.1.B above, if individual goods or services are not distinct from one another, they might be inputs to a combined item and each good or service might represent only a part of a single promise to the customer. Therefore, in a contract in which goods or services provided by another party are inputs to a combined item (or items), the entity would assess whether it controls the combined item (or items) before that item (or items) is transferred to the customer. If so, in determining whether it is a principal or an agent, an entity evaluates that single promise to the customer, rather than the individual inputs that make up that promise. However, in order to conclude that it controls the combined item(s), Paragraph 23.37(c) of FRS 102 (further discussed in 5.4.2 below) notes that it is likely an entity will need to conclude it performs a significant service of integrating the individual goods or services because it also controls the underlying inputs before integration.

Appropriately identifying the specified good or service to be provided is a critical step in determining whether an entity is a principal or an agent in a transaction. In many situations, especially those involving tangible goods, identifying the specified good or service is relatively straightforward. For example, if an entity is reselling laptop computers, the specified good that is transferred to the customer is a laptop computer.

However, the assessment might require significant judgement in other situations, such as those involving intangible goods or services. For example, the specified good or service might be the underlying good or service a customer ultimately wants to obtain (e.g., a flight, a meal) or a right to obtain that good or service (e.g., in the form of a ticket or voucher). It is helpful to consider the guidance provided in the Basis for Conclusions on IFRS 15 in this area. The IASB noted that when the specified good or service is a right to a good or service that will be provided by another party, the entity would determine whether its performance obligation is a promise to provide that right (and it is, therefore, a principal) or whether it is arranging for the other party to provide that right (and it is, therefore, an agent). The fact that the entity does not provide the underlying goods or services itself is not determinative. [IFRS 15.BC385O]. As well as considering the goods or services explicitly promised in the contract, an entity also needs to consider any implicit promises (see 5.1 above and Illustration 5-18 in 5.4.2 below for further discussion), which might require judgement. [FRS 102.23.19].

It might be difficult in some cases to determine whether the specified good or service is the underlying good or service or a right to obtain that good or service. An entity could consider Example 47 in IFRS 15 which involves an airline ticket reseller. In this example, the entity pre-purchases airline tickets that it will later sell to customers. While the customer ultimately wants airline travel, the conclusion is that the specified good or service is the right to fly on a specified flight (in the form of a ticket) and not the underlying flight itself. The entity itself does not fly the plane and it cannot change the service (e.g., change the flight time or destination). However, the entity obtained the ticket prior to identifying a specific customer to purchase the ticket. As a result, the entity holds an asset (in the form of a ticket) that represents a right to fly. The entity could, therefore, transfer that right to a customer (as depicted in the example) or decide to use the right itself. [IFRS 15.IE Example 47, IFRS 15.IE239-IE243].

An entity can also consider also Example 46A in IFRS 15 which involves an office maintenance service provider. In this example, the entity concludes that the specified good or service is the underlying office maintenance service (rather than a right to that service). While the entity obtained the contract with the customer prior to engaging a third party to perform the requested services, the right to the subcontractor's services never transfers to the customer. Instead, the entity retains the right to direct the service provider. That is, the entity can direct the right to use the subcontractor's services as it chooses (e.g., to fulfil the customer contract, to fulfil another customer contract, to service its own facilities). Furthermore, the customer in this example is indifferent as to who carries out the office maintenance services. [IFRS 15.IE Example 46A, IFRS 15.IE238A-IE238G]. This is not the case in Example 47 in IFRS 15 discussed above, in which the customer wants the ticket reseller to sell one of its tickets on a specific flight.

If a contract with a customer includes more than one specified good or service, Section 23 requires that an entity must determine whether it is a principal or an agent for each performance obligation in a contract because an entity might be a principal for some specified goods or services and an agent for others.

[FRS 102.23.36]. Example 48A in IFRS 15 provides an illustration of this. [IFRS 15.IE Example 48A, IFRS 15.IE248A-IE248F]. Also consider the following Illustration:

Illustration 5-17: Entity is both a principal and an agent

A software reseller sells software licences bundled with post-contract support (PCS) and other IT solutions to end-users. The reseller has entered into contracts with several software manufacturers that provide the reseller with the right to sell licences to the software with PCS to end-users during non-cancellable periods of time in exchange for fixed fees per licence sold. The reseller can set the prices it charges end-users, but is contractually required to pay the software manufacturer the fixed fee, regardless of the price paid by end-users. The software reseller does not have a commitment to make a minimum number of purchases from the software manufacturer and does not make purchases in advance.

The software reseller is responsible for identifying which software will address the customer's needs (including the feasibility of integrating it with the customer's existing technology environment), ordering the software from the manufacturer, assisting customers if they encounter issues downloading the software (all software is provided electronically) and with other basic technical support. The software reseller is also responsible for providing refunds or remedies to the customer if the software product is not suitable for the customer's needs. The software manufacturer provides higher levels of technical support and provides PCS directly to the customer.

As part of its principal-versus-agent evaluation for these contracts, the software reseller determines that the software licence and PCS are separate specified goods or services.

When assessing control for the software licence, the reseller concludes that it controls the software licence before the licence is provided to the end-user. This is because the reseller has the right to direct the software manufacturer to provide the software to the end-user on the reseller's behalf, including the right to redirect the software to another end user (consistent with the requirements in paragraph 23.37(b), which are discussed in 5.4.2 below). As part of this assessment, the software reseller also considers the three indicators of control in Section 23 and makes the following determinations that support its overall control evaluation:

- The software reseller is responsible for fulfilling the promise to the customer and the entity takes responsibility for much of the purchasing process, as described above.
- There is no inventory risk associated with the software provided electronically.
- The software reseller has discretion to establish prices.

Conversely, the reseller concludes that it does not control the PCS before it is provided to the end-user because the software manufacturer creates the updates that it delivers electronically to end-users of the software directly through the internet and all but the most basic level of technical support will be provided by the software manufacturer. As part of this assessment, the software reseller also considers the three indicators of control in Section 23 and makes the following determinations that support its overall control evaluation:

- The software manufacturer is responsible for fulfilling the promise to the customer because, in this example, it provides the updates directly to the end-users.
- There is no inventory risk associated with the PCS provided electronically.
- The software reseller has discretion to establish prices.

The software reseller believes that the first of the indicators is the most relevant to consider in this assessment and that it supports its overall control assessment. Therefore, the software reseller concludes that it is the principal for the software licence, but is an agent for the PCS, because it does not control the PCS before it is transferred to the end-user.

How we see it

As discussed above, appropriately identifying the specified good or service to be provided to the customer is a critical step in identifying whether the nature of an entity's promise is to act as a principal or an agent. Entities need to carefully examine their contract terms and might need to apply significant judgement to determine whether the specified good or service is the underlying good or service or a right to obtain that good or service.

5.4.2 Control of the specified good or service

After identifying the specified good or service (see 5.4.1 above), the next step in determining the nature of the entity's promise (i.e., whether it is to provide the specified goods or services or to arrange for those goods or services to be provided by another party) is for the entity to determine whether the entity controls the specified good or service before it is transferred to the customer. An entity cannot provide the specified good or service to a customer (and, therefore, be a principal) unless it controls that good or service prior to its transfer. [FRS 102.23.36, FRS 102.23.37]. That is, control is the determining factor when assessing whether an entity is a principal or an agent.

In assessing whether an entity controls the specified good or service prior to transfer to the customer, an entity considers the definition of control in paragraph 23.80 that is included in Step 5 of the model (discussed further in 8 below). [FRS 102.23.80].

Extract from Section 23

23.80 Goods and services are assets, even if only momentarily, when they are received and used (as in the case of many services). Control of an asset refers to the ability to direct the use of, and obtain substantially all of the remaining economic benefits that may flow from, the asset.

How we see it

When evaluating the definition of control in paragraph 23.80, we believe it could be helpful for entities to consider the indicators in paragraph 23.85 (see 8.2 below) to help determine the point in time when a customer obtains control of a particular good or service (e.g., legal title, physical possession, risks and rewards of ownership).

If, after evaluating the requirement in paragraph 23.80, an entity concludes that it controls the specified good or service before it is transferred to the customer, the entity is a principal in the transaction. If the entity does not control that good or service before transfer to the customer, it is an agent.

The control principle is often easier to apply to tangible goods than to intangible goods or services because intangible goods or services generally exist only at the moment they are delivered. Therefore, Section 23 includes guidance on how the control principle applies to certain types of arrangements (including service transactions) by explaining what a principal controls before the specified good or service is transferred to the customer: [FRS 102.23.37]

Extract from Section 23

- 23.37** An entity is a principal if it controls the specified good or service before that good or service is transferred to a customer. A principal might obtain control of any one of the following:
- (a) a good or another asset from the other party that it then transfers to the customer;
 - (b) a right to a service to be performed by the other party, which gives the entity the ability to direct that party to provide the service to the customer on the entity's behalf; or
 - (c) a good or service from the other party that it then combines with other goods or services in providing the specified good or service to the customer.

An entity can control a service to be provided by another party when it controls the right to the specified service that will be provided to the customer. Generally, the entity then either transfers the right (in the form of an asset, such as a ticket) to its customer, in accordance with paragraph 23.37(a) (as in Example 47 in IFRS 15 involving the airline ticket reseller discussed in 5.4.1 above) or uses its right to direct the other party to provide the specified service to the customer on the entity's behalf, in accordance with paragraph 23.37(b) (as in Example 46A in IFRS 15 involving the office maintenance services discussed in 5.4.1 above).

The condition described in paragraph 23.37(a) above includes contracts in which an entity transfers to the customer a right to a future service to be provided by another party. If the specified good or service is a right to a good or service to be provided by another party, the entity evaluates whether it controls the right to the goods or services before that right is transferred to the customer (rather than whether it controls the underlying goods or services). Consider also the observation noted in the Basis for Conclusions on IFRS 15 on this matter, i.e., in assessing such rights, it is often relevant to assess whether the right is created only when it is obtained by the customer or whether the right exists before the customer obtains it. If the right does not exist before the customer obtains it, an entity would not be able to control that right before it is transferred to the customer. [IFRS 15.BC3850].

An entity could consider two examples included in IFRS 15 that illustrate this point. In Example 47 in IFRS 15 (discussed in 5.4.1 above), which involves an airline ticket reseller, the specified good or service is determined to be the right to fly on a specified flight (in the form of a ticket). One of the determining factors for the principal-agent evaluation in this example is that the entity pre-purchases the airline tickets before a specific customer is identified. Accordingly, the right existed prior to a customer obtaining it. The example concludes that the entity controls the right before it is transferred to the customer (and is, therefore, a principal). [IFRS 15.IE Example 47, IFRS 15.IE239-IE243].

In Example 48 in IFRS 15, an entity sells vouchers that entitle customers to future meals at specified restaurants selected by the customer. The specified good or service is determined to be the right to a meal (in the form of a voucher). One of the determining factors for the principal-agent evaluation is that the entity does not control the voucher (the right to a meal) at any time. It does not pre-purchase or commit itself to purchase the vouchers from the restaurants before they are sold to a customer. Instead, the entity waits to purchase the voucher until a customer requests a voucher for a particular restaurant. In addition, vouchers are created only at the time that they are transferred to a customer and do not exist before that transfer. Accordingly, the right does not exist before the customer obtains it. Therefore, the entity does not at any time have the ability to direct the use of the vouchers or obtain substantially all of the remaining benefits from the vouchers before they are transferred to customers. The example concludes that the entity does not control the right before it is transferred to the customer (and is, therefore, an agent). [IFRS 15.IE Example 48, IFRS 15.IE244-IE248].

Consistent with the observation in the Basis for Conclusions on IFRS 15, determining whether an entity is a principal or an agent might be more difficult when evaluating whether a contract falls under paragraph 23.37(b). That is, it might be difficult to determine whether an entity has the ability to direct another party to provide the service on its behalf (and is, therefore, a principal) or is only arranging for the other party to provide the service (and is, therefore, an agent). As depicted in Example 46A in IFRS 15 (as discussed in 5.4.1 above), an entity could control the right to the specified service and be a principal by entering into

a contract with the subcontractor in which the entity defines the scope of service to be performed by the subcontractor on its behalf. This situation is equivalent to the entity fulfilling the contract using its own resources. Furthermore, the entity remains responsible for the satisfactory provision of the specified service in accordance with the contract with the customer. In contrast, when the specified service is provided by another party and the entity does not have the ability to direct those services, the entity typically is an agent because the entity is facilitating, rather than controlling the rights to, the service.

[IFRS 15.BC385V, IFRS 15.IE Example 46A, IFRS 15.IE238A-IE238G].

In accordance with paragraph 23.37(c), if an entity provides a significant service of integrating two or more goods or services into a combined item that is the specified good or service the customer contracted to receive, the entity controls that specified good or service before it is transferred to the customer. This is because the entity first obtains control of the inputs to the specified good or service (which can include goods or services from other parties) and directs their use to create the combined item that is the specified good or service. The inputs would be a fulfilment cost to the entity. However, if a third party provides the significant integration service, the entity's customer for its good or services (which would be inputs to the specified good or service) is likely to be the third party.

Accordingly, when an entity assesses whether the entity controls the combined good or service before it is transferred to the end-consumer, it would be helpful to determine the nature and significance of the integration service and whether the entity first controls the inputs to the combined good or service. It might be unclear how an entity could conclude that it is a principal if the integration service is not significant or it does not control the inputs to the combined good or service.

While paragraph 23.37 provides helpful guidance, significant judgement might still be needed to determine whether the entity controls the specified good or service before it is transferred to the customer. For example, in 2021, the IFRS IC received a request regarding the determination of whether a reseller of software licences is a principal or agent. At its April 2022 meeting, the IFRS IC concluded that the principles and requirements in IFRS 15 provide an adequate basis for a reseller to determine this in the submitted fact pattern. Consequently, the IFRS IC decided not to add a standard-setting project to the work plan.

In considering this request, the IFRS IC noted that the assessment of control requires an entity to consider specific facts and circumstances, including the terms and conditions of the contracts between each of the parties involved. If it is unclear whether the entity controls the specified good or service, the entity would consider the indicators in paragraph B37 of IFRS 15 (which is similar to the indicators in paragraph 23.38 of IFRS 102) to assess whether it obtains control. The IFRS IC noted that part of applying judgement in the principal versus agent assessment involves "considering the relevance of the indicators to the assessment of control and the degree to which they provide evidence of control".¹³⁵

The following Illustration is based on the example from the IFRS IC agenda paper used by the IFRS IC when it discussed whether a reseller of software licences is a principal or agent in its April 2022 meeting:¹³⁶

Illustration 5-18: Determination of whether a reseller of software licences is a principal or agent

A reseller of standard software licences has a distribution agreement with a software manufacturer to sell licences to customers. The reseller has discretion in pricing the software licences. The reseller provides pre-sales advice to each customer to identify the type and number of the licences that meet the customer's needs. If the customer decides not to buy software licences, the reseller and the customer do not enter into an agreement, and the customer does not pay anything.

If the customer decides to buy the software licences, the reseller negotiates the selling price with the customer, places an order with the software manufacturer (and pays the manufacturer) and invoices the customer. The software licences are issued in the customer's name via a software portal with an activation key. If the pre-sale advice is incorrect, the customer might not accept the licences. However, the reseller cannot return unaccepted licences to the software manufacturer or sell them to another customer.

Identify the specified goods or services in the contract

The IFRS IC observed that the pre-sales advice the reseller provides is not an implicit promise in the contract. Since the reseller has already provided the advice at the time of entering into the contract with the customer, there is no further advice to be provided by the reseller after the contract inception. Therefore, the specified goods in the contract are the standard software licences as described in IFRS 15.B34A(a) (and in line with the discussion in 5.4.1 above).

¹³⁵ [IFRIC Update](#), April 2022, available on the IFRS Foundation's website.

¹³⁶ [IFRIC Update](#), April 2022, available on the IFRS Foundation's website.

Assess whether the entity controls the specified good before it is transferred to the customer

The reseller assesses whether it obtains control of the standard software licences from the software manufacturer before they are transferred to the customer. After applying paragraphs B35-B35A of OFRS 15 (or paragraph 23.37 of FRS 102), if it is unclear, the reseller considers the indicators in paragraph B37 of IFRS 15 (or paragraph 23.38 of FRS 102). The IFRS IC observed that:

- The software manufacturer is responsible for fulfilling the promise to provide the licences to the customer (IFRS 15.B37(a) or FRS 102.23.38(a)), for example, the software's functionality, issuing and activating the licences.
- The reseller is responsible for fulfilling the promise to provide the licences to the customer (IFRS 15.B37(a) or FRS 102.23.38(a)), for example, engaging with the customer before and after the software licences are provided to the customer and taking unaccepted licences.
- The reseller has no inventory risk before the licences are provided to the customer but then has inventory risk until the customer accepts the licences (IFRS 15.B37(b) or FRS 102.23.38(b)).
- The reseller has discretion in establishing the price for the software licences (IFRS 15.B37(c) or FRS 102.23.38(c)), which might be less relevant if, for example, the market has limited flexibility in establishing the price.

The reseller would apply judgement in making its overall assessment, including considering the relevance of the indicators to the assessment of control and the degree to which they provide evidence of control.

5.4.2.A Principal indicators

After considering the guidance discussed above, it still might not be clear whether an entity controls the specified good or service. Therefore, Section 23 provides three indicators of when an entity controls the specified good or service (and is, therefore, a principal): [FRS 102.23.38]

Extract from Section 23

23.38 Indicators that an entity is a principal include, but are not limited to, the following:

- (a) the entity is primarily responsible for fulfilling the promise to provide the specified good or service;
- (b) the entity has inventory risk before the specified good or service has been transferred to a customer or after transfer of control to the customer (eg if the customer has a right of return); or
- (c) the entity has discretion in establishing the price for the specified good or service.

The principal indicators above are meant to support an entity's assessment of control, not to replace it. Each indicator explains how it supports the assessment of control.

Section 23 refers to the items described above as 'indicators' only. This implies, they do not override the assessment of control, are not meant to be viewed in isolation and do not constitute a separate or additional evaluation. Furthermore, they are not a checklist of criteria to be met or factors to be considered in all scenarios, i.e., considering one or more of the indicators will often be helpful and, depending on the facts and circumstances, individual indicators will be more or less relevant or persuasive to the assessment of control (which is consistent with the IFRS IC's April 2022 discussions – see 5.4.2 above).

If an entity reaches different conclusions about whether it controls the specified good or service by applying Section 23's definition of control versus the principal indicators, the entity re-evaluates its assessment, considering the facts and circumstances of its contract. This is because an entity's conclusions about control and the principal indicators need to align.

5.4.2.B Principal indicators: primarily responsible for fulfilling the promise

The first indicator that an entity is a principal, in paragraph 23.38(a), is that the entity is primarily responsible for fulfilling the promise to provide the specified good or service to the customer, which typically includes responsibility for the acceptability of the specified good or service.

How we see it

We believe that one of the reasons that the indicator in paragraph 23.38(a) supports the assessment of control of the specified good or service is because an entity generally controls a specified good or service if it is responsible for transferring control to a customer.

The terms of the contract and representations (written or otherwise) made by an entity during marketing generally provide evidence of which party is responsible for fulfilling the promise to provide the specified good or service and for the acceptability of that good or service.

It is possible that one entity might not be solely responsible for both providing the specified good or service and for the acceptability of that same good or service. For example, a reseller might sell goods or services that are provided to the customer by a supplier. However, if the customer is dissatisfied with the goods or services it receives, the reseller might be solely responsible for providing a remedy to the customer. The reseller might promote such a role during the marketing process or might agree to such a role as claims arise in order to maintain its relationship with its customer. In this situation, both the reseller and the supplier possess characteristics of this indicator. Therefore, it is likely that other indicators will need to be considered to determine which entity is the principal. However, if the reseller is responsible for providing a remedy to a dissatisfied customer but can then pursue a claim against the supplier to recoup any remedies it provides, that might indicate that the reseller is not ultimately responsible for the acceptability of the specified good or service.

5.4.2.C Principal indicators: inventory risk

The second indicator that an entity is a principal, in paragraph 23.38(b), is that the entity has inventory risk (before the specified good or service is transferred to the customer or upon customer return). Inventory risk is the risk normally taken by an entity that acquires inventory in the hope of reselling it at a profit. Inventory risk exists if a reseller obtains (or commits to obtain) the specified good or service before it is ordered by a customer. Inventory risk also exists if a customer has a right of return and the reseller will take back the specified good or service if the customer exercises that right.

This indicator supports the assessment of control of the specified good or service because when an entity obtains (or commits to obtain) the specified good or service before it has contracted with a customer, it is likely that the entity has the ability to direct the use of and obtain substantially all of the remaining benefits from the good or service. For example, inventory risk can exist in a customer arrangement involving the provision of services if an entity is obliged to compensate the individual service provider(s) for work performed, regardless of whether the customer accepts that work. However, this indicator often does not apply to intangible goods or services.

Factors might exist that mitigate a reseller's inventory risk. For example, a reseller's inventory risk might be significantly reduced or eliminated if it has the right to return to the supplier goods it cannot sell or goods that are returned by customers. Another example is if a reseller receives inventory price protection from the supplier. In these cases, the inventory risk indicator might be less relevant or persuasive to the assessment of control.

5.4.2.D Principal indicators: pricing discretion

The third principal indicator, in paragraph 23.38(c), is that the entity has discretion in establishing the price of the specified good or service. Reasonable latitude, within economic constraints, to establish the price with a customer for the product or service might indicate that the entity has the ability to direct the use of that good or service and obtain substantially all of the remaining benefits (i.e., the entity controls the specified good or service). However, because an agent might also have discretion in establishing the price of the specified good or service, the facts and circumstances of the transaction need to be carefully evaluated.

5.4.2.E Principal indicators: examples

Illustration 5-19 below shows how an entity might conclude that it is an agent:

Illustration 5-19: Entity is an agent

An entity operates a website that provides a marketplace for customers to purchase goods from a variety of suppliers who deliver the goods directly to the customers. The entity's website facilitates customer payments to suppliers at prices that are set by the suppliers. The entity requires payment from customers before orders are processed and all orders are non-refundable. The entity has no further obligations to the customers after arranging for the products to be provided to them; the entity is not responsible for the acceptability of goods provided to customers.

First, the entity evaluates the specified goods and concludes that there are no other goods or services provided to the customer except for those provided directly by the suppliers. Next, the entity considers whether it controls the specified goods before they are transferred to the customers. Since the entity does not at any time have the ability to direct the use of the goods transferred to the customers, the entity concludes

that it does not control the specified goods before they are transferred. As part of this assessment, the entity considers the three indicators of control in Section 23 and makes the following determinations that support its overall control evaluation:

- The suppliers are responsible for fulfilling the promise to the customer and the entity does not take responsibility for the acceptability of the goods.
- The entity does not have inventory risk because it does not obtain the goods at any time.
- The entity does not have discretion to establish prices because they are set by the suppliers.

The entity concludes that it is an agent for the goods sold through its website because the nature of its performance obligation is to arrange for goods to be provided to the customers.

In contrast, consider the following Illustration of an entity that concludes it is acting as a principal:

Illustration 5-20: Entity is a principal

An entity operates a website that provides a marketplace for customers to purchase digital content. The entity has entered into contracts with suppliers that provide it with the right to sell the digital content during a non-cancellable period of time in exchange for a fixed fee per unit of content. The entity can set the price for the content to be sold to customers on its website. The entity is contractually required to pay the supplier a fixed price or rate for any digital content it sells to its customers and that price or rate is unaffected by the price paid by the end-consumers. The entity is responsible for assisting customers if they encounter issues downloading the content or with the user experience, and customers do not interact with the suppliers.

The entity first evaluates the specified goods and concludes that the digital content is the only specified good or service. Next, the entity considers whether it controls the digital content before it is transferred to the customer. The entity concludes that it controls the specified goods before they are transferred because it has entered into a non-cancellable distribution agreement that permits the entity to sell the digital content to its customers. This conclusion differs from the entity's conclusion in Illustration 5-19 above because that entity provided a platform to connect suppliers to customers and did not have the ability to sell the suppliers' goods. As part of this assessment, the entity also considers the three indicators of control in Section 23 and makes the following determinations that support its overall control evaluation:

- The entity is responsible for fulfilling the promise to the customer and the entity takes responsibility for the acceptability of the digital content.
- There is no inventory risk associated with digital content.
- The entity has discretion to establish prices.

The entity concludes that it is a principal for the digital content sold through its website because it controls the content before it is transferred to the customer.

5.4.3 Recognising revenue as principal or agent

The determination of whether the entity is acting as a principal or an agent affects the amount of revenue the entity recognises. When the entity is the principal in the arrangement, the revenue recognised is the gross amount to which the entity expects to be entitled in exchange for the specified good or service transferred as it satisfies its performance obligation. [FRS 102.23.39]. When the entity is the agent, the performance obligation is to arrange for the specified goods or services to be provided by another party. The revenue recognised upon satisfaction of its performance obligation is the fee or commission to which the agent expects to be entitled in exchange for arranging for the specified goods or services to be provided by the other party. [FRS 102.23.40]. The agent's fee or commission might be the net amount of consideration that the entity retains after paying the other party the consideration received in exchange for the goods or services to be provided by that party.

After an entity determines whether it is the principal or the agent and the amount of gross or net revenue that would be recognised, the entity recognises revenue when or as it satisfies its performance obligation. An entity satisfies its performance obligation by transferring control of the specified good or service underlying the performance obligation, either at a point in time or over time (as discussed in 8 below). That is, a principal would recognise revenue when (or as) it transfers the specified good or service to the customer. An agent would recognise revenue when its performance obligation to arrange for the specified good or service is complete.

It is also worth considering the observations noted in the Basis for Conclusions on IFRS 15 relating to this matter. The IASB noted that, in some contracts in which the entity is the agent, control of specified goods or services promised by the agent might transfer before the customer receives related goods or services from the principal. For example, an entity might satisfy its promise to provide customers with loyalty points when those points are transferred to the customer if:

- The entity's promise is to provide loyalty points to customers when the customer purchases goods or services from the entity.
- The points entitle the customers to future discounted purchases with a third party (i.e., the points represent a material right to a future discount).
- The entity determines that it is an agent (i.e., its promise is to arrange for the customers to be provided with points) and the entity does not control those points (i.e., the specified good or service) before they are transferred to the customer.

In contrast, if the points entitle the customers to future goods or services to be provided by the entity, the entity might conclude it is not an agent. This is because the entity's promise is to provide those future goods or services and, therefore, the entity controls both the points and the future goods or services before they are transferred to the customer. In these cases, the entity's performance obligation might only be satisfied when the future goods or services are provided.

In other cases, the points might entitle customers to choose between future goods or services provided by either the entity or a third party. For example, many airlines allow loyalty programme members to redeem loyalty points for goods or services provided by a partner (e.g., travel on another airline, hotel accommodation). In this situation, the nature of the entity's performance obligation might not be known until the customer makes its choice. That is, until the customer has chosen the goods or services to be provided (and, therefore, whether the entity or the third party will provide those goods or services), the entity is obliged to stand ready to deliver goods or services. Therefore, the entity might not satisfy its performance obligation until it either delivers the goods or services or is no longer obliged to stand ready. If the customer subsequently chooses to receive the goods or services from a third party, the entity would need to consider whether it was acting as an agent and would, therefore, only recognise revenue for a fee or commission that it received for arranging the ultimate transaction between the customer and the third party. [IFRS 15.BC383, IFRS 15.BC384, IFRS 15.BC385].

How we see it

The above discussion illustrates that control of specified goods or services promised by an agent might transfer before the customer receives related goods or services from the principal. An entity needs to assess each loyalty programme in accordance with the principles of the principal versus agent guidance to determine if revenue would be reported on a gross or net basis.

In addition, if an entity that was initially the principal in a transaction transfers to another entity its obligation to provide the specified goods or services to the customer, the entity does not continue to recognise revenue as a principal. Instead, after the transfer of its obligation, the entity evaluates whether it is acting as an agent and would recognise as revenue the net amount of consideration that the entity retains in accordance with paragraph 23.40. This is consistent with the guidance in provided in IFRS 15.B36. [IFRS 15.B38].

5.4.4 Examples of principal versus agent considerations

IFRS 15 and Section 23 have consistent principal versus agent guidance, however Section 23 does not provide examples to illustrate how such guidance might be applied. IFRS 15 includes six examples that illustrate the application of principal versus agent guidance. Refer to the EY publication, International GAAP® for these examples and additional guidance.

Frequently asked questions

Question 5-15: How would an entity determine whether it is a principal or an agent in a transaction for a specified good for which it only takes title momentarily or never has physical possession?

An entity's determination of whether it is a principal or an agent in a transaction for a specified good for which it only takes title momentarily or never has physical possession requires significant judgement and careful consideration of the facts and circumstances. Entities might enter into contracts with third-party vendors (the vendors) to provide goods or services to be sold through their sales channels to their customers. In these arrangements, the entity might take legal title to the good only momentarily before the good is transferred to the customer, such as in scan-based trading or 'flash title' contracts (e.g., vendor is responsible for stocking, rotating and otherwise managing the product until the final point of sale). Alternatively, the entity might never take physical possession or legal title to the good (e.g., 'drop shipment arrangements' when goods are shipped directly from a vendor to the customer). In these situations, the entity needs to carefully evaluate whether it obtains control of the specified good and, therefore, is the principal in the transaction with the end-consumer.

How we see it

When evaluating the control principle and the principal indicators provided in Section 23, we believe some questions an entity might consider when making this judgement could include the questions listed below.

- Does the entity take title to the goods at any point in the order-to-delivery process? If not, why?
- Is the vendor the party that the customer will hold responsible for the acceptability of the product (e.g., handling of complaints and returns)? If so, why?
- Does the entity have a return-to-vendor agreement with the vendor or have a history of returning goods to the vendor after a customer returns the good(s)? If so, why?
- Does the vendor have discretion in establishing the price for the goods (e.g., setting the floor or ceiling)? If so, why?
- Is the vendor responsible for the risk of loss or damage (e.g., shrinkage) while the goods are in the entity's store? If so, why?
- Does the vendor have the contractual right to take back the goods delivered to the entity and, if so, has the vendor exercised that right in situations other than when the goods were at the end of their useful lives?
- Can the entity move goods between their stores or relocate goods within their stores without first obtaining permission from the vendor? If not, why?
- Does the entity have any further obligation to the customer after remitting the customer's order to the vendor? If not, why?
- Once a customer order is placed, can the entity direct the product to another entity or prevent the product from being transferred to the customer? If not, why?

Understanding the business purpose and rationale for the contractual terms between the vendor and the entity might help the entity assess whether it controls the specified goods prior to the transfer to the end-consumer and is, therefore, the principal in the sale to the end-consumer.

Question 5-16: How would entities determine the presentation of amounts billed to customers (e.g., shipping and handling, expenses or cost reimbursements and taxes) under FRS 102 (i.e., as revenue or as a reduction of costs)?¹³⁷

Section 23 is generally clear that any amounts not collected on behalf of third parties would be included in the transaction price (i.e., revenue). As discussed in 6 below, paragraph 23.41 states that "the transaction price is the amount of consideration to which an entity expects to be entitled in exchange for transferring promised goods or services to a customer, excluding amounts collected on behalf of third parties (eg some sales taxes)". Therefore, if the amounts were earned by the entity in fulfilling its performance obligations, the amounts are included in the transaction price and recorded as revenue.

¹³⁷ Based on TRG Agenda paper no. 2, *Gross versus Net Revenue: Amounts Billed to Customers*, dated 18 July 2014 and TRG Agenda paper no. 5, *July 2014 Meeting - Summary of Issues Discussed and Next Steps*, originally dated 31 October 2014, reissued 18 March 2015.

Shipping and handling

The appropriate presentation of amounts billed to customers for shipping and handling activities would depend on whether the entity is a principal or an agent in the shipping arrangement (see Question 11-8 in 11.3 below for further discussion on presentation of shipping and handling costs incurred by the entity).

Expense or cost reimbursements

Many service providers routinely incur incidental expenses, commonly referred to as 'out-of-pocket' expenses, in the course of conducting their normal operations. Those expenses often include, but are not limited to, airfare, other travel-related costs (such as car rentals and hotel accommodation) and telecommunications charges. The entity (i.e., the service provider) and the customer might agree that the customer will reimburse the entity for the actual amount of such expenses incurred. Alternatively, the parties might negotiate a single fixed fee that is intended to compensate the service provider for both professional services rendered and out-of-pocket expenses incurred.

Out-of-pocket expenses are often costs incurred by an entity in fulfilling its performance obligation(s) (i.e., the out-of-pocket expenses are fulfilment costs) and do not transfer a good or service to the customer. In these situations, reimbursement for such costs generally is included in the entity's estimate of the transaction price and recognised as revenue when (or as) the performance obligation(s) is (are) satisfied, even if the entity is reimbursed at 'cost' (i.e., at zero margin). Alternatively, if an entity concludes that the costs *do* transfer a good or service to the customer, it considers the principal-versus-agent guidance when determining whether reimbursement amounts received from its customer need to be recorded on a gross or net basis.

In some cases, it might be appropriate to include the reimbursement in the transaction price and recognise that amount as revenue when the applicable expense is incurred. That is, an entity might not have to estimate out-of-pocket expenses in its determination of the transaction price at contract inception. This could be the case in the following situations:

- The entity is an agent as it relates to the specified good or service identified (see 5.4 above). That is, in cases in which the entity is an agent and the reimbursement is equal to the cost, the net effect on revenue would be zero and, therefore, no estimation would be required.
- The variable consideration is constrained (see 6.2.3 below). That is, if a portion of the transaction price related to reimbursements of out-of-pocket expenses is constrained, an entity would not include an estimate in the transaction price for that amount until it becomes highly probable that the entity will be entitled to the cumulative amount of revenue recognised (see 6.2.3 below), which might be when the underlying out-of-pocket expenses are incurred in some cases. For example, an entity might not be able to make reliable estimates of expenses and the related reimbursements that the entity will be entitled to due to a lack of historical evidence.
- The variable consideration relates specifically to a performance obligation or a distinct good or service in a series and the entity meets the variable consideration exception (see 7.3 below).
- The entity qualifies to apply the 'right to invoice' practical expedient (see 8.1.4.B below).
- The entity applies a 'costs incurred' measure of progress when recognising revenue for over time performance obligations (see 8.1.4 below). That is, if an entity selects a 'costs incurred' method, the timing of the costs being incurred and the revenue recognition associated with those costs would align.

Taxes or other assessments

This would generally require entities to evaluate taxes collected in all jurisdictions in which they operate to determine whether a tax is levied on the entity or the customer. That is, whether the entity is liable for the tax (regardless of whether it can pass that cost onto its customers) or the customer is liable, and the entity would be collecting the tax on behalf of the tax authority. Assume an entity sets the price for a good at £99, which includes an amount equivalent to the sales tax of £9:

- If the tax is levied on the entity (i.e., the entity is liable for the tax), the £9 charged to the customer is because the entity is able to increase its prices to cover the sales tax (its own cost). Therefore, £9 is actually part of the transaction price that the entity earns from the customer in exchange for fulfilling its performance obligation(s). That is, £99 is the transaction price (i.e., revenue) and the entity would recognise an expense of £9 when it is liable for the tax.
- If the tax is levied on the customer (i.e., the entity is collecting the tax on behalf of the tax authority), the transaction price would be £90. This is because the sales tax of £9 is being collected by the entity on behalf of the tax authority. Furthermore, the entity would not incur any costs in respect of the tax, since it is the customer who is liable, rather than the entity.

Also, an entity would generally apply the principal versus agent guidance when it is not clear whether the amounts are collected on behalf of third parties. This could result in amounts billed to a customer being recorded as an offset to costs incurred (i.e., on a net basis). Because sales or similar taxes are an obligation to a tax authority, rather than a good or service promised to a customer, the principal versus agent guidance is applied by analogy and judgement might, therefore, be needed.

Determining whether an entity is a principal (i.e., directly liable for the tax obligation) or an agent (i.e., collecting the tax on behalf of the tax authority) in relation to such taxes will depend on the specific facts and circumstances, including the intention and underlying characteristics of the tax in the particular jurisdiction. The basis on which the tax is calculated might be informative (e.g., the sales price, units sold or consumed, units produced, imported or exported). However, the measurement point will not, in and of itself, determine the economic nature of the tax. Tax authorities might simply utilise a basis that is at a convenient point in the process and is easy to verify.

One or more of the following indicators might indicate that the entity is the principal in relation to taxes and other assessments remitted to governmental authorities:

- *The entity is primarily responsible for fulfilling the tax obligation* - Entities might be responsible for a particular tax assessment regardless of whether they choose to seek full or partial reimbursement of that assessment through billings to their customers. In other jurisdictions, the customer could be responsible for payment of sales taxes even though the tax authority in that jurisdiction might require the entity to collect the tax from the customer and remit the entire amount to the tax authority. In that context, the customer might be responsible for remitting the tax to the appropriate authority if the entity does not collect the tax.
- *The entity has latitude with respect to the amount charged to the customer* - If the entity is able to make its own decision about whether and how it recovers the tax from its customers, it might be the principal. For example, entities that are required to collect sales tax from customers are required to do so at the amount owed to the tax authority and remit that amount to the tax authority, while other entities make their own decision about whether and how they recover the costs from their customers.
- *The amount retained by the entity is not fixed* - If the entity is required to remit what it collects from the customer and its retention is fixed (at zero), it might indicate it is an agent. Conversely, the entity might be a principal if its margins on the tax are not fixed and the selling price represents a business decision about the price that customers are willing to pay for the goods or services.
- *The entity has credit risk* - An entity would have credit risk if it is solely responsible for payment of the full tax or other assessment amount, regardless of whether it collects any amounts it has billed to its customers.

In addition to the above indicators, while it might vary depending on the nature of the sales (or similar) tax, it might not be clear whether those amounts represent consideration to which the entity expects to be entitled in exchange for transferring promised goods or services to a customer. That is, the amount billed to the customer in respect of the tax might not relate to the entity's performance in satisfying a performance obligation. This might be evident in circumstances when the price of the good or service varies among jurisdictions by the statutorily mandated tax. For example, when a good is sold over the internet, a sales tax amount is added (or not added) at time of checkout based on where the customer resides. In addition, in some jurisdictions, certain types of entities might not be required to pay sales tax for certain products, while other types of entities are required to pay sales tax for the same products. Since the price variation in those examples is entirely attributable to the tax (not to any incremental performance), one might conclude that the tax amount should not be part of the transaction price (i.e., excluded from revenue).

Question 5-17: How does an entity allocate the transaction price in a contract with multiple performance obligations in which the entity acts as both a principal and an agent?

See response to Question 7-8 in 7.2 below.

5.5 Consignment arrangements

Section 23 provides specific guidance for a promise to deliver goods on a consignment basis to other parties. See 8.4 below.

5.6 Customer options for additional goods or services

Many sales contracts give customers the option to acquire additional goods or services. These additional goods or services might be priced at a discount or might even be free of charge. [FRS 102.23.31]. Options to acquire additional goods or services at a discount can come in many forms, including sales incentives, volume-tiered pricing structures, customer award credits (e.g., frequent flyer points) or contract renewal options (e.g., waiver of certain fees, reduced future rates). [FRS 102.23.32]. See the Questions that follow this section, which discuss many of these different types of customer options.

When an entity grants a customer the option to acquire additional goods or services, that option is only a separate performance obligation if it provides a material right to the customer that the customer would not receive without entering into the contract. [FRS 102.23.31]. For example, granting a customer the option to acquire additional goods or services at a discount that exceeds the range of discounts typically given for those goods or services to that class of customer in that geographical area or market would represent an option that provides a material right to the customer. See Question 5-22 below for further discussion on the evaluation of class of customer.

If the option provides a material right to the customer, the customer has, in effect, paid the entity in advance for future goods or services. As such, the entity recognises revenue when those future goods or services are transferred or when the option expires. [FRS 102.23.33]. Effectively, an entity is required to identify and account for options that customers are paying for (often implicitly) as part of the current transaction. See 7.1.5 below for a discussion of the measurement of customer options that are separate performance obligations.

Section 23 does not provide any further guidance as to what constitutes a 'material' right. However, Section 23 requires that an option to purchase additional goods or services at a price that would reflect their stand-alone selling prices does not provide a material right to the customer and does not give rise to a separate performance obligation. [FRS 102.23.31]. Instead, this is treated as a marketing offer. This is the case even if the customer has obtained the option only as a result of entering into a previous contract. It follows that an entity that has made a marketing offer accounts for it only when the customer exercises the option to purchase the additional goods or services.

However, an option to purchase additional goods or services in the future at the current stand-alone selling price could be a material right if prices are highly likely to significantly increase. This could also be the case if a renewal option at the current stand-alone selling price is offered for an extended period of time and the stand-alone selling price for the product is highly likely to significantly increase, depending on the facts and circumstances of the contract. This is because the customer is being offered a discount on future goods or services compared to what others will have to pay in the future as a result of entering into the previous contract.

How we see it

Significant judgement might be required to determine whether a customer option represents a material right. This determination is important because it affects the accounting and disclosures for the contract at inception and throughout the life of the contract.

Section 23's requirements for accounting for customer options for additional goods or services are aligned with the requirements in IFRS 15. However, unlike IFRS 15, Section 23 does not provide examples to illustrate how such guidance might be applied.

Illustration 5-21 below, which is based on Example 49 in IFRS 15, illustrates the determination of whether an option represents a material right (see 7.1.5 below for a discussion of the measurement of options that are separate performance obligations): [IFRS 15.IE Example 49, IFRS 15.IE250-IE253]

Illustration 5-21: Option that provides the customer with a material right (discount voucher)

An entity enters into a contract for the sale of Product A for £100. As part of the contract, the entity gives the customer a 40% discount voucher for any future purchases up to £100 in the next 30 days. The entity intends to offer a 10% discount on all sales during the next 30 days as part of a seasonal promotion. The 10% discount cannot be used in addition to the 40% discount voucher.

Because all customers will receive a 10% discount on purchases during the next 30 days, the only discount that provides the customer with a material right is the discount that is incremental to that 10% (i.e., the additional 30% discount). The entity accounts for the promise to provide the incremental discount as a performance obligation in the contract for the sale of Product A.

To estimate the stand-alone selling price of the discount voucher in accordance with paragraph 23.71 (see 7.1.5 below), the entity estimates an 80% likelihood that a customer will redeem the voucher and that a customer will, on average, purchase £50 of additional products. Consequently, the entity's estimated stand-alone selling price of the discount voucher is £12 (£50 average purchase price of additional products × 30% incremental discount × 80% likelihood of exercising the option). The stand-alone selling prices of Product A and the discount voucher and the resulting allocation of the £100 transaction price are as follows:

Performance obligations	Stand-alone selling price	
		£
Product A	100	
Discount voucher	12	
Total	112	
	Allocated transaction price	
Product A	89	(£100 ÷ £112 × £100)
Discount voucher	11	(£12 ÷ £112 × £100)
Total	100	

The entity allocates £89 to Product A and recognises revenue for Product A when control transfers. The entity allocates £11 to the discount voucher and recognises revenue for the voucher when the customer redeems it for goods or services or when it expires.

Evaluating whether an option provides a material right might be more complex when the stand-alone selling price of the good or service is highly variable, as illustrated below:

Illustration 5-22: Evaluating a customer option when the stand-alone selling price is highly variable

A technology entity enters into a contract with a customer for a perpetual licence of a software, with one year of post-contract support (PCS). The contract also includes an option to purchase additional licences of the software at 40% off the list price.

The entity does not sell the software separately, but it sells PCS separately in the form of renewals that are consistently priced at 20% of the net licence fee. Assume that the technology entity uses the residual method to estimate the stand-alone selling price of the perpetual licence for the software (see 7.1.2 below). Also assume that the price the technology entity charges for the bundle of the perpetual licence and PCS is highly variable. That is because the price the technology entity charges to customers in the same class and same market as the customer who have not made prior purchases ranges from the list price to a discounted price of up to 70% off the list price for the bundle. Assume that the entity has appropriately stratified its contracts/customers to evaluate the range of discounts and has a sufficient amount of transactions to support that this is the range of discounts it offers.

Since the 40% discount the technology entity offered to the customer is within the range of discounts it typically offers to customers in the same class as the customer, the technology entity concludes that this option does not represent a material right.

While the customer option is determined not to be a material right in this example, that might not always be the case. An entity would need to evaluate all customer options, even those for which the price of the good or service that is subject to the option is highly variable and for which the residual approach was used.

Frequently asked questions

Question 5-18: Would entities consider only the current transaction or would they consider past and future transactions with the same customer when determining whether an option for additional goods or services provides the customer with a material right?¹³⁸

Entities would generally consider all relevant transactions with a customer (i.e., current, past and future transactions), including those that provide accumulating incentives, such as loyalty programmes, when determining whether an option represents a material right. That is, the evaluation is not solely performed in relation to the current transaction.

Question 5-19: Is the material right evaluation solely a quantitative evaluation or does the evaluation also consider qualitative factors?¹³⁹

The evaluation generally considers both quantitative and qualitative factors that would be known to the entity (e.g., what a new customer would pay for the same service, the availability and pricing of competitors' service alternatives, whether the average customer life indicates that the fee provides an incentive for customers to remain beyond the stated contract term, whether the right accumulates). This is because a customer's perspective on what constitutes a 'material right' might consider qualitative factors. This is consistent with the notion that when identifying promised goods or services in Step 2, an entity considers reasonable expectations of the customer that the entity will transfer a good or service to it (see 5.1 above).

Question 5-20: How would an entity distinguish between a contract that contains an option to purchase additional goods or services and a contract that includes variable consideration (see 6.2 below) based on a variable quantity (e.g., a usage-based fee)?¹⁴⁰

Entities have found it challenging to distinguish between a contract that includes customer options to purchase additional goods or services and one that includes variable consideration based on a variable quantity (e.g., a usage-based fee). This is because, under both types of contracts, the ultimate quantity of goods or services to be transferred to the customer is often unknown at contract inception. This determination generally requires judgement and consideration of the facts and circumstances.

This determination is important because it affects the accounting for the contract at inception and throughout the life of the contract, as well as disclosures. If an entity concludes that a customer option for additional goods or services provides a material right, the option itself is deemed to be a performance obligation in the contract, but the underlying goods or services are not accounted for until the option is exercised (as discussed below in Question 5-21 below). As a result, the entity is required to allocate a portion of the transaction price to the material right at contract inception and to recognise that revenue when or as the option is exercised or the option expires. If an entity, instead, concludes that an option for additional goods or services is not a material right, there is no accounting for the option and no accounting for the underlying optional goods or services until those subsequent purchases occur.

However, if the contract includes variable consideration (rather than a customer option), an entity has to estimate at contract inception the variable consideration expected over the life of the contract and update that estimate each reporting period (subject to the constraint on variable consideration) (see 6.2 below). There are also more disclosures required for variable consideration (e.g., the requirement to disclose the remaining transaction price for unsatisfied performance obligations) (see 11.4.1.D below) than for options that are not determined to be material rights.

The first step (in determining whether a contract involving variable quantities of goods or services are accounted for as a contract containing customer options or variable consideration) is for the entity to determine the nature of its promise in providing goods or services to the customer and the rights and obligations of each party.

In a contract in which the variable quantity of goods or services results in variable consideration, the nature of the entity's promise is to transfer to the customer an overall service. In providing this overall service, an entity might perform individual tasks or activities. At contract inception, the entity is presently obliged by the terms and conditions of the contract to transfer all promised goods or services

¹³⁸ Based on TRG Agenda paper no. 6, *Customer options for additional goods and services and non-refundable upfront fees*, dated 31 October 2014, and TRG Agenda paper no. 11, *October 2014 Meeting - Summary of Issues Discussed and Next Steps*, dated 26 January 2015.

¹³⁹ Based on TRG Agenda paper no. 6, *Customer options for additional goods and services and non-refundable upfront fees*, dated 31 October 2014, and TRG Agenda paper no. 11, *October 2014 Meeting - Summary of Issues Discussed and Next Steps*, dated 26 January 2015.

¹⁴⁰ Based on TRG Agenda paper no. 48, *Customer options for additional goods and services*, dated 9 November 2015.

provided under the contract and the customer is obliged to pay for those promised goods or services. This is because the customer entered into a contract that obliges the entity to transfer those goods or services. The customer's subsequent actions to utilise the service affect the measurement of revenue (in the form of variable consideration), but do not oblige the entity to provide additional distinct goods or services beyond those promised in the contract.

For example, consider a contract between a transaction processor and a customer in which the processor will process all of the customer's transactions in exchange for a fee paid for each transaction processed. The ultimate quantity of transactions that will be processed is not known. The nature of the entity's promise is to provide the customer with continuous access to the processing platform so that submitted transactions are processed. By entering into the contract, the customer has made a purchasing decision that obliges the entity to provide continuous access to the transaction processing platform. The consideration paid by the customer results from events (i.e., additional transactions being submitted for processing to the processor) that occur after (or as) the entity transfers the payment processing service. The customer's actions do not oblige the processor to provide additional distinct goods or services because the processor is already obliged (starting at contract inception) to process all transactions submitted to it.

Another example of contracts that might include variable consideration relates to certain IT outsourcing contracts. Under this type of contract (similar to the transaction processing contract, discussed above), the entity provides continuous delivery of a service over the contract term and the amount of service provided is variable.

Illustration 5-23: Variable consideration (IT outsourcing arrangement)

An entity enters into a 10-year IT outsourcing arrangement with a customer in which it provides continuous delivery of outsourced activities over the contract term. The entity provides server capacity, manages the customer's software portfolio and runs an IT help desk. The total monthly invoice is calculated based on the units consumed for each activity. For example, the billings might be based on millions of instructions per second of computing power, the number of software applications used or the number of employees supported. The price per unit differs for each type of activity.

At contract inception, it is unknown how many outsourced activities the entity will perform for the customer throughout the life of the contract. The question that arises is whether the customer makes optional purchases when it sends activities to the entity to be performed or whether its use of the service affects the measurement of revenue (in the form of variable consideration).

It is likely that this contract contains variable consideration because of the nature of the entity's promise. The customer is paying for the entity to stand ready to perform in an outsourcing capacity on any given day. The customer does not make a separate purchasing decision each time it sends a unit for processing. Instead, the customer made its purchasing decision when it entered into the outsourcing contract with the entity. Therefore, the customer's actions to use the service also do not oblige the entity to provide any additional distinct goods or services.

In contrast, when an entity provides a customer option, the nature of its promise is to provide the quantity of goods or services specified in the contract, if any, and a right for the customer to choose the amount of additional distinct goods or services the customer will purchase. That is, the entity is not obliged to provide any additional distinct goods or services until the customer exercises the option. The customer has a contractual right that allows it to choose the amount of additional distinct goods or services to purchase, but the customer has to make a separate purchasing decision to obtain those additional distinct goods or services. Prior to the customer's exercise of that right, the entity is not obliged to provide (nor does it have a right to consideration for transferring) those goods or services.

Since an option that is a marketing offer is considered a new contract if it is exercised, an analogy to the contract modification requirements in paragraphs 23.15 to 23.16 (see 4.4 above) could be helpful when an entity is distinguishing between optional purchases and variable consideration. For a modification to be considered a separate contract, one of the criteria is that the modification results in the addition of promised goods or services that are distinct. Similarly, the exercise of a customer option would typically result in the addition of promised goods or services that are distinct.

The following Illustration is an example of a contract that includes a customer option (rather than variable consideration).

Illustration 5-24: Customer option that is not a material right

Entity B enters into a contract to provide 100 widgets to Customer Y in return for consideration of £10 per widget. Each widget is a distinct good transferred at a point in time. The contract also gives Customer Y the right to purchase additional widgets at the stand-alone selling price of £10 per widget. Therefore, the quantity that might be purchased by Customer Y is variable.

While the quantity of widgets that might be purchased is variable, the transaction price for the existing contract is fixed at £1,000 [100 widgets x £10 per widget].

That is, the transaction price only includes the consideration for the 100 widgets specified in the contract and the customer's decision to purchase additional widgets is an option. While Entity B might be required to deliver additional widgets in the future, Entity B is not legally obligated to provide the additional widgets until Customer Y exercises the option. In this example, the option is accounted for as a separate contract because there is no material right, since the pricing of the option is at the stand-alone selling price of the widgets.

Contrast the above Illustration with another contract that includes a customer option that is determined to be a material right:

Illustration 5-25: Customer option that is a material right

Entity B enters into a contract to provide 100 widgets to Customer Y at £10 per widget (which is the widget's stand-alone selling price at contract inception). Each widget is a distinct good transferred at a point in time. The contract also gives Customer Y the right to purchase additional widgets at £9 per widget. Therefore, the quantity that might be purchased by Customer Y is variable.

While the quantity of widgets that might be purchased is variable, the transaction price for the existing contract is fixed at £1,000 [100 widgets x £10 per widget]. That is, the transaction price only includes the consideration for the 100 widgets specified in the contract, and the customer's decision to purchase additional widgets is an option. While Entity B might be required to deliver additional widgets in the future, Entity B is not legally obligated to provide the additional widgets until Customer Y exercises the option.

Entity B determines that Customer Y obtained a discount on future widgets because £9 per widget is lower than the stand-alone selling price of each widget at contract inception (i.e., £10 per widget), as well as being lower than the expected stand-alone selling price at renewal. In this example, the option is accounted for as a material right.

The following Illustration is an example of a contract in which the variable quantity of goods or services includes a customer option:

Illustration 5-26: Customer option

A supplier enters into a five-year master supply arrangement in which the supplier is obliged to produce and sell parts to a customer at the customer's request. That is, the supplier is not obliged to transfer any parts until the customer submits a purchase order. In addition, the customer is not obliged to purchase any parts; however, it is highly likely it will do so because the part is required to manufacture the customer's product and it is not practical to obtain parts from multiple suppliers. Each part is determined to be a distinct good that transfers to the customer at a point in time.

The nature of the promise in this example is the delivery of parts (and not a service of standing ready to produce and sell parts). That is, the contract provides the customer with a right to choose the quantity of additional distinct goods (i.e., it provides a customer option), rather than a right to use the services for which control to the customer has (or is currently being) transferred (such as in the transaction processor example above). Similarly, the supplier is not obliged to transfer any parts until the customer submits the purchase order (another important factor in distinguishing a customer option from variable consideration). In contrast, in certain other fact patterns, the supplier is obliged to make the promised services available to the customer without any additional decisions made by the customer.

The above example can be contrasted with other contracts that might include a stand-ready obligation (e.g., a customer's use of a health club). When the customer submits a purchase order under the master supply arrangement, it is contracting for a specific number of distinct goods, which creates new performance obligations for the supplier. In contrast, a customer using services in a health club is using services that the health club is already obliged to provide under the present contract. That is, there are no new obligations arising from the customer's usage.

The following Illustration is an example of a contract in which the variable quantity of goods or services results in variable consideration:

Illustration 5-27: Variable consideration (variable quantities of goods or services)

Entity A enters into a contract to provide equipment to Customer X. The equipment is a single performance obligation transferred at a point in time. Entity A charges Customer X based on its usage of the equipment at a fixed rate per unit of consumption. The contract has no minimum payment guarantees. Customer X is not contractually obliged to use the equipment. However, Entity A is contractually obliged to transfer the equipment to Customer X.

The usage of the equipment by Customer X is a variable quantity that affects the amount of consideration owed to Entity A. It does not affect Entity A's performance obligation, which is to transfer the piece of equipment. That is, Entity A has performed by transferring the distinct good. Customer X's actions, which result in payment to Entity A, occur after the equipment has been transferred and do not require Entity A to provide additional goods or services.

Question 5-21: When, if ever, would an entity consider the goods or services underlying a customer option as a separate performance obligation?¹⁴¹

Generally, an entity does not need to identify the additional goods or services underlying the option as promised goods or services (or performance obligations) if there are no contractual penalties (e.g., termination fees, monetary penalties for not meeting contractual minimums), even if it believes that it is virtually certain that a customer will exercise its option for additional goods or services. Only the option is assessed to determine whether it represents a material right (and accounted for as a performance obligation). As a result, any consideration that would be received in return for optional goods or services is not included in the transaction price at contract inception. The following Illustration is an example of a contract in which it is virtually certain that a customer will exercise its option for additional goods or services:

Illustration 5-28: Customer option with no contractual penalties

An entity sells equipment and consumables, both of which are determined to be distinct goods that are recognised at a point in time. The stand-alone selling price of the equipment and each consumable is £10,000 and £100, respectively. The equipment costs £8,000 and each consumable costs £60. The entity sells the equipment for £6,000 (i.e., at a 40% discount on its stand-alone selling price) with a customer option to purchase each consumable for £100 (i.e., equal to its stand-alone selling price). There are no contractual minimums, but the entity estimates the customer will purchase 200 parts over the next two years. This is an exclusive contract in which the customer cannot purchase the consumables from any other vendors during the contract term.

Generally, the consumables underlying each option would not be considered part of the contract. Furthermore, the option does not represent a material right because it is priced at the stand-alone selling price for the consumable. This is the case even though the customer is compelled to exercise its option for the consumables because the equipment cannot function without the consumables and the contract includes an exclusivity clause that requires the customer to acquire the consumables only from the entity. Accordingly, the transaction price is £6,000 and it is entirely attributable to the equipment. This would result in a loss for the entity of £2,000 when it transfers control of the equipment to the customer.

However, contractual minimums might represent fixed consideration in a contract, even if the contract also contains optional purchases. For example, an MSA might set minimum purchase quantities that the entity is obliged to provide, but any quantities above the minimum might require the customer to make a separate purchasing decision (i.e., exercise a customer option). If contractual penalties exist (e.g., termination fees, monetary penalties assessed) for not meeting contractual minimums, it might be appropriate to include some or all of the goods or services underlying customer options as part of the contract at inception. This is because the penalty effectively creates a minimum purchase obligation for the goods or services that would be purchased if the penalty were enforced.

Illustration 5-29: Customer option with contractual penalties

Consider the same facts as in Illustration 5-28 above, except that the customer will incur a penalty if it does not purchase at least 200 consumables. That is, the customer will be required to repay some or all of the £4,000 discount provided on the equipment. Per the contract terms, the penalty decreases as each consumable is purchased at a rate of £20 per consumable.

The penalty is substantive and it effectively creates a minimum purchase obligation. As a result, the entity concludes that the minimum number of consumables required to avoid the penalty would be evidence of enforceable rights and obligations. The entity would then calculate the transaction price as £26,000 [(200 consumables x £100/consumable) + £6,000 (the selling price of the equipment)]. Furthermore, if the customer failed to purchase 200 consumables, the entity accounts for the resulting penalty as a contract modification.

Question 5-22: How does an entity consider the class of customer when evaluating whether a customer option is a material right?¹⁴²

Generally, an entity considers 'class of customer' when determining whether a customer option to acquire additional goods or services represents a material right. When making this evaluation, they agreed that an entity first determines whether the customer option exists independently of the existing contract. That is, would the entity offer the same pricing to a similar customer independent of a prior contract with the entity? If the pricing is independent, the option is considered a marketing offer and there is no material right. Also, it is likely that the determination will require an entity to exercise significant judgement and consider all facts and circumstances. In addition, a volume rebate or discount that is provided prospectively to all customers within a class of customers might also provide a material right. See Question 5-23 below for additional discussion.

Paragraph 23.31 states that when an entity grants a customer the option to acquire additional goods or services, that option is a separate performance obligation if it provides a material right that the customer would not receive without entering into the contract. [FRS 102.23.31]. This is consistent with IFRS 15, however, IFRS 15 provided an example i.e., a discount that exceeds the range of discounts typically given for those goods or services to that class of customer in that region or market. [IFRS 15.B40]. Furthermore, paragraph 23.33 states that an option to purchase additional goods or services at their stand-alone selling prices does not provide a material right and does not give rise to a separate performance obligation. [FRS 102.23.31]. This is also consistent with IFRS 15, and IFRS 15 clarifies that in such cases, the entity has instead made a marketing offer. [IFRS 15.B41].

These requirements are intended to make clear that a customer option to acquire additional goods or services would not give rise to a material right if a customer could execute a separate contract to obtain the goods or services at the same price. That is, customer options that would exist independently of an existing contract with a customer do not constitute performance obligations in that existing contract.

The following Illustration provides an application of the above discussion:

Illustration 5-30: Class of customer evaluation

Retailer owns and operates several electronic stores and currently provides customers who purchase a 50-inch television with a coupon for 50% off the purchase of a stereo system. The coupon must be redeemed at one of Retailer's stores and is valid for one year. Retailer has never offered a discount of this magnitude to a customer that does not purchase a television (or another item of similar value).

Customer A purchases a 50-inch television from Retailer. At the time of purchase, Customer A receives a coupon for 50% off a stereo system. In evaluating whether the 50% discount provided to Customer A exists independently of its existing contract to purchase a television, Retailer needs to compare the discount offered to Customer A (50%) with the discount typically offered to other customers independent of a prior contract (purchase) with Retailer. For customers that do not purchase a 50-inch television, the only promotion Retailer is running on the stereo system is offering a 5% off coupon to all customers walking into the store. It would not be appropriate for Retailer to compare the discount offered to Customer A with a discount offered to another customer that also purchased a 50-inch television. This is because the objective of the requirements in paragraphs 23.31 to 23.33 is to determine whether a customer option exists independently of an existing contract with a customer.

Retailer determines that the discount offered to Customer A is not comparable to the discount typically offered to customers without a prior contract (purchase). Rather, Customer A is receiving an incremental discount that it would not have received had it not entered into a contract to purchase a 50-inch television. The incremental discount provided to Customer A represents a material right.

Question 5-23: Are volume rebates and/or discounts on goods or services accounted for as variable consideration or as customer options to acquire additional goods or services at a discount?**How we see it**

We believe the appropriate accounting for volume rebates and/or discounts depends on whether the rebate or discount programme is applied retrospectively (variable consideration) or prospectively (a customer option).

¹⁴¹ Based on TRG Agenda paper no. 48, *Customer options for additional goods and services*, dated 9 November 2015.

¹⁴² Based on FASB TRG Agenda paper no. 54, *Considering Class of Customer When Evaluating Whether a Customer Option Gives Rise to a Material Right*, dated 18 April 2016.

Generally, if a volume rebate or discount is applied prospectively, we believe the rebate or discount would be accounted for as a customer option (not variable consideration). This is because the consideration for the goods or services in the present contract is not contingent upon or affected by any future purchases. Rather, the discounts available from the rebate programme affect the price of future purchases. Entities need to evaluate whether the volume rebate or discount provides the customer with an option to purchase goods or services in the future at a discount that represents a material right (and is, therefore, accounted for as a performance obligation) (see Question 5-24 below). In addition, a volume rebate or discount that is provided prospectively to all customers within a class of customer might also provide a material right. The fact that other customers receive the same volume rebate or discount is not relevant to the assessment if those customers similarly must first make purchases at a higher price in order to receive a right to discount on purchases in the future. That is, consistent with the guidance in Question 5-24 below, an entity does not compare discounts given to other customers who receive a similar volume-based discount. Rather, the entity must evaluate whether the option exists independently of an existing contract with the customer.

However, we believe a volume rebate or discount that is applied retrospectively is accounted for as variable consideration (see 6.2 below). This is because the final price of each good or service sold depends upon the customer's total purchases that are subject to the rebate programme. That is, the consideration is contingent upon the occurrence or non-occurrence of future events. This view is consistent with Illustration 6-1 in 6.2.1 below).

Entities must keep in mind that they need to evaluate whether contract terms, other than those specific to the rebate or discount programme, create variable consideration that needs to be separately evaluated (e.g., if the goods subject to the rebate programme are also sold with a right of return).

Question 5-24: How does an entity consider whether prospective volume discounts determined to be customer options are material rights?¹⁴³

In making this evaluation, similar to the discussion in Question 5-22 and Question 5-23 above, an entity would first evaluate whether the option exists independently of the existing contract. That is, would the entity offer the same pricing to a similar high-volume customer independent of a prior contract with the entity? If yes, it indicates that the volume discount is not a material right, as it is not incremental to the discount typically offered to a similar high-volume customer. If the entity typically charges a higher price to a similar customer, it might indicate that the volume discount is a material right as the discount is incremental.

Consider the following Illustration:

Illustration 5-31: Volume discounts

Entity enters into a long-term master supply arrangement with Customer A to provide an unspecified volume of non-customised parts. The price of the parts in subsequent years is dependent upon Customer A's purchases in the current year. That is, Entity charges Customer A £1.00 per part in year one and if Customer A purchases more than 100,000 parts, the year two price will be £0.90 per part.

When determining whether the contract between Entity and Customer A includes a material right, Entity first evaluates whether the option provided to Customer A exists independently of the existing contract. To do this, Entity compares the discount offered to Customer A with the discount typically offered to a similar high-volume customer that receives a discount independent of a prior contract with Entity. Such a similar customer could be Customer B who places a single order with Entity for 105,000 parts. Comparing the price offered to Customer A in year two with offers to other customers that also receive pricing that is contingent on prior purchases would not help Entity determine whether Customer A would have been offered the year two price had it not entered into the original contract.

Volume discounts or tiered pricing can make an entity's assessment of whether a customer option to purchase additional goods or services is a material right more complex. It is likely that this assessment will require significant judgement, as illustrated below:

¹⁴³ Based on FASB TRG Agenda paper no. 54, *Considering Class of Customer When Evaluating Whether a Customer Option Gives Rise to a Material Right*, dated 18 April 2016.

Illustration 5-32: Evaluating a customer option with volume discounts

Semi-conductor Entity S sells microchips for use in cell phones. The entity executes a contract with a customer to sell one million units of microchip M for £0.50 each (or £500,000). The contract provides the right for the customer to purchase an additional 200,000 microchips for £0.40 each.

The entity concludes that it has provided the customer with an option to purchase the additional microchips since the entity is not obligated to provide the additional goods until the customer makes a purchasing decision. Furthermore, the volume discount is applied prospectively and does not affect the transaction price in the original contract.

Scenario A

For microchip M, Semi-conductor Entity S provides volume discounts as part of its standard pricing practices and typically prices the first one million microchips at £0.50 each, the second million at £0.40 each and any additional amounts at £0.35 each.

Semi-conductor Entity S considers whether the option provides the customer with a material right. To make this evaluation, the entity compares the discount offered in this option with the discount it typically offers to a similar high-volume customer that receives a discount without having had a prior contract. In other words, the entity compares the pricing in this contract to the pricing it typically offers to customers that purchase between one million and two million units of microchip M without having made any prior purchases.

The entity has sold, and continues to sell, the same volume of microchip M at the same price to other customers in the same class of customer who have not made prior purchases (i.e., similar customers pay £0.50 each for the first one million microchips and £0.40 each for the second million). That is, the price offered to the customer in the option exists independently of the existing contract. Therefore, Semi-conductor Entity S concludes that it has not provided the customer with a material right.

Scenario B

For microchip M, Semi-conductor Entity S provides volume discounts as part of its standard pricing practices and typically prices the first three million microchips at £0.50 each and any additional amounts at £0.30 each.

Semi-conductor Entity S considers whether the option provides the customer with a material right. To make this evaluation, the entity compares the discount offered in this option with the discount it typically offers to a similar high-volume customer that receives a discount without having had a prior contract.

For similar high-volume customers of the same customer class who have not made prior purchases, the entity typically does not provide this pricing (e.g., similar customers would pay £0.50 per microchip for all of the 1.2 million microchips). Therefore, the entity concludes that it has provided the customer with a material right.

Question 5-25: How would an entity consider whether a renewal option is a material right?

An entity assesses whether a renewal option represents a material right in the same manner as other customer options discussed above. That is, an entity would determine whether the customer renewal option would be offered at the same price to a similar class of customer, independent of a prior contract with the entity. Customer renewal options might be explicitly included in the original contract or, as discussed in 6.8 below, the existence of a non-refundable upfront fee might indicate that the contract includes a renewal option for future goods or services (e.g., if the customer renews the contract without the payment of an additional upfront fee).

As discussed above, paragraph 23.31 specifies that if a customer has the option to purchase additional goods or services (e.g., by exercising a renewal option) at a price that would reflect the stand-alone selling prices of those goods or services, the renewal option would not provide a material right and does not give rise to a separate performance obligation. [FRS 102.23.31]. Determining the stand-alone selling price of a renewal option might require significant judgement. For example, a renewal option offered at the current stand-alone selling price might or might not be determined to be a material right. That is, if the pricing for the goods and services are expected to remain stable, it would be appropriate for a renewal option offered at a current stand-alone selling price to be considered a marketing offer. In contrast, a renewal option at the current stand-alone selling price could be a material right if, for example, prices are highly likely to significantly increase or the renewal option is offered for an extended period of time.

Illustration 7-5 in 7.1.5 below describes the accounting for a renewal option that is a material right. That example also includes guidance on how to allocate a portion of the transaction price to the material right, which is further discussed in 7.1.5 below.

Question 5-26: How would an entity consider whether a loyalty or reward programme is a material right?

Entities frequently offer loyalty or reward programmes under which customers accumulate points that they can redeem for 'free' or discounted products or services. Under paragraphs 23.31 to 23.33, an entity typically concludes that such a loyalty or reward programme provides a material right to customers that they would not receive without entering into a contract. This is because the customer effectively pays in advance for the right to obtain a future good or service (e.g., travel, upgrades, products) or a discount on that good or service.

This is also consistent with the discussion in Questions 5-18 and 5-19 above, that entities need to consider all relevant transactions with a customer (i.e., current, past and future transactions) and both quantitative and qualitative factors, including those that provide accumulating incentives, when determining whether an option represents a material right. Illustration 8-16 in 8.9 below) illustrates the accounting for a loyalty programme.

Question 5-27: How would an entity account for the exercise of a material right? That is, would an entity account for it as: a contract modification, a continuation of the existing contract or variable consideration?¹⁴⁴

Generally, it is reasonable for an entity to account for the exercise of a material right as either a contract modification or as a continuation of the existing contract (i.e., a change in the transaction price). It is not generally considered appropriate to account for the exercise of a material right as variable consideration.

Under the approach that treats the exercise of a material right as a contract modification (i.e., because there is a change in the scope and/or price of a contract), an entity follows the contract modification requirements in paragraphs 23.13 to 23.16 (see 4.4 above).

Under the second approach, which treats the exercise of a material right as a continuation of the existing contract (i.e., because the customer decided to purchase additional goods or services contemplated in the original contract), an entity would update the transaction price of the contract to include any consideration to which the entity expects to be entitled as a result of the exercise, in accordance with the requirements for changes in the transaction price included in paragraphs 23.75 to 23.77 – see 7.4 below.

Under these requirements, changes in the total transaction price are generally allocated to the separate performance obligations on the same basis as the initial allocation. However, unlike Section 23, IFRS 15 provides further guidance and specifies criteria which an entity could consider when allocating changes in transaction price under the second approach. Under IFRS 15.89, an entity allocates a change in the transaction price entirely to one or more, but not all, performance obligations if the criteria in paragraph 85 of IFRS 15 are met. [IFRS 15.89]. These criteria are that the additional consideration specifically relates to the entity's efforts to satisfy the performance obligation(s) and that allocating the additional consideration entirely to one or more, but not all, performance obligation(s) is consistent with IFRS 15's allocation objective (which is consistent with the overall revenue recognition and allocation objective of Section 23 – see 7 below). The additional consideration received for the exercise of the option is likely to meet the criteria to be allocated directly to the performance obligation(s) underlying the material right. Revenue would be recognised when (or as) the performance obligation(s) is (are) satisfied. [IFRS 15.85].

Consider the following Illustration:

Illustration 5-33: Exercise of a material right under the requirements for changes in the transaction price

Entity enters into a contract with Customer to provide two years of Service A for £100 and includes an option for Customer to purchase two years of Service B for £300. The stand-alone selling prices of Services A and B are £100 and £400, respectively. Entity concludes that the option represents a material right and its estimate of the stand-alone selling price of the option is £33. Entity allocates the £100 transaction price to each performance obligation as follows:

	Transaction price	Stand-alone selling price	%	Allocation
Service A		£100	75%	£75
Option		£33	25%	£25
Totals	£100	£133	100%	£100

Upon executing the contract, Customer pays £100 and Entity begins transferring Service A to Customer. The consideration of £75 that is allocated to Service A is recognised over the two-year service period. The consideration of £25 that is allocated to the option is deferred until Service B is transferred to the customer or the option expires.

Six months after executing the contract, Customer exercises the option to purchase two years of Service B for £300. Following the requirements for changes in the transaction price, the consideration of £300 related to Service B is added to the amount previously allocated to the option to purchase Service B (i.e., £300 + £25 = £325). This is recognised as revenue over the two-year period in which Service B is transferred. Entity is able to allocate the additional consideration received for the exercise of the option to Service B because it specifically relates to Entity's efforts to satisfy the performance obligation and the allocation in this manner is consistent with Section 23's overall revenue recognition objective (see 7 and 7.3 below).

Since more than one approach would be acceptable, an entity needs to consider which approach is most appropriate, based on the facts and circumstances, and consistently apply that approach to similar contracts.

Question 5-28: Is an entity required to evaluate whether a customer option that provides a material right includes any effects of time value of money? If so, how would entities perform this evaluation?

Generally, an entity has to evaluate whether a material right includes effect of time value of money (see 6.5 below) in the same way that it evaluates for any other performance obligation. This evaluation requires judgement and consideration of the facts and circumstances.¹⁴⁵

Accordingly, the requirement relating to adjustment and recognition of the effects of time of value of money, including the policy choice as discussed in 6.5 below, applies to customer option that provides a material right.

Question 5-29: How would revenue be recognised for customer options for additional goods or services that represent a material right but do not have an expiration date (i.e., can an entity recognise breakage for these options)?

Paragraph 23.33 states that an entity recognises revenue allocated to options that are material rights when the future goods or services resulting from the option are transferred or when the option expires. [FRS 102.23.33]. However, in some cases, options might be perpetual and not have an expiration date. For example, loyalty points likely provide a material right to a customer and, sometimes, these points do not expire.

How we see it

We believe an entity might apply the requirements in Section 23 on customers' unexercised rights (or breakage), which are discussed in 8.9 below (i.e., paragraphs 23.129 to 23.130) to customer options that represent a material right but do not have an expiry date. That is, we believe it is appropriate for revenue allocated to a customer option that does not expire to be recognised at the earlier of when the future goods or services, resulting from the option, are transferred or, if the goods or services are not transferred, when the likelihood of the customer exercising the option becomes remote.

5.7 Sale of products with a right of return

An entity might provide its customers with a right to return a transferred product. A right of return might be contractual, an implicit right that exists due to the entity's customary business practice or a combination of both (e.g., an entity has a stated return period, but generally accepts returns over a longer period). A customer exercising its right to return a product might receive a full or partial refund, a credit that can be applied to amounts owed, a different product in exchange or any combination of these items. [FRS 102.23.51].

¹⁴⁴ Based on TRG Agenda paper no. 32, *Accounting for a Customer's Exercise of a Material Right*, dated 30 March 2015 and TRG Agenda paper no. 34, *March 2015 Meeting - Summary of Issues Discussed and Next Steps*, dated 13 July 2015.

¹⁴⁵ Based on TRG Agenda paper no. 32, *Accounting for a Customer's Exercise of a Material Right*, dated 30 March 2015 and TRG Agenda paper no. 34, *March 2015 Meeting - Summary of Issues Discussed and Next Steps*, dated 13 July 2015.

Offering a right of return in a sales agreement obliges the selling entity to stand ready to accept any returned product during the return period. As clarified in IFRS 15 such an obligation to stand ready to accept a returned product does not represent a performance obligation in addition to the obligation to provide a refund. [IFRS 15.B22]. Instead, the IASB concluded that an entity makes an uncertain number of sales when it provides goods with a return right. That is, until the right of return expires, the entity is not certain how many sales will fail. Therefore, the IASB concluded that an entity does not recognise revenue for sales that are expected to fail as a result of the customer exercising its right to return the goods. [IFRS 15.BC364]. Instead, the potential for customer returns needs to be considered when an entity estimates the transaction price because potential returns are a component of variable consideration. [FRS 102.23.51-23.57]. This concept is discussed further in 6.4 below.

Paragraph 23.52 clarifies that exchanges by customers of one product for another of the same type, quality, condition and price (e.g., one colour or size for another) are not considered returns for the purposes of applying Section 23. [FRS 102.23.52]. Furthermore, contracts in which a customer might return a defective product in exchange for a functioning product need to be evaluated in accordance with the requirements on warranties included in Section 23. [FRS 102.23.57]. See further discussion on warranties in 10.1 below.

6 Step 3 – Determine the transaction price

When (or as) an entity satisfies a performance obligation, it recognises revenue at the amount of the transaction price (which excludes constrained estimates of variable consideration – see 6.2.3 below) that is allocated to that performance obligation.

Section 23 provides the following requirements for determining the transaction price: [FRS 102.23.41, FRS 102.23.42]

Extract from Section 23

- 23.41** An entity shall consider the terms of the contract and its customary business practices to determine the transaction price. The transaction price is the amount of consideration to which the entity expects to be entitled in exchange for transferring goods or services promised to a customer, excluding amounts collected on behalf of third parties (eg some sales taxes).
- 23.42** For the purposes of determining the transaction price, an entity shall assume that the goods or services will be transferred to the customer in accordance with the existing contract and that the contract will not be cancelled, modified or renewed.

The transaction price is based on the amount to which the entity expects to be 'entitled'. This is meant to reflect the amount to which the entity has rights under the present contract (see 4.2 above on contract enforceability and termination clauses). That is, the transaction price does not include estimates of consideration resulting from future change orders for additional goods or services. The amount to which the entity expects to be entitled also excludes amounts collected on behalf of another party, such as sales taxes. It is also worth noting that in the Basis for Conclusions on IFRS 15, the IASB decided that the transaction price would not include the effects of the customer's credit risk, unless the contract includes a significant financing component (see 6.5 below). [IFRS 15.BC185].

Entities might have rights under the present contract to amounts that are to be paid by parties other than the customer and, if so, these amounts would be included in the transaction price. For example, in the healthcare industry, an entity might be entitled under the present contract to payments from the patient, insurance companies and/or government organisations. Similarly, an entity might also receive a payment from a manufacturer, as a result of the manufacturer issuing coupons or rebates directly to the entity's customer. If that is the case, the total amount to which the entity expects to be entitled needs to be included in the transaction price, regardless of the source. Note that this is consistent with the clarification in the Basis for Conclusions on IFRS 15. [IFRS 15.BC187].

Determining the transaction price is an important step in applying Section 23 because this amount is allocated to the identified performance obligations and is recognised as revenue when (or as) those performance obligations are satisfied. In many cases, the transaction price is readily determinable because the entity receives payment when it transfers promised goods or services and the price is fixed (e.g., a restaurant's sale of food with a no refund policy). Determining the transaction price is more challenging when the consideration is variable, when payment is received at a time that differs from when the entity provides the promised goods or services or when payment is in a form other than cash. Consideration paid or payable by the entity to the customer might also affect the determination of the transaction price.

Figure 6-1 illustrates how an entity would determine the transaction price if the consideration to be received is fixed or variable:

Figure 6-1: Fixed versus variable consideration

Frequently asked questions

Question 6-1: How would entities determine the presentation of amounts billed to customers (e.g., shipping and handling, expenses or cost reimbursements and taxes under the revenue standards (i.e., as revenue or as a reduction of costs)?

See response to Question 5-16 in 5.4.4 above.

6.1 Presentation of sales (and other similar) taxes

Various types of taxes based on the production, use, consumption or sale of goods and services are common in many jurisdictions (e.g., taxes levied on tobacco, alcohol, gasoline, sugar). Sales and excise taxes are those levied by taxing authorities on the sales of goods or services. Although various names are used for these taxes, sales taxes generally refer to taxes levied on the purchasers of the goods or services and excise taxes refer to those levied on the sellers of goods or services. Significant variations exist in how these taxes are calculated and administered and the regulations might differ significantly from one country to another. In some cases, these taxes are collected by an entity from a customer on behalf of the tax authorities while, in other cases, the entity is directly liable for the tax obligation.

Section 23 includes a general principle that an entity determines the transaction price exclusive of amounts collected on behalf of third parties (e.g., some sales taxes). [FRS 102.23.41]. However, in practice, there could be multiple interpretations regarding whether certain items that are billed to customers need to be presented as revenue or as a reduction of costs. Examples of such amounts include shipping and handling fees, reimbursements of out-of-pocket expenses and taxes or other assessments collected and remitted to government authorities. See Question 5-16 in 5.4.4 above.

6.2 Variable consideration

The transaction price reflects an entity's expectations about the consideration to which it will be entitled to receive from the customer. Section 23 provides the following requirements for determining whether consideration is variable and, if so, how it would be treated under the model: *[FRS 102.23.43]*

Extract from Section 23

23.43 If the consideration promised in a contract includes a variable amount, an entity shall estimate the amount of consideration to which the entity will be entitled in exchange for transferring the promised goods or services to a customer. If the consideration promised in a contract includes a variable amount (eg because of some discounts, rebates, refunds, penalties or performance bonuses), an entity shall estimate the variable amount in the transaction price that reflects the amount of consideration to which the entity will be entitled in exchange for transferring the promised goods or services to a customer, determined in accordance with paragraphs 23.44 to 23.50.

The requirements on variable consideration are discussed in more detail below.

6.2.1 Forms of variable consideration

As described in 6.2 above, 'variable consideration' broadly includes discounts, rebates, refunds, penalties and performance bonuses (e.g., meeting specified performance conditions where there is uncertainty about the outcome). *[FRS 102.23.43]*. The examples in IFRS 15 also include price concessions, credits and other incentives given to entity's customer. *[IFRS 15.51]*. Variable consideration can result from explicit terms in a contract to which the parties to the contract agreed or can be implied by an entity's past business practices or intentions under the contract. It is important for entities to appropriately identify the different instances of variable consideration included in a contract because the second step of estimating variable consideration requires entities to apply a constraint (as discussed further in 6.2.3 below) to all variable consideration.

Consideration can be variable even when the stated price in the contract is fixed. This is because the entity might be entitled to consideration only upon the occurrence or non-occurrence of a future event. For example, Section 23's description of variable consideration includes amounts resulting from variability due to customer refunds or returns. As a result, a contract to provide a customer with 100 widgets at a fixed price per widget would be considered to include a variable component if the customer has the right to return the widgets (see 6.2 below).

In many transactions, entities have variable consideration as a result of rebates and/or discounts on the price of products or services they provide to customers once the customers meet specific volume thresholds. Illustration 6-1 below, which is based on Example 24 in IFRS 15, is an example relating to volume discounts: *[IFRS 15.IE Example 24, IFRS 15.IE124-IE128]*

Illustration 6-1: Volume discount incentive

An entity enters into a contract with a customer on 1 January 20X6 to sell Product A for £100 per unit. If the customer purchases more than 1,000 units of Product A in a calendar year, the contract specifies that the price per unit is retrospectively reduced to £90 per unit. Consequently, the consideration in the contract is variable.

For the first quarter ended 31 March 20X6, the entity sells 75 units of Product A to the customer. The entity estimates that the customer's purchases will not exceed the 1,000-unit threshold required for the volume discount in the calendar year.

The entity considers the requirements in paragraph 23.46 on constraining estimates of variable consideration (see 6.2.3 below). The entity determines that it has significant experience with this product and with the purchasing pattern of the entity. Thus, the entity concludes that it is highly probable that the entity will be entitled to the cumulative amount of revenue recognised (i.e., £100 per unit) when the uncertainty is resolved (i.e., when the total amount of purchases is known). Consequently, the entity recognises revenue of £7,500 (75 units × £100 per unit) for the quarter ended 31 March 20X6.

In May 20X6, the entity's customer acquires another company and in the second quarter ended 30 June 20X6 the entity sells an additional 500 units of Product A to the customer. In the light of the new fact, the entity estimates that the customer's purchases will exceed the 1,000-unit threshold for the calendar year and therefore it will be required to retrospectively reduce the price per unit to £90.

Consequently, the entity recognises revenue of £44,250 for the quarter ended 30 June 20X6. That amount is calculated from £45,000 for the sale of 500 units (500 units × £90 per unit) less the change in transaction price of £750 (75 units × £10 price reduction) for the reduction of revenue relating to units sold for the quarter ended 31 March 20X6 (see FRS 102.23.75-23.76 - see 7.4 below).

How we see it

Section 23 requires an entity to disclose significant payment terms (including whether the consideration amount is variable). Section 8 requires additional disclosures about an entity's key sources of estimation uncertainties and use of significant judgements. This might include any significant judgements used in determining the transaction price such as information about methods, inputs and assumptions used to estimate variable consideration and assess whether the estimate is constrained.

As a result, entities might need to explain the different forms of variable consideration included in their contracts with customers. Entities, therefore, need to carefully consider and identify all forms of variable consideration when they determine the transaction price for their customer contracts and review their disclosures to verify that they meet the disclosure requirements in Section 23 and Section 8 (see 11.4 below for further discussion of disclosure requirements).

Frequently asked questions

Question 6-2: Are volume rebates and/or discounts on goods or services accounted for as variable consideration or as customer options to acquire additional goods or services at a discount?

See response to Question 5-23 in 5.6 above.

Question 6-3: How would an entity distinguish between a contract that contains an option to purchase additional goods or services and a contract that includes variable consideration based on a variable quantity (e.g., a usage-based fee)?

See response to Question 5-20 in 5.6 above.

Question 6-4: Are liquidated damages, penalties or compensation from other similar clauses accounted for as variable consideration or as warranties under Section 23?

How we see it

Most liquidated damages, penalties and similar payments are accounted for as variable consideration. However, in limited situations, we believe that amounts that are based on the actual performance of a delivered good or service could be considered similar to warranty payments (e.g., in situations in which an entity pays the customer's direct costs to remedy a defect).

Some contracts provide for liquidated damages, penalties or other damages if an entity fails to deliver future goods or services or if the goods or services fail to meet certain specifications. Section 23 includes 'penalties' as an example of variable consideration. [FRS 102.23.43]. That is, a promised consideration in a contract can be variable if the right to receive the consideration is contingent on the occurrence or non-occurrence of a future event (e.g., the contract specifies that an entity pays a penalty if it fails to perform according to the agreed upon terms).

Penalties and other clauses that are considered similar to warranty provisions would be accounted for as:

(a) Consideration paid or payable to a customer (which might be variable consideration, see 6.7 below)

Or

(b) An assurance-type or service-type warranty (see 10.1 below on warranties)

Cash fines or penalties paid to a customer would generally be accounted for under the requirements on consideration payable to a customer. However, we believe there might be situations in which it is appropriate to account for cash payments to a customer as an assurance-type warranty (e.g., an entity's direct reimbursement to the customer for costs paid by the customer to a third party for repair of a product).

Question 6-5: If a contract includes an undefined quantity of outputs, but the contractual rate per unit is fixed, is the consideration variable?¹⁴⁶

Generally, if a contract includes an unknown quantity of tasks, throughout the contract period, for which the entity has enforceable rights and obligations (i.e., the unknown quantity of tasks is not an option to purchase additional goods or services, as described in Question 5-20 in 5.6 above) and the consideration received is contingent upon the quantity completed, the total transaction price would be variable. This is because the contract has a range of possible transaction prices and the ultimate consideration depends on the occurrence or non-occurrence of a future event (e.g., customer usage), even though the rate per unit is fixed.

¹⁴⁶ Based on TRG Agenda paper no. 39, *Application of the Series Provision and Allocation of Variable Consideration*, dated 13 July 2015.

An entity would need to consider contractual minimums (or other clauses) that would make some or all of the consideration fixed.

Question 6-6: If a contract is denominated in a currency other than that of the entity's functional currency, would changes in the contract price due to exchange rate fluctuations be accounted for as variable consideration?

Changes to the contract price due to exchange rate fluctuations are a consequence of entering into a contract that is denominated in a foreign currency.

How we see it

The variability resulting from changes in foreign exchange rates relates to the form of the consideration (i.e., it is in a currency other than the entity's functional currency), rather than as a result of a contractual term like a discount or rebate or one that depends on the occurrence or non-occurrence of a future event. As such, we believe that it would not be considered variable consideration when determining the transaction price.

Such variability might, instead, need to be accounted for in accordance with Section 12 if it is a separable embedded derivative. Otherwise, an entity would account for this variability in accordance with Section 30 *Foreign Currency Translation*.

Also, when consideration denominated in a foreign currency is recognised in advance of the associated revenue, an entity could conclude that the appropriate application of Section 30 is to measure the revenue using the exchange rate at the date the advanced receipt is recognised, normally the payment date. This is consistent with the guidance in IFRIC 22 *Foreign Currency Transactions and Advance Consideration* on determining the date of the transaction for the purpose of determining the exchange rate to use in translating deposits or progress payments where these deposits or progress payments are recognised as non-monetary items (see Chapter 32 at 3.4.10). [FRS 102.10.6, IFRIC 22.8].

Question 6-7: How would an entity account for price protection or price matching clauses included in a contract with a customer?

How we see it

Consideration subject to price protection or price matching clauses that require an entity to refund a portion of the consideration to the customer in certain situations must be accounted for as variable consideration under Section 23. That is, we believe that, if an entity is required to retrospectively apply lower prices to previous purchases made by a customer (or has a past business practice of doing so, even if the contractual terms would only require prospective application), the consideration would be accounted for as variable consideration.

Examples include contracts between an entity and a customer that provide, either as a matter of formal agreement or due to an entity's business practices, that the entity will refund or provide a credit equal to a portion of the original purchase price towards future purchases if the entity subsequently reduces its price for a previously delivered product and the customer still has inventory of that product on hand. An entity might also offer to match a competitor's price and provide a refund of the difference, if the customer finds the same product offered by one of the entity's competitors for a lower price during a specified period of time following the sale.

Contracts with customers also might contain 'most favoured nation' or 'most favoured customer' clauses under which the entity guarantees that the price of any products sold to the customer after contract inception will be the lowest price the entity offers to any other customer. How consideration from such contracts would be accounted for under Section 23 depends on the terms of the clause (i.e., whether the price protection is offered prospectively or retrospectively).

How we see it

We believe that clauses that require an entity to prospectively provide a customer with its best prices on any purchases of products after the execution of a contract have no effect on the revenue recognised for goods or services already transferred to the customer (i.e., the consideration would not be accounted for as variable consideration).

However, if an entity is required to retrospectively apply lower prices to previous purchases made by a customer (or has a past business practice of doing so even if the written contractual terms would only require prospective application), we believe the contract includes a form of price protection and the consideration subject to this provision would be accounted for as variable consideration, as discussed above.

We note that these clauses might be present in arrangements with governmental agencies. For example, an entity might be required to monitor discounts given to comparable customers during the contract period and to refund the difference between what was paid by the government and the price granted to comparable commercial customers.

Question 6-8: Do early payment (or prompt payment) discounts represent a form of variable consideration?

Contracts with customers might include a discount for early payment (or 'prompt payment' discount) under which the customer can pay less than an invoice's stated amount if the payment is made within a certain period of time. For example, a customer might receive a 2% discount if the payment is made within 15 days of receipt (if payment is otherwise due within 45 days of receipt).

How we see it

Because the amount of consideration to be received by the entity would vary depending on whether the customer takes advantage of the discount, we believe the transaction price is variable.

Question 6-9: How does an entity account for a dispute related to a contract accounted for in accordance with Section 23 that might result in consideration received or receivable from a customer?

A dispute related to a contract accounted for in accordance with Section 23 might result in consideration received or receivable from a customer. Disputes might involve third-party arbitration or litigation proceedings, or they might not (e.g., a resolution negotiated only between the entity and the customer).

For settlements (or potential settlements) received or receivable from a customer, an entity needs to apply judgement to determine the appropriate accounting based on a thorough analysis of facts and circumstances. For example, if the entity receives (or expects to receive) consideration from its customer as part of a settlement related to a contract accounted for in accordance with Section 23, the payment might represent variable consideration to which the entity is entitled based on its performance under that contract. The requirements for estimating and constraining variable consideration in Section 23 would apply.

An entity will also need to determine whether the settlement with the customer represents a contract modification, (see 4.4 above, including Question 4-13). This would be the case if the settlement results in a change in the scope and/or price of a contract that either creates new or changes existing enforceable rights and obligations of the parties. Judgement might also be required to distinguish between a contract modification and a change in the estimated transaction price due to variable consideration, as discussed in Question 4-15 in 4.4 above.

If a dispute arises, but the payment or anticipated payment was not contemplated in the original contract and the settlement does not yet represent a contract modification, the requirements for contingent assets in Section 21 (see Chapter 24) might apply until there is a contract modification under Section 23.

For settlements (or potential settlements) from litigation or disputes that result in consideration paid or payable to a customer, please see response to Question 6-26 in 6.7.2 below.

6.2.1.A Implicit price concessions

Section 23 requires an entity to consider not only the terms of the contract, but also its customary business practices to determine the transaction price. [FRS 102.23.41].

For some contracts, the stated price has easily identifiable variable components. However, for other contracts, the consideration might be variable because the facts and circumstances indicate that the entity might accept a lower price than the amount stated in the contract (i.e., it expects to provide an implicit price concession). This could be a result of the customer having a valid expectation that the entity will reduce its price based on the entity's customary business practices, published policies or statements made by the entity.

An implicit price concession could also result from other facts and circumstances indicating that the entity intended to offer a price concession to the customer when it entered into the contract. For example, an entity might accept a lower price than the amount stated in the contract to develop or enhance a customer relationship or because the incremental cost of providing the service to the customer is not significant and the consideration it expects to collect provides a sufficient margin.

An entity deducts from its contract price any estimated price concessions to derive the transaction price at contract inception (i.e., the amount the entity expects to be entitled in exchange for the goods or services that will be transferred to the customer). The Section 23 collectability assessment is then performed on the transaction price (see 4.1.5 above). An entity also has to assess any contract assets or trade receivables arising from a Section 23 contract under the credit loss model in Section 11 (see Chapter 13).

Illustration 6-2 below, which is based on Example 2 in IFRS 15, is an example of when an implicit price concession exists and, as a result, the transaction price is not the amount stated in the contract: [IFRS 15.IE Example 2, IFRS 15.IE7-IE9]

Illustration 6-2: Consideration is not the stated price - implicit price concession

Example 2-Consideration is not the stated price - implicit price concession

An entity sells 1,000 units of a prescription drug to a customer for promised consideration of £1 million. This is the entity's first sale to a customer in a new region, which is experiencing significant economic difficulty. Thus, the entity expects that it will not be able to collect from the customer the full amount of the promised consideration. Despite the possibility of not collecting the full amount, the entity expects the region's economy to recover over the next two to three years and determines that a relationship with the customer could help it to forge relationships with other potential customers in the region.

When assessing whether the criterion in paragraph 23.7(e) of FRS 102 is met (see 4.1.5 above), the entity also considers paragraph 23.41 (and could also consider IFRS 15.52(b)). Based on the assessment of the facts and circumstances, the entity determines that it expects to provide a price concession and accept a lower amount of consideration from the customer. Accordingly, the entity concludes that the transaction price is not £1 million and, therefore, the promised consideration is variable. The entity estimates the variable consideration and determines that it expects to be entitled to £400,000.

The entity considers the customer's ability and intention to pay the consideration and concludes that even though the region is experiencing economic difficulty, it is probable that it will collect £400,000 from the customer. Consequently, the entity concludes that the criterion in paragraph 23.7(e) is met based on an estimate of variable consideration of £400,000. In addition, on the basis of an evaluation of the contract terms and other facts and circumstances, the entity concludes that the other criteria in paragraph 23.7 are also met. Consequently, the entity accounts for the contract with the customer in accordance with the requirements in Section 23.

Variable consideration might also result where payment terms in a contract are deferred beyond normal business terms and any resulting uncertainty about whether the entity will be willing to accept a lower payment amount in the future. That is, an entity has to evaluate whether such payment terms represent an implied price concession because the entity does not intend to collect all amounts due in future periods. Offering payment terms beyond the normal business terms constitutes a financing transaction (see 6.5 below).

6.2.1.B Variable consideration versus credit risk

As discussed in 4.1.5 above, entities need to determine at contract inception whether they expect to collect a lower amount of consideration than the amount stated in the contract. In some cases, it might be difficult to determine whether the entity has implicitly offered a price concession (i.e., variable consideration) or whether the entity has chosen to accept the risk of the customer defaulting on the contractually agreed consideration (i.e., impairment losses under Section 11, see Chapter 13). Section 23 does not have guidance to assist in distinguishing between price concessions (recognised as variable consideration, within revenue) and a credit loss to be accounted for as an impairment loss under Section 11 (i.e., outside of revenue). Therefore, entities need to consider all relevant facts and circumstances when analysing situations in which an entity is willing to accept a lower price than the amount stated in the contract.

How we see it

We believe the following factors might suggest that the entity has implicitly offered a price concession to the customer:

- The entity has an established business practice that indicates it is willing to accept consideration less than its contractually stated prices. For example, an entity routinely accepts reduced payments on services for which it earns high margins, indicating that it is willing to accept an amount of consideration that is less than the contract price.
- The entity has a history of not enforcing its contractual rights to promised consideration in similar contracts under similar circumstances such that customers expect the entity to offer price concessions. For example, the customer has a valid expectation that the entity is willing to accept a lower amount of consideration than the contractually stated price based on its past experience with the entity.
- The entity is willing to enter into a contract with a customer even though facts and circumstances indicate that the customer intends to pay an amount of consideration that is less than the contractually stated price. For example, the entity willingly enters into a contract expecting that it will receive less than the stated contract price, implicitly reducing the transaction price to the expected lesser consideration.

Appropriately distinguishing between price concessions (i.e., reductions of revenue) and customer credit risk (i.e., impairment loss) for collectability concerns, that were known at contract inception, is also important because it affects whether a valid contract exists (see 4.1.5 above). If an entity determines at contract inception that a contract includes a price concession (i.e., variable consideration), the estimated amount of the concession is reflected in the transaction price (i.e., as a reduction of the stated contract price). As shown in Illustration 6-2 in 6.2.1.A above, entities might estimate a transaction price that is significantly lower than the stated invoice or contractual amount, but still consider the difference between those amounts to be variable consideration (e.g., a price concession), rather than a collectability issue that would result in credit losses.

After the entity has determined the amount to assess for collectability under paragraph 23.7(e), it also has to apply the requirements in Section 11 to account for any credit losses for the receivable (or contract asset) that is recorded (i.e., after consideration of any variable consideration, such as an implicit price concession). Also, it presents any resulting impairment loss as an expense under Section 11 (i.e., not as a reduction of the transaction price). This is illustrated in Illustration 4-3 included in Question 4-4 in 4.1.5.B above.

After contract inception, entities need to update both their estimate of variable consideration under Section 23 (see 6.2.4 below) and their assessment of credit losses under Section 11, respectively, at the end of each reporting period. When the amount an entity expects to collect changes after contract inception, the entity might need to exercise significant judgement to determine whether that change is due to: (1) a change in estimate of the variable consideration identified at contract inception (and, therefore, would be accounted for as a change in the transaction price, as discussed in 7.4 below); or (2) an identifiable credit event (e.g., a known or expected decline in a customer's operations, a known or expected bankruptcy filing or other financial reorganisation or the request for a concession on payment terms due to economic reasons) that would trigger a credit loss to be accounted for as an impairment loss under Section 11 (i.e., outside revenue). It is likely that this determination will require entities to establish policies to differentiate between price concessions and customer credit events, both at contract inception and as facts and circumstances change over the life of the contract. Such assessments could, for example, be needed during a pandemic or following a natural disaster because customers' ability and intent to pay might be affected and/or entities might be more willing to accept partial payment or extended payment terms. Importantly, if the parties need to change the terms of contracts with existing customers as a result, entities need to determine whether there is a contract modification (see 4.4 above).

When making this evaluation, the entity needs to consider the facts and circumstances that led to its change in expectation about the amount it expects to collect. For example, if an entity that had contemplated an implicit price concession at contract inception decides to increase the amount of the concession it is willing to provide to further enhance the relationship with its customer, it might conclude that this is variable consideration. Therefore, it would be a reduction of the transaction price, i.e., revenue. In contrast, if the entity determines it will collect less consideration than it originally estimated due to its customer filing for bankruptcy, it is likely the entity would conclude that this is an impairment loss to be accounted for outside of Section 23 (i.e., there would be no adjustment to revenue).

An entity might also need to make the following assessments when evaluating changes in expectations about the amount it expects to collect after contract inception:

- Reassess collectability of the remaining contract consideration if the entity concludes that the change in expectation is due to a significant change in facts and circumstances (see Question 4-5 in 4.1.5.B above).
- Consider whether the change in expectation is due to a contract modification. A contract modification is defined in Section 23 as “a change in the scope or price (or both) of a contract that is approved by the parties to the contract”. [FRS 102.23.13]. See 4.4 above for further discussion on contract modifications.
- Consider whether the change in expectation indicates that the entity needs to assess related capitalised costs to obtain or fulfil a contract for impairment (see 10.3 below).

How we see it

Determining, at contract inception, whether an entity has implicitly offered a price concession (i.e., variable consideration) or whether it has accepted the risk that a customer might default on the contractually agreed-upon consideration (i.e., impairment losses) might require significant judgement. The entity needs to consider its specific facts and circumstances, including its customary business practices and any other indicators about whether it intended at contract inception to offer a price concession to the customer.

Entities might also need to apply judgement when determining whether a change in the amount it expects to collect after contract inception is due to a change in an estimate of variable consideration (and, therefore, needs to be accounted for as change in transaction price) or due to a change in customer's credit risks that would be accounted for as impairment loss.

6.2.2 Estimating variable consideration

If a contract with a customer includes variable consideration, paragraph 23.43 (see 6.2 above) states that “an entity shall estimate the variable amount in the transaction price that reflects the amount of consideration to which the entity will be entitled in exchange for transferring the promised goods or services to a customer”. Entities are generally required to estimate variable consideration at contract inception and at the end of each reporting period (see 6.2.4 below for reassessment requirements). In Question 6-10 below, we discuss limited situations in which the estimation of variable consideration might not be required.

Variable consideration generally needs to be estimated, instead of waiting for the variable consideration to be received or known with a high degree of certainty (e.g., upon receipt of a report from a customer detailing the amount of revenue due to the entity). For example, it would not be acceptable for entities that sell their products through distributors or resellers to wait until the end-sale has occurred if the only uncertainty is the variability in the pricing. This is because Section 23 requires an entity to estimate the variable consideration (the end-sales price in our example) based on the information available, taking into consideration the effect of the constraint on variable consideration (see 6.2.3 below), unless one of the limited situations discussed in Question 6-10 below occurs.

An entity is required to first estimate variable consideration using either the ‘expected value’ or the ‘most likely amount’ method, as described in Section 23: [FRS 102.23.44, FRS 102.23.45]

Extract from Section 23

- 23.44** An entity shall first estimate an amount of variable consideration by using either of the following methods, depending on which method the entity expects to better predict the amount of consideration to which it will be entitled:
- (a) The expected value - the expected value is the sum of probability-weighted amounts in a range of possible consideration amounts. An expected value may be an appropriate estimate of the amount of variable consideration if an entity has a large number of contracts with similar characteristics.
 - (b) The most likely amount - the most likely amount is the single most likely amount in a range of possible consideration amounts (ie the single most likely outcome of the contract). The most likely amount may be an appropriate estimate of the amount of variable consideration if the contract has only two possible outcomes (eg an entity either achieves a performance bonus or does not).

23.45 An entity shall apply one method consistently throughout the contract when estimating the amount of variable consideration. The information that an entity uses to estimate the amount of variable consideration would typically be similar to the information that the entity's management uses during the bid-and-proposal process and in establishing prices for the goods or services promised to the customer.

An entity is required to choose between the expected value method and the most likely amount method, selecting the method which better predicts the amount of consideration to which it will be entitled. That is, the method selected is not meant to be a 'free choice'. Rather, an entity must select the method that is best suited, based on the specific facts and circumstances of the contract. [FRS 102.23.44].

A contract might contain different types of variable consideration. As such, it might be appropriate for an entity to use different methods (i.e., expected value or most likely amount) for estimating different types of variable consideration within a single contract. However, an entity applies the selected method consistently to each type of variable consideration throughout the contract term and updates the estimated variable consideration at the end of each reporting period. [FRS 102.23.45]. Once it selects a method, an entity is required to apply that method consistently for similar types of variable consideration in similar types of contracts. [FRS 102.23.5].

Entities determine the expected value of variable consideration using the sum of probability-weighted amounts in a range of possible amounts under the contract. To do this, an entity identifies the possible outcomes of a contract and the probabilities of those outcomes. Accordingly, the expected value method is likely to better predict expected consideration when an entity has a large number of contracts with similar characteristics. [FRS 102.23.44(a)]. This method might also better predict consideration when an entity has a single contract with a large number of possible outcomes. Under IFRS 15, the IASB clarified that an entity preparing an expected value calculation is not required to consider all possible outcomes, even if the entity has extensive data and can identify many possible outcomes. Instead, the IASB noted in the Basis for Conclusions on IFRS 15 that, in many cases, a limited number of discrete outcomes and probabilities can provide a reasonable estimate of the expected value. [IFRS 15.BC201].

Illustration 6-3: Estimating the transaction price using the expected value method

Entity A enters into contracts with customers to construct commercial buildings. The contracts include similar terms and conditions and contain a fixed fee plus variable consideration for a performance bonus related to the timing of Entity A's completion of the construction. Based on Entity A's historical experience, the expected bonus amounts and associated probabilities for achieving each bonus are, as follows:

Bonus amount	Probability of outcome
£0	25%
£100,000	50%
£150,000	25%

Entity A determines that using the expected value method would better predict the amount of consideration to which it will be entitled because it has a large number of contracts that have characteristics that are similar to the new contract. Under the expected value method, Entity A estimates variable consideration of £87,500, as follows:

Bonus amount (a)	Probability of outcome (b)	Expected value amount (a × b)
£0	25%	£0
£100,000	50%	£50,000
£150,000	25%	£37,500
Total		£87,500

Entity A needs to consider the effect of applying the constraint on variable consideration (see 6.2.3 below).

Entities determine the most likely amount of variable consideration using the single most likely amount in a range of possible consideration amounts. The most likely amount method might be the better predictor when the entity expects to be entitled to one of two possible amounts. For example, a contract in which an entity is entitled to receive all or none of a specified performance bonus, but not a portion of that bonus. [FRS 102.23.44(b)].

Illustration 6-4: Estimating the transaction price using the most likely amount

Entity A enters into a six-month advertising campaign agreement (£500,000 fixed fee) that also includes a potential £100,000 performance bonus linked to certain goals. Entity A estimates that it is 90% likely to receive the entire performance bonus and 10% likely to receive none of the bonus.

Because of the binary nature of the outcome (i.e., the entity will either receive the performance bonus or not receive it), Entity A determines that the most likely amount method is the better predictor of the amount to which it expects to be entitled. Because it is 90% probable that Entity A will receive the £100,000 performance bonus, Entity A estimates the most likely amount it will receive is £600,000 (i.e., £500,000 fixed fee plus the entire £100,000 bonus).

However, Entity A also needs to consider the effect of applying the constraint on variable consideration (see 6.2.3 below) and determine whether it is highly probable that the entity will be entitled to the cumulative amount of revenue recognised if it includes the entire £100,000 performance bonus in the transaction price.

Section 23 noted that the information that an entity uses to estimate the amount of variable consideration, under either the expected value method and the most likely amount method, would typically be similar to the information that the entity's management uses during the bid-and-proposal process and in establishing prices for the goods or services promised to the customer. [FRS 102.23.45]. Under IFRS 15 when applying either of these estimation methods, an entity considers all information (historical, current and forecast) that is reasonably available to the entity. Some stakeholders questioned whether an entity would be applying the portfolio approach practical expedient in paragraph 4 of IFRS 15 (which is similar to paragraph 23.6 of FRS 102 - see 4.3.1 above) when considering evidence from other, similar contracts to develop an estimate of variable consideration using an expected value method. This question was discussed in July 2015 TRG meeting for purposes of IFRS 15 application.¹⁴⁷ We consider that the TRG discussion on this question is relevant in applying the related Section 23 requirements.

The TRG members generally agreed that an entity would not be applying the portfolio approach practical expedient, if it used a portfolio of data from its historical experience with similar customers and/or contracts. The TRG members noted that an entity could choose to apply the portfolio approach practical expedient, but would not be required to do so. Use of this practical expedient requires an entity to assert that it does not expect the use of the expedient to differ materially from applying the revenue standard to an individual contract. The TRG agenda paper noted that using a portfolio of data is not equivalent to using the portfolio approach practical expedient, so entities that use the expected value method to estimate variable consideration would not be required to assert that the outcome from the portfolio is not expected to materially differ from an assessment of individual contracts.

¹⁴⁷ TRG Agenda paper no. 38, *Portfolio Practical Expedient and Application of Variable Consideration Constraint*, dated 13 July 2015.

Frequently asked questions

Question 6-10: Are there any situations in which an entity would not have to estimate variable consideration at contract inception under Section 23?

An entity would not have to estimate variable consideration at the inception of a contract in the following situations:

- **Variable consideration allocation exception** - When the terms of a variable payment relate to an entity's efforts to satisfy a specific part of a contract (i.e., one or more, but not all, performance obligations or distinct goods or services promised in a series) and allocating the consideration to this specific part is consistent with the Section 23's overall allocation objectives, Section 23 requires variable consideration to be allocated entirely to that specific part of a contract. As a result, variable consideration would not be estimated for the purpose of recognising revenue. For example, an entity that provides a series of distinct hotel management services and receives a variable fee based on a fixed percentage of rental revenue would need to allocate the percentage of monthly rental revenue entirely to the period in which the consideration is earned if this allocation exception is applied. See 7.3 below for further discussion of the variable consideration allocation exception.
- **The 'right to invoice' practical expedient** - When an entity recognises revenue over time, the right to invoice practical expedient allows it to recognise revenue as invoiced, if the entity's right to payment is for an amount that corresponds directly with the value to the customer of the entity's performance to date. For example, an entity would not be required to estimate the variable consideration for a three-year service contract under which it has a right to invoice the customer a fixed amount for each hour of service rendered, provided that fixed amount reflects the value to the customer. See 8.1.4.B below for further discussion of the right to invoice practical expedient.
- **Recognition constraint for sales-based and usage-based royalties related to licences of intellectual property** - Section 23 provides explicit guidance for recognising consideration from sales-based and usage-based royalties provided in exchange for licences of intellectual property. Under Section 23, an entity must not apply the requirements on estimating, constraining and updating estimates of variable consideration to such sales-based or usage-based royalties. Instead, Section 23 states that an entity recognises sales-based and usage-based royalties as revenue at the later of when: (1) the subsequent sales or usage occurs; or (2) the performance obligation to which some, or all, of the sales-based or usage-based royalty has been allocated has been satisfied (or partially satisfied). In many cases, using this guidance results in the same pattern of revenue recognition as fully constraining the estimate of variable consideration associated with the future royalty stream. However, in cases where an entity is required to allocate sales-based or usage-based royalties to separate performance obligations in a contract, it might need to include expected royalties in its estimate of the stand-alone selling price of one or more of the performance obligations. See 9.5 below for further discussion about sales-based and usage-based royalties related to licences of intellectual property.

6.2.3 Constraining estimates of variable consideration

Before an entity can include any amount of variable consideration in the transaction price, it must consider whether the amount of variable consideration is required to be constrained. This ensures that there is sufficient certainty that the amounts recognised would faithfully depict the consideration to which an entity expects to be entitled in exchange for the goods or services transferred to a customer and that the estimates are robust and result in useful information. Accordingly, an entity includes estimates of variable consideration in revenue only when the entity has a 'high degree of confidence' that it will be entitled to the cumulative amount of revenue in the subsequent reporting period.

Therefore, as the following extract from Section 23 states, the constraint is aimed at preventing the over-recognition of revenue (i.e., Section 23 focuses on probability of entitlement): [FRS 102.23.46]

Extract from Section 23

- 23.46** An entity shall include in the transaction price an amount of variable consideration estimated in accordance with paragraph 23.44 only to the extent that it is highly probable that it will be entitled to the cumulative amount of revenue recognised when the uncertainty associated with the variable consideration is subsequently resolved.

Note that Section 23 has a different model for consideration in the form of a sales-based or usage-based royalty provided in exchange for a licence of intellectual property, when the licence of intellectual property is the sole or predominant item to which the royalty relates. [FRS 102.23.48]. See 9.5 below for further discussion about sales-based and usage-based royalties related to licences of intellectual property.

To include variable consideration in the estimated transaction price, the entity has to conclude that it is 'highly probable' that the entity will be entitled to the cumulative amount of revenue in future periods once the uncertainty related to the variable consideration is resolved. For the purpose of this analysis, the meaning of the term 'highly probable' is defined as "significantly more likely than probable" and 'probable' is defined as "more likely than not". [FRS 102 Appendix I]. These definitions are consistent with existing definitions in adopted IFRS.

Consequently, an entity's analysis to determine whether its estimate of variable consideration must be constrained is largely qualitative. That is, an entity needs to use judgement to evaluate whether it has met the objective of the constraint (i.e., it is highly probable that the entity will be entitled to the cumulative amount of revenue recognised when the uncertainty associated with the variable consideration is subsequently resolved). In applying the judgement, the entity must consider the likelihood of entitlement to cumulative revenue.

An entity must carefully evaluate the factors that could decrease the likelihood of its entitlement to the cumulative amount of revenue in the subsequent periods. The factors described in IFRS 15 could be considered when applying Section 23 constraint guidance: [IFRS 15.57]

- The amount of consideration is highly susceptible to factors outside the entity's influence (e.g., volatility in a market, judgement or actions of third parties, weather conditions, high risk of obsolescence of the promised good or service).
- The uncertainty about the amount of consideration is not expected to be resolved for a long period of time.
- The entity's experience (or other evidence) of similar types of contracts is limited, or that experience (or other evidence) has limited predictive value.
- The entity has a practice of either offering a broad range of price concessions or changing the payment terms and conditions of similar contracts in similar circumstances.
- The contract has a large number and broad range of possible consideration amounts.

Assessing the likelihood of an entitlement to cumulative amount of revenue requires significant judgement. Entities want to ensure they adequately document the basis for their conclusions. The presence of any one of the indicators described above does not necessarily mean that a decrease in the likelihood of an entitlement will occur if the variable consideration is included in the transaction price. Under IFRS 15, these are included as 'factors', rather than 'criteria', to signal that the list of items to consider is not a checklist for which all items need to be met. In addition, the factors provided are not meant to be an all-inclusive list and entities might need to consider additional factors that are relevant to their facts and circumstances.

The following Illustration, which is based on Example 2 in FRC's FRS 102 Factsheet 10,¹⁴⁸ shows application of variable consideration constraint under Section 23:

Illustration 6-5: Variable consideration constraint

Entity B agrees to carry out a service for a customer. The contract (which is not part of a portfolio of similar contracts, and so is accounted for as an individual contract) has a single performance obligation that is satisfied over time and the transaction price consists of a £50,000 fixed element and a £25,000 variable element to which Entity B will be entitled if it meets specified performance criteria.

At the end of the first reporting period, Entity B measures its progress towards completion of the performance obligation at 90%. Entity B also assesses that the most likely amount of variable consideration it will be entitled to is the full amount, because it is more likely than not to achieve the performance criteria.

Entity B therefore initially estimates the amount of variable consideration to which it will be entitled at £25,000, which gives a total transaction price of £75,000. Using that transaction price would suggest that Entity B would recognise £67,500 as revenue (90% of £75,000) at the end of the first reporting period. However, Entity B must also consider the variable consideration constraint.

¹⁴⁸ [FRS 102 Factsheet 10 Revenue](#) from *Contracts with Customers*, FRC, issued on 27 November 2024 Section 2 The five-step revenue recognition model, Step 3 - Determine the transaction price, page 11.

In this example, Entity B considers that even though meeting the performance criteria is the most likely outcome, that outcome is not highly probable. If Entity B did not meet the performance criteria, then at the end of the contract it would be entitled only to £50,000 of consideration. Therefore, Entity B constrains the estimate of variable consideration included in the transaction price to zero and recognises £45,000 of revenue at the end of the first reporting period (90% of £50,000).

In the subsequent reporting period, the entity's progress towards complete satisfaction of the performance obligation reaches 100%. If Entity B has not achieved the performance criteria it recognises a further £5,000 as revenue (£50,000 of cumulative revenue). If Entity B has achieved the performance criteria it recognises a further £30,000 as revenue (£75,000 of cumulative revenue).

There are some types of variable consideration that are frequently included in contracts that have significant uncertainties. It is likely to be more difficult for an entity to assert its entitlement to cumulative amount of revenue is highly probable. Examples of the types of variable consideration include, but are not limited to, the following:

- Payments contingent on regulatory approval (e.g., regulatory approval of a new drug)
- Long-term commodity supply arrangements that are settled based on market prices at the future delivery date
- Contingency fees based on litigation or regulatory outcomes (e.g., fees based on the positive outcome of litigation or the settlement of claims with government agencies)

In some situations, it is appropriate for an entity to include in the transaction price an estimate of variable consideration that is not a possible outcome of an individual contract. The TRG discussed this topic in July 2015 using an example from the TRG agenda paper no. 38 for purposes of IFRS 15 application.¹⁴⁹ The following Illustration is based on that example, which we consider relevant in applying the related Section 23 requirements:

Illustration 6-6: Estimating variable consideration using the expected value method

Entity A develops websites for customers. The contracts include similar terms and conditions and contain a fixed fee, plus variable consideration for a performance bonus related to the timing of Entity A completing the website. Based on Entity A's historical experience, the bonus amounts and associated probabilities for achieving each bonus are, as follows:

Bonus amount	Probability of outcome
£0	15%
£50	40%
£100	45%

Entity A determines that using the expected value method would better predict the amount of consideration to which it will be entitled than using the most likely amount method because it has a large number of contracts that have characteristics that are similar to the new contract.

Under the expected value method, Entity A estimates variable consideration of £65,000 [$(£0 \times 15\%) + (£50,000 \times 40\%) + (£100,000 \times 45\%)$]. Entity A must then consider the effect of applying the constraint on variable consideration. To do this, Entity A considers the factors that could reduce the likelihood of its entitlement to the cumulative amount of revenue in the future, including those factors described above. Entity A concludes that it has relevant historical experience with similar types of contracts and that the amount of consideration is not highly susceptible to factors outside of its influence.

In determining whether the entity would include £50,000 or £65,000 in the transaction price, when an entity has concluded that the expected value approach is the appropriate method to estimate variable consideration, the constraint is also applied based on the expected value method. That is, the entity is not required to switch from an expected value method to a most likely amount for purposes of applying the constraint. As a result, if an entity applies the expected value method for a particular contract, the estimated transaction price might not be a possible outcome in an individual contract. Therefore, the entity could conclude that, in this example, £65,000 is the appropriate estimate of variable consideration to include in the transaction price. It is important to note that in this example, the entity had concluded that none of the factors described above or any other factors indicate a likelihood that the entity would not receive the cumulative amount of revenue it is entitled to in the future.

¹⁴⁹ TRG Agenda paper no. 38, *Portfolio Practical Expedient and Application of Variable Consideration Constraint*, dated 13 July 2015.

When an entity uses the expected value method and determines that the estimated amount of variable consideration is not a possible outcome in the individual contract, the entity must still consider the constraint on variable consideration. Depending on the facts and circumstances of each contract, an entity might need to constrain its estimate of variable consideration, even though it has used an expected value method, if there are factors (including those described above) which indicate a likelihood of decreasing an entity's entitlement to revenue. However, using the expected value method and considering probability-weighted amounts sometimes achieve the objective of the constraint on variable consideration. When an entity estimates the transaction price using the expected value method, the entity reduces the probability of entitlement to cumulative amount of revenue because the estimate does not include all of the potential consideration due to the probability weighting of the outcomes. In some cases, the entity does not need to constrain the estimate of variable consideration if the factors, including those described above, do not indicate a likelihood of decreasing the entity's entitlement to cumulative amount of revenue in the future.

FRS 102 aims to be simpler than adopted IFRS. Accordingly, the FRC included a rewording of the constraint on estimates of variable consideration so it is easier to understand but generally has the same effect as applying the IFRS 15 requirement for constraining variable consideration. [FRS 102.BC.B23.7]. Whilst the requirement in Section 23 is reworded for simplification, it is worth noting that it has resulted in a requirement (see discussion below) that is expressed differently to that in IFRS 15 which could, in some instances, result in an entity recognising different amounts of variable consideration in a reporting period in similar circumstances.

An entity's analysis to determine whether its estimate of variable consideration must be constrained is largely qualitative under Section 23 and IFRS 15. However, under IFRS 15, the requirement in constraining variable consideration is to include in the transaction price some or all of an amount of estimated variable consideration, only to the extent that it is highly probable that a significant reversal in the amount of cumulative revenue recognised will not occur when the uncertainty associated with the variable consideration is subsequently resolved. An entity needs to consider both the likelihood and magnitude of a revenue reversal to apply the constraint under IFRS 15; i.e., the constraint is based on the probability of a reversal (likelihood of reversal) of an amount that is 'significant' relative to the cumulative revenue recognised for the contract (magnitude of reversal). [IFRS 15.56, IFRS 15.57]. In contrast, Section 23 only requires an entity to consider the likelihood of entitlement to the estimated cumulative amount of revenue recognised, when the uncertainty associated with the variable consideration is subsequently resolved.

Consequently, an entity might be expected to recognise some amounts of revenue earlier under IFRS 15 compared to Section 23 in instances where it is highly probable that some (but not a significant) amounts of revenue will reverse in the future.

Frequently asked questions

Question 6-11: Is an entity required to follow a two-step approach to estimate variable consideration (i.e., first estimate the variable consideration and then apply the constraint to that estimate)?

An entity is not required to strictly follow a two-step process (i.e., first estimate the variable consideration and then apply the constraint to that estimate) if its internal processes incorporate the principles of both steps in a single step. Note that this is consistent with the observation in the Basis for Conclusions on IFRS 15. [IFRS 15.BC215]. For example, if an entity already had a single process to estimate expected returns when calculating revenue from the sale of goods in a manner consistent with the objectives of applying the constraint, the entity would not need to estimate the transaction price and then separately apply the constraint.

Also, as discussed above, applying the expected value method, which requires an entity to consider probability-weighted amounts, might sometimes achieve the objective of the constraint on variable consideration. That is, in developing its estimate of the transaction price in accordance with the expected value method, an entity reduces the probability of entitlement to cumulative amount of revenue and might not need to further constrain its estimate of variable consideration. However, to meet the objective of the constraint, the entity's estimated transaction price would need to incorporate its expectations of the possible consideration amounts (e.g., products not expected to be returned) at a level at which it is highly probable that including the estimate of variable consideration in the transaction price would not impact the entity's entitlement to cumulative amount of revenue in the future (i.e., such that it is highly probable that additional returns above the estimated amount would not reduce the entity's entitlement to cumulative amount of revenue in the future).¹⁵⁰

¹⁵⁰ Based on TRG Agenda paper no. 38, *Portfolio Practical Expedient and Application of Variable Consideration Constraint*, dated 13 July 2015.

Question 6-12: How does an entity apply the constraint on variable consideration to milestone payments?

An entity might need to apply significant judgement to determine whether and, if so, how much of a milestone payment is constrained. Assuming the payment is not subject to the sales-based or usage-based royalty recognition constraint (see 9.5 below), a milestone payment is a form of variable consideration that needs to be estimated and included in the transaction price, subject to the variable consideration constraint.

Milestone payments are often binary (i.e., the entity will either achieve the target or desired outcome and become entitled to the milestone payment or not). In these situations, entities generally conclude that the most likely amount method is the better predictor of the amount to which it expects to be entitled. The entity will then consider the constraint on variable consideration to determine whether it is highly probable that an entity will be entitled to the cumulative amount of revenue recognised when the uncertainties related to the milestone payments have been resolved.

How we see it

Applying the constraint to milestone payments often requires significant judgement, especially when uncertainty exists about the underlying activities necessary to meet the target or desired outcome that entitle the entity to the milestone payment. Entities need to analyse the facts and circumstances of each milestone payment and consider all information (historical, current and forecast) that is reasonably available to them to assess whether the revenue needs to be constrained. In addition, there could be external factors that affect an entity's assessment of the contract and the probability of entitlement to milestone payments. For example, we expect entities to conclude in many instances that milestone payments contingent on regulatory approval (e.g., regulatory approval of a new drug) are constrained, preventing them from recognising these payments until the uncertainty associated with the payments is resolved.

Consider the following Illustration:

Illustration 6-7: Milestone payments

Biotech enters into an arrangement with Pharma under which Biotech provides a licence to a product candidate that is starting phase II clinical studies and performs research and development services for a specified period of time. Assume that these two promises are determined to be distinct. Biotech receives an upfront payment upon execution of the arrangement and is entitled to receive milestone payments upon: (1) enrolment of a specified number of patients in a phase II clinical study; (2) completion of phase III clinical studies, (3) regulatory approval in the UK; and (4) regulatory approval in the European Union.

Under Section 23, Biotech includes in the transaction price the upfront payment and its estimate of the milestone payments it expects to receive. The amount of consideration that Biotech would include in the transaction price is restricted to amounts for which it is highly probable that the entity will be entitled to the cumulative amount of revenue when the associated uncertainty is subsequently resolved.

The milestone for patient enrolment only has two possible outcomes (e.g., Biotech enrolls or does not enrol the specified number of patients). Therefore, Biotech determines that the most likely amount method is the better predictor of the milestone payment. It then determines that it can include the amount associated with the enrolment milestone in the transaction price because it is highly probable that doing so will not reduce the likelihood of its entitlement to such amount (see discussion further above), based on its prior experience with enrolling participants in similar studies and clinical trial results on the product candidate to date.

Due to the significant uncertainty associated with the other future events that would result in milestone payments, however, Biotech initially determines that it cannot include these amounts in the transaction price (i.e., the other milestone payments are fully constrained at contract inception). At the end of each reporting period, Biotech updates its assessment of whether the milestone payments are constrained.

The evaluation of the constraint considers the probability of entitlement (i.e., achieving the target or desired outcome). There are many variables that need to be factored into this assessment. Thus, entities need to carefully evaluate each milestone to determine when it is appropriate to include the milestone in the transaction price.

As discussed in 6.2.4 below, an entity is required to update its estimate of variable consideration (including any amounts that are constrained) at the end of each reporting period to reflect its revised expectations of the amount of consideration to which it expects to be entitled. For example, an entity might initially conclude that a milestone payment is constrained and, therefore, exclude it from the transaction price. However, in a later reporting period, when reassessing the amount of variable consideration that must be included in the transaction price, the entity might conclude a milestone payment is no longer constrained even though the target or desired outcome has not been achieved. That is, based on new information, an entity might conclude that it expects to achieve the target or desired outcome and, therefore, concludes that it is now highly probable that the entity will be entitled to the cumulative amount of revenue when the associated uncertainty is subsequently resolved.

6.2.4 Reassessment of variable consideration

At the end of each reporting period, an entity updates the estimate of variable consideration included in the transaction price to reflect any relevant changes in circumstances. [FRS 102.23.47]. That is, when a contract includes variable consideration, an entity needs to update its estimate of the transaction price throughout the term of the contract to depict conditions that exist at the end of each reporting period. This involves updating the estimate of the variable consideration (including any amounts that are constrained) to reflect an entity's revised expectations about the amount of consideration to which it expects to be entitled, considering uncertainties that are resolved or new information that is gained about remaining uncertainties. The entity accounts for changes in the transaction price in accordance with paragraphs 23.75 to 23.77. [FRS 102.23.47]. As discussed in 6.2.3 above, conclusions about amounts that could result in an entitlement to the cumulative amount of revenue recognised might change as an entity satisfies a performance obligation. See 7.4 below for a discussion of allocating changes in the transaction price after contract inception.

In some cases, an estimate of variable consideration made at the end of an accounting period could be affected by information that arises after the end of the reporting period, but before the release of the financial statements. In these cases, the entity applies the guidance in accounting for subsequent events provided in Section 32 *Events after the End of the Reporting Period* (see Chapter 34).

Frequently asked questions

Question 6-13: How would an entity distinguish between a contract modification and a change in the estimated transaction price due to variable consideration after contract inception?

See response to Question 4-15 in 4.4 above.

6.3 Refund liabilities

An entity might receive consideration that it will need to refund to the customer in the future because the consideration is not an amount to which the entity ultimately will be entitled under the contract. If an entity expects to refund some or all of that consideration, the amounts received (or receivable) need to be recorded as refund liabilities. [FRS 102.23.49].

A refund liability is measured at the amount of consideration received (or receivable) to which the entity does not expect to be entitled (i.e., amounts not included in the transaction price). An entity is required to update its estimates of refund liabilities (and the corresponding change in the transaction price) at the end of each reporting period. An entity accounts for changes in the estimate of the transaction price by applying paragraphs 23.75 to 23.77 – see discussion in 7.4 below [FRS 102.23.49]. Section 23 also notes that, if a refund liability relates to a sale with a right of return, an entity applies the specific guidance for sale with a right of return. [FRS 102.23.50].

While the most common form of refund liabilities is related to sale with a right of return (see 6.4 below), the refund liability requirements also apply when an entity expects that it will need to refund consideration received due to poor customer satisfaction with a service provided (i.e., there was no good delivered or returned). For example, the terms of a fixed-price service contract might require a customer to pay upfront and could provide the customer with a full refund of the amount paid if the customer is dissatisfied with the service at any time. [FRS 102.23.49]. The refund liability requirements also apply if an entity expects to have to provide retrospective price reductions to a customer (e.g., if a customer reaches a certain threshold of purchases, the unit price is retrospectively adjusted).

Frequently asked questions

Question 6-14: Is a refund liability a contract liability (and, thus, subject to the presentation and disclosure requirements of a contract liability)?

See response to Question 11-4 in 11.1.5 below.

6.4 Rights of return

Section 23 notes that, in some contracts, an entity might transfer control of a product to a customer but grant the customer a right of return. In return, the customer might receive a full or partial refund of any consideration paid; a credit that can be applied against amounts owed, or that will be owed, to the entity; another product in exchange; or any combination thereof. [FRS 102.23.51]. As discussed in 5.7 above, IFRS 15 clarifies that a right of return does not represent a separate performance obligation. [IFRS 15.B22]. Instead, a right of return affects the transaction price and the amount of revenue an entity can recognise for satisfied performance obligations. In other words, rights of return create variability in the transaction price.

Under Section 23, rights of return do not include exchanges by customers of one product for another of the same type, quality, condition and price (e.g., one colour or size for another). [FRS 102.23.52]. Nor do rights of return include situations where a customer might return a defective product in exchange for a functioning product; these are, instead, evaluated in accordance with the guidance on warranties (see 10.1 below). [FRS 102.23.57].

Section 23 provides the following guidance to determine how rights of return would be treated: [IFRS 15.B21]

Extract from Section 23

- 23.53** To account for revenue for the transfer of products with a right of return (and for some services that are provided subject to a refund), an entity shall recognise the following:
- (a) revenue only for products expected not to be returned;
 - (b) a refund liability for consideration received (or receivable) for products expected to be returned; and
 - (c) a refund asset, classified as inventory, for products expected to be returned (and corresponding adjustment to cost of sales).

Under Section 23, an entity estimates the transaction price and applies the constraint to the estimated transaction price to determine the amount of consideration to which the entity expects to be entitled. In doing so, it considers the products expected to be returned in order to determine the amount to which the entity expects to be entitled (excluding consideration for the products expected to be returned). The entity recognises revenue based on the amount to which it expects to be entitled through to the end of the return period (considering expected product returns). An entity does not recognise the portion of the revenue subject to the constraint until the amount is no longer constrained, which could be at the end of the return period. The entity recognises the amount received or receivable that is expected to be returned as a refund liability, representing its obligation to return the customer's consideration (see 6.3 above). [FRS 102.23.54]. Subsequently, at the end of each reporting period, the entity updates its assessment of amounts for which it expects to be entitled. [FRS 102.23.56(a)].

As part of updating its estimate, an entity must update its assessment of expected returns and the related refund liabilities. This remeasurement is performed at the end of each reporting period and reflects any changes in assumptions about expected returns. Any adjustments made to the estimate result in a corresponding adjustment to amounts recognised as revenue for the satisfied performance obligations (e.g., if the entity expected the number of returns to be lower than originally estimated, it would have to increase the amount of revenue recognised and decrease the refund liability). [FRS 102.23.56(a)].

Finally, when customers exercise their rights of return, the entity might receive the returned product in a saleable or repairable condition. Under Section 23, at the time of the initial sale (i.e., when recognition of revenue is deferred due to the anticipated return), the entity recognises a refund asset (and adjusts the cost of goods sold) for its right to recover the goods returned by the customer. [FRS 102.23.53]. The entity initially measures this asset at the former carrying amount of the inventory, less any expected costs to recover the goods, including any potential decreases in the value of the returned goods (e.g., because of damage, obsolescence or declining selling prices). The consideration of potential decreases in value of the returned products is important because the returned products might not be in the same condition they were in when they were sold (e.g., due to damage or use) and this helps to ensure that the value of the refund asset is not impaired. [FRS 102.23.55].

The following table provides a summary of what an entity initially recognises in relation to a right of return in accordance with the requirements in Section 23 (also see Illustration 6-8 below).

Figure 6-2: Rights of return

Revenue	The amount to which the entity expects to be entitled through to the end of the return period (considering expected product returns)
Cost of sales	The carrying amount of goods transferred, less the refund asset
Refund liability	The amount received or receivable that is expected to be returned
Refund asset	The former carrying amount of the inventory the entity expects to recover (i.e., goods expected to be returned by the customer), less any expected costs to recover the goods, including potential decreases in the value of the returned goods

Along with remeasuring the refund liability at the end of each reporting period (as discussed above), the entity updates the measurement of the refund asset recorded (with adjustments in cost of sales) for any revisions to its expected level of returns, as well as any additional potential decreases in the value of the returned products. [FRS 102.23.56(b)]. Because paragraph 23.56 of FRS 102 includes specific remeasurement requirements for the refund asset, an entity applies those requirements, rather than other impairment models (e.g., inventory). Section 23 also requires the refund asset to be classified as inventory. [FRS 102.23.53]. Consequently, refund liability is presented separately from the refund asset (i.e., on a gross basis, rather than a net basis).

Illustration 6-8 below, which is based on Example 22 in IFRS 15, is an example of accounting for a sale with a right of return: [IFRS 15.IE Example 22, IFRS 15.IE110-IE115]

Illustration 6-8: Right of return

An entity enters into 100 contracts with customers. Each contract includes the sale of one product for £100 (100 total products × £100 = £10,000 total consideration). Cash is received when control of a product transfers. The entity's customary business practice is to allow a customer to return any unused product within 30 days and receive a full refund. The entity's cost of each product is £60.

The entity applies the requirements in Section 23 to the portfolio of 100 contracts because it reasonably expects that, in accordance with FRS 102.23.6 (see 4.3.1 above), the effects on the financial statements from applying these requirements to the portfolio would not differ materially from applying the requirements to the individual contracts within the portfolio.

Because the contract allows a customer to return the products, the consideration received from the customer is variable. To estimate the variable consideration to which the entity will be entitled, the entity decides to use the expected value method in paragraph 23.44(a) (see 6.2.2 above) because it is the method that the entity expects to better predict the amount of consideration to which it will be entitled. Using the expected value method, the entity estimates that 97 products will not be returned.

The entity also considers the requirements in paragraph 23.46 (see 6.2.3 above) on constraining estimates of variable consideration to determine whether the estimated amount of variable consideration of £9,700 (£100 × 97 products not expected to be returned) can be included in the transaction price.

The entity assesses the factors which might not support the entity's entitlement to revenue, including considerations of the factors in IFRS 15 (see 6.2.3 above), and determines that although the returns are outside the entity's influence, it has significant experience in estimating returns for this product and customer class. In addition, the uncertainty will be resolved within a short time frame (i.e., the 30-day return period). Thus, the entity concludes that it is highly probable that a reversal in the cumulative amount of revenue recognised (i.e., CU9,700) will not occur as the uncertainty is resolved (i.e., over the return period) - which supports a high degree of entitlement to such revenue.

The entity estimates that the costs of recovering the products will be immaterial and expects that the returned products can be resold at a profit.

Upon transfer of control of the 100 products, the entity does not recognise revenue for the three products that it expects to be returned. Consequently, in accordance with paragraphs 23.50 and 23.53, the entity recognises the following:

- (a) revenue of £9,700 (£100 × 97 products not expected to be returned)
- (b) a refund liability of £300 (£100 refund × 3 products expected to be returned)

And

- (c) a refund asset of £180 (£60 × 3 products for its right to recover products from customers on settling the refund liability)

The following journal entries illustrate how the entity would account for the above transaction, when the products are transferred to the customer:

Dr	Cash	£10,000 ^(a)	
	Cr Revenue		£9,700 ^(b)
	Cr Refund liability		£300 ^(c)
Dr	Cost of sales	£5,820 ^(d)	
Dr	Refund asset	£180 ^(e)	
	Cr Inventory		£6,000 ^(f)

(a) £100 × 100 products transferred

(b) £100 × 97 products not expected to be returned

(c) £100 refund × 3 products expected to be returned

(d) £60 × 97 products not expected to be returned

(e) £60 × 3 products for its right to recover products from customers on settling the refund liability

(f) £60 × 100 products

Frequently asked questions

Question 6-15: Is an entity applying the portfolio approach practical expedient when accounting for rights of return?¹⁵¹

Illustration 6-8 above states that the entity is using the portfolio approach practical expedient in paragraph 23.6 (see 4.3.1 above) to calculate its estimate of returns. Use of this practical expedient requires an entity to assert that it does not expect the use of the expedient to differ materially from applying the standard to an individual contract.

However, an entity can, but would not be required to, apply the portfolio approach practical expedient to estimate variable consideration for expected returns using the expected value method. Similar to the discussion in 6.2.2 above on estimating variable consideration, an entity can consider evidence from other, similar contracts to develop an estimate of variable consideration using the expected value method without applying the portfolio approach practical expedient. In order to estimate variable consideration in a contract, an entity frequently makes judgements considering its historical experience with other, similar contracts. Considering historical experience does not necessarily mean the entity is applying the portfolio approach practical expedient.

We expect that entities often use the expected value method to estimate variable consideration related to returns because doing so would likely better predict the amount of consideration to which the entities will be entitled. This is despite the fact that there are two potential outcomes for each contract from the variability of product returns: the product either will be returned or will not be returned. That is, the revenue for each contract ultimately either will be 100% or will be 0% of the total contract value (assuming returns create the only variability in the contract). However, entities might conclude that the expected value is the appropriate method for estimating variable consideration because they have a large number of contracts with similar characteristics. Using a portfolio of data is not equivalent to using the portfolio approach practical expedient, so entities that use the expected value method to estimate variable consideration for returns would not be required to assert that the outcome from the portfolio is not expected to materially differ from an assessment of individual contracts.

Question 6-16: How does an entity account for restocking fees for goods that are expected to be returned?¹⁵²

Entities sometimes charge customers a 'restocking fee' when a product is returned. This fee might be levied by entities to compensate them for the costs of repackaging, shipping and/or reselling the item at a lower price to another customer. Section 23 is not clear about the accounting for such restocking fees and related costs.

¹⁵¹ Based on TRG Agenda paper no. 38, *Portfolio Practical Expedient and Application of Variable Consideration Constraint*, dated 13 July 2015.

¹⁵² Based on TRG Agenda paper no. 35, *Accounting for Restocking Fees and Related Costs*, dated 13 July 2015.

Restocking fees for goods that are expected to be returned would be included in the estimate of the transaction price at contract inception and recorded as revenue when (or as) control of the good transfers. That is, selling a product subject to a restocking fee if it is returned is not different from providing a partial return right and must be accounted for similarly.

Consider the following Illustration:

Illustration 6-9: Restocking fees

Entity A enters into a contract with a customer to sell 10 widgets for £100 each. The customer has the right to return the widgets, but, if it does so, it will be charged a 10% restocking fee (or £10 per returned widget). The entity estimates that 10% of all widgets that are sold will be returned. Upon transfer of control of the 10 widgets, the entity will recognise revenue of £910 [(9 widgets not expected to be returned x £100 selling price) + (1 widget expected to be returned x £10 restocking fee)]. A refund liability of £90 will also be recorded [1 widget expected to be returned x (£100 selling price - £10 restocking fee)].

Question 6-17: How does an entity account for restocking costs related to expected returns (e.g., shipping or repackaging costs)?¹⁵³

Restocking costs (e.g., shipping and repackaging costs) would be recorded as a reduction of the amount of the refund asset when (or as) control of the good is transferred to the customer. This accounting treatment is consistent with the requirement in paragraph 23.55 that the refund asset be initially measured at the former carrying amount of the inventory, less any expected costs to recover the goods (e.g., restocking costs). [FRS 102.23.55].

Question 6-18: How can an entity evaluate a conditional call option to repurchase an asset?

See response to Question 8-24 in 8.3.1 below.

Question 6-19: Does an entity account for a customer's return of a defective item in exchange for compensation (i.e., not for a replacement item) as a right of return or an assurance-type warranty?

See response to Question 10-3 in 10.1.1 below.

6.5 Time value of money

For some transactions, the receipt of the consideration does not match the timing of the transfer of goods or services to the customer (e.g., the consideration is prepaid or is paid after the services are provided). When the customer pays in arrears, the entity is effectively providing financing to the customer. Conversely, when the customer pays in advance, the entity has effectively received financing from the customer.

Section 23 states the following in relation to the effects of time value of money arising from a contract: [FRS 102.23.58, FRS 102.23.59, FRS 102.23.60]

Extract from Section 23

- 23.58** If payment is deferred beyond normal business terms or is financed (by the entity) at a rate of interest that is not market rate, the arrangement constitutes a financing transaction (see paragraphs 11.13 and 12.7). An entity shall adjust the promised amount of consideration for the effects of the time value of money and recognise the interest revenue in accordance with Section 11 or Section 12. The entity shall present interest revenue separately from revenue from contracts with customers.
- 23.59** If payment is received in advance, an entity may adjust the promised amount of consideration for the effects of the time value of money and recognise the resulting interest expense in accordance with Section 11 or Section 12.
- 23.60** An entity need not adjust the promised amount of consideration for the effects of the time value of money if the entity expects, at contract inception, that the period between when the entity transfers the good or service promised to a customer and when the customer pays for that good or service will be 12 months or less (see paragraph 11.13A(c)).

¹⁵³ Based on TRG Agenda paper no. 35, *Accounting for Restocking Fees and Related Costs*, dated 13 July 2015.

A revenue contract that includes a financing component comprise two transactions. The first one being a transaction for the sale of goods and/or services and the second one being a financing transaction. Accordingly, subject to the policy choice and/or practical expedient available (see 6.5.1 and 6.5.2 below), entities would adjust the amount of promised consideration for the effects of time value of money if the arrangement constitutes a financing transaction. [FRS 102.23.58].

When the arrangement constitutes a financing transaction, i.e., when the payment for goods or services is deferred beyond normal business terms or the sale is financed at a below-market rate of interest, the trade debtor or contract asset is measured at the present value of the future cash inflows discounted at the market rate of interest for a similar receivable (see Chapter 13 at 5.2.2). [FRS 102.11.13, FRS 102.23.58, FRS 102.23.59]. See 11.1 below for further discussions on contract assets.

Adjusting the promised amount of consideration for the effects of time value of money results in entities recognising as revenue the present value of future cash receipts attributed to the underlying goods or services at the time of transfer. The FRC also observed that in practice, an entity could use the current cash selling price for the goods or services sold on an arm's length basis as an estimate for the present value of the future payments. However, if there is no cash sale alternative or the cash selling price is the same as the price when buying on credit, the entity must calculate the present value of the future cash flows.¹⁵⁴

6.5.1 Practical expedient

As a practical expedient, an entity is not required to adjust the promised amount of consideration for the effects of a financing component if the entity expects, at contract inception, that the period between when the entity transfers a promised good or service to a customer and when the customer pays for that good or service will be one year or less. This practical expedient is consistent with paragraph 11.13A(c) which allows an entity to initially measure financing transactions at the transaction price (i.e., a trade receivable or contract asset when, at contract inception, payment is expected within 12 months or less from when the entity transfers the good or service could be measured initially at transaction price). [FRS 102.11.13A(c), FRS 102.23.60].

In applying the practical expedient, it is important to note that if the period between when the entity transfers a promised good or service to a customer and the customer pays for that good or service is more than one year, the entity must account for the entire financing component. That is, an entity cannot exclude the first 12 months of the period between when the entity transfers a promised good or service to a customer and when the customer pays for that good or service from the calculation of the potential adjustment to the transaction price.

Entities might need to apply judgement to determine whether the practical expedient applies to some contracts. For example, Section 23 does not specify whether entities must assess the period between payment and performance at the contract level or at the performance obligation level. However, see Question 6-20 in 6.5.3 below for a discussion of how an entity might consider whether the practical expedient applies to contracts with a single payment stream for multiple performance obligations.

If an entity uses the practical expedient, it applies the expedient consistently to similar contracts in similar circumstances. [FRS 102.23.5]. Use of this practical expedient is also required to be disclosed (see 11.4.4 below).

Note that Section 23 does not discuss situations in which expectations change after contract inception regarding the timing difference between the receipt of consideration and the transfer of goods and services to the customer (e.g., a change in the timing of delivery).

How we see it

As discussed above, Section 23 includes a practical expedient that allows an entity to not adjust the promised amount of consideration for the effects of the time value of money if the entity expects, at contract inception, that the period between transfer to, and payment from, the customer will be less than one year. To the extent this period of time changes and extends beyond one year (due to events unknown at contract inception), we believe an entity would not be required to reconsider the use of this expedient because the guidance does not contemplate updating this assessment after contract inception.

¹⁵⁴ [FRS 102 Factsheet 4 Financial Instruments](#), FRC, issued on 27 November 2024, Appendix - Financing transactions, The sale of goods or services on deferred payment terms, page 18.

If an entity has accounted for a financing component at contract inception and the expected timing of the transfer of goods or services then changes, it is important to understand the reason for the expectation change. For example, if the change to the delivery date was part of a larger contract modification that changed the scope and/or price of the contract, the entity would need to apply the contract modification requirements (see 4.4 above for further discussion on accounting for contract modifications). If the change to the delivery date was at the entity's discretion or was due to circumstances that were not foreseen at contract inception, Section 23 does not specify how an entity would account for that change and an entity needs to use judgement to determine the appropriate accounting treatment.

6.5.2 Existence of a financing transaction

Absent the use of the practical expedient (see 6.5.1 above) or accounting policy choice not to adjust the effects of time value of money on payments received in advance (see 6.5.2.A below), to determine whether a financing component exists, Section 23 requires an entity to assess whether the payment is deferred beyond normal business terms or is financed at a rate of interest that is not market rate. If so, the arrangement constitutes a financing transaction. This is consistent with the requirements in paragraphs 11.13 and 12.7. Accordingly, an entity needs to adjust the promised amount of consideration for the effects of the time value of money and subsequently recognise the interest revenue and/or interest expense in accordance with Section 11 or Section 12. [FRS 102.23.58, FRS 102.23.59].

For further discussion and illustration relating to accounting for financing transactions, see Chapter 13 at 5.2.2.

Section 23 specifies when the time value of money should be adjusted for (i.e., a financing transaction exists if payment is deferred beyond normal business terms or is financed at a rate of interest that is not market rate). [FRS 102.23.58]. It does not refer to the term 'financing component' or 'significant financing component'. In contrast, under IFRS 15, an entity considers all relevant facts and circumstances in assessing whether a contract contains a financing component and whether that financing component is significant to the contract (i.e., only transactions with a 'significant' financing component in the context of the contract under IFRS 15 are adjusted for the effects of the time value of money). The factors to be considered include: (a) the difference, if any, between the amount of promised consideration and the cash selling price of the promised goods or services; and (b) the combined effect of the expected length of time between the transfer of the goods or services and the receipt of consideration and the prevailing market interest rates. [IFRS 15.61]. The assessment of significance is made at the individual contract level – this requires application of judgement.

In addition, even if conditions in a contract would otherwise indicate that a significant financing component exists, IFRS 15 also includes several situations which do not provide the customer or the entity with a significant benefit of financing, and therefore, no adjustment for a financing component is required. [IFRS 15.62]. However, Section 23 does not include similar provisions which could preclude accounting for the effects of the time value of money.

IFRS 15 also provides a practical expedient similar to the practical expedient discussed in 6.5.1 above. However, unlike in Section 23, there is no accounting policy choice available under IFRS 15 or an overall exemption from accounting for the effects of a significant financing component arising from advance payments (see 6.5.2.A below). [IFRS 15.60].

6.5.2.A Advance payments

Where an entity requires advance payments from a customer, ignoring the effects of such advance payments could skew the amount and timing of revenue recognised if the advance payment is significant and the purpose of the payment is to provide the entity with financing. For example, an entity might require a customer to make advance payments to avoid obtaining the financing from a third party. If the entity obtained third-party financing, it would likely charge the customer additional amounts to cover the finance costs incurred. Accordingly, the entity's revenue must be consistent regardless of whether it receives the significant financing benefit from a customer or from a third party because, in either scenario, the entity's performance is the same.

Nevertheless, Section 23 offers a policy choice for payments made by the customer in advance of the entity providing the promised goods or services: it can choose whether to adjust the promised amount of consideration for the effects of the time value of money and recognise the resulting interest expense in accordance with Section 11 or Section 12. [FRS 102.23.59]. If the entity chooses not to adjust the promised consideration for the effects of the time value of money, the amount received by the entity is recognised as contract liability (see 11.1 below).

If the entity chooses to adjust the promised amount of consideration for the effects of time value of money for payments received in advance, the practical expedient offered by Section 23 could still be applied. The use of the practical expedient in paragraph 23.60 does not specifically exclude the effects of time value of money on payments received in advance. Instead, it only provides the condition that needs to be met in order to use the practical expedient. That is, at contract inception, the period between when the entity transfers a promised good or service to a customer and when the customer pays for that good or service must be one year or less (see 6.5.1 above).

6.5.3 Examples of financing components

Illustration 6-10 below, which is based on Example 26 in IFRS 15, illustrates a contract that contains a financing component because payment is deferred beyond normal business terms: [IFRS 15.IE Example 26, IFRS 15.IE135-IE140]

Illustration 6-10: Financing component and right of return

An entity sells a product to a customer for £121 that is payable 24 months after delivery. The customer obtains control of the product at contract inception. The contract permits the customer to return the product within 90 days. The product is new and the entity has no relevant historical evidence of product returns or other available market evidence.

The entity's normal business term is cash on delivery. If the product was sold under the normal business terms, the product would have been sold for £100. The entity's cost of the product is £80. Sales taxes are ignored in this example.

The entity does not recognise revenue when control of the product transfers to the customer. This is because the existence of the right of return and the lack of relevant historical evidence means that the entity cannot conclude that it is highly probable that a reversal in the amount of cumulative revenue recognised will not occur which supports the entity's entitlement to the revenue in accordance with paragraph 23.46 (see 6.2.3 above). Consequently, revenue is recognised after three months when the right of return lapses.

The contract includes a financing component, in accordance with paragraph 23.58 (see 6.5.2 above). This is because payment is deferred beyond normal business terms.

The contract includes an implicit interest rate of 10% (i.e., the interest rate that over 24 months discounts the promised consideration of £121 to the selling price of £100 under normal business terms). The entity evaluates the rate and concludes that it is commensurate with the market rate that would be reflected in a separate financing transaction between the entity and its customer at contract inception.

The following journal entries illustrate how the entity accounts for this contract in accordance with paragraphs 23.51 to 23.57 (see 6.4 above).

(a) When the product is transferred to the customer, in accordance with paragraph 23.51:

Refund asset (for right to recover product to be returned)	£80 ⁽¹⁾	
Inventory		£80

(1) This example does not consider expected costs to recover the asset.

(b) During the three-month right of return period, no interest is recognised in line with the discussion in 6.5.2 above because no contract asset or receivable has been recognised.

(c) When the right of return lapses (the product is not returned):

Receivable	£100 ⁽²⁾	
Revenue		£100
Cost of sales	£80	
Refund asset		£80

(2) The receivable recognised would be measured in accordance with Section 11. This example assumes there is no material difference between the fair value of the receivable at contract inception and the fair value of the receivable when it is recognised at the time the right of return lapses. In addition, this example does not consider the impairment accounting for the receivable.

Until the entity receives the cash payment from the customer, interest revenue would be recognised in accordance with Section 11. In determining the effective interest rate in accordance with Section 11, the entity would consider the remaining contractual term.

Illustration 6-11 below, which is based on Example 29 in IFRS 15, illustrates a contract with an advance payment from the customer that the entity concludes constitutes a financing transaction. It also illustrates a situation in which the implicit interest rate does not reflect the interest rate that would be used in a separate financing transaction between the entity and its customer at contract inception, as follows:

[IFRS 15.IE Example 29, IFRS 15.IE148-IE151]

Illustration 6-11: Advance payment and assessment of discount rate

An entity enters into a contract with a customer to sell an asset. Control of the asset will transfer to the customer in two years (i.e., the performance obligation will be satisfied at a point in time). The contract includes two alternative payment options: payment of £5,000 in two years when the customer obtains control of the asset or payment of £4,000 when the contract is signed. The customer elects to pay £4,000 when the contract is signed.

The entity concludes that the contract contains a financing component because of the length of time between when the customer pays for the asset and when the entity transfers the asset to the customer, as well as the prevailing interest rates in the market. The entity's accounting policy is to adjust the effects of the time value of money on payments received in advance.

The interest rate implicit in the transaction is 11.8%, which is the interest rate necessary to make the two alternative payment options economically equivalent. However, the entity determines that, in accordance with paragraph 11.13, the rate that must be used in adjusting the promised consideration is 6%, which is the market rate of interest for a similar debt instrument.

The following journal entries illustrate how the entity would account for the financing component:

- (a) Recognise a contract liability for the £4,000 payment received at contract inception:

Cash	£4,000	
	Contract liability	£4,000

- (b) During the two years from contract inception until the transfer of the asset, the entity adjusts the promised amount of consideration (in accordance with FRS 102.23.59) and accretes the contract liability by recognising interest on £4,000 at 6% for two years:

Interest expense	CU494 ^(a)	
	Contract liability	CU494

(a) £494 = CU4,000 contract liability × (6% interest per year for two years).

- (c) Recognise revenue for the transfer of the asset:

Contract liability	£4,494	
	Revenue	£4,494

Frequently asked questions

Question 6-20: How do entities consider whether the practical expedient on adjusting for the effects of time value of money applies to contracts with a single payment stream for multiple performance obligations?¹⁵⁵

As discussed in 6.5.1 above, Section 23 includes a practical expedient that allows an entity not to adjust the promised consideration in a contract for the effects of time value of money if the period between the customer's payment and the entity's transfer of the goods or services is one year or less. [FRS 102.23.60]. Depending on the facts and circumstances, generally, entities could either apply an approach of allocating any consideration received:

- (1) To the earliest good or service delivered
- Or
- (2) Proportionately between the goods or services

For example, a telecommunications entity enters into a two-year contract to provide a device at contract inception and related data services over 24 months in exchange for 24 equal monthly instalments. The entity concludes that the device and services are each distinct. The promised amount of consideration (combined amount for device and services) is £2,400 payable in 24 monthly instalments of £100. Assume the transaction price is allocated to the device (£500) and services (£1,900 [£79 per month]).

¹⁵⁵ Based on TRG Agenda paper no. 30, *Significant Financing Components*, dated 30 March 2015 and TRG Agenda paper no. 34, March 2015 Meeting - Summary of Issues Discussed and Next Steps, dated 13 July 2015.

The example also assumes that the arrangement includes a financing component, and that the entity transfers the device first and recognises revenue for £500. Each month the entity transfers the services and recognises revenue for £79.

Under approach (1) above, an entity would be allowed to apply the practical expedient because the period between transfer of the good or service and customer payment would be less than one year for both the device and the related services. This is because, in the example provided, the device would be 'paid off' after five months. The entity also notes that any given month of service will be settled in less than 12 months under this approach. For example, services delivered in month 1 will be fully paid in month 6, services delivered in month 2 will be fully paid in month 7, etc.

Under approach (2) above, an entity would not be able to apply the practical expedient because the device would be deemed to be paid off over the full 24 months (i.e., greater than one year). Each month, £79 of the cash is allocated to service and £21 cash is allocated to the device. The amount related to the service receivable is fully settled at the end of each month. The entity will, however, receive the full amount outstanding on the handset only over 24 months (£21 per month for 24 months).

Approach (2) above would be appropriate in circumstances similar to the example above, when the cash payment is not directly tied to the earliest good or service delivered in a contract. Approach (1) would be appropriate when the cash payment is directly tied to the earliest good or service delivered in a contract. However, it might be difficult to tie a cash payment directly to a good or service because cash is fungible. Accordingly, judgement is required based on the facts and circumstances.

Question 6-21: How does an entity allocate the effects of time value of money when there are multiple performance obligations in a contract?¹⁵⁶

Section 23 is clear that, when determining the transaction price in Step 3 of the model, the effect of financing is excluded from the transaction price prior to the allocation of the transaction price to performance obligations (which occurs in Step 4). However, it might be reasonable for an entity to attribute a financing component to one or more, but not all, of the performance obligations in the contract. In doing so, the entity would analogise to the exceptions for allocating variable consideration and/or discounts to one or more (but not all) performance obligations, if the basis for allocation depicts the amount of consideration to which the entity expects to be entitled in exchange for satisfying each performance obligation in the contract (see 7.3 below). However, attribution of a financing component to one (or some) of the performance obligations requires the use of judgement, especially because cash is fungible.

Question 6-22: Is an entity required to evaluate whether a customer option that provides a material right includes any effects of time value of money? If so, how would entities perform this evaluation?

See response to Question 5-28 in 5.6 above.

6.5.4 Financial statement presentation of the effects of the time value of money

As discussed in 6.5 above, when a financing component exists in a contract, the transaction price is adjusted so that the amount recognised as revenue is the present value of future cash receipts (or, when applicable, 'cash selling price') attributed to the underlying goods or services at the time of transfer. Essentially, a contract with a customer that has a financing component would be separated into a revenue component (for the notional cash selling price) and a loan component (for the effect of the deferred or advance payment terms). Consequently, the accounting for accounts receivable arising from a contract that has a financing component must be comparable to the accounting for a loan with the same features.

The amount allocated to the financing component must be presented separately from revenue recognised from contracts with customers. An entity is required to present interest revenue separately from revenue from contracts with customers in the income statement. [FRS 102.23.58]. It also follows that interest expense is presented separately from revenue from contracts with customers. The financing component is recognised as interest expense (when the customer pays in advance) or interest income (when the customer pays in arrears). The interest income or expense is recognised over the financing period using the effective interest method described in Section 11 (see Chapter 13 at 6.2).

¹⁵⁶ Based on TRG Agenda paper no. 30, *Significant Financing Components*, dated 30 March 2015 and TRG Agenda paper no. 34, March 2015 Meeting - Summary of Issues Discussed and Next Steps, dated 13 July 2015.

As discussed in 11.1 below, a contract asset (or receivable) or contract liability is generated (and presented on the balance sheet) when either party to a contract performs, depending on the relationship between the entity's performance and the customer's payment. As shown in the Illustrations in 6.5.3 above, interest revenue or interest expense is recognised only to the extent that a contract asset (or receivable) or a contract liability is recognised in accounting for a contract with a customer. For example, Illustration 6-10 in 6.5.3 above illustrates a situation in which an entity transfers control of a good to a customer, but the customer is not required to pay for the good until two years after delivery. The contract includes a financing component. Furthermore, the customer has the right to return the good for 90 days. The product is new and the entity does not have historical evidence of returns activity. Therefore, the entity is not able to recognise revenue (or a contract asset or receivable) upon delivery because it cannot assert that it is highly probable that the entity will be entitled to the cumulative amount of revenue in the future (i.e., it cannot assert that it is highly probable that the product will not be returned). Accordingly, during the 90-day return period, the entity also cannot record interest income. However, as depicted in the example, once the return period lapses, the entity can record revenue and a receivable, as well as begin to recognise interest income.

The above discussion is consistent with IFRS 15 which requires an entity to present the effects of financing (interest revenue or interest expense) separately from revenue from contracts with customers in the statement of comprehensive income. Also, under IFRS 15, interest revenue or interest expense is recognised only to the extent that a contract asset (or receivable) or a contract liability is recognised in accounting for a contract with a customer. [IFRS 15.65]. The IASB noted in the Basis for Conclusions on IFRS 15 that the requirement in paragraph 65 of IFRS 15 does not preclude an entity from presenting interest income as revenue when interest income represents income from an entity's ordinary activities (see 3.1.3 above), which might be the case for banks and other entities with similar types of operations. [IFRS 15.BC247]. See also further discussion in Question 11-7 in 11.2 below.

Although there are two components within the contract when there is a financing component (i.e., the revenue component and the financing component), it is only in the case of deferred payment terms that there are two cash flow components. In that case, the revenue component cash flows are classified as cash flows from operating activities, and the cash flows related to the financing component are classified consistent with the entity's choice to present cash flows from interest received in accordance with Section 7 *Statement of Cash Flows* (i.e., as cash flows from operating or investing activities). [FRS 102.7.15]. If the customer pays in advance, the sum of the cash amount and the accrued interest represent revenue, and thus there is only one cash flow component. Accordingly, the cash received is classified as cash flows from operating activities. See Chapter 7 at 3.3 for further discussion.

Impairment losses on receivables, with or without a financing component, are presented in line with the general requirements of Section 5 *Statement of Comprehensive Income and Income Statement* (see Chapter 6 at 5) and disclosed in accordance with Section 11 or Section 12 (see Chapter 13). However, Section 23 makes it clear that such amounts are disclosed separately from impairment losses from other contracts (see 11.2 below). [FRS 102.23.133(b)].

How we see it

We believe entities might need to expend additional effort to track impairment losses on assets arising from contracts that are within the scope of Section 23 separately from impairment losses on assets arising from other contracts. Entities need to ensure that they have the appropriate systems, internal controls, policies and procedures in place to collect and separately present this information.

6.6 Non-cash consideration

Customer consideration might be in the form of goods, services or other non-cash consideration (e.g., PP&E, a financial instrument). When an entity (i.e., the seller or vendor) receives, or expects to receive, non-cash consideration, the fair value of the non-cash consideration is included in the transaction price. [FRS 102.23.61].

It is likely that an entity will apply the requirements of Section 2A *Fair Value Measurement* or Section 26 when measuring the fair value of any non-cash consideration. If an entity cannot reasonably estimate the fair value of non-cash consideration, it measures the non-cash consideration indirectly by reference to the stand-alone selling price of the promised goods or services. [FRS 102.23.61]. Significant judgement and consideration of specific facts and circumstances might be required in such situations (e.g., advertising barter transactions, see 6.6.2 below for further discussion on barter transactions).

For contracts with both non-cash consideration and cash consideration, an entity needs to measure the fair value of the non-cash consideration and look to other requirements within Section 23 to account for the cash consideration. For example, for a contract in which an entity receives non-cash consideration and a sales-based royalty, the entity would measure the fair value of the non-cash consideration and refer to the requirements within Section 23 for the sales-based royalties.

Note that IFRS 15 provides further guidance (as discussed below) when dealing with non-cash consideration which an entity reporting under FRS 102 could consider.

The fair value of non-cash consideration might change both because of the form of consideration (e.g., a change in the price of a share an entity is entitled to receive from a customer) and for reasons other than the form of consideration (e.g., a change in the exercise price of a share option because of the entity's performance). Under IFRS 15, if an entity's entitlement to non-cash consideration promised by a customer is variable for reasons other than the form of consideration (i.e., there is uncertainty as to whether the entity receives the non-cash consideration if a future event occurs or does not occur), the entity considers the constraint on variable consideration. [IFRS 15.68].

In some transactions, a customer contributes goods or services, such as equipment or labour, to facilitate the fulfilment of the contract. Under IFRS 15, if the entity obtains control of the contributed goods or services, it would consider them non-cash consideration and account for that consideration as described above. [IFRS 15.69]. Assessing whether the entity obtains control of the contributed goods or services by the customer might require judgement.

Note that any assets recognised as a result of non-cash consideration are accounted for in accordance with other sections of FRS 102 (e.g., Section 17).

Illustration 6-12 below, which is based on Example 31 in IFRS 15, is an example of a transaction for which non-cash consideration is received in exchange for services provided: [IFRS 15.IE Example 31, IFRS 15.IE156-IE158]

Illustration 6-12: Entitlement to non-cash consideration

An entity enters into a contract with a customer to provide a weekly service for one year. The contract is signed on 1 January 20X6 and work begins immediately. The entity concludes that the service is a single performance obligation in accordance with paragraph 23.17(b). This is because the entity is providing a series of distinct services that are substantially the same and have the same pattern of transfer (the services transfer to the customer over time and use the same method to measure progress—that is, a time-based measure of progress).

In exchange for the service, the customer promises 100 shares of its common stock per week of service (a total of 5,200 shares for the contract). The terms in the contract require that the shares must be paid upon the successful completion of each week of service.

The entity measures its progress towards complete satisfaction of the performance obligation as each week of service is complete. To determine the transaction price (and the amount of revenue to be recognised), the entity measures the fair value of 100 shares that are received upon completion of each weekly service. The entity does not reflect any subsequent changes in the fair value of the shares received (or receivable) in revenue (see 6.6.1 below).

6.6.1 Non-cash consideration application considerations

One of the application issues related to accounting for non-cash consideration is about the date to use when measuring the fair value of non-cash consideration for inclusion within the transaction price. In addition, the variability of non-cash consideration could arise both from its form (e.g., shares) and for other reasons (e.g., performance factors that affect the amount of consideration to which the entity will be entitled). Consequently, it is not clear how the constraint on variable consideration would be applied in such circumstances.

At the January 2015 TRG meeting, the TRG members discussed these matters for purposes of IFRS 15 application.¹⁵⁷ We consider that such TRG discussions on these matters are relevant in applying the related Section 23 requirements.

¹⁵⁷ TRG Agenda paper no. 15, *Noncash consideration*, dated 26 January 2015, and TRG Agenda paper no. 25, *January 2015 Meeting - Summary of Issues Discussed and Next Steps*, dated 30 March 2015.

TRG members agreed that, while the revenue standard requires non-cash consideration (e.g., shares, advertising provided as consideration from a customer) to be measured at fair value, it is unclear when that fair value must be measured (i.e., the measurement date). The TRG members discussed three measurement date options:

- Contract inception
 - When the non-cash consideration is received (or receivable)
- Or
- At the earlier of (i) when the non-cash consideration is received (or is receivable) and (ii) when (or as) the related performance obligation is satisfied

Consider the example in Illustration 6-12 included in 6.6 above). Under the first view, the entity would measure fair value of all of the 5,200 shares on 1 January 20X6 (i.e., contract inception). Under the second view, it would measure the fair value of 100 shares at the end of each week, since this is when each week's shares are received (or receivable). Under the third view, the entity would measure the fair value of the weekly 100 shares over the course of each week. This is because the entity satisfies its performance obligation over time each week and this is earlier than when the non-cash consideration is received (or receivable), which is at the end of the week. As noted in the example in Illustration 6-12 above, the entity does not reflect any subsequent changes in fair value in revenue.

Each view received support from some TRG members. Since neither IFRS 15 nor Section 23 specifies the measurement date, an entity needs to use its judgement to determine the most appropriate measurement date when measuring the fair value of non-cash consideration. However, in accordance with paragraph 126 of IFRS 15 and in paragraphs 8.6 to 8.7, information about the methods, inputs and assumptions used to measure non-cash consideration might need to be disclosed. [IFRS 15.126, IFRS 15.BC254E, FRS 102.8.6, FRS 102.8.7].

Whichever method is selected, under IFRS 15, the objective is to choose a single measurement date. That is, the fact that IFRS 15 does not specify the measurement date does not change the requirement in the standard not to update the fair value measurement if the reason for the change is solely because of its form (i.e., because it is non-cash). [IFRS 15.68].

Also, as discussed in 6.6 above, IFRS 15 requires that the constraint on variable consideration be applied to non-cash consideration only if the variability is due to factors other than the form of consideration (i.e., variability arising for reasons other than changes in the price of the non-cash consideration). The constraint does not apply if the non-cash consideration varies because of its form (e.g., listed shares for which the share price changes).

However, IFRS 15 does not address how the constraint would be applied when the non-cash consideration is variable due to both its form and other reasons. While some of the TRG members said that IFRS 15 could be interpreted to require an entity to split the consideration based on the source of the variability, other TRG members highlighted that this approach would be overly complex and would not provide useful information.

6.6.2 Barter transactions

An entity might enter into barter transactions to provide goods or services in exchange for receiving similar or dissimilar goods or services from its customers. In some cases, barter transactions include cash consideration in addition to the non-cash consideration. Neither Section 23 nor IFRS 15 contains specific requirements for barter transactions. Therefore, significant judgement and consideration of the specific facts and circumstances will be needed when accounting for such transactions.

Refer to the EY publication, International GAAP®, for further discussions of, and additional guidance on, accounting for a barter transaction.

6.7 Consideration paid or payable to a customer

Many entities make payments to their customers. In some cases, the consideration paid or payable represents purchases by the entity of goods or services offered by the customer that satisfy a business need of the entity. In other cases, the consideration paid or payable represents incentives given by the entity to entice the customer to purchase, or continue purchasing, its goods or services.

Section 23 provides the following requirements for consideration paid or payable to a customer: [FRS 102.23.62, FRS 102.23.63, FRS 102.23.64]

Extract from Section 23**Consideration payable to a customer**

- 23.62** Consideration payable to a customer includes cash amounts that an entity pays, or expects to pay, to the customer (or to other parties that purchase the entity's goods or services from the customer). Consideration payable to a customer also includes credit or other items (eg a coupon or voucher) that can be applied against amounts owed to the entity (or to other parties that purchase the entity's goods or services from the customer).
- 23.63** An entity shall account for consideration payable to a customer as a reduction of the transaction price and, therefore, of revenue unless the payment to the customer is in exchange for a distinct good or service (as described in paragraphs 23.21 to 23.25) that the customer transfers to the entity.
- 23.64** If consideration payable to a customer is accounted for as a reduction of the transaction price, an entity shall recognise the reduction of revenue when (or as) the later of either of the following events occurs:
- the entity recognises revenue for the transfer of the related goods or services to the customer; and
 - the entity pays or promises to pay the consideration (even if the payment is conditional on a future event).

Figure 6-3 below illustrates these requirements.

Figure 6-3: Consideration payable to a customer

* Section 23 does not have explicit guidance in circumstances when the consideration payable to the customer exceeds the fair value of the distinct good or service nor when the fair value of the distinct good or service cannot be reasonably estimated. This is further discussed in 6.6.2 below.

Section 23 indicates that an entity accounts for the consideration payable to a customer, regardless of whether the purchaser receiving the consideration is a direct or indirect customer of the entity. This includes consideration to any purchasers of the entity's products at any point along the distribution chain. This would include entities that make payments to the customers of resellers or distributors that purchase directly from the entity (e.g., manufacturers of breakfast cereals might offer coupons to end-consumers, even though their direct customers are the grocery stores that sell to end-consumers). The requirements in Section 23 apply to entities that derive revenue from sales of services, as well as entities that derive revenue from sales of goods.

The requirements for consideration payable to a customer could also be helpful for entities receiving such consideration from vendors to consider in the absence of other, specific guidance. For further discussion of this topic, entities reporting under FRS 102 also could refer to the publication *Applying IFRS: Accounting for Payments from Suppliers*.¹⁵⁸

Frequently asked questions

Question 6-23: Who is considered to be an entity's customer when applying the requirements for consideration payable to a customer?¹⁵⁹

The requirements for consideration payable to a customer generally apply to all payments made to entities/customers in the distribution chain for that contract. However, there could also be situations in which the requirements would apply to payments made to any customer of an entity's customer outside the distribution chain if both parties are considered the entity's customers. For example, in an arrangement with a principal, an agent and an end-consumer, an agent might conclude that its only customer is the principal or it might conclude that it has two customers - the principal and the end-consumer. Regardless of this assessment, an agent's payment to a principal's end-consumer that was contractually required based on an agreement between the entity (agent) and the principal would represent consideration payable to a customer. Absent similar contract provisions that clearly indicate when an amount is consideration payable, agents need to evaluate their facts and circumstances to determine whether payments made to an end-consumer would be considered a reduction of revenue or a marketing expense.

Question 6-24: How does an entity that acts as an agent account for incentive payments made to end-consumers that are not the entity's customers and are outside the distribution chain?

An entity might make incentive payments to an end-consumer that is not the entity's direct customer and is not identified as an indirect customer (e.g., the end-consumer does not purchase the entity's goods or services at any point along the distribution chain). Incentive payments of this nature might be common in arrangements in which an entity acts as an agent to facilitate the sale of its customer's (i.e., the principal's) goods or services to an end-consumer (e.g., incentive payments offered by platform entities). The entity will need to apply significant judgement to determine: (1) whether the end-consumer is a customer (see 3.1.3 above); and (2) the appropriate accounting treatment for incentive payments made to an end-consumer that is not identified as a customer (e.g., whether to account for the payment as a reduction of revenue or as a marketing expense).

The entity first has to consider whether the payment to the end-consumer is in exchange for a distinct good or service acquired from the end-consumer at fair value. If it is, the entity must account for the payment in the same way it accounts for other purchases from suppliers (see 6.7.2 below). If the incentive payment is not in exchange for a distinct good or service, the entity will need to apply significant judgement to determine whether the payment results in a reduction to revenue.

An entity's customer might have a valid expectation that the payment will be made to the end-consumer based on reasonably available information about the entity's incentive programme, including written or oral communications (e.g., advertisements, press releases, published policies, customer reporting) and any customary business practices of the entity. Entities will need to carefully consider their facts and circumstances to determine whether a valid expectation exists.

Similar to a contractually required obligation, an implied obligation to a customer to provide incentive payments to an end-consumer is accounted for as consideration payable to a customer and results in a reduction to the transaction price if the payment to the end-consumer is not in exchange for a distinct good or service.

In certain arrangements, an entity might make a payment to an end-consumer in exchange for a distinct good or service and the payment exceeds the fair value of that good or service. The entity will need to apply significant judgement in these arrangements to determine whether the excess payment represents an implied obligation to its customer. If the entity determines the excess payment is an implied obligation to the customer, then the excess payment must result in a reduction to the transaction price. See also discussion in 6.7.2 below.

Given the judgement involved with such arrangements, an entity needs to consider the disclosure requirements in FRS 102.8.6 (see 11 below and Chapter 6 at 7.3). [FRS 102.8.6].

¹⁵⁸ Available on www.ey.com/IFRS.

¹⁵⁹ Based on TRG Agenda paper no. 28, *Consideration Payable to a Customer*, dated 30 March 2015, TRG Agenda paper no. 34, *March 2015 Meeting - Summary of Issues Discussed and Next Steps*, dated 13 July 2015, and TRG Agenda paper no. 37, *Consideration Payable to a Customer*, dated 13 July 2015.

6.7.1 Forms of consideration paid or payable to a customer

Consideration paid or payable to customers commonly takes the form of vouchers or coupons, among others. Furthermore, in determining the transaction price, the promise to pay the consideration might be implied by the entity's customary business practice. [FRS 102.23.41].

Since consideration paid or payable to a customer can take many different forms, entities have to carefully evaluate each transaction to determine the appropriate treatment of such amounts (i.e., as payment for a distinct good or service, a reduction of the transaction price or a combination of both, as illustrated in Figure 6-3 in 6.7 above). Some common examples of consideration paid to customers are given below:

- **Slotting fees** - Manufacturers of consumer products commonly pay retailers fees to have their goods displayed prominently on store shelves. Generally, such fees do not provide a distinct good or service to the manufacturer and are treated as a reduction of the transaction price.
- **Co-operative advertising arrangements** - In some arrangements, an entity agrees to reimburse a reseller for a portion of costs incurred by the reseller to advertise the entity's products. The determination of whether the payment from the vendor is in exchange for a distinct good or service at fair value depends on a careful analysis of the facts and circumstances of the contract.
- **Price protection** - An entity might agree to reimburse a retailer up to a specified amount for shortfalls in the sales price received by the retailer for the entity's products over a specified period of time. Normally such fees do not provide a distinct good or service to the manufacturer and are treated as a reduction of the transaction price (see Question 6-7 in 6.2.1 above).
- **Coupons, vouchers and rebates** - An indirect customer of an entity might receive a refund of a portion of the purchase price of the product or service acquired by returning a form to the retailer or the entity. Generally, such fees do not provide a distinct good or service to the manufacturer and are treated as a reduction of the transaction price.
- **'Pay-to-play' arrangements** - In some arrangements, an entity pays an upfront fee to the customer prior to, or in conjunction with, entering into a contract. In most cases, these payments are not associated with any distinct good or service to be received from the customer and are treated as a reduction of the transaction price.
- **Purchase of goods or services** - Entities often enter into supplier-vendor arrangements with their customers in which the customers provide them with a distinct good or service. For example, a software entity buys its office supplies from one of its software customers. In such situations, the entity has to carefully determine whether the payment made to the customer is solely for the goods or services received or whether part of the payment is actually a reduction of the transaction price for the goods or services the entity is transferring to the customer.

Frequently asked questions

Question 6-25: Which payments to a customer are within the scope of the requirements for consideration payable to a customer?¹⁶⁰

Generally, an entity does not need to separately analyse each payment to a customer if it is apparent that the payment is for a distinct good or service acquired in the normal course of business at a market price. However, if the business purpose of a payment to a customer is unclear or the goods or services are acquired in a manner that is inconsistent with market terms that other entities would receive when purchasing the customer's good or services, the payment needs to be evaluated under these requirements.

Also, in the Basis for Conclusions on IFRS 15, the IASB noted that the amount of consideration received from a customer for goods or services and the amount of any consideration paid to that customer for goods or services could be linked even if they are separate events. [IFRS 15.BC257].

Question 6-26: Do litigation settlements payable by an entity to its customer represent consideration payable to a customer?

An entity might be sued (for example, as a result of anti-competition investigations related to the price of the goods or services) by a current or previous customer in relation to goods or services that have already been transferred (or partially transferred) to a customer. If the entity is ordered to pay compensation to the customer, the entity needs to consider the accounting for the payment and the corresponding effects on the entity's statement of profit or loss. However, not all disputes with customers result in third-party arbitration or litigation proceeding. For example, an entity might agree to transfer consideration to a customer because of a resolution negotiated only between the entity and the customer.

Entities need to carefully consider all relevant facts and circumstances to determine the appropriate accounting, including whether compensation paid represents consideration payable to a customer. Factors to consider include whether the litigation is related to a revenue contract and whether the contract related to the litigation was previously completed, which might require judgement to determine.

If a litigation settlement is related to a revenue contract and that contract is not completed, Section 23 would apply unless it is covered by an assurance type warranty accounted for in accordance with Section 21 (see 10.1.3 below).

If a litigation settlement is related to a revenue contract and that contract is completed, an entity might conclude it is appropriate to apply Section 21 to account for any (contingent) liability because there is no longer a contract or a customer relationship. If the entity reaches that conclusion, the compensation to the customer charged by the court's decision would not be part of the price that the parties agreed for the completed contract, nor related to any future contracts with that customer. However, an entity that applies Section 21 might determine that it only applies to the recognition and measurement of any provision and not to the impact on profit or loss, and that, instead, it would apply Section 23 to determine the classification in profit or loss, in accordance with the requirements for consideration payable to a customer. This is because Section 21 requires an entity to recognise the amount paid or payable as an expense, unless another section of FRS 102 requires the cost to be recognised as part of the cost of an asset such as inventories or PP&E. [FRS 102.21.5, FRS 102.21.11].

However, an entity might conclude that only Section 23 applies because Section 21 excludes from its scope any provision, contingent liability or contingent asset addressed by other sections of FRS 102 (including Section 23) except for onerous contracts, [FRS 102.21.1], and that Section 23 provides specific requirements for consideration payable to a customer. Although there is no longer a contract or customer relationship, the litigation is directly attributable to a previously completed customer contract, and an entity might thus conclude it is reasonable to apply Section 23.

If an entity applies Section 23, it might need to apply the requirements for contract modifications. This is because, as a result of the court's decision, the entity has an enforceable obligation to pay the customer and an (implicit or explicit) agreement between the entity (see 4 above) and customer leads to a reduction of the total consideration in the original contract. [FRS 102.23.13]. If the court finds in favour of the customer, but the amount to pay is not finalised, the consideration payable to the customer would be variable, [FRS 102.23.14, FRS 102.23.43], and the entity would need to apply the variable consideration requirements (including the constraint).

¹⁶⁰ Based on TRG Agenda paper no. 28, *Consideration Payable to a Customer*, dated 30 March 2015, TRG Agenda paper no. 34, *March 2015 Meeting - Summary of Issues Discussed and Next Steps*, dated 13 July 2015, and TRG Agenda paper no. 37, *Consideration Payable to a Customer*, dated 13 July 2015.

How we see it

If the revenue contract related to the litigation is not yet completed, an entity needs to apply Section 23 to account for the litigation settlement as consideration payable to a customer, unless it is covered by an assurance-type warranty that is accounted for under Section 21.

If the revenue contract related to the litigation was previously completed, we believe an entity needs to apply judgement, based on the specific facts and circumstances, to determine whether to either apply Section 21 or Section 23 to account for any (contingent) liability, and apply the judgement consistently to similar transactions. Even if Section 21 is applied to the liability for litigation settlements, an entity might conclude that, because it is a payment to a customer, the requirements for consideration payable to a customer apply when determining the classification in profit or loss, which might result in a reduction of revenue.

For settlements of litigation or disputes that result in consideration received or receivable from a customer, please see response to Question 6-9 in 6.2.1 above.

6.7.2 Classification and measurement of consideration paid or payable to a customer

To determine the appropriate accounting treatment (and as illustrated in Figure 6-3 in 6.7 above), an entity must first determine whether the consideration paid or payable to a customer is a payment for a distinct good or service. If it is not in exchange for a distinct good or service, an entity accounts for consideration payable to a customer as a reduction in the transaction price. This is because Section 23 requires an entity to account for consideration payable to a customer as a reduction of the transaction price and, therefore, of revenue unless the payment is for a distinct good or service (see 6.7 above). [FRS 102.23.63]. That is, for a payment by the entity to a customer to be treated as something other than a reduction of the transaction price, the good or service provided by the customer must be distinct (as discussed in 5.2.1 above).

Sometimes, consideration payable to a customer is a payment for a distinct good or service from the customer. In certain situations, such payment exceeds the fair value of the good or service purchased from the customer. IFRS 15 provides further guidance on this matter. Under IFRS 15, if consideration payable to a customer is in exchange for a distinct good or service at fair value, an entity accounts for such purchase of the good or service in the same way it accounts for other purchases from suppliers. However, if the payment to the customer is in excess of the fair value of the distinct good or service received, the entity must account for such excess as a reduction of the transaction price. In the event that the entity cannot reasonably estimate the fair value of the good or service received from the customer, it will need to account for all of the consideration payable to the customer as a reduction in the transaction price.

[IFRS 15.71].

Illustration 6-13: Consideration paid to a customer in exchange for a distinct good or service

Entity A enters into a contract to sell goods to Customer B in the ordinary course of business (see 3.1.3 above) in exchange for cash consideration. Separately, Entity A enters into an agreement to purchase market research from Customer B related to the launch of a new product in exchange for cash consideration. The two contracts were not negotiated in contemplation of one another.

Entity A elects to purchase the market research, rather than internally developing such knowledge because of Customer's B expertise in this area. Entity A could purchase similar services from a non-customer.

Based on an evaluation of the circumstances, the cash consideration paid to the customer is in return for Customer B providing distinct services to Entity A. To reach this conclusion, Entity A considers the requirements in paragraphs 23.21 to 23.25 (see 5.2 above) and concludes that the market research services are capable of being distinct, as well as separately identifiable (or distinct within the context of the contract), from Entity A's sale of its goods to Customer B.

Entity A determines that market research is capable of being distinct from the sale of its goods to Customer B because the market research could be purchased from a non-customer. Therefore, Entity A is able to demonstrate that the market research can provide benefits on its own or with other readily available resources.

Entity A determines that the market research is distinct within the context of the contract because of the following:

- Customer B is not providing a significant service of integrating the market research with the purchases of Entity A's goods because the promises to Entity A are not a combined output of integrated goods or services.

- The market research provided by Customer B does not modify or customise the purchases of Entity A's goods. The market research and the purchases of goods are not being assembled together to produce a combined output.
- The market research is not highly interrelated or interdependent with the sale of Entity A's goods because the market research is not needed for Customer B to purchase the goods. That is, there is no significant two-way dependency between the promises.

Entity A accounts for the cash consideration paid to Customer B in the same way that it accounts for other purchases from suppliers, provided that the cash consideration paid does not exceed the fair value of the distinct services received from Customer B. If the amount of cash consideration paid by Entity A exceeds the fair value of the distinct services, that excess amount would be characterised as a reduction of the transaction price of the goods sold to Customer B in Entity A's income statement.

In many cases, determining the amount of consideration payable to a customer (e.g., cash amounts an entity pays to a customer) will be straightforward. However, if the consideration paid or payable to a customer includes a variable amount, an entity would estimate the amount using the variable consideration requirements in paragraphs 23.43 to 23.57 (see 6.2 to 6.4 above).

6.7.3 Timing of recognition of consideration paid or payable to a customer

If the consideration paid or payable to a customer is accounted for as a reduction of the transaction price, this reduction of the transaction price (and, ultimately, revenue) is recognised at the later of when: (1) the entity recognises revenue for the transfer of the related promised goods or services to the customer; or (2) the entity pays or promises to pay the consideration (even if the payment is conditional on a future event) (see 6.7 above). [FRS 102.23.64]. For example, if goods subject to a discount through a coupon are already delivered to the retailers, the discount would be recognised when the coupons are issued. However, if a coupon is issued that can be used on a new line of products that have not yet been sold to retailers, the discount would be recognised upon sale of the products to a retailer. Section 23 also notes that in determining the transaction price, the promise to pay the consideration might be implied by an entity's customary business practices. [FRS 102.23.41].

Certain sales incentives, such as mail-in rebates and manufacturer coupons, entitle a customer to receive a reduction in the price of goods or services by submitting a form or claim for a refund of a specified amount of the price charged to the customer at the point of sale. An entity must recognise a liability for those sales incentives at the later of: (a) when it recognises revenue on the goods or services; or (b) the date at which the sales incentive was offered. The amount of liability will be based on the estimated amount of discounts or refunds that will be claimed by customers, similar to how the entity would estimate variable consideration (see 6.2.2 above).

Even if the sales incentives result in a loss on the sale of the product or service, an entity also recognises a liability for those sales incentives at the later of: (a) when it recognises revenue on the goods or services; or (b) the date at which the sales incentive was offered. That is, an entity does not recognise the loss before either date. However, an entity needs to consider whether the offer indicates that the value of inventories is lower than its cost, which will require write-down of inventories to estimated selling price less costs to complete and sell [FRS 102.13.4, FRS 102.13.19].

To determine the appropriate timing of recognition of consideration payable to a customer, entities also need to consider the requirements for variable consideration. That is, Section 23's description of variable consideration is broad and includes amounts such as coupons or other forms of credits that can be applied to the amounts owed to an entity by the customer (see 6.2.1 above). Section 23 requires that all potential variable consideration be considered and reflected in the transaction price at contract inception and reassessed as the entity performs. In other words, if an entity has a history of providing this type of consideration to its customers, the requirements on estimating variable consideration would require that such amounts be considered at contract inception, even if the entity has not yet provided or explicitly promised this consideration to the customer.

A potential inconsistency arises between the requirements on consideration payable to a customer and variable consideration because the requirements specific to consideration payable to a customer indicate that such amounts are not recognised as a reduction of revenue until the *later* of when:

- The related sales are recognised
- Or
- The entity promises to provide such consideration

A literal read of these requirements seems to suggest that an entity need not anticipate offering these types of programmes, even if it has a history of doing so, and would only recognise the effect of these programmes at the later of when the entity transfers the promised goods or services or makes a promise to pay the customer. Notwithstanding this, if an entity has historically provided or intends to provide this type of consideration to customers, the requirements on estimating variable consideration (i.e., FRS 102.23.43) would require the entity to consider such amounts at contract inception when the transaction price is estimated, even if the entity has not yet provided or promised to provide this consideration to the customer.¹⁶¹ If the consideration paid or payable to a customer includes variable consideration (e.g., in the form of a discount or refund for goods or services provided), an entity would use either the expected value method or most likely amount method to estimate the amount to which the entity expects to be entitled and apply the constraint to the estimate (see 6.2.3 above for further discussion) to determine the effect of the variable consideration payable to the customer.

How we see it

We believe entities generally need to consider the requirements for variable consideration to determine the appropriate timing of recognition of consideration payable to a customer. Therefore, significant judgement might be needed to determine the appropriate timing of recognition.

Illustration 6-14 below, which is based on Example 32 in IFRS 15, is an example of consideration paid to a customer: [IFRS 15.IE Example 32, IFRS 15.IE160-IE162]

Illustration 6-14: Consideration payable to a customer

An entity that manufactures consumer goods enters into a one-year contract to sell goods to a customer that is a large global chain of retail stores. The customer commits to buy at least £15 million of products during the year. The contract also requires the entity to make a non-refundable payment of £1.5 million to the customer at the inception of the contract. The £1.5 million payment will compensate the customer for the changes it needs to make to its shelving to accommodate the entity's products.

The entity considers the requirements in paragraphs 23.62 to 23.64 and concludes that the payment to the customer is not in exchange for a distinct good or service that transfers to the entity. This is because the entity does not obtain control of any rights to the customer's shelves. Consequently, the entity determines that, in accordance with paragraph 23.63, the £1.5 million payment is a reduction of the transaction price.

The entity applies the requirements in paragraph 23.64 and concludes that the consideration payable is accounted for as a reduction in the transaction price when the entity recognises revenue for the transfer of the goods. Consequently, as the entity transfers goods to the customer, the entity reduces the transaction price for each good by 10% (£1.5 million ÷ £15 million). Therefore, in the first month in which the entity transfers goods to the customer, the entity recognises revenue of £1.8 million (£2.0 million invoiced amount less £0.2 million of consideration payable to the customer).

Frequently asked questions

Question 6-27: How does an entity account for upfront payments to a customer or a potential customer?¹⁶²

While the requirements for consideration payable to a customer clearly apply to payments to customers under current contracts, it is unclear how to account for upfront payments to potential customers and payments that relate to both current and anticipated contracts.

There could be two approaches. Under Approach A, an entity would recognise an asset for the upfront payment and reduce revenue as the related goods or services (or as the expected related goods or services) are transferred to the customer. As a result, the payment might be recognised in profit or loss over a period that is longer than the contract term. Entities would determine the amortisation period based on facts and circumstances and would assess the asset for recoverability using the principles in asset impairment models in other sections of FRS 102. Under Approach B, entities would reduce revenue in the current contract by the amount of the payment. If there is no current contract, entities would immediately recognise the payment in profit or loss.

¹⁶¹ TRG Agenda paper no. 37, *Consideration Payable to a Customer*, dated 13 July 2015 and TRG Agenda paper no. 44, *July 2015 Meeting - Summary of Issues Discussed and Next Steps*, dated 9 November 2015.

¹⁶² Based on FASB TRG Agenda paper no. 59, *Payments to Customers*, dated 7 November 2016 and FASB TRG Agenda paper no. 60, *November 2016 Meeting - Summary of Issues Discussed and Next Steps*, dated 31 January 2017.

An entity needs to apply the view that best reflects the substance and economics of the payment to the customer; it would not be an accounting policy choice. Entities would evaluate the nature of the payment, the rights and obligations under the contract and whether the payment meets the definition of an asset. An entity's decision on which view is appropriate might be a significant judgement in the determination of the transaction price that would require disclosure under paragraph 8.6 (see 11 below and Chapter 6 at 7.3). [FRS 102.8.6].

How we see it

We believe an entity has to carefully evaluate all facts and circumstances of payments made to customers to determine the appropriate accounting treatment. However, if an entity expects to generate future revenue associated with the payment, we believe an entity generally applies Approach A (assuming any asset recorded is recoverable). If no revenue is expected as a result of the payment, Approach B might be appropriate.

If an entity recognises an asset for consideration paid to a customer (because the payment made to the customer will be recognised as a reduction from revenue in future periods when (or as) goods or services are transferred to the customer), a question arises about the nature of that asset. This is relevant because it would determine, among other things, which impairment requirements apply to the asset. This is discussed further in 6.7.4 below.

Question 6-28: How does an entity present 'negative revenue' resulting from consideration paid or payable to a customer that exceeds the amount to which the entity expects to be entitled?

In certain arrangements, consideration paid or payable to a customer could exceed the consideration to which the entity expects to be entitled in exchange for transferring promised goods or services in a contract with a customer. In these situations, recognition of payments to the customer as a reduction of revenue could result in 'negative revenue'. Neither Section 23 nor IFRS 15 specifically address how entities would present negative revenue.

For application of IFRS 15, stakeholders had asked the TRG whether an entity would reclassify negative revenue resulting from consideration paid or payable to a customer to expense and, if so, in what circumstances. The TRG did not discuss this question in detail and no additional application guidance was provided.

As discussed above, paragraph 23.63 states that an entity must account for consideration payable to a customer as a reduction of the transaction price (and, therefore, of revenue), unless the payment to the customer is in exchange for a distinct good or service that the customer transfers to the entity.

How we see it

Therefore, we believe it is appropriate for an entity to present payments to a customer in excess of the transaction price that are not in exchange for a distinct good or service within revenue.

However, we believe it might also be acceptable, in limited circumstances, to reclassify negative revenue to expense in an entity's income statement. For example, if an entity demonstrates that characterisation of consideration payable to a customer as a reduction of revenue results in negative revenue for a specific customer on a cumulative basis (i.e., since the inception of the overall relationship between the entity and the customer), then the amount of the cumulative shortfall might be re-characterised as an expense.

In determining whether cumulative negative revenue exists for a specific customer, revenues from all transactions with that customer recognised by all entities within the consolidated group that includes the entity paying the consideration to the customer must be considered (i.e., revenues recognised from sales to the customer from all of the consolidated entities needs to be considered). Therefore, an entity that considers reclassifying negative revenue to expense must carefully evaluate all of its historical contractual arrangements with the customer before reclassifying any cumulative shortfall in revenue to expense. In addition, when making this evaluation, we believe an entity needs to incorporate revenue from any current or anticipated contracts with the customer to transfer goods or services in the future.

To provide users with sufficient information about its revenue transactions and significant judgements applied, entities need to consider the disclosure requirements in paragraph 8.6 (see 11 below and Chapter 6 at 7.3). [FRS 102.8.6].

6.7.4 Impairment of consideration paid to a customer recognised as an asset

If an entity has recognised an asset for consideration paid to a customer (because the payment made to the customer will be recognised as a reduction from revenue in future periods when (or as) goods or services are transferred to the customer, see 6.7.3 above), it will need to consider the nature of that asset to determine which impairment requirements apply. Specifically, whether the asset is subject to the impairment requirements in Section 11 (see 10.1.3 below) or the impairment requirements in Section 27 *Impairment of Assets* (see Chapter 29).

Consideration paid to a customer recognised as an asset arises from a contract that is within the scope of Section 23. However, it is not a 'contract asset' as defined in FRS 102 (see Appendix A and 11.1.1 below) because it does not represent a conditional right to consideration in exchange for goods or services that it has transferred to a customer. In substance, consideration paid to a customer recognised as an asset is similar to a prepayment.

If the payment to the customer is refundable, the impairment requirements in Section 11 would apply. Otherwise, the asset would be within the scope of Section 27 for impairment purposes (see Chapter 29). Judgement might be needed to assess impairment. For example, under Section 27, an entity might need to test the asset for impairment as part of a cash-generating unit. When assessing indicators and/or testing for impairment, identifying which goods or services are related to the deferred consideration payable to a customer and whether the customer is committed or only expected to purchase them might also be important.

6.8 Non-refundable upfront fees

In certain circumstances, entities receive payments from customers before they provide the contracted service or deliver a good. Upfront fees generally relate to the initiation, activation or set up of a good to be used or a service to be provided in the future. Upfront fees might also be paid to grant access to, or provide, a right to use a facility, product or service. In many cases, the upfront amounts paid by the customer are non-refundable. Examples include joining fees in health club membership contracts, set-up fees in some service contracts and initial fees in some supply contracts. [FRS 102.23.29].

Entities must evaluate whether a non-refundable upfront fee relates to the transfer of a promised good or service. If it does, the entity is required to determine whether to account for the promised good or service as a separate performance obligation (see 5 above). [FRS 102.23.30]. In addition, Question 5-7 in 5.2.1.G above discusses how entities would determine whether implementation services are distinct.

Section 23 notes that, even though a non-refundable upfront fee relates to an activity that the entity is required to undertake at or near contract inception in order to fulfil the contract, in many cases, that activity does not result in the transfer of a promised good or service to the customer. Instead, in many situations, an upfront fee represents an advance payment for future goods or services and, therefore, would be recognised as revenue when those future goods or services are provided. [FRS 102.23.30].

The existence of a non-refundable upfront fee might indicate that the contract includes a renewal option for future goods or services at a reduced price (if the customer renews the agreement without the payment of an additional upfront fee). In such circumstances, an entity would need to assess whether the option is a material right (i.e., another performance obligation in the contract) (see 5.6 above). [FRS 102.23.30]. If the entity concludes that the non-refundable upfront fee does not provide a material right, the fee would be part of the consideration allocable to the goods or services in the contract and would be recognised when (or as) the good or service to which the consideration was allocated is transferred to the customer. If an entity concludes that the non-refundable upfront fee provides a material right, the amount of the fee allocated to the material right would be recognised over the period of benefit of the fee, which might be the estimated customer life.

The following Illustration depicts the allocation of a non-refundable upfront fee determined to be a material right:

Illustration 6-15: Non-refundable upfront fees

A customer signs a one-year contract with a health club and is required to pay both a non-refundable initiation fee of £150 and an annual membership fee in monthly instalments of £40. At the end of each year, the customer can renew the contract for an additional year without paying an additional initiation fee. The customer is then required to pay an annual membership fee in monthly instalments of £40 for each renewal period. The club's activity of registering the customer does not transfer any service to the customer and, therefore, is not a performance obligation. By not requiring the customer to pay the upfront membership fee again upon renewal, the club is effectively providing a discounted renewal rate to the customer.

The club determines that the renewal option is a material right because it provides a renewal option at a lower price than the range of prices typically charged for new customers. Therefore, it is a separate performance obligation. Based on its experience, the club determines that its customers, on average, renew their annual memberships twice before terminating their relationship with the club. As a result, the club determines that the option provides the customer with the right to two annual renewals at a discounted price. In this scenario, the club would allocate the total transaction consideration of £630 (£150 upfront membership fee + £480 (£40 x 12 months)) to the identified performance obligations (monthly services for the one-year contract and renewal option) based on the relative stand-alone selling price method. In accordance with FRS 102.23.33, the amount allocated to the renewal option would be recognised when, or as, the future goods or services are transferred (e.g., years two and three of the services if the renewal option is fully exercised) or when the renewal option expires.

Alternatively, the club could value the option by 'looking through' to the optional goods or services using the practical alternative provided in paragraphs 23.34 to 23.35 (see 7.1.5 below). In that case, the club would determine that the total hypothetical transaction price (for purposes of allocating the transaction price to the option) is the sum of the upfront fee plus three years of service fees (i.e., £150 + £1,440) and would allocate that amount to all of the services expected to be delivered or 36 months of membership (or £44.17 per month). Therefore, the total consideration in the contract of £630 would be allocated to the 12 months of service (£530 (£44.17 x 12 months)) with the remaining amount being allocated to the renewal option (£100 (£630 - £530)). Assuming the renewal option is exercised for year 2 and year 3, the amount allocated to the renewal option (£100) would be recognised as revenue over each renewal period. One acceptable approach would be to reduce the initial £100 deferred revenue balance for the material right by £4.17 each month (£100 ÷ 24 months remaining), assuming that the estimated renewal period of two years remains unchanged. See 5.6 above and 7.1.5 below for a more detailed discussion of the treatment of options (including the practical alternative allowed under paragraphs 23.34 to 23.35) and 7.1 and 7.2 below for a discussion of estimating stand-alone selling prices and allocating consideration using the relative stand-alone selling price method.

In some cases, an entity might charge a non-refundable fee in part as compensation for costs incurred in setting up a contract (or other administrative tasks). If those set-up activities do not satisfy a performance obligation, the entity is required to disregard such activities (and the related costs) when measuring progress (see 8.1.4 below). This is because the costs of set-up activities do not depict the transfer of services to the customer. In addition, the entity is required to assess whether costs incurred in setting up a contract are costs incurred to fulfil a contract that meet the requirements for capitalisation in Section 23 (see 10.3.2 below).

Frequently asked questions

Question 6-29: Over what period would an entity recognise a non-refundable upfront fee (e.g., fees paid for membership to a club, activation fees for phone, cable or internet services) that does not relate to the transfer of a good or service?¹⁶³

Generally, the period over which a non-refundable upfront fee is recognised depends on whether the fee provides the customer with a material right with respect to future contract renewals (see 5.6 above). For example, assume that an entity charges a one-time activation fee of £50 to provide £100 of services to a customer on a month-to-month basis. If the entity concludes that the activation fee provides a material right, the fee would be recognised over the service period during which the customer is expected to benefit from not having to pay an activation fee upon renewal of the service. That period might be the estimated customer life in some situations. If the entity concludes that the activation fee does not provide a material right, the fee would be recognised over the contract duration (i.e., one month).

Question 6-30: How does a utility entity determine whether a contract that includes a non-refundable upfront fee received for establishing a connection to a network (i.e., a connection fee) is within the scope of Section 23?

Utility entities are often responsible for constructing infrastructure (e.g., a pipe) that will physically connect a building to its network (i.e., connection) and for providing ongoing services (e.g., delivery of electricity, gas, water). In exchange, a utility entity generally charges the customer a non-refundable upfront connection fee and a separate fee for the ongoing services. Furthermore, the connection fee and/or the fee for ongoing services are often subject to rate regulation established through a formal regulatory framework that affects the rates that a utility entity is allowed to charge to its customers.

Utility entities first need to assess whether some or all of the contract is within the scope of another section of FRS 102 (e.g., Section 20, Section 17). If the contract is partially within the scope of Section 23, the entity would need to separate the non-revenue components, in accordance with paragraph 23.3, and account for the remainder within the scope of Section 23 (see 3.1.5 above for further discussion).

To be within the scope of Section 23, a vendor-customer relationship needs to exist.

How we see it

Provided such goods or services are an output of the ordinary activities of the entity (see 3.1.3 above), we believe a vendor-customer relationship would exist (and the contract would be wholly, or partially, within the scope of Section 23) if:

- The ongoing service is part of the contract or part of an associated contract for ongoing services that is combined with the contract to establish the connection if the combined contract criteria in paragraph 23.12 are met (see 4.3 above). In a rate-regulated environment, the contract to transfer ongoing services to a customer (e.g., delivery of energy) might be implied as the customer has no alternative other than purchasing the good or service from the entity that is responsible for creating the connection.
- Or
- The customer obtains control of the infrastructure asset (e.g., a pipe) or the connection.

Question 6-31: What factors might be relevant when a utility entity applies the guidance to non-refundable upfront fees for establishing a connection to a network?

As discussed in Question 6-30 above, utility entities are often responsible for constructing infrastructure (e.g., a pipe) that will physically connect a building to its network (i.e., connection) and might receive a non-refundable upfront connection fee in exchange. Applying the non-refundable upfront fee guidance in such contracts often requires significant judgement and depends on the facts and circumstances. For example, if more than one party is involved, the utility entity needs to consider the principal versus agent guidance (see 5.4 above) in addition to the non-refundable upfront fee guidance.

The non-refundable upfront fee guidance requires an entity to determine if the upfront fee is related to a distinct good or service. [FRS 102.23.30].

¹⁶³ Based on TRG Agenda paper no. 32, *Accounting for a Customer's Exercise of a Material Right*, dated 30 March 2015 and TRG Agenda paper no. 34, *March 2015 Meeting - Summary of Issues Discussed and Next Steps*, dated 13 July 2015.

How we see it

Determining whether the connection to the network is a distinct good or service depends on the facts and circumstances and might require significant judgement.

As part of this assessment:

- A utility entity needs to determine whether the connection is a promised good or service in the contract. It considers explicit promises in the contract and implied promises that create a valid expectation of the customer that it will transfer control of the connection to the customer. [FRS 102.23.19, FRS 102.23.20]. This is likely to require significant judgement if the infrastructure asset remains an asset of the utility entity.
- If the connection is a promised good or service, a utility entity needs to determine whether the promise is distinct. In particular, the assessment of whether the connection is distinct in the context of the contract is highly judgemental and must consider the specific contract with the customer, including all relevant facts and circumstances. Entities must not assume that a particular type of good or service is distinct (or not distinct) in all instances. The manner in which the promised goods and services have been bundled within a contract, if any, will affect the entity's assessment. [FRS 102.23.21].

As part of assessing whether the promise is distinct within the context of the contract, a utility entity considers the three factors described in paragraph 23.24 (see 5.2.1.B above), as follows: [FRS 102.23.24]

- Factor (a): The utility entity needs to understand the promise(s) it has made to its customers and whether it integrates them to satisfy its promise(s). For example, if it promised its customer the ongoing supply of services, it might also bear the risk for distribution of these services (including ensuring continued connection). Therefore, it might be providing a significant service of integrating promised goods or services to provide a combined output.
- Factor (b): This factor is unlikely to be relevant in the assessment of whether connection is distinct within the context of the contract because the ongoing service and the connection are unlikely to modify or customise each other.
- Factor (c): The utility entity has to determine whether the connection is highly interdependent and highly interrelated with the ongoing service (e.g., supply of electricity). For example, whether there is more than just a functional relationship (i.e., one item, by its nature, depends on the other) because the utility entity cannot provide ongoing services (its main output, e.g., electricity, gas, water) without the connection and the customer cannot benefit from the connection without the ongoing services (i.e., is there two-way dependency?).

If the utility entity concludes that connection is not a distinct good or service, the non-refundable upfront fee is advanced payment for future goods or services and is recognised as revenue when (or as) the future goods or services are provided. As discussed above, in such situations, an entity must determine whether the non-refundable upfront fee represents an option to renew the contract at a lower price and must assess whether the option to renew represents a material right. [FRS 102.23.30, FRS 102.23.31, FRS 102.23.33].

How we see it

Significant judgement might be needed to determine whether the customer has a material right. However, the fact that the customer remains connected to the network and does not to pay the connection fee again while in the same property, for example, might indicate that a material right exists.

If the renewal option represents a material right, the period over which the upfront fee is recognised is longer than the initial contract duration. [FRS 102.23.30]. It is likely that significant judgement will be needed to determine the appropriate period over which to recognise the upfront fee in such circumstances (see Question 6-29 above).

Question 6-32: How is consideration that was received from a customer, but not yet recognised as revenue, accounted for when the contract is cancelled?

See response to Question 4-10 in 4.2 above.

6.9 Changes in the transaction price

Changes in the transaction price can occur for various reasons, including the resolution of uncertain events or other changes in circumstances that change the amount of consideration to which an entity expects to be entitled in exchange for the promised goods or services. See 7.4 below for additional requirements on accounting for a change in transaction price.

7 Step 4 – Allocate the transaction price to the performance obligations

As discussed in 3.2 above, the objective of the revenue recognition model in Section 23 is for an entity to recognise revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods or services. [FRS 102.23.4]. Accordingly, the objective for the allocation of the transaction price to the performance obligations identified in a contract (the “allocation objective”) is for an entity to allocate the transaction price to each performance obligation (or distinct good or service) in an amount that depicts the amount of consideration to which the entity expects to be entitled in exchange for transferring the promised goods or services to the customer. Once the separate performance obligations are identified and the transaction price has been determined, Section 23 generally requires an entity to allocate the transaction price to the performance obligations in proportion to their stand-alone selling prices (i.e., on a relative stand-alone selling price basis). [FRS 102.23.65]. In most cases, an allocation based on stand-alone selling prices will faithfully depict the different margins that might apply to promised goods or services. Note, however that, Section 23 specifies that an entity would not apply the allocation requirements if the contract has only one performance obligation (except for a single performance obligation that is made up of a series of distinct goods or services and includes variable consideration – see 7.3 below). It also states that an entity would not apply the allocation requirements if all performance obligations in a contract are satisfied at the same point in time (see 8.2 below). [FRS 102.23.66]. This is because any allocation under these cases would make no difference to the accounting outcome.

When allocating on a relative stand-alone selling price basis, variable consideration or any discount within the contract is generally allocated proportionately to all of the performance obligations in the contract. For this purpose, a discount refers to the excess, if any, of the sum of the stand-alone selling prices of the goods or services promised in the contract over the promised consideration.

However, as discussed further in 7.3 below, Section 23 offers flexibility in allocating discounts or variable consideration to the contract. That is, instead of allocating on a relative stand-alone selling price basis, an entity could allocate a discount or variable consideration to one or more, but not all, performance obligations in the contract using a method that reflects the amount of consideration to which the entity expects to be entitled in exchange for satisfying each performance obligation in the contract.

[FRS 102.23.74].

This is similar to the IFRS 15’s allocation requirements. IFRS 15 provides two exceptions to the default method of allocation using relative stand-alone selling price method when allocating discount and variable consideration to the performance obligations. However, IFRS 15 requirements are more restrictive i.e., different specific set of criteria must be satisfied first before an entity applies the allocation exception to variable consideration or to discounts. Under IFRS 15, when the respective criteria are met, discounts and variable consideration must be entirely allocated to one or more, but not all, performance obligations in the contract. [IFRS 15.83, IFRS 15.85]. Under Section 23, the allocation requirements for discounts and variable consideration are combined into a single general requirement as described above.

Further, unlike Section 23, IFRS 15 establishes a hierarchy for allocation. Under IFRS 15, an entity identifies and allocates variable consideration first, if it meets the criteria for the exception, to one or some, but not all performance obligations. The general guidance related to allocation of transaction price to performance obligations on a relative stand-alone selling price basis and the specific requirements related to allocation of a discount are then applied to allocate the remaining amount of the transaction price that does not meet the criteria related to allocation of variable consideration. [IFRS 15.86]. In addition, when an entity meets the specified criteria and applies a discount to one or more performance obligations, IFRS 15 requires that the discount is allocated first before using the residual approach to estimate the stand-alone selling price of a good or service. [IFRS 15.83].

7.1 Determining stand-alone selling prices

To allocate the transaction price on a relative stand-alone selling price basis, an entity must first determine the stand-alone selling price at contract inception of the distinct good or service (which might represent a bundle of goods or services) underlying each performance obligation. [FRS 102.23.67]. Under Section 23, this is the price at which an entity would sell a distinct good or service on a stand-alone (or separate) basis at contract inception. [FRS 102.23.68]. If multiple non-distinct goods or services are bundled to form a single performance obligation, the stand-alone selling price is determined at the price the entity would sell the bundle separately to the customer. This amount is not always the sum of the prices at which the entity would sell the individual goods or services that make up the bundle.

Section 23 indicates the observable price of a good or service sold separately (in similar circumstances and to similar customers) provides the best evidence of stand-alone selling price. [FRS 102.23.68]. Accordingly, a contractually stated or list price for a good or service could be (but cannot be presumed to be) the stand-alone selling price of that good or service. However, in many situations, stand-alone selling prices are not readily observable. In those cases, the entity is required to estimate the stand-alone selling price by considering all relevant information (including market conditions, entity-specific factors, and information about the customer or class of customer) that is reasonably available to the entity and apply estimation methods consistently in similar circumstances. [FRS 102.23.69]. In doing so, entities could also consider the requirements in IFRS 15 i.e., when estimating a stand-alone selling price, an entity maximises the use of observable inputs. [IFRS 15.78].

Section 23 includes the following requirements on estimating stand-alone selling prices: [FRS 102.23.69, FRS 102.23.70]

Extract from Section 23

- 23.69** If a stand-alone selling price is not directly observable, an entity shall estimate it. When estimating a stand-alone selling price, an entity shall take into account all information that is reasonably available to the entity, including market conditions, entity-specific factors and information about the customer or class of customer. An entity shall apply estimation methods consistently in similar circumstances.
- 23.70** Suitable estimation methods include, but are not limited to, the following:
- adjusted market assessment approach – an entity could evaluate the market in which it sells goods or services and estimate the price that a customer in that market would be willing to pay for those goods or services. That approach might also include referring to prices from the entity’s competitors for similar goods or services and adjusting those prices as necessary to reflect the entity’s costs and margins.
 - expected cost plus a margin approach – an entity could forecast its expected costs of transferring the good or service promised to a customer and then add an appropriate margin for that good or service.
 - residual approach – only if the stand-alone selling price of a good or service is highly variable or uncertain, then an entity may estimate the stand-alone selling price by reference to the total transaction price less the sum of the observable or estimated stand-alone selling prices of other goods or services promised in the contract.

The following flow chart illustrates how an entity determines the stand-alone selling price of a good or service, which might include estimation:

Figure 7-1: Determining the stand-alone selling price of a good or service

* See 7.1.2 below for further discussion of these estimation approaches, including when it might be appropriate to use a combination of approaches.

Stand-alone selling prices are determined at contract inception and are not updated to reflect changes between contract inception and when performance is complete. [FRS 102.23.76]. For example, assume an entity determines the stand-alone selling price for a promised good using the expected cost plus a margin approach and, before it can finish manufacturing and deliver that good, the underlying cost of the materials doubles. In such a situation, the entity would not revise its stand-alone selling price used for this contract. However, for future contracts involving the same good, the entity would need to determine whether the change in circumstances (i.e., the significant increase in the cost to produce the good) warrants a revision of the stand-alone selling price. If so, the entity would use that revised price for allocations in future contracts (see 7.1.3 below).

Similarly, when a modification is treated as part of the existing contract (see 4.4.2.B above), stand-alone selling prices are also not updated to reflect changes in a transaction price. However, new estimates of stand-alone selling prices are used if the modification creates a new or separate contract, as in the following situations:

- If the modification is treated as a termination of the existing contract and the creation of a new contract (see 4.4.2.A above), the entity would update its estimate of the stand-alone selling price at the time of the modification. This would include the portion of a paragraph 23.16(c) modification (see 4.4.2.C above) that is treated as the creation of a new contract.
- If the modification is treated as a separate contract (see 4.4.1 above), the accounting for the original contract would not be affected (and the stand-alone selling prices of the goods or services would not be updated), but the stand-alone selling prices of the distinct goods or services in the separate contract would have to be determined at the time of the modification.

See 4.4 above for further details about the accounting for contract modifications.

7.1.1 Factors to consider when estimating the stand-alone selling price

To estimate the stand-alone selling price (if not readily observable), an entity can consider the stated prices in the contract. However, as discussed in 7.1 above, an entity cannot presume that a contractually stated price, or a list price, for a good or service is the stand-alone selling price. In estimating a stand-alone selling price, an entity takes into account all information that is reasonably available to the entity, including market conditions, entity-specific factors and information about the customer or class of customer. [FRS 102.23.69]. As discussed in 7.1 above, an entity could also consider maximising the use of observable inputs in its estimate. This estimation is a very broad requirement for which an entity needs to consider a variety of data sources.

The following list, which is not comprehensive, provides examples of market conditions to consider:

- Potential limits on the selling price of the product
- Competitor pricing for a similar or identical product
- Market awareness and perception of the product
- Current market trends that are likely to affect the pricing (e.g., supply and demand for the good or service, competition)
- The entity's market share and position (e.g., the entity's ability to dictate pricing)
- Effects of the geographic area on pricing
- Effects of customisation on pricing
- Expected life of the product, including whether significant technological advances are expected in the market in the near future

Examples of entity-specific factors include:

- Profit objectives and internal cost structure
- Pricing practices and pricing objectives (including desired gross profit margin)
- Effects of customisation on pricing
- Pricing practices used to establish pricing of bundled products
- Effects of a proposed transaction on pricing (e.g., the size of the deal, the characteristics of the targeted customer)
- Expected life of the product, including whether significant entity-specific technological advances are expected in the near future

Examples of information about the customer, or class of customer, include:

- Type of customer
- Geographic region
- Distribution channel

An entity must also consider its customary business practices when determining the stand-alone selling price. To document its estimated stand-alone selling price, an entity ought to consider describing the information that it has considered (e.g., the factors listed above), especially if there is limited observable data or none at all.

7.1.2 Possible estimation approaches

Section 23 discusses three estimation approaches: (1) the adjusted market assessment approach; (2) the expected cost plus a margin approach; and (3) the residual approach. [FRS 102.23.70]. All of these are discussed further below. When applying Section 23, an entity might need to use a different estimation approach for each of the distinct goods or services underlying the performance obligations in a contract. In addition, an entity might need to use a combination of approaches to estimate the stand-alone selling prices of goods or services promised in a contract, if one or more of those goods or services have highly variable or uncertain stand-alone selling prices.

Section 23 does not limit estimation process to these three approaches. [FRS 102.23.70]. It allows any reasonable estimation approach, as long as it is consistent with the notion of a stand-alone selling price (i.e., consistent with the allocation objective – see 7 above) and is applied on a consistent basis for similar goods or services and customers (see discussion in 7 and 7.1 above). An entity could also consider the requirements in IFRS 15 which requires an entity to maximise the use of observable inputs when estimating a stand-alone selling price. [IFRS 15.78].

In some cases, an entity will have sufficient observable data to determine the stand-alone selling price. For example, an entity might have sufficient stand-alone sales of a particular good or service that provide persuasive evidence of the stand-alone selling price of that particular good or service. In such situations, no estimation would be necessary. [FRS 102.23.68].

In many instances, an entity will not have sufficient stand-alone sales data to determine the stand-alone selling price based solely on those sales. An entity needs to consider all factors contemplated in negotiating the contract with the customer and the entity's normal pricing practices factoring in the most objective and reliable information that is available. Accordingly, entities need to have robust practices and processes in place regarding the pricing of goods or services and developing estimates of stand-alone selling prices.

Section 23 includes the following estimation approaches: [FRS 102.23.70]

- **Adjusted market assessment approach** - this approach focuses on the amount that the entity believes a participant in the market in which it sells goods or services is willing to pay for a good or service. For example, an entity might refer to competitors' prices for similar goods or services and adjust those prices, as necessary, to reflect the entity's costs and margins. When using the adjusted market assessment approach, an entity considers market conditions, such as those listed in 7.1.1 above. Applying this approach is likely to be easiest when an entity has sold the good or service for a period of time (such that it has data about customer demand) or a competitor offers similar goods or services that the entity can use as a basis for its analysis. Applying this approach will be difficult when an entity is selling an entirely new good or service because it might be difficult to anticipate market demand. In these situations, entities might want to use the market assessment approach, with adjustments, as necessary, to reflect the entity's costs and margins, in combination with other approaches to maximise the use of observable inputs (e.g., using competitors' pricing, adjusted based on the market assessment approach in combination with an entity's planned internal pricing strategies if the performance obligation has never been sold separately).
- **Expected cost plus margin approach** - this approach focuses more on internal factors (e.g., the entity's cost basis), but has an external component as well. That is, the margin included in this approach must reflect the margin the market would be willing to pay, not just the entity's desired margin. The margin might have to be adjusted for differences in products, geographies, customers and other factors. The expected cost plus margin approach could be useful in many situations, especially when the performance obligation has a determinable direct fulfilment cost (e.g., the performance obligation is a tangible product or an hourly service). However, this approach will be less helpful when there are no clearly identifiable direct fulfilment costs or the amount of those costs is unknown (e.g., when the performance obligation is a new software licence or specified upgrade rights).

- **Residual approach** - this approach allows an entity to estimate the stand-alone selling price of a promised good or service as the difference between the total transaction price and the observable or estimated stand-alone selling prices of other promised goods or services in the contract, provided that one of the following two criteria are met i.e., the stand-alone selling price of a good or service is: *[FRS 102.23.70(c)]*

- Highly variable - for example, at or near the same time, the same good or service is sold by the entity to different customers at a wide range of prices (i.e., the representative stand-alone selling price cannot be determined from past transactions or other observable evidence as it is highly variable).
- Uncertain - for example, the good or service has not yet been sold on a stand-alone basis and a price for that good or service has not previously been established by the entity (i.e., the selling price is uncertain).

We expect the use of the residual approach will be limited because Section 23 indicates that it can only be used for contracts with multiple promised goods or services when the selling price of one or more of the promised goods or services in the contract is unknown because one of the two criteria above are met. However, allowing entities to use a residual technique provides relief to entities that rarely, or never, sell goods or services on a stand-alone basis, such as entities that sell intellectual property only with physical goods or services.

The use of the residual approach cannot result in a stand-alone selling price of zero if the good or service is distinct because a good or service must have value on a stand-alone basis to be distinct. Accordingly, if use of the residual approach results in very little, or no, consideration being allocated to a good or service or a bundle of goods or services, an entity has to re-evaluate whether the use of the residual approach is appropriate.

An example of an appropriate use of the residual approach would be an entity that frequently sells software, professional services and maintenance, bundled together, at prices that vary widely. However, the entity also sells the professional services and maintenance individually at relatively stable, observable prices. In such situation, it would be appropriate to estimate the stand-alone selling price for the software as the difference between the total transaction price and the observable selling prices of the professional services and maintenance. See Illustration 7-1 below for examples of when the residual approach is or is not appropriate.

Note that the use of the residual approach is simplified under Section 23. Under Section 23, an entity estimates the stand-alone selling price by reference to the total transaction price less either the sum of the observable or estimated stand-alone selling prices of other goods or services promised in the contract (see 7.1.2 below). *[FRS 102.23.70(c)]*. In contrast, IFRS 15 allows an entity to estimate the stand-alone selling price of a promised good or service as the difference between the total transaction price and the observable (i.e., not estimated) stand-alone selling prices of other promised goods or services in the contract. *[IFRS 15.79(c)]*. Accordingly, in addition to meeting one of the two criteria (i.e., selling price is either highly variable or uncertain), the remaining promised goods or services in the contract must have at least one observable (i.e., not estimated) stand-alone selling prices in order to use the residual approach under IFRS 15. That is, the residual approach cannot be used if the selling price for all the goods or services in the contract are not observable.

Also, unlike IFRS 15, Section 23 does not provide explicit guidance on application of residual approach if there are two or more goods or services in the contract with highly variable or uncertain stand-alone selling prices. An entity could consider the guidance in IFRS 15 which allows a combination of methods to estimate the stand-alone selling prices of each of the promised goods or services with highly variable or uncertain stand-alone selling prices. For example, an entity could apply the residual approach to estimate the aggregate of the stand-alone selling prices for all of the promised goods or services with highly variable or uncertain stand-alone selling prices, but then use another approach (e.g., adjusted market assessment, expected cost plus margin) to estimate the stand-alone selling prices of each of those promised goods or services with highly variable or uncertain stand-alone selling prices.

[IFRS 15.80].

Illustration 7-1: Estimating the stand-alone selling price using the residual approach

Entity X enters into a contract with a customer to sell equipment, professional services and maintenance as a bundled package for £20,000. The professional services and maintenance have observable prices from Entity X's historical sales. The equipment is a new product for Entity X for which it has limited historical sales and no established price. Entity X has not historically sold any similar equipment, and Entity X's cost of the equipment is £6,000.

Scenario A

Entity X frequently sells professional services and maintenance separately for observable prices of £7,000 and £5,000, respectively.

If Entity X determines that there is no other relevant observable data to determine the stand-alone selling price of the equipment, it could use the residual approach. This approach results in a stand-alone selling price for the equipment of £8,000 (£20,000 - £7,000 - £5,000).

Scenario B

Entity X frequently sells professional services and maintenance separately for observable prices of £14,000 and £5,500, respectively.

The residual approach would result in a stand-alone selling price for the equipment of £500 (£20,000 - £14,000 - £5,500). It might not be appropriate to use the approach in this situation because the result allocates very little consideration to the equipment.

Illustration 7-2 below, which is based on Example 33 in IFRS 15, is an example in which two estimation approaches are used to estimate stand-alone selling prices of two different goods in a contract: [IFRS 15.IE Example 33, IFRS 15.IE164-IE166]

Illustration 7-2: Allocation methodology

An entity enters into a contract with a customer to sell Products A, B and C in exchange for £100. The entity will satisfy the performance obligations for each of the products at different points in time. The entity regularly sells Product A separately and therefore the stand-alone selling price is directly observable. The stand-alone selling prices of Products B and C are not directly observable.

Because the stand-alone selling prices for Products B and C are not directly observable, the entity must estimate them. To estimate the stand-alone selling prices, the entity uses the adjusted market assessment approach for Product B and the expected cost plus a margin approach for Product C. In making those estimates, the entity maximises the use of observable inputs (see 7.1 above). The entity estimates the stand-alone selling prices as follows:

Product	Stand-alone selling price	Method
	£	
Product A	50	Directly observable (FRS 102.23.68)
Product B	25	Adjusted market assessment approach (FRS 102.23.70(a))
Product C	75	Expected cost plus a margin approach (FRS 102.23.70(b))
Total	150	

The customer receives a discount for purchasing the bundle of goods because the sum of the stand-alone selling prices (£150) exceeds the promised consideration (£100). The entity considers whether allocating the entire discount to one or more (but not all) performance obligations would meet the allocation objective in Section 23 (see 7.3 below) and concludes that it does not. Consequently, in accordance with paragraphs 23.67 and 23.72, the discount is allocated proportionately across Products A, B and C. The discount, and therefore the transaction price, is allocated as follows:

Product	Allocated transaction price
	£
Product A	33 (£50 ÷ £150 × £100)
Product B	17 (£25 ÷ £150 × £100)
Product C	50 (£75 ÷ £150 × £100)
Total	100

Given the flexibility provided by Section 23 to estimate stand-alone selling prices, it is both appropriate and necessary for entities to tailor the approach(es) used to their specific facts and circumstances. However, regardless of whether the entity uses a single approach or a combination of approaches, it must evaluate whether the resulting allocation of the transaction price is consistent with the overall allocation objective (see 7 above) and the requirements for estimating stand-alone selling prices discussed above.

In accordance with Section 23, an entity must make a reasonable estimate of the stand-alone selling price for the distinct good or service underlying each performance obligation if an observable selling price is not readily available.

How we see it

We believe entities generally have sufficient information to develop a reasonable estimate, even in instances in which limited information is available.

Entities need robust processes to estimate stand-alone selling prices. It is important for entities to be able to demonstrate the reasonableness of the calculations they make in estimating stand-alone selling prices.

7.1.3 Updating estimated stand-alone selling prices

As discussed in 7.1 above, stand-alone selling prices are determined at contract inception and are not updated to reflect changes between contract inception and when performance is complete. [FRS 102.23.76]. Similarly, when a modification is treated as part of the existing contract (see 4.4.2.B above), stand-alone selling prices are also not updated to reflect changes in a transaction price. However, new estimates of stand-alone selling prices are used if the modification creates a new or separate contract, as in the following situations:

- If the modification is treated as a termination of the existing contract and the creation of a new contract (see 4.4.2.A above), the entity would update its estimate of the stand-alone selling price at the time of the modification. This would include the portion of A paragraph 23.16(c) modification (see 4.4.2.C above) that is treated as the creation of a new contract.
- If the modification is treated as a separate contract (see 4.4.1 above), the accounting for the original contract would not be affected (and the stand-alone selling prices of the goods and services would not be updated), but the stand-alone selling prices of the distinct goods or services in the separate contract would have to be determined at the time of the modification.

See 4.4 above for further details about the accounting for contract modifications.

Furthermore, an entity needs to update its estimates of stand-alone selling prices for future transactions to reflect changes in circumstances. Section 23 does not specifically address how frequently estimated stand-alone selling prices for new contracts must be updated. Instead, it indicates that an entity must make this estimate for each distinct good or service underlying each performance obligation in each contract with a customer, which suggests that an entity needs to constantly update its estimates of stand-alone selling prices for each new contract.

In practice, we expect that entities will consider their own facts and circumstances in order to determine how frequently they will need to update their stand-alone selling price estimates for new contracts. If, for example, the information used to estimate the stand-alone selling price for similar transactions has not changed, an entity might determine at inception of the new contract that it is still reasonable to use the previously determined stand-alone selling price.

However, in order for changes in circumstances to be reflected in the estimate in a timely manner, we expect that an entity would formally update the estimate on a regular basis (e.g., monthly, quarterly, semi-annually). The frequency of updates needs to be based on the facts and circumstances of the distinct good or service underlying each performance obligation for which the estimate is made. An entity uses current information each time it develops or updates its estimate. While the estimates might be updated, the approach used to estimate stand-alone selling price does not change (i.e., an entity must use a consistent approach), unless facts and circumstances change. [FRS 102.23.69].

7.1.4 Additional considerations for determining the stand-alone selling price

While not explicitly stated in Section 23, a single good or service could have more than one stand-alone selling price. That is, the entity might be willing to sell goods or services at different prices to different customers. Furthermore, an entity might use different prices in different geographies or in markets where it uses different methods to distribute its products (e.g., it might use a distributor or reseller, rather than selling directly to the end-consumer) or for other reasons (e.g., different cost structures or strategies in different markets). Accordingly, an entity might need to stratify its analysis to determine its stand-alone selling price for each class of customer, geography and/or market, as applicable.

Frequently asked questions

Question 7-1: When estimating the stand-alone selling price, does an entity have to consider its historical pricing for the sale of the good or service involved?

Historical pricing is likely to be an important input as it often reflects both market conditions and entity-specific factors and can provide supporting evidence about the reasonableness of management's estimate. For example, if management determines, based on its pricing policies and competition in the market, that the stand-alone selling price of its good or service is X, historical transactions within a reasonable range of X would provide supporting evidence for management's estimate. However, if historical pricing was only 50% of X, this would indicate that historical pricing is no longer relevant due to changes in the market, for example, or that management's estimate is flawed.

Depending on the facts and circumstances, an entity might conclude that other factors such as internal pricing policies are more relevant to its determination of a stand-alone selling price. When historical pricing has been established using the entity's normal pricing policies and procedures, it is more likely that this information will be relevant in the estimation.

How we see it

We believe that an entity has to consider its historical pricing in all circumstances, but it is not necessarily determinative. If the entity has sold the product separately or has information on competitors' pricing for a similar product, it is likely that the entity would find historical data relevant to its estimate of stand-alone selling prices, among other factors. In addition, we believe it might be appropriate for entities to stratify stand-alone selling prices based on: the type or size of customer; the amount of product or services purchased; the distribution channel; the geographic location; or other factors.

Question 7-2: When using an expected cost plus margin approach to estimate a stand-alone selling price, how would an entity determine an appropriate margin?

When an entity elects to use the expected cost plus margin approach, it is important for the entity to use an appropriate margin.

How we see it

Determining an appropriate margin might require the use of significant judgement and involve the consideration of many market conditions and entity-specific factors, discussed in 7.1.1 above.

It would not be appropriate, for example, to determine that the entity's estimate of stand-alone selling price is equivalent to cost plus a 30% margin if a review of market conditions demonstrates that customers are only willing to pay the equivalent of cost plus a 12% margin for a comparable product. Similarly, it would be inappropriate to determine that cost plus a specified margin represents the stand-alone selling price if competitors are selling a comparable product at twice the determined estimate. Furthermore, the determined margin might have to be adjusted for differences in products, geographic locations, customers and other factors.

Question 7-3: When estimating the stand-alone selling price of a good or service, can an entity estimate a range of prices or does it have to identify a point estimate?

Entities might use a range of prices to help estimate the stand-alone selling price of a good or service.

How we see it

We believe it is reasonable for an entity to use such a range for the purpose of assessing whether a stand-alone selling price (i.e., a single price) that the entity intends to use is reasonably within that range. That is, we do not believe that an entity is required to determine a point estimate for each estimated stand-alone selling price if a range is a more practical means of estimating the stand-alone selling price for a good or service.

As discussed in 7 above, the objective of Section 23 is to allocate the transaction price to each performance obligation in an amount that depicts the amount of consideration to which the entity expects to be entitled in exchange for transferring the promised goods or services to the customer. While Section 23 does not address ranges of estimates, using a range of prices would not be inconsistent with the objective of Section 23. The only requirements under Section 23 are that an entity must take into account all information that is reasonably available to the entity and that the entity is required to apply the estimation approaches consistently (see 7.1 above). Therefore, the use of a range would also be consistent with these principles.

Practices we have observed include an entity establishing that a large portion of the stand-alone selling prices falls within a narrow range (e.g., by reference to historical pricing).

How we see it

We believe the use of a narrow range is acceptable for determining estimates of stand-alone selling prices under Section 23. While the use of a range would be appropriate for estimating the stand-alone selling price, we believe that some approaches to identifying this range do not meet the requirements of Section 23.

It would not be appropriate, for example, for an entity to determine a range by estimating a single price point for the stand-alone selling price and then adding an arbitrary range on either side of that point estimate, nor would it be appropriate to take the historical prices and expand the range around the midpoint until a significant portion of the historical transactions fall within that band. The wider the range necessary to capture a high proportion of historical transactions, the less relevant it is in terms of providing a useful data point for estimating stand-alone selling prices.

Management's analysis of market conditions and entity-specific factors could support it in determining the best estimate of the stand-alone selling price. The historical pricing data from transactions, while not necessarily determinative, could be used as supporting evidence for management's conclusion. However, management would need to analyse the transactions that fall outside the range to determine whether they have similar characteristics and, therefore, need to be evaluated as a separate class of transactions with a different estimated selling price.

If the entity has established a reasonable range for the estimated stand-alone selling prices and the stated contractual price falls within that range, it would be appropriate to use the stated contractual price as the stand-alone selling price in the allocation calculation. However, if the stated contractual price for the good or service falls outside of the range, the stand-alone selling price needs to be adjusted to a point within the established range in order to allocate the transaction price on a relative stand-alone selling price basis. In these situations, the entity would need to determine which point in the range is most appropriate to use (e.g., the midpoint of the range or the outer limit nearest to the stated contractual price) when performing the allocation calculation.

Illustration 7-3: Allocating transaction price when there is a range of stand-alone selling prices

Entity X sells a product to Customer Y, along with a distinct service. Entity X sells the product on a stand-alone basis for prices that range from £7,500 to £8,500, and the service is sold on a stand-alone basis for £4,000.

Scenario A

Assume the stated contract prices for the product and the service are £8,000 and £2,000, respectively, for a total transaction price of £10,000.

The contract price for the product falls within the range that Entity X determined for the stand-alone selling price. Therefore, Entity X could use the stated contract price for the product as the stand-alone selling price when allocating the transaction price. The total stand-alone selling prices of the product and service would be £12,000 (£8,000 for the product and £4,000 for the service). This calculation is illustrated, as follows:

	Stand-alone selling price		Allocated transaction price
	£		£
Product	8,000	$(8,000 \div 12,000 \times 10,000)$	6,667
Service	4,000	$(4,000 \div 12,000 \times 10,000)$	3,333
Total	12,000		10,000

Scenario B

Assume the stated contract prices for the product and the service are £6,500 and £2,000, respectively, for a total transaction price of £8,500. Entity X has a policy that it will use the outer limit nearest to the stated contractual price when performing the allocation calculation.

In this scenario, the contract price for the product is not within the range of stand-alone selling prices. Therefore, Entity X would need to determine a price within the range to use as the stand-alone selling price of the product. Consistent with its policy, Entity X uses the outer limit closest to the contractual price, or £7,500. Therefore, in this scenario, the total of the stand-alone selling prices is £11,500 (£7,500 for the product and £4,000 for the service). The calculation is illustrated as follows:

	Stand-alone selling price		Allocated transaction price
	£		£
Product	7,500	$(7,500 \div 11,500 \times 8,500)$	5,543
Service	4,000	$(4,000 \div 11,500 \times 8,500)$	2,957
Total	11,500		8,500

Question 7-4: How does an entity evaluate a contract where the total transaction price exceeds the sum of the stand-alone selling prices?

If the total transaction price exceeds the sum of the stand-alone selling prices, it indicates that the customer is paying a premium for bundling the goods or services in the contract. This situation is likely to be rare because most customers expect to receive a discount for purchasing a bundle of goods or services. If a premium exists after determining the stand-alone selling prices of each good or service, the entity needs to evaluate whether it properly identified both the estimated stand-alone selling prices (i.e., are they too low?) and the number of performance obligations in the contract.

How we see it

If the entity determines that a premium does exist after this evaluation, we believe the entity would need to allocate the premium in a manner consistent with the Section 23's allocation objective, which would typically be on a relative stand-alone selling price basis (see 7 above).

Question 7-5: Can an entity use the stated contract price as the stand-alone selling price of a good or service?

As noted in 7.1 above, paragraph 23.68 states that the stand-alone selling price is the price at which an entity would sell a good or service promised in a contract separately to a customer and that the best evidence of this is the observable price of a good or service when the entity sells that good or service separately in similar circumstances and to similar customers. [FRS 102.23.68]. Note that under IFRS 15, a contractually stated price or a list price for a good or service could be, but must not be presumed to be, the stand-alone selling price of that good or service. [IFRS 15.77]. In line with this, an entity cannot assume that the stated contract price is the stand-alone selling price. However, the stated contract or list price might be a data point in determining the stand-alone selling price.

7.1.5 Measurement of options that are separate performance obligations

As discussed in 7 above, an entity must allocate the transaction price to identified performance obligations on a relative stand-alone selling price basis. [FRS 102.23.65]. In line with this, an entity that determines that a customer option for additional goods or services is a separate performance obligation (because the option provides the customer with a material right, as discussed in 5.6 above) needs to determine the stand-alone selling price of the option.

If the option's stand-alone selling price is not directly observable, the entity needs to estimate it. [FRS 102.23.69]. In doing so, paragraph 23.71 requires an entity to take into consideration any discount the customer would receive in a stand-alone transaction and the likelihood that the customer would exercise the option. [FRS 102.23.71].

Generally, option pricing models consider both the intrinsic value of the option (i.e., the value of the option if it were exercised today) and its time value (e.g., the option might be more or less valuable based on the amount of time until its expiration date and/or the volatility of the price of the underlying good or service). However, an entity is only required to measure the intrinsic value of the option when estimating the stand-alone selling price of the option. Illustration 5-21 included in 5.6 above shows the measurement of an option determined to be a material right under paragraph 23.71 of FRS 102. The following Illustration also explains this concept:

Illustration 7-4: Estimating the stand-alone selling price of options that are separate performance obligations

Publisher A sells a physical textbook for £10 and offers the customer an option to purchase the digital version of the publication at 50% off the retail price of £8. The typical discount for digital versions is 15%. Therefore, Publisher A concludes that this discount exceeds the typical discount offered to customers and that it provides the customer with a material right.

To estimate the stand-alone selling price of the option, Publisher A estimates there is a 50% likelihood that a customer will redeem the discount option. Therefore, Publisher A's estimated stand-alone selling price of the discount option is £1.40 (£8 digital price x 35% incremental discount x 50% likelihood of exercising the option).

Publisher A allocates £1.23 (£10 x [$\frac{£1.40}{£1.40 + £10}$]) of the transaction price to the discount option and recognises revenue for the option when the customer exercises its right for the digital version or when the option expires. Publisher A allocates £8.77 (£10 - £1.23) to the physical book and recognises revenue for the physical book when it transfers control of the book to the customer.

Paragraph 23.34 provides a practical alternative to estimating the stand-alone selling price of an option. It applies when the customer is granted an option to renew a contract on similar terms and the additional goods or services are similar to the original goods or services in the contract (i.e., the entity continues to provide what it was already providing). [FRS 102.23.34].

Under the practical alternative, a portion of the transaction price is allocated to the option (i.e., the material right that is a separate performance obligation) by reference to the total goods or services expected to be provided to the customer (including expected renewals) and the corresponding expected consideration. That is, the total amount of consideration expected to be received from the customer (including consideration from expected renewals) is allocated to the total goods or services expected to be provided to the customer, including those from the expected contract renewals. [FRS 102.23.34]. The amount allocated to the goods or services that the entity is required to transfer to the customer under the contract (i.e., excluding the optional goods or services that will be transferred if the customer exercises the renewal option(s)) is then subtracted from the total amount of consideration received (or that will be received) for transferring those goods or services. The difference is the amount that is allocated to the option at contract inception. [FRS 102.23.35]. An entity using this alternative needs to apply the constraint on variable consideration (as discussed in 6.2.3 above) to the estimated consideration for the optional goods or services prior to performing the allocation. Scenario B in Illustration 7-5 below illustrates the use of the allocation alternative in paragraph 23.34.

Customer loyalty points and discount vouchers typically do not meet the criteria for use of this practical alternative. This is because customer loyalty points and discount vouchers are redeemable for goods or services that might differ in nature from those offered in the original contract and the terms of the original contract do not restrict the pricing of the additional goods or services. For example, if an airline offers flights to customers in exchange for points from its frequent flyer programme, the airline is not restricted because it can subsequently determine the number of points that are required to be redeemed for any particular flight.

It is important to note that the calculation of total expected consideration (i.e., the hypothetical transaction price), including consideration related to expected renewals, is only performed for the purpose of allocating a portion of the hypothetical transaction price to the option at contract inception. It does not change the enforceable rights or obligations in the contract, nor does it affect the actual transaction price for the goods or services that the entity is presently obliged to transfer to the customer (which would not include expected renewals). Accordingly, the entity would not include any remaining hypothetical transaction price in its disclosure of remaining performance obligations (see 11.4.1.D below). In this respect, the practical alternative is consistent with the conclusion in Question 5-21 in 5.6 above. That is, even if an entity thinks that it is almost certain that a customer will exercise an option to buy additional goods or services, an entity

does not include the additional goods or services underlying the option as promised goods or services (or performance obligations), unless there are substantive contractual penalties.

Subsequent to contract inception, if the actual number of contract renewals is different from an entity's initial expectations, the entity updates the hypothetical transaction price and allocation. However, as discussed in 7.1 above, the estimate of the stand-alone selling price at contract inception is not updated. See Scenario B in Illustration 7.5 below for an example of how an entity could update its practical alternative calculation based on a change in expectations.

The following Illustration shows the two possible approaches for measuring options included in a contract:

Illustration 7-5: Measuring an option

A machinery maintenance contract provider offers a promotion to new customers who pay full price for the first year of maintenance coverage that grants them an option to renew the services for up to two years at a discount. The entity regularly sells maintenance coverage for £750 per year. With the promotion, the customer can renew the one-year maintenance at the end of each year for £600. The entity concludes that the ability to renew is a material right because the customer would receive a discount that exceeds any discount available to other customers. The entity also determines that no directly observable stand-alone selling price exists for the option to renew at a discount.

Scenario A - Estimate the stand-alone selling price of the option directly (FRS 102.23.71)

Since the entity has no directly observable evidence of the stand-alone selling price for the renewal option, it estimates the stand-alone selling price of an option for a £150 discount on the renewal of service in years two and three. When developing its estimate, the entity considers factors such as the likelihood that the option will be exercised and the price of comparable discounted offers. For example, the entity might consider the selling price of an offer for a discounted price of similar services found on a 'deal of the day' website.

The option will then be included in the relative stand-alone selling price allocation. In this example, there are two performance obligations: one-year of maintenance services; and an option for discounted renewals. The consideration of £750 is allocated between these two performance obligations based on their relative stand-alone selling prices.

Illustration 5-21 included in 5.6 above illustrates the estimation of the stand-alone selling price of an option determined to be a material right under paragraph 23.71.

Scenario B - Practical alternative to estimating the stand-alone selling price of the option using the renewal option approach (FRS 102.23.34-23.35)

If the entity chooses to use the renewal option approach, it allocates the transaction price to the option for maintenance services by reference to the maintenance services expected to be provided (including expected renewals) and the corresponding expected consideration. Since there is a discount offered on renewal of the maintenance service, this calculation will result in less revenue being allocated to the first year of the maintenance service when compared to the amount of consideration received for the first year of service (i.e., an amount less than £750). The difference between the consideration received (or that will be received) for the first year of maintenance service (i.e., £750) and the revenue allocated to the first year of maintenance service (i.e., an amount less than £750) will represent the amount allocated to the option using the renewal option approach.

Assume the entity obtains 100 new customers under the promotion. Based on its experience, the entity anticipates approximately 50% attrition annually, after considering the anticipated effect that the £150 discount will have on attrition. The entity considers the constraint on variable consideration and concludes that it is highly probable that the entity will be entitled to the cumulative amount of revenue in the future. Therefore, the entity concludes that, for this portfolio of contracts, it will ultimately sell 175 contracts, each contract providing one-year of maintenance services (i.e., 100 customers in the first year, 50 customers in the second year and 25 customers in the third year).

Therefore, the total consideration the entity expects to receive is £120,000 $[(100 \times £750) + (50 \times £600) + (25 \times £600)]$ (i.e., the hypothetical transaction price). Assuming the stand-alone selling price for each maintenance contract period is the same, the entity allocates £685.71 $(£120,000 \div 175)$ to each maintenance contract sold.

During the first year, the entity will recognise revenue of £68,571 (100 one-year maintenance service contracts sold x the allocated price of £685.71 per maintenance service contract). Consequently, at contract inception, the entity would allocate £6,429 to the option to renew (£75,000 cash received - £68,571 revenue to be recognised in the first year).

If the actual renewals in years two and three differ from expectations, the entity would have to update the hypothetical transaction price and allocation accordingly. However, beyond stating, as discussed in 7.1 above, that the estimate of the stand-alone selling prices at contract inception would not be updated, the standard is not explicit about how the entity would update the hypothetical transaction price and allocation. Below is an

Illustration of how an entity could update its practical alternative calculation based on a change in expectations.

For example, assume that the entity experiences less attrition than expected (e.g., 40% attrition annually, instead of 50%). Therefore, the entity's revised estimate is that it will ultimately sell 196 one-year maintenance services (100 + 60 renewals after year one + 36 renewals after year two). Accordingly, the total consideration that the entity expects to receive is £132,600 [(100 x £750) + (60 x £600) + (36 x £600)] (i.e., the updated hypothetical transaction price). The entity would not update its estimates of the stand-alone selling prices (which were assumed to be the same for each maintenance period). As such, the entity allocates £676.53 (£132,600 ÷ 196) to each maintenance period. The entity would reduce the amount of revenue it recognises in year one by £918 (CU68,571 - (100 x £676.53)) because the amount allocated to the option would have been higher at contract inception.

See Illustration 6-15 in 6.8 above for another example of applying the practical alternative when the contract includes a non-refundable upfront fee that is deemed to be a material right.

Frequently asked questions

Question 7-6: Could the form of an option (e.g., a gift card versus a coupon) affect how an option's stand-alone selling price is estimated?

How we see it

We believe that the form of an option would not affect how the stand-alone selling price is estimated.

Consider, for example, a retailer that gives customers who spend more than £100 during a specified period a £15 discount on a future purchase in the form of a coupon or a gift card that expires two weeks from the sale date. If the retailer determines that this type of offer represents a material right (see 5.6 above), it will need to allocate a portion of the transaction price to the option on a relative stand-alone selling price basis.

As discussed in 7.1 above, Section 23 requires that an entity first look to any directly observable stand-alone selling price. This requires the retailer to consider the nature of the underlying transaction. In this example, while a customer can purchase a £15 gift card for its face value, that transaction is not the same in substance as a transaction in which the customer is given a £15 gift card or coupon in connection with purchasing another good or service. As such, the retailer could conclude that there is no directly observable stand-alone selling price for a 'free' gift card or coupon obtained in connection with the purchase of another good or service. It would then need to estimate the stand-alone selling price in accordance with paragraph 23.71.

The estimated stand-alone selling price of an option given in the form of a gift card or a coupon would be the same because both estimates would reflect the likelihood that the option will be exercised (i.e., breakage, as discussed in 8.9 below).

Question 7-7: Can an entity use the practical alternative when some, but not all, of the goods or services in the original contract are subject to a renewal option?

How we see it

In certain instances, we believe it might be appropriate to apply the practical alternative even if some of the goods or services in the original contract are not subject to a renewal option, provided that at least one of the goods or services in the original contract is subject to the renewal terms included in the original contract.

Consider a contract to sell hardware and a service-type warranty where the customer has the option to renew only the warranty. Furthermore, assume that the renewal option is determined to be a material right. If the terms of any future warranty renewals are consistent with the terms provided in the original contract, we believe it would be reasonable to use the practical alternative when allocating the transaction price of the contract.

7.2 Applying the relative stand-alone selling price method

Once an entity has determined the stand-alone selling price for the separate goods or services in a contract, the entity allocates the transaction price to those performance obligations. Section 23 requires an entity to use the relative stand-alone selling price method to allocate the transaction price, except in the two specific circumstances (variable consideration and discounts), which are described in 7.3 below.

Under the relative stand-alone selling price method, the transaction price is allocated to each performance obligation based on the proportion of the stand-alone selling price of each performance obligation (determined at contract inception) to the sum of the stand-alone selling prices of all of the performance obligations in the contract, as described in Illustration 7-6 below: [FRS 102.23.67]

Illustration 7-6: Relative stand-alone selling price allocation

Manufacturing Co. entered into a contract with a customer to sell a machine for £100,000. The total contract price included installation of the machine and a two-year extended warranty. Assume that Manufacturing Co. determined there were three performance obligations and the stand-alone selling prices of those performance obligations were as follows: machine - £75,000, installation services - £14,000 and extended warranty - £20,000. That is, if the customer had bought these items separately from Manufacturing Co. at contract inception, they would have cost £109,000 in total.

The aggregate of the stand-alone selling prices (£109,000) exceeds the total transaction price of £100,000, indicating there is a discount inherent in the contract. That discount must be allocated to each of the individual performance obligations based on the relative stand-alone selling price of each performance obligation. Therefore, the amount of the £100,000 transaction price is allocated to each performance obligation as follows:

Machine - £68,807 ($£100,000 \times (£75,000 \div £109,000)$)

Installation - £12,844 ($£100,000 \times (£14,000 \div £109,000)$)

Warranty - £18,349 ($£100,000 \times (£20,000 \div £109,000)$)

The entity would recognise as revenue the amount allocated to each performance obligation when (or as) each performance obligation is satisfied.

Frequently asked questions

Question 7-8: How does an entity allocate the transaction price in a contract with multiple performance obligations in which the entity acts as both a principal and an agent?¹⁶⁴

Section 23 does not illustrate the allocation of the transaction price for a contract with multiple performance obligations in which the entity acts as both a principal and an agent (see 5.4 above for a discussion of principal versus agent considerations). Below we illustrate two acceptable ways to perform the allocation for this type of contract that are consistent with the Section 23's objective for allocating the transaction price (see 7 above). Entities need to evaluate the facts and circumstances of their contracts to make sure that the allocation involving multiple performance obligations in which an entity acts as both a principal and an agent meets the allocation objective (see 7 above).

Illustration 7-7: Allocation when an entity is both a principal and an agent in a contract

Entity X sells two distinct products (i.e., Product A and Product B) to Customer Y, along with a distinct service for an aggregate contract price of £800. Entity X is the principal for the sale of Product A and Product B, but is an agent for the sale of the service.

The stand-alone selling price of each good and service in the contract is, as follows:

Contract	Stand-alone selling price
	£
Product A	500
Product B	300
Service	200
Total	1,000

¹⁶⁴ Based on TRG Agenda paper no. 1, *Gross versus Net Revenue*, dated 18 July 2014.

Entity X earns a 20% commission from the third-party service provider based on the stand-alone selling price of the service. That is, Entity X earns £40 of commission (i.e., £200 x 20%) and remits the remaining £160 to the third-party service provider.

Method A - Entity X determines that it has provided a single discount of £200 (i.e., sum of stand-alone selling prices of £1,000 less the contract price of £800) on the bundle of goods and services sold to Customer Y in the contract (i.e., Products A and B and the service provided by the third party). Assume in this example that Entity X concludes allocating the discount to all performance obligations in the contract meets the allocation objective in accordance with FRS 102.23.74 - see 7.3 below.

In order to allocate the discount to all of the goods and services in the contract, Entity X considers the performance obligation for the agency service as part of the contract with Customer Y for purposes of allocating the transaction price. Entity X determines the stand-alone selling prices of Products A and B and the agency service and allocates the transaction price of £640 (i.e., £800 contract price less £160 to be remitted to the third-party service provider) for Products A and B and the service on a relative stand-alone selling price basis. This method is illustrated, as follows:

Contract	Stand-alone selling price	Allocated transaction price
	£	£
Product A	500 (500 ÷ 840 × 640)	381
Product B	300 (300 ÷ 840 × 640)	229
Service	40 (40 ÷ 840 × 640)	30
Total	840	640

Method B - Entity X determines that it has provided a discount of £200 on Products A and B since it is the principal for the transfer of those goods to Customer Y. Entity X believes the third-party service provider is a separate customer for its agency services and the commission Entity X expects to be entitled to receive for the agency service is not part of the transaction price in the contract with Customer Y. Entity X allocates a transaction price of £600 (i.e., £800 contract price less £200 stand-alone selling price of service) to Product A and B on a relative stand-alone selling price basis. This method is illustrated, as follows:

Contract 1	Stand-alone selling price	Allocated transaction price
	£	£
Product A	500 (500 ÷ 800 × 600)	375
Product B	300 (300 ÷ 800 × 600)	225
Total	800	600

The entity would recognise £40 separately for its earned commission on the service contract when the performance obligation for the agency service has been satisfied.

In either method, the same amount of revenue is ultimately recognised (i.e., CU640). However, the timing of revenue recognition would be different if the products and agency service are transferred to the customer at different times.

Question 7-9: How does an entity allocate the transaction price in a contract with optional purchases using the relative stand-alone selling price method?¹⁶⁵

Generally, if there are no contractual penalties, the entity would not identify the additional goods and services underlying the option as performance obligations at contract inception. Therefore, the consideration that would be received for the optional goods or services is not included in the transaction price at contract inception (see Question 5-21 in 5.6 above for additional details). The option needs to be assessed to determine whether it represents a material right that would be accounted for as a performance obligation. If the entity concludes the option is a material right, a portion of the consideration is allocated to that option using the relative stand-alone selling price method. Consider the following Illustration:

¹⁶⁵ Based on TRG Agenda paper no. 48, *Customer options for additional goods and services*, dated 9 November 2015.

Illustration 7-8: Allocation using the relative stand-alone selling price method

An entity sells equipment and consumables, both of which are determined to be distinct goods that generate revenue that is recognised at a point in time. The stand-alone selling prices of the equipment and each consumable are £10,000 and £100, respectively.

The entity enters into a contract to sell the equipment for £10,000 and gives the customer the option to purchase each consumable for CU80 (the entity concludes the 20% discount on consumables is material). The equipment cost the entity £8,000, and each consumable costs the entity £60. The customer is not required to purchase any consumables, however, the option to purchase consumables represents a material right. The entity estimates that 200 consumables would be purchased, and the stand-alone selling price of the material right is £4,000.

The transaction price of £10,000 for the sale of the equipment (prior to the purchase of any consumables) is allocated to the performance obligations on a relative stand-alone selling price basis. This method is illustrated, as follows:

	Stand-alone selling price		Allocated transaction price
	£		£
Equipment	10,000	$(10,000 \div 14,000 \times 10,000)$	7,143
Material right	4,000	$(4,000 \div 14,000 \times 10,000)$	2,857
Total	14,000		10,000

The allocated transaction price would be recognised as each performance obligation is satisfied (see 8 below). The entity would recognise a loss on the sale of the equipment, and recognition of some of the transaction price would be deferred until the option to purchase the consumables has been exercised and control of the consumables is transferred.

Question 7-10: How does an entity allocate the effects of time value of money when there are multiple performance obligations in a contract?

See response to Question 6-21 in 6.5.3.

7.3 Allocating a discount or variable consideration

As discussed in 7.2 above, the relative stand-alone selling price method is the default method for allocating the transaction price. However, this method might not always result in a faithful depiction of the amount of consideration to which an entity expects to be entitled from the customer. Therefore, Section 23 provides two exceptions to the relative stand-alone selling price method of allocating the transaction price.

[FRS 102.23.65]. The exceptions relate to the allocation of a discount and to the allocation of variable consideration. [FRS 102.23.65].

Section 23 explains when these exceptions must be applied, as follows: [FRS 102.23.73, FRS 102.23.74]

Extract from Section 23

23.73 A discount or amount of variable consideration (see paragraphs 23.43 to 23.57) may be attributable to the entire contract or to a specific part of the contract.

23.74 An entity shall allocate a discount or variable consideration to all the performance obligations in the contract on a relative stand-alone selling price basis, unless this basis does not depict the amount of consideration to which the entity expects to be entitled in exchange for satisfying each performance obligation in the contract. In that case, the entity shall allocate that discount or variable consideration using a method that reflects such an amount (eg a variable payment may be allocated entirely to one performance obligation in the contract if the terms of that variable payment relate specifically to the entity's efforts to satisfy that performance obligation).

Section 23 states that a customer receives a discount if the sum of the stand-alone selling prices of the goods or services promised in the contract exceeds the promised consideration. [FRS 102.23.72]. This discount could be attributable to the entire contract or to a specific part of the contract, such as one or more (but not all) performance obligations in the contract if use of relative stand-alone selling price basis does not reflect Section 23's allocation objective (see 7 above). [FRS 102.23.73, FRS 102.23.74]. For example,

when an entity sells a bundle of goods or services, the selling price of the bundle is often less than the sum of the stand-alone selling prices of the individual elements. Under the relative stand-alone selling price allocation method, this discount would be allocated proportionately to all performance obligations. However, if an entity determines that a discount is not related to all of the promised goods or services in the contract, the entity allocates the contract's entire discount only to the goods or services to which it relates if doing so will meet the allocation objective of Section 23 (see 7 above).

The allocation exception for variable consideration requires allocating variable consideration entirely to a specific part of a contract, such as one or more (but not all) performance obligations in the contract (e.g., a bonus might be contingent on an entity transferring a promised good or service within a specified period of time). [FRS 102.23.73, FRS 102.23.74]. paragraph 23.66 also clarifies that paragraph 23.74 applies if an entity accounts for a series of distinct goods or services as a single performance obligation (see 5.2.2 above) and the consideration promised in the contract includes a variable amount. [FRS 102.23.66]. Accordingly, the allocation exception on variable consideration also requires an entity to allocate variable consideration to one or more (but not all) distinct goods or services promised in a series of distinct goods or services that form part of a single performance obligation (see 5.2.2 above). For example, the consideration promised for the second year of a two-year cleaning contract will increase according to movements in a specified inflation index. This exception will be applied to a single performance obligation, a combination of performance obligations or distinct goods or services that make up part of a performance obligation depending on the facts and circumstances of each contract.

It is important to note that if use of the relative stand-alone selling price basis does not reflect the allocation objective, allocating a discount or variable consideration to one or more, but not all, performance obligations or distinct goods or services in a series is a requirement, not a policy choice. In such a case, Section 23 does not specify a method to use as an alternative to the relative stand-alone selling price basis of allocation. Section 23 implies that an entity can use any method of allocating a discount or variable consideration provided it meets the allocation objective in Section 23 (see 7 above). This gives entities flexibility in allocating a discount or variable consideration in the contract. [FRS 102.BC.B23.9]. Accordingly, an entity would apply reasonable judgement to determine whether the allocation results in a reasonable outcome (and, therefore, meets the allocation objective in Section 23 (see 7 above)). [FRS 102.10.4]. Section 23 provides an example of a situation when the allocation objective could be met by allocating a variable payment entirely to one performance obligation in the contract. This is when the terms of that variable payment relate specifically to the entity's efforts to satisfy that performance obligation. [FRS 102.23.74].

In addition, when determining an alternative method of allocation that could meet the allocation objective in Section 23, an entity could consider further guidance in paragraphs 82 and 85 of IFRS 15 which sets out specific criteria in allocating a discount or a variable amount (and subsequent changes to that amount) entirely to one or more (but not all) performance obligations in the contract, or to one or more (but not all) distinct goods or services promised in a series of distinct goods or services that form part of a single performance obligation. [IFRS 15.82, IFRS 15.85].

An entity could consider the hierarchy of allocation in paragraph 86 of IFRS 15; that is, the variable consideration is identified and allocated first. The general guidance related to allocation of transaction price to performance obligations on a relative stand-alone selling price basis and the specific requirements related to allocation of a discount are then applied to allocate the remaining amount of the transaction price that does not meet the criteria related to allocation of variable consideration. [IFRS 15.86].

Furthermore, when an entity allocates a discount entirely to one or more (but not all) performance obligations, the entity could also consider the guidance in paragraph 83 of IFRS 15, which explains that an entity allocates a discount before using the residual approach to estimate the stand-alone selling price of a good or service (see discussion in 7.1.2 above). [IFRS 15.83].

Detailed discussions of the specified criteria in IFRS 15 for allocating a discount or variable consideration and the hierarchy of allocation in IFRS 15 are available in the EY publication, International GAAP®.

7.3.1 Variable fee arrangements based on usage

Consideration for some service contracts is based entirely on customer usage, and an entity has a stand-ready obligation to perform, regardless of how often the customer uses the service. Therefore, the usage-based fees are variable consideration.

It is important to note that, while these usage-based transactions might be economically similar to licensing arrangements that include sales-based or usage-based royalties, the accounting would be different. As described in 9.5 below, sales-based and usage-based royalties on licences of intellectual property are subject to the royalty recognition constraint and that requirement must be applied to the overall royalty stream when the sole or predominant item to which the royalty relates is a licence of intellectual property. Entities cannot analogue to the royalty recognition constraint for other situations.

If the usage-based fees relate specifically to the entity's effort to satisfy the performance obligation to provide services (or to a specific outcome from satisfying the performance obligation) and allocating the variable consideration to each distinct day is consistent with the allocation objective (see 7 above), the variable consideration allocation exception is met and the consideration is allocated to the period in which the usage occurred. If the usage-based fees do not relate to an entity's effort to satisfy the performance obligation (or to a specific outcome from satisfying the performance obligation) or if the allocation of the usage-based fees is not consistent with the allocation objective, the allocation exception is not met. For example, the allocation exception would not be met if the fees decline over the contract term as an incentive for the customer to achieve certain volume thresholds, if such pricing is not based on market terms or not linked to changes in the entity's cost to fulfil the obligation or value provided to the customer. In this situation, the variable consideration is estimated at contract inception and it is to be recognised over the contract duration based on a selected measure of progress. These estimates of variable consideration must be updated at the end of each reporting period and are subject to the constraint on variable consideration. See 6.2 above for further discussion on estimating variable consideration.

Consider the following Illustration of a contract with variable usage-based fees calculated daily that is likely to meet the on variable consideration allocation exception:

Illustration 7-9: Variable fee service arrangement based on usage

Provider C enters into a contract for cloud storage in which a customer agrees to pay daily fees based on the amount of storage space it uses (i.e., a fixed daily rate of £0.025 per gigabyte of storage is multiplied by the number of gigabytes used). Provider C invoices the customer at the end of each month. Assume that the entity has appropriately concluded that the nature of the entity's performance obligation is to stand ready to provide any amount of storage space the customer needs at any time during the contract term and the consideration in the contract is variable based on the number of gigabytes of storage used (and, therefore, each gigabyte used is not an optional purchase - see Question 5-20 in 5.6 above).

Provider C determines that the service provided to the customer in this contract meets the criteria to be accounted for as a series of distinct goods or services (see 5.2.2 above). This is because the performance obligation to stand ready to provide any amount of storage space represents a series of distinct services that are substantially the same and have the same pattern of transfer to the customer.

Provider C then considers whether the variable consideration allocation exception would apply to the daily usage-based fees. Provider C determines that it can allocate the daily variable fee to the distinct service performed that day because the uncertainty related to the consideration is resolved on a daily basis as the entity satisfies its obligation to provide cloud storage. This is because the variable payments specifically relate to transferring the distinct service (i.e., access to any amount of cloud storage that the customer chooses to use each day).

Provider C concludes that allocating the variable payments to each day is consistent with the allocation objective because the fixed-rate-per-gigabyte fees reflect the value to the customer based on the amount of storage the customer uses each day. Furthermore, the rates charged are consistent with Provider C's standard pricing practices.

Therefore, Provider C determines that it needs to apply the variable consideration allocation exception and recognises each day's fee for the day in which it occurs. That is, if the customer uses 250 gigabytes of storage the first day and 300 gigabytes the second, Provider C will recognise £6.25 and £7.50 of revenue for the respective days.

7.3.2 Fixed-fee arrangements with overages

Some service contracts have fixed fees (including any minimum amounts guaranteed) but also require customers to pay overage fees when they exceed certain thresholds based on usage. When an entity's performance obligation is to stand ready to perform, regardless of customer usage, the overage fee is considered variable consideration that the entity needs to estimate at contract inception, unless the variable consideration allocation exception is met (see 7.3 above).

How we see it

We believe that, for an entity to apply the variable consideration allocation exception by allocating overage fees to a particular period (e.g., day, month, year), the entity would have to conclude that the overage fees relate to its performance during that particular period.

Consider the following Illustration of a contract with fixed fees and annual overages:

Illustration 7-10: Fixed-fee service arrangement with overages

Entity X enters into a three-year contract with a customer to provide access to its SaaS application, which allows the customer to process transactions, among other functions. The customer agrees to pay an annual fee of £100,000, plus overage fees at a rate of £0.10 per transaction for transactions processed through the application during the year that exceed one million (i.e., overage fees are only paid if the customer processes more than one million transactions during the year).

Assume that Entity X has determined that the nature of its performance obligation is to provide continuous access to the SaaS application, regardless of the number of transactions processed. Entity X determines that the £100,000 annual fee is fixed consideration and all additional consideration received as overage fees is variable consideration.

Also assume that Entity X has determined that the fixed component of the consideration needs to be recognised rateably over the contract term because the service is provided to the customer on a consistent basis (i.e., the performance obligation is satisfied evenly over the period). Entity X will then need to determine whether the variable consideration allocation exception applies to the overage fees, which are calculated based on annual usage.

Evaluating the allocation exception for distinct daily periods

We believe that, for the entity to apply the variable consideration allocation exception by allocating overage fees to a particular day, the entity would have to conclude that the overage fees relate to its performance on that particular day. Therefore, Entity X concludes that it cannot apply the variable consideration allocation exception to the daily reporting periods for the overage fees because those payments do not relate to its efforts to satisfy the performance obligation to provide continuous access to the platform. That is, the nature of the performance obligation is a series of daily stand-ready obligations that are satisfied evenly over time, and the overage fees are additional consideration for satisfying that performance obligation over the course of each year.

Since the overage fees are only incurred after the annual minimum is reached, recognising revenue when the fees are incurred would result in more revenue recognised for the periods after the minimum is reached (i.e., backloading the revenue recognition), which is inconsistent with the allocation objective (see also 7.3 above). Therefore, the requirement for using the variable consideration allocation exception would not be met for each day of service, and Entity X would not recognise revenue for the overages on the days when the fees are incurred. However, we believe that if the overages in this example were calculated based on a short period of usage (e.g., daily or monthly (instead of annually)), Entity X might be able to demonstrate that it meets the requirement to apply the variable consideration allocation exception. This is because of the relatively short period of time between Entity X's performance and when it is entitled to the variable consideration such that Entity X could reasonably conclude that the allocation objective has been met.

Evaluating the allocation exception for annual periods

Since Entity X earns overage fees over a period of time that is less than the contract term (i.e., a three-year contract where overage fees are accrued and reset on an annual basis), Entity X would evaluate whether the overages need to be allocated to the period in which the overage fees are earned (e.g., to the annual period in which overages accrue).

To do so, Entity X evaluates whether it meets the requirement to apply the variable consideration allocation exception to the overage fees earned in each annual period in the three-year contract. Entity X might conclude that it needs to apply the variable consideration allocation exception to the overage fees earned in annual periods, which would require the entity to allocate the annual overage fees to each respective year (since the overages can be attributed to a single year). Therefore, Entity X will need to estimate overage fees only for each annual period (also considering the variable consideration constraint, as discussed in 6.2 above), rather than for the full three-year period at contract inception (which would be required if the variable consideration allocation exception was not met for any period). This would result in recognition of revenue from the overage fees only in the annual period to which the overages relate and not over the entire contract term.

For example, if the entity estimated that the overage fees for the first year would be £20,000, it would recognise this amount rateably over the year (i.e., £5,000 in each quarter), in addition to the fixed consideration that is also recognised rateably. The estimates of variable consideration must be updated at the end of each reporting period, as discussed in 6.2.4 above.

7.3.3 Example of allocating variable consideration

Illustration 7-11 below, which is based on Example 35 in IFRS 15, is an example to illustrate when an entity is or is not able to allocate variable consideration to a specific part of a contract. Note that the example focuses on licences of intellectual property, which are discussed in 9 below: [IFRS 15.IE Example 35, IFRS 15.IE178-IE187]

Illustration 7-11: Allocation of variable consideration

An entity enters into a contract with a customer for two intellectual property licences (Licences X and Y), which the entity determines to represent two performance obligations each satisfied at a point in time. The stand-alone selling prices of Licences X and Y are £800 and £1,000, respectively.

Case A-Variable consideration allocated entirely to one performance obligation

The price stated in the contract for Licence X is a fixed amount of £800 and for Licence Y the consideration is 3% of the customer's future sales of products that use Licence Y. For purposes of allocation, the entity estimates its sales-based royalties (i.e., the variable consideration) to be £1,000, in accordance with paragraph 23.44 (see 6.2.2 above).

To allocate the transaction price, the entity considers the requirement in paragraph 23.74 (see 7.3 above) and concludes that the variable consideration (i.e., the sales-based royalties) must be allocated entirely to Licence Y. The entity concludes that allocating variable consideration on a relative stand-alone selling price basis does not depict the amount of consideration to which the entity expects to be entitled in exchange for satisfying each performance obligation in the contract, for the following reasons:

- (a) the variable payment relates specifically to an outcome from the performance obligation to transfer Licence Y (i.e., the customer's subsequent sales of products that use Licence Y).
- (b) allocating the expected royalty amounts of £1,000 entirely to Licence Y is consistent with the allocation objective (see 7 above). This is because the entity's estimate of the amount of sales-based royalties (£1,000) approximates the stand-alone selling price of Licence Y and the fixed amount of £800 approximates the stand-alone selling price of Licence X. The entity allocates £800 to Licence X. This is because, based on an assessment of the facts and circumstances relating to both licences, allocating to Licence Y some of the fixed consideration in addition to all of the variable consideration would not meet the allocation objective (see 7 above).

The entity transfers Licence Y at inception of the contract and transfers Licence X one month later. Upon the transfer of Licence Y, the entity does not recognise revenue because the consideration allocated to Licence Y is in the form of a sales-based royalty. Therefore, in accordance with FRS 102.23.48 (see 9.5 below), the entity recognises revenue for the sales-based royalty when those subsequent sales occur.

When Licence X is transferred, the entity recognises as revenue the £800 allocated to Licence X.

Case B-Variable consideration allocated on the basis of stand-alone selling prices

The price stated in the contract for Licence X is a fixed amount of £300 and for Licence Y the consideration is 5% of the customer's future sales of products that use Licence Y. The entity's estimate of the sales-based royalties (i.e., the variable consideration) is £1,500 in accordance with FRS 102.23.44 (see 6.2.2 above).

To allocate the transaction price, the entity applies the requirement in paragraph 23.74 (see 7.3 above) to determine whether to allocate the variable consideration (i.e., the sales-based royalties) entirely to Licence Y. In applying the requirement, the entity concludes that even though the variable payments relate specifically to an outcome from the performance obligation to transfer Licence Y (i.e., the customer's subsequent sales of products that use Licence Y), allocating the variable consideration entirely to Licence Y would be inconsistent with the principle for allocating the transaction price. Allocating £300 to Licence X and £1,500 to Licence Y does not reflect a reasonable allocation of the transaction price on the basis of the stand-alone selling prices of Licences X and Y of £800 and £1,000, respectively. Consequently, the entity applies the general allocation requirements in paragraphs 23.67 to 23.70 (see 7.1 and 7.2 above).

The entity allocates the transaction price of £300 to Licences X and Y on the basis of relative stand-alone selling prices of £800 and £1,000, respectively. The entity also allocates the consideration related to the sales-based royalty on a relative stand-alone selling price basis. However, in accordance with paragraph 23.48 (see 9.5 below), when an entity licenses intellectual property in which the consideration is in the form of a sales-based royalty, the entity cannot recognise revenue until the later of the following events: the subsequent sales occur or the performance obligation is satisfied (or partially satisfied).

Licence Y is transferred to the customer at the inception of the contract and Licence X is transferred three months later. When Licence Y is transferred, the entity recognises as revenue the £167 ($£1,000 \div £1,800 \times £300$) allocated to Licence Y. When Licence X is transferred, the entity recognises as revenue the £133 ($£800 \div £1,800 \times £300$) allocated to Licence X.

In the first month, the royalty due from the customer's first month of sales is £200. Consequently, in accordance with FRS 102.23.48 (see 9.5 below), the entity recognises as revenue the £111 ($£1,000 \div £1,800 \times £200$) allocated to Licence Y (which has been transferred to the customer and is therefore a satisfied performance obligation). The entity recognises a contract liability for the £89 ($£800 \div £1,800 \times £200$) allocated to Licence X. This is because although the subsequent sale by the entity's customer has occurred, the performance obligation to which the royalty has been allocated has not been satisfied.

7.4 Changes in transaction price after contract inception

Section 23 requires entities to determine the transaction price at contract inception. However, there could be changes to the transaction price after contract inception. For example, as discussed in 6.2.4 above, when a contract includes variable consideration, entities need to update their estimate of the transaction price at the end of each reporting period to reflect any changes in circumstances. [FRS 102.23.75]. Changes in the transaction price can also occur due to contract modifications (see 4.4 above). [FRS 102.23.77].

As stated in paragraph 23.76, changes in the estimate of the total transaction price are generally allocated to the performance obligations on the same basis as the initial allocation, whether they are allocated based on the relative stand-alone selling price (i.e., using the same proportionate share of the total) or to individual performance obligations under the allocation exceptions discussed in 7.3 above. Consequently, an entity does not reallocate the transaction price to reflect changes in stand-alone selling prices after contract inception. Amounts allocated to a satisfied performance obligation must be recognised as revenue, or a reduction in revenue, in the period that the estimate of the transaction price changes. [FRS 102.23.76].

As discussed in 7.1 and 7.1.3 above, stand-alone selling prices are not updated after contract inception, unless the contract has been modified and the contract modification is accounted for as a new or separate contract. Furthermore, any amounts allocated to satisfied (or partially satisfied) performance obligations must be recognised in revenue in the period in which the transaction price changes (i.e., on a cumulative catch-up basis). This could result in either an increase or decrease to revenue in relation to a satisfied performance obligation or to cumulative revenue recognised for a partially satisfied over time performance obligation (see 8.1 below). [FRS 102.23.76].

The following Illustration explains this concept for a partially satisfied over time performance obligation:

Illustration 7-12: Change in transaction price after contract inception

Entity A, a construction company, enters into a contract with a customer on 1 January 20X6 to build three specific amenities at a community centre, a swimming pool, playground and a parking lot, for £3,000,000. Entity A will earn a bonus of £250,000 if it completes the swimming pool by 1 May 20X6.

At contract inception, Entity A concludes that the swimming pool, playground and parking lot are each distinct and, therefore, represent separate performance obligations. Entity A also concludes that the £250,000 bonus needs to be allocated entirely to the swimming pool because the requirement in paragraph 23.74 (see 7.3 above) for the variable consideration allocation are met. However, Entity A does not expect it will be entitled to the £250,000 bonus related to the completion of the swimming pool by 1 May 20X6 due to factors outside of Entity A's control, including inclement winter weather and the swimming pool supplier's backlog. Therefore, Entity A uses the most likely amount method to estimate variable consideration and does not include the bonus in the transaction price (see 6.2 above).

As at 1 January 20X6, Entity A allocates the transaction price to the performance obligations on a relative stand-alone selling price basis, as follows:

Performance obligations	Allocation of the transaction price
Swimming pool	£2,000,000
Playground	£750,000
Parking lot	£250,000
Total	£3,000,000

Entity A concludes that each of the performance obligations are satisfied over time because they meet the criteria in paragraph 23.81 (see 8.1 below for further discussion on evaluating whether performance obligations are satisfied over time). Due to the nature of Entity A's business, it determines that an input method based on costs incurred is an appropriate measure of progress over time.

As at 31 March 20X6, Entity A determines that it has incurred 60% of the total expected costs to complete each of its performance obligations. Therefore, Entity A recognises £1,800,000 (£3,000,000 × 60%) as revenue.

In addition, at 31 March 20X6, Entity A reassesses its estimate of variable consideration in the contract (including the constraint) and believes it will be able to complete the swimming pool by 1 May 20X6, because the significant uncertainties related to the weather and the supplier have been resolved. Entity A updates its transaction price to include the £250,000 bonus related to the swimming pool in accordance with paragraph 23.47 (see 6.2.4 above). Therefore, Entity A updates the transaction price as at 31 March 20X6, as follows:

Performance obligations	Allocation of the transaction price
Swimming pool	£2,250,000
Playground	£750,000
Parking lot	£250,000
Total	£3,250,000

Due to the change in the transaction price related to the swimming pool performance obligation, Entity A recognises £150,000 ($£250,000 \times 60\%$) as revenue on a cumulative catch-up basis as at 31 March 20X6.

A change in transaction price as a result of a contract modification arises from separate and subsequent negotiation between the parties to the contract that changes the enforceable rights and obligations of those parties. If the change in the transaction price is due to a contract modification, the contract modification requirements in paragraphs 23.13 to 23.16 must be followed (see 4.4 above for a discussion on contract modifications). [FRS 102.23.77]. See Question 4-15 in 4.4 for further discussion on how an entity would distinguish between a contract modification and a change in the estimated transaction price due to variable consideration after contract inception. In addition, when contracts include variable consideration, it is possible that changes in the transaction price that arise after a modification are (or are not) related to performance obligations that existed before the modification. For changes in the transaction price arising after a contract modification that is not treated as a separate contract, an entity must apply the following requirements, whichever is applicable: [FRS 102.23.77]

- If the change in transaction price is attributable to an amount of variable consideration promised before the modification and the modification was considered a termination of the existing contract and the creation of a new contract, the entity allocates the change in transaction price to the performance obligations that existed before the modification.
- In all other cases, the change in the transaction price is allocated to the performance obligations in the modified contract (i.e., the performance obligations that were unsatisfied or partially unsatisfied immediately after the modification).

The first scenario is applicable to a change in transaction price that occurs after a contract modification that is accounted for in accordance with paragraph 23.16(a) (i.e., as a termination of the existing contract and the creation of a new contract) and the change in the transaction price is attributable to variable consideration promised before the modification. For example, an estimate of variable consideration in the initial contract might have changed or might no longer be constrained. [FRS 102.23.16(a), FRS 102.23.77(a)]. In this scenario, an entity has to allocate the corresponding change in the transaction price to the performance obligations identified in the contract before the modification (e.g., the original contract), including performance obligations that were satisfied prior to the modification. That is, it would not be appropriate for an entity to allocate the corresponding change in the transaction price to the performance obligations that are in the modified contract, if the promised variable consideration (and the resolution of the associated uncertainty) were not affected by the contract modification.

The second scenario (i.e., paragraph 23.77(b)) is applicable in all other cases when a modification is not treated as a separate contract (e.g., when the change in the transaction price is not attributable to variable consideration promised before the modification). [FRS 102.23.77(b)]. Under this scenario, the change in the transaction price is allocated to the performance obligation(s) in the modified contract (i.e., the performance obligations that were unsatisfied or partially unsatisfied immediately after the modification).

Section 23 does not contain examples to illustrate application of the requirements described above, however, these are consistent with the requirements in IFRS 15. Accordingly, entities could consider Example 6 in IFRS 15, which illustrates the accounting for a change in the transaction price that occurs after a contract modification. [IFRS 15.IE Example 6, IFRS 15.IE25-IE32].

In some cases, an estimate of variable consideration made at the end of a reporting period could be affected by information that arises after the end of the reporting period, but before the release of the financial statements. In such a circumstance, an entity would follow the accounting requirements for subsequent events in Section 32 (see Chapter 34).

Frequently asked questions

Question 7-11: How does an entity distinguish between a contract modification and a change in the estimated transaction price due to variable consideration after contract inception?

See response to Question 4-15 in 4.4 above.

7.5 Allocation of transaction price to components outside the scope of Section 23

Revenue arrangements might include some components that are not within the scope of Section 23. As discussed in 3.1.5 above, Section 23 indicates that in such situations, an entity must first apply the other sections of FRS 102 if those sections address separation and/or measurement. [FRS 102.23.3].

For example, some sections of FRS 102 require certain components, such as financial liabilities, to be accounted for at fair value. As a result, when a revenue contract includes that type of component, the fair value of that component must be separated from the total transaction price. The remaining transaction price is then allocated to the remaining performance obligations.

The following Illustration explains this concept:

Illustration 7-13: Arrangements with components outside the scope of Section 23

Retailer sells products to customers and often bundles them with prepaid gift cards when the customer buys multiple units of its products. The prepaid gift cards are non-refundable, non-redeemable and non-exchangeable for cash and do not have an expiry date or back-end fees. That is, any remaining balance on the prepaid gift cards does not reduce, unless it is spent by the customer. Customers can redeem prepaid gift cards only at third-party merchants specified by Retailer (i.e., the prepaid gift card cannot be redeemed at the Retailer) in exchange for goods or services up to a specified monetary amount. When a customer uses the prepaid gift cards at a merchant(s) to purchase goods or services, Retailer delivers cash to the merchant(s).

Customer X enters into a contract to purchase 100 units of a product and a prepaid gift card for total consideration of £1,000. Because it bought 100 units, Retailer gives Customer X a discount on the bundle. The stand-alone selling price of the product and the fair value of the prepaid gift card are £950 and £200, respectively.

Retailer determines that it has a contractual obligation to deliver cash to specified merchants on behalf of the prepaid gift card owner (Customer X). Although this obligation is conditional upon Customer X redeeming or using the prepaid gift card to purchase goods or services, Retailer does not have an unconditional right to avoid delivering cash to settle this contractual obligation. Therefore, Retailer concludes that the liability for the prepaid gift card meets the definition of a financial liability and applies the requirements in Section 11 and Section 12 to account for it. In accordance with paragraph 23.3, because Section 11 provides measurement requirements for initial recognition (i.e., requires that financial liabilities within its scope be initially recognised at fair value, which is usually the initial transaction price), Retailer excludes from the Section 23 transaction price the fair value of the prepaid gift card. Retailer allocates the remaining transaction price to the products purchased. The allocation of the total transaction price is, as follows:

	Stand-alone selling price and fair value	% Allocated discount	Allocated discount	Arrangement consideration allocation
Products (100 units)	£950	100%	£150	£800
Prepaid gift card	£200	0%	-	£200
	£1,150		£150	£1,000

For components that must be recognised at fair value at inception, any subsequent remeasurement would be pursuant to other sections of FRS 102 (e.g., Section 11). That is, subsequent adjustments to the fair value of those components have no effect on the amount of Section 23 transaction price previously allocated to any performance obligations included within the contract or on revenue recognised.

8 Step 5 – Satisfaction of performance obligations

Under Section 23, an entity only recognises revenue when it satisfies an identified performance obligation by transferring a promised good or service to a customer. A good or service is considered to be transferred when the customer obtains control. [FRS 102.23.78].

Section 23 states that “Control of an asset refers to the ability to direct the use of, and obtain substantially all of the remaining economic benefits that may flow from, the asset.” [FRS 102.23.80]. Control also means the ability to prevent others from directing the use of, and receiving the benefit from, a good or service. This definition of control in Section 23 is consistent with the definition of control in IFRS 15.

Under IFRS 15, the IASB notes that both goods and services are assets that a customer acquires (even if many services are not recognised as an asset because those services are simultaneously received and consumed by the customer). [IFRS 15.BC118]. The IASB explains the key terms in the definition of control in the Basis for Conclusions on IFRS 15, which are, as follows: [IFRS 15.BC120]

- *Ability* - a customer must have the present right to direct the use of, and obtain substantially all of the remaining benefits from, an asset for an entity to recognise revenue. For example, in a contract that requires a manufacturer to produce an asset for a customer, it might be clear that the customer will ultimately have the right to direct the use of, and obtain substantially all of the remaining benefits from, the asset. However, the entity does not recognise revenue until the customer has actually obtained that right (which, depending on the contract, might occur during production or afterwards).
- *Direct the use of* - a customer’s ability to direct the use of an asset refers to the customer’s right to deploy or to allow another entity to deploy that asset in its activities or to restrict another entity from deploying that asset.
- *Obtain the benefits from* - the customer must have the ability to obtain substantially all of the remaining benefits from an asset for the customer to obtain control of it. Conceptually, the benefits from a good or service are potential cash flows (either an increase in cash inflows or a decrease in cash outflows). Paragraph 33 of IFRS 15 indicates that a customer can obtain the benefits directly or indirectly in many ways, such as: using the asset to produce goods or services (including public services); using the asset to enhance the value of other assets; using the asset to settle a liability or reduce an expense; selling or exchanging the asset; pledging the asset to secure a loan; or holding the asset. [IFRS 15.33].

The transfer of control to the customer represents the transfer of the rights with regard to the good or service. The customer’s ability to receive the benefit from the good or service is represented by its right to substantially all of the cash inflows, or the reduction of the cash outflows, generated by the goods or services. Upon transfer of control, the customer has sole possession of the right to use the good or service for the remainder of its economic life or to consume the good or service in its own operations.

Similar to IFRS 15, it is expected that control is assessed under Section 23 primarily from the customer’s perspective. While a seller often surrenders control at the same time the customer obtains control, assessment of control from the customer’s perspective minimises the risk of an entity recognising revenue from activities that do not coincide with the transfer of goods or services to the customer. [IFRS 15.BC121].

Section 23 indicates that an entity must determine, at contract inception, whether it will transfer control of a promised good or service over time. If an entity does not satisfy a performance obligation over time, the performance obligation is satisfied at a point in time. [FRS 102.23.79]. These concepts are explored further in the following sections.

8.1 Performance obligations satisfied over time

Frequently, entities transfer the promised goods or services to the customer over time. While the determination of whether goods or services are transferred over time is straightforward in some contracts (e.g., many service contracts), it is more difficult in other contracts.

To help entities determine whether control transfers over time (rather than at a point in time), Section 23 states that an entity transfers control of a good or service over time (and, therefore, satisfies a performance obligation and recognises revenue over time) if one of the following criteria is met: [FRS 102.23.81]

- As the entity performs, the customer simultaneously receives and consumes the benefits provided by the entity’s performance, e.g., routine or recurring services such as a cleaning service (see 8.1.1 below).

- The entity's performance creates or enhances an asset that the customer controls as the asset is created or enhanced e.g., in the case of a construction contract in which the customer controls the work in progress (see 8.1.2 below).
- The entity's performance does not create an asset with an alternative use to the entity and the entity has an enforceable right to payment for performance completed to date (see 8.1.3 below).

Examples of each of the criteria above are included in the following sections. If an entity is unable to demonstrate that control transfers over time, the presumption is that control transfers at a point in time (see 8.2 below). [FRS 102.23.79].

The following flow chart illustrates how to evaluate whether control transfers over time:

Figure 8-1: Evaluating whether control transfers over time

How we see it

Determining when performance obligations are satisfied requires judgement. paragraph 23.135(a) requires an entity to disclose when it typically satisfies its performance obligations (e.g., upon shipment, as services are delivered). Paragraph 23.136 also requires an entity to disclose the method used to recognise revenue (e.g., a description of the input or output method used and how that method is applied). See 11.4.1.D and 11.4.2 below for more information.

In line with the requirements in Section 8, an entity would also need to disclose any significant judgements applied in determining the timing of satisfaction of performance obligations and why the method selected provides a faithful depiction of the transfer of goods or services. See Chapter 6 at 7.3.

Frequently asked questions

Question 8-1: Can an entity elect to recognise revenue at a point in time under Section 23?

Entities cannot elect to recognise revenue at a point in time. Rather, entities must analyse their contracts to determine the appropriate timing and pattern of recognition while considering the specific criteria and requirements of Section 23. As discussed above, for each performance obligation identified in the contract, an entity is required to consider at contract inception whether it satisfies the performance obligation over time (i.e., whether it meets one of the three criteria for over time recognition in paragraph 23.81) or at a point in time. If an entity does not satisfy a performance obligation over time, the performance obligation is satisfied at a point in time. That is, there is no exception in Section 23 that would allow entities to elect point-in-time recognition for contracts, including those with a short duration (e.g., a year or less).

Question 8-2: Do all contracts with a stand-ready element include a single performance obligation that is satisfied over time?

See response to Question 5-3 in 5.1 above.

8.1.1 Customer simultaneously receives and consumes benefits as the entity performs

Goods and services are assets, even if only momentarily, when they are received and used as in the case of many services. [FRS 102.23.80]. In many service contracts the entity's performance creates an asset, momentarily, because that asset is simultaneously received and consumed by the customer. In these cases, the customer obtains control of the entity's output as the entity performs. Therefore, the performance obligation is satisfied over time. Examples include a cleaning service that is routine or recurring in which the customer simultaneously receives and consumes the benefits provided by the entity's performance as the entity performs. [FRS 102.23.81(a)].

While this criterion most often applies to service contracts, there might be instances in which commodity contracts (e.g., electricity, natural gas, heating oil) could be recognised over time. These situations could arise if the facts and circumstances of the contract indicate that the customer will simultaneously receive and consume the benefits (e.g., a continuous supply contract to meet immediate demands). See Question 8-3 below for further information.

There might be contracts in which it is unclear whether the customer simultaneously receives and consumes the benefit of the entity's performance over time. To assist entities, Section 23 states that if an entity cannot readily identify whether the customer simultaneously receives and consumes the benefit as the entity performs, "a performance obligation is satisfied over time if another entity would not need to substantially re-perform the work that the entity has completed to date if that other entity were to fulfil the remaining performance obligation (eg in a freight logistics contract)." [FRS 102.23.81(a)]. Following this guidance, assume that the entity has agreed to transport goods from London to Edinburgh. It could appear that the customer receives no benefit from the entity's performance until the goods are delivered to, in this case, Edinburgh. However, the customer benefits as the entity performs because if the goods were only delivered part of the way (e.g., to Manchester), another entity would not need to substantially re-perform the entity's performance to date. In these cases, the assessment of whether another entity would need to substantially re-perform the entity's performance to date is an objective way to assess whether the customer receives benefit from the entity's performance as it occurs.

In assessing whether a customer simultaneously receives and consumes the benefits provided by an entity's performance, all relevant facts and circumstances need to be considered. This includes considering the inherent characteristics of the good or service, the contract terms and information about how the good or service is transferred or delivered.

Section 23 and IFRS 15 are consistent in this area. Entities reporting under FRS 102 could consider further guidance provided in IFRS 15. Accordingly, in determining whether another entity would not need to substantially re-perform the work the entity has completed to date, an entity could consider the following assumptions provided in IFRS 15: [IFRS 15.B4]

- (a) Disregard potential contractual restrictions or practical limitations that otherwise would prevent the entity from transferring the remaining performance obligation to another entity.

And

- (b) Presume that another entity fulfilling the remainder of the performance obligation would not have the benefit of any asset that is presently controlled by the entity and that would remain controlled by the entity if the performance obligation were to transfer to another entity.

Illustration 8-1 below, which is based on Example 13 in IFRS 15, is an example that illustrates a customer simultaneously receiving and consuming the benefits as the entity performs in relation to a series of distinct payroll processing services: [IFRS 15.IE Example 13, IFRS 15.IE67-IE68]

Illustration 8-1: Customer simultaneously receives and consumes the benefits

An entity enters into a contract to provide monthly payroll processing services to a customer for one year. The promised payroll processing services are accounted for as a single performance obligation in accordance with paragraph 23.17(b) (see 5.2.2 above). The performance obligation is satisfied over time in accordance with paragraph 23.81(a) because the customer simultaneously receives and consumes the benefits of the entity's performance in processing each payroll transaction as and when each transaction is processed. The fact that another entity would not need to re-perform payroll processing services for the service that the entity has provided to date also demonstrates that the customer simultaneously receives and consumes the benefits of the entity's performance as the entity performs. (The entity disregards any practical limitations on transferring the remaining performance obligation, including setup activities that would need to be undertaken by another entity.) The entity recognises revenue over time by measuring its progress towards complete satisfaction of that performance obligation in accordance with paragraphs 23.98 to 23.104 (see 8.1.4 below).

An entity does not evaluate this criterion (to determine whether a performance obligation is satisfied over time) if the entity's performance creates an asset that the customer does not consume immediately as the asset is received (see also discussions in Question 8-11 in 8.1.3.B below). Instead, an entity assesses that performance obligation using the criteria discussed in 8.1.2 and 8.1.3 below.

For some service contracts, the entity's performance will not satisfy its obligation over time because the customer does not consume the benefit of the entity's performance until the entity's performance is complete. Illustration 8-4 in 8.1.3.B below provides an example of an entity providing consulting services that will take the form of a professional opinion upon the completion of the services. In this situation, an entity cannot conclude that the services are transferred over time based on this criterion. Instead, the entity must consider the remaining two criteria in paragraph 23.81 (see 8.1.2 and 8.1.3 and Illustration 8-4 in 8.1.3.B below).

Frequently asked questions

Question 8-3: What factors does an entity consider when evaluating whether a customer simultaneously receives and consumes the benefits of a commodity (e.g., electricity, natural gas or heating oil) as the entity performs?¹⁶⁶

An entity would consider all known facts and circumstances when evaluating whether a customer simultaneously receives and consumes the benefits of a commodity. These might include the inherent characteristics of the commodity (e.g., whether the commodity can be stored), contract terms (e.g., a continuous supply contract to meet immediate demands) and information about infrastructure or other delivery mechanisms.

As such, revenue related to the sale of a commodity might or might not be recognised over time, depending on whether the facts and circumstances of the contract indicate that the customer simultaneously receives and consumes the benefits. This evaluation could require the use of significant judgement.

Whether a commodity meets this criterion and is transferred over time is important in determining whether the sale of a commodity meets the criteria to apply the series requirement (see 5.2.2 above). This, in turn, affects how an entity allocates variable consideration and applies the requirements for contract modifications and changes in the transaction price.

8.1.2 Customer controls the asset as it is created or enhanced

The second criterion to determine whether control of a good or service is transferred over time requires entities to evaluate whether the customer controls the asset as it is being created or enhanced by the entity's performance. [IFRS 102.23.81(b)]. Therefore, in determining whether a customer controls an asset as it is created or enhanced, an entity applies the requirements for control in paragraphs 23.78 to 23.80 (see 8 above) and 23.85 (see 8.2 below). The asset being created or enhanced can be either tangible or intangible.

¹⁶⁶ Based on TRG Agenda paper no. 43, *Determining When Control of a Commodity Transfers*, dated 13 July 2015.

For the purpose of this determination, the definition of 'control' is the same as previously discussed in 8 above (i.e., the ability to direct the use of and obtain substantially all of the remaining benefits from the asset). This criterion addresses situations in which the customer clearly controls any work in progress arising from the entity's performance. In effect, the entity has agreed to sell its rights to the asset (i.e., work in progress) as the entity performs (i.e., a continuous sale). An example of which is an entity that has entered into a construction contract to build on the customer's land, stating that any work in progress arising from the entity's performance is generally controlled by the customer (see also discussions in Question 8-11 in 8.1.3.B below). In addition, some construction contracts might also contain clauses indicating that the customer owns any work in progress as the contracted item is being built.

Frequently asked questions

Question 8-4: How does an entity evaluate a customer's right to sell (or pledge) a right to obtain an asset when determining whether the customer controls the asset as it is created or enhanced under FRS 102.23.81(b)?

How we see it

We believe that an entity needs to assess control of the asset that the entity's performance creates or enhances, rather than any contractual rights to obtain the completed asset in the future.

As an example, (and as discussed by the IFRS IC - see Question 8-11 in 8.1.3.B below), in a contract for the sale of real estate that the entity constructs, the asset created is the real estate itself and not the customer's right to obtain the completed real estate in the future. That is, an entity would evaluate whether the customer controls the partially constructed real estate as it is being constructed to determine whether the criterion paragraph 23.81(b) is met. The customer's right to sell (or pledge) a right to obtain a completed asset in the future is not evidence that the customer controls the asset itself as it is being created or enhanced.

8.1.3 Asset with no alternative use and right to payment

In some cases, it might be unclear whether the asset that an entity creates or enhances is controlled by the customer when considering the first two criteria (discussed in 8.1.1 and 8.1.2 above) for evaluating whether control transfers over time. Therefore, a third criterion is provided, which requires revenue to be recognised over time if both of the following two requirements are met: [FRS 102.23.81(c)]

- The entity's performance does not create an asset with alternative use to the entity (see 8.1.3.A below).
- The entity has an enforceable right to payment for performance completed to date (see 8.1.3.B below).

Under IFRS 15, the IASB has clarified how the factors of 'no alternative use' and the 'right to payment' relate to the assessment of control. Since an entity is constructing an asset with no alternative use to the entity, the entity is effectively creating an asset at the direction of the customer. That asset would have little or no value to the entity if the customer were to terminate the contract. As a result, the entity will seek economic protection from the risk of customer termination by requiring the customer to pay for the entity's performance to date in the event of customer termination. The customer's obligation to pay for the entity's performance to date (or the inability to avoid paying for that performance) suggests that the customer has obtained the benefits from the entity's performance. [IFRS 15.BC142].

8.1.3.A No alternative use

The notion of 'alternative use' prevents over time revenue recognition when the entity's performance does not transfer control of the goods or services to the customer over time. This is because when the entity's performance creates an asset with an alternative use to the entity (e.g., standard inventory items), the entity can readily direct the asset to another customer. In those cases, the entity (not the customer) controls the asset as it is created because the customer does not have the ability to direct the use of the asset or restrict the entity from directing that asset to another customer (see 8 above).

Section 23 includes the following requirements for 'alternative use': [FRS 102.23.82, FRS 102.23.83]

Extract from Section 23

- 23.82** An asset created by an entity's performance does not have alternative use if the entity is either:
- (a) restricted contractually from readily directing the asset for another use during its creation or enhancement, because the customer could enforce its rights to that promised asset; or
 - (b) limited practically from readily directing the asset in its completed state for another use, because the entity would incur significant economic losses in doing so.
- 23.83** The assessment of whether an asset has an alternative use to the entity is made at contract inception and shall be reassessed only if there is a contract modification that substantially changes the performance obligation.

In assessing whether an asset has an alternative use to an entity, an entity considers the effects of contractual restrictions and practical limitations on the entity's ability to readily direct that asset for another use. Section 23 and IFRS 15 are consistent in this area. Entities reporting under FRS 102 could consider further guidance provided in IFRS 15 on 'alternative use'. The discussion of such guidance is available in the EY publication, International GAAP®.

Illustration 8-2 below, which is based on Example 15 in IFRS 15, is an example to illustrate an evaluation of practical limitations on directing an asset for another use: [IFRS 15.IE Example 15, IFRS 15.IE73-IE76]

Illustration 8-2: Asset has no alternative use to the entity

An entity enters into a contract with a customer, a government agency, to build a specialised satellite. The entity builds satellites for various customers, such as governments and commercial entities. The design and construction of each satellite differ substantially, based on each customer's needs and the type of technology that is incorporated into the satellite.

At contract inception, the entity assesses whether its performance obligation to build the satellite is a performance obligation satisfied over time in accordance with paragraph 23.81.

As part of that assessment, the entity considers whether the satellite in its completed state will have an alternative use to the entity. Although the contract does not preclude the entity from directing the completed satellite to another customer, the entity would incur significant costs to rework the design and function of the satellite to direct that asset to another customer. Consequently, the asset has no alternative use to the entity (see paragraphs 23.81(c) and 23.82) because the customer-specific design of the satellite limits the entity's practical ability to readily direct the satellite to another customer.

For the entity's performance obligation to be satisfied over time when building the satellite, paragraph 23.81(c) also requires the entity to have an enforceable right to payment for performance completed to date (see 8.1.3.B below). This condition is not illustrated in this example.

The assessment of whether an asset has an alternative use to the entity is made at contract inception. After contract inception, an entity does not update its assessment of whether an asset has an alternative use for any subsequent changes in facts and circumstances, unless the parties approve a contract modification that substantively changes the performance obligation. [FRS 102.23.83]. An entity's lack of an alternative use for an asset does not, by itself, mean that the customer effectively controls the asset. In addition, the entity would also need to determine that it has an enforceable right to payment for performance to date, as discussed in 8.1.3.B below.

Frequently asked questions

Question 8-5: Does an entity consider the completed asset or the work in progress when assessing whether its performance creates an asset with no alternative use under FRS 102.23.81(c)?¹⁶⁷

When an entity evaluates whether its performance creates an asset with no alternative use, it considers whether it could sell the completed asset to another customer without incurring a significant economic loss (i.e., whether it could sell the raw materials or work in progress to another customer is not relevant). This conclusion is supported by the IASB's comment in the Basis for Conclusions on IFRS 15 "that an entity should consider the characteristics of the asset that will ultimately be transferred to the customer". [IFRS 15.BC136].

However, as discussed above and in accordance with paragraph 23.82, if the entity is contractually restricted or has a practical limitation on its ability to direct the asset for another use, the asset would not have an alternative use, regardless of the characteristics of the completed asset. A contractual restriction is substantive if a customer could enforce its rights to the promised asset if the entity sought to direct the asset for another use. A practical limitation exists if an entity would incur a significant economic loss to direct the asset for another use.

Consider the following Illustration:

Illustration 8-3: No alternative use

An entity enters into a contract with a customer to build customised equipment. The customisation of the equipment occurs when the manufacturing process is approximately 75% complete. That is, for approximately the first 75% of the manufacturing process, the in-process asset could be redirected to fulfil another customer's equipment order (assuming no contractual restrictions). However, the equipment cannot be sold in its completed state to another customer without incurring a significant economic loss. The design specifications of the equipment are unique to the customer and the entity would only be able to sell the completed equipment at a significant economic loss.

The entity would evaluate, at contract inception, whether there is any contractual restriction or practical limitation on its ability to readily direct the asset (in its completed state) for another use. Because the entity cannot sell the completed equipment to another customer without incurring a significant economic loss, the entity has a practical limitation on its ability to direct the equipment in its completed state and, therefore, the asset does not have an alternative use. However, before concluding that revenue would be recognised over time, an entity must evaluate whether it has an enforceable right to payment (see 8.1.3.B below).

8.1.3.B Enforceable right to payment for performance completed to date

To evaluate whether it has an enforceable right to payment for performance completed to date, the entity considers the terms of the contract and any laws or regulations that relate to it. Section 23 does not specify whether the right to payment for performance completed to date need to be for a fixed amount. However, Section 23 clarifies that at any time during the contract term, an entity must be entitled to an amount that at least compensates the entity for performance completed to date, even if the contract is terminated by the customer (or another party) for reasons other than the entity's failure to perform as promised. [FRS 102.23.84]. Also, under IFRS 15, the IASB concluded that a customer's obligation to pay for the entity's performance is an indicator that the customer has obtained benefit from the entity's performance. [IFRS 15.BC142].

Section 23 states the following about an entity's right to payment for performance completed to date: [FRS 102.23.84]

¹⁶⁷ Based on FASB TRG Agenda paper no. 56, *Over Time Revenue Recognition*, dated 7 November 2016 and FASB TRG Agenda paper no. 60, November 2016 Meeting - Summary of Issues Discussed and Next Steps, dated 31 January 2017.

Extract from Section 23

23.84 An enforceable right to payment for performance completed to date may arise from specific terms in the contract or laws that apply to that contract. At all times throughout the duration of the contract, the entity must be entitled to an amount that at least compensates the entity for performance completed to date if the contract is terminated for reasons other than the entity's failure to perform as promised. An amount that would compensate an entity for performance completed to date would be an amount that approximates the selling price of the goods or services transferred to date (eg recovery of the cost incurred by the entity in satisfying the performance obligation plus a reasonable profit margin).

The enforceable right to payment criterion has two components that an entity must assess:

- The amount that the customer would be required to pay.
- And
- What it means to have the enforceable right to payment.

Section 23 and IFRS 15 are consistent in this area. Entities reporting under FRS 102 could consider further guidance provided in IFRS 15 on 'enforceable right to payment'. The discussion of such guidance is available in the EY publication, International GAAP®. Illustration 8-4 below, which is based on Example 14 in IFRS 15, is an example which depicts an entity providing consulting services that will take the form of a professional opinion upon the completion of the services. [IFRS 15.IE Example 14, IFRS 15.IE69-IE72]. In this example, the entity's performance obligation meets the no alternative use and right to payment criterion:

Illustration 8-4: Assessing alternative use and right to payment

An entity enters into a contract with a customer to provide a consulting service that results in the entity providing a professional opinion to the customer. The professional opinion relates to facts and circumstances that are specific to the customer. If the customer were to terminate the consulting contract for reasons other than the entity's failure to perform as promised, the contract requires the customer to compensate the entity for its costs incurred plus a 15% margin. The 15% margin approximates the profit margin that the entity earns from similar contracts.

The entity considers the criterion in paragraph 23.81(a) to determine whether the customer simultaneously receives and consumes the benefits of the entity's performance (see 8.1.1 above). If the entity were to be unable to satisfy its obligation and the customer hired another consulting firm to provide the opinion, the other consulting firm would need to substantially re-perform the work that the entity had completed to date, because the other consulting firm would not have the benefit of any work in progress performed by the entity. The nature of the professional opinion is such that the customer will receive the benefits of the entity's performance only when the customer receives the professional opinion. Consequently, the entity concludes that the criterion in paragraph 23.81(a).

However, the entity's performance obligation meets the criterion in paragraph 23.81(c) and is a performance obligation satisfied over time because of both of the following factors:

- (a) in accordance with paragraph 23.82, the development of the professional opinion does not create an asset with alternative use to the entity because the professional opinion relates to facts and circumstances that are specific to the customer. Therefore, there is a practical limitation on the entity's ability to readily direct the asset to another customer.
- (b) in accordance with paragraph 23.84, the entity has an enforceable right to payment for its performance completed to date for its costs plus a reasonable margin, which approximates the profit margin in other contracts.

Consequently, the entity recognises revenue over time by measuring the progress towards complete satisfaction of the performance obligation in accordance with paragraphs 23.98 to 23.104 (see 8.1.4 below).

Illustration 8-5 below, which is based on Example 16 in IFRS 15, illustrates a contract in which the fixed payment schedule is not expected to correspond, at all times throughout the contract, to the amount that would be necessary to compensate the entity for performance completed to date. [IFRS 15.IE Example 16, IFRS 15.IE77-IE80]. Accordingly, the entity concludes that it does not have an enforceable right to payment for performance completed to date as follows:

Illustration 8-5: Enforceable right to payment for performance completed to date

An entity enters into a contract with a customer to build an item of equipment. The payment schedule in the contract specifies that the customer must make an advance payment at contract inception of 10% of the contract price, regular payments throughout the construction period (amounting to 50% of the contract price) and a final payment of 40% of the contract price after construction is completed and the equipment has passed the prescribed performance tests. The payments are non-refundable unless the entity fails to perform as promised. If the customer terminates the contract, the entity is entitled only to retain any progress payments received from the customer. The entity has no further rights to compensation from the customer.

At contract inception, the entity assesses whether its performance obligation to build the equipment is a performance obligation satisfied over time in accordance with paragraph 23.81.

As part of that assessment, the entity considers whether it has an enforceable right to payment for performance completed to date in accordance with paragraphs 23.81(c) and 23.84 if the customer were to terminate the contract for reasons other than the entity's failure to perform as promised. Even though the payments made by the customer are non-refundable, the cumulative amount of those payments is not expected, at all times throughout the contract, to at least correspond to the amount that would be necessary to compensate the entity for performance completed to date. This is because at various times during construction the cumulative amount of consideration paid by the customer might be less than the selling price of the partially completed item of equipment at that time. Consequently, the entity does not have a right to payment for performance completed to date.

Because the entity does not have a right to payment for performance completed to date, the entity's performance obligation is not satisfied over time in accordance with paragraph 23.81(c). Accordingly, the entity does not need to assess whether the equipment would have an alternative use to the entity. The entity also concludes that it does not meet the criteria in paragraphs 23.81(a) or 23.81(b) and thus, the entity accounts for the construction of the equipment as a performance obligation satisfied at a point in time in accordance with paragraph 23.85 (see 8.2 below).

Illustration 8-6 below contrasts similar situations and illustrates when revenue would be recognised over time (see 8.1 above) versus at a point in time (see 8.2 below). Specifically, Illustration 8-6, which is based on Example 17 in IFRS 15, illustrates the evaluation of the 'no alternative use' and 'right to payment for performance to date' concepts, as follows. [IFRS 15.IE Example 17, IFRS 15.IE81-IE90].

Illustration 8-6: Assessing whether a performance obligation is satisfied at a point in time or over time

An entity is developing a multi-unit residential complex. A customer enters into a binding sales contract with the entity for a specified unit that is under construction. Each unit has a similar floor plan and is of a similar size, but other attributes of the units are different (for example, the location of the unit within the complex).

Case A-Entity does not have an enforceable right to payment for performance completed to date

The customer pays a deposit upon entering into the contract and the deposit is refundable only if the entity fails to complete construction of the unit in accordance with the contract. The remainder of the contract price is payable on completion of the contract when the customer obtains physical possession of the unit. If the customer defaults on the contract before completion of the unit, the entity only has the right to retain the deposit.

At contract inception, the entity applies paragraph 23.81(c) to determine whether its promise to construct and transfer the unit to the customer is a performance obligation satisfied over time. The entity determines that it does not have an enforceable right to payment for performance completed to date because, until construction of the unit is complete, the entity only has a right to the deposit paid by the customer.

Because the entity does not have a right to payment for work completed to date, the entity's performance obligation is not a performance obligation satisfied over time in accordance with paragraph 23.81(c). Instead, the entity accounts for the sale of the unit as a performance obligation satisfied at a point in time in accordance with paragraph 23.85 (see 8.2 below).

Case B-Entity has an enforceable right to payment for performance completed to date

The customer pays a non-refundable deposit upon entering into the contract and will make progress payments during construction of the unit. The contract has substantive terms that preclude the entity from being able to direct the unit to another customer. In addition, the customer does not have the right to terminate the contract unless the entity fails to perform as promised. If the customer defaults on its obligations by failing to make the promised progress payments as and when they are due, the entity would have a right to all of the consideration promised in the contract if it completes the construction of the unit. The courts have previously upheld similar rights that entitle developers to require the customer to perform, subject to the entity meeting its obligations under the contract.

At contract inception, the entity applies paragraph 23.81(c) to determine whether its promise to construct and transfer the unit to the customer is a performance obligation satisfied over time. The entity determines that the asset (unit) created by the entity's performance does not have an alternative use to the entity because the contract precludes the entity from transferring the specified unit to another customer. The entity does not consider the possibility of a contract termination in assessing whether the entity is able to direct the asset to another customer.

The entity also has a right to payment for performance completed to date in accordance with paragraph 23.84. This is because if the customer were to default on its obligations, the entity would have an enforceable right to all of the consideration promised under the contract if it continues to perform as promised.

Therefore, the terms of the contract and the practices in the legal jurisdiction indicate that there is a right to payment for performance completed to date. Consequently, the criteria in paragraph 23.81(c) are met and the entity has a performance obligation that it satisfies over time. To recognise revenue for that performance obligation satisfied over time, the entity measures its progress towards complete satisfaction of its performance obligation in accordance with paragraphs 23.98 to 23.104 (see 8.1.4 below).

In the construction of a multi-unit residential complex, the entity might have many contracts with individual customers for the construction of individual units within the complex. The entity would account for each contract separately. However, depending on the nature of the construction, the entity's performance in undertaking the initial construction works (i.e., the foundation and the basic structure), as well as the construction of common areas, might need to be reflected when measuring its progress towards complete satisfaction of its performance obligations in each contract.

Case C-Entity has an enforceable right to payment for performance completed to date

The same facts as in Case B apply to Case C, except that in the event of a default by the customer, either the entity can require the customer to perform as required under the contract or the entity can cancel the contract in exchange for the asset under construction and an entitlement to a penalty of a proportion of the contract price.

Notwithstanding that the entity could cancel the contract (in which case the customer's obligation to the entity would be limited to transferring control of the partially completed asset to the entity and paying the penalty prescribed), the entity has a right to payment for performance completed to date because the entity could also choose to enforce its rights to full payment under the contract. The fact that the entity could choose to cancel the contract in the event the customer defaults on its obligations would not affect that assessment, provided that the entity's rights to require the customer to continue to perform as required under the contract (i.e., pay the promised consideration) are enforceable. As discussed above, this is consistent with the application guidance in paragraph B11 of IFRS 15.

Frequently asked questions

Question 8-6: How does an entity determine whether it has an enforceable right to payment under FRS 102.23.81(c)?¹⁶⁸

Generally, entities need to evaluate the contractual provisions to determine whether the right to payment compensates the entity for performance completed to date. For example, a contract might not explicitly provide an entity with an enforceable right to payment for anything other than finished goods. However, if the termination provisions in the contract allow for a notice period (e.g., 60 days) that would provide sufficient time for an entity to move all work in progress to the finished goods stage, it is likely that an entity would conclude that the contract provides for an enforceable right to payment for performance completed to date. In addition, an entity considers any legislation or legal precedent that could supplement or override any contractual terms.

¹⁶⁸ Based on FASB TRG Agenda paper no. 56, *Over Time Revenue Recognition*, dated 7 November 2016.

The linkage amongst right to payment, measure of progress and the timing of the customisation of a good would also need to be considered. For example, an entity might not always have an enforceable right to payment at contract inception, such as when an entity is producing standard goods (i.e., inventory) that might be customised for a customer towards the end of the production process. Generally, an entity would need to consider whether it has an enforceable right to payment related to its performance completed to date. If the entity's performance obligation is to customise its standard goods for a customer, generally, the entity would evaluate whether it has an enforceable right to payment at the point that the entity begins to satisfy the performance obligation to customise the goods for the customer. That is, because the right to payment is for performance completed to date, an entity's performance needs to coincide with how it defines the nature of its performance obligation and its measure of progress toward satisfaction of that performance obligation.

Question 8-7: To have an enforceable right to payment for performance completed to date, does an entity need to have a present unconditional right to payment?

The contractual payment terms in a contract might not always align with an entity's enforceable rights to payment for performance completed to date. As a result, an entity does not need to have a present unconditional right to payment. Instead, it must have an enforceable right to demand and/or retain payment for performance completed to date upon customer termination without cause. For example, consider a consulting contract that requires an entity to provide a report at the end of the project. In return, the entity earns a fixed amount, which is due and payable to the entity when it delivers the report. Assume that the entity is performing under the contract and that the contract (or the law) requires the customer to compensate the entity for its performance completed to date. In that situation, the entity would have an enforceable right to payment for performance completed to date, even though an unconditional right to the fixed amount only exists at the time the report is provided to the customer. This is because the entity has a right to demand and retain payment for performance completed to date.

The above discussion is consistent with the clarification made by the IASB in the Basis for Conclusions on IFRS 15. [IFRS 15.BC145].

Question 8-8: Does an entity have a right to payment for performance completed to date if the entity receives a non-refundable upfront payment that represents the full transaction price?

Such a payment would represent an entity's right to payment for performance completed to date provided that the entity's right to retain and not refund the payment is enforceable upon termination by the customer. This is because a full upfront payment would at least compensate an entity for the work completed to date throughout the contract. This is consistent with the observations of IASB in the Basis for Conclusions on IFRS 15. [IFRS 15.BC146]. Conversely, if the non-refundable upfront payment does not represent the full transaction price, an entity will have to apply judgement to determine whether the upfront payment provides the entity with a right to payment for performance completed to date in the event of a contract termination.

Question 8-9: Can an entity conclude it has an enforceable right to payment for performance completed to date when a contract is priced at a loss?

The specific facts and circumstances of the contract must be considered to determine whether an entity has an enforceable right to payment for performance completed to date when a contract is priced at a loss. As discussed above, Section 23 states that, if a contract is terminated for reasons other than the entity's failure to perform as promised, the entity must be entitled to an amount that at least compensates it for its performance to date. Furthermore, Section 23 states that "An amount that would compensate an entity for performance completed to date would be an amount that approximates the selling price of the goods or services transferred to date (for example, recovery of the costs incurred by an entity in satisfying the performance obligation plus a reasonable profit margin)." [FRS 102.23.84]. Accordingly, it is unclear whether an entity could have an enforceable right to payment for performance completed to date if the contract was priced at a loss.

How we see it

We believe that the example in paragraph 23.84 of cost recovery plus a reasonable profit margin does not preclude an entity from having an enforceable right to payment even if the contract is priced at a loss. Rather, we believe an entity needs to evaluate whether it has an enforceable right to receive an amount that approximates the selling price of the goods or services for performance completed to date in the event the customer terminates the contract.

Consider the following Illustration below (which is based on an example from the American Institute of Certified Public Accountants (AICPA) Audit and Accounting Guide, Revenue Recognition):¹⁶⁹

Illustration 8-7: Determination of enforceable right to payment for a contract priced at a loss

Customer X requests bids for the design of a highly customised system. The customer expects to award subsequent contracts for systems over the next 10 years to the entity that wins the design contract. Contractor A is aware of the competition and knows that in order to win the design contract it must bid the contract at a loss. That is, Contractor A is willing to bid the design contract at a loss due to the significant value in future expected orders.

Contractor A wins the contract with a value of £100 and estimated costs to complete of £130. Contractor A has determined that the contract contains a single performance obligation and that its performance does not create an asset with an alternative use. The contract is non-cancellable, however, the contract terms stipulate that if the customer terminates the contract, Contractor A would be entitled to payment for work completed to date. The payment amount would be equal to a proportional amount of the price of the contract based upon the performance of work done to date. For example, if at the termination date Contractor A was 50% complete (i.e., incurred £65 of costs), it would be entitled to a £50 payment from Customer X (i.e., 50% of £100 contract value).

In this example, we believe Contractor A has an enforceable right to payment for performance completed to date. This is in accordance with paragraph 23.81(c) because Contractor A is entitled to an amount that approximates the selling price of the good or service for performance completed to date in the event the customer terminates the contract.

See 10.2 below regarding accounting for anticipated losses on contracts.

Question 8-10: Can an entity have an enforceable right to payment for performance completed to date if it is not entitled to a reasonable profit margin on standard inventory materials that were purchased but not yet used in completing the performance obligation?

It is possible for an entity to have an enforceable right to payment for performance completed to date if it is not entitled to a reasonable profit margin on standard inventory materials that were purchased, but not yet used in completing the performance obligation. Consider an example in which an entity agrees to construct a specialised asset for a customer that has no alternative use to the entity. The construction of this asset requires the use of standard inventory materials that could be used interchangeably on other projects of the entity until they are integrated into the production of the customer's asset. The contract with the customer entitles the entity to reimbursement of costs incurred plus a reasonable profit margin if the contract is terminated. However, the contract specifically excludes reimbursement of standard inventory purchases before they are integrated into the customer's asset. As previously discussed, Section 23 states that, at any time during the contract, an entity must be entitled to an amount that compensates the entity for performance completed to date (as defined in paragraph 23.84) if the contract is terminated for reasons other than the entity's failure to perform. However, in this example, the standard inventory materials have not yet been used in fulfilling the performance obligation, so the entity does not need to have an enforceable right to payment in relation to these materials. The entity could also repurpose the materials for use in other contracts with customers.

The entity will still need to evaluate whether it has an enforceable right to payment for performance completed to date once the standard inventory materials are used in fulfilling the performance obligation. [FRS 102.23.84].

Question 8-11: What does an entity consider when assessing the over time criteria for the sale of a real estate unit?

Whilst decisions of the IFRS IC do not apply directly to entities reporting under FRS 102, due to the similarities of accounting requirements between Section 23 and IFRS 15 in this area, the analysis set out below is relevant to entities considering a similar fact pattern under FRS 102 (see 1 above).

The IFRS IC received three requests regarding the assessment of the over time criteria in relation to contracts for the sale of a real estate unit. At its March 2018 meeting, the IFRS IC concluded that the principles and requirements in IFRS 15 provide an adequate basis for an entity to determine whether to recognise revenue over time, or at a point in time, including whether it has an enforceable right to payment for performance completed to date for a contract for the sale of a real estate unit. Consequently, the IFRS IC decided not to add these matters to its agenda.¹⁷⁰

¹⁶⁹ See AICPA guide, *Revenue Recognition*, Chapter 3, *Aerospace and Defense Entities*, paragraphs 3.5.18 - 3.5.23.

¹⁷⁰ [IFRIC Update](#), March 2018, available on the IFRS Foundation's website.

The agenda decisions included the following reminders:

- An entity accounts for contracts within the scope of IFRS 15 only when all the criteria in IFRS 15.9 are met, which includes the collectability criterion (Section 23 provides similar criteria to be met in paragraph 23.7 – see 4.1 above).
- Before considering the over time criteria, an entity is required to apply paragraphs 22-30 of IFRS 15 to identify whether each promise to transfer a good or service to the customer is a performance obligation (Section 23 provides similar requirements in paragraphs 23.17-23.25 – (see 5.2 above for further discussion).
- An entity assesses the over time criteria in paragraph 35 of IFRS 15 at contract inception. Paragraph 35 of IFRS 15 specifies that an entity transfers control of a good or service over time and, therefore, satisfies a performance obligation and recognises revenue over time, if any of the three criteria is met. If an entity does not satisfy a performance obligation over time, it satisfies the performance obligation at a point in time (Section 23 provides similar criteria to be met in paragraph 23.81 – see 8.1 above).

The agenda decisions also set out the following in relation to the over time criteria.

Criterion (a)

According to IFRS 15.35(a) (or FRS 102.23.81(a)), an entity recognises revenue over time if the customer simultaneously receives and consumes the benefits provided by the entity's performance as the entity performs. This criterion is not applicable in a contract for the sale of a real estate unit that the entity constructs because the real estate unit created by the entity's performance is not consumed immediately.

Criterion (b)

IFRS 15.35(b) (or FRS 102.23.81(b)) specifies that an entity recognises revenue over time if the customer controls the asset that an entity's performance creates or enhances as the asset is created or enhanced. Control refers to the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. The IASB included this criterion to "address situations in which an entity's performance creates or enhances an asset that a customer *clearly* controls as the asset is created or enhanced". [IFRS 15.BC129]. Therefore, all relevant facts and circumstances need to be considered by an entity when assessing whether there is evidence that the customer clearly controls the asset that is being created or enhanced (e.g., the part-constructed real estate unit) as it is created or enhanced. None of the facts and circumstances is determinative.

The IFRS IC observed that "in a contract for the sale of real estate that the entity constructs, the asset created is the real estate itself. It is not, for example, the right to obtain the real estate in the future. The right to sell or pledge a right to obtain real estate in the future is not evidence of control of the real estate itself".¹⁷¹ That is, it is important to apply the requirements for control to the asset that the entity's performance creates or enhances (see Question 8-4 in 8.1.2 above).

Criterion (c)

The IASB developed this third criterion because, in some cases, it might not be clear whether the asset that is created or enhanced is controlled by the customer. IFRS 15.35(c) (or FRS 102.23.81(c)) requires an entity to determine whether: (a) the asset created by an entity's performance does not have an alternative use to the entity; and (b) the entity has an enforceable right to payment for performance completed to date. However, the underlying objective of this criterion is still to determine whether the entity is transferring control of goods or services to the customer as it is creating the asset for that customer. The agenda decisions reiterate that:

- The asset being created does not have an alternative use to the entity if the entity is restricted contractually from readily directing the asset for another use during the asset's creation or if it is limited practically from readily directing the asset in the completed state for another use. [IFRS 15.36, FRS 102.23.82].¹⁷²

¹⁷¹ [IFRIC Update](#), March 2018, available on the IFRS Foundation's website.

¹⁷² [IFRIC Update](#), March 2018, available on the IFRS Foundation's website.

- The entity has an enforceable right to payment if it is entitled to an amount that at least compensates it for performance completed to date were the contract to be terminated by the customer for reasons other than the entity's failure to perform as promised. [IFRS 15.37, FRS 102.23.84].¹⁷³ The entity must be entitled to this amount at all times throughout the duration of the contract and this amount must at least approximate the selling price of the goods or services transferred to date. That is, it is not meant to refer to compensation for only the entity's potential loss of profit were the contract to be terminated. The IFRS IC observed that "it is the payment the entity is entitled to receive under the contract with the customer relating to performance under that contract that is relevant in determining whether the entity has an enforceable right to payment for performance completed to date". As discussed in Question 8-12 below, the IFRS IC also observed that an entity does not consider consideration it might receive upon resale of the asset if the original customer were to terminate the contract.¹⁷⁴

In determining whether it has an enforceable right to payment, an entity considers the contractual terms as well as any legislation or legal precedent that could supplement or override those contractual terms. While an entity does not need to undertake an exhaustive search for evidence, it is not appropriate for an entity to ignore evidence of relevant legal precedent that is available to it or to anticipate evidence that might become available in the future. The IFRS IC also observed that "the assessment ... is focused on the existence of the right and its enforceability. The likelihood that the entity would exercise the right is not relevant to this assessment. Similarly, if a customer has the right to terminate the contract, the likelihood that the customer would terminate the contract is not relevant to this assessment".¹⁷⁵

Question 8-12: Does an entity contemplate consideration it might receive from the potential resale of the asset to determine whether an enforceable right to payment for performance completed to date exists?

How we see it

We believe that only the payment the entity is entitled to receive relating to performance under the current customer contract is relevant in determining whether the entity has an enforceable right to payment for performance completed to date.

As an example, and as discussed by the IFRS IC (see Question 8-11 above), an entity would not look to potential consideration it might receive upon resale of the asset if the original customer were to terminate the contract. This is because the resale of an asset typically represents a separate contract with a different customer and, therefore, is not relevant to determining the existence and enforceability of a right to payment with the existing customer.

Consider the following Illustration (which is based on an example discussed by the IFRS IC):¹⁷⁶

Illustration 8-8: Determining whether an enforceable right to payment exists when cancellation by a customer obliges an entity to resell the asset

Entity X, a construction company, enters into a contract with a customer to sell a real estate unit in a residential multi-unit complex before the entity constructs the unit. The entity determines that it has a single performance obligation to construct and deliver the real estate unit as specified in the contract. The customer pays 10% of the purchase price at contract inception and the remainder after construction is complete. The entity retains legal title to the real estate unit (and any land attributed to it) until the customer has paid the purchase price after construction is complete.

Under the contract, the customer has the right to cancel the contract at any time before construction is complete. However, if it does, the entity is legally required to make reasonable efforts to resell the real estate unit to a third party. If the entity finds a new buyer, a new contract is executed and the original contract is not novated to the third party. If the resale price in the contract with the third party is less than the original purchase price (plus selling costs), the customer is legally obliged to pay the difference to the entity.

The entity concludes that the over time criteria in paragraphs 23.81(a) and 23.81(b) are not met. In considering the over time criterion in paragraph 23.81(c), the entity determines that its performance does not create an asset with an alternative use to the entity during the period of construction. It, therefore, considers whether it has an enforceable right to payment.

When determining whether an entity has an enforceable right to payment, an entity considers the payment to which it is entitled under the existing contract with the customer, which relates to its performance under that contract. It does not consider the consideration it would receive from a third party in a potential resale contract. Such consideration relates to that resale contract and is not payment for performance under the existing contract with the customer.

Since Entity X cannot consider the resale contract, the only future payment to which it has rights under the existing contract with the customer is for the difference between the resale price of the unit, if any, and its original purchase price (plus selling costs). That payment, together with the deposit received, does not (at all times throughout the duration of the contract) entitle the entity to an amount that at least approximates the selling price of the part-constructed real estate unit (i.e., it does not compensate for performance completed to date). Therefore, Entity X does not have an enforceable right to payment for performance completed to date. Accordingly, none of the over time criteria are met and the entity would therefore recognise revenue at a point in time in accordance with paragraph 23.85 (see 8.2 below).

8.1.4 Measuring progress

When an entity has determined that a performance obligation is satisfied over time, Section 23 requires the entity to recognise revenue over time by measuring its progress towards complete satisfaction of that performance obligation. [FRS 102.23.98]. In doing so, an entity is required to select a single revenue recognition method for the relevant performance obligation that faithfully depicts the entity's performance in transferring control of the goods or services to a customer. An entity applies the method selected consistently to similar performance obligations and in similar circumstances. In addition, at the end of each reporting period, an entity is required to remeasure its progress toward completion of the performance obligation.

Section 23 provides the following requirements: [FRS 102.23.99, FRS 102.23.100, FRS 102.23.101]

Extract from Section 23

- 23.99** An entity shall select a method of measuring progress that depicts the entity's performance in transferring control of goods or services promised to a customer (ie the satisfaction of the performance obligation). An entity shall apply a single method of measuring progress for each performance obligation satisfied over time and shall apply that method consistently to similar performance obligations and in similar circumstances.
- 23.100** At the end of each reporting period, an entity shall remeasure its progress towards complete satisfaction of a performance obligation satisfied over time and update its measure of progress. Such changes to an entity's measure of progress shall be accounted for as a change in accounting estimate in accordance with paragraphs 10.14D to 10.18.
- 23.101** In determining a method of measuring progress, an entity shall consider the nature of the good or service that the entity will transfer to the customer. Appropriate methods of measuring progress include methods that recognise revenue based on:
- (a) measurements of the value to the customer of the goods or services transferred to date relative to the remaining goods or services to be transferred under the contract (referred to as output methods); and
 - (b) the entity's efforts or inputs to the satisfaction of a performance obligation relative to the total expected inputs to satisfy the performance obligation (referred to as input methods).

174 [IFRIC Update](#), March 2018, available on the IFRS Foundation's website.

175 [IFRIC Update](#), March 2018, available on the IFRS Foundation's website.

176 [IFRIC Update](#), March 2018, available on the IFRS Foundation's website.

While Section 23 requires an entity to remeasure its progress towards satisfaction of an over time performance obligation at the end of each reporting period related to the measure of progress selected, it does not permit a change in method. A performance obligation is accounted for using the method the entity selects (i.e., either the specific input or output method it has chosen) from inception until the performance obligation has been fully satisfied. It would not be appropriate for an entity to start recognising revenue based on an input measure and later switch to an output measure (or to switch from one input method to a different input method). Furthermore, Section 23 requires that the selected method be applied to similar contracts in similar circumstances. It also requires that a single method of measuring progress be used for each performance obligation. [FRS 102.23.99]. Applying more than one method to measure performance would effectively override the guidance on identifying performance obligations.

When measuring progress of an over time performance obligation, the objective is to faithfully depict the entity's performance in transferring control of the goods or services to a customer (i.e., the satisfaction of an entity's performance obligation). [FRS 102.23.99]. To achieve this objective, an entity would need to exclude from the measure of progress any goods or services for which the entity does not transfer control to a customer. Conversely, an entity must include in the measure of progress any goods or services for which the entity does transfer control to a customer when satisfying that performance obligation.

Changes in circumstances over time might require an entity to update its measure of progress to reflect any changes in the outcome of the performance obligation. For example, an entity might determine that total expected costs are greater than its original expectation. If the entity was using an input method based on costs incurred, it would need to update its measure-of-progress calculation with this new information.

Changes to an entity's measure of progress are accounted for in accordance with the requirements in Section 10 for changes in accounting estimates (i.e., paragraphs 10.14D to 10.18). [FRS 102.23.100]. Section 10 requires a change in accounting estimate to be accounted for prospectively, i.e., by adjusting the carrying amount of an asset, liability or item of equity in the statement of financial position; and recognising the change by including it "in profit or loss in: (1) the period of the change, if the change affects that period only; or (2) the period of the change and future periods, if the change affects both".

[FRS 102.10.16, FRS 102.23.17]. A change in accounting estimate, by its nature, does not relate to prior periods and is not the correction of an error. The disclosure requirements in Section 10 related to changes in accounting estimates are also applicable (see Chapter 9 at 3.4.1).

If an entity does not have a reasonable basis to measure its progress, revenue cannot be recognised until progress can be reasonably measured. However, if an entity cannot reasonably measure its progress towards complete satisfaction of a performance obligation (e.g., in the early stages of a contract), but the entity expects to recover the costs incurred in satisfying that performance obligation, Section 23 requires the entity to recognise revenue only to the extent of the costs incurred. [FRS 102.23.104]. Subsequently, an entity would stop using this method once it is able to reasonably measure its progress towards satisfaction of the performance obligation. A cumulative catch-up adjustment would be recognised in the period in which the entity is able to reasonably measure its progress.

Furthermore, an entity's inability to measure progress would not mean that costs incurred would also be deferred. That is, costs cannot be deferred in these situations, unless they meet the criteria for capitalisation under paragraph 23.117 (see 10.3.2 below).

Section 23 provides two methods for recognising revenue on contracts involving the transfer of goods or services over time: input methods and output methods. In determining the best method for measuring progress that faithfully depicts an entity's performance, an entity needs to consider both the nature of the promised goods or services and the nature of the entity's performance. [FRS 102.23.101]. In other words, an entity's selection of a method to measure its performance needs to be consistent with the nature of its promise to the customer and what the entity has agreed to transfer to the customer. To illustrate this concept, consider a contract for health club services. Regardless of when, or how frequently, the customer uses the health club, the entity's obligation to stand ready for the contractual period does not change. Furthermore, the customer is required to pay the fee regardless of whether the customer uses the health club. As a result, the entity would need to select a measure of progress based on its service of standing ready to make the health club available. Illustration 8-10 in 8.1.4.E below illustrates how a health club might select this measure of progress.

An entity is required to recognise as revenue the amount of the transaction price it allocates to each performance obligation in a contract when or as it transfers the promised goods or services to customers, regardless of whether the consideration is paid upfront or the entity has a conditional or unconditional right to receive the consideration in the future. An entity that has not yet received the consideration to which it is entitled for transferring promised goods or services recognises a corresponding receivable if its right to payment is unconditional or a contract asset if its right to payment is conditional (see 11.1 below for further discussion). This requirement, which applies to both revenue recognised over time and at a point in time, does not limit the arrangement consideration otherwise allocable to a satisfied performance obligation to the amount that is not contingent on future performance. See 7 above for further discussion of allocating the transaction price to the performance obligations.

8.1.4.A Output methods

Appropriate methods of measuring progress include methods that recognise revenue based on measurements of the value to the customer of the goods or services transferred to date relative to the remaining goods or services to be transferred under the contract (referred to as output methods).

[FRS 102.23.101(a)]. Under Section 23, common output methods, and circumstances when they might be appropriate, include: [FRS 102.23.102]

- An output method based on surveys of work completed, when the surveys provide an objective measure of an entity's performance to date.
- An output method based on units delivered, when each item transfers an equal amount of value to the customer on delivery and partly-completed items are not significant (see further discussion below).
And
- An output method based on time elapsed, when control of the goods or services is transferred evenly over time.

In addition to above, IFRS 15 mentions other examples of output methods such as appraisals of results achieved, milestones reached and units produced.

When an entity evaluates whether to apply an output method to measure its progress, the entity considers whether the output selected would faithfully depict the entity's performance towards complete satisfaction of the performance obligation. An output method would not provide a faithful depiction of the entity's performance if the output selected would fail to measure some of the goods or services for which control has transferred to the customer.

Under IFRS 15, the IASB discussed two output methods (i.e., units of delivery and units of production) that are not considered to be appropriate in many instances if the entity's performance obligation is satisfied over time. [IFRS 15.BC165]. Refer to the EY publication, International GAAP®, for the detailed discussion.

It is important to note that 'value to the customer' in paragraph 23.101(a) refers to an objective method of measuring the entity's performance in the contract. Aligned with IFRS 15, this is not intended to be assessed by reference to the market prices, stand-alone selling prices or the value a customer perceives to be embodied in the goods or services. [IFRS 15.BC163]. This concept of value is different from the concept of value an entity uses to determine whether it can use the 'right to invoice' practical expedient, as discussed in 8.1.4.B below. When an entity determines whether items individually transfer an equal amount of value to the customer (i.e., when applying paragraph 23.101(a)), the evaluation related to how much, or what proportion, of the goods or services (i.e., quantities) have been delivered (but not the price). For example, for the purposes of applying paragraph 23.101(a), an entity might consider the amount of goods or services transferred to date in proportion to the total expected goods or services to be transferred when measuring progress. However, if this measure of progress results in material work in progress at the end of the reporting period, it would not be appropriate, as discussed above.

See the discussion in 8.1.4.B below regarding the evaluation of 'value to the customer' in the context of evaluating the 'right to invoice' practical expedient in paragraph 23.103.

8.1.4.B Output methods: practical expedient for measuring progress towards satisfaction of a performance obligation

Section 23 provides a practical expedient for an entity that is using an output method to measure progress towards completion of a performance obligation that is satisfied over time. The practical expedient only applies if an entity has a right to consideration from a customer in amount that corresponds directly with the value to the customer of the entity's performance work to date. In that situation, the practical expedient allows an entity to recognise revenue in the amount for which it has the right to invoice (i.e., the 'right to invoice' practical expedient). For example, an entity could use this practical expedient in a service contract in which the entity bills a fixed amount for each hour of service provided. [FRS 102.23.103].

IFRS 15 also provides similar 'right to invoice' practical expedient. Further discussions on other considerations when applying such practical expedient are available in the EY publication International GAAP®.

8.1.4.C Input methods

Input methods recognise revenue based on an entity's efforts or inputs towards satisfying a performance obligation relative to the total expected efforts or inputs to satisfy the performance obligation.

[FRS 102.23.101(b)]. Under Section 23, common input methods, and circumstances when they might be appropriate, include: [FRS 102.23.102]

- An input method based on time elapsed, when an entity's efforts or inputs are expended evenly throughout the performance period.
- An input method based on costs incurred, when the method includes costs that reflect an entity's performance to date and contribute to the entity's progress in transferring control of goods or services promised to a customer (see below and further discussion in 8.1.4.D below).
- And
- An input method based on labour hours expended, when there is a relationship between labour hours expended and the transfer of control of goods or services to a customer.

In addition to above, IFRS 15 mentions other examples of input methods such as resources consumed and machine hours used.

As discussed in 8.1.4 above, an entity is required to select a single measure of progress for each performance obligation that depicts the entity's performance in transferring control of the goods or services promised to a customer. If an entity's efforts or inputs are used evenly throughout the entity's performance period, a time-based measure that results in a straight-line recognition of revenue might be appropriate. However, there might be a disconnect between an entity's inputs (e.g., cost of non-distinct goods included in a single performance obligation satisfied over time) and the depiction of an entity's performance to date. In these situations, adjustments to the measure of progress might be necessary. See 8.1.4.D below for additional discussion.

Regardless of which method an entity selects, it excludes from its measure of progress any goods or services for which control has not transferred to the customer. Likewise, if an entity uses an input method based on costs incurred, it excludes from its measure of progress those costs that do not reflect its performance in transferring a good or service to the customer (e.g., borrowing costs incurred, which it incurs to fund its activities, rather than to fulfil a performance obligation).

8.1.4.D Input methods: adjustments to the measure of progress based on an input method

As discussed in 8.1.4.C above, an entity could apply an input method based on costs incurred when the method includes costs that reflect an entity's performance to date and contribute to the entity's progress in transferring control of goods or services promised to a customer. [FRS 102.23.102(e)]. Consequently, an entity would exclude the effects of any inputs that do not depict the entity's performance in transferring control of goods or services to the customer. Therefore, when using a cost-based input method, an adjustment to the measure of progress might be required in the following circumstances:

- When a cost incurred does not contribute to an entity's progress in satisfying the performance obligation.
- Or
- When a cost incurred is not proportionate to the entity's progress in satisfying the performance obligation.

The principles in paragraph 23.101(e) are consistent with those in IFRS 15. Hence, entities reporting under FRS 102 could consider application guidance in IFRS 15.B19 on adjustments to the measure of progress that might be necessary when using a cost-based input method. A detailed discussion of such application guidance is available in the EY publication, International GAAP®.

8.1.4.E Examples of measures of progress

The following Illustration shows some possible considerations when determining an appropriate measure of progress:

Illustration 8-9: Choosing the measure of progress

A ship-building entity enters into a contract to build 15 vessels for a customer over a three-year period. The contract includes both design and production services. The entity has not built a vessel of this type in the past. In addition, the entity expects that the first vessels might take longer to produce than the last vessels because, as the entity gains experience building the vessels, it expects to be able to construct the vessels more efficiently.

Assume that the entity has determined that the design and production services represent a single performance obligation. In this situation, it is likely that the entity would not choose a 'units-of-delivery' method as a measure of progress because that method would not accurately capture the level of performance. That is, such a method would not reflect the entity's efforts during the design phase of the contract because no revenue would be recognised until a vessel was shipped. In such situations, an entity would likely determine that an input method is more appropriate, such as a percentage of completion method based on costs incurred.

Illustration 8-10, which is based on Example 18 in IFRS 15, is an example on selecting an appropriate measure of progress towards satisfaction of a performance obligation: *[IFRS 15.IE Example 18, IFRS 15.IE92-IE94]*

Illustration 8-10: Measuring progress when making goods or services available

An entity, an owner and manager of health clubs, enters into a contract with a customer for one year of access to any of its health clubs. The customer has unlimited use of the health clubs and promises to pay £100 per month.

The entity determines that its promise to the customer is to provide a service of making the health clubs available for the customer to use as and when the customer wishes. This is because the extent to which the customer uses the health clubs does not affect the amount of the remaining goods and services to which the customer is entitled. The entity concludes that the customer simultaneously receives and consumes the benefits of the entity's performance as it performs by making the health clubs available. Consequently, the entity's performance obligation is satisfied over time in accordance with paragraph 23.81(a) (see 8.1.1 above).

The entity also determines that the customer benefits from the entity's service of making the health clubs available evenly throughout the year. That is, the customer benefits from having the health clubs available, regardless of whether the customer uses it or not. Consequently, the entity concludes that the best measure of progress towards complete satisfaction of the performance obligation over time is a time-based measure and it recognises revenue on a straight-line basis throughout the year at £100 per month.

Frequently asked questions

Question 8-13: How are the effects of learning curve costs addressed in Section 23?

See response to Question 10-16 in 10.3.2 below.

Question 8-14: How would an entity measure progress towards satisfaction of a stand-ready obligation that is satisfied over time?¹⁷⁷

An entity generally cannot default to a straight-line revenue attribution model. However, if an entity expects the customer to receive and consume the benefits of its promise throughout the contract period, a time-based measure of progress (e.g., straight-line) would be appropriate. This is generally the case for unspecified upgrade rights, help-desk support contracts and cable or satellite television contracts. In contrast, rateable recognition might not be appropriate if the benefits are not spread evenly over the contract period (e.g., an annual snow removal contract that provides most benefits in winter).

Also, as discussed in Question 5-13 in 5.2.2 above, we generally believe that a stand-ready obligation that is satisfied over time will meet the criteria to be accounted for as a series of distinct goods and services. Similar to the discussion above, while it is not appropriate to default to a straight-line revenue attribution model for a series, straight-line revenue recognition might be reasonable in many cases. Management needs to select the measure of progress that faithfully depicts the entity's performance in transferring the goods or services promised in a series.

Question 8-15: Can multiple measures of progress be used to depict an entity's performance in transferring a performance obligation comprised of two or more goods and/or services that is satisfied over time (i.e., a combined performance obligation)?¹⁷⁸

When an entity has determined that a combined performance obligation is satisfied over time, the entity has to select a single measure of progress that faithfully depicts the entity's performance in transferring the goods or services. For example, using different measures of progress for different non-distinct goods or services in the combined performance obligation would be inappropriate because doing so ignores the unit of account that has been identified under Section 23 (i.e., the single combined performance obligation). Furthermore, the Basis for Conclusions on IFRS 15 noted that it would be inappropriate because the entity would recognise revenue in a way that overrides the separation and allocation requirements in the revenue standard. [IFRS 15.BC161].

A single method of measuring progress cannot be broadly interpreted to mean an entity might apply multiple measures of progress as long as all measures used are either output or input measures.

Question 8-16: How would an entity determine the appropriate single measure of progress for a combined performance obligation that is satisfied over time?¹⁷⁹

It might be difficult to appropriately determine a single measure of progress when the entity transfers goods or services that make up the combined performance obligation over different points of time and/or the entity would otherwise use a different measure of progress (e.g., a time-based method versus a labour-based input method) if each promise was a separate performance obligation.

Such a determination requires significant judgement, but the measure of progress selected is not meant to be a 'free choice'. Entities need to consider the nature of the overall promise for the combined performance obligation in determining the measure of progress to use. For example, entities must not default to a 'final deliverable' methodology, such that all revenue would be recognised over the performance period of the last promised good or service. Rather, an entity is required to select the single measure of progress that most faithfully depicts the entity's performance in satisfying its combined performance obligation.

¹⁷⁷ Based on TRG Agenda paper no. 16, *Stand-Ready Performance Obligations*, dated 26 January 2015.

¹⁷⁸ Based on TRG Agenda paper no. 41, *Measuring progress when multiple goods or services are included in a single performance obligation*, dated 13 July 2015. Note that under Step 2 of the model (see 5 above), a single performance obligation might contain multiple non-distinct goods or services and/or distinct goods or services that were required to be combined with non-distinct goods or services in order to identify a distinct bundle. This bundled performance obligation is referred to as a 'combined performance obligation' for the purpose of this discussion.

¹⁷⁹ Based on TRG Agenda paper no. 41, *Measuring progress when multiple goods or services are included in a single performance obligation*, dated 13 July 2015.

An entity would need to consider the reasons why goods or services were bundled into a combined performance obligation in order to determine the appropriate pattern of revenue recognition. For example, if a good or service was combined with other goods or services because it was not capable of being distinct, that might indicate that it does not provide value or use to the customer on its own. As such, the entity would not contemplate the transfer of that good or service when determining the pattern of revenue recognition for the combined performance obligation.

Also, if an appropriately selected single measure of progress does not faithfully depict the economics of the arrangement, the entity generally needs to challenge whether the performance obligation was correctly combined (i.e., there might be more than one performance obligation).

Consider the following Illustration:

Illustration 8-11: Combined licence and installation service performance obligation

An entity promises to provide a software licence and installation services that will substantially customise the software to add significant new functionality that enables the software to interface with other customised applications used by the customer.

The entity concludes that the software and services are not separately identifiable from the customised installation service, and the criterion in paragraph 23.21(b) is not met (see 5.2.1 above). Therefore, the software licence and installation service are combined into a single performance obligation and the entity concludes that the combined performance obligation is satisfied over time. If the licence were distinct, it would be considered a right-to-use licence and revenue would be recognised at a point in time.

The entity further determines that the nature of its overall promise is to develop the customised software over time. Accordingly, the entity determines that it needs to use a measure of progress that depicts the performance of completing the customised software solution. Therefore, all of the revenue for this contract would be recognised over the period that the customisation services are performed.

Question 8-17: Can control of a good or service underlying a performance obligation satisfied over time be transferred at discrete points in time?¹⁸⁰

Generally, if a performance obligation meets the criteria for revenue to be recognised over time (rather than at a point in time), control of the underlying good or service is not transferred at discrete points in time. Because control transfers as an entity performs, an entity's performance (as reflected using an appropriate measure of progress) must not result in the creation of a material asset in the entity's accounts (e.g., work in progress).

The question whether control of a good or service underlying a performance obligation that is satisfied over time can be transferred at discrete points in time arose because the IFRS 15 highlights several output methods, including 'milestones reached', as potentially acceptable methods for measuring progress towards satisfaction of an over time performance obligation. Generally, an entity could use an output method only if that measure of progress correlates to the entity's performance to date.

Question 8-18: Can an entity use the 'right to invoice' practical expedient for a contract that includes rates that change over the contractual term?¹⁸¹

Determining whether an entity can apply the 'right to invoice' practical expedient generally requires judgement. It is also generally possible for entities to meet the requirements for the practical expedient in contracts with changing rates, provided that the changes in rates correspond directly to changes in value to the customer. That is, a contract does not need to have a fixed price per unit for the duration of a contract to qualify for the practical expedient. Examples of contracts that might qualify include an IT outsourcing arrangement with rates that decrease over the contract term as the level of effort to the customer decreases or a multi-year electricity contract that contemplates the forward market price of electricity. However, entities need to have strong evidence that variable prices reflect the value to the customer to recognise variable amounts of revenue for similar goods or services.

Question 8-19: If an entity does not meet the criteria to use the 'right to invoice' practical expedient, can it still use the disclosure practical expedient regarding the amount of transaction price allocated to remaining performance obligations?

See response to Question 11-11 in 11.4.1.D below.

Question 8-20: If an entity begins activities on a specifically anticipated contract either: (1) before it agrees to the contract with the customer; or (2) before the arrangement meets the criteria to be considered a contract under Section 23, how would revenue for those activities be recognised at the date a contract exists?¹⁸²

If the goods or services that ultimately will be transferred meet the criteria to be recognised over time, revenue would generally be recognised on a cumulative catch-up basis at the 'contract establishment

date', reflecting the performance obligation(s) that are partially or fully satisfied at that time. The cumulative catch-up method is consistent with the overall principle of Section 23 that revenue is recognised when (or as) an entity transfers control of goods or services to a customer.

When recording revenue on a cumulative catch-up basis in these circumstances, an entity needs to consider the requirements in Step 5 of the model to determine the goods or services that the customer controls. This determines what portion of costs incurred before the contract establishment date would be included in any measure of progress used to calculate the cumulative catch-up adjustment. If, for example, costs incurred prior to the contract establishment date relate to uninstalled materials or any goods or services that the customer does not control, the inclusion of those costs in determining how much revenue to recognise might not be appropriate (see 8.1.4.D above for further discussion on uninstalled materials).

Question 8-21: How do entities consider costs subject to volatility caused by factors such as foreign exchange rates and commodity prices in a measure of progress if an entity applies an input method based on costs incurred?

Entities might enter into contracts for which they will incur costs that are subject to volatility caused by market factors such as foreign exchange rates, inflation and commodity prices, either directly or indirectly (e.g., when suppliers pass on such costs to the entity). That volatility in prices might be passed along to the customer in some cases but not in others.

The underlying premise of an input method based on costs incurred (e.g., cost-to-cost) for measuring progress is that the costs incurred are proportionate to an entity's progress as the entity performs. That is, an entity must include costs that contribute to its performance and exclude those costs that do not. See further discussions in 8.1.4.C and 8.1.4.D above.

Under Section 23, an entity needs to ensure that the measure of progress appropriately reflects the entity's performance in transferring control of the promised good or service to the customer, which could require judgement. Exchange rates and commodity prices are subject to changes in market activity and often drive a degree of mismatch between expected costs and market prices. In some cases, the entity might conclude that the use of an input method based on costs incurred is not appropriate if the costs it will incur will be subject to significant market volatility.

If the entity concludes the cost contributes to performance, but the volatility of the market price or exchange rate does not, it will need to appropriately reflect that in an input method based on costs incurred to measure progress, which will require judgement.

Entities might need to consider whether the determination of an exchange rate or commodity price applied on an input method based on costs incurred requires significant judgement or is a source of estimation uncertainty. If so, disclosure would be required in accordance with Section 8 (see Chapter 6 at 7.4). [FRS 102.8.6, FRS 102.8.7].

Question 8-22: How does an entity account for fulfilment costs incurred prior to the contract establishment date that are outside the scope of another section of FRS 102 (e.g., Section 13 *Inventories*)?

See response to Question 10-15 in 10.3.2 below.

8.2 Control transferred at a point in time

For performance obligations in which control is not transferred over time, control is transferred as at a point in time. [FRS 102.23.85]. In many situations, the determination of *when* that point in time occurs is relatively straightforward. However, in other circumstances, this determination is more complex.

To help entities determine the point in time when a customer obtains control of a particular good or service, Section 23 provides the following requirements: [FRS 102.23.85, FRS 102.23.86]

180 Based on FASB TRG Agenda paper no. 53, *Evaluating How Control Transfers Over Time*, dated 18 April 2016.

181 Based on TRG Agenda paper no. 40, *Practical Expedient for Measuring Progress toward Complete Satisfaction of a Performance Obligation*, dated 13 July 2015.

182 Based on TRG Agenda paper no. 33, *Partial Satisfaction of Performance Obligations Prior to Identifying the Contract*, dated 30 March 2015.

Extract from Section 23

- 23.85** If a performance obligation is not satisfied over time, an entity satisfies the performance obligation at a point in time. To determine the point in time at which a customer obtains control of a promised asset, an entity shall consider indicators of the transfer of control, which include but are not limited to the following:
- (a) the entity has a present right to payment for the asset;
 - (b) the customer has legal title to the asset;
 - (c) the customer has physical possession of the asset;
 - (d) the customer has the significant risks and rewards of ownership of the asset; and
 - (e) the customer has accepted the asset (see paragraphs 23.88 to 23.89).
- 23.86** The existence or absence of an indicator in paragraph 23.85 does not determine whether control of a promised asset has transferred.
- (a) For example, in some situations a customer may obtain control of an asset, and an entity shall recognise revenue, even though the entity retains legal title of the asset as protection against the customer's failure to pay, or retains physical possession of the asset under a bill and hold arrangement.
 - (b) Conversely, in a consignment arrangement, the other party (eg a dealer or distributor) has physical possession of a product that an entity controls. An entity shall not recognise revenue upon delivery of a product to another party if the delivered product is held on consignment.

None of the indicators above are meant to individually determine whether the customer has gained control of the good or service. For example, while shipping terms might provide information about when legal title to a good transfers to the customer, they are not determinative when evaluating the point in time at which the customer obtains control of the promised asset. See Question 8-23 in 8.2.5 below for further discussion on shipping terms. An entity must consider all relevant facts and circumstances to determine whether control has transferred. Similar to IFRS 15, the indicators are not meant to be a checklist. Furthermore, not all of them must be present for an entity to determine that the customer has gained control. Rather, the indicators are factors that are often present when a customer has obtained control of an asset and the list is meant to help entities apply the principle of control. [FRS 102.23.86, IFRS 15.BC155].

Paragraph 23.85 also states that indicators of control transfer are not limited to those listed above. For example, channel stuffing is a practice that entities sometimes use to increase sales by inducing distributors or resellers to buy substantially more goods than can be promptly resold. To induce the distributors to make such purchases, an entity might offer deep discounts that it would have to evaluate as variable consideration in estimating the transaction price (see 6.2 above). Channel stuffing also might be accompanied by side agreements with the distributors that provide a right of return for unsold goods that is in excess of the normal sales return privileges offered by the entity. Significant increases in, or excess levels of, inventory in a distribution channel due to channel stuffing might affect or preclude the ability to conclude that control of such goods has transferred.

How we see it

Entities need to carefully consider the expanded rights of returns offered to customers in connection with channel stuffing in order to determine whether they prevent the entity from recognising revenue at the time of the sales transaction.

If an entity uses channel stuffing practices, it needs to consider whether disclosure in its financial statements is required when it expects these practices to materially affect future operating results.

If, for example, an entity sold excess levels into a certain distribution channel at, or near, the end of a reporting period, it is likely that those sales volumes would not be sustainable in future periods. That is, sales into that channel might, in fact, slow down in future periods as the excess inventory takes longer to entirely sell through the channel. In such a case, the entity needs to consider whether disclosure of the effect of the channel stuffing practice on its current and future earnings is required, if material.

In determining when control transfers, it is important that the entity consider the good or service it is transferring, not the right to obtain that good or service in the future. For example, the right to sell (or pledge) a right to obtain an asset (e.g., real estate) in the future is not evidence of control of the asset itself (see Question 8-4 in 8.1.2 above and Question 8-11 in 8.1.3.B above for further discussion).

We discuss the indicators in paragraph 23.85 that an entity considers when determining when it transfers control of the promised good or service to the customer in more detail in 8.2.1 – 8.2.4 below.

8.2.1 Present right to payment for the asset

A right to payment is one of the indicators under Section 23 but it is not an overarching criterion for determining when revenue would be recognised. So, while the date at which the entity has a right to payment for the asset might be an indicator of the date the customer obtained control of the asset, it does not always indicate that the customer has obtained control of the asset. For example, in some contracts, a customer is required to make a non-refundable upfront payment but receives no goods or services in return at that time.

8.2.2 Legal title and physical possession

The term ‘title’ is often associated with a legal definition denoting the ownership of an asset or legally recognised rights that preclude others’ claim to the asset. Accordingly, the transfer of title often indicates that control of an asset has been transferred. Determination of which party has title to an asset does not always depend on which party has physical possession of the asset, but without contractual terms to the contrary, title generally passes to the customer at the time of the physical transfer. For example, in a retail store transaction, there is often no clear documentation of the transfer of title. However, it is generally understood that the title to a product is transferred at the time it is purchased by the customer.

While the retail store transaction is relatively straightforward, determining when title has transferred might be more complicated in other arrangements. Transactions that involve the shipment of products might have varying shipping terms and could involve third-party shipping agents. In such cases, a clear understanding of the seller’s practices and the contractual terms is required to assess when title transfers. Legal title and/or physical possession might be an indicator of which party to a contract has the ability to direct the use of, and obtain substantially all the remaining benefits from, an asset or to restrict the access of other entities to those benefits. However, in some situations a customer might obtain control of an asset, and an entity recognises revenue, even though the entity retains legal title of the asset as protection against the customer’s failure to pay or retains physical possession of the asset under a bill and hold arrangement (see 8.5 below). [FRS 102.23.86(a)]. These rights of the entity or nature of the arrangement would not preclude the customer from obtaining control of the asset. By contrast, in a consignment arrangement (see 8.4 below), the other party (the consignee, e.g., a dealer or distributor) has physical possession of a product that the entity controls. In such a case, the entity does not recognise revenue upon delivery of a product to the consignee if the delivered product is held on consignment. [FRS 102.23.86(b)]. This is also the case in some repurchase agreements where a customer might have physical possession of an asset that the entity controls (see 8.3 below).

See also Question 8-23 in 8.2.5 below for further discussion on how shipping terms affect when an entity has transferred control of a good to a customer.

8.2.3 Risks and rewards of ownership

Although paragraph 23.85 of FRS 102 includes risks and rewards of ownership as one factor to consider when evaluating whether control of an asset has transferred, this factor does not change the principle of determining the transfer of goods or services based on control. The concept of the risks and rewards of ownership is based on how the seller and the customer share both the potential gain (the reward) and the potential loss (risk) associated with owning an asset. Rewards of ownership include the following:

- Rights to all appreciation in value of the asset
- Unrestricted usage of the asset
- Ability to modify the asset
- Ability to transfer or sell the asset
- Ability to grant a security interest in the asset

Conversely, the risks of ownership include the following:

- Absorbing all the declines in market value
- Incurring losses due to theft or damage of the asset
- Incurring losses due to changes in the business environment (e.g., obsolescence, excess inventory, effect of retail pricing environment)

However, an entity does not consider risks that give rise to a separate performance obligation when evaluating whether the entity has the risks of ownership of an asset. For example, an entity does not consider warranty services that represent a separate performance obligation when evaluating whether it retains the risks of ownership of the asset sold to the customer.

8.2.4 Customer acceptance

When determining whether the customer has obtained control of the goods or services, an entity must consider any customer acceptance clauses that require the customer to approve the goods or services before it is obliged to pay for them. If a customer does not accept the goods or services, the entity might not be entitled to consideration, might be required to take remedial action or be required to take back the delivered good. [FRS 102.23.85(e), FRS 102.23.88].

Section 23 provides the following guidance regarding how to evaluate customer acceptance provisions: [FRS 102.23.89]

Extract from Section 23

23.89 If an entity can objectively determine (ie determine based on information available to the entity) that control of a good or service has been transferred to the customer in accordance with the agreed-upon specifications in the contract, then customer acceptance is a formality that would not affect the entity's determination of when the customer has obtained control of the good or service. However, if an entity cannot objectively determine that the good or service provided to the customer is in accordance with the agreed-upon specifications in the contract, then the entity would not be able to conclude that the customer has obtained control until the entity receives the customer's acceptance.

Some acceptance provisions might be straightforward, giving a customer the ability to accept or reject the transferred products based on objective criteria specified in the contract (e.g., the goods function at a specified speed or specified size and weight characteristics of the goods). Other acceptance clauses might be subjective or appear in parts of the contract that do not typically address acceptance matters, such as warranty provisions or indemnification clauses. Professional judgement might be required to determine the effect on revenue recognition of the latter types of acceptance clauses.

Acceptance criteria that an entity cannot objectively evaluate against the agreed-upon specifications in the contract preclude an entity from concluding that a customer has obtained control of a good or service until formal customer sign-off is obtained or the acceptance provisions lapse. That is because in this circumstance the entity cannot determine that the customer has the ability to direct the use of, and obtain substantially all the remaining benefits from, the good or service. However, the entity would consider all information available to it, including its experience with other contracts for similar goods or services because that experience might provide evidence about whether the entity is able to objectively determine that a good or service provided to the customer is in accordance with the agreed-upon specifications in the contract.

How we see it

We believe one or more of the following would represent circumstances in which the entity might not be able to objectively evaluate the acceptance criteria:

- The acceptance provisions are unusual or 'non-standard'. Indicators of 'non-standard' acceptance terms are:
 - The duration of the acceptance period is longer than in contracts for similar goods or services.
 - The majority of the entity's contracts lack similar acceptance terms.
 - The contract contains explicit customer-specified requirements that must be met prior to acceptance.
- The contract contains a requirement for explicit notification of acceptance (not just deemed acceptance). Explicit notification requirements might indicate that the criteria with which the customer is assessing compliance are not objective. In addition, such explicit notification clauses might limit the time period within which the customer can reject transferred products and might require the customer to provide, in writing, the reasons for the rejection of the products by the end of a specified period. When such clauses exist, acceptance can be deemed to have occurred at the end of the specified time period if notification of rejection has not been received from the customer, as long as the customer has not indicated it will reject the products.

In determining whether compliance with the criteria for acceptance can be objectively assessed (and acceptance is only a formality), the following is considered:

- Whether the acceptance terms are standard in arrangements entered into by the entity.
- Whether the acceptance is based on the transferred product performing to standard, published, specifications, and the entity can demonstrate that it has an established history of objectively determining that the product functions in accordance with those specifications.

As discussed above, customer acceptance would not be deemed a formality if the acceptance terms are unusual or non-standard. If a contract contains acceptance provisions that are based on customer-specified criteria, it might be difficult for the entity to objectively assess compliance with them and the entity might not be able to recognise revenue prior to obtaining evidence of customer acceptance. However, determining that the acceptance criteria have been met (and, therefore, acceptance is merely a formality) might be appropriate if the entity can demonstrate that its product meets all of the customer's acceptance specifications by replicating, before shipment, the conditions under which the customer intends to use the product.

If it is reasonable to expect that the product's performance (once it has been installed and is operating at the customer's facility) will be different from the performance when it was tested prior to shipment, the acceptance provision will not have been met. The entity, therefore, would not be able to conclude that the customer has obtained control until customer acceptance occurs. Factors indicating that specifications cannot be tested effectively prior to shipment include:

- The customer has unique equipment, software or environmental conditions that can reasonably be expected to make performance in that customer's environment different from testing performed by the entity. If the contract includes customer acceptance criteria or specifications that cannot be effectively tested before delivery or installation at the customer's site, revenue recognition is deferred until it can be demonstrated that the criteria are met.
- The products that are transferred are highly complex.
- The entity has a limited history of testing products prior to control transferring to the customer or a limited history of having customers accept products that it has previously tested.

Determining when a customer obtains control of an asset in a contract with customer-specified acceptance criteria requires the use of professional judgement and depends on the weight of the evidence in the particular circumstances. The conclusion could change based on an analysis of an individual factor, such as the complexity of the equipment, the nature of the interface with the customer's environment, the extent of the entity's experience with this type of transaction or a particular clause in the agreement. An entity might need to discuss the situation with knowledgeable project managers or engineers in making such an assessment.

In addition, each contract containing customer-specified acceptance criteria might require a separate compliance assessment of whether the acceptance provisions have been met prior to confirmation of the customer's acceptance. That is, since different customers might specify different acceptance criteria, an entity might not be able to make one compliance assessment that applies to all contracts because of the variations in contractual terms and customer environments.

Even if a contract includes a standard acceptance clause, if the clause relates to a new product or one that has only been sold on a limited basis previously, an entity might be required to initially defer revenue recognition for the product until it establishes a history of successfully obtaining acceptance.

If an entity delivers products to a customer for trial or evaluation purposes and the customer is not committed to pay any consideration until the trial period lapses, control of the product is not transferred to the customer until either the customer accepts the product or the trial period lapses. See further discussion of 'free' trial periods in Question 4-2 in 4.1 above, including when such arrangements might meet the criteria to be considered a contract within the scope of the model in Section 23.

8.2.5 Example of control transferring at a point in time

The following Illustration shows the application of the indicators of the transfer of control in paragraph 23.85 (see 8.2 above) to a performance obligation that is satisfied at a point in time:

Illustration 8-12: Applying the indicators of the transfer of control to a performance obligation satisfied at a point in time

BCB Liquors (BCB) uses a distribution network to sell its product to end-consumers. Upon receipt of the product, a distributor receives legal title to the goods and is required to pay BCB for the product. In this example, BCB has determined its relationship with the distributor is not a consignment agreement (see 8.4 below). Rather, the distributor is BCB's customer.

BCB determines that its performance obligation for the sale of product to the distributor is satisfied at a point in time. BCB considers the indicators of the transfer of control and concludes that control transfers to the distributor when the product is delivered to the distributor. At this point in time, BCB has a present right to payment and the distributor has legal title and physical possession of the product, as well as the risks and rewards of ownership. BCB concludes customer acceptance is a formality as BCB can objectively determine that the goods meet the agreed-upon specifications before shipment to the distributor.

Alternatively, if BCB sold the product to the distributor on consignment or determined that the end-consumer was its customer, the distributor was not obligated to pay for the product until it was sold to the end-consumer and BCB had the ability to require the return of any unsold product or the distributor had an unlimited amount of time to return any unsold products, then BCB might have concluded that control of the product would not transfer until it is sold to the end-consumer. Therefore, BCB would not recognise revenue until the product was sold to the end-consumer.

An entity is required to recognise as revenue the amount of the transaction price it allocates to each performance obligation in a contract when or as it transfers the promised goods or services to customers, regardless of whether the consideration is paid upfront or the entity has a conditional or unconditional right to receive the consideration in the future. An entity that has not yet received the consideration to which it is entitled for transferring promised goods or services recognises a corresponding receivable if its right to payment is unconditional or a contract asset if its right to payment is conditional (see 11.1 below for further discussion). This requirement, which applies to both revenue recognised over time and at a point in time, does not limit the consideration allocable to satisfied performance obligations to the amount that is not contingent on future performance. See 7 above for further discussion of allocating the transaction price to the performance obligations.

Frequently asked questions

Question 8-23: How do shipping terms affect when an entity has transferred control of a good to a customer?

Under Section 23, an entity recognises revenue only when it satisfies an identified performance obligation by transferring a promised good or service to a customer. While shipping terms might provide information about when legal title to a good transfers to the customer, they are not determinative when evaluating the point in time at which the customer obtains control of the promised asset. Entities must consider all relevant facts and circumstances to determine whether control has transferred.

[FRS 102.23.85, FRS 102.23.86].

As an example, when the shipping terms are free on board (FOB), entities need to carefully consider whether the customer or the entity has the ability to control the goods during the shipment period. Furthermore, if the entity has the legal or constructive obligation to replace goods that are lost or damaged in transit, it needs to evaluate whether that obligation influences the customer's ability to direct the use, and obtain substantially all of the remaining benefits from, the goods. A selling entity's historical practices also need to be considered when evaluating whether control of a good has transferred to a customer because the entity's practices might override the contractual terms of the arrangement.

Contractually specified shipping terms might vary depending on factors such as the mode of transport (e.g., by sea, inland waterway, road, air) and whether the goods are shipped locally or internationally. A selling entity might utilise International Commerce Terms (Incoterms®) to clarify when delivery occurs. Incoterms® are a series of pre-defined commercial terms published by the International Chamber of Commerce (ICC) relating to international commercial law. For example, 'EXW' or 'Ex Works' in Incoterms® 2020 means that the selling entity 'delivers' when it places the goods at the disposal of the customer, either at the seller's premises or at another named location (e.g., a factory, warehouse). The selling entity is not required to load the goods on any collecting vehicle, nor does it need to clear the goods for

export (if applicable, see further discussion on Ex Works in 8.5 below). The Incoterm FOB means “the seller delivers the goods on board the vessel nominated by the buyer at the named port of shipment or procures the goods already so delivered. The risk of loss of or damage to the goods passes when the goods are on board the vessel, and the buyer bears all costs from that moment onwards”.¹⁸³

8.3 Repurchase agreements

A repurchase agreement is a contract in which an entity sells an asset and also promises or has the option to repurchase the asset. The repurchased asset could be the asset that was originally sold to the customer, an asset that is substantially the same as that asset, or another asset of which the asset that was originally sold is a component. Some agreements include such repurchase provisions either as part of a sales contract or as a separate contract that relates to the goods in the original agreement or similar goods.

[FRS 102.23.90]. These provisions affect how an entity applies the requirements on control to affected transactions. That is, when evaluating whether a customer obtains control of an asset, an entity needs to consider any agreement to repurchase the asset. [FRS 102.23.90].

Repurchase agreements generally come in three forms:

- (a) An entity’s obligation to repurchase the asset (a forward) – see 8.3.1 below
- (b) An entity’s right to repurchase the asset (a call option) – see 8.3.1 below

And

- (c) An entity’s obligation to repurchase the asset at the customer’s request (a put option) – see 8.3.2 below

For an obligation or right to purchase an asset to be accounted for as a repurchase agreement under Section 23, it needs to exist at contract inception, either as a part of the same contract or in another contract. [FRS 102.23.79]. An entity’s subsequent decision to repurchase an asset (after transferring control of that asset to a customer) without reference to any pre-existing contractual right would not be accounted for as a repurchase agreement under Section 23. That is, the customer is not obliged to resell that good to the entity as a result of the initial contract. Therefore, any subsequent decision to repurchase the asset does not affect the customer’s ability to control the asset upon initial transfer. However, in cases in which an entity decides to repurchase a good after transferring control of the good to a customer, the entity needs to carefully consider whether the customer obtained control in the initial transaction. Furthermore, it might need to consider the guidance on principal versus agent considerations (see 5.4 above).

8.3.1 Forward or call option held by the entity

When an entity has the obligation or right to repurchase an asset (i.e., a forward or a call option), Section 23 indicates that the customer has not obtained control of the asset. This is because the customer is limited in its ability to direct the use of, and obtain substantially all the remaining benefits from, the asset even though the customer might have physical possession of the asset. Section 23 provides the following guidance: [FRS 102.23.92]

Extract from Section 23

- 23.92** If an entity has an obligation or a right to repurchase an asset (a forward or a call option), a customer does not obtain control of the asset and the entity shall not recognise revenue from a sale of a good or service. Consequently, the entity shall account for the contract as either:
- (a) a lease in accordance with Section 20 if the entity can or must repurchase the asset for an amount that is less than the original selling price of the asset. As an exception, the entity shall account for the contract in accordance with paragraph 20.122 if the contract forms part of a sale and leaseback transaction; or
 - (b) a financing arrangement in accordance with paragraph 23.93 if the entity can or must repurchase the asset for an amount that is equal to or more than the original selling price of the asset.

The guidance in the extract above requires an entity to account for a transaction including a forward or a call option based on the relationship between the repurchase price and the original selling price, regardless of whether the option will be exercised. It indicates that if the entity has the right or obligation to repurchase the asset at a price less than the original selling price (taking into consideration the effects of

¹⁸³ See the [ICC website](#) for further information.

the time value of money), the entity would account for the transaction as a lease in accordance with Section 20, unless the contract is part of a sale and leaseback transaction. For additional information on lease accounting under Section 20, see Chapter 23. If the entity has the right or obligation to repurchase the asset at a price equal to or greater than the original selling price (considering the effects of the time value of money) or if the contract is part of a sale and leaseback transaction (as discussed further below), the entity would account for the contract as a financing arrangement in accordance with Section 23.

[FRS 102.23.92].

When comparing the repurchase price with the selling price, an entity considers the time value of money.

[FRS 102.23.91(a)].

How we see it

It is important to remember that the effect of the time value of money must be considered when comparing the repurchase price to the original selling price of the asset. This evaluation can influence the determination of whether the repurchase agreement represents a lease or financing arrangement.

The following figure depicts this guidance for transactions that are not sale and leaseback transactions:

Figure 8-2: Forward or call options

Forward or call option				
Repurchase price	<	Original selling price	=	Lease*
Repurchase price	≥	Original selling price	=	Financing

* If the transaction is not part of a sale and leaseback transaction.

Note: When comparing the repurchase price with the original selling price, an entity considers the time value of money.

Under Section 23, a transaction in which a seller has an option to repurchase the product is treated as a lease or a financing arrangement (i.e., not a sale). This is because the customer does not have control of the product and is constrained in its ability to direct the use of and obtain substantially all of the remaining benefits from the good. Similar to IFRS 15, entities would not need to consider the likelihood that a call option will be exercised in determining the accounting for the repurchase provision. However, non-substantive call options are ignored and would not affect when a customer obtains control of an asset.

[IFRS 15.BC427]. See Question 8-24 below for how an entity might consider conditional call options and an example of a conditional call option that might qualify to be treated as a sale.

In the Basis for Conclusions on IFRS 15, the IASB observes that, “Theoretically, a customer is not constrained in its ability to direct the use of and obtain substantially all of the benefits from, the asset if an entity agrees to repurchase, at the prevailing market price, an asset from the customer that is substantially the same and is readily available in the marketplace.” [IFRS 15.BC425]. For example, an entity might transfer control of a commodity to a customer together with a forward or call option to repurchase that commodity (or one that is substantially the same). If (1) the repurchase price in the forward or call option is at the prevailing market price at the repurchase date, (2) the commodity to be repurchased is substantially the same, and (3) the commodity to be repurchased under the forward or call option is readily available (e.g., by being traded in an active commodity market), then the customer might not be constrained in its ability to direct the use of, and obtain substantially all the remaining benefits from, the asset as discussed in paragraph 23.92.

How we see it

To conclude that the customer obtains control in such an arrangement would require the use of significant judgement, and such a conclusion might not be appropriate in situations that do not meet the narrow fact pattern discussed above.

If a transaction is considered a financing arrangement under Section 23, the selling entity continues to recognise the asset. In addition, it records a financial liability for the consideration received from the customer. The difference between the consideration received from the customer and the consideration to be paid to the customer subsequently (upon repurchasing the asset) represents the interest (and if applicable as processing or holding costs, e.g., insurance) that are recognised over the term of the financing arrangement using the effective interest method in accordance with paragraphs 11.15 to 11.20.

[FRS 102.23.93].

If the option lapses unexercised, the entity derecognises the liability and recognises revenue at that time. [FRS 102.23.91(b)].

Also note that paragraph 23.92(a) specifies that an entity must account for the contract in accordance with paragraph 20.122 if the contract forms part of a sale and leaseback transaction. This is discussed in Chapter 23 at 9.1 and 9.3.

How we see it

Since lease guidance is embedded in Section 23, it is important for entities to understand the interaction between the lease and revenue standards.

Illustration 8-13, which is based on Case A within Example 62 in IFRS 15, is an example of a call option: [IFRS 15.IE Example 62 Case A, IFRS 15.IE315-IE318]

Illustration 8-13: Repurchase agreements – Call option: financing

An entity enters into a contract with a customer for the sale of a tangible asset on 1 January 20X6 for £1 million. The contract includes a call option that gives the entity the right to repurchase the asset for £1.1 million on or before 31 December 20X6.

Control of the asset does not transfer to the customer on 1 January 20X6 because the entity has a right to repurchase the asset and therefore the customer is limited in its ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. Consequently, in accordance with paragraph 23.92(b), the entity accounts for the transaction as a financing arrangement, because the exercise price is more than the original selling price. In accordance with paragraph 23.93, the entity does not derecognise the asset and instead recognises the cash received as a financial liability. The entity also recognises interest expense for the difference between the exercise price (£1.1 million) and the cash received (£1 million), which increases the liability.

On 31 December 20X6, the option lapses unexercised; therefore, the entity derecognises the liability and recognises revenue of £1.1 million.

Frequently asked questions

Question 8-24: How can an entity evaluate a conditional call option to repurchase an asset?

Neither Section 23 nor IFRS 15 specifically address conditional call options.

How we see it

We believe entities need to consider the following when evaluating conditional call options to repurchase an asset.

- If the entity controls the outcome of the condition that causes the call option to become active, then the presence of the call option indicates that control has not transferred because the customer is limited in its ability to direct the use of and obtain substantially all of the remaining benefits from the asset. That is, the entity would be required to treat the contract as a lease or a financing arrangement as required by paragraph 23.92.
- If the entity does not control the condition that causes the call option to become active, then it would be acceptable for the entity to apply judgement to determine whether the call option limits the customer's ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. For example, if neither the entity nor the customer controls the outcome of the contingency, the entity could evaluate the nature of the contingency, together with the likelihood of the contingency becoming active, to determine whether it limits the customer's ability to obtain control of the asset. This could be the case for certain types of product recalls. See also Question 10-3 in 10.1.1 below for how an entity would account for a customer's return of a defective item in exchange for compensation (i.e., not for a replacement item).
- If the customer controls the outcome of the contingency, then the conditional call option might not prevent the customer from obtaining control of the asset if the customer can direct the use of, and obtain substantially all the remaining benefits from, the asset. The guidance in paragraphs 23.94-23.97 (see 8.3.2 below) might be helpful for an entity to consider when determining whether the customer obtains control of the asset when it controls the outcome of the contingency.

- In the case of perishable products, an entity's conditional right to remove and replace expired goods does not necessarily constrain the customer's ability to direct the use of and obtain substantially all of the remaining benefits from the products. That is, the entity is not able to remove and replace the products until they expire. Furthermore, the customer has control of the products over their entire useful life. Consequently, it might be reasonable for an entity to conclude that control of the initial product does transfer to the customer in this situation and that an entity could consider this right to be a form of a right of return (see 6.4 above).

8.3.2 Put option held by the customer

Section 23 indicates that if the customer has an unconditional right to require an entity to repurchase an asset (i.e., a put option), the customer obtains control of the asset unless the customer has a significant economic incentive to exercise that right. The entity considers, at contract inception, whether the customer has a significant economic incentive to exercise that right. [FRS 102.23.94]. That is, this determination influences whether the customer truly has control over the asset received.

The determination of whether an entity has a significant economic incentive to exercise its right determines whether the arrangement is treated as a lease, a financing arrangement or a sale with the right of return (discussed in 6.4 above). An entity must consider all relevant facts and circumstances to determine whether a customer has a significant economic incentive to exercise its right, including the relationship between the repurchase price to the expected market value (taking into consideration the effects of the time value of money) of the asset at the date of repurchase and the amount of time until the right expires. [FRS 102.23.95]. For example, if the repurchase price is expected to significantly exceed the market value of the asset, the customer might have a significant economic incentive to exercise the put option.

Since Section 23 provides limited guidance on determining whether a significant economic incentive exists, judgement might be required to make this determination:

- If a customer has a significant economic incentive to exercise its right (e.g., the repurchase price is more than the expected market value of the asset), the customer is expected to ultimately return the asset. An entity accounts for the contract as either a lease or a financing arrangement depending on the relationship between the amount that the entity might be required to pay to repurchase the asset and its original selling price. This is similar to the accounting discussed in 8.3.1 above. [FRS 102.23.97].
- In cases where the repurchase price is lower than original selling price, the entity accounts for the agreement as a lease because the customer is effectively paying the entity for the right to use the asset for a period of time. However, an exception to this is if the contract is part of a sale and leaseback, in which case, the contract would be accounted for as a financing arrangement (financing arrangements are discussed in 8.3.1 above). If the contract is part of a sale and leaseback transaction, the entity continues to recognise the asset. Furthermore, the entity recognises a financial liability for any consideration received from the customer to which the entity applies the accounting policy choice it made for its financial instruments under Section 11 and Section 12 (see Chapter 23 at 9.3 and Chapter 11 at 4). [FRS 102.23.92(a), FRS 102.20.126(a)].
- If the customer has the ability to require an entity to repurchase the asset at a price equal to, or more than, the original selling price, the contract is in effect a financing arrangement. Accordingly, the selling entity applies the accounting for a financing arrangement discussed in 8.3.1 above. [FRS 102.23.92(b), FRS 102.23.93].
- If a customer does not have a significant economic incentive to exercise its right, the entity accounts for the agreement in a manner similar to a sale of a product with a right of return. [FRS 102.23.96]. For example, if the repurchase price of an asset is equal to or greater than the original selling price, but less than or equal to the expected market value of the asset, it must be accounted for as a sale of a product with a right of return if the customer does not have a significant economic incentive to exercise its right based on other factors. See 6.4 above for a discussion of sales with a right of return.

Note that when comparing the repurchase price with the selling price, an entity considers the time value of money. If the option lapses unexercised, an entity derecognises the liability and recognises revenue at that time. [FRS 102.23.91].

Illustration 8-14, which is based on Case B within Example 62 in IFRS 15, is an example of a put option: [IFRS 15.IE Example 62 Case B, IFRS 15.IE315, IFRS 15.IE319-IE321]

Illustration 8-14: Repurchase agreements - Put option: lease

An entity enters into a contract with a customer for the sale of a tangible asset on 1 January 20X6 for £1 million. The contract includes a put option that obliges the entity to repurchase the asset at the customer's request for £900,000 on or before 31 December 20X6. The market value is expected to be £750,000 on 31 December 20X6.

At the inception of the contract, the entity assesses whether the customer has a significant economic incentive to exercise the put option, to determine the accounting for the transfer of the asset (see paragraphs 23.94-23.97). The entity concludes that the customer has a significant economic incentive to exercise the put option because the repurchase price significantly exceeds the expected market value of the asset at the date of repurchase. The entity determines there are no other relevant factors to consider when assessing whether the customer has a significant economic incentive to exercise the put option. Consequently, the entity concludes that control of the asset does not transfer to the customer, because the customer is limited in its ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset.

In accordance with paragraphs 23.97 and 23.92(a), the entity accounts for the transaction as a lease in accordance with Section 20.

8.3.3 Sales with residual value guarantees

An entity that sells equipment might use a sales incentive programme under which it guarantees that the customer will receive a minimum resale amount when it disposes of the equipment (i.e., a residual value guarantee). While the economics of a repurchase agreement and a residual value guarantee might be similar, the accounting could be quite different. A detailed discussion of factors an entity must consider in sales with residual value guarantees is available in the EY publication, International GAAP®.

8.4 Consignment arrangements

Entities frequently deliver inventory on a consignment basis to other parties (e.g., distributor, dealer). A consignment sale is one in which physical delivery of a product to a counterparty has occurred, but the counterparty is not required to pay until the product is either resold to an end-consumer or used by the counterparty. Under such arrangements, the seller (or consignor) retains the legal title to the merchandise and the counterparty (or consignee) acts as a selling agent. The consignee earns a commission on the products that have been sold and periodically remits the cash from those sales, net of the commission it has earned, to the consignor. In addition, consigned products that are not sold or used generally can be returned to the consignor. By shipping on a consignment basis, consignors are able to better market products by moving them closer to the end-consumer. However, they do so without selling the goods to the intermediary (consignee). [FRS 102.23.86(b)].

Section 23 provides the following guidance for determining whether an arrangement is a consignment arrangement: [FRS 102.23.87]

Extract from Section 23

- 23.87** Indicators that an arrangement is a consignment arrangement include, but are not limited to, the following:
- (a) the product is controlled by the entity until a specified event occurs, such as the sale of the product to a customer of the distributor or until a specified period expires;
 - (b) the entity is able to require the return of the product or transfer the product to a third party (such as another distributor); and
 - (c) the distributor does not have an unconditional obligation to pay for the product (although it might be required to pay a deposit).

Entities entering into a consignment arrangement need to determine the nature of the performance obligation (i.e., whether the obligation is to transfer the product to the consignee or to transfer the product to the end-consumer). This determination would be based on whether control of the product passes to the consignee. Typically, a consignor does not relinquish control of the consigned product until the product is sold to the end-consumer or, in some cases, when a specified period expires. Consignees commonly do not have any obligation to pay for the product, other than to pay the consignor the agreed-upon portion of the sale price once the consignee sells the product to a third party. As a result, for consignment arrangements, revenue generally would not be recognised when the products are delivered to the consignee because control has not transferred (i.e., the performance obligation to deliver goods to the end-consumer has not yet been satisfied). [FRS 102.23.86(b)].

While some transactions are clearly identified as consignment arrangements, there are other less transparent transactions, in which the seller has retained control of the goods, despite no longer having physical possession. Such arrangements might include the shipment of products to distributors that are not required (either explicitly or implicitly), or do not have the wherewithal, to pay for the product until it is sold to the end-consumer.

Judgement is necessary in assessing whether the substance of a transaction is a consignment arrangement. The identification of such arrangements often requires a careful analysis of the facts and circumstances of the transaction, as well as an understanding of the rights and obligations of the parties and the seller's customary business practices in such arrangements. [FRS 102.23.87]. While not required by Section 23 or Section 13, we would encourage entities to disclose separately the amount of their consigned inventory, if material.

8.5 Bill-and-hold arrangements

In some sales transactions, the selling entity fulfils its obligations and bills the customer for the work performed, but does not ship the goods until a later date. These transactions, often called bill-and-hold transactions, are usually designed this way at the request of the purchaser for a number of reasons, including a lack of storage capacity or an inability to use the goods until a later date. Whereas in a consignment sale (discussed in 8.4 above), physical delivery has occurred, but control of the goods has not transferred to the customer, the opposite might be true in a bill-and-hold transaction.

The general principle in recognising revenue under Section 23 must be applied in a bill-and-hold arrangement. That is, an entity determines when it has satisfied its performance obligation to transfer a product by evaluating when a customer obtains control of that product (see 8.2 above). For some contracts, control is transferred either when the product is delivered to the customer's site or when the product is shipped, depending on the terms of the contract (including delivery and shipping terms). However, for some contracts, a customer might obtain control of a product even though that product remains in an entity's physical possession. [FRS 102.23.86(a)]. In that case, the customer has the ability to direct the use of, and obtain substantially all of the remaining benefits from, the product even though it has decided not to exercise its right to take physical possession of that product. Consequently, the entity does not control the product. Instead, the entity provides custodial services to the customer over the customer's asset.

Unlike Section 23, IFRS 15 includes specific guidance which includes the four criteria that must be met before concluding that a customer has obtained control of a product in a bill-and-hold arrangement. An entity could consider such guidance in IFRS 15 when accounting for bill-and-hold arrangements. A detailed discussion of the guidance is available in the EY publication, International GAAP®.

If an entity concludes that it can recognise revenue for a bill-and-hold transaction, the entity needs to further consider whether it is also providing custodial services for the customer that would be identified as a separate performance obligation in the contract. Entities need to carefully evaluate their bill-and-hold arrangements and apply judgement to determine the performance obligations in the arrangements (e.g., products, custodial services) and assess when control transfers to the customer.

As discussed in Question 8-23 in 8.2.5 above, certain entities might use Ex Works from Incoterms® 2020 in contracts with customers. Under an Ex Works arrangement, the entity's responsibility is to make ordered goods available to the customer at the entity's premises or another named location. The customer is responsible for arranging, and paying for, shipment of the goods to the desired location and bears all of the risks related to them once they are made available.

How we see it

We believe that all Ex Works arrangements need to be evaluated using the requirements discussed above to determine whether revenue recognition is appropriate prior to shipment.

8.6 Recognising revenue for licences of intellectual property

Section 23 provides guidance for recognising revenue from licences of intellectual property that differs in some respects from the general requirements for other promised goods or services. We discuss licensing in detail in 9 below.

8.7 Recognising revenue when a right of return exists

As discussed in 5.7 above, a right of return does not represent a separate performance obligation. Instead, the existence of a right of return affects the transaction price and the entity must determine whether the customer will return the transferred product.

Under Section 23, as discussed in 6 above, an entity estimates the transaction price and applies the constraint to the estimated transaction price. In doing so, it considers the products expected to be returned in order to determine the amount to which the entity expects to be entitled (excluding consideration for the products expected to be returned). The entity recognises revenue based on the amounts to which the entity expects to be entitled through to the end of the return period (considering expected product returns). An entity does not recognise the portion of the revenue that is subject to the constraint until the amount is no longer constrained, which could be at the end of the return period or earlier if the entity's expectations about the products expected to be returned change prior to the end of the return period. The entity recognises the amount received or receivable that is expected to be returned as a refund liability, representing its obligation to return the customer's consideration. An entity also updates its estimates at the end of each reporting period. See 5.7 and 6.4 above for further discussion on this topic.

8.8 Recognising revenue for customer options for additional goods or services

As discussed in 5.6 above, when an entity grants a customer the option to acquire additional goods or services, that option is a separate performance obligation if it provides a material right to the customer that the customer would not receive without entering into the contract (e.g., a discount that exceeds the range of discounts typically given for those goods or services to that class of customer in that geographical area or market). If the option provides a material right to the customer, the customer has, in effect, paid the entity in advance for future goods or services. Section 23 requires the entity to allocate a portion of the transaction price to the material right at contract inception (see 7.1.5 above). The revenue allocated to the material right is recognised when (or as) the option is exercised (and the underlying future goods or services are transferred) or when the option expires.

In contrast, if a customer option is not deemed to be a material right and is instead a marketing offer, the entity does not account for the option and waits to account for the underlying goods or services until those subsequent purchases occur.

Frequently asked questions

Question 8-25: How would an entity account for the exercise of a material right? That is, would an entity account for it as: a contract modification, a continuation of the existing contract or variable consideration?

See response to Question 5-27 in 5.6 above.

8.9 Breakage and prepayments for future goods or services

In certain industries, an entity collects non-refundable payments from its customers for goods or services that the customer has a right to receive in the future. However, a customer might ultimately leave that right unexercised (often referred to as 'breakage'). [FRS 102.23.129]. Retailers, for example, frequently sell gift cards that might not be partially redeemed or completely redeemed and airlines sometimes sell non-refundable tickets to passengers who allow the tickets to expire unused.

When an entity receives consideration that is attributable to a customer's unexercised rights, the entity recognises a contract liability equal to the full amount prepaid by the customer for the performance obligation to transfer, or to stand ready to transfer, goods or services in the future. [FRS 102.23.125, FRS 102.23.129]. As discussed further below, an entity derecognises that contract liability (and recognises revenue) when it transfers those goods or services and, therefore, satisfies its performance obligation. [FRS 102.23.125]. Effectively, this guidance requires the same pattern of revenue recognition as the requirements for customer options (see 7.1.5 above).

However, since entities might not be required by customers to fully satisfy their performance obligations, Section 23 requires that when an entity expects to be entitled to a breakage amount, the expected breakage would be recognised as revenue in proportion to the pattern of rights exercised by the customer. If an entity does not expect to be entitled to a breakage amount, it would not recognise any breakage amounts as revenue until the likelihood of the customer exercising its right becomes remote.

[FRS 102.23.130].

When estimating any breakage amount, an entity has to consider the constraint on variable consideration, as discussed in 6.2.3 above. [FRS 102.23.130]. That is, if it is highly probable that the entity will not be entitled for any estimated breakage amounts, an entity would not recognise those amounts until the breakage amounts are no longer constrained.

Entities cannot recognise estimated breakage as revenue immediately upon receipt of prepayment from the customer. This is because the entity has not performed under the contract. That is, recognising revenue would not be a faithful depiction of the entity's performance and would understate its obligation to stand ready to provide future goods or services. This is the case even if an entity has historical evidence to support the view that no further performance will be required for some portion of the customer contract(s).

As discussed in 6 above and following the guidance on principal versus agent considerations (see 5.4 above), the amount to which the entity expects to be entitled excludes amounts collected on behalf of another party. Accordingly, regardless of whether an entity can demonstrate the ability to reliably estimate breakage, entities would not estimate or recognise any amounts attributable to a customer's unexercised rights in income (e.g., an unused gift card balance) if the amounts are required to be remitted to another party (e.g., the government). Such an amount is recognised as a liability (not as revenue). The liability would not be derecognised until the derecognition requirements in Section 11 are met, generally when cash is remitted to the other party.

Consider the following Illustration which shows how an entity would apply the above guidance to the sale of a gift card in the scope of Section 23 (see Question 3-3 in 3.1.5 above for further discussion):

Illustration 8-15: Accounting for the sale of a gift card

Entity A sells a £500 non-refundable gift card that can be redeemed at any of its retail locations. Any unused balance is not subject to laws that require from the entity to remit the payment to another party. When the gift card is sold, Entity A recognises a contract liability of £500 (i.e., the full amount that was prepaid by the customer). No breakage is recognised as revenue upon sale of the gift card.

Scenario A - Entity expects to be entitled to a breakage amount

Based on historical redemption rates, Entity A expects 90% of the gift card (or £450) to be redeemed. That is, Entity A expects breakage of 10% (or £50). Upon its first use, the customer redeems £225 of the gift card. That is, 50% of the expected redemption has occurred (i.e., £225 redemption ÷ £450 total expected redemption). Upon this redemption, Entity A recognises revenue and reduces the contract liability by £250. This is equal to £225 for the transfer of goods or services purchased by the customer, as well as breakage of £25 (50% redemption × £50 breakage estimate) that is recognised in proportion to the exercise of the customer's rights. Similar accounting would occur for future redemptions.

Scenario B - Entity does not expect to be entitled to a breakage amount

Based on historical redemption experiences that customers fully redeem similar gift cards (or possibly the lack of historical experience due to a new gift card programme that means Entity A is unable to estimate the redemption rates), Entity A does not expect to be entitled to a breakage amount. Upon its first use of the gift card, the customer redeems £225. Entity A recognises revenue and reduces the contract liability by the same amount as the redemption (or £225). That is, no additional amounts are recognised for breakage. Similar accounting would occur for future redemptions.

If no further redemptions occur, Entity A recognises the remaining gift card balance (or £275) as revenue (and reduces the contract liability by the same amount) when the likelihood of the customer exercising its remaining rights becomes remote.

As discussed above, the guidance on breakage requires that an entity recognise a contract liability for the full amount of the prepayment. It would then recognise breakage on that contract liability proportionate to the pattern of rights exercised by the customer. If the prepayment element (e.g., the sale of a gift card, loyalty points) is part of a multiple-element arrangement, an entity needs to allocate the transaction price between the identified performance obligations. As a result, the deferred revenue associated with this element would be less than the 'prepaid' amount received for the unsatisfied performance obligations.

Illustration 8-16, which is based on Example 52 in IFRS 15, depicts the sale of goods with loyalty points. [IFRS 15.IE Example 52, IFRS 15.IE267-IE270]. In this example, the amount allocated to the points (i.e., the 'prepaid' element) is less than the stand-alone selling price of those points because of the allocation of the transaction price among the two performance obligations.

Illustration 8-16: Customer loyalty programme

An entity has a customer loyalty programme that rewards a customer with one customer loyalty point for every £10 of purchases. Each point is redeemable for a £1 discount on any future purchases of the entity's products. During a reporting period, customers purchase products for £100,000 and earn 10,000 points that are redeemable for future purchases. The consideration is fixed and the stand-alone selling price of the purchased products is £100,000. The entity expects 9,500 points to be redeemed. The entity estimates a stand-alone selling price of £0.95 per point (totalling £9,500) on the basis of the likelihood of redemption in accordance with paragraph 23.71 (see 7.1.5 above).

The points provide a material right to customers that they would not receive without entering into a contract. Consequently, the entity concludes that the promise to provide points to the customer is a performance obligation. The entity allocates the transaction price (£100,000) to the product and the points on a relative stand-alone selling price basis as follows:

	£	
Product	91,324	$[\text{£}100,000 \times (\text{£}100,000 \text{ stand-alone selling price} \div \text{£}109,500)]$
Points	8,676	$[\text{£}100,000 \times (\text{£}9,500 \text{ stand-alone selling price} \div \text{£}109,500)]$

At the end of the first reporting period, 4,500 points have been redeemed and the entity continues to expect 9,500 points to be redeemed in total. The entity recognises revenue for the loyalty points of £4,110 $[(4,500 \text{ points} \div 9,500 \text{ points}) \times \text{£}8,676]$ and recognises a contract liability of £4,566 ($\text{£}8,676 - \text{£}4,110$) for the unredeemed points at the end of the first reporting period.

At the end of the second reporting period, 8,500 points have been redeemed cumulatively. The entity updates its estimate of the points that will be redeemed and now expects that 9,700 points will be redeemed. The entity recognises revenue for the loyalty points of £3,493 $[(8,500 \text{ total points redeemed} \div 9,700 \text{ total points expected to be redeemed}) \times \text{£}8,676 \text{ initial allocation}] - \text{£}4,110$ recognised in the first reporting period. The contract liability balance is £1,073 ($\text{£}8,676 \text{ initial allocation} - \text{£}7,603 \text{ of cumulative revenue recognised}$).

As depicted in Illustration 8-16 above, entities need to routinely refine and evaluate estimates of breakage. An entity can elect to apply the portfolio approach practical expedient (see 4.3.1 above) to estimate breakage. Similar to the discussion in Question 6-15 in 6.4 above, an entity can consider evidence from similar contracts to develop an estimate without applying the portfolio approach practical expedient. That is, considering historical experience does not necessarily mean the entity is applying the portfolio approach practical expedient.

Frequently asked questions

Question 8-26: Are customers' unexercised rights (i.e., breakage) a form of variable consideration?

How we see it

Although the breakage guidance in paragraph 23.130 specifically refers to the constraint on variable consideration, we do not believe breakage is a form of variable consideration (see 6.2 above).

This is because it does not affect the transaction price. Breakage is a recognition concept (Step 5) that could affect the timing of revenue recognition. It is not a measurement concept (Step 3). For example, the transaction price for a sale of a £20 gift card is fixed at £20 regardless of the expected breakage amount. The expected breakage, however, could affect the timing of revenue recognition because an entity is required under paragraph 23.130 to "recognise the expected breakage amount as revenue in proportion to the pattern of rights exercised by the customer" if it expects to be entitled to a breakage amount. [IFRS 102.23.130].

Question 8-27: How would revenue be recognised for customer options for additional goods or services that represent a material right, but do not have an expiration date (i.e., can an entity recognise breakage for these options)?

See response to Question 5-29 in 5.6 above.

9 Licences of intellectual property

Section 23 provides guidance for recognising revenue from licences of intellectual property that differs in some respects from the requirements for other promised goods or services. Given that licences include a wide array of features and economic characteristics, an entity needs to evaluate the nature of its promise to grant a licence of intellectual property in order to determine whether the promise is satisfied (and revenue is recognised) over time or at a point in time. A licence provides either: *[FRS 102.23.107]*

- A right to access the entity's intellectual property throughout the licence period, which results in revenue that is recognised over time.

Or

- A right to use the entity's intellectual property as it exists at the point in time in which the licence is granted, which results in revenue that is recognised at a point in time.

Section 23 states that licences of intellectual property establish a customer's rights to the intellectual property of an entity and could include, but are not limited to, licences for any of the following: software and technology, media and entertainment (e.g., motion pictures and music), franchises, patents, trademarks and copyrights. *[FRS 102.23.105]*.

The guidance provided on licences of intellectual property is only applicable to licences that are distinct. When the licence is the only promised item (either explicitly or implicitly) in the contract, the guidance is clearly applicable to that licence. The assessment as to whether the contract includes a distinct licence of intellectual property will be straightforward for many contracts. However, if there are multiple promises in a contract, entities might have to more carefully evaluate the nature of the rights conveyed.

Licences of intellectual property are frequently included in multiple-element arrangements with promises for additional goods or services that could be explicit or implicit. In these situations, an entity first applies the requirements of Step 2 of the model to determine whether the licence of intellectual property is distinct, as discussed in 5 above and 9.1 below.

For most licences that are not distinct, an entity would follow the general requirements in Step 5 of the model to account for the recognition of revenue for the performance obligation that includes the licence (i.e., the requirements in paragraphs 23.78-23.89 to determine whether the performance obligation transfers over time or at a point in time, as discussed in 8.1 and 8.2 above).

FRS 102 aims to be simpler than adopted IFRS. Accordingly, the FRC included a more straightforward description of the requirements for licensing. *[FRS 102.BC.B23.7]*. The overall accounting requirements for licences of intellectual property are consistent between Section 23 and IFRS 15. However, IFRS 15 provides more detailed guidance and illustrations, which an entity reporting under FRS 102 could consider in applying the requirements of Section 23. For example, the IASB noted in the Basis for Conclusions on IFRS 15 that there might be some situations in which, even though the licence is not distinct from the good or service transferred with the licence, the licence is the primary or dominant component (i.e., the predominant item) of the combined performance obligation. *[IFRS 15.BC407]*. In such situations, the IASB indicated that the application guidance for licences still applies. The IASB provided no application guidance or bright lines for determining when a licence is the primary or dominant component. However, an example in the Basis for Conclusions on IFRS 15 illustrates this concept further. *[IFRS 15.BC414X]*. See 9.2.1 below for further discussion. The determination of whether a licence is the predominant component will be obvious in some cases, but not in others. Therefore, entities might need to exercise significant judgement and consider both qualitative and quantitative factors.

9.1 Identifying performance obligations in a licensing arrangement

Contracts for licences of intellectual property frequently include explicit or implicit promises for additional goods or services (e.g., equipment, when-and-if available upgrades, maintenance and installation). *[FRS 102.23.19]*. Consistent with Step 2 of the general model (see 5 above), entities need to apply the requirements on identifying performance obligations in paragraphs 23.17 to 23.25 when a contract with a customer includes a licence of intellectual property and other promised goods or services in order to appropriately determine whether the licence of intellectual property and the other promises are distinct (i.e., are separate performance obligations).

In respect of identifying performance obligations in a licensing arrangement, Section 23 states that "If a contract with a customer includes a promise to grant a licence (or licences) in addition to other promised goods or services, an entity shall apply paragraphs 23.17 to 23.25 to identify each of the performance obligations in the contract." *[FRS 102.23.106]*.

As discussed in 5.2 above, Section 23 outlines a two-step process for determining whether a promised good or service (including a licence of intellectual property) is distinct and, therefore, is a performance obligation, as follows:

- (a) Consideration of the individual good or service (i.e., whether the good or service is capable of being distinct).

And

- (b) Consideration of whether the good or service is separately identifiable from other promises in the contract (i.e., whether the promise to transfer the good or service is distinct in the context of the contract).

To conclude that a good or service is distinct, an entity needs to determine that the good or service is both capable of being distinct and distinct in the context of the contract. These requirements need to be applied to determine whether a promise to grant a licence of intellectual property is distinct from other promised goods or services in the contract. Therefore, entities are required to assess whether the customer can benefit from a licence of intellectual property on its own or together with readily available resources (i.e., whether it is capable of being distinct) and whether the entity's promise to transfer a licence of intellectual property is separately identifiable from other promises in the contract (i.e., whether it is distinct in the context of the contract). The assessment of whether a licence of intellectual property is distinct needs to be based on the facts and circumstances of each contract.

9.1.1 Licences of intellectual property that are distinct

Licences are frequently capable of being distinct (i.e., the first criteria of a distinct good or service) as a customer can often obtain at least some benefit from the licence of intellectual property on its own or with other readily available resources. An entity could consider Case A within Example 11 in IFRS 15 which includes a contract for a software licence that is transferred along with installation services, technical support and unspecified software updates. In this example, the installation service is routinely performed by other entities and does not significantly modify the software. The software licence is delivered before the other goods or services and remains functional without the updates and technical support. The entity concludes that the customer can benefit from each of the goods or services either on their own or together with other goods or services that are readily available. [IFRS 15.IE Example 11 Case A, IFRS 15.IE49-IE58]. That is, each good or service, including the software licence, is capable of being distinct under paragraph 23.21.

If an entity determines that a licence of intellectual property and other promised goods or services are capable of being distinct, the second step in the evaluation is to determine whether they are distinct in the context of the contract. As part of this evaluation, an entity considers the indicators for whether the goods or services are not separately identifiable, including whether:

- (a) The entity provides a significant service of integrating the licence and other goods or services into a combined output or outputs.
- (b) The licence and other goods or services significantly modify or customise each other.

Or

- (c) The licence and other goods or services are highly interdependent or highly interrelated, such that the entity would not be able to fulfil its promise to transfer the licence independently of fulfilling its promise to transfer the other goods or services to the customer.

Continuing with Case A within Example 11 in IFRS 15, which is discussed above, the entity considers the separately identifiable principle and factors in paragraph 23.24 and determines that the promise to transfer each good and service, including the software licence, is separately identifiable. In reaching this determination, the entity considers that the installation services are routine and can be obtained from other providers. In addition, the entity considers that, although it integrates the software into the customer's system, the software updates do not significantly affect the customer's ability to use and benefit from the software licence during the licence period. Therefore, neither the installation services nor the software updates significantly affect the customer's ability to use and benefit from the software licence. The entity further observes that none of the promised goods or services significantly modify or customise one another and the entity is not providing a significant service of integrating the software and services into one combined output. Lastly, the software and the services are not deemed to be highly interdependent or highly interrelated because the entity would be able to fulfil its promise to transfer the initial software licence independent from its promise to subsequently provide the installation service, software updates and the technical support.

The illustration below, which is based on Case B within Example 56 in IFRS 15, is another example that illustrates a contract for which a licence of intellectual property is determined to be distinct from other promised goods or services: *[IFRS 15.IE Example 56 Case B, IFRS 15.IE281, IFRS 15.IE285-IE288]*

Illustration 9-1: Identifying a distinct licence

An entity, a pharmaceutical company, licenses to a customer its patent rights to an approved drug compound for 10 years and also promises to manufacture the drug for the customer. The drug is a mature product; therefore, the entity will not undertake any activities to support the drug, which is consistent with its customary business practices.

In this case, the manufacturing process used to produce the drug is not unique or specialised and several other entities can also manufacture the drug for the customer.

The entity assesses the goods and services promised to the customer to determine which goods and services are distinct, and it concludes that the criteria in paragraph 23.21 (see 5.2.1 above) are met for each of the licence and the manufacturing service. The entity concludes that the criterion in paragraph 23.21(a) (see 5.2.1.A above) is met because the customer can benefit from the licence together with readily available resources other than the entity's manufacturing service (because there are other entities that can provide the manufacturing service), and can benefit from the manufacturing service together with the licence transferred to the customer at the start of the contract.

The entity also concludes that its promises to grant the licence and to provide the manufacturing service are separately identifiable (i.e., the criterion in paragraph 23.21(b) is met – see 5.2.1.B above). The entity concludes that the licence and the manufacturing service are not inputs to a combined item in this contract on the basis of the principle and the factors in paragraph 23.24 (see 5.2.1.B above). In reaching this conclusion, the entity considers that the customer could separately purchase the licence without significantly affecting its ability to benefit from the licence. Neither the licence, nor the manufacturing service, is significantly modified or customised by the other and the entity is not providing a significant service of integrating those items into a combined output. The entity further considers that the licence and the manufacturing service are not highly interdependent or highly interrelated because the entity would be able to fulfil its promise to transfer the licence independently of fulfilling its promise to subsequently manufacture the drug for the customer. Similarly, the entity would be able to manufacture the drug for the customer even if the customer had previously obtained the licence and initially utilised a different manufacturer. Thus, although the manufacturing service necessarily depends on the licence in this contract (i.e., the entity would not provide the manufacturing service without the customer having obtained the licence), the licence and the manufacturing service do not significantly affect each other. Consequently, the entity concludes that its promises to grant the licence and to provide the manufacturing service are distinct and that there are two performance obligations:

(a) Licence of patent rights

And

(b) Manufacturing service

The entity assesses, in accordance with paragraph 23.108, the nature of the entity's promise to grant the licence (see 9.2 below). The drug is a mature product (i.e., it has been approved, is currently being manufactured and has been sold commercially for the last several years). For these types of mature products, the entity's customary business practices are not to undertake any activities to support the drug. The drug compound has significant stand-alone functionality (i.e., its ability to produce a drug that treats a disease or condition). Consequently, the customer obtains a substantial portion of the benefits of the drug compound from that functionality, rather than from the entity's ongoing activities. The entity concludes that neither of the criteria in paragraph 23.108 are met because the contract does not require, and the customer does not reasonably expect, the entity to undertake activities that significantly affect the intellectual property to which the customer has rights. In its assessment of the criteria in paragraph 23.108, the entity does not take into consideration the separate performance obligation of promising to provide a manufacturing service. Consequently, the nature of the entity's promise in transferring the licence is to provide a right to use the entity's intellectual property in the form and the functionality with which it exists at the point in time that it is granted to the customer. Consequently, the entity accounts for the licence as a performance obligation satisfied at a point in time.

The entity applies paragraphs 23.78 to 23.89 to determine whether the manufacturing service is a performance obligation satisfied at a point in time or over time (see 8.1 and 8.2 above).

9.1.2 Licences of intellectual property that are not distinct

The licences of intellectual property included in the examples in 9.1.1 above were determined to be distinct because they met the two criteria of paragraph 23.21 (see 5.2.1 above). In other situations, a licence of intellectual property might not be distinct from other promised goods or services in a contract, either because it is not capable of being distinct and/or it is not separately identifiable.

Accordingly, a licence that is not distinct from other promised goods or services in a contract must be combined into a single performance obligation (i.e., into a bundle of goods or services that is distinct).

[FRS 102.23.25]. IFRS 15 identifies two examples of licences of intellectual property that are not distinct from other goods or services, as follows: [IFRS 15.B54]

- A licence that is a component of, and integral to the functionality of, a tangible good.
- A licence that the customer can benefit from, but only in conjunction with a related service (e.g., as a result of the entity granting a licence, the customer has access to an online service provided by the entity).

In both examples, a customer only benefits from the combined output of the licence of intellectual property and the related good or service. Therefore, the licence is not distinct and would be combined with those other promised goods or services in the contract.

Illustration 9-3 in 9.2.1 below is another example which illustrates contracts that include licences of intellectual property that are not distinct from other goods or services promised to the customer.

When an entity is required to bundle a licence of intellectual property with other promised goods or services in a contract, it often needs to consider the licensing guidance to help determine the nature of its promise to the customer when the licence is the predominant item in the combined performance obligation.

See 9.2.1 below for further discussion on applying the licensing guidance to such performance obligations.

9.1.3 Contractual restrictions

Some licences contain substantive contractual restrictions on how the customer can employ a licence. Section 23 does not include guidance on how contractual restrictions impact the determination of the nature of the entity's promise in granting the licence.

IFRS 15 explicitly states that restrictions of time, geography or use do not affect the licensor's determination of whether the promise to transfer a licence is satisfied over time or at a point in time. These are, therefore, disregarded in the assessment because restrictions of time, geographical region or use define the attributes of the promised licence, rather than define whether the entity satisfies its performance obligation at a point in time or over time. [IFRS 15.B62(a)].

Entities applying Section 23 could consider the related guidance in IFRS 15 and a detailed discussion of that guidance is available in the EY publication, International GAAP®.

9.1.4 Guarantees to defend or maintain a patent

An entity might provide a guarantee that it has a valid patent to intellectual property and that it will defend that patent from unauthorised use. Section 23 does not provide further guidance regarding the treatment of such guarantees but an entity could consider the related guidance in IFRS 15.

IFRS 15 states that a guarantee to defend or maintain a patent does not represent a performance obligation in a licensing contract. Furthermore, this type of guarantee does not affect the licensor's determination as to whether the licence provides a right to access intellectual property (satisfied over time) or a right to use intellectual property (satisfied at a point in time). This is because the act of defending a patent protects the value of the entity's intellectual property assets and provides assurance to the customer that the licence transferred meets the specifications of the licence promised in the contract.

[IFRS 15.B62(b)].

Entities applying Section 23 could consider the related guidance in IFRS 15 and a detailed discussion of that guidance is available in the EY publication, International GAAP®.

Frequently asked questions

Question 9-1: How do entities account for modifications and other changes to licences of intellectual property?

A licence provides a customer with a right to use or a right to access the intellectual property of an entity. The terms of each licence of intellectual property are defined by the contract, which establishes the customer's rights (e.g., period of time, area of use). Parties to a licensing arrangement might agree to renew (or extend) the terms and conditions of an existing licence (see 9.4 below for further discussion on the accounting for licence renewals).

However, parties to a licensing arrangement might agree to extend the licence term, but the extension is not solely a renewal of the terms and conditions of a licence (i.e., the parties could add goods or services, change the pricing, or do both). Neither Section 23 nor IFRS 15 explicitly address the accounting for these types of licence changes.

How we see it

The following are two approaches entities have applied in practice under IFRS 15, that we believe would be acceptable under Section 23. The approaches described below assume a right-to-use licence (see 9.3.2 below). Approach A is based on the use and benefit requirement in paragraph 23.112 (discussed in 9.3.3 below) and Approach B is based on the contract modification requirements in paragraphs 23.13-23.16 (discussed in 4.4 above).¹⁸⁴

While we believe both approaches are acceptable, an entity must make a policy choice to select one approach and apply it consistently to similar transactions. We believe other approaches could also be acceptable, depending on the facts and circumstances.

Approach A

New rights granted in a licensing arrangement (i.e., an extension for existing rights and the granting of additional rights) do not constitute a contract modification but, instead, create a new contract. Under this approach, because the performance related to the existing right-to-use licence was completed at the beginning of the original licence period (when the customer was able to use and benefit from the licence), any changes to the terms or pricing (or both) of the licence cannot modify or revoke the existing licence.

Instead, new rights granted in the licensing arrangement would be accounted for using the licensing guidance (i.e., the use and benefit requirement in paragraph 23.112 that is discussed in 9.3.3 below). As a result, revenue related to the renewal or extension of the existing licence would be recognised when (or as) that performance obligation is satisfied, which might not be until the beginning of the renewal or extension period (see 9.4 below) or some other date.

Approach B

The contract modification requirements in paragraphs 23.13 to 23.16 (discussed in 4.4 above) are applied to the licence extension. Under this approach, the accounting for the renewed licence follows the form of the contract modification.

How we see it

We believe that when a contract that only includes a licence of intellectual property is modified, the additional and/or modified licence of intellectual property is distinct from the existing licence because the new and/or modified rights will always differ from those conveyed by the existing licence.

¹⁸⁴ These approaches are consistent with the alternatives described in the FASB staff's memo, *Issue Summary No. 1*, when the FASB's Emerging Issues Task Force (EITF) considered the accounting for contract modifications of licenses of intellectual property. For further details about these alternatives, refer to *Issue 1: Accounting for contract modifications under which the contract term for existing rights is extended, while also adding rights* in the staff's memo, available on the [FASB's website](#). The FASB will consider this issue as part of the post-implementation review process of ASC 606.

Section 23 contains requirements for accounting for contract modifications and it requires a modification in which the additional promised goods or services are distinct to be accounted for on a prospective basis, as follows:

- The modification is accounted for as a separate contract if the additional consideration from the modification reflects the new licence's stand-alone selling price in accordance with paragraph 23.15(b) (see 4.4.1 above). [FRS 102.23.15(b)].
- If the additional consideration does not reflect the stand-alone selling price of the new licence, the modification is accounted for in accordance with paragraph 23.16(a) (see 4.4.2.A above). [FRS 102.23.16(a)].

If the modification is determined to be a separate contract in accordance with paragraph 23.15(b), the existing contract is not considered terminated. As a result, any revenue allocated to a performance obligation created at the modification date for the renewal or extension of a licence would be recognised when (or as) that performance obligation is satisfied, which might not occur until the beginning of the renewal or extension period (consistent with Approach A above).

If the modification is determined to be a termination of the existing contract and the creation of a new contract in accordance with paragraph 23.16(a), any revenue recognised to date under the original contract would not be adjusted. At the date of the modification, the remaining unrecognised transaction price from the existing contract (if any) and the additional transaction price from the new contract are allocated to the remaining performance obligation(s) in the new contract. Any revenue allocated to a performance obligation created at the modification date for the renewal or extension of a licence would be recognised when (or as) that performance obligation is satisfied, which might occur as early as the modification date (if the customer can use and benefit from the licences) because the existing contract (including the existing licence) would be considered terminated.

Example

The following Illustration shows the application of each of the approaches discussed above:

Illustration 9-2: Additional rights under a right-to-use licence granted to a licensee

Entity A enters into a contract on 1 January 20X6 with Customer B to transfer a right-to-use licence of software. The licence provides 100 seats (i.e., a right-to-use licence for 100 users to access the software) of Product C for a two-year term for £200,000. The consideration is paid annually in two equal instalments (i.e., £100,000 is due 30 January 20X6 and the remaining £100,000 is due on 30 January 20X7). The price reflects the stand-alone selling price of Product C.

On 1 January 20X7, Entity A and Customer B agree to add more seats to the licence. The existing licence is terminated, and the customer is granted a new licence for 150 seats for a two-year term for £276,000, which represents the second £100,000 payment from the original contract plus an additional £176,000. That is, Customer B receives an 8% discount per seat on the original price because of the added volume.

Entity A determines that the additional seats are distinct from the existing seats and the additional seats are not priced at their stand-alone selling prices because the price has decreased by 8%.

Since it is a right-to-use licence under Section 23, Entity A needs to evaluate when Customer B can use and benefit from the new software licence because that determines the point before which control cannot transfer (and Entity A cannot recognise revenue) related to the new software licence. Entity A also needs to evaluate ongoing services, such as post-contract customer support, which could change the allocation of consideration to the performance obligations and, therefore, the timing of revenue recognition.

To illustrate the different approaches that would be acceptable, the analysis below focuses only on the creation of the new licence itself:

Approach A

Entity A determines that the new licence is: (1) the addition of 50 new seats for a two-year term (from 1 January 20X7 through to 31 December 20X8); (2) a one-year renewal of the original 100 seats (from 1 January 20X8 through to 31 December 20X8); and (3) an 8% reduction from the original price for each of the 100 original seats for the second year (from 1 January 20X7 through to 31 December 20X7).

Entity A allocates the additional consideration of £176,000 between the 50 new seats and the renewal of the original 100 seats. The consideration allocated to the new seats is recognised on 1 January 20X7, which is the date when Customer B can use and benefit from the new seats (and assuming control has transferred at the beginning of licence period). Entity A would then need to determine when it has satisfied its performance obligation for the renewal (which cannot be before Customer B can use and benefit from the renewed licence) to determine when to recognise the consideration allocated to the renewal. Entity A might, for example, determine that this is at the time the new licence is granted (1 January 20X7), not before the beginning of the licence renewal period (1 January 20X8) or some other date.

Approach B

Entity A determines that a contract modification has occurred in accordance with paragraph 23.16(a), whereby a new licence for 150 seats for a two-year term has been granted and the original licence has been terminated as at 1 January 20X7 when the additional, distinct seats were added to the contract. Entity A concludes that Customer B can use the software and benefit from the modified licence immediately because the customer is not renewing a licence with the same terms and conditions as the original contract due to the addition of 50 new seats and change in pricing. It also determines control has transferred to Customer B at the same date. As a result, Entity A recognises the entire £176,000 on 1 January 20X7.

Question 9-2: How do entities account for an option to revoke licensing rights?

Certain licensing arrangements include, either at inception or as a result of a modification, an option that allows the customer to revoke licensing rights in the future. For example, a contract for an on-premise software licence might include an option that allows the customer to migrate the on-premise software to a SaaS arrangement (i.e., the on-premise licence is revoked).

Neither Section 23 nor IFRS 15 provides guidance on how to account for an option that allows a customer to revoke rights to a licence of intellectual property. We believe there are two acceptable alternatives, if the option is determined not to be a material right:¹⁸⁵

- Account for the option as a right of return (see 5.7 above for further details about the accounting for rights of return).
- Or
- Account for the conversion prospectively when it occurs applying the contract modification requirements (see 4.4 above for further details about the accounting for contract modifications).

However, if the option is determined to be a material right, see 5.6 above for further details about accounting for material rights.

How we see it

We believe entities must select one of the two alternatives above to account for the revocation of a licence and apply it consistently to similar transactions.

Question 9-3: How does an entity account for contracts that grant both permission for past use of intellectual property and a licence to use the intellectual property in the future?

An entity might enter into a contract with a customer that grants the right to use intellectual property and the customer also agrees to pay consideration for past use of that intellectual property. Such an agreement might be in part a settlement for the use of the intellectual property in the past without the entity's permission.

In such circumstances, it would require judgement to determine what aspects of the contract are within the scope of Section 23. This would include consideration of whether, and to what extent, the counterparty is acting as a customer as defined in FRS 102 (see 3.1.3 above).

If the contract is only partially within the scope of Section 23, an entity would need to use judgement when applying the requirements in paragraph 23.3 (see 3.1.5 above) to separate the consideration between the revenue in exchange for the licence, any amount received for the past use and any other components. [FRS 102.23.3].

If, or to the extent, the contract is outside the scope of Section 23, an entity considers whether the income is arising in the course of the entity's ordinary activities in order to determine whether presentation as (other) revenue is appropriate (see 3.1.3 above and Question 11-7 in 11.2 below).

Question 9-4: Does a licence to a content library include more than one performance obligation?

Whether a contract that includes the transfer of one or more licences of intellectual property to a content library includes more than one performance obligation depends on facts and circumstances, and requires an entity to apply significant judgement. For example, an entity might enter into a licensing arrangement that provides the customer with a right to use all of the entity's existing content at contract inception, together with a right to use unspecified future updates to the content library (e.g., a licence for a film producer's completed titles and any titles produced in the future, a licence for an existing music library and any songs added or removed in the future). Typically, the contractual licence fee is not adjusted if the licensor does not obtain or create new content to provide to the licensee over the term of the contract.

¹⁸⁵ These alternatives are consistent with the alternatives described in the FASB staff's memo, *Issue Summary No. 1*, when the EITF considered this issue. For further details about these alternatives, refer to *Issue 2: Accounting for the revocation of licensing rights (including conversion of term software licences to SaaS arrangements)* in the staff's memo, available on the [FASB's website](#). The FASB will consider the issue as part of the post-implementation review process of ASC 606.

In these arrangements, the licensor needs to evaluate the promised goods or services in the contract to determine the number of performance obligations (e.g., whether the licence for the existing content library provided at inception of the arrangement is distinct from other promises in the contract, including the obligation to provide updates to the content library on a when-and-if-available basis). That is, entities need to consider whether each individual good or service is both capable of being distinct and distinct in the context of the contract.

The licence for the existing content library is considered distinct from the other promised goods or services in the contract if it is separately identifiable from them. That might be the case if the licensor does not provide a significant service of integrating the existing content library with other promised goods or services in the contract (e.g., unspecified future updates to the content library), the promise goods or services do not significantly modify or customise each other, or the existing content library is not highly interdependent or interrelated with the other promised goods or services.

In many cases, a licensing arrangement that provides the customer with a right to use all of the entity's existing content at contract inception, together with a right to use unspecified future updates to the content library will generally be both capable of being distinct and distinct within the context of the contract (i.e., separately identifiable). Therefore, these promises are generally two separate performance obligations.

When an entity determines that there is more than one performance obligation (e.g., one for the licence to the content library provided at the inception of the arrangement, and another for the obligation to provide updates to the content library in the future, when and if available), the licensor will need to allocate the transaction price to the separate performance obligations on a relative stand-alone selling price basis.¹⁸⁶

9.2 Determining the nature of the entity's promise in granting a licence

Entities need to evaluate the nature of a promise to grant a licence of intellectual property in order to determine whether the promise is satisfied (and revenue is recognised) over time or at a point in time. An entity considers whether the nature of the entity's promise in granting the licence provides the customer with: *[FRS 102.23.107]*

- A right to access the entity's intellectual property as it exists throughout the licence period.
- Or
- A right to use the entity's intellectual property as it exists at the point in time in which the licence is granted.

In order to help entities in determining whether a licence provides a customer with a right to access or a right to use the intellectual property (which is important when determining the period of performance and, therefore, the timing of revenue recognition - see 9.3 below), Section 23 provides the following guidance: *[FRS 102.23.108, FRS 102.23.109, FRS 102.23.110]*

¹⁸⁶ Licences of content library arrangements are typically provided in exchange for fixed consideration and/or variable consideration in the form of a sales-based or usage-based royalty. This paragraph assumes the transaction price does not include any other form of variable consideration that could be subject to the variable consideration allocation exception in FRS 102.23.73-23.74 (see 7.3 above).

Extract from Section 23

- 23.108** A licence provides a customer with a right to access an entity's intellectual property if the entity expects to undertake activities that either:
- (a) will significantly affect the benefit the customer obtains from the intellectual property by changing the substance of the intellectual property; or
 - (b) could significantly affect the benefit the customer obtains from the intellectual property by directly exposing the customer to any positive or negative effects of those activities.
- 23.109** An entity's expected activities may be included in the terms of a contract or arise from those activities that the customer reasonably expects the entity will undertake. The assessment of whether a licence provides a customer with a right to access an entity's intellectual property shall not include activities that result in the transfer of a good or service to the customer as those activities occur.
- 23.110** Activities that change the substance of the intellectual property include activities that change the intellectual property's design, content or ability to perform a function or task (eg development activities that change the content to which the customer has rights). Activities that expose the customer to positive or negative effects of those activities include activities that support or maintain the value of intellectual property (eg ongoing activities that maintain the value of the brand to which the customer has rights).

When applying this guidance, the focus is on the characteristics of a licence that provides a right to access the entity's intellectual property. If the licensed intellectual property does not have those characteristics, it provides a right to use the entity's intellectual property, by default. This analysis is focused on situations in which the underlying intellectual property is subject to change over the licence period.

As discussed in 9 above, Section 23 includes a more straightforward description of the requirements for licences of intellectual property, but the overall accounting requirements are consistent with those in IFRS 15. However, IFRS 15 provides more detailed guidance which an entity could consider in applying the requirements of Section 23.

A licence establishes a customer's rights to the intellectual property of an entity. [FRS 102.23.105, IFRS 15.B52]. Consequently, activities that significantly affect the intellectual property and the rights granted by the licence to the customer, directly exposes the customer to any effects of such activities. In this case, such activities will or could significantly affect the benefit the customer obtains from the intellectual property to which the customer has rights.

Note that under IFRS 15, the key determinants of whether the nature of an entity's promise is a right to access the entity's intellectual property are whether: (1) the entity is required to undertake activities that affect the licensed intellectual property (or the customer has a reasonable expectation that the entity will do so); and (2) the customer is exposed to positive or negative effects resulting from those changes. This is consistent with the requirements in Section 23, that is, an entity must determine whether it expects to undertake activities that either will or could significantly affect the benefit the customer obtains from the intellectual property. [FRS 102.23.108].

It is important to note that when an entity is making this assessment, it excludes the effect of any other performance obligations in the contract. For example, if an entity enters into a contract to licence software and provide access to any future upgrades to that software during the licence period, the entity first determines whether the licence and the promise to provide future updates are separate performance obligations. If they are separate, when the entity considers whether it has a contractual (explicit or implicit) obligation to undertake activities to change the software during the licence period, it excludes any changes and activities associated with the performance obligation to provide future upgrades.

While the activities considered in this assessment do not include those that are a performance obligation, these activities can be part of an entity's ongoing ordinary activities (see 3.1.3 above) and customary business practices (i.e., they do not have to be activities the entity is undertaking specifically as a result of the contract with the customer). [FRS 102.23.108, FRS 102.23.109]. In addition, the IASB noted in the Basis for Conclusions on IFRS 15 that the existence of a shared economic interest between the parties (e.g., sales-based or usage-based royalties) could be an indicator that the customer has a reasonable expectation that the entity will undertake such activities. [IFRS 15.BC413].

After an entity has identified the activities for this assessment, it must determine if those activities will or could significantly affect the benefit the customer obtains from the intellectual property to which the customer has rights. Section 23 clarifies that such activities: *[FRS 102.23.108, FRS 102.23.110]*

- Will significantly affect the benefit the customer obtains from the intellectual property by changing the substance of the intellectual property – these are activities that significantly change the form (e.g., design or content) or functionality (e.g., the ability to perform a function or task) of the intellectual property.
- Or
- Could significantly affect the benefit the customer obtains from the intellectual property by directly exposing the customer to positive or negative effects of those activities – these are activities that could affect the ability of the customer to obtain benefit from the intellectual property because such benefit is substantially derived from, or dependent upon, those activities (e.g., the benefit from a brand is often derived from, or dependent upon, the entity's ongoing activities that support or maintain the value of the intellectual property).

Note also that IFRS 15 provides further guidance which states that if the intellectual property has significant stand-alone functionality, the customer derives a substantial portion of the benefit of that intellectual property from that functionality. As such, the ability of the customer to obtain benefit from that intellectual property would not be significantly affected by the entity's activities unless those activities significantly change its form or functionality. Therefore, if the intellectual property has significant stand-alone functionality, revenue is recognised at a point in time. Examples of types of intellectual property that often have significant stand-alone functionality that are mentioned in IFRS 15 include software, biological compounds or drug formulas, and completed media content (such as films, television shows and music recordings). *[IFRS 15.B59A]*.

The IASB has not defined the term 'significant stand-alone functionality', but has made clarifications to the examples in IFRS 15 to illustrate when the intellectual property to which the customer has rights might have significant stand-alone functionality. In some cases, it will be clear when intellectual property has significant stand-alone functionality. If there is no significant stand-alone functionality, the benefit to the customer might be substantially derived from the value of the intellectual property and the entity's activities to support or maintain that value. The IASB noted, however, that an entity might need to apply judgement to determine whether the intellectual property to which the customer has rights has significant stand-alone functionality. *[IFRS 15.BC414]*.

How we see it

It is important for entities that provide licences of intellectual property to their customers to appropriately identify the performance obligations as part of Step 2 of the model because those conclusions will directly affect their evaluation of whether the entity's activities significantly change the form or functionality of the intellectual property or affect the ability of the customer to obtain benefit from the intellectual property.

9.2.1 Applying the licensing guidance to a single (bundled) performance obligation that includes a licence of intellectual property

If a licence is not distinct from the other goods or services in the contract, entities are required to follow the requirements in paragraphs 23.78 to 23.89 to determine whether the single (bundled) performance obligation (which includes the licence) is satisfied over time or at a point in time (i.e., the general requirements in Step 5 of the model, as discussed in 8.1 and 8.2 above). *[FRS 102.23.106]*.

Neither Section 23 nor IFRS 15 explicitly states that an entity needs to consider the nature of its promise in granting a licence when applying the general revenue recognition model to performance obligations that are comprised of both a licence (that is not distinct) and other goods or services. However, the IASB clarified in the Basis for Conclusions on IFRS 15 that to the extent that an entity is required to combine a licence with other promised goods or services in a single performance obligation and the licence is the primary or dominant component (i.e., the predominant item) of that performance obligation, the entity needs to consider the licensing guidance to help determine the nature of its promise to the customer. *[IFRS 15.BC407]*. If the licence is the predominant item of a single performance obligation, entities need to consider the licensing guidance when:

- (a) Determining whether the performance obligation is satisfied over time or at a point in time.

And

- (b) Selecting an appropriate method for measuring progress of that performance obligation if it is satisfied over time.

Considering the nature of an entity's promise in granting a licence that is part of a single combined performance obligation is not a separate step or evaluation in the revenue model. Rather, it is part of the overall requirements in Step 5 of the model to determine whether that single performance obligation is satisfied over time or at a point in time and the appropriate measure of progress toward the satisfaction, if it is satisfied over time.

Under IFRS 15, the IASB did not provide application guidance or bright lines for determining when a licence is the primary or dominant (i.e., the predominant) component. However, the IASB explained in the Basis for Conclusions on IFRS 15 that, in some instances, not considering the nature of the entity's promise in granting a licence that is combined with other promised goods or services in a single performance obligation would result in accounting that does not best reflect the entity's performance. For example, consider a situation where an entity grants a 10-year licence that is not distinct from a one-year service arrangement. The IASB noted that a distinct licence that provides access to an entity's intellectual property over a 10-year period could not be considered completely satisfied before the end of the access period. The IASB observed in that example that it is, therefore, inappropriate to conclude that a single performance obligation that includes that licence is satisfied over the one-year period of the service arrangement.

[IFRS 15.BC414X].

IFRS 15 includes examples that illustrate how an entity applies the licensing application guidance to help determine the nature of a performance obligation that includes a licence of intellectual property and other promised goods or services.

In Illustration 9-3 below, which is based on Case A within Example 56 in IFRS 15, an entity licences the patent rights for an approved drug compound to its customer and also promises to manufacture the drug for the customer. The entity considers that no other entity can perform the manufacturing service because of the highly specialised nature of the manufacturing process. Therefore, the licence cannot be purchased separately from the manufacturing service and the customer cannot benefit from the licence on its own or with other readily available resources (i.e., the licence and the manufacturing service are not capable of being distinct). Accordingly, the entity's promises to grant the licence and to manufacture the drug are accounted for as a single performance obligation, as set out below. [IFRS 15.IE Example 56 Case A, IFRS 15 IE281-IE284]

Illustration 9-3: Identifying a distinct licence

An entity, a pharmaceutical company, licenses to a customer its patent rights to an approved drug compound for 10 years and also promises to manufacture the drug for the customer. The drug is a mature product; therefore, the entity will not undertake any activities to support the drug, which is consistent with its customary business practices.

In this case, no other entity can manufacture this drug because of the highly specialised nature of the manufacturing process. As a result, the licence cannot be purchased separately from the manufacturing services.

The entity assesses the goods and services promised to the customer to determine which goods and services are distinct in accordance with IFRS 102.23.21 (see 5.2.1 above). The entity determines that the customer cannot benefit from the licence without the manufacturing service; therefore, the criterion in paragraph 23.21(a) (see 5.2.1.A above) is not met. Consequently, the licence and the manufacturing service are not distinct and the entity accounts for the licence and the manufacturing service as a single performance obligation.

The entity applies paragraphs 23.78 to 23.89 to determine whether the performance obligation (i.e., the bundle of the licence and the manufacturing services) is a performance obligation satisfied at a point in time or over time (see 8.1 and 8.2 above).

Illustration 9-3 above demonstrates the importance of applying the licensing guidance when determining the nature of an entity's promise in granting a licence that is combined into a single performance obligation with other promised goods or services. This is because the conclusion of whether a non-distinct licence provides the customer with a right to use intellectual property or a right to access intellectual property might have a significant effect on the timing of revenue recognition for the single combined performance obligation. In Illustration 9-3 above, the entity needs to determine the nature of its promise in granting the licence within the single performance obligation (comprising the licence and the manufacturing service) to appropriately apply the general principle of recognising revenue when (or as) it satisfies its performance obligation to the customer. If the licence in this example provided a right to use the entity's intellectual property that on its own would be recognised at the point in time in which control of the licence is

transferred to the customer, it is likely that the combined performance obligation would only be fully satisfied when the manufacturing service is complete. In contrast, if the licence provided a right to access the entity's intellectual property, the combined performance obligation would not be fully satisfied until the end of the 10-year licence period, which could extend the period of revenue recognition beyond the date when the manufacturing service is complete.

9.3 Transfer of control of licensed intellectual property

When determining whether a licence of intellectual property transfers to a customer (and revenue is recognised) over time or at a point in time, Section 23 states that an entity provides a customer with either: *[FRS 102.23.107]*

- A right to access the entity's intellectual property throughout the licence period for which revenue is recognised over the licence period.
- Or
- A right to use the entity's intellectual property as it exists at the point in time the licence is granted for which revenue is recognised at the point in time the customer can first use and benefit from the licensed intellectual property.

Section 23 provides the following guidance on the timing of revenue recognition for right-to-access and right-to-use licences: *[FRS 102.23.111, FRS 102.23.112]*

Extract from Section 23

23.111 If either of the criteria in paragraph 23.108 are met, the licence transfers over time because a customer receives and consumes the benefits of an entity's performance of providing access to its intellectual property as the entity performs. An entity shall apply paragraphs 23.98 to 23.104 to select an appropriate method to measure its progress towards complete satisfaction of the performance obligation.

23.112 If neither of the criteria in paragraph 23.108 are met, the licence provides the customer with a right to use the entity's intellectual property as it exists at the point in time at which the licence is granted. An entity shall apply paragraphs 23.85 to 23.89 to determine the point in time at which the licence transfers to the customer. Revenue cannot be recognised for a licence that provides a right to use the entity's intellectual property before the beginning of the period during which the customer is able to use and benefit from the licence.

9.3.1 Right to access

The explanation in paragraph 23.111 (see 9.3 above) stating that the licence transfers over time if either of the criteria in paragraph 23.108 are met is consistent with the principles in IFRS 15. *[FRS 102.23.111]*

The IASB concluded that a licence that provides an entity with the right to access intellectual property is satisfied over time "because the customer simultaneously receives and consumes the benefit from the entity's performance as the performance occurs", including the related activities undertaken by entity. *[IFRS 15.B60, IFRS 15.BC414]*. This conclusion is based on the determination that when a licence is subject to change (and that change will or could significantly affect the benefit the customer obtains from the intellectual property – see 9.2 above), the customer is not able to fully gain control over the licence of intellectual property at any given point in time, but rather gains control over the licence period. Entities need to apply the general Step 5 requirements in paragraphs 23.98 to 23.104 to determine the appropriate method to measure progress (see 8.1.4 above) in addition to paragraph 23.112 (i.e., the use and benefit requirement, which is discussed in 9.3.3 below).

In performing this analysis, an entity would not default to a straight-line revenue attribution model. However, the customer often receives and consumes the benefits of a right-to-access licence evenly over the contract period and, therefore, a time-based measure of progress that results in a straight-line recognition of revenue would be appropriate.

The illustration below, which is based on Example 58 in IFRS 15, is an example of a right-to-access licence:
[IFRS 15.IE Example 58, IFRS 15.IE297-IE302]

Illustration 9-4: Access to intellectual property

An entity, a creator of comic strips, licenses the use of the images and names of its comic strip characters in three of its comic strips to a customer for a four-year term. There are main characters involved in each of the comic strips. However, newly created characters appear regularly and the images of the characters evolve over time. The customer, an operator of cruise ships, can use the entity's characters in various ways, such as in shows or parades, within reasonable guidelines. The contract requires the customer to use the latest images of the characters.

In exchange for granting the licence, the entity receives a fixed payment of £1 million in each year of the four-year term.

In accordance with paragraph 23.21 (see 5.2.1 above), the entity assesses the goods and services promised to the customer to determine which goods and services are distinct. The entity concludes that it has no other performance obligations other than the promise to grant a licence. That is, the additional activities associated with the licence do not directly transfer a good or service to the customer because they are part of the entity's promise to grant a licence.

The entity assesses the nature of the entity's promise to transfer the licence in accordance with paragraph 23.108 (see 9.2 above). In assessing the criteria the entity considers the following:

- The customer reasonably expects (arising from the entity's customary business practices) that the entity will undertake activities that will significantly affect the intellectual property to which the customer has rights (i.e., the characters). This is because the entity's activities (i.e., development of the characters) change the form of the intellectual property to which the customer has rights. In addition, the ability of the customer to obtain benefit from the intellectual property to which the customer has rights is substantially derived from, or dependent upon, the entity's ongoing activities (i.e., the publishing of the comic strip).
- The rights granted by the licence directly expose the customer to any positive or negative effects of the entity's activities because the contract requires the customer to use the latest characters.
- Even though the customer could benefit from those activities through the rights granted by the licence, they do not transfer a good or service to the customer as those activities occur.

Consequently, the entity concludes that either of the criteria in paragraph 23.108 are met i.e., the entity is expected to undertake activities that will, or could, significantly affect the benefit the customer obtains from the intellectual property. Therefore, the entity concludes that the nature of the entity's promise to transfer the licence is to provide the customer with access to the entity's intellectual property as it exists throughout the licence period. Consequently, the entity accounts for the promised licence as a performance obligation satisfied over time (i.e., the criterion in paragraph 23.81(a) is met - see 8.1.1 above).

The entity applies paragraphs 23.98 to 23.104 to identify the method that best depicts its performance in the licence. Because the contract provides the customer with unlimited use of the licensed characters for a fixed term, the entity determines that a time-based method would be the most appropriate measure of progress towards complete satisfaction of the performance obligation.

Frequently asked questions

Question 9-5: Is a licence that provides a right to access intellectual property a series of distinct goods or services that would be accounted for as a single performance obligation?

Step 2 of the model requires an entity to identify the performance obligations in a contract. This includes determining whether multiple distinct goods or services would be accounted for as a single performance obligation under the series requirement (see 5.2.2 above). It is likely that many licences that provide a right to access intellectual property are a series of distinct goods or services that are substantially the same and have the same pattern of transfer to the customer (e.g., a series of distinct periods of access to intellectual property, such as monthly access or quarterly access).

A TRG agenda paper included an example of a licence that provides a right to access intellectual property that is accounted for as a series of distinct goods or services.¹⁸⁷ In the example, a franchisor grants a licence of intellectual property to a franchisee allowing the franchisee to use its trade name and sell its product for a period of 10 years. As discussed in Question 5-11 in 5.2.2 above, if the nature of an entity's promise is to provide a single service for a period of time, the evaluation of whether goods or services are distinct and substantially the same considers whether each time increment of access to the intellectual property (e.g., hour, day) is distinct and substantially the same. In this example, the nature of the franchisor's promise is to provide a right to access the intellectual property throughout the licence period. Each time increment is distinct because the customer benefits from the right to access each day on its own (i.e., each time increment is capable of being distinct). In addition, each day is separately identifiable (i.e., each time increment is distinct in the context of the contract) because: there is no integration service provided between the days of access provided; no day modifies or customises another; and the days of access are not highly interdependent or highly interrelated. In addition, each distinct daily service is substantially the same because the customer receives access to the intellectual property each day.

If a licence meets the criteria to be accounted for as a series of distinct goods or services, an entity needs to consider whether any variable consideration in the contract (e.g., royalties, milestone payments) must be allocated to the distinct periods of access, if certain allocation criteria are met. See 7.3 above for a discussion of the variable consideration allocation exception and 9.5 below for a discussion of the accounting for sales-based or usage-based royalties.

9.3.2 Right to use

In contrast, when the licence represents a right to use the intellectual property as it exists at a specific point in time, the customer gains control over that intellectual property at the beginning of the period for which it has the right to use the intellectual property. [FRS 102.23.112]. This timing might differ from when the licence was granted. For example, an entity could provide a customer with the right to use intellectual property but indicate that right to use does not start until 30 days after the agreement is finalised. For the purpose of determining when control transfers for the right-to-use licence, Section 23 is clear that the assessment is from the customer's perspective (i.e., when the customer can use the licensed intellectual property), rather than the entity's perspective (i.e., when the entity transfers the licence). Entities need to apply the general Step 5 requirements in FRS 102.23.85-23.89 to determine the point in time that control of the licence transfers to the customer (see 8.2 above) in addition to paragraph 23.112 (i.e., the use and benefit requirement, which is discussed below in 9.3.3 below). [FRS 102.23.112].

¹⁸⁷ TRG Agenda paper no. 39, *Application of the Series Provision and Allocation of Variable Consideration*, dated 13 July 2015.

The illustration below, which is based on Example 59 in IFRS 15, is an example of a right-to-use licence:
[IFRS 15.IE Example 59, IFRS 15.IE303-IE306]

Illustration 9-5: Right to use intellectual property

An entity, a music record label, licenses to a customer a 1975 recording of a classical symphony by a noted orchestra. The customer, a consumer products company, has the right to use the recorded symphony in all commercials, including television, radio and online advertisements for two years in Country A. In exchange for providing the licence, the entity receives fixed consideration of £10,000 per month. The contract does not include any other goods or services to be provided by the entity. The contract is non-cancellable.

The entity assesses the goods and services promised to the customer to determine which goods and services are distinct in accordance with paragraph 23.21 (see 5.2.1 above). The entity concludes that its only performance obligation is to grant the licence. The entity determines that the term of the licence (two years), its geographical scope (the customer's right to use the recording only in Country A), and the defined permitted use for the recording (in commercials) are all attributes of the promised licence in the contract (see discussion in 9.1.3 above).

In accordance with paragraph 23.108 (see 9.2 above), the entity assesses the nature of the entity's promise to grant the licence. The entity does not have any contractual or implied obligations to change the licensed recording. The licensed recording has significant stand-alone functionality (i.e., the ability to be played) and, therefore, the ability of the customer to obtain the benefits of the recording is not substantially derived from the entity's ongoing activities. The entity therefore determines that the contract does not require, and the customer does not reasonably expect, the entity to undertake activities that significantly affect the licensed recording (i.e., neither of the criteria in paragraph 23.108 are met). Consequently, the entity concludes that the nature of its promise in transferring the licence is to provide the customer with a right to use the entity's intellectual property as it exists at the point in time that it is granted. Therefore, the promise to grant the licence is a performance obligation satisfied at a point in time. The entity recognises all of the revenue at the point in time when the customer can direct the use of, and obtain substantially all of the remaining benefits from, the licensed intellectual property.

Because of the length of time between the entity's performance (at the beginning of the period) and the customer's monthly payments over two years (which are non-cancellable), the entity considers the requirements in paragraphs 23.58 to 23.60 to determine whether a financing component exists (see 6.5 above).

9.3.3 Use and benefit requirement

Both Section 23 and IFRS 15 state that revenue from a right-to-use licence cannot be recognised before the beginning of the period during which "the customer is able to use and benefit from the licence".

[FRS 102.23.112, IFRS 15.B61]. Note also that the IASB explained in the Basis for Conclusions on IFRS 15 that if the customer cannot use and benefit from the licensed intellectual property then, by definition, it does not control the licence. *[IFRS 15.BC414]*. See 9.4 below for discussion on licence renewals.

Consider an example where an entity provides a customer with a right to use its software, but the customer requires a code before the software will function, which the entity will not provide until 30 days after the agreement is finalised. In this example, it is likely that the entity would conclude that control of the licence does not transfer until 30 days after the agreement is finalised because that is when the customer has the right to use and can benefit from the software.

9.4 Licence renewals

As discussed in 9.3.3 above, Section 23 states that revenue cannot be recognised for a licence that provides a right to use the entity's intellectual property before the beginning of the period during which the customer is able to use and benefit from the licence. *[FRS 102.23.112]*. A question could arise whether the above requirement applies to the renewal of an existing licence or whether the entity could recognise revenue for the renewal when the parties agree to the renewal.

The above requirement is consistent with the requirement in IFRS 15.B61. Note that the TRG discussed the application of IFRS 15.B61 within the context of renewals or extensions of existing licences. [IFRS 15.BC414S]. The discussion at the TRG indicated that this is an area in which judgement is needed and, therefore, this topic was further discussed by the IASB.¹⁸⁸

The IASB decided that a clarification about the application of the contract modification requirements specifically for renewals of licensing arrangements was not necessary. The IASB noted that, although some diversity might arise, IFRS 15 provides an extensive framework for applying judgement.

Therefore, when an entity and a customer enter into a contract to renew (or extend the period of) an existing licence, the entity needs to evaluate whether the renewal or extension has to be treated as a new licence or as a modification of the existing contract. A modification would be accounted for in accordance with the contract modifications requirements in paragraphs 18 to 21 of IFRS 15. [IFRS 15.BC414T]. These requirements are consistent with the contract modifications requirements in paragraphs 23.13 to 23.16 (see 4.4 above).

See Question 9-1 in 9.1.4 above for further discussion on modifications of licences.

Frequently asked questions

Question 9-6: How do entities account for modifications and other changes to licences of intellectual property?

See response to Question 9-1 in 9.1.4 above.

Question 8-7: How do entities account for an option to revoke licensing rights?

See response to Question 9-2 in 9.1.4 above.

9.5 Sales-based or usage-based royalties on licences of intellectual property

Section 23 provides guidance on the recognition of revenue for sales-based or usage-based royalties on licences of intellectual property, which differs from the requirements that apply to other revenue from licences. Section 23 states that an entity must not apply the requirements related to variable consideration described in paragraphs 23.44 to 23.47 (see 6.2.2 to 6.2.4 above) to a sales-based or usage-based royalty provided in exchange for a licence of intellectual property when the licence of intellectual property is the sole or predominant item to which the royalty relates. Instead, consistent with IFRS 15, Section 23 requires royalties received in exchange for licences of intellectual property to be recognised at the later of when: [FRS 102.23.48]

(a) The subsequent sale or usage takes place

And

(b) The performance obligation to which some or all of the sales-based or usage-based royalty has been allocated has been satisfied (or partially satisfied)

That is, an entity recognises the royalties as revenue for such arrangements when (or as) the customer's subsequent sales or usage occurs, unless that pattern of recognition accelerates revenue recognition ahead of the entity's satisfaction of the performance obligation to which the royalty solely or partially relates, based on an appropriate measure of progress (see 8.1.4 above).

The IASB explained in the Basis for Conclusions on IFRS 15 that for a licence of intellectual property for which the consideration is based on the *customer's* subsequent sales or usage, an entity does not recognise any revenue for the variable amounts until the uncertainty is resolved (i.e., when a customer's subsequent sales or usage occurs). [IFRS 15.BC219].

The application guidance addresses the *recognition* of sales-based or usage-based royalties received in exchange for a licence of intellectual property, rather than when such amounts are included in the transaction price of the contract. [IFRS 15.BC421I]. As a result, this exception is a recognition constraint and the constraint on variable consideration (see 6.2.3 above) does not apply.

188 TRG Agenda paper no. 45, *Licences - Specific Application Issues About Restrictions and Renewals*, dated 9 November 2015.

Under Section 23, the general requirements related to variable consideration (see 6.2 above) do not apply to a sales-based or usage-based royalty provided in exchange for a licence of intellectual property when the licence of intellectual property is the sole or predominant item to which the royalty relates. [FRS 102.23.48]. Under IFRS 15, the variable consideration constraint does not apply, but the other requirements for estimating variable consideration still apply. [IFRS 15.B63]. However, this might be one of the situations where an entity would not need to estimate variable consideration at contract inception (see also discussion in Question 6-10 in 6.2.2 above). This is because, in many cases, using this application guidance will result in the same pattern of revenue recognition as fully constraining the estimate of variable consideration associated with the future royalty stream (also see 9.5.1 below for more information about recognition of royalties for a licence that provides a right to access the entity's intellectual property). However, under Section 23 and IFRS 15, in cases where an entity is required to allocate sales-based or usage-based royalties to separate performance obligations in a contract, it would need to include expected royalties in its estimate of the stand-alone selling price of one or more of the performance obligations.

The IASB explained that it added the royalty recognition constraint because both users and preparers of financial statements indicated that it would not be useful for entities to recognise a minimum amount of revenue for sales-based or usage-based royalties received in exchange for licences of intellectual property (following the requirements in the general model on estimating the transaction price). This is because that approach would inevitably require the entity to report significant adjustments to the amount of revenue recognised throughout the life of the contract as a result of changes in circumstances that are not related to the entity's performance. The IASB observed that this would not result in relevant information, especially for contracts in which the sales-based or usage-based royalties are paid over a long period of time.

[IFRS 15.BC415].

In some contracts, a sales-based or usage-based royalty might be related to both a licence of intellectual property and another good or service that is, or is not, be distinct. Section 23 requires that the royalty recognition constraint be applied to the overall royalty stream when the sole or predominant item to which the royalty relates is a licence of intellectual property. [FRS 102.23.48]. Note also that in the Basis for Conclusions on IFRS 15, the IASB observed that the royalty recognition constraint would also apply when no single licence of intellectual property is the predominant item to which the royalty relates, but the royalty predominantly relates to two or more licences of intellectual property in the contract. [IFRS 15.B63A, IFRS 15.BC421G]. That is, this application guidance is applicable to all licences of intellectual property, regardless of whether they have been determined to be distinct. Neither Section 23 nor IFRS 15 provides a bright line for determining the 'predominant' item in a contract that includes a licence of intellectual property. The IASB acknowledged in the Basis for Conclusions on IFRS 15 that significant judgement is required to determine when a licence is the predominant item to which a royalty relates. However, the judgement for determining whether a licence is the predominant item is likely to be less than the judgement needed to apply the general requirements for variable consideration to such contracts. [IFRS 15.BC421E]. See Question 9-18 in 9.5.1 below for further discussion.

It is important to note that the guidance in paragraph 23.48, or in paragraphs B63-B63B of IFRS 15, applies only to licences of intellectual property for which some or all of the consideration is in the form of a sales-based or usage-based royalty. The IASB said in the Basis for Conclusions on IFRS 15 that the royalty recognition constraint was structured to apply only to a particular type of transaction (i.e., a licence of intellectual property). Therefore, other transactions that might be economically similar would be accounted for differently. [IFRS 15.BC416]. That is, entities cannot analogise to the royalty recognition constraint for other types of transactions. For example, it cannot be applied if consideration in a contract is in the form of a sales-based or usage-based royalty, but there is either: (a) no licence of intellectual property; or (b) the licence of intellectual property to which the sales-based or usage-based royalty relates is not the predominant item in the contract (e.g., the sale of a tangible good that includes a significant amount of intellectual property). Under Section 23 and IFRS 15, when the royalty recognition constraint cannot be applied, an entity follows the general requirements on variable consideration (see 6.2 above). [FRS 102.23.48, IFRS 15.B63B]. In some cases, it will not be obvious whether the arrangement is an in-substance sale of intellectual property (i.e., a promise that is in the form of a licence, but, in substance, has the characteristics of a sale) or a licence of intellectual property. In such instances, entities would have to exercise judgement to determine whether the control over the underlying intellectual property has been transferred from the entity to the customer and therefore, has been sold.

The following flow chart illustrates an entity's evaluation when determining whether the royalty recognition constraint must be applied to a royalty stream:

Figure 9-1: Determining whether the royalty recognition constraint applies to a royalty stream

* This includes situations in which no single licence is the predominant item to which the sales-based or usage-based royalty relates, but the sales-based or usage-based royalty predominantly relates to two or more licences in the contract.

The illustration below, which is based on Example 60 in IFRS 15, is an example of a contract that includes two performance obligations, including a licence that provides a right to use the entity's intellectual property and consideration in the form of sales-based royalties. In the example, the licence is determined to be the predominant item to which the royalty relates: [IFRS 15.IE Example 60, IFRS 15.IE307-IE308]

Illustration 9-6: Sales-based royalty for a licence of intellectual property

An entity, a movie distribution company, licenses Movie XYZ to a customer. The customer, an operator of cinemas, has the right to show the movie in its cinemas for six weeks. Additionally, the entity has agreed to (a) provide memorabilia from the filming to the customer for display at the customer's cinemas before the beginning of the six-week screening period; and (b) sponsor radio advertisements for Movie XYZ on popular radio stations in the customer's geographical area throughout the six-week screening period. In exchange for providing the licence and the additional promotional goods and services, the entity will receive a portion of the operator's ticket sales for Movie XYZ (i.e., variable consideration in the form of a sales-based royalty).

The entity concludes that the licence to show Movie XYZ is the predominant item to which the sales-based royalty relates because the entity has a reasonable expectation that the customer would ascribe significantly more value to the licence than to the related promotional goods or services (see discussion in Question 9-18 in 9.5.1 below). The entity recognises revenue from the sales-based royalty, the only consideration to which the entity is entitled under the contract, wholly in accordance with paragraph 23.48. If the licence, the memorabilia and the advertising activities are separate performance obligations, the entity would allocate the sales-based royalty to each performance obligation.

As shown in the illustration above, when the criteria for applying the royalty recognition constraint are applied, the royalty stream must be accounted for entirely under the royalty recognition constraint. [FRS 102.23.48]. That is, an entity would not split a single royalty and apply the royalty recognition constraint to a portion of the sales-based royalty and the general constraint requirements for variable consideration (see 6.2.3 above) to the remainder. Note also that the IASB indicated in the Basis for Conclusions on IFRS 15 that it would be more complex to account for part of a royalty under the royalty recognition constraint and another part under the general requirements for variable consideration and that doing so would not provide any additional useful information to users of financial statements. This is because splitting a royalty would result in an entity recognising an amount at contract inception that would reflect neither the amount to which the entity expects to be entitled, based on its performance, nor the amount to which the entity has become legally entitled during the period. [IFRS 15.BC421J].

Regardless of whether an entity applies the royalty recognition constraint or the general requirements for variable consideration, it is still required to allocate sales-based or usage-based royalties to separate performance obligations in a contract (as noted in Illustration 9-6 above) in a manner consistent with the allocation objective in Section 23 – see discussion in 7 above. In order to perform such an allocation, an entity would need to include expected royalties in its estimate of the stand-alone selling price of one or more of the performance obligations. Illustration 7-11 in 7.3.3 above also illustrates the allocation of the transaction price (including sales-based or usage-based royalties) to the performance obligations in the contract.

9.5.1 Recognition of royalties for a licence that provides a right to access intellectual property

The royalty recognition constraint is intended to align the recognition of sales or usage-based royalties with the key principle that revenue is recognised when (or as) an entity satisfies a performance obligation. As discussed in 9.5 above, Section 23 requires that royalties received in exchange for licences of intellectual property are recognised at the later of when: (1) the subsequent sales or usage occurs; and (2) the performance obligation to which the sales-based or usage-based royalties relate has been satisfied (or partially satisfied). That is, an entity recognises the royalties as revenue when (or as) the customer's subsequent sales or usage occurs, unless that pattern of recognition accelerates revenue recognition ahead of the entity's satisfaction of the performance obligation to which the royalty solely or partially relates, based on an appropriate measure of progress (see 8.1.4 above).

Consider the following Illustration, based on an example provided by the FASB¹⁸⁹, that is an example of when revenue recognition would be inappropriately accelerated ahead of an entity's performance, if revenue was recognised under paragraph 23.48(a) for a right-to-access licence:

Illustration 9-7: Licensing contract with a declining royalty rate

A contract provides a customer with the right to access an entity's intellectual property and the entity receives royalties of 8% on total sales up to £1 million, 4% on the next £3 million in sales and 2% on all sales above £4 million. The declining royalty rate does not reflect changing value to the customer.

In this example, the FASB noted that recognising royalties as they are due (i.e., according to the contractual formula) would not be aligned with the principle of recognising revenue only when (or as) an entity satisfies a performance obligation because the right to access the intellectual property is provided evenly over the licence term while the declining royalty rate does not reflect the value to the customer. However, the FASB stated that the existence of a declining royalty rate in a contract does not always mean that recognising revenue for sales-based or usage-based royalties as the customer's underlying sales or usage occur is inappropriate. In fact, it would be appropriate if the declining royalty rate reflects the changing value to the customer.

¹⁸⁹ ASU 2016-10, *Revenue from Contracts with Customers (Topic 606): Identifying Performance Obligations and Licensing*, April 2016, paragraph BC71.

The above example notwithstanding, for many contracts with licences that provide a right to access an entity's intellectual property, applying the royalty recognition constraint results in an entity recognising revenue from sales-based or usage-based royalties when (or as) the customer's underlying sales or usage occurs in accordance with paragraph 23.48(a). An output-based measure of progress that is the same as, or similar to, the application of the practical expedient in paragraph 23.103 (i.e., when the right to consideration corresponds directly with the value to the customer of the entity's performance to date) is appropriate because the entity's right to consideration (i.e., the sales-based or usage-based royalties earned) often corresponds directly with the value to the customer of the entity's performance completed to date. The practical expedient in paragraph 23.103 is discussed further in 8.1.4 above.

In addition, an output-based measure could also be appropriate for a licence that provides a right to access intellectual property in which the consideration is in the form of a fixed fee and royalties. The following example, which is based on Example 61 in IFRS 15, illustrates this: [IFRS 15.IE Example 61, IFRS 15.IE309-IE313]

Illustration 9-8: Access to intellectual property

An entity, a well-known sports team, licenses the use of its name and logo to a customer. The customer, an apparel designer, has the right to use the sports team's name and logo on items including t-shirts, caps, mugs and towels for one year. In exchange for providing the licence, the entity will receive fixed consideration of £2 million and a royalty of 5% of the sales price of any items using the team name or logo. The customer expects that the entity will continue to play games and provide a competitive team.

The entity assesses the goods and services promised to the customer to determine which goods and services are distinct in accordance with paragraph 23.21 (see 5.2.1 above). The entity concludes that its only performance obligation is to transfer the licence. The additional activities associated with the licence (i.e., continuing to play games and provide a competitive team) do not directly transfer a good or service to the customer because they are part of the entity's promise to grant the licence.

The entity assesses the nature of the entity's promise to transfer the licence in accordance with paragraph 23.108 (see 9.2 above). In assessing the criteria the entity considers the following:

- The entity concludes that the customer would reasonably expect that the entity will undertake activities that will significantly affect the benefit the customer obtains from intellectual property (i.e., the team name and logo) to which the customer has rights. This is on the basis of the entity's customary business practice to undertake activities that support and maintain the value of the name and logo such as continuing to play and providing a competitive team. The entity determines that the ability of the customer to obtain benefit from the name and logo is substantially derived from, or dependent upon, the expected activities of the entity. In addition, the entity observes that because some of its consideration is dependent on the success of the customer (through the sales-based royalty), the entity has a shared economic interest with the customer, which indicates that the customer will expect the entity to undertake those activities to maximise earnings.
- The entity observes that the rights granted by the licence (i.e., the use of the team's name and logo) directly expose the customer to any positive or negative effects of the entity's activities and thus, the activities the entity is expected to undertake could significantly affect the benefit the customer obtains from the licence to which the customer has rights.
- The entity also observes that even though the customer could benefit from the activities through the rights granted by the licence, they do not transfer a good or service to the customer as those activities occur.

The entity concludes that one of the criteria in paragraph 23.108 is met i.e., the entity is expected to undertake activities that could significantly affect the benefit the customer obtains from the intellectual property by directly exposing the customer to any positive or negative effects of those activities, which include activities that support or maintain the value of intellectual property. [IFRS 102.23.108, IFRS 102.23.110]. Therefore, the entity concludes that the nature of the entity's promise to grant the licence is to provide the customer with access to the entity's intellectual property as it exists throughout the licence period. Consequently, the entity accounts for the promised licence as a performance obligation satisfied over time (i.e., the criterion in paragraph 23.81(a) is met - see 8.1.1 above).

The entity then applies paragraphs 23.98 to 23.104 to determine a measure of progress that will depict the entity's performance. For the consideration that is in the form of a sales-based royalty, paragraph 23.48 applies because the sales-based royalty relates solely to the licence (see 9.5 above), which is the only performance obligation in the contract. The entity concludes that recognition of the £2 million fixed consideration as revenue rateably over time plus recognition of the royalty as revenue as and when the customer's sales of items using the team name or logo occur reasonably depicts the entity's progress towards complete satisfaction of the licence performance obligation.

In Illustration 9-8 above, the fixed consideration of £2 million is an explicit term in the contract with the customer. In some contracts, fixed consideration is implied, such as when a guaranteed minimum amount of royalties is part of the transaction price.

In addition, as discussed in Question 9-5 in 9.3.1 above, many licences that provide a right to access intellectual property constitute a series of distinct goods or services that are substantially the same and have the same pattern of transfer to the customer (e.g., a series of distinct periods of access to intellectual property, such as monthly access or quarterly access). In cases where the criteria for a performance obligation to be accounted for as a series of distinct goods or services have been met, an entity needs to consider whether any variable consideration in the contract (e.g., sales-based or usage-based royalties) must be allocated directly to the distinct periods of access, if the condition for the variable consideration allocation exception is met (see 7.3 above). The allocation of sales-based or usage-based royalties in this manner generally results in the recognition of royalties as revenue when (or as) the customer's underlying sales or usage occurs.

An entity might need to apply significant judgement to determine the appropriate pattern of revenue recognition for royalties received on a licence that provides a right to access intellectual property.

Frequently asked questions

Question 9-8: Can the recognition constraint for sales-based or usage-based royalties be applied to royalties that are paid in consideration for sales of intellectual property (rather than just licences of intellectual property)?

Section 23 specifies that the royalty recognition constraint only applies to sales-based or usage-based royalty provided in exchange for a licence of intellectual property when the licence of intellectual property is the sole or predominant item to which the royalty relates (see 9.5 above). [FRS 102.23.48]. This is consistent with IFRS 15. As noted in the Basis for Conclusions on IFRS 15, the IASB discussed but decided not to expand the scope of the royalty recognition constraint to include sales of intellectual property. The IASB also stated that the royalty recognition constraint is intended to apply only to limited circumstances (i.e., those circumstances involving licences of intellectual property) and, therefore, entities cannot apply it by analogy to other types of transactions. [IFRS 15.BC421, IFRS 15.BC421F].

Question 9-9: If a contract for a licence of intellectual property includes payments with fixed amounts (e.g., milestone payments) that are determined by reference to sales-based or usage-based thresholds, would the royalty recognition constraint need to be applied?

How we see it

We generally believe the royalty recognition constraint would apply to fixed amounts of variable consideration (i.e., fixed amounts of consideration that are contingent on the occurrence of a future event), such as milestone payments, provided the amounts are determined by reference to sales-based or usage-based thresholds. This is the case even if those payments are not referred to as 'royalties' under the terms of the contract. However, entities need to apply judgement and carefully evaluate the facts and circumstances of their contracts for licences of intellectual property to determine whether these types of payments need to be accounted for using the royalty recognition constraint.

Consider the following Illustration:

Illustration 9-9: Application of the royalty recognition constraint to a milestone payment

An entity enters into a contract to grant a customer a right to use the entity's intellectual property. The contract contains payment terms that include a £10 million milestone payment that is payable to the entity once the customer has achieved sales of £100 million associated with the licence.

The entity determines that the milestone payment is based on the customer's subsequent sales and represents variable consideration because it is contingent on the customer's sales reaching £100 million. The entity accounts for the £10 million milestone payment in accordance with the royalty recognition constraint and only recognises revenue for the milestone payment once the customer's sales reach £100 million.

Question 9-10: If a contract for a licence of intellectual property includes a milestone payment based on the first commercial sale, would the royalty recognition constraint apply?

How we see it

We generally believe it would be acceptable for an entity to apply the royalty recognition constraint to a milestone payment that is contingent on the customer's first commercial sale of a product using the entity's intellectual property. This is because the milestone payment is linked to a sales-based or usage-based threshold (i.e., the milestone payment is based on the customer's sales).

Consider the following Illustration:

Illustration 9-10: Application of the royalty recognition constraint to a milestone payment based on the first commercial sale

An entity enters into a contract to grant a customer a right to use the entity's intellectual property. The contract contains payment terms that include a £10 million milestone payment that is payable to the entity upon the customer's first commercial sale of a product that uses the entity's intellectual property. The entity determines that the milestone payment is based on the customer's subsequent sales and represents variable consideration because it is contingent on the customer's first commercial sale. It accounts for the £10 million milestone payment in accordance with the royalty recognition constraint and only recognises revenue for the milestone payment upon the customer's first commercial sale.

In contrast, if a milestone payment is contingent on metrics that are not determined by reference to sales-based or usage-based thresholds and that are substantive (e.g., regulatory approval), the royalty recognition constraint must not be applied (i.e., the milestone payment is not based on the customer's sales). Rather, the general variable consideration requirements need to be applied.

As discussed in Question 6-12 in 6.2.3 above, we expect entities to conclude, in many instances, that milestone payments contingent on regulatory approval (e.g., regulatory approval of a new drug) are constrained, preventing them from recognising these payments until the uncertainty associated with the payments is resolved.

Question 9-11: Does the application of the royalty recognition constraint preclude the requirement to adhere to the allocation objective in Section 23?

If an entity applies the royalty recognition constraint, it still needs to adhere to the allocation objective in Section 23 (discussed in 7 above) if the contract contains multiple performance obligations. This is consistent with IFRS 15.

Under IFRS 15, it is clear from paragraphs IFRS 15.BC421A and BC421G that allocation of sales-based or usage-based royalties to two or more different performance obligations was contemplated by the IASB. This is also consistent with Example 60 in IFRS 15 (see Illustration 9-6 above), which clarifies sales-based or usage-based royalties need to be allocated to each performance obligation. [IFRS 15.IE Example 60, IFRS 15.IE308]. Therefore, regardless of whether an entity applies the royalty recognition constraint or the general constraint on variable consideration, it is still required to allocate sales-based or usage-based royalties to separate performance obligations in a contract in a manner consistent with the allocation objective (see 7 above). To perform such an allocation, an entity might need to include expected royalties in its estimate of the stand-alone selling price of one or more of the performance obligations.

Question 9-12: Can an entity recognise revenue for sales-based or usage-based royalties for licences of intellectual property on a lag if actual sales or usage data is not available at the end of a reporting period?

Section 23 requires that sales-based or usage-based royalties promised in exchange for licences of intellectual property be recognised as revenue at the later of when: (1) the subsequent sales or usage occurs and (2) the performance obligation to which the sales-based or usage-based royalties relate has been satisfied (or partially satisfied). [FRS 102.23.48].

How we see it

After the conditions in the royalty recognition constraint guidance have been met (i.e., the underlying sales or usage has occurred and the performance obligation to which the royalties relate has been satisfied (or partially satisfied)), we believe that licensors without actual sales or usage data from the licensee need to make an estimate of royalties earned in the current reporting period.

Question 9-13: How does a minimum guarantee affect the recognition of sales-based or usage-based royalties promised in exchange for a licence of intellectual property that is satisfied at a point in time?¹⁹⁰

Generally, a minimum guaranteed amount of sales based or usage-based royalties promised in exchange for a licence of intellectual property that is satisfied at a point in time (i.e., a right-to-use licence) would need to be recognised as revenue at the point in time that the entity transfers control of the licence to the customer (see 9.3.2 above). Any royalties above the fixed minimum would be recognised in accordance with the royalty recognition constraint (i.e., at the later of when the sale or usage occurs or when the entity satisfies the performance obligation to which some or all of the royalty has been allocated).

Question 9-14: How does a minimum guarantee affect the recognition of sales-based or usage-based royalties promised in exchange for a licence of intellectual property that is satisfied over time?¹⁹¹

Generally, various recognition approaches could be acceptable for minimum guarantees promised in exchange for licences of intellectual property that are satisfied over time (i.e., right-to-access licences, see 9.3.1 above). This is because this question is asking what an appropriate measure of progress is for such contracts and Section 23 permits reasonable judgement when selecting a measure of progress. Because Section 23 does not prescribe a single approach that must be applied in all circumstances in which a sales-based or usage-based royalty is promised in exchange for a licence of intellectual property and the contract includes a minimum guaranteed amount, an entity needs to consider the nature of its arrangements and make sure that the measure of progress it selects does not override the core principle and objective of Section 23 which is for “an entity to recognise revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods or services”. [FRS 102.23.4]. An entity would need to disclose the accounting policy it selects because it is likely that this would affect the timing of revenue recognised.

An entity could consider two approaches. Under one approach, an entity would estimate the total consideration (i.e., the fixed minimum and the variable consideration from future royalties) and apply an appropriate measure of progress to recognise revenue as the entity satisfies the performance obligation, subject to the royalty recognition constraint. Alternatively, under the other approach, an entity could apply a measure of progress to the fixed consideration and begin recognising the variable component after exceeding the fixed amount on a cumulative basis.

The first approach can be applied in two different ways, as follows:

- View A: If an entity expects royalties to exceed the minimum guarantee, the entity might determine that an output-based measure is an appropriate measure of progress and apply the right-to-invoice practical expedient (i.e., paragraph 23.103, see 8.1.4.B above) because the royalties due for each period correlate directly with the value to the customer of the entity’s performance each period. As a result of applying the practical expedient for recognising revenue, the entity would not need to estimate the expected royalties beyond determining whether it expects, at contract inception, that the royalties will exceed the minimum guarantee. However, the entity would be required to update that assessment at the end of each reporting period. It is important to note that this view is likely to be appropriate if the entity expects cumulative royalties to exceed the minimum guarantee.
- View B: An entity estimates the transaction price for the performance obligation (including both fixed and variable consideration) and recognises revenue using an appropriate measure of progress, subject to the royalty recognition constraint. If an entity does not expect cumulative royalties to exceed the minimum guarantee, the measure of progress is applied to the minimum guarantee since the transaction price will at least equal the fixed amount.

The second approach can be summarised, as follows:

- View C: An entity recognises the minimum guarantee (i.e., the fixed consideration) using an appropriate measure of progress and recognises royalties only when cumulative royalties exceed the minimum guarantee.

¹⁹⁰ Based on FASB TRG Agenda paper no. 58, *Sales-Based or Usage-Based Royalty with Minimum Guarantee*, dated 7 November 2016 and FASB TRG Agenda paper no. 60, *November 2016 Meeting - Summary of Issues Discussed and Next Steps*, dated 31 January 2017.

¹⁹¹ Based on FASB TRG Agenda paper no. 58, *Sales-Based or Usage-Based Royalty with Minimum Guarantee*, dated 7 November 2016 and FASB TRG Agenda paper no. 60, *November 2016 Meeting - Summary of Issues Discussed and Next Steps*, dated 31 January 2017.

Note that, in order for an entity to apply View C, the over time licence would have to be considered a series of distinct goods or services (i.e., a series of distinct time periods) and the variable consideration (i.e., the royalties in excess of the minimum guarantee) would have to be allocated to the distinct time periods to which they relate.

To illustrate the application of these views, consider the following Illustration:

Illustration 9-11: Accounting for a licence of intellectual property that is satisfied over time in exchange for a minimum guarantee and sales-based royalty

An entity enters into a five-year arrangement to licence a trademark. The trademark is determined to be a licence of intellectual property that is satisfied over time (i.e., a right-to-access licence, see 9.3.1 above)). The licence requires the customer to pay a sales-based royalty of 5% of its gross sales associated with the trademark. However, the contract includes a guarantee that the entity will receive a minimum of £5 million for the entire five-year period.

The customer's actual gross sales associated with the trademark and the related royalties each year are, as follows (this information is not known at the beginning of the contract):

Year 1 - £15 million (royalties equal £750,000)

Year 2 - £30 million (royalties equal £1.5 million)

Year 3 - £40 million (royalties equal £2 million)

Year 4 - £20 million (royalties equal £1 million)

Year 5 - £60 million (royalties equal £3 million)

Total royalties equal £8.25 million.

View A: The entity expects total royalties to exceed the minimum guarantee. The entity determines that an output-based measure is an appropriate measure of progress and applies the right-to-invoice practical expedient because the royalties due for each period correlate directly with the value to the customer of the entity's performance for each period. The entity recognises revenue from the sales-based royalty when the customer's subsequent sales occur.

(in £'000s)	Year 1	Year 2	Year 3	Year 4	Year 5
Royalties received	750	1,500	2,000	1,000	3,000
Annual revenue	750	1,500	2,000	1,000	3,000
Cumulative revenue	750	2,250	4,250	5,250	8,250

View B: The entity estimates the transaction price (including fixed and variable consideration) for the contract. The entity determines that time elapsed is an appropriate measure of progress and recognises revenue rateably over the five-year term of the contract, subject to the royalty recognition constraint (i.e., cumulative revenue recognised cannot exceed the cumulative royalties received once the minimum guarantee has been met).

(in £'000s)	Year 1	Year 2	Year 3	Year 4	Year 5
Royalties received	750	1,500	2,000	1,000	3,000
Royalties (cumulative)	750	2,250	4,250	5,250	8,250
Fixed + Variable (rateable) ^a	1,650	1,650	1,650	1,650	1,650
Annual revenue	1,650	1,650	1,650	300	3,000
Cumulative revenue	1,650	3,300	4,950	5,250^b	8,250

a. Assuming the entity's estimated transaction price (including both fixed and variable consideration) is £8.25 million, the annual revenue that could be recognised is £1.65 million (£8.25 million divided by five years, being contract term).

b. In Year 4, the cumulative revenue using a time-elapsed measure of progress of £6.6 million (£4.95 million plus £1.65 million) exceeds the cumulative royalties received (£5.25 million). As such, the total cumulative revenue recognised through to the end of Year 4 is constrained to the total cumulative royalties received of £5.25 million.

View C: The entity recognises the minimum guarantee (i.e., the fixed consideration) using an appropriate measure of progress and recognises royalties only when cumulative royalties exceed the minimum guarantee. The entity determines that time elapsed is an appropriate measure of progress.

The entity applies the royalty recognition constraint to the sales-based royalties that are in excess of the minimum guarantee (i.e., recognise the royalties as revenue when the minimum guarantee is exceeded on a cumulative basis). The variable consideration (royalties in excess of the minimum guarantee) is allocated to the distinct periods using the variable consideration allocation exception (see 7.3 above). [FRS 102.23.74].

As previously discussed, in order for an entity to apply View C, the over time licence would have to be considered a series of distinct goods or services (i.e., a series of distinct time periods) and the variable consideration (i.e., the royalties that are in excess of the minimum guarantee) would have to be allocated to the distinct time periods to which they relate.

(in £'000s)	Year 1	Year 2	Year 3	Year 4	Year 5
Royalties received	750	1,500	2,000	1,000	3,000
Royalties (cumulative)	750	2,250	4,250	5,250	8,250
Fixed (rateable) ^a	1,000	1,000	1,000	1,000	1,000
Annual revenue	1,000	1,000	1,000	1,250 ^b	4,000 ^c
Cumulative revenue	1,000	2,000	3,000	4,250	8,250

- Because the minimum guarantee is £5 million over the contract term, the annual revenue (excluding royalties that are in excess of the minimum guarantee) is £1 million (£5 million divided by five years, being the contract term).
- In Year 4, the cumulative royalties received (£5.25 million) exceed the total minimum guarantee (£5 million) by £250,000. As such, the annual revenue recognised in Year 4 is £1.25 million (£1 million annual revenue plus £250,000 of royalties in excess of the minimum guarantee).
- In Year 5, the annual revenue recognised (£4 million) is calculated as the £1 million annual revenue plus the royalties for that year (£3 million) since the royalties exceeded the minimum guarantee in Year 4.

Note that other measures of progress, in addition to those set out above, could be acceptable because the Section 23 permits entities to use judgement in selecting an appropriate measure of progress. However, it would not be acceptable for entities to apply any measure of progress in any circumstance. For example, it would not be acceptable to apply multiple measures of progress to a single performance obligation, such as one measure for fixed consideration and a different one for variable consideration. It would also not be appropriate for an entity to apply the breakage model in paragraph 23.130 (see 8.9 above) because it is likely that a customer would not have an unexercised right in a licence arrangement if the entity were providing the customer with access to its intellectual property over the entire term of the arrangement. [FRS 102.23.130]. Another approach that would not be appropriate is one that ignores the royalty recognition constraint application guidance in paragraph 23.48 (see 9.5 above), which requires revenue to be recognised at the later of when: (1) the subsequent sale or usage occurs; or (2) the performance obligation to which some or all of the sales-based or usage-based royalty has been allocated is satisfied (in whole or in part). [FRS 102.23.48].

Question 9-15: Can entities apply the royalty recognition constraint for sales-based or usage-based royalties if they do not own the intellectual property or control the intellectual property as a principal in the arrangement?

How we see it

We generally believe entities can apply the royalty recognition constraint if their revenue is based on a sales-based or usage-based royalty from a licence of intellectual property, but they do not own or control the intellectual property as a principal in the arrangement.

It is important to note that this view applies only to licences of intellectual property for which some or all of the consideration received by both the licensor and the agent is in the form of a sales-based or usage-based royalty. Entities cannot analogise to this view for other situations.

Entities need to disclose their use of the royalty recognition constraint because it is likely to affect the amount and timing of revenue recognised.

Consider the following Illustration:

Illustration 9-12: Application of the royalty recognition constraint as an agent

University U has intellectual property for its logo. Company Z, acting as an agent for University U, identifies an apparel company looking to licence University U's logo to put it on merchandise. University U is paid a royalty based on sales and usage of its intellectual property (the logo) by the licensee (the apparel company). Company Z receives a portion of the royalty earned by University U. Company Z does not control the intellectual property at any point during the arrangement and its ability to receive consideration from University U depends on the licensing of University U's intellectual property. We believe that application of the royalty recognition constraint would be appropriate in this example because the royalties earned by University U and, in effect, the amount Company Z expects to be entitled to receive, are directly tied to the usage of the intellectual property.

Question 9-16: Can entities recognise sales-based or usage-based royalties before the sale or usage of the intellectual property occurs if they have historical information that is highly predictive of future royalty amounts?

In accordance with paragraph 23.48 (see 9.5 above), revenue from a sales-based or usage-based royalty promised in exchange for a licence of intellectual property is recognised at the later of when: (1) the subsequent sale or usage occurs; or (2) the performance obligation to which some or all of the sales-based or usage-based royalty has been allocated has been satisfied (in whole or in part).

How we see it

Revenue recognition cannot be accelerated even if an entity has historical information that is highly predictive of future royalty amounts. That is, the use of the royalty recognition constraint is not optional.

Question 9-17: Must an entity apply the royalty recognition constraint when the royalty is calculated on a financial metric that is not solely based on sales or usage?

How we see it

In certain circumstances, we believe the royalty recognition constraint can be applied when the royalty is calculated on a financial metric that is not solely based on sales or usage.

We believe that a metric such as gross profit (commonly defined as sales less cost of goods sold) is largely attributable to sales. Judgement will be required to determine whether the royalty recognition constraint needs to be applied if the royalty is based on a different financial metric that is not solely based on sales or usage.

A licensor, for example, might be entitled to a fee based on a fixed percentage of gross profit generated by the licensee for the entire term of the contract. If the royalty is calculated using gross profit, the royalty recognition constraint might be applied.

Question 9-18: Does the royalty recognition constraint apply if the licence of intellectual property is not distinct from other goods or services in the contract?

If the licence of intellectual property is not distinct from other goods or services in the contract, the royalty recognition constraint applies only if the licence is the predominant item to which the royalty relates. As discussed in 9.5 above, paragraph 23.48 requires that the royalty recognition constraint be applied to the overall royalty stream when the sole or predominant item to which the royalty relates is a licence of intellectual property. As an example, IFRS 15 states that the licence of intellectual property might be the predominant item to which the royalty relates when the entity has a reasonable expectation that the customer would ascribe significantly more value to the licence than to the other goods or services to which the royalty relates. [IFRS 15.B63A]. The Basis for Conclusions on IFRS 15 further observed that the royalty recognition constraint would also apply when there is no single licence of intellectual property is the predominant item to which the royalty relates, but the royalty predominantly relates to two or more licences of intellectual property in the contract. [IFRS 15.BC421G].

The IASB noted in the Basis for Conclusions on IFRS 15 that applying the royalty recognition constraint only when the royalty solely relates to a licence that is a separate performance obligation would have excessively restricted its application. Furthermore, it noted that applying the royalty recognition constraint to those royalty arrangements in which the licence is the predominant feature to which the royalty relates provides more useful information to users that are likely to view those arrangements as licensing arrangements. [IFRS 15.BC421D].

Neither Section 23 nor IFRS 15 provides a bright line for determining the 'predominant' item in a contract that includes a licence of intellectual property. The IASB acknowledged in the Basis for Conclusions on IFRS 15 that significant judgement is required to determine when a licence is the predominant item to which a royalty relates. However, the judgement for determining whether a licence is the predominant item is likely to be less than the judgement needed to apply the general requirements for variable consideration to such contracts. [IFRS 15.BC421E].

Question 9-19: Can an entity recognise revenue at an expected average rate when a licence of intellectual property has royalty rates that increase over time?

As discussed in 9.5 above, paragraph 23.48 requires that sales-based or usage-based royalties received in exchange for licences of intellectual property be recognised at the later of when: (1) the subsequent sale or usage occurs; or (2) the performance obligation to which some or all of the sales-based or usage-based royalty has been allocated is satisfied (wholly or partially). That is, an entity recognises the royalties as revenue when (or as) the customer's subsequent sales or usage occurs, unless that recognition pattern accelerates revenue recognition ahead of the entity's satisfaction of the performance obligation to which the royalty solely (or partially) relates based on an appropriate measure of progress.

In contrast to the declining royalty rate scenario discussed by the FASB in the Basis for Conclusions to its revenue standard, and discussed above,¹⁹² we would not expect an increasing royalty rate to cause revenue to be recognised ahead of an entity's performance if an entity's recognises revenue as the related sales or usage occurs at the contractual rate in place at the time. However, if an entity were to use an output measure based on an average expected royalty rate over the full contract term, it would be accelerating revenue recognition ahead of the related sales or usage, which would be counter to the principle of the royalty recognition constraint. In this case, it would be inappropriate to recognise revenue using an output measure based on an average expected royalty rate over the full contract term.

Question 9-20: How would an entity distinguish between a contract that contains an option to purchase additional licences and a contract in which additional licence usage might be subject to the royalty recognition constraint?¹⁹³

A technology entity might, for example, provide the customer with the option to purchase or use additional copies of software in exchange for additional consideration, and the customer might have the ability to replicate the software or download additional copies without further assistance from the technology entity. Questions have been raised about whether this type of option is an option to acquire additional software rights (i.e., an option for additional goods, as discussed in 5.6 above) or whether the extra copies represent additional usage of the software licence and, therefore, whether the additional usage gives rise to a sales-based or usage-based royalty that is likely to be subject to the royalty recognition constraint.

The entity has to exercise judgement to determine whether the contract is for a single licence or for multiple licences. In doing so, the entity considers whether the additional copies are distinct goods or services. Additional licences are typically distinct because the customer can benefit from the additional licence on its own, providing it does not modify, customise or have an interdependency with existing licences. Further, while the customer might be able to replicate the software or download additional copies without the assistance of the technology entity, the entity might still be required to grant additional rights to the customer for the use of the additional copies of software.

An entity has provided a customer with an option if the customer can decide to purchase additional distinct copies of the software, and the entity is required to transfer those additional rights to the customer. See 5.6 above for further discussion of the accounting for customer options for additional goods and services, including how to evaluate whether the option represents a material right. Conversely, if the contract requires the customer to pay usage-based fees to compensate the vendor for the rights to use the software that have already been transferred, these fees are treated as variable consideration (see 6.2 above). This conclusion is consistent with the discussion in Question 5-20 in 5.6 above. However, when the software licence is the sole or predominant item to which the usage-based fees relate, in accordance with paragraph 23.48, the fees are accounted for as sales-based and usage-based royalties (as discussed in 9.5 above) rather than the general variable consideration requirements.

10 Other measurement and recognition topics

10.1 Warranties

Warranties are commonly included in arrangements to sell goods or services. [FRS 102.23.26]. They might be explicitly included in the contractual arrangement with a customer or might be required by law or regulation. In addition, an entity might have established an implicit policy of providing warranty services to maintain a desired level of satisfaction among its customers. Whether explicit or implicit, warranties extend an entity's obligations beyond the transfer of control of the good or service to the customer, requiring it to stand ready to perform under the warranty over the life of the warranty obligation.

Warranties will normally meet the definition of an insurance contract, which is a contract in which "one party (the insurer) accepts significant insurance risk from another party (the policyholder) by agreeing to compensate the policyholder if a specified uncertain future event (the insured event) adversely affects the policyholder". [FRS 102 Appendix I]. Therefore, before assessing warranties under Section 23, an entity needs to consider whether the warranty might be within the scope of FRS 103 (also see Chapter 38 at 3.2). To make this assessment, entities need to consider whether the scope exception in FRS 103 applies for "product warranties issued directly by a manufacturer, dealer or retailer". [FRS 103.1.7(a)]. For further discussion of the requirements of FRS 103, see Chapter 38.

The price of a warranty might be included in the overall purchase price or listed separately as an optional product. If the warranty is not separately purchased and it is within the scope of FRS 103, the contract consideration will need to be allocated between the standards - see 3.1.5 and 7.5 above for further discussion.

For warranties within the scope of Section 23, while the nature of a warranty can vary significantly across industries and contracts, it identifies two types of warranties:

- Warranty that provides assurance that the product complies with agreed-upon specifications (referred as 'assurance-type warranties').
- Warranty (or part of the warranty) that provides the customer with a service to the customer in addition to assurance that the product complies with agreed-upon specifications (referred as 'service-type warranties').

10.1.1 Determining whether a warranty is an assurance-type or service-type warranty

If the customer has the option to purchase the warranty separately or if the warranty provides a service to the customer, beyond ensuring that the product complies with agreed-upon specifications, the entity is providing a service-type warranty. Otherwise, it is an assurance-type warranty, which provides the customer with assurance that the product complies with agreed-upon specifications. [FRS 102.23.27].

In some cases, it might be difficult to determine whether a warranty provides a customer with a service in addition to the assurance that the delivered product is as specified in the contract. To help entities make that assessment, Section 23 provides the following guidance: [FRS 102.23.27]

Extract from Section 23

- 23.27** An entity shall account for the warranty in accordance with Section 21 *Provisions and Contingencies* unless the warranty, or part of the warranty, provides the customer with an additional service. An additional service is a service in addition to the assurance that the product complies with agreed-upon specifications. In assessing whether a warranty provides the customer with an additional service, an entity shall consider:
- (a) Whether the warranty can be purchased separately - if the entity provides the customer with the option to purchase a warranty separately, the warranty provides the customer with an additional service.
 - (b) Whether the warranty is required by law - if the entity is required by law to provide a warranty, the warranty does not provide the customer with an additional service.
 - (c) The length of the warranty coverage - the longer the coverage period, the more likely it is that the warranty provides the customer with an additional service.
 - (d) The nature of the tasks that the entity promises to perform - if it is necessary for an entity to perform specified tasks to provide the assurance that a product complies with agreed-upon specifications (eg a return shipping service for a defective product), then those tasks are unlikely to provide the customer with an additional service.

Section 23 and IFRS 15 are consistent in this area and entities reporting under FRS 102 could consider further guidance provided by IFRS 15. IFRS 15 states that a law that requires an entity to pay compensation if its products cause harm or damage does not give rise to a performance obligation. For example, a manufacturer might sell products in a jurisdiction in which the law holds the manufacturer liable for any damages (for example, to personal property) that might be caused by a consumer using a product for its intended purpose. Similarly, an entity's promise to indemnify the customer for liabilities and damages arising from claims of patent, copyright, trademark or other infringement by the entity's products does not give rise to a performance obligation. [IFRS 15.B33]. The entity accounts for such obligations in accordance with Section 21.

The following flow chart illustrates these requirements:

Figure 10-1: Determining whether a warranty is an assurance-type or service-type warranty

* Some contracts may include both assurance-type and service-type warranties. See 10.1.4 below for further discussion.

How we see it

Entities might need to exercise significant judgement when determining whether a warranty is an assurance-type or service-type warranty. An entity's evaluation might be affected by several factors, including common warranty practices within its industry and the entity's business practices related to warranties. For example, consider an automotive manufacturer that provides a five-year warranty on a luxury vehicle and a three-year warranty on a standard vehicle. The manufacturer might conclude that the longer warranty period is not an additional service because it believes the materials used to construct the luxury vehicle are of a higher quality and that latent defects would take longer to appear. In contrast, the manufacturer might also consider the length of the warranty period and the nature of the services provided under the warranty and conclude that the five-year warranty period, or some portion of it, is an additional service that needs to be accounted for as a service-type warranty. Section 23 excludes assurance-type warranties, which are accounted for in accordance with Section 21.

As a reminder (and as discussed in 3.1.5 above), elements of a contract with a customer might be in the scope of other sections of FRS 102 or other standards and not within the scope of Section 23. Certain entities, particularly those that act as an agent in a revenue transaction and provide quality assurance or similar promises to a customer's customer, will need to consider whether such promises are in the scope of other sections of FRS 102 or other standards (e.g., Section 11, Section 12, FRS 103) before applying the warranty guidance in Section 23.

Frequently asked questions

Question 10-1: How does an entity evaluate whether a product warranty is a service-type warranty (i.e., a performance obligation) when it is not separately priced?¹⁹⁴

Generally, the evaluation of whether a warranty provides a service (in addition to the assurance that the product complies with agreed specifications) requires judgement and depends on the facts and circumstances. There is no bright line in the standard on what constitutes a service-type warranty, beyond it being separately priced.

However, paragraph 23.27 includes three other factors that need to be considered in each evaluation: (1) whether the warranty is required by law; (2) the length of the warranty coverage; and (3) the nature of the tasks that the entity promises to perform. Consider the following Illustration which shows the factors an entity considers in assessing whether a product warranty is a service-type warranty:

Illustration 10-1: Consideration of service-type warranty factors

A luggage company provides a life-time warranty to repair broken or damaged baggage free of charge. The luggage company evaluates the three factors in paragraph 23.27 and determines that the warranty is a performance obligation in addition to the assurance that the product complies with agreed-upon specifications because: (1) there is no law that requires the luggage company to make a promise for the lifetime of the product; (2) the length of the warranty is for the life of the baggage; and (3) the tasks include both repairs to baggage that does not meet the promised specifications and repairs for broken or damaged baggage.

Furthermore, entities need to evaluate each type of warranty offered to determine the appropriate accounting treatment.

Question 10-2: How would an entity account for a customary business practice of providing repairs provided outside the stated contractual warranty period?

An entity must consider all facts and circumstances, including the factors in paragraph 23.27 (e.g., the nature of the services provided, the length of the implied warranty period) to determine whether a customary business practice of providing repairs outside the stated contractual warranty period needs to be accounted for as an implied assurance-type or service-type warranty. For example, an equipment manufacturer might give its customers a standard product warranty that provides assurance that the product complies with agreed-upon specifications for one year from the date of purchase. However, the entity might also provide an implied warranty by frequently repairing products for free after the one-year standard warranty period has ended. See 5.1 above for a discussion of implied promises in a contract with a customer.

If the entity determines that the repairs made during the implied warranty period generally involve defects that existed when the product was sold and the repairs occur shortly after the assurance warranty period, it is likely that the entity would conclude that the repairs are covered by an assurance-type warranty. That is, the term of the assurance-type warranty might be longer than that stated in the contract. However, all facts need to be considered to reach a conclusion.

If the entity determines that the repairs made during the implied warranty period are covered by a service-type warranty (because the entity is providing a service to the customer beyond fixing defects that existed at the time of sale), it also needs to consider whether the term of the service-type warranty is longer than that stated in the contract.

Question 10-3: Does an entity account for a customer's return of a defective item in exchange for compensation (i.e., not for a replacement item) as a right of return or an assurance-type warranty?

How we see it

We believe that an entity that is the principal in the transaction must account for a customer's right to return a defective item in return for cash (instead of a replacement item) under the right of return guidance in paragraphs 23.51 to 23.57 (see 6.4 above), rather than as an assurance-type warranty.

¹⁹⁴ Based on TRG Agenda paper no. 29, *Warranties*, dated 30 March 2015 and TRG Agenda paper no. 34, *March 2015 Meeting - Summary of Issues Discussed and Next Steps*, dated 13 July 2015.

In Example 4 in Section 20, a manufacturer recognises a provision for warranties that it gives to its customers at the time of sale of the product where it undertakes to make good, by repair or replacement, manufacturing defects that become apparent within the warranty period (see Chapter 24 at 3.8.1). [FRS 102.21A.4]. Similarly, the Basis for Conclusions on IFRS 15 states that "... the boards decided that an entity should recognise an assurance-type warranty as a separate liability to replace or repair a defective product". [IFRS 15.BC376]. This description of an assurance-type warranty does not include defective products that are returned for a refund. It only contemplates defective products that are replaced or repaired. See 6.4 above for a discussion of rights of return.

If an entity provides customers with an option to receive either a cash refund or a replacement product, the entity is required to estimate which options customers will choose and account for each option accordingly. That is, the entity needs to estimate the expected returns in exchange for cash as part of its accounting for estimated returns and account for the expected returns in exchange for a replacement product under the warranty guidance.

However, there might be limited circumstances in which the cash paid to a customer for a defective item would need to be accounted for in accordance with the warranty guidance, instead of as a right of return. For example, an entity might pay cash to a customer as reimbursement for third-party costs incurred to repair a defective item. In this case, the cash payment to the customer was incurred to fulfil the entity's warranty obligation. This assessment requires judgement and depends on the facts and circumstances.

Similarly, entities will need to apply judgement in determining the appropriate treatment for product recalls (also see Question 8-24 in 8.3.1 above).

Question 10-4: Are liquidated damages, penalties or compensation from other similar clauses accounted for as variable consideration or as warranties under Section 23?

See response to Question 6-4 in 6.2.1 above.

10.1.2 Service-type warranties

A service-type warranty represents a distinct service and is a separate performance obligation. [FRS 102.23.28]. Therefore, using the relative stand-alone selling price of the warranty, an entity allocates a portion of the transaction price to the service-type warranty (see 7 above, also see 7.1 above for a discussion on determining stand-alone selling prices, which might not be equal to the contractually stated price). The entity then recognises the allocated revenue over the period in which the service-type warranty service is provided. This is because it is likely that the customer receives and consumes the benefits of the warranty as the entity performs (i.e., it is likely that the warranty performance obligation is satisfied over time in accordance with paragraph 23.81(a), see 8.1.1 above).

Judgement might be required to determine the appropriate pattern of revenue recognition associated with service-type warranties. For example, an entity might determine that it provides the warranty service continuously over the warranty period (i.e., the performance obligation is an obligation to 'stand ready to perform' during the stated warranty period). An entity that makes this determination is likely to recognise revenue rateably over the warranty period. An entity might also conclude that a different pattern of recognition is appropriate based on data it has collected about when it provides such services. For example, an entity might recognise little or no revenue in the first year of a three-year service-type warranty if its historical data indicates that it only provides warranty services in the second and third years of the warranty period.

See discussions in 8.1.4 above which describe considerations for determining the appropriate pattern of revenue recognition, including those for stand-ready obligations. If payment for the service-type warranty is received upfront, an entity must also evaluate whether a financing component exists (see 6.5 above).

In some instances, entities that sell service-type warranties will buy insurance to protect themselves against the potential costs of performing under such warranties. Although the anticipated insurance proceeds might offset any costs that the entity might incur, immediate revenue recognition for the price of the service-type warranty is not appropriate. The entity has not been relieved of its obligation to perform under the terms of the warranty contract and, therefore, a liability still exists. Accordingly, the warranty obligation and any proceeds related to the insurance coverage need to be accounted for separately (unless the insurer has legally assumed the warranty obligation and the customer has acknowledged that fact).

As discussed in 7.1 above, stand-alone selling prices are determined at contract inception and are not updated to reflect changes in the period between contract inception and when performance is complete (unless the contract has been modified and the contract modification is accounted for as a new or separate contract - see 7.1.3 above). Accordingly, an entity generally would not change the amount of transaction price it originally allocated to the service-type warranty at contract inception. This would be the case even if, for example, an entity discovers two months after a product is shipped that the cost of a part acquired from a third-party manufacturer has tripled and that, as a result, it will cost the entity significantly more to replace that part if a warranty claim is made. However, for future contracts involving the same warranty, the entity would need to determine whether to revise the stand-alone selling price because of the increase in the costs to satisfy the warranty and, if so, use that revised price for future allocations (see 7.1.3 above).

10.1.3 Assurance-type warranties

Assurance-type warranties do not provide an additional good or service to the customer (i.e., they are not separate performance obligations). By providing this type of warranty, the selling entity has effectively provided a guarantee of quality. These types of warranties are accounted for as warranty obligations and the estimated cost of satisfying them is recognised in accordance with the requirements in Section 21. [FRS 102.23.27]. Once recorded, the warranty liability is assessed on an ongoing basis in accordance with Section 21 (see Chapter 24).

An entity recognises revenue for sales of goods or services, including assurance-type warranties, when control of the goods or services is transferred to the customer, assuming that the arrangement meets the criteria to be considered a contract under Section 23 (see 4.1 above).

Assurance-type warranties are accounted for outside of the scope of Section 23. Therefore, if an entity elects to use a costs incurred measure of progress for over time revenue recognition of the related good or service, the costs of satisfying an assurance-type warranty are excluded (i.e., excluded from both the numerator and the denominator in the measure of progress calculation - see 8.1.4 above for further discussion on measuring progress over time).

10.1.4 Contracts that contain both assurance and service-type warranties

If an entity provides both an assurance-type and service-type warranty within a contract and the entity cannot reasonably account for them separately, the warranties are accounted for as a single performance obligation (i.e., revenue would be allocated to the combined warranty and recognised over the period the warranty services are provided). [FRS 102.23.28]. This accounting ensures the entity does not overstate the recognition of revenue at the time the product is transferred to the customer.

When an assurance-type warranty and a service-type warranty are both present in a contract with a customer and can reasonably account for them separately, an entity is required to recognise a provision for the expected costs associated with the assurance-type warranty and defer the revenue for the service-type warranty, as illustrated below:

Illustration 10-2: Service-type and assurance-type warranties

An entity manufactures and sells computers that include an assurance-type warranty for the first 90 days. The entity offers an optional 'extended coverage' plan under which it will repair or replace any defective part for three years from the expiration of the assurance-type warranty. Since the optional 'extended coverage' plan is sold separately, the entity determines that the three years of extended coverage represent a separate performance obligation (i.e., a service-type warranty).

The total transaction price for the sale of a computer and the extended warranty is £3,600. The entity determines that the stand-alone selling prices of the computer and the extended warranty are £3,200 and £400, respectively. The inventory value of the computer is £1,440. Furthermore, the entity estimates that, based on its experience, it will incur £200 in costs to repair defects that arise within the 90-day coverage period for the assurance-type warranty. As a result, the entity will record the following entries:

Dr	Cash/Trade receivables	£3,600	
Dr	Warranty expense	£200	
	Cr Provisions for warranty costs (assurance-type warranty)		£200
	Cr Contract liability (service-type warranty)		£400
	Cr Revenue		£3,200

To record revenue and liabilities related to warranties.

Dr	Cost of goods sold	£1,440	
	Cr Inventory		£1,440

To relieve inventory and recognise cost of goods sold.

The entity derecognises the warranty liability associated with the assurance-type warranty as actual warranty costs are incurred during the first 90 days after the customer receives the computer. The entity recognises the contract liability associated with the service-type warranty as revenue during the contract warranty period and recognises the costs associated with providing the service-type warranty as they are incurred. The entity would need to be able to determine whether the repair costs incurred are applied against the warranty reserve it had already established for claims that occur during the first 90 days or recognised as an expense as incurred.

Accounting for both assurance-type warranties and service-type warranties in the same transaction can be complex. Entities might need to develop processes to match individual warranty claims with the specific warranty plans so that claims can be analysed for the appropriate accounting treatment. This individual assessment of warranty claims is necessary because the assurance-type warranty costs will have been provided for previously, while the service-type warranty costs are expenses that need to be recognised in the period in which they are incurred, as illustrated below:

Illustration 10-3: Service-type and assurance-type warranty costs

Assume the same facts as in Illustration 10-2 above, but assume the entity has sold 500 computers during the year. In January of the following year, £10,000 of warranty claims are submitted by customers. The entity analyses each claim and identifies the specific computer sale to which the claims relate. The entity needs to do this in order to determine eligibility under the warranty plans and the appropriate accounting treatment.

The entity determines that a portion of the claims, costing £2,500 for repair and replacement parts, are covered by the assurance-type warranty plan. As shown in Illustration 10-2 above, the expected cost of each assurance-type warranty was provided for at the time of the sale. The entity records the following entry to derecognise a portion of the warranty liability:

Dr	Provisions for warranty costs (assurance-type warranty)	£2,500	
	Cr Cash		£2,500

To derecognise the assurance-type warranty liability as the costs are incurred.

The entity also determines that a portion of the claims, costing £7,000 for repair and replacement parts, are eligible under the 'extended coverage' plan (i.e., the service-type warranty). The entity records the following entry to recognise the costs associated with the service-type warranty:

Dr	Warranty expense	£7,000	
	Cr Cash		£7,000

To record the costs of the service-type warranty as the costs are incurred.

The entity also determines that £500 of the claims are not eligible under either warranty plan. This is because the claims relate to incidents that occurred after the 90-day coverage period for the assurance-type warranty and the customers in those transactions did not purchase the extended warranty coverage. The entity rejects these customer claims.

10.2 Onerous contracts

Section 23 contains no specific requirements to address contracts with customers that are, or have become, onerous. Accordingly, Section 21 applies to such contracts. [FRS 102.21.1]. Entities are required to use the requirements in Section 21 to identify and measure onerous revenue contracts.

The requirements in Section 21 on onerous contracts are discussed generally in Chapter 24 at 3.3.1 and for contracts with customers specifically in Chapter 24 at 3.3.1.B.

If an entity determines a contract is onerous under Section 21, the provision for the onerous contract will reflect the lower of the penalty for terminating the contract or the present value of the net cost of fulfilling the contract. Contracts need to be reviewed to determine whether there are any special terms that might relieve an entity of its obligations (e.g., *force majeure*). Contracts that can be cancelled without paying compensation to the other party do not become onerous as there is no obligation.

Frequently asked questions

Question 10-5: How does an entity account for an onerous contract with a customer when the contract includes more than one performance obligation that is satisfied over time consecutively?

How we see it

Since the requirements for onerous contracts are outside the scope of Section 23, an entity's accounting for onerous contracts does not affect the accounting for its revenue from contracts with customers in accordance with Section 23.

Therefore, we believe that entities must use an 'overlay' approach, which consists of two steps:

1. Apply the requirements of Section 23 to measure progress in satisfying each performance obligation over time and account for the related costs when incurred in accordance with the applicable sections of FRS 102.
2. At the end of each reporting period, apply Section 21 to determine if the remaining contract as a whole is onerous (i.e., considering whether the revenue still to be recognised is less than the costs yet to be incurred). If an entity concludes that the remaining contract is onerous, it recognises a provision to the extent that the amount of the unavoidable costs under the contract exceed the economic benefits to be received under it.

The effect of the provision is recognised as an expense, not as an adjustment to revenue. A change in the provision is recognised in profit or loss in accordance with Section 21. [FRS 102.21.5].

Since the definition of an onerous contract in Appendix I to FRS 102 refers only to a contract, the unit of account to determine whether an onerous contract exists is the contract itself, rather than the performance obligations identified in accordance with Section 23. [FRS 102 Appendix I, FRS 102.21A.2]. As a result, the entity must consider the entire remaining contract, including remaining revenue to be recognised for unsatisfied, or partially unsatisfied, performance obligations and the remaining costs to fulfil those performance obligations.

10.3 Contract costs

Section 23 specifies the accounting treatment for costs an entity incurs to obtain and fulfil a contract to provide goods or services to customers as discussed below. An entity only applies those requirements to costs incurred that relate to a contract with a customer that is within the scope of Section 23 (see 3.1 above).

It is important to note that Section 23 provides guidance on certain costs relating to contracts with customers in the scope of Section 23 (i.e., the incremental costs of obtaining a contract and costs incurred to fulfil a contract). However, it does not provide comprehensive cost guidance and must only be applied if the costs are not in the scope of other sections of FRS 102 or other standards. That is, if other section of FRS 102 or other standard precludes the recognition of an asset for a particular cost, an asset cannot be recognised under Section 23. If the costs are not in the scope of other sections of FRS 102 or other standards, an entity would then evaluate whether the costs meet the criteria for capitalisation under Section 23 (discussed in 10.3.1 and 10.3.2 below). [FRS 102.23.113, FRS 102.23.117]. After initial recognition of contract costs as assets under Section 23, an entity measures these assets at cost less accumulated amortisation and any accumulated impairment losses (see 10.3.3 and 10.3.4 below). [FRS 102.23.119].

When an entity recognises capitalised contract costs under Section 23, any such assets must be presented separately from contract assets and contract liabilities (see 11.1 below) in the statement of financial position or disclosed separately in the notes to the financial statements. Furthermore, entities must consider the requirements in Section 4 *Statement of Financial Position* on classification of current assets when determining whether their contract cost assets are presented as current or non-current. See 11.1.2 below for a discussion on classification as current or non-current.

10.3.1 Costs to obtain a contract

Before applying the cost requirements in Section 23, entities need to consider the scoping provisions. If a payment is made to a customer, an entity first needs to consider whether the requirements on consideration payable to a customer under Section 23 apply to the costs (see 6.7 above).

For costs to obtain a contract that are within the scope of the requirements in Section 23, it allows an accounting policy choice to either expense incremental costs of obtaining a contract with a customer or recognise such costs as an asset if the entity expects to recover them (subject to practical expedient as discussed below). [FRS 102.23.113, FRS 102.23.114, FRS 102.23.115]. Unlike Section 23, IFRS 15 requires incremental costs of obtaining a contract with a customer to be recognised as an asset if the entity expects to recover them (subject also to similar practical expedient).

Incremental costs are those that an entity would not have incurred if the contract had not been obtained (e.g., a sales commission payable on obtaining a contract). [FRS 102.23.113]. An entity can expect to recover contract acquisition costs through direct recovery (i.e., reimbursement under the contract) or indirect recovery (i.e., through the margin inherent in the contract).

To determine whether a cost is recoverable, an entity needs to include the future cash inflows and outflows associated with the contract renewal or extension periods if the period of benefit of the costs under assessment is expected to extend beyond the present contract (see 10.3.3 below for further discussion on the period of benefit). Furthermore, when determining the amount it expects to receive as part of the recoverability assessment, an entity would not apply the requirements on constraining estimates of variable consideration. That is, if an entity were required to reduce the estimated transaction price because of the constraint on variable consideration, it would use the unconstrained transaction price to evaluate recoverability of the contract acquisition costs. The unconstrained transaction price also needs to be adjusted to reflect the customer's credit risk. This recoverability assessment for the costs to obtain a contract is similar to the impairment assessment discussed in 10.3.4 below.

Costs incurred to obtain a contract that are not incremental costs must be expensed as incurred, unless they are explicitly chargeable to the customer (regardless of whether the contract is obtained).

[FRS 102.23.114, FRS 102.23.115].

The following flow chart illustrates the requirements in Section 23:

Figure 10-2: Costs to obtain a contract

To determine whether a cost is incremental, an entity considers whether it would incur the cost if the customer (or the entity) decides, just as the parties are about to sign the contract, that it will not enter into the contract. If the costs would have been incurred even if the contract is not executed, the costs are not incremental to obtaining that contract. The objective of this requirement is not to allocate costs that are associated in some manner with an entity's marketing and sales activity, but only to identify those costs that an entity would not have incurred if the contract had not been obtained. For example, salaries and benefits of sales employees that are incurred regardless of whether a contract is obtained are not incremental costs.

Consider the following Illustration:

Illustration 10-4: Fixed employee salaries

An entity pays an employee an annual salary of £100,000. The employee's salary is based on the number of contracts he or she signed for the prior year, as well as the number of contracts the employee is expected to sign for the current year. The employee's current year salary will not change if the number of contracts the employee actually signs differs from the projected number. However, any difference would affect the employee's salary in the following year.

In this case, if the entity's accounting policy is to capitalise recoverable incremental costs of obtaining a contract, no portion of the employee's salary will be capitalised because it is not an incremental cost of obtaining a contract. The employee's salary would have been incurred regardless of the number of contracts the employee has actually signed during the current year.

Section 23 cites sales commissions as a type of an incremental cost that might require capitalisation under its requirements. For example, commissions that are related to sales from contracts signed during the period might represent incremental costs that would require capitalisation. Section 23 does not explicitly address considerations for different types of commission programmes. Therefore, entities have to exercise judgement to determine whether sales commissions are incremental costs and, if so, the point in time when the costs would be capitalised. However, an employee's title or level in the organisation or how directly involved the employee is in obtaining the contract, are not factors in assessing whether a sales commission is incremental. Consider the following Illustration:

Illustration 10-5: Commissions paid to different levels of employees

An entity's salesperson receives a 10% sales commission on each contract that he or she obtains. In addition, the following employees of the entity receive sales commissions on each signed contract negotiated by the salesperson: 5% to the manager and 3% to the regional manager.

All commissions are incremental because the commissions would not have been incurred if the contract had not been obtained. Section 23 does not distinguish between commissions paid to the employee(s) based on the function or the title of the employee(s) that receives a commission. It is the entity that decides which employee(s) are entitled to a commission as a result of obtaining a contract.

How we see it

We believe that commissions that are paid to a third party in relation to sales from contracts that were signed during the period might also represent incremental costs. That is, commissions paid to third parties must be evaluated in the same manner as commissions paid to employees in order to determine whether they represent incremental costs to obtain a contract.

In addition, entities need to carefully evaluate all compensation plans, not just sales commission plans, to determine whether any plans contain incremental costs. For example, payments under a compensation 'bonus' plan might be solely tied to contracts that are obtained. Such costs could be capitalised (as a policy choice) if they are recoverable incremental costs of obtaining a contract, irrespective of the title of the plan.

Illustration 10-6: Commissions paid to a pool of funds

Assume that an entity has a compensation plan for support personnel in its sales department. As a group, the employees are entitled to a pool of funds calculated based on 2% of all new contracts signed during the monthly period. Once the amount of the pool is known, the amount paid to each individual employee is determined based on each employee's rating.

While the amount paid to each employee is discretionary (based on each employee's rating), the total amount of the pool is considered an incremental cost to obtain a contract because the entity owes that amount to the employees (as a group) simply because a contract was signed.

Entities first need to refer to the applicable sections of FRS 102 (e.g., Section 11, Section 12, Section 21) to determine when they are required to accrue for certain costs. Entities then use the requirements in Section 23 to determine whether the related costs are incremental costs to obtaining contracts which could be recognised as an asset. Certain aspects of the cost requirements require entities to apply significant judgement in analysing the facts and circumstances and determining the appropriate accounting treatment.

In addition, incremental costs of obtaining a contract are not limited to initial incremental costs. Commissions recognised subsequent to contract inception (e.g., commissions paid on modifications, commissions subject to contingent events or clawback) because they did not meet the recognition criteria for liabilities at contract inception would still be considered as costs to obtain the contract when the liability is recognised. This would include costs related to contract renewals because a renewal is a contract and there is nothing in the requirements for costs to obtain a contract that suggests a different treatment for contracts that are renewals of existing contracts. That is, the only difference between the two costs would be the timing of recognition based on when a liability has been incurred. See Question 10-8 below for additional discussion of accounting for commissions paid on contract modifications.

Unlike many commissions, some incentive payments, such as bonuses and other compensation that are based on quantitative or qualitative metrics that are not related to contracts obtained (e.g., profitability, earnings per share (EPS), performance evaluations) are not incremental to obtaining a contract. However, a legal contingency cost might be an incremental cost of obtaining a contract, for example, when a lawyer is entitled to be paid only upon the successful completion of a negotiation. Determining which costs are incremental costs of obtaining a contract might require judgement and it is possible that some contract acquisition costs are determined to be incremental and others are not.

Consider the following Illustration:

Illustration 10-7: Incremental and non-incremental costs for the same contract

An entity pays a 5% sales commission to its employees when they obtain contracts with customers. An employee begins negotiating a contract with a prospective customer and the entity incurs £5,000 in legal and travel costs in the process of trying to obtain the contract. The customer ultimately enters into a £500,000 contract and, as a result, the employee receives a sales commission of £25,000.

The entity will consider the commission paid to the employee of £25,000 as the only cost that is incremental to obtaining the contract. While the entity incurs other costs that are necessary to facilitate a sale (e.g., legal, travel), those costs would have been incurred even if the contract had not been obtained.

Note that the above discussions and guidance are consistent with the TRG and FASB TRG discussions on similar topic for purposes of applying IFRS 15 and ASC 606.¹⁹⁵ We consider that such discussions are also relevant in applying the related Section 23 requirements.

Illustration 10-8, which is based on Example 36 in IFRS 15, is an example regarding incremental costs of obtaining a contract: [IFRS 15.IE Example 36, IFRS 15.IE189-IE191]

Illustration 10-8: Incremental costs of obtaining a contract

An entity, a provider of consulting services, wins a competitive bid to provide consulting services to a new customer. The entity incurred the following costs to obtain the contract:

	£
External legal fees for due diligence	15,000
Travel costs to deliver proposal	25,000
Commissions to sales employees	10,000
Total costs incurred	<u>50,000</u>

The entity has selected an accounting policy to recognise recoverable incremental costs of obtaining a contract as an asset.

In accordance with paragraph 23.113, the entity recognises an asset for the £10,000 incremental costs of obtaining the contract arising from the commissions to sales employees because the entity expects to recover those costs through future fees for the consulting services. The entity also pays discretionary annual bonuses to sales supervisors based on annual sales targets, overall profitability of the entity and individual performance evaluations. In accordance with paragraph 23.113, the entity does not recognise an asset for the bonuses paid to sales supervisors because the bonuses are not incremental to obtaining a contract. The amounts are discretionary and are based on other factors, including the profitability of the entity and the individuals' performance. The bonuses are not directly attributable to identifiable contracts.

The entity observes that the external legal fees and travel costs would have been incurred regardless of whether the contract was obtained. Therefore, in accordance with paragraph 23.114, those costs are recognised as expenses when incurred, unless they are within the scope of another section of FRS 102, in which case, the relevant provisions of that section of FRS 102 apply.

¹⁹⁵ TRG agenda paper no. 23, *Incremental costs of obtaining a contract*, dated 26 January 2015, FASB TRG Agenda paper no. 57, *Capitalization and Amortization of Incremental Costs of Obtaining a Contract*, dated 7 November 2016 and FASB TRG Agenda paper no. 60, *November 2016 Meeting - Summary of Issues Discussed and Next Steps*, dated 31 January 2017.

As a practical expedient, even if an entity elects an accounting policy to recognise recoverable incremental costs of obtaining a contract as an asset, Section 23 permits the entity to expense immediately contract acquisition costs, if the asset that would have resulted from capitalising those costs would have been amortised within one year or less. [FRS 102.23.114]. It is important to note that the amortisation period for incremental costs is not always the initial contract term (see further discussion on this in Question 10-13 below). See 10.3.3 below for discussion of the amortisation of capitalised contract costs.

Frequently asked questions

Question 10-6: Does the timing of commission payments affect whether they are incremental costs?¹⁹⁶

The timing of commission payments does not affect whether the costs would have been incurred if the contract had not been obtained. However, there could be additional factors or contingencies that would need to be considered in different commission plans that could affect the determination of whether all (or a portion) of a cost is incremental.

Consider the following Illustration:

Illustration 10-9: Timing of commission payments

An entity pays an employee a 4% sales commission on a £50,000 signed contract with a customer. For cash flow management purposes, the entity pays the employee half of the commission (i.e., 2% of the total contract value) upon completion of the sale and the remainder in six months' time. The employee is entitled to receive the unpaid commission even if he or she is no longer employed by the entity when payment is due.

If such costs are recoverable and if elected as a policy choice, the entity would capitalise the entire commission in this example (the timing of which would coincide with the recognition of the related liability). That is, the entity would not just capitalise the portion it paid immediately and expense the rest.

In this fact pattern, only the passage of time is required for the entity to pay the second half of the commission. For example, in some commission plans, the employee will only be entitled to the second half of the commission payment if the employee is still employed by the entity when the commission is due. For such plans, an entity needs to carefully evaluate whether the requirement to remain employed in order to receive the commission (i.e., the service vesting condition) is substantive.

How we see it

We believe that the second half of the commission payment would not be incremental if the service condition is substantive because other conditions are necessary, beyond simply obtaining the contract, for the entity to incur the cost.

If the entity's payment of a commission is only 'contingent' on a customer paying the amount due in the obtained contract, we do not believe this would influence the determination of whether the commission is an incremental cost, provided the contract meets the Step 1 criteria to be accounted for as a contract under the five-step model (see 4.1 above). However, if there is an extended payment term (i.e., there is a significant amount of time between contract signing and the date in which the contract consideration is due), the entity needs to consider whether there is a service condition or other contingency, as discussed above.

Question 10-7: Would commission payments subject to a threshold be considered incremental costs?¹⁹⁷

Generally, basing a commission on a pool of contracts, rather than paying a set percentage for each contract, would not affect the determination of whether the commissions would have been incurred, if the entity did not obtain the contracts with those customers.

¹⁹⁶ Based on FASB TRG Agenda paper no. 57, *Capitalization and Amortization of Incremental Costs of Obtaining a Contract*, dated 7 November 2016 and FASB TRG Agenda paper no. 60, *November 2016 Meeting - Summary of Issues Discussed and Next Steps*, dated 31 January 2017.

¹⁹⁷ Based on FASB TRG Agenda paper no. 57, *Capitalization and Amortization of Incremental Costs of Obtaining a Contract*, dated 7 November 2016 and FASB TRG Agenda paper no. 60, *November 2016 Meeting - Summary of Issues Discussed and Next Steps*, dated 31 January 2017.

Consider the following example:

Illustration 10-10: Commission payments subject to a threshold

An entity has a commission programme that increases the amount of commission a salesperson receives based on how many contracts the salesperson has obtained during an annual period, as follows:

0-9 contracts	0% commission
10-19 contracts	2% of value of contracts 1-19
20+ contracts	5% of value of contracts 1-20+

Generally, these costs are incremental costs of obtaining a contract with a customer. Therefore, if such costs are recoverable and if elected as a policy choice, the costs will be capitalised when the entity incurs a liability to pay these commissions. The costs are incremental because the entity will pay the commission under the programme terms, as a result of entering into the contracts. See Question 10-24 in 10.3.3 below for discussion about the period over which an entity would amortise a sales commission that is subject to a threshold and is considered an incremental cost of obtaining a contract.

Question 10-8: Would an entity capitalise commissions paid on contract modifications? ¹⁹⁸

If commissions paid on contract modifications are incremental (i.e., they would not have been incurred if there had not been a modification) and recoverable, an entity would capitalise them if the entity has elected an accounting policy to recognise recoverable incremental costs of obtaining a contract as an asset. Contract modifications are accounted for in one of three ways: (1) as a separate contract; (2) as a termination of the existing contract and the creation of a new contract; or (3) as part of the existing contract (see 4.4 above for further requirements on contract modifications). In all three cases, commissions paid on contract modifications are incremental costs of obtaining a contract and could be capitalised if they are recoverable. In the first two cases, a separate or new contract is created, so the costs of obtaining that contract would be incremental. The commissions paid on the modification of a contract that is accounted for as part of the existing contract are incremental costs even though they are not initial incremental costs.

Also see Question 10-11 below for further discussion of accounting for capitalised commissions upon a modification of the contract that is treated as the termination of an existing contract and the creation of a new contract.

Question 10-9: Would fringe benefits on commission payments be included in the capitalised amounts? ¹⁹⁹

If an entity elects to capitalise incremental costs of obtaining a contract as an asset, fringe benefits must be capitalised as part of the incremental cost of obtaining a contract if the additional costs are based on the amount of commissions paid and the commissions qualify as costs to obtain a contract. However, if the costs of fringe benefits would have been incurred regardless of whether the contract had been obtained (e.g., health insurance premiums), the fringe benefits cannot be capitalised. That is, an entity cannot allocate fringe benefits to the commission and, therefore, capitalise a portion of the costs of benefits it would provide, regardless of whether the commission was paid.

Question 10-10: Must an entity apply the practical expedient to expense contract acquisition costs to all of its qualifying contracts across the entity or can it apply the practical expedient to individual contracts?

How we see it

When an entity elects to capitalise incremental costs of obtaining a contract as an asset, we believe the practical expedient to expense contract acquisition costs (that would, otherwise, be amortised over a period of one year or less) must be applied consistently to contracts with similar characteristics and in similar circumstances.

¹⁹⁸ Based on TRG agenda paper no. 23, *Incremental costs of obtaining a contract*, dated 26 January 2015.

¹⁹⁹ Based on TRG agenda paper no. 23, *Incremental costs of obtaining a contract*, dated 26 January 2015.

Question 10-11: How would an entity account for capitalised commissions upon a modification of the contract that is treated as the termination of an existing contract and the creation of a new contract?

How we see it

When an entity elects to capitalise incremental costs of obtaining a contract as an asset, we believe an asset recognised for incremental costs to obtain a contract that exists when the related contract is modified must be carried forward into the new contract, if the modification is treated as the termination of an existing contract and the creation of a new contract and the goods or services to which the original contract cost asset relates are part of the new contract.

This is because the contract cost asset relates to goods or services that have not yet been transferred and the accounting for the modification is prospective. This conclusion is similar to the accounting for contract assets upon a contract modification, as discussed in Question 11-5 in 11.1.5 below.

The contract cost asset that remains on the entity's statement of financial position at the date of modification would continue to be evaluated for impairment in accordance with Section 23 (see 10.3.4 below). In addition, an entity must determine an appropriate amortisation period for the contract cost asset (see 10.3.3 below).

Question 10-12: Would an entity consider contract renewals when assessing whether the practical expedient applies?

Contract renewals are considered when assessing whether the practical expedient for incremental costs to obtain a contract applies. Even if an entity elects an accounting policy to recognise recoverable incremental costs of obtaining a contract as an asset, as a practical expedient, entities could recognise such costs as an expense if the asset that would have resulted from capitalising these costs would have been amortised in one year or less.

As discussed further in 10.3.3 below, in order to determine the amortisation period for capitalised incremental costs to obtain a contract, an entity needs to consider whether the capitalised contract costs only relate to goods or services that will be transferred under the initial contract or whether the costs also relate to goods or services that will be transferred under a specific anticipated contract.

If an entity's past experience indicates that a renewal is likely, the entity needs to determine whether the renewal commission is commensurate with the initial commission; if not, the amortisation period for the initial commission would be longer than the initial term. If the amortisation period extends beyond one year due to expected contract renewals, the practical expedient would not be available to the entity.

Question 10-13: If a contract contains more than one performance obligation, can an entity apply the practical expedient?

Whether the practical expedient for incremental costs to obtain a contract will apply when a contract contains more than one performance obligation will depend on the specific facts and circumstances. If a policy of recognising recoverable incremental costs to obtain a contract as an asset is chosen, entities could recognise such costs as an expense only if the asset resulting from capitalising these costs would have been amortised in one year or less. As discussed further in Question 10-23 in 10.3.3 below, we believe an entity can attribute capitalised contract costs to individual performance obligations in a contract, but it is not required to do so. That is, an entity can use multiple approaches to determine the amortisation period provided that the asset recognised is amortised on a systematic basis that is consistent with the transfer to the customer of the goods or services to which the asset relates.

Reasonable approaches could include:

- Amortising a single capitalised contract cost using one measure of performance considering all of the performance obligations in the contract.
 - Allocating the capitalised costs to all performance obligations in the contract on a relative basis and determining an appropriate amortisation period for each performance obligation.
- Or
- Allocating specific capitalised contracts costs to individual performance obligations in the contract (but not all) when the costs relate specifically to certain goods or services (but not all) in the contract.

Regardless of the approach used to determine the appropriate amortisation period for a capitalised contract cost related to a contract containing multiple performance obligations, all the amortisation periods related to the contract would have to be one year or less for an entity to apply the practical expedient. If any amortisation period related to the contract extends beyond one year, the entity cannot apply the practical expedient.

10.3.2 Costs to fulfil a contract

Section 23 divides contract fulfilment costs into two categories: (1) costs that give rise to an asset; and (2) costs that are expensed as incurred. When determining the appropriate accounting treatment for such costs, Section 23 makes it clear that any other applicable sections of FRS 102 (e.g., Section 13, Section 17 and Section 18) are considered first. That is, if costs incurred in fulfilling a contract are within the scope of another section of FRS 102, an entity accounts for those costs in accordance with those other sections of FRS 102. [FRS 102.23.116, FRS 102.23.117]. Accordingly, if those other sections of FRS 102 preclude capitalisation of a particular cost, then an asset cannot be recognised under Section 23. If the costs incurred to fulfil a contract are not within the scope of another section of FRS 102, an entity capitalises such costs only if they meet all of the following criteria: [FRS 102.23.117]

- The costs directly relate to a contract or to a specifically identifiable anticipated contract (e.g., costs relating to services to be provided under renewal of an existing contract or costs of designing an asset to be transferred under a specific contract that has not yet been approved).
- The costs generate or enhance resources of the entity that will be used in satisfying (or in continuing to satisfy) performance obligations in the future.
- The costs are expected to be recovered.

If all the criteria are met, an entity is required to capitalise the costs as an asset. Such costs are recognised as an asset because they give rise to resources that the entity will use to satisfy future performance obligations in the contract. Conversely, costs that relate to performance obligations that are satisfied (or partially satisfied) are recognised as expenses when incurred, as those costs relate to past performance. [FRS 102.23.118].

The following flow chart illustrates these requirements:

Figure 10-3: Costs to fulfil a contract

Sections of FRS 102 that might be applicable to costs to fulfil a contract with a customer include, but are not limited to, the following:

- Inventory costs within the scope of Section 13.
- Costs related to the acquisition of an intangible asset within the scope of Section 18.
- Costs attributable to the acquisition or construction of PP&E within the scope of Section 17 or an investment property within the scope of Section 16.
- Costs related to biological assets or agricultural produce within the scope of Section 34 *Agriculture*.

Illustration 10-12 below illustrates some costs that are accounted for under other sections of FRS 102.

The IFRS IC received a request about the recognition of training costs incurred to fulfil a contract with a customer in relation to an entity that supplies outsourced services and incurs costs to train its employees so that they understand the customer's equipment and processes. This is expected to be relevant to entities reporting under FRS 102 due to the close alignment between Section 23 and IFRS 15 in this area.

In March 2020, the IFRS IC concluded that, before assessing the criteria in paragraph 95 of IFRS 15 (equivalent to the criteria in paragraph 23.117 of FRS 102), an entity first considers whether the training costs incurred to fulfil the contract are within the scope of another IFRS accounting standard. In relation to the request, since IAS 38 explicitly includes expenditure on training within its scope, the entity would apply the IAS 38 requirements and not IFRS 15. IAS 38 requires an entity to expense training costs as incurred and states that "an entity usually has insufficient control over the expected future economic benefits arising from a team of skilled staff and from training for these items to meet the definition of an intangible asset". [IAS 38.15, IAS 38.68, IAS 38.69]. The IFRS IC noted that the Basis for Conclusions on IFRS 15 states that "if the other Standards preclude the recognition of any asset arising from a particular cost, an asset cannot then be recognised under IFRS 15". [IFRS 15.BC307]. Therefore, since IAS 38 requires those costs to be expensed as incurred, they cannot be capitalised under IFRS 15. The IFRS IC concluded that IFRS 15 and IAS 38 provide an adequate basis for an entity to determine its accounting for training costs incurred to fulfil a contract with a customer and decided not to add the matter to its agenda.²⁰⁰ Similarly, Section 18 also requires an entity to expense training costs as incurred, therefore, these costs cannot be capitalised under Section 23. [FRS 102.18.8C].

When determining whether costs to fulfil a contract with a customer meet the criteria for capitalisation in paragraph 23.117, an entity must consider its specific facts and circumstances.

With regard to the first criterion, Section 23 indicates that costs can be capitalised even if the contract with the customer is not yet finalised. However, rather than allowing costs to be related to any potential future contract, Section 23 requires that the costs relate directly to a specifically anticipated contract.

IFRS 15 provides the following examples of costs that meet the first criterion for capitalisation (i.e., costs that relate directly to the contract or a specifically anticipated contract) that can be useful in the application of the requirements in Section 23: [IFRS 15.97]

- (a) Direct labour (for example, salaries and wages of employees who provide the promised services directly to the customer)
 - (b) Direct materials (for example, supplies used in providing the promised services to a customer)
 - (c) Allocations of costs that relate directly to the contract or to contract activities (for example, costs of contract management and supervision, insurance and depreciation of tools, equipment and right-of-use assets used in fulfilling the contract)
 - (d) Costs that are explicitly chargeable to the customer under the contract
- And
- (e) Other costs that are incurred only because an entity enters into the contract (for example, payments to subcontractors)

Significant judgement might be required to determine whether costs meet the second criterion for capitalisation in paragraph 23.117(b) (i.e., the costs generate or enhance resources of the entity that will be used in satisfying, or in continuing to satisfy, performance obligations in the future). In the Basis for Conclusions on IFRS 15, the IASB explained that the revenue standard only results in the capitalisation of costs that meet the definition of an asset and precludes an entity from deferring costs merely to normalise profit margins throughout a contract (by allocating revenue and costs evenly over the contract term). [IFRS 15.BC308].

²⁰⁰ [IASB Staff Paper 2](#): Project: *Training Costs to Fulfil a Contract (IFRS 15)*, Paper topic: *Initial Consideration*, IFRS IC meeting, September 2019; and [IFRIC Update](#), March 2020. Available on the IFRS Foundation's website.

For costs to meet the third criterion (i.e., the 'expected to be recovered' criterion in paragraph 23.117(c)), they need to be either explicitly reimbursable under the contract or reflected through the pricing on the contract and recoverable through margin. Determining whether the costs are expected to be recovered might be challenging and require significant judgement if some, or all, of the transaction price is contingent (e.g., success-based fees).

Similar to the discussion related to incremental costs to obtain a contract in 10.3.1 above, an entity needs to include all future cash inflows and outflows associated with fulfilling the contract to determine whether costs to fulfil a contract are recoverable. Furthermore, when determining the amount it expects to receive as part of the recoverability assessment, an entity would not apply the requirements for constraining estimates of variable consideration. That is, if an entity were required to reduce the estimated transaction price because of the constraint on variable consideration, it would use the unconstrained transaction price to evaluate recoverability of the contract fulfilment costs. The unconstrained transaction price also needs to be adjusted to reflect the customer's credit risk. This recoverability assessment for the costs to fulfil a contract is similar to the impairment assessment discussed in 10.3.4 below.

How we see it

As discussed above, entities must first determine whether costs incurred to fulfil a contract with a customer are in the scope of other sections of FRS 102 before determining whether capitalisation is required under Section 23. As an example, an entity might determine that fulfilment costs related to a service contract are not in the scope of other sections of FRS 102 (e.g., Section 13), so it evaluates the requirements in Section 23 to determine whether the fulfilment costs need to be capitalised or expensed. The type of costs that might be capitalised under Section 23 for the service contract are similar to the types of costs that might be capitalised under Section 13 for a contract to sell goods.

As noted above, costs that are evaluated for capitalisation include direct costs and allocable overhead-type costs. However, an entity will also need to consider the types of costs that must be expensed as incurred, as discussed further below.

If the criteria for capitalisation in paragraph 23.117 are not met, the costs incurred in fulfilling a contract do not give rise to an asset and must be expensed as incurred. IFRS 15 provides some common examples of costs that must be expensed as incurred, as follows: [IFRS 15.98]

- (a) General and administrative costs (unless those costs are explicitly chargeable to the customer under the contract – see discussion above)
 - (b) Costs of wasted materials, labour or other resources to fulfil the contract, that were not reflected in the price of the contract
 - (c) Costs that relate to satisfied performance obligations (or partially satisfied performance obligations) in the contract (i.e., costs that relate to past performance)
- And
- (d) Costs for which an entity cannot distinguish whether the costs relate to unsatisfied performance obligations or to satisfied performance obligations (or partially satisfied performance obligations)

Item (c) above specifies that, if a performance obligation (or a portion of a performance obligation that is satisfied over time) has been satisfied, fulfilment costs related to that performance obligation (or portion thereof) can no longer be capitalised. This is true even if the associated revenue has not yet been recognised (e.g., the contract consideration is variable and has been fully or partially constrained). Once an entity has begun satisfying a performance obligation that is satisfied over time, it only capitalises fulfilment costs that relate to future performance. Accordingly, it might be challenging for an entity to capitalise costs that are related to a performance obligation that an entity has already started to satisfy. Similarly, item (d) above specifies that, if an entity is unable to determine whether certain costs relate to past or future performance and the costs are not eligible for capitalisation under other sections of FRS 102, the costs are expensed as incurred.

The IFRS IC received a request about the recognition of costs incurred to fulfil a contract in relation to a performance obligation that is satisfied over time. In June 2019, the IFRS IC concluded that IFRS 15 provides an adequate basis for an entity to determine how to recognise the costs in the fact pattern provided and decided not to add the matter to its agenda.²⁰¹ The guidance in IFRS 15 discussed by the IFRIC is helpful in the application of Section 23 as the principles relating to the recognition of costs incurred to fulfil a contract are consistent with those in IFRS 15.

201 [IFRIC Update](#), June 2019, available on the IFRS Foundation's website.

Consider the following Illustration (which is based on an example discussed by the IFRS IC).²⁰²

Illustration 10-11: Costs to fulfil a contract related to past performance

An entity enters into a contract with a customer to construct a building. It identifies a single performance obligation, being the promise to transfer the building to the customer, which it expects will take three years to complete. The entity satisfies this performance obligation (and recognises revenue) over time in accordance with paragraph 23.81(c) because its performance does not create an asset with an alternative use and it has an enforceable right to payment (see 8.1.3 above).

At the end of the reporting period, the entity has begun constructing the building and has incurred costs related to laying the foundation of the building.

The IFRS IC noted that the foundation costs relate to construction work done on the partly-constructed building, which has been transferred to the customer. Therefore, the costs relate to the entity's past performance in partially satisfying its performance obligation and in accordance with paragraph 23.118, must be expensed as incurred. That is, the costs do not meet the criteria to be recognised as an asset under paragraph 23.117.

Illustration 10-12, which is based on Example 37 in IFRS 15, illustrates costs that are capitalised under other sections of FRS 102, costs that meet the capitalisation criteria and costs that do not: [IFRS 15, IE Example 37, IFRS 15.IE192-IE196]

Illustration 10-12: Costs that give rise to an asset - costs to fulfil a contract

An entity enters into a service contract to manage a customer's information technology data centre for five years. The contract is renewable for subsequent one-year periods. The average customer term is seven years. Before providing the services, the entity designs and builds a technology platform for the entity's internal use that interfaces with the customer's systems. That platform is not transferred to the customer, but will be used to deliver services to the customer.

The initial costs incurred to set up the technology platform are as follows:

	£
Design services	40,000
Hardware	120,000
Software	90,000
Migration and testing of data centre	100,000
Total costs	<u>350,000</u>

The initial setup costs relate primarily to activities to fulfil the contract but do not transfer goods or services to the customer. The entity accounts for the initial setup costs as follows:

- (a) Hardware costs are accounted for in accordance with Section 17.
- (b) Software costs are accounted for in accordance with Section 18.
- (c) Costs of the design, migration and testing of the data centre are assessed in accordance with paragraph 23.117 to determine whether an asset can be recognised for the costs to fulfil the contract. Any resulting asset would be amortised on a systematic basis over the seven-year period (i.e., the five-year contract term and two anticipated one-year renewal periods) that the entity expects to provide services related to the data centre.

In addition to the initial costs to set up the technology platform, the entity also assigns two employees who are primarily responsible for providing the service to the customer. Although the costs for these two employees are incurred as part of providing the service to the customer, the entity concludes that the costs do not generate or enhance resources of the entity (see FRS 102.23.117(b)). Therefore, the costs do not meet the criteria in paragraph 23.117 and cannot be recognised as an asset using Section 23. Accordingly, the entity recognises the payroll expense for these two employees when incurred.

²⁰² [IASB Staff Paper 2](#): Project: *Costs to Fulfil a Contract (IFRS 15)*, Paper topic: *Initial Consideration*, IFRS IC meeting, March 2019; and [IFRIC Update](#), June 2019. Available on the IFRS Foundation's website.

Frequently asked questions

Question 10-14: Can an entity defer costs of a transferred good or service that would otherwise generate an upfront loss because variable consideration is fully or partially constrained?

An entity cannot defer the costs of a transferred good or service when the application of the constraint on variable consideration results in an upfront loss, even if the entity ultimately expects to recognise a profit on that good or service, unless other specific requirements allow or require a deferral of those costs. The criteria in Section 23 must be met to capitalise costs to fulfil a contract, including the criterion that the costs must generate or enhance resources of the entity that will be used in satisfying performance obligations in the future. An entity recognises such costs when control of a good or service transfers to the customer. As such, the cost of those sales would not generate or enhance resources of the entity used to satisfy future performance obligations.

Consider the following example:

Illustration 10-13: Recognise cost of sales when control is transferred

An entity sells goods with a cost of £500,000 for consideration of £600,000. The goods have a high risk of obsolescence, which might require the entity to provide price concessions in the future, resulting in variable consideration (see 6.2.1.A – 6.2.1.B above). The entity estimates and constrains the transaction price and concludes that it is highly probable that it will be entitled to £470,000, even though the entity reasonably expects the contract to ultimately be profitable. When control transfers, the entity recognises revenue of £470,000 and costs of £500,000. It would not capitalise the loss of £30,000 because the loss does not generate or enhance resources of the entity that will be used in satisfying performance obligations in the future.

Question 10-15: How does an entity account for fulfilment costs incurred prior to the contract establishment date that are outside the scope of another section of FRS 102 (e.g., Section 13 *Inventories*)?²⁰³

Entities sometimes begin activities on a specifically anticipated contract before the contract establishment date (e.g., before agreeing to the contract with the customer, before the contract satisfies the criteria to be accounted for under Section 23), that are not within the scope of another section of FRS 102 (e.g., Section 13). The costs in respect of such activities, that relate to a good or service that will transfer to the customer at or after the contract establishment date, might be capitalised as costs to fulfil a specifically anticipated contract. However, such costs would still need to meet the criteria in paragraph 23.117 to be capitalised (e.g., they are expected to be recovered under the anticipated contract). Certain costs, such as general and administrative costs that are not explicitly chargeable to the customer under the contract, would not satisfy these criteria and would need to be expensed as incurred.

Subsequent to capitalisation, costs that relate to goods or services that are transferred to the customer at the contract establishment date would be expensed immediately. Any remaining capitalised contract costs would be amortised over the period that the related goods or services are transferred to the customer.

For requirements on recognising revenue for a performance obligation satisfied over time when activities are completed before the contract establishment date, see Question 8-20 in 8.1.4.E above.

Question 10-16: How are the effects of learning curve costs addressed in Section 23?

Section 23 does not explicitly address the effects of learning curve costs. Entities reporting under FRS 102 could consider guidance provided in IFRS 15 due to the close alignment of the requirements about costs to fulfil a contract between Section 23 and IFRS 15.

In the Basis for Conclusions on IFRS 15, “a ‘learning curve’ is the effect of efficiencies realised over time when an entity’s costs of performing a task (or producing a unit) decline in relation to how many times the entity performs that task (or produces that unit)”. [IFRS 15.BC312].

Learning curve costs usually consist of materials, labour, overhead, rework or other costs that must be incurred to complete the contract (but do not include research and development costs). These types of efficiencies generally can be predicted at inception of an arrangement and are often considered in the pricing of a contract between an entity and a customer.

²⁰³ Based on TRG Agenda paper no. 33, *Partial Satisfaction of Performance Obligations Prior to Identifying the Contract*, dated 30 March 2015 and TRG Agenda paper no. 34, *March 2015 Meeting - Summary of Issues Discussed and Next Steps*, dated 13 July 2015.

The IASB noted that in situations where learning curve costs are incurred in relation to a contract with a customer accounted for as a single performance obligation that is satisfied over time to deliver a specified number of units, IFRS 15 requires an entity to select a method of progress that depicts the transfer over time of the good or service to the customer. [IFRS 15.BC313]. See also the discussions in 8.1.4 above.

The IASB further noted that an entity would probably select a method (such as a costs incurred measure of progress) for these types of contracts, which would result in the entity recognising more revenue and expense at the beginning of the contract relative to the end. The IASB clarified that this would be appropriate as an entity would charge a higher price to a customer only purchasing one unit (rather than multiple units) in order to recover its learning curve costs.

Conversely, when learning curve costs are incurred for a performance obligation satisfied at a point in time (rather than over time), an entity needs to assess whether those costs are within the scope of another standard. The IASB noted that in situations in which an entity incurs cost to fulfil a contract without also satisfying a performance obligation over time, the entity is probably creating an asset that is within the scope of another standard (e.g., IAS 2). [IFRS 15.BC315]. For example, if within the scope of IAS 2, the costs of producing the components would accumulate as inventory in accordance with the requirements in IAS 2. The entity would then recognise revenue when control of the inventory transfers to the customer. In that situation, no learning curve costs would be capitalised under IFRS 15 as the costs would be in the scope of another standard.

How we see it

If the learning curve costs are not within the scope of another section of FRS 102, we believe they generally will not be eligible for capitalisation under Section 23 (e.g., because the costs relate to past (and not future) performance).

Question 10-17: How does an entity account for pre-contract or setup costs?

Pre-contract costs are often incurred in anticipation of a contract and will result in no future benefit unless the contract is obtained. Examples include: (1) engineering, design or other activities performed on the basis of commitments, or other indications of interest, by a customer; (2) costs for production equipment and materials relating to specifically anticipated contracts (e.g., costs for the purchase of production equipment, materials or supplies); and (3) costs incurred to acquire or produce goods in excess of contractual requirements in anticipation of subsequent orders for the same item.

Pre-contract costs that are incurred in anticipation of a specific contract must first be evaluated for capitalisation under other sections of FRS 102 (e.g., Section 13, Section 16, Section 18). For example, pre-contract costs incurred to acquire or produce goods in excess of contractual requirements for an existing contract in anticipation of subsequent orders for the same item would likely be evaluated under Section 13. Some other examples include costs incurred to move newly acquired equipment to its intended location, which could be required to be capitalised under Section 17 (see Question 10-18 below), and employee training costs that are expensed in accordance with Section 18 (see discussions in 10.3.2 above). Pre-contract costs incurred in anticipation of a specific contract that are not addressed under other sections of FRS 102 are capitalised under Section 23 only if they meet all of the criteria of a cost incurred to fulfil a contract. Pre-contract costs that are not in the scope of other sections of FRS 102 and do not meet the criteria under Section 23 are expensed as incurred.

Question 10-18: Can mobilisation costs be capitalised as costs to fulfil a contract with a customer under Section 23?

Entities incur mobilisation costs when moving personnel, equipment and supplies to a project site either before, at or after inception of a contract with a customer. They are incurred in order to ensure that the entity is in a position to fulfil its promise(s) in a contract (or specifically anticipated contract) with a customer, rather than transferring a good or service to a customer (i.e., they are not a promised good or service).

How we see it

The assessment of whether mobilisation costs can be capitalised depends on the specific facts and circumstances and might require significant judgement. Entities need to ensure that the costs are: (1) within the scope of Section 23; and (2) meet all the criteria in paragraph 23.117 of FRS 102 to be capitalised. We believe the considerations listed below are relevant to this assessment.

Are the costs within the scope of Section 23?

If the asset being moved is in the scope of another section of FRS 102 (e.g., equipment in the scope of Section 17, inventory in the scope of Section 13), an entity must determine whether the mobilisation costs are specifically addressed by the other section; if so, the cost is outside the scope of Section 23.

If the mobilisation costs are not specifically addressed in another section of FRS 102, or it is not clear whether these are within the scope of another section of FRS 102, an entity further analyses whether the mobilisation costs are:

- Specific to the asset being moved or applicable to more than one customer under unrelated contracts; in the latter case it is likely that they would not be within the scope of Section 23. For example, moving an asset between different premises of the entity to better utilise the asset in preparation for future contracts with many customers.
- Or
- Specific to the contract with the customer, in which case, it would be within the scope of Section 23. For example, moving an asset to a remote location at the customer's request, which does not provide a benefit to the entity beyond ensuring it is in a position to fulfil its obligation(s) to the customer under the contract.

Do the costs meet the criteria in FRS 102.23.117 to be capitalised?

As discussed above, Section 23 includes three criteria that must be met for costs to fulfil a contract within its scope can be capitalised:

- (a) Entities might need to use judgement to determine if costs relate directly to a contract (or a specifically anticipated contract, see 10.3.2 above), as required in paragraph 23.117(a). Indicators that a cost, by function rather than by nature, might be directly related include, but are not limited to, the following:
 - The costs are explicitly or implicitly chargeable to the customer under the contract.
 - The costs are incurred only because the entity entered into the contract.
 - The contract explicitly or implicitly refers to mobilisation activities (e.g., that the entity must move equipment to a specific location).
 - The location in which the entity must perform is explicitly or implicitly specified in the contract and the mobilisation costs are incurred in order for the entity to fulfil its promise(s) to the customer.
- (b) Significant judgement might also be required to determine whether costs generate or enhance resources of the entity that will be used in satisfying performance obligations in the future as required by paragraph 23.117(b). This determination would include (but not be limited to) considering whether:
 - The costs are incurred in order for the entity to be able to fulfil the contract

And

 - Location is implicitly or explicitly an attribute of the contract

If a performance obligation (or a portion of a performance obligation that is satisfied over time) has been satisfied, fulfilment costs related to that performance obligation (or portion thereof) can no longer be capitalised (see 10.3.2 above for further discussion).

- (c) For costs to meet the 'expected to be recovered' criterion as required by paragraph 23.117(c), they need to be either explicitly reimbursable under the contract or reflected through the pricing on the contract and recoverable through margin.

Determining whether mobilisation costs are directly related to a contract might be more challenging when they are incurred between two contracts. That is, when the costs are related to returning an entity's personnel, equipment and/or supplies to their original location or to another project site. In those situations, an entity will need to determine to which contract the costs relate. It will also need to determine whether the costs generate or enhance resources of the entity that will be used in satisfying performance obligations in the future. This is important because costs related to past performance cannot be capitalised under Section 23.

Question 10-19: Can an entity defer losses incurred on a contract by capitalising related fulfilment costs when it is expected to generate future profits on the sale of optional goods or services (i.e., loss leader)?

Certain contracts are executed as part of a loss leader strategy in which a good is sold at a loss with an expectation that future sales contracts will result in higher sales and/or profits. In determining whether these anticipated contracts would be part of the accounting for the existing loss leader contract, entities need to refer to the definition of a contract in Section 23, which is based on enforceable rights and obligations in the existing contract (see 4.1 above). While it might be probable that the customer will enter into a future contract or the customer might even be economically compelled, or compelled by regulation to do so, it would not be appropriate to account for an anticipated contract when there is an absence of enforceable rights and obligations.

In addition, if the fulfilment costs incurred during satisfying the initial contract are within the scope of other sections of FRS 102 (e.g., Section 13), the entity must account for those costs under that relevant section of FRS 102. Even if the costs are not within the scope of another section of FRS 102, the costs would relate to a satisfied or partially satisfied performance obligation (i.e., the original contract priced at a loss) and, therefore, must be expensed as incurred. Section 23 does not permit an entity to defer fulfilment costs or losses incurred based on the expectation of profits in a future contract.

Question 10-20: How does an entity account for costs associated with installation or implementation services?

Entities that provide installation or implementation services to customers incur costs to fulfil the services. To determine the appropriate accounting for these costs, entities first need to determine whether the costs are within the scope of another section of FRS 102 (e.g., PP&E, intangibles).

[FRS 102.23.116].

If they are not within the scope of another section of FRS 102, entities need to determine whether the installation or implementation service is a separate performance obligation that is satisfied over time (see 5 and 8 above). If it is a performance obligation, then entities generally expense the costs associated with it as incurred because, as discussed in 10.3.2 above, it might be challenging to conclude that the costs relate only to the entity's satisfaction of performance obligations in the future, which is required for capitalisation by paragraph 23.117(b). [FRS 102.23.117, FRS 102.23.118].

If the installation or implementation service is not a separate performance obligation, an entity needs to evaluate whether it is required to capitalise the costs to fulfil the contract under Section 23 requirements mentioned above. That is, costs incurred to fulfil a contract are required to be capitalised only if they meet all the criteria for capitalisation in paragraph 23.117. [FRS 102.23.117].

The Illustrations below contrast an example of implementation services that are determined to be a separate performance obligation (and, therefore, are not capitalised as costs to fulfil a contract) with an example of implementation services that meet the criteria for capitalisation as costs to fulfil a contract under Section 23.

Illustration 10-14: Implementation services are not capitalised costs to fulfil a contract

Technology entity M enters into a three-year SaaS contract with a customer for £4,000,000 for a subscription to an inventory management application beginning 1 June 20X6. The contract includes implementation services that will be performed at the beginning of the contract, starting on 1 June 20X6. The implementation services include data migration, creation of objects for the customer's products that will be inventoried, and customisation of the application's layout with the customer's logo and colour scheme. Several third-party service providers also sell implementation services for Technology entity M's application. Assume that the implementation services do not represent a significant integration service (i.e., the implementation services do not significantly modify or customise the SaaS) and the SaaS is fully functional without the implementation service. Under the contract, the customer receives access to the fully functional SaaS on 1 June 20X6.

Technology entity M determines that the costs incurred related to the implementation services are not within the scope of another section of FRS 102 (e.g., PP&E, intangible assets).

Technology entity M then considers the implementation services and SaaS and determines that they are separate performance obligations that will be satisfied over time. This is because the implementation services and SaaS can be purchased separately. Technology entity M determines that it is able to fulfil its promise to transfer the SaaS separately from the implementation services, indicating that the two are not highly interdependent or interrelated. Therefore, Technology entity M determines that the costs incurred related to implementation services do not meet the criteria for capitalisation because they do not relate to the entity's satisfaction of performance obligations in the future (i.e., the costs are expensed as incurred in the process of performing the implementation services).

Illustration 10-15: Implementation services are capitalised costs to fulfil a contract

Technology entity N enters into a contract with a customer for £2,000,000 for a one-year SaaS subscription to an enterprise software application beginning when the customer obtains access to the SaaS. The contract includes implementation services that will be performed at the beginning of the contract, starting on 1 January 20X6. The implementation services, which will take approximately two months to complete, must be performed in order for the customer to access the SaaS because the services involve the creation of customer-specific interfaces. Technology entity N does not sell the SaaS without these implementation services and no other vendors are able to perform the implementation services because they require the creation of code that will reside on Technology entity N's servers.

Technology entity N determines that the costs incurred related to the implementation services are not within the scope of another section of FRS 102 (e.g., PP&E, intangible assets).

Technology entity N then determines that the implementation services are not capable of being distinct. This is because they cannot be purchased separately or provided by a third party and because the services do not provide benefit on their own or with other readily available resources (since the SaaS has not yet been provided and also cannot be sold separately). Therefore, the implementation services and SaaS subscription are a combined performance obligation.

Technology entity N also concludes that the combined performance obligation meets the requirements for recognition over time. It determines that revenue will be recognised over the contract term, beginning when the customer obtains access to the SaaS.

Therefore, Technology entity N considers whether the costs incurred related to the implementation services that will be provided at the outset of the contract (i.e., before the customer obtains access to the SaaS) meet the criteria to be capitalised as a cost to fulfil the contract, as follows:

- The costs relate specifically to the SaaS contract with this customer.
- The costs generate a resource (i.e., the interfaces) that will be used in future performance (i.e., providing the SaaS, to the customer).
- The costs are expected to be recovered based on the margin included in the contract.

As such, Technology entity N determines that the costs must be capitalised as a cost to fulfil as the implementation services are performed. The costs will then be amortised over the estimated period of benefit beginning when the customer gains access to the SaaS.

10.3.3 Amortisation of capitalised contract costs

Any capitalised contract costs are amortised, with the expense recognised on a systematic basis that is consistent with the entity's pattern of transfer to the customer of the goods or services to which the contract costs asset relates. [FRS 102.23.119, FRS 102.23.120].

When the timing of revenue recognition (e.g., at a point in time, over time) aligns with the transfer of the goods or services to the customer, the amortisation of the capitalised contract costs in a reporting period will correspond with the revenue recognition in that reporting period. However, the timing of revenue recognition might not always align with the transfer of the goods and services to the customer (e.g., when variable consideration is constrained at the time the related performance obligation is satisfied). When this occurs, the amortisation of the capitalised contract costs will not correspond with the revenue recognition in a reporting period.

For example, consider an entity that enters into a contract with a customer with two performance obligations: (a) a right-to-use licence; and (b) a related service for three years. Further assume that payment from the customer is based on the customer's usage of the intellectual property (i.e., a usage-based royalty). Revenue in respect of the licence of intellectual property would be recognised at a point in time (see 9.3.2 above) and revenue in respect of the related service would be recognised over time. The transaction price allocated to the performance obligation for the licence of intellectual property cannot be recognised at the point in time when control of the licence transfers to the customer due to the royalty recognition constraint (see 9.5 above). Accordingly, any capitalised contract costs that relate to the licence need to be fully amortised upon the transfer of control of that licence (i.e., at a point in time), regardless of when the related revenue will be recognised. Any capitalised contract costs that relate to the services need to be amortised over the period of time consistent with the transfer of control of the service.

It is important to note that capitalised contract costs could relate to multiple goods or services (e.g., design costs to manufacture multiple distinct goods when design services are not a separate performance obligation) in a single contract. In such instances, the amortisation period could be the entire contract term. See Question 10-23 below for a discussion on how an entity might determine the appropriate amortisation period when capitalised contract costs relate to multiple performance obligations. The amortisation period could also extend beyond a single contract, if the capitalised contract costs relate to goods or services being transferred under multiple contracts or to a specifically anticipated contract (e.g., certain contract renewals). [FRS 102.23.117(a), FRS 102.23.120].

In these situations, the capitalised contract costs would be amortised over a period that is consistent with the transfer to the customer of the goods or services to which the asset relates. This can also be thought of as the expected period of benefit of the asset capitalised. The expected period of benefit might be the expected customer relationship period, but that is not always the case. To determine the appropriate amortisation period, an entity needs to evaluate the type of capitalised contract costs, what the costs relate to and other facts and circumstances of the specific arrangement. Furthermore, before including estimated renewals in the period of benefit, an entity needs to evaluate its history with renewals, to conclude that such an estimate is supportable.

How we see it

We believe the following factors might be relevant for the evaluation of the period of benefit.

Figure 10-4: Evaluation of the period of benefit

Because amortisation follows the entity's pattern of transfer of related goods or services to the customer, an entity will therefore need to update the amortisation period when there is a significant change in the expected timing of transfer to the customer of the goods or services to which the asset relates. The entity accounts for such a change as a change in accounting estimate and discloses related information in accordance with the requirements in Section 10 (see Chapter 9 at 3.4.1 and 3.6.2). This principle is also consistent with the principle applied under IFRS 15. [IFRS 15.100].

Consider the following Illustration:

Illustration 10-16: Amortisation period

Entity A enters into a three-year contract with a new customer for transaction processing services. To fulfil the contract, Entity A incurred set-up costs of £60,000, which it capitalised in accordance with paragraphs 23.116 - 23.118 (see 10.3.2 above) and will amortise over the term of the contract.

At the beginning of the third year, the customer renews the contract for an additional two years. Entity A will benefit from the initial set-up costs during the additional two-year period. Therefore, it changes the remaining amortisation period from one year to three years and adjusts the amortisation expense in the period of the change and future periods in accordance with the requirements in Section 10 for changes in accounting estimates. The disclosure requirements of Section 10 related to changes in accounting estimates are also applicable.

However, under Section 23, if Entity A had been in the position to anticipate the contract renewal at contract inception, Entity A would have amortised the set-up costs over the anticipated term of the contract including the expected renewal (i.e., five years).

Determining the amortisation period for capitalised incremental costs of obtaining a contract with a customer can be complicated, especially when contract renewals are expected and the commission rates are not constant throughout the entire life of the contract. IFRS 15 provides further discussion and guidance which entities reporting under FRS 102 could consider due to the close alignment between Section 23 and IFRS 15 in this area.

When evaluating whether the amortisation period for a sales commission extends beyond the original contract period, an entity would also evaluate whether an additional commission is paid for subsequent renewals. If so, it evaluates whether the renewal commission is considered 'commensurate' with the original commission. See Question 10-21 below for further discussion on whether a commission is commensurate. In the Basis for Conclusions on IFRS 15, the IASB explained that amortising the asset over a longer period than the initial contract would not be appropriate if an entity pays a commission on a contract renewal that is commensurate with the commission paid on the initial contract. In that case, the costs of obtaining the initial contract do not relate to the subsequent contract. [IFRS 15.BC309]. An entity would need to evaluate the appropriate amortisation period for any renewal commissions that are required to be capitalised under Section 23 in a similar manner. See Question 10-22 below for the discussion of how an entity determines the amortisation period of an asset recognised for the incremental costs of obtaining a contract with a customer.

How we see it

Under Section 23, entities are required to evaluate whether the period of benefit is longer than the term of the initial contract. As discussed above, it is likely that an entity would be required to amortise the capitalised sales commission cost over a period longer than the initial contract, if a renewal commission is not paid or a renewal commission is paid that is not commensurate with the original commission. It is also important to note that the amortisation period affects whether the entity can apply the practical expedient allowing the incremental cost of obtaining a contract to be expensed immediately. That expedient requires that the asset resulting from the capitalisation of these costs be amortised in one year or less. It is not dependent on the initial contract term.

In determining the appropriate amortisation period or the period of benefit for capitalised contract costs, an entity considers its facts and circumstances and might use judgement similar to that used when estimating the amortisation period for intangible assets (e.g., a customer relationship intangible acquired in a business combination). This could include considering factors such as customer retention and how quickly the entity's products and services change.

It is important for entities to document the judgements they make when determining the appropriate amortisation period and, if considered significant, disclose the same in their financial statements as required by Section 8 (see 11.4.3 below).

Frequently asked questions

Question 10-21: How does an entity determine whether a commission on a renewal contract is commensurate with the commission on the initial contract?²⁰⁴

Generally, the commissions would have to be reasonably proportional to the contract values (e.g., 5% of both the initial and renewal contract values) to be considered commensurate. Generally, it would not be reasonable for an entity to use a 'level of effort' analysis to determine whether a commission is commensurate. For example, a 6% commission on an initial contract and a 2% commission on a renewal would not be commensurate even if the declining commission rate corresponds to the level of effort required to obtain the contracts.

As discussed above in this section, if the renewal commission is considered to be commensurate with the commission on the initial contract, it would not be appropriate to amortise any asset for the initial commission over a longer period than the initial contract. In contrast, it is likely that it would be appropriate to amortise the asset over a longer period than the initial contract if the commissions are not considered to be commensurate (such as in the example above with a 6% initial commission and 2% renewal commission). See Question 10-22 below for discussion of how an entity determines this longer amortisation period.

Entities would also need to evaluate whether any expected subsequent renewal commissions are commensurate with prior renewal commissions to determine the appropriate amortisation period for any renewal commissions that are required to be capitalised under Section 23. Continuing the above example, assume the original three-year contract (for which a 6% commission is paid) and each subsequent renewal contract (for which a 2% renewal commission is paid) is for a one-year term. If the entity expects to renew the contract in years two through four and continue to pay a constant 2% commission upon each renewal, each renewal commission would be considered commensurate. As a result, it is likely that the appropriate amortisation period for each renewal required to be capitalised would be one year. See Question 10-25 below for discussion of when an entity would begin to amortise an asset recognised for the incremental cost of obtaining a renewal contract.

Question 10-22: How does an entity determine the amortisation period of an asset recognised for the incremental costs of obtaining a contract with a customer?²⁰⁵

Generally, when an entity determines an amortisation period that is consistent with the transfer to the customer of the goods or services to which the asset relates, it must determine whether the capitalised contract costs relate only to goods or services that will be transferred under the initial contract, or whether the costs also relate to goods or services that will be transferred under a specifically anticipated contract. For example, if an entity only pays a commission based on the initial contract and does not expect the customer to renew the contract (e.g., based on its past experience or other relevant information), amortising the asset over the initial term would be appropriate.

However, if the entity's past experience indicates that the customer is likely to renew the contract, the amortisation period would be longer than the initial term if the renewal commission is not 'commensurate' with the initial commission. See Question 10-21 above for a discussion of commensurate.

An entity needs to evaluate its facts and circumstances to determine an appropriate amortisation period if it determines that the period extends beyond the initial contract term, because the commission on the renewal contract is not commensurate with the commission on the initial contract. An entity might reasonably conclude that its average customer life is the best estimate of the amortisation period that is consistent with the transfer of the goods or services to which the asset relates (e.g., if the good or service does not change over time, such as a health club membership). However, this approach is not required and that entities must not use this as a default. Entities would use judgement that is similar to judgement used when estimating the amortisation period for intangible assets (e.g., a customer relationship intangible acquired in a business combination) and could consider factors such as customer loyalty and how quickly their products and services change.

204 Based on FASB TRG Agenda paper no. 57, *Capitalization and Amortization of Incremental Costs of Obtaining a Contract*, dated 7 November 2016 and FASB TRG Agenda paper no. 60, *November 2016 Meeting - Summary of Issues Discussed and Next Steps*, dated 31 January 2017.

205 Based on FASB TRG Agenda paper no. 57, *Capitalization and Amortization of Incremental Costs of Obtaining a Contract*, dated 7 November 2016 and FASB TRG Agenda paper no. 60, *November 2016 Meeting - Summary of Issues Discussed and Next Steps*, dated 31 January 2017 and TRG discussions included in TRG Agenda paper no. 23, *Incremental costs of obtaining a contract*, dated 26 January 2015.

Consider a technology entity that capitalises a commission paid on the sale of software, which the entity estimates it will maintain and support for only the next five years, and the estimated customer life is seven years. In evaluating the period of benefit, the entity might reasonably conclude that the capitalised commission has to be amortised over the five-year life of the software to which the commission relates. However, two acceptable methods for amortising capitalised contract costs that relate to both the original contract and the renewals in cases in which the renewal commission is not commensurate with the initial commission:

- The initial capitalised amount is amortised over the period of benefit that includes expected renewals, while amounts capitalised that relate to renewals are amortised over the renewal period.
- The portion of the initial capitalised amount that is commensurate is amortised over the original contract term and the additional amount that is not commensurate is amortised over the period of benefit that includes expected renewals. Capitalised amounts that relate to renewals are amortised over the renewal period.

Both methods are acceptable because they each meet the objective of amortising the costs on a systematic basis that is consistent with the pattern of transfer to the customer of the goods or services to which the asset relates. However, an entity needs to select one method and apply it consistently in similar circumstances. Other amortisation methods might also be acceptable if they are consistent with the pattern of transfer to the customer of the goods or services to which the asset relates.

The following Illustration shows the two methods described above:

Illustration 10-17: Methods for amortising capitalised contract costs

An entity has a commission plan that pays a 6% commission to a sales representative each time that sales representative obtains a new contract with a customer and a 2% commission each time that customer renews. The entity has elected an accounting policy to recognise recoverable incremental costs of obtaining a contract as an asset.

Based on the entity's assessment of the requirements in Section 23 for contract costs, it has concluded that the commissions paid as part of this commission plan are incremental costs to obtain a contract that are required to be capitalised. Furthermore, the entity has determined that the 2% commission paid for renewals is not commensurate with the 6% commission paid for initial contracts and, therefore, the period of benefit for capitalised commissions extends beyond the initial contract term.

The entity performs an assessment of average customer life, technology turnover and competitive factors and concludes that the period of benefit for capitalised commissions is five years.

The entity executes a three-year service contract with a customer for £600,000 and pays a 6% commission to the sales representative. At the end of the three-year term, the customer renews the contract for two more years for £400,000 and the entity pays a 2% commission to the sales representative.

The following are two acceptable methods for amortising the capitalised contract costs related to the £36,000 commission paid on the initial contract and the £8,000 commission paid on the renewal:

Method 1

The £36,000 commission related to the initial contract that was capitalised is amortised over the five-year period of benefit. When the contract is renewed, the £8,000 commission related to the renewal that was capitalised is amortised over the two-year renewal period. The commission would be amortised, as follows:

£	Year 1	Year 2	Year 3	Year 4	Year 5
Initial commission	7,200	7,200	7,200	7,200	7,200
Renewal commission	-	-	-	4,000	4,000
Total amortisation expense	7,200	7,200	7,200	11,200	11,200

Method 2

The £36,000 commission related to the initial contract that was capitalised is separated into two components: £12,000 that is commensurate with the commission paid on renewal (i.e., the amount of commission that the £600,000 initial contract earns at the commensurate rate of 2%); and £24,000 that is not commensurate. The entity amortises the £12,000 component over the three-year initial contract term and the £24,000 component over the five-year period of benefit. When the contract is renewed, the £8,000 commission related to the renewal that was capitalised is amortised over the two-year renewal period. The commission would be amortised, as follows:

£	Year 1	Year 2	Year 3	Year 4	Year 5
Initial commission (not commensurate)	4,800	4,800	4,800	4,800	4,800
Initial commission (commensurate)	4,000	4,000	4,000	-	-
Renewal commission	-	-	-	4,000	4,000
Total amortisation expense	8,800	8,800	8,800	8,800	8,800

Question 10-23: Can an entity attribute the capitalised contract costs to the individual performance obligations in the contract to determine the appropriate amortisation period?²⁰⁶

How we see it

We believe an entity can attribute the capitalised contract costs to individual performance obligations in the contract to determine the appropriate amortisation period, but it is not required to do so.

Paragraph 23.120 states that the asset recognised is amortised on a systematic basis “in accordance with the pattern of transfer to the customer of the goods or services to which the asset relates”. [FRS 102.23.120]. An entity would meet this objective by allocating the capitalised contract costs to performance obligations on a relative basis (i.e., in proportion to the transaction price allocated to each performance obligation) to determine the period of amortisation.

Illustration 10-18: Allocation of capitalised contract costs

A technology entity executes a contract for £600,000 for a perpetual software licence and one year of PCS. Based on the stand-alone selling prices, the entity allocates £500,000 (83%) of the total transaction price to the licence and £100,000 (17%) to the PCS. The entity has elected an accounting policy to recognise recoverable incremental costs of obtaining a contract as an asset. The entity pays a 4% commission to the sales representative and has determined that the commission is required to be capitalised because it is an incremental cost of obtaining the contract and is expected to be recovered.

The entity concludes that the £24,000 sales commission needs to be allocated between the licence and the PCS and amortised over the expected period of benefit associated with each of those performance obligations. The entity allocates £20,000 (83%) to the licence and £4,000 (17%) to the PCS, consistent with the relative value of the performance obligations to the transaction price.

Other methods for allocating capitalised contract costs might be appropriate. For example, we believe an entity would also meet the objective by allocating specific capitalised contract costs to individual performance obligations when the costs relate specifically to certain goods or services.

An entity needs to have objective evidence to support a conclusion that a specified amount of the costs relates to a specific performance obligation and consistently apply any methods used for allocating capitalised contract costs to performance obligations.

In addition, as discussed in Question 10-22 above, an entity that attributes capitalised contract costs to individual performance obligations needs to consider whether the amortisation period for some or all of the performance obligations extends beyond the original contract (see also discussion in this section above).

Another potentially acceptable amortisation pattern for capitalised contract costs relates to multiple performance obligations that are satisfied over different periods that would not require allocation of the asset to individual performance obligations in the contract. That is, an entity might amortise a single capitalised contract cost using one measure of performance taking into consideration all of the performance obligations in the contract. An entity that uses this method needs to select a measure that best reflects the ‘use’ of the asset as the goods and services are transferred to the customer. That is, the pattern of amortisation must meet the objective of paragraph 23.120 so that it is consistent with the pattern of transfer to the customer of the goods or services to which the asset relates.

Question 10-24: Over what period would an entity amortise a sales commission (that is only paid once a threshold is met) that is determined to be an incremental cost to obtain a contract?²⁰⁷

There are at least two alternatives that meet the objective of amortising the costs on a systematic basis that is consistent with the pattern of transfer to the customer of the goods or services to which the asset

²⁰⁶ Based on TRG Agenda paper no. 23, *Incremental costs of obtaining a contract*, dated 26 January 2015.

²⁰⁷ Based on TRG Agenda paper no. 23, *Incremental costs of obtaining a contract*, dated 26 January 2015.

relates. However, either alternative must be applied consistently to similar circumstances. In the first alternative, an entity allocates the capitalised costs to all of the contracts that cumulatively result in the threshold being met and amortises the costs over the expected customer relationship period of each of those contracts. In the second alternative, an entity allocates the capitalised costs to the contract that results in the threshold being met and amortise the costs over the expected customer relationship period of that contract. Note that the second alternative might result in a counterintuitive answer if the commission paid upon obtaining the contract that resulted in the threshold being met was large in relation to the transaction price for only that contract. While the first alternative might be easier to apply and result in a more intuitive answer than the second alternative in some situations, either approach is considered acceptable. Note that there could be other approaches that also are acceptable.

Consider the following example:

Illustration 10-19: Amortisation of capitalised commission payments subject to a threshold

An entity has a commission programme that increases the amount of commission a salesperson receives based on how many contracts the salesperson has obtained during an annual period. The entity has elected an accounting policy to recognise recoverable incremental costs of obtaining a contract.

In this example, the first commission is paid when the first contract is signed. Subsequently, once a cumulative threshold number of contracts is reached, a commission is paid on that threshold contract as a fixed escalating amount, taking into account any commission already paid, as follows:

1 contract	£3,000 commission
10 contracts	£5,000 cumulative commission (including £3,000 already paid)
15 contracts	£10,000 cumulative commission (including £5,000 already paid)

Assume 11 new contracts are signed by a specific employee in that period.

As discussed in Question 10-7 in 10.3.1 above, generally, commission payments subject to a threshold are incremental costs of obtaining a contract with a customer and, therefore, if such costs are expected to be recovered, the costs must be capitalised when the entity incurs a liability to pay these commissions.

In the first acceptable alternative, an entity estimates the total amount of commission that is expected to be paid for the period and capitalises an equal amount as each contract is signed. In this example, because the entity estimates that the employee will sign 11 new contracts during the period, it expects the total amount of commission to be paid will be £5,000. The entity would capitalise £455 when each contract is signed (i.e., £5,000 cumulative commission divided by the 11 contracts). The capitalised amount would be amortised over the expected customer relationship period of each of those contracts. That is, the £455 capitalised for the first contract would be amortised over the expected customer relationship period of the first contract and the £455 capitalised for the second contract would be amortised over the expected customer relationship period of the second contract.

In the second acceptable alternative, an entity capitalises £3,000 in commission costs upon signing the first contract. This amount would be amortised over the expected customer relationship period of that contract (i.e., the first contract). The entity would not capitalise any additional costs upon signing the second contract through to the ninth contract because the next commission 'tier' has not been met. Once the tenth contract is signed, the entity capitalises an additional £2,000 in commission costs. This amount would be amortised over the expected customer relationship period for that contract (i.e., the tenth contract).

Question 10-25: When does an entity begin to amortise an asset recognised for the incremental cost of obtaining a renewal contract?

As discussed in Question 10-21 above, assets recognised for commensurate renewal commissions paid are amortised over the term of the contract renewal, with the expense recognised as the entity transfers the related goods or services to the customer.

How we see it

We believe that the amortisation of the renewal commission must not begin earlier than the beginning of the renewal period.

Consider the following Illustration:

Illustration 10-20: Amortisation of a capitalised contract costs

On 1 January 20X6, an entity enters into a three-year service contract with a customer that ends on 31 December 20X8. Upon the customer signing the contract, the entity pays a sales employee a £50,000 sales commission for obtaining the contract. On 30 September 20X8, the entity negotiates a three-year renewal term that will begin on 1 January 20X9 and pays the sales employee a renewal commission that is commensurate with the initial sales commission paid. Since the entity does not begin to transfer services under the contract renewal until 1 January 20X9, the entity would not begin amortising the asset related to the renewal commission until 1 January 20X9.

Question 10-26: How are capitalised contract costs and their amortisation classified and presented in the statement of financial position and statement of profit or loss and other comprehensive income, respectively?

As discussed in 10.3.1 to 10.3.3 above, Section 23 provides a policy choice to capitalise incremental costs of obtaining a contract and requires certain costs to fulfil a contract to be recognised as an asset, and that asset is required to be amortised on a systematic basis. Paragraph 23.138 requires separate disclosure of closing balances and the amount of amortisation and impairment losses recognised during the period (see 11.4.3 below). However, Section 23 is silent on the classification of that asset and the related amortisation.

While such capitalised contract cost assets are intangible in nature, Section 18 specifically excludes from its scope intangible assets arising from contracts with customers that are recognised in accordance with Section 23. [FRS 102.18.1]. In the absence of a section in FRS 102 that specifically deals with the classification and presentation of contract costs, management would need to apply the requirements in Section 10 to select an appropriate accounting policy (see Chapter 9 at 3.3).

How we see it

In developing such an accounting policy, we believe that costs to obtain a contract and costs to fulfil a contract need to be considered separately for the purpose of classification and presentation in the financial statements, as described in the bullets below.

Considering the nature of *costs to obtain a contract* and the lack of guidance in FRS 102 and adopted IFRS, we believe an entity can choose to classify and present these costs as either:

- A separate class of asset (which could be placed adjacent to inventories or 'stocks' as similar in nature to work in progress or 'inventory') in the statement of financial position and its amortisation within cost of goods sold, changes in contract costs or similar.
- Or
- A separate class of intangible assets in the statement of financial position and its amortisation in the same line item as amortisation of intangible assets within the scope of Section 18.

In contrast, the nature of costs to fulfil a contract is such that they directly impact the entity's performance under the contract. Therefore, costs to fulfil a contract are classified and presented as a separate class of asset in the statement of financial position (e.g., adjacent to inventories or 'stocks') and its amortisation within cost of goods sold, changes in contract costs or similar.

We do not believe it would be appropriate to analogise to the requirements for intangible assets in Section 18. Instead, such costs are consistent in nature to costs incurred in the process of production, as contemplated in Section 13. That is, in nature, they are consistent with work in progress, or 'inventory', of a service provider. Therefore, whether costs to fulfil a contract meet the criteria for capitalisation in paragraph 23.117 or are expensed as incurred, we believe that classification and presentation of such costs in the statement of profit or loss and other comprehensive income, and the classification and presentation of related cash flows in the statement of cash flows needs to be consistent.

Presenting the contract cost assets and corresponding amortisation as separate line items in the financial statements as described above is consistent with the requirements in Section 4 and Section 5 which apply both to statutory and adapted formats, i.e., additional line items, headings and subtotals are required to be added where relevant to an understanding of the entity's financial position or financial performance. [FRS 102.4.3, FRS 102.5.9].

Further, for entities using the statutory formats, presenting these items as separate line items in the financial statements can be justified by reference to the General Rules to the formats which allow any item to be shown in a company's balance sheet or profit and loss account in greater detail than required by the particular format used. The balance sheet or profit and loss account could include an item representing or covering the amount of any asset or liability, income or expenditure not otherwise covered by any of the items listed in the format used. [1 Sch 3].

For further discussion on presentation requirements in Section 4, Section 5 and the Regulations, please refer to Chapter 6.

In all cases, an entity needs to consider the aggregation requirements of Section 4 and the General Rules to the formats (if statutory formats are used) when determining whether the separate classes of assets or expense items are presented together with other assets or other expenses, respectively (see Chapter 6 at 8.4).

In addition, the entity needs to consider the requirements in Section 7, in particular paragraph 7.5(a), when determining the classification of cash flows arising from costs to obtain and fulfil a contract (i.e., either as a cash flow from operating activities or investing activities if costs to obtain a contract are classified as a class of intangible assets). [FRS 102.7.5(a)].

Capitalised contract costs are subject to impairment assessments (see 10.3.4 below). Impairment losses are recognised in profit or loss, but Section 23 is silent on where to classify and present such amounts within the primary financial statements.

How we see it

We believe it would be appropriate for the classification and presentation of any impairment losses to be consistent with the classification and presentation of the amortisation expense.

10.3.4 Impairment of capitalised contract costs

Capitalised contract costs must be tested for impairment. This is because the costs that give rise to an asset must be recoverable throughout the contract period (or period of benefit, if longer), to meet the criteria for capitalisation.

Under Section 23, an entity follows Section 27 for recognising and measuring the impairment of the capitalised contract costs. However, instead of following the requirements in paragraphs 27.11 to 27.20A to estimate the recoverable amount of such capitalised contract costs (i.e., using the higher of fair value less costs to sell and value in use), an entity estimates the recoverable amount of the contract costs asset as the remaining amount of consideration that the entity expects to receive in exchange for the goods or services to which the asset relates, less the costs that relate directly to providing those goods or services and that have not been recognised as expenses. An impairment exists if the carrying amount of the asset exceeds the estimated recoverable amount. Impairment losses are recognised in profit or loss.

[FRS 102.23.121, FRS 102.23.122]. See Question 10-26 in 10.3.3 above for further discussion on classifying and presenting impairment losses within profit or loss.

IFRS 15 and TRG discussions provide further guidance on this area which entities reporting under FRS 102 could consider in its application of the requirements of Section 23.

TRG members generally agreed that an impairment test of capitalised contract costs must include future cash inflows and outflows associated with contract renewal or extension periods, if the period of benefit of the costs under assessment is expected to extend beyond the present contract.²⁰⁸ In other words, an entity must consider the total period over which it expects to receive economic benefits relating to the asset, for the purpose of both determining the amortisation period and estimating cash flows to be used in the impairment test. The question was raised because of an inconsistency within IFRS 15, which can also be observed in Section 23. IFRS 15 and Section 23 indicate that costs capitalised under the respective revenue standards could relate to goods or services to be transferred under 'a specific anticipated contract' (e.g., goods or services to be provided under contract renewals and/or extensions). [IFRS 15.95, FRS 102.23.117]. Both IFRS 15 and Section 23 also indicate that an impairment loss would be recognised when the carrying amount of the asset exceeds the remaining amount of consideration expected to be received (determined by using principles for determining the transaction price, see 6 above). [IFRS 15.101(a), IFRS 15.102, FRS 102.23.122(a), FRS 102.23.123]. However, the requirements for measuring the transaction price in IFRS 15 and Section 23 indicate that an entity does not anticipate that the contract will be "cancelled, renewed or modified" when determining the transaction price. [IFRS 15.49, FRS 102.23.42].

²⁰⁸ TRG Agenda paper no. 4, *Impairment testing of capitalised contract costs*, dated 18 July 2014 and TRG Agenda paper no. 5, *July 2014 Meeting-Summary of Issues Discussed and Next Steps*, dated 31 October 2014.

In some instances, excluding renewals or extensions would trigger an immediate impairment of a contract asset because the consideration an entity expects to receive would not include anticipated cash flows from contract extensions or renewal periods. However, the entity would have capitalised contract costs on the basis that they would be recovered over the contract extension or renewal periods. When an entity determines the amount it expects to receive (see 6 above), it would not apply the requirements for constraining estimates of variable consideration. That is, if an entity were required to reduce the estimated transaction price because of the constraint on variable consideration, it would use the unconstrained transaction price for the impairment test. This would include any amounts expected to be received but not yet recognised because of the royalties recognition constraint (see 9.5 above) or the 'right to invoice' practical expedient (see 8.1.4.B above). While the amount expected to be received is unconstrained, it would still need to be adjusted to reflect the customer's credit risk before it is used in the impairment test. [FRS 102.23.123].

Unlike Section 23, IFRS 15.103 provides prescriptive steps in assessing impairment of capitalised contract costs, which entities reporting under FRS 102 could consider when applying the impairment guidance. [IFRS 15.103]. Accordingly, following the guidance in paragraph 103 of IFRS 15, an entity would first consider impairment losses recognised in accordance with other sections in FRS 102 (e.g., impairment of specific assets such as inventories under Section 13) before recognising an impairment loss on capitalised contract costs incurred to obtain or fulfil a contract. After applying the impairment test to the capitalised contract costs (as discussed above), an entity includes the resulting carrying amounts in the carrying amount of a cash-generating unit for purposes of applying the requirements in Section 27.

Under FRS 102, Section 27 permits the reversal of some or all of previous impairment losses on assets (other than goodwill) or cash-generating units if the estimates used to determine the assets' recoverable amount have changed (see Chapter 29 at 7). [FRS 102.27.28-27.31]. Section 23 refers to the requirements of Section 27 when recognising and measuring the impairment of the capitalised contract costs (except for estimating the recoverable amount, as discussed above), therefore, Section 23 also permits reversal of impairment losses when impairment conditions no longer exist or have improved. However, consistent with requirements in Section 27, the increased carrying amount of the asset must not exceed the amount that would have been determined (net of amortisation) if no impairment loss had been recognised previously. [FRS 102.23.121, FRS 102.27.30(c), FRS 101.27.31(c)].

Frequently asked questions

Question 10-27: How often does an entity need to assess its capitalised contract costs for impairment under Section 23?

Section 23 refers to the requirements of Section 27 when recognising and measuring the impairment of the capitalised contract costs (except for estimating the recoverable amount, as discussed above). [FRS 102.23.121]. Accordingly, an entity needs to assess whether there is any indication that its capitalised contract costs might be impaired at the end of each reporting period.

This is consistent with the requirement in paragraph 27.7 to assess at each reporting date whether there are indicators that assets within the scope of Section 27 are impaired (see Chapter 29 at 4). For example, a pandemic or natural disaster might affect customers' ability and intent to pay, and/or entities might be more willing to accept partial payment or extend payment terms. Such collectability concerns might indicate that entities need to assess related capitalised costs to obtain or fulfil a contract for impairment.

11 Presentation and disclosure

Section 23 provides explicit presentation and disclosure requirements, which are more detailed than under legacy Section 23 and increase the volume of required disclosures that entities must include in their annual financial statements. However, Section 1 *Scope* of FRS 102 provides presentation and/or disclosure exemptions that are available to entities meeting the definition of a qualifying entity. The definition of a 'qualifying entity', the conditions required to be met to use any of the available presentation or disclosure exemptions and the list of these exemptions are discussed in detail in Chapter 3 at 3. The exemptions available for specific disclosure requirements in Section 23 are indicated in this part of the chapter, where appropriate.

While not part of the requirements in Section 23, entities also need to disclose material accounting policy information in accordance with Section 8. [FRS 102.8.5, FRS 102.8.6, FRS 102.8.7].

It is possible that entities will conclude that accounting policy information about areas of Section 23 that are complex or require significant judgements are material. If so, entities will need to make entity-specific and tailored disclosures (see Chapter 6 at 7.2). [FRS 102.8.5A-8.5C]. In addition, entities also need to disclose information about judgements and key sources of estimation uncertainty in respect of applying the requirements of Section 23 (see Chapter 6 at 7.3 and 7.4). [FRS 102.8.6, FRS 102.8.7]. See also discussions in 11.4.2 below.

How we see it

Section 23 requires more extensive and detailed disclosures in entities' financial statements, compared to legacy Section 23.

Entities might have to expend considerable effort when preparing the required disclosures for their annual financial statements. For example, some entities operating in multiple segments with many different product lines might find it challenging to gather the data needed to provide the disclosures. Therefore, it is important for entities to have the appropriate systems, internal controls, policies and procedures in place to collect and disclose the required information.

11.1 Presentation requirements for contract assets and contract liabilities

The revenue model is based on the notion that a contract asset or contract liability is generated when either party to a contract performs, depending on the relationship between the entity's performance and the customer's payment. Section 23 requires that an entity present these contract assets or contract liabilities in the statement of financial position, as extracted below: [FRS 102.23.124, FRS 102.23.125, FRS 102.23.126, FRS 102.23.127]

Extract from Section 23

- 23.124** When either party to a contract has performed, an entity shall present the contract in the statement of financial position as a contract asset or a contract liability, depending on the relationship between:
- (a) the entity's performance in transferring goods or services to the customer; and
 - (b) the customer's payment.
- 23.125** If an entity has received consideration (or consideration is due) from the customer before the entity transfers goods or services to the customer, the entity shall recognise a contract liability when the payment is made or the payment is due (whichever is earlier). A contract liability is an entity's obligation to transfer goods or services to a customer for which the entity has received consideration (or the amount is due) from the customer. When (or as) the entity transfers those goods or services to the customer, the entity shall derecognise the contract liability (or part of a contract liability) and recognise revenue, in accordance with paragraphs 23.78 to 23.112.
- 23.126** If an entity transfers goods or services to a customer before the customer pays consideration (or before payment is due), the entity shall recognise a contract asset, excluding any amounts presented as a trade receivable. A contract asset is an entity's right to consideration in exchange for goods or services that the entity has transferred to a customer when that right is conditional on something other than the passage of time (eg the entity transferring other goods or services promised in the contract). When the customer pays the consideration (or the consideration becomes due), the entity shall derecognise the contract asset. An entity shall assess a contract asset for impairment, and recognise any impairment loss, in accordance with Section 11.

23.127 A trade receivable is an entity's right to consideration that is unconditional. A right to consideration is unconditional if only the passage of time is required before payment of that consideration is due. For example, an entity would recognise a trade receivable if it has a present right to payment even though that amount may be subject to refund in the future.

Section 23 does not explicitly require an entity to present contract assets or contract liabilities as separate line items in the statement of financial position. Therefore, entities need to consider the requirements in Section 4 (see Chapter 6) to determine whether to present them in separate line items.

Presenting these items as separate line items in the statement of financial position is consistent with the requirements in Section 4 which apply both to statutory and adapted formats, i.e., additional line items, headings and subtotals are required to be added where relevant to an understanding of the entity's financial position. [FRS 102.4.3].

See Question 11-1 and Question 11-3 in 11.1.5 below for further information on offsetting contract assets and contract liabilities and see 11.1.2 below for current versus non-current classification.

The following flowchart illustrates how an entity determines whether to recognise a receivable, a contract asset or a contract liability on the balance sheet:

Figure 11-1: Recognition of a receivable, a contract asset or a contract liability

* If the customer can cancel the contract and receive a refund of the advance payment, an entity would consider recognising a refund liability (separate from contract liabilities – see Question 11-4 below).

** This assumes the consideration received is equal to the amount to which the entity is entitled for the good or service already transferred. If the consideration received is less than this amount, an entity may need to recognise a contract asset or a receivable for the difference. If the consideration received is more than this amount, an entity may need to recognise a contract liability or a refund liability.

When an entity satisfies a performance obligation by transferring a promised good or service, the entity has earned a right to consideration from the customer and, therefore, has a contract asset. When the customer performs first, for example, by prepaying its promised consideration, the entity has a contract liability.

[FRS 102.23.125, FRS 102.23.126].

An entity could also have recognised other assets related to contracts with a customer (e.g., the incremental costs of obtaining the contract and other costs incurred that meet the criteria for capitalisation). Section 23 requires that any such assets be presented separately from contract assets and contract liabilities in the statement of financial position or disclosed separately in the notes to the financial statements (assuming that they are material). [FRS 102.23.134(a)]. These amounts are also assessed for impairment separately (see 10.3.4 above).

11.1.1 Distinction between contract assets and receivables

Contract assets represent conditional or unconditional rights to consideration. The right is conditional, for example, when an entity must first satisfy another performance obligation in the contract before it is entitled to payment from the customer. If an entity has an unconditional right to receive consideration from the customer, the contract asset is accounted for as a receivable and presented separately from other contract assets. A right is unconditional if nothing other than the passage of time is required before payment of that consideration is due. For example, an entity recognises a trade receivable if it has a present right to payment even though that amount might be subject to refund in the future. [FRS 102.23.126, FRS 102.23.127].

In the Basis for Conclusions on IFRS 15, the IASB explains that in many cases, an unconditional right to consideration (i.e., a receivable) arises when an entity satisfies a performance obligation, which could be before it invoices the customer (e.g., an unbilled receivable) if only the passage of time is required before payment of that consideration is due. It is also possible for an entity to have an unconditional right to consideration before it satisfies a performance obligation. [IFRS 15.107, IFRS 15.BC325]. In some industries, it is common for an entity to invoice its customers in advance of performance (and satisfaction of the performance obligation). For example, an entity that enters into a non-cancellable contract requiring payment a month before the entity provides the goods or services would recognise a receivable and a contract liability on the date the entity has an unconditional right to the consideration (see Question 11-6 in 11.1.5 below for factors to consider when assessing whether an entity's right to consideration is considered unconditional). In this situation, revenue is not recognised until goods or services are transferred to the customer.

In December 2015, the IASB discussed application of IFRS 15 to contracts in which the entity has transferred control of a good to the customer at a point in time, but the consideration to which the entity is entitled is contingent upon a market price (e.g., a commodity price), which will be determined at a future date. The example assumed that there was no separable embedded derivative (i.e., the entire contract was within the scope of IFRS 15). In discussing this issue, the IASB clarified the nature of conditions that might prevent recognition of a receivable. Specifically, the IASB agreed that the variability arising solely from changes in the market price would not be a condition that prevents an entity to recognise a receivable. That is, since the entity has performed, "... nothing else (ie no future event) needs to happen before payment of the consideration is due. The existence of a price in the future requires no event to occur and depends solely on the passage of time. Changes in the price of Commodity do not affect the entity's right to consideration, even though the amount that the entity receives is known only on the payment date. In other words, there is no uncertainty with regards to the entity's entitlement to the consideration. The entity's right to consideration is therefore unconditional as understood by IFRS 15...". Therefore, when the entity performs by transferring control of the good to the customer, it recognises a receivable in accordance with IFRS 9 (and is no longer subject to the requirements in IFRS 15 for the variable consideration constraint).²⁰⁹

In the Basis for Conclusions on IFRS 15, the IASB noted that making the distinction between a contract asset and a receivable is important because doing so provides users of financial statements with relevant information about the risks associated with the entity's rights in a contract. Although both are subject to credit risk, a contract asset is also subject to other risks (e.g., performance risk). [IFRS 15.BC323].

Under Section 23, entities are not required to use the terms 'contract asset', 'contract liability' or 'trade receivable' in the statement of financial position or in the notes, but must disclose sufficient information so that users of the financial statements can clearly distinguish between unconditional rights to consideration (receivables) and conditional rights to receive consideration (contract assets). [IFRS 102.23.128].

Illustration 11-1, which is based on Example 38 in IFRS 15, is an example of presentation of contract balances: [IFRS 15.IE Example 38, IFRS 15.IE198-IE200]

Illustration 11-1: Contract liability and receivable

Case A-Cancellable contract

On 1 January 20X6, an entity enters into a cancellable contract to transfer a product to a customer on 31 March 20X6. The contract requires the customer to pay consideration of £1,000 in advance on 31 January 20X6. The customer pays the consideration on 1 March 20X6. The entity transfers the product on 31 March 20X6. The following journal entries illustrate how the entity accounts for the contract:

- (a) The entity receives cash of £1,000 on 1 March 20X6 (cash is received in advance of performance):
- | | | |
|------|--------------------|--------|
| Cash | £1,000 | |
| | Contract liability | £1,000 |
- (b) The entity satisfies the performance obligation on 31 March 20X6:
- | | | |
|--------------------|---------|--------|
| Contract liability | £1,000 | |
| | Revenue | £1,000 |

²⁰⁹ IASB Staff Paper 7H: Project: Revenue from Contracts with Customers, Paper topic: Constraining estimates of variable consideration when the consideration varies based on a future market price, IASB Meeting, December 2015; and IASB Update, December 2015. Available on the IFRS Foundation's website.

Case B-Non-cancellable contract

The same facts as in Case A apply to Case B except that the contract is non-cancellable. The following journal entries illustrate how the entity accounts for the contract:

- (a) The amount of consideration is due on 31 January 20X6 (which is when the entity recognises a receivable because it has an unconditional right to consideration):

Receivable	£1,000	
Contract liability		£1,000

- (b) The entity receives the cash on 1 March 20X6:

Cash	£1,000	
Receivable		£1,000

- (c) The entity satisfies the performance obligation on 31 March 20X6:

Contract liability	£1,000	
Revenue		£1,000

If the entity issued the invoice before 31 January 20X6 (the due date of the consideration), the entity would not present the receivable and the contract liability on a gross basis in the statement of financial position because the entity does not yet have a right to consideration that is unconditional.

Illustration 11-2, which is based on Example 39 in IFRS 15 illustrates when an entity has satisfied a performance obligation, but does not have an unconditional right to payment and, therefore, recognises a contract asset: [IFRS 15.IE Example 39, IFRS 15.IE201-IE204]

Illustration 11-2: Contract asset recognised for the entity's performance

On 1 January 20X6, an entity enters into a contract to transfer Products A and B to a customer in exchange for £1,000. The contract requires Product A to be delivered first and states that payment for the delivery of Product A is conditional on the delivery of Product B. In other words, the consideration of £1,000 is due only after the entity has transferred both Products A and B to the customer. Consequently, the entity does not have a right to consideration that is unconditional (a receivable) until both Products A and B are transferred to the customer.

The entity identifies the promises to transfer Products A and B as performance obligations and allocates £400 to the performance obligation to transfer Product A and £600 to the performance obligation to transfer Product B on the basis of their relative stand-alone selling prices. The entity recognises revenue for each respective performance obligation when control of the product transfers to the customer.

The entity satisfies the performance obligation to transfer Product A:

Contract asset	£400	
Revenue		£400

The entity satisfies the performance obligation to transfer Product B and to recognise the unconditional right to consideration:

Receivable	£1,000	
Contract asset		£400
Revenue		£600

The following Illustration, which is based on Example 5 in the FRC's FRS 102 Factsheet 10,²¹⁰ shows accounting for contract balances when revenue is recognised over time:

Illustration 11-3: Contract balances

Entity E enters into a contract with a customer with a transaction price of £10,000, of which £5,000 is paid in advance and £5,000 is due within 30 days of the contract being completed. The contract contains a single performance obligation that is satisfied over time.

When the initial payment is received, the entity recognises the following transaction:

Dr	Cash	£5,000	
	Cr	Contract liability	£5,000

At the end of the reporting period, Entity E's measure of progress towards completion of the performance obligation is 60%. Entity E recognises the following transaction:

Dr	Contract liability	£5,000	
Dr	Contract asset	£1,000	
	Cr	Revenue	£6,000

As required by paragraph 23.126, Entity E assesses the contract asset for impairment in accordance with Section 11 (see 11.1.3 below); in this example there is no impairment.

Part-way through the subsequent period, the measure of progress towards completion of the performance obligation is 100%. Entity E recognises the following transaction:

Dr	Contract asset	£4,000	
	Cr	Revenue	£4,000

The contract requires the customer to pay Entity E in full when the performance obligation is complete, so Entity E has a right to the remaining £5,000 consideration that is unconditional (refer to paragraph 23.127). Entity E recognises the following transaction:

Dr	Trade receivable	£5,000	
	Cr	Contract asset	£5,000

Also consider the following Illustration, which shows an unbilled receivable (rather than a contract asset):

Illustration 11-4: Unbilled receivable

On 14 September 20X6, Entity L enters into a contract to sell 100 widgets to Customer F at £10 per widget. All of the widgets are delivered to Customer F on 29 September 20X6. Entity L invoices Customer F on 12 October 20X6.

Entity L determines that revenue is recognised when control of the widgets transfers to Customer F on 29 September 20X6. Entity L records a corresponding receivable because only the passage of time is required before payment of that consideration is due. That is, Entity L has an unconditional right to consideration as at 29 September 20X6, even though Entity L has not yet issued an invoice. That is, even though the amount is 'unbilled', it is still considered a receivable, rather than a contract asset.

As noted in Question 6-6 in 6.2.1 above, when an entity is entitled to receive consideration denominated in a foreign currency, it needs to apply Section 30 to appropriately translate a foreign denominated transaction on initial recognition. After initial recognition, receivables are retranslated using the spot exchange rate at each subsequent reporting date and on derecognition, with the exchange gains and losses being recognised in profit or loss. This is because receivables are monetary items as defined in FRS 102. [FRS 102 Appendix I]. Further analysis is needed for a contract asset to determine whether it is a monetary item that requires retranslation, or a non-monetary item that does not. Some (or all) of a contract asset will meet the definition of a monetary item to the extent the (conditional) right to consideration is to foreign denominated cash.²¹¹ See Chapter 32 at 3.4.6 to 3.4.9 for further discussion.

²¹⁰ [FRS 102 Factsheet 10 Revenue](#) from *Contracts with Customers*, FRC, issued on 27 November 2024, Section 3 Other requirements, Contract balances, page 19.

²¹¹ Based on [IASB Staff Paper 2](#): Project: *IAS 21 The Effects of Changes in Foreign Exchange Rates*, Paper topic: *Draft Interpretation- Foreign Currency Transactions and Advance Consideration*, IFRS IC meeting, March 2015, paragraph 38. Available on the IFRS Foundation's website.

11.1.2 Contract assets classification

Since Section 23 does not address whether an entity needs to present and classify contract assets or contract liabilities as current or non-current (or, if applicable, as fixed assets) in the statement of financial position, entities need to consider the requirements in Section 4 and the Regulations (see Chapter 6 at 4).

The current versus non-current (or, if applicable, fixed assets) assessments are also relevant for other assets and liabilities arising from contracts with customers within the scope of Section 23 (e.g., capitalised contract costs to obtain and fulfil a contract – see 10.3 above).

▪ *Use of adapted formats:*

If an entity is using the adapted formats, the distinction between current and non-current items depends on the length of the entity's operating cycle. The concept of 'operating cycle' is not further explained in FRS 102 but under adopted IFRS, IAS 1 *Presentation of Financial Statements* (or IFRS 18 *Presentation and Disclosure in Financial Statements*²¹²) states that the operating cycle of an entity is the time between the acquisition of assets for processing and their realisation in cash or cash equivalents. However, when the entity's normal operating cycle is not clearly identifiable, it is assumed to be 12 months. [IAS 1.68, IAS 1.70, IFRS 18.B95, IFRS 18.B96]. IAS 1 (or IFRS 18) does not provide guidance on how to determine whether an entity's operating cycle is 'clearly identifiable'. For some entities, the time involved to produce goods or provide services might vary significantly from contracts with one customer to another. In such cases, it might be difficult to determine what is the normal operating cycle. Therefore, entities need to consider all facts and circumstances and use judgement to determine whether it is appropriate to consider that the operating cycle is clearly identifiable, or whether to use the twelve-month default. [IAS 1.68, IAS 1.70, IFRS 18.B95, IFRS 18.B96]. See Chapter 6 at 4.1.1A and 4.1.2.A for further discussion.

Consequently, an entity assesses, based on the contract terms, facts and circumstances, whether a contract asset or contract liability is classified as current or non-current. It considers:

- For a contract asset: when payment is due (e.g., based on payment schedule agreed with client)
- For a contract liability: the timing of satisfaction of the performance obligation as a factor when applying the requirements of Section 4

This assessment might lead to a separation of the contract asset or contract liability into a current and a non-current portion.

▪ *Use of statutory formats:*

The statutory formats distinguish between current and fixed assets and the definitions of these categories differ to that for current and non-current assets, under the adapted formats. This is discussed in detail in Chapter 6 at 4.2.2.

Contract assets and contract liabilities do not feature in the balance sheet formats. As further discussed in Chapter 6 at 4.3.13A, it would be appropriate to include the contract asset as a line item within 'debtors' and would follow the disclosure requirements for any material amounts due after more than one year, as required by Section 4. Contract liabilities are similar in nature to deferred income. The statutory formats permit a choice of locations for the deferred income line item: either in creditors falling due within one year / creditors falling due after more than one year or in the separate line item for accruals and deferred income.

For further discussion, please see Chapter 6 at 4.

11.1.3 Impairment of contract assets

After initial recognition, contract assets, like receivables, are subject to impairment assessments in accordance with Section 11 (the impairment requirements are discussed in Chapter 13 at 6.5).

[FRS 102.23.126].

Unless an entity chooses to apply the recognition and measurement provisions of IFRS 9 (as a policy choice – see Chapter 11 at 4) to account for all of its financial instruments, the entity is required to assess contract assets for impairment in accordance with Section 11 which uses the same principles and criteria as the incurred loss model under IAS 39 *Financial Instruments: Recognition and Measurement* with one major difference. Under Section 11, assets which have been individually assessed for impairment and found not to be impaired, are not subsequently required to be included in a collective assessment of impairment. If there is objective evidence of impairment, the entity recognises an impairment loss in profit or loss immediately.

[FRS 102.11.21].

²¹² IFRS 18 supersedes IAS 1 for reporting periods beginning on or after 1 January 2027 (with earlier application permitted). See Chapter 6 for further information.

The expected credit loss model in IFRS 9 focuses on the difference between the contractual cash flows and expected cash flows, [IFRS 9.B5.5.29], while the incurred loss model under Section 11 focuses on the difference between the carrying amount of the contract asset and the present value of estimated cash flows. [FRS 102.11.25(a)]. However, the right to receive non-cash consideration does not give rise to cash inflows. As such, judgement might be needed when the consideration to which the entity is entitled is non-cash. Since the entity does not yet hold the non-cash consideration, the impairment requirements in Section 27, for example, do not directly apply.

How we see it

When applying the impairment requirements of Section 11 (or if elected, IFRS 9) to the contract asset, an entity considers the likelihood of not receiving the non-cash consideration (i.e., non-performance risk). However, this would not consider any potential impairment in the underlying asset to which the entity is entitled. As such, an entity might need to consider the value of the underlying non-cash consideration to which it is entitled to use as a proxy for the cash inflows when applying the impairment requirements of Section 11 (or if elected, IFRS 9).

Further information regarding impairment under IFRS 9 is available in the EY publication, International GAAP®.

As discussed in 6.5.4 above, impairment losses on receivables are presented in line with the general requirements of Section 5 (see Chapter 6 at 5) and the disclosure requirements in Section 11 or Section 12 (see Chapter 15). In addition, as discussed in 11.2 below, Section 23 requires that such amounts are disclosed separately from impairment losses from other contracts. [FRS 102.23.133(b)]. These requirements also apply to impairment losses on contract assets.

11.1.4 Derecognition of contract assets and contract liabilities

Section 23 explicitly requires an entity to derecognise contract assets when the customer pays the consideration or the consideration becomes due (i.e., when the entity's right to consideration becomes unconditional, and it is able to recognise a receivable in accordance with Section 11). [FRS 102.23.126]. When (or as) the entity transfers the promised goods or services to the customer, the entity is required to derecognise the contract liability (or part of a contract liability) and recognise revenue in accordance with paragraphs 23.78 to 23.112 (see 8 above). [FRS 102.23.125].

11.1.5 Initial measurement of receivables

If the initial measurement of a receivable is at fair value, there might be a number of reasons why differences from the transaction price could arise (e.g., changes in the fair value of non-cash consideration not yet received, changes in market interest rates or inflation, etc.). This is the case when the difference is attributable to customer credit risk, rather than an implied price concession. Implied price concessions are deducted from the contract price to derive the transaction price, which is the amount recognised as revenue. Distinguishing between implied price concessions and expense due to customer credit risk requires judgement (see 6.2.1.A – 6.2.1.B above). Impairment losses resulting from contracts with customers are presented separately from other impairment losses (see 11.4.1 below for further discussion). [FRS 102.23.133(b)].

Further analysis of the reason for such a difference might be needed if an entity has an unconditional right to payment (i.e., a receivable) even though that amount is subject to refund in the future. This could occur because, for example, a customer might be entitled to a retrospective volume rebate. Assume, for example, that an entity has invoiced a customer £100 for the sale of goods, but expects to refund £25 because the customer will meet the conditions for an agreed volume rebate. The entity recognises £75 because it has constrained the consideration (in accordance with the variable consideration requirements, see 6.2 above). However, it has an unconditional right to receive payment for the full invoice price of £100. Therefore, the entity recognises a receivable of £100 and the refund obligation of £25 (on a gross basis), unless the offsetting requirements in paragraph 11.38A, or paragraph 12.25B, are met (see Chapter 13 at 8.1 on the requirements in Section 11 and Section 12 for offsetting financial assets and financial liabilities). This example is consistent with Example 40 in IFRS 15. [IFRS 15.IE Example 40, IFRS 15.IE205-IE208]. Careful analysis of the facts will be important including expectations about when any conditions for refund will be met and when the entity has an unconditional right to payment.

Section 23 does not provide specific guidance on how to present any difference between the initial measurement of the receivable and the corresponding amount of revenue recognised. However, an entity could consider the requirements and guidance in IFRS 15. Under IFRS 15, if upon initial measurement there

is a difference between the measurement of the receivable (in accordance with IFRS 9) and the corresponding amount of revenue, that difference is presented immediately in profit or loss (e.g., as an impairment loss). [IFRS 15.108]. Further discussion on recognition and initial measurement under IFRS 9 is available in the EY publication, International GAAP®.

Frequently asked questions

Question 11-1: How would an entity determine the presentation of contract assets and liabilities for contracts that contain multiple performance obligations?²¹³

Contract assets and liabilities would be determined at the contract level and not at the performance obligation level. That is, an entity does not separately recognise an asset or liability for each performance obligation within a contract, but aggregates them into a single contract asset or liability.

Under Section 23, the amount and timing of revenue recognition is determined based on progress toward complete satisfaction of *each* performance obligation. Therefore, this question addresses whether an entity could have a contract asset and a contract liability for a single contract. An example is when the entity has satisfied (or partially satisfied) one performance obligation in a contract for which consideration is not yet due but has received a prepayment for another unsatisfied performance obligation in the contract. Entities reporting under FRS 102 could consider further guidance in IFRS 15. That is, the discussion in the Basis for Conclusions on IFRS 15 is clear that contract asset or contract liability positions are determined for each contract on a net basis. This is because the rights and obligations in a contract with a customer are interdependent - the right to receive consideration from a customer depends on the entity's performance and, similarly, the entity performs only as long as the customer continues to pay. Those interdependencies are best reflected by accounting and presenting contract assets or liabilities on a net basis. [IFRS 15.BC317].

Consider the following Illustration:

Illustration 11-5: Presentation of contract assets and liabilities

Entity A has a contract with Customer B to transfer a licence on 1 January 20X6 for the right to use Entity A's intellectual property in exchange for a £200,000 milestone payment that is contingent upon Customer B achieving a specific outcome. The contract also includes a one-year service to be provided by Entity A for fixed consideration of £100,000 that is paid upfront by Customer B at contract inception.

Assume Entity A concludes there are two performance obligations: one for the right to use licence of intellectual property that will be satisfied when the licence is delivered and one for the service that will be recognised over time using a time-elapsed measure of progress. On 1 January 20X6, the licence is delivered and the service commences.

Entity A determines that the milestone payment is variable consideration. Because of the binary nature of the outcome (i.e., the entity will either receive the milestone payment or not), Entity A determines that the most likely amount method (discussed in 6.2.2 above) is the better predictor of the amount to which it expects to be entitled. Entity A believes it is 90% probable that it will receive the £200,000 milestone payment. Therefore, using the most likely amount method, Entity A estimates that it will receive the full £200,000. Entity A then allocates the total transaction price of £300,000 (variable consideration of £200,000 plus the fixed consideration of £100,000) to the licence and the service based on their relative stand-alone selling prices (assume this arrangement does not meet the variable consideration allocation exception). Further assume that £200,000 is allocated to the licence and £100,000 is allocated to the service, i.e., the components were priced at their stand-alone selling price.

On 1 January 20X6, when Entity A satisfies the performance obligation related to the licence, it recognises revenue and a contract asset of £200,000. A contract asset is recorded (rather than a receivable) because Entity A's right to the consideration is contingent upon something other than the passage of time, i.e., Customer B achieving a specific outcome (see 11.1.1 above). The performance obligation associated with the service results in the recognition of a contract liability of £100,000 as at 1 January 20X6 because Entity A paid upfront for the service (see 11.1 above).

On 31 March 20X6, related to the contract with Customer B, Entity A has a contract asset of £200,000 (because the condition to receive consideration for the licence still has not been met) and a contract liability of £75,000 (because £25,000 of revenue has been recognised for one quarter of service). For presentation purposes as at 31 March 20X6, Entity A nets the contract asset of £200,000 and the contract liability of £75,000 and presents a net contract asset of £125,000.

²¹³ Based on TRG Agenda paper no. 7, *Presentation of a contract as a contract asset or a contract liability*, dated 31 October 2014 and TRG Agenda paper no. 11, *October 2014 Meeting - Summary of Issues Discussed and Next Steps*, dated 26 January 2015.

After determining the net contract asset or contract liability position for a contract, entities consider the requirements in Section 4 on presentation (including classification as current or non-current) in the statement of financial position (as discussed in 11.1.2 above).

Question 11-2: How would an entity determine the presentation of two or more contracts that are required to be combined under Section 23?²¹⁴

Generally, the contract asset or liability would be combined (i.e., presented net) for different contracts with the same customer (or a related party of the customer) if an entity is otherwise required to combine those contracts under Section 23 (see 4.3 above for discussion of the criteria for combining contracts). When two or more contracts are required to be combined under Section 23, the rights and obligations in the individual contracts are interdependent. Therefore, as discussed in Question 11-1 above, this interdependency is best reflected by combining the individual contracts as if they were a single contract. However, this analysis might be operationally difficult for some entities because their systems might capture data at the performance obligation level in order to comply with the recognition and measurement aspects of the standard.

Question 11-3: When would an entity offset contract assets and liabilities against other statement of financial position items (e.g., accounts receivable)?²¹⁵

Because Section 23 does not provide requirements for offsetting, entities need to apply the requirements of other sections of FRS 102 to determine whether offsetting is appropriate (e.g., Section 2, Section 11, Section 12, Section 21). For example, if an entity has recorded a contract asset (or a receivable) and a contract liability (or refund liability) from separate contracts with the same customer (that are not required to be combined under Section 23), the entity needs to look to requirements outside Section 23 to determine whether offsetting is appropriate.

Question 11-4: Is a refund liability a contract liability (and, thus, subject to the presentation and disclosure requirements of a contract liability)?

How we see it

An entity needs to determine whether a refund liability is characterised as a contract liability based on the specific facts and circumstances of the arrangement. We believe the following are relevant considerations in making that determination.

We believe that a refund liability typically does not meet the definition of a contract liability. When an entity concludes that a refund liability is not a contract liability, it presents the refund liability separately from any contract liability (or asset) and the refund liability is not subject to the disclosure requirements in paragraph 23.134 discussed in 11.4.1.B below.

When a customer pays consideration (or consideration is unconditionally due) and the entity has an obligation to transfer *goods or services* to the customer, the entity recognises a contract liability. When the entity expects to refund some or all of the *consideration* received (or receivable) from the customer, it recognises a refund liability. A refund liability generally does not represent an obligation to transfer goods or services in the future. Similar to receivables (which are considered a subset of contract assets), refund liabilities could be considered a subset of contract liabilities.

We believe refund liabilities are also similar to receivables in that they are extracted from the net contract position and presented separately (if material). This conclusion is consistent with the specific requirement in Section 23 to present the corresponding asset for expected returns separately (see 6.4 above).

If an entity concludes, based on its specific facts and circumstances, that a refund liability represents an obligation to transfer goods or services in the future, the refund liability is a contract liability subject to the disclosure requirements in paragraph 23.134. In addition, in that situation, the entity presents a single net contract liability or asset (i.e., including the refund liability) determined at the contract level, as discussed in Question 11-1 above.

²¹⁴ Based on TRG Agenda paper no. 7, *Presentation of a contract as a contract asset or a contract liability*, dated 31 October 2014 and TRG Agenda paper no. 11, *October 2014 Meeting - Summary of Issues Discussed and Next Steps*, dated 26 January 2015.

²¹⁵ Based on TRG Agenda paper no. 7, *Presentation of a contract as a contract asset or a contract liability*, dated 31 October 2014 and TRG Agenda paper no. 11, *October 2014 Meeting - Summary of Issues Discussed and Next Steps*, dated 26 January 2015.

Question 11-5: How would an entity account for a contract asset that exists when a contract is modified if the modification is treated as the termination of an existing contract and the creation of a new contract? ²¹⁶

A contract asset that exists when a contract is modified would be carried forward into the new contract if the modification is treated as the termination of an existing contract and the creation of a new contract (see 4.4.1 above).

This question addresses this type of modification because the termination of the old contract could indicate that any remaining balances associated with the old contract must be written off.

It is appropriate to carry forward the related contract asset in such modifications because the asset relates to a right to consideration for goods or services that have already been transferred and are distinct from those to be transferred in the future. As such, the revenue recognised to date is not reversed and the contract asset continues to be realised as amounts become due from the customer and are presented as a receivable. The contract asset that remains on the entity's statement of financial position at the date of modification continues to be subject to evaluation for impairment.

Consider the following example:

Illustration 11-6: Accounting for an existing contract asset when the contract is modified

Vendor A enters into a contract to provide a good and one year of service. The transaction price is £4,200. The good and service are separate performance obligations, and the service is considered a series of distinct goods or services (see 5.2.2 above). The stand-alone selling price for the good is £3,000 and the stand-alone selling price for the services is £100 per month (£1,200 for one year). Therefore, Vendor A allocates £3,000 to the good and £1,200 to the services. Customer B will pay 12 equal instalments of £350. Vendor A will invoice Customer B at the end of each month.

At the beginning of the first month, the good is transferred to Customer B and the revenue allocated to that performance obligation (£3,000) is recognised. Vendor A also recognises a contract asset for £3,000 because payment of that £3,000 is conditional upon Vendor A's performance of future services.

At the end of the first month, Vendor A recognises revenue of £100 for progress toward complete satisfaction of the performance obligation related to the services (assuming the entity is using a time-based measure of progress). Vendor A also recognises accounts receivable of £350 because that amount is not conditional. The contract asset, which had a balance of £3,000 at the beginning of the month, would have a balance of £2,750 at the end of the first month.

Vendor A continues to make similar entries for the first nine months of the contract. After nine months, £3,900 of revenue has been recognised for the contract (£900 of revenue for the services and £3,000 for the good). Vendor A has a receivable for £350 (assuming Customer B already paid the first eight instalments). In addition, Vendor A has a contract asset for £750 ($CU3,000 - (9 \times (£350 - £100))$).

At the end of nine months, the contract is modified to include one additional year of service. The fee for the last three months of the initial one-year contract is unchanged, but the agreed fee for the additional one year of services is £50 per month, which is significantly below the stand-alone selling price of the services.

In addition, because the remaining services are a series of distinct services, Vendor A determines that the remaining services are distinct from the goods or services transferred prior to the modification. Therefore, the modification would be accounted for under paragraph 23.16(a) (i.e., as a termination of the existing contract and the creation of a new contract, as discussed in 4.4.2.A above).

At the modification date, Vendor A retains the existing contract asset of £750 that relates to revenue previously recognised, but which has not been paid by the customer (and is not presented as a receivable). Vendor A also determines the total consideration to be allocated to the remaining performance obligations. The consideration promised by Customer B that was included in the transaction price, but not yet recognised as revenue under the original contract, is £300 (equal to £4,200 transaction price - £3,900 already recognised as revenue). The additional consideration promised as part of the contract modification is £600 (equal to 12 additional months $\times$ £50 per month). Therefore, the total amount of consideration allocated to the remaining distinct services is £900 (£300 + £600). Vendor A would allocate the £900 to the remaining performance obligations and recognise revenue over the remaining modified contract duration. Subsequent to the contract modification, the contract asset would be evaluated and accounted for in the same manner as any other contract asset.

How we see it

We believe a similar conclusion would be appropriate when accounting for an asset created under Section 23, such as a capitalised commission, which exists immediately before a contract modification that is treated as if it were a termination of the existing contract and creation of a new contract. See Question 10-11 in 10.3.1 above for further discussion.

Question 11-6: If an entity has not transferred a good or service, when does it have an unconditional right to payment?

Section 23 states in paragraph 23.127 that a receivable is an entity's right to consideration that is unconditional.

How we see it

In general, we believe it might be difficult to assert that the entity has an unconditional right to payment when it has not transferred a good or service.

However, an entity might enter into non-cancellable contracts that provide unconditional rights to payment from the customer for services that the entity has not yet completed providing or services it will provide in the near future (e.g., amounts invoiced in advance related to a service or maintenance arrangement).

When determining whether an entity is required to recognise accounts receivable and a corresponding contract liability, the contractual terms and specific facts and circumstances supporting the existence of an unconditional right to payment need to be evaluated, including the factors outlined below.

- (a) Does the entity have a contractual (or legal) right to invoice and receive payment from the customer for services being provided currently (and not yet completed) or being provided in the near future (e.g., amounts invoiced in advance related to a service or maintenance arrangement)?
- (b) Is the advance invoice consistent with the entity's normal invoicing terms?
- (c) Will the entity commence performance within a relatively short time frame of the invoice date?
- (d) Is there more than one year between the advance invoice and performance?

11.2 Presentation requirements for revenue from contracts with customers

Section 23 requires entities to separately present or disclose the amount of revenue related to contracts with customers, as follows: [FRS 102.23.133]

- Paragraph 23.133(a) requires an entity to disclose (or present in the statement of comprehensive income or income statement, if presented) the amount of revenue recognised from contracts with customers under Section 23 separately from other sources of revenue. For example, a large equipment manufacturer that both sells and leases its equipment is required to present (or disclose) amounts from these transactions separately.
- For qualifying entities, an exemption is available from presenting or disclosing revenue recognised from contracts with customer, provided certain conditions are met (see Chapter 3 at 3 and 3.2).
- Paragraph 23.133(b) also requires an entity to disclose, in aggregate, the impairment losses recognised (by applying Section 11) on any receivables or contract assets arising from contracts with customers separately from other impairment losses arising from other contracts, if they are not presented in the statement of comprehensive income (or income statement, if presented) separately.

Unless required, or permitted, by another section of FRS 102, Section 2 does not permit offsetting of income and expenses within profit or loss or the statement of comprehensive income. [FRS 102.2.96].

Section 23 requires an entity to measure revenue from contracts with customers at the amount of consideration to which the entity expects to be entitled in exchange for transferring promised goods or services. [FRS 102.23.41]. Accordingly, after applying the requirements for determining the transaction price in Section 23 (see 6 above), revenue recognised by an entity might include offsets, for example, for any trade discounts given and volume rebates paid by the entity to its customers.

216 Based on FASB TRG Agenda paper no. 51, *Contract Asset Treatment in Contract Modifications*, dated 18 April 2016.

Section 5 also requires 'turnover' to be presented on the face of the income statement (or statement of comprehensive income, if presented). [FRS 102.5.7D]. However, not all income reported in the statement of comprehensive income is turnover, nor is the concept of turnover synonymous with revenue. As discussed in Chapter 6 at 5.5.1, this implies that an additional analysis of revenue between turnover and other components of revenue (if any) is required in the income statement (or single statement of comprehensive income).

See further discussions in Chapter 6 at 5.5.1, 5.6.1 and 5.7.1.

Frequently asked questions

Question 11-7: Can income outside the scope of Section 23 be presented as revenue in the income statement?

How we see it

Entities need to consider the definition of revenue to determine whether income outside the scope of Section 23 can be presented as revenue in the income statement. We believe an entity needs to consider the discussion below as part of its determination.

FRS 102 defines revenue as "Income arising in the course of an entity's ordinary activities", but Section 23 excludes some revenue contracts from its scope (e.g., leases). [FRS 102 Appendix I, FRS 102.23.1]. Revenue might be referred to by a variety of different names, including sales, fees, interest, dividends, royalties and rent. These revenue items would be in scope of different sections of FRS 102. Section 23 only involves a subset of revenue – specifically, revenue that arises from a contract when the counterparty to that contract is a customer (as defined, see 3.1.3 above) and the contract is not specifically excluded from its scope (see 3.1.1 above).

Also, in defining items of revenue, income arising from 'ordinary activities' pertains to income generated from the primary business activities of an entity, rather than income generated from its incidental activities (see Chapter 6 at 5.1.2 and 3.1.3 above).

Accordingly, if the transaction involves the sale of an asset, the nature of the asset and the purpose for which it was held by the entity could be informative. For example, inventory accounted for under Section 13 is, by definition, held for use in production or sale in the ordinary course of business. [FRS 102 Appendix I]. Therefore, the sale of that inventory is typically part of an entity's primary business activities. Conversely, PP&E accounted for under Section 17 is, by definition, held for use by the entity for more than one period. [FRS 102 Appendix I]. Likewise, Section 18 excludes from its scope intangible assets held for sale in the ordinary course of business. [FRS 102.18.1]. Therefore, disposal of an item of PP&E or an intangible asset is not typically part of an entity's primary business activities and the difference between the net disposal proceeds and the carrying amount of the asset is not recognised as revenue under Section 23, but as a gain or loss on disposal. See also discussions in 3.1.6.C and 3.1.6.D above.

If an entity receives consideration in the course of its ordinary activities that is outside the scope of Section 23 (e.g., leases), it might present that income as revenue in the income statement. This view is consistent with the Basis for Conclusions on IFRS 15, which says that an entity can present interest income as revenue only when interest income represents income from an entity's ordinary activities (also discussed in 6.5.4 above). [IFRS 15.BC247]. However, any revenue recognised that is outside the scope of Section 23 will need to be presented either separately from revenue from contracts with customers within the income statement or disclosed separately within the notes. This is because, as mentioned above, entities are required to present in the statement of comprehensive income, or disclose within the notes, the amount of revenue recognised from contracts with customers separately from other sources of revenue. [FRS 102.23.133(a), FRS 102 Appendix I].

Section 23 does not explicitly require an entity to use the term 'revenue from contracts with customers'. Therefore, entities might use a different terminology in their financial statements to describe revenue arising from transactions that are within the scope of Section 23. However, entities need to ensure the terms used are not misleading and allow users to distinguish revenue from contracts with customers from other sources of revenue. [FRS 102.23.133(a)].

11.3 Other presentation considerations

Section 23 also includes presentation requirements for products expected to be returned and for those that contain a financing component. See 6.4 and 6.5.4 above for presentation considerations related to rights of return and financing components, respectively. Also see Question 10-26 in 10.3.3 above for classification and presentation considerations related to capitalised contract costs to obtain and fulfil a contract.

Frequently asked questions

Question 11-8: How are shipping and handling costs incurred in relation to a revenue contract presented in the income statement?

How an entity presents shipping and handling costs in the income statement will depend upon how it presents expenses in accordance with the requirements of Section 5 and the Regulations. The statutory formats in Schedule 1 to the Regulations require an analysis of expenses by function, e.g., cost of sales, costs of distribution or administrative activities, (format 1 profit and loss account) or by nature, e.g., purchases of materials or transportation costs, (format 2 profit and loss account), and where the adapted formats available in those schedules are used, Section 5 requires an analysis of expenses to be presented either in the income statement or in the notes to the financial statements, which is equivalent to what would have been presented if the statutory formats had been adopted. [FRS 102.5.5B]. The presentation requirements for the income statement under FRS 102 are further discussed in Chapter 6 at 5.

An entity might be involved with a variety of shipping and handling activities. Prior to a revenue contract, for example, an entity might transport inventory it has purchased to its warehouse or move it between warehouses. In such cases, the related costs will be within the scope of Section 13 (discussed in Chapter 16). An entity might also incur shipping and handling costs not related to a promised good or service to the customer (e.g., distribution costs) that are outside the scope of Section 13 and Section 23. An entity might need to apply judgement to distinguish such costs from those within the scope of Section 13 or Section 23, and to determine where to present such costs.

Under Section 23, an entity needs to determine whether shipping and handling is a separate promised service to the customer or if they are activities to fulfil the promise to transfer the good (see 5.1 above). Shipping and handling activities that are performed before the customer obtains control of the related good are activities to fulfil its promise to transfer control of the good. If shipping and handling activities are performed after a customer obtains control of the related good, shipping and handling is a promised service to that customer and an entity needs to determine whether it acts as a principal or an agent in providing those services.

If an entity determines that the shipping and handling activities are related to a promised good or service to the customer (either the promise to transfer control of the good or the promise to provide shipping and handling services) and the entity is the principal (rather than the agent), the costs are incurred to fulfil its promise to provide those services.

How we see it

If the entity determines that the shipping and handling activities are related either to the promise to transfer control of the good or the promise to provide shipping and handling services and the entity is the principal, we believe it is appropriate to present the related costs as cost of sales, changes in contract costs, or similar, because the costs would be incurred to fulfil a revenue obligation (i.e., fulfilment costs).

Entities need to consider whether disclosure of the amount of shipping and handling costs and the line items in the income statement that include them is required. [FRS 102.3.2, FRS 102.5.9, FRS 102.5.9A].

If the entity determines that shipping and handling is a separate promised service to the customer and it is acting as an agent in providing those services, the related revenue to be recognised for shipping and handling services would be net of the related costs. [FRS 102.23.41, FRS 102.23.36-23.40].

Question 11-9: How are capitalised contract costs and their amortisation classified and presented in the statement of financial position and statement of profit or loss and other comprehensive income, respectively?

See response to Question 10-26 in 10.3.3 above.

Question 11-10: How would entities determine the presentation of amounts billed to customers (e.g., shipping and handling, expenses or cost reimbursements and taxes) under FRS 102 (i.e., as revenue or as a reduction of costs)?

See response to Question 5-16 in 5.4.4 above.

11.4 Specific disclosure requirements

The following Illustration depicts the disclosure requirements in Section 23, which are discussed further below by category:

Figure 11-2: Specific disclosure requirements in Section 23

Category	Sub-category/type	Required disclosure*
Contracts with customers	Contracts with customers (see 11.4.1 below) <i>Quantitative</i>	If not presented separately in the statement of comprehensive income: ▪ The amount of revenue recognised from contracts with customers (i.e., Section 23) separately from other sources of revenue** ▪ Any impairment losses from contract with customers separately from other impairment losses
	Disaggregation of revenue (see 11.4.1.A below) <i>Quantitative and qualitative</i>	▪ Disaggregation of revenue from contracts with customers into categories that depict how the nature, amount, timing and uncertainty of revenue and cash flows are affected by economic factors** ▪ Sufficient information to enable users of financial statements to understand the relationship between the disclosure of disaggregated revenue and revenue information that is disclosed for each reportable segment, if the entity applies IFRS 8 <i>Operating Segments</i>**
	Contract balances (see 11.4.1.C below) <i>Quantitative</i>	▪ Opening and closing balances of receivables, contract assets and contract liabilities, if not otherwise separately presented or disclosed ▪ Revenue recognised in the reporting period that was included in the contract liability balance at the beginning of the period
	Performance obligations (see 11.4.1.D below) <i>Quantitative and qualitative</i>	▪ Descriptive information about an entity's performance obligations related to the following: ▪ When typically satisfied** ▪ Significant payment terms** ▪ Nature of goods and services** ▪ Obligations for returns, refunds, and other similar obligations And ▪ Types of warranties and related obligations ▪ Revenue recognised in the reporting period from performance obligations satisfied (or partially satisfied) in previous periods ▪ The methods used to recognise revenue over time and how the methods are applied** ▪ Explanation of the significance of performance obligations that are unsatisfied (or partially satisfied) as of the end of the reporting period and explanation of when the related revenue is expected to be recognised (subject to certain optional exemptions)**
Costs to obtain or fulfil a contract (see 11.4.3 below)	<i>Quantitative</i>	▪ Closing balances of capitalised contract costs by main category or asset ▪ Amount of amortisation and any impairment losses recognised in the period

Category	Sub-category/type	Required disclosure*
Practical expedients (see 11.4.4 below)	Qualitative	▪ Use of the following options: ▪ Option to make no adjustments for the time value of money** ▪ Option to recognise costs incurred to obtain a contract as an asset** ▪ Option to expense incremental costs of obtaining a contract when incurred if the amortisation period of the asset that the entity otherwise would have recognised is one year or less**

* These disclosures must not be viewed as a checklist of minimum requirements.

** These disclosure requirements are optional for entities meeting the definition of a qualifying entity (see Chapter 3 at 3). However, the use of any of these disclosure exemptions is conditional on specified criteria being met (see Chapter 3 at 3.2).

11.4.1 Contracts with customers

The majority of the disclosure requirements in Section 23 relate to an entity's contracts with customers. These disclosures include disaggregation of revenue, information about contract asset and liability balances and information about an entity's performance obligations.

11.4.1.A Disaggregation of revenue

Entities are required to disclose disaggregated revenue information to illustrate how the nature, amount, timing and uncertainty about revenue and cash flows are affected by economic factors. [FRS 102.23.131].

Subject to the discussion in 11.4.1.B below, note that for qualifying entities, disclosing disaggregated revenue is optional, provided that certain conditions are met (see Chapter 3 at 3 and 3.2).

Section 23 suggests categories for entities to consider when disaggregating revenue. An entity could also consider the application guidance in IFRS 15 which indicates that the most appropriate categories for a particular entity depend on its facts and circumstances, but an entity needs to consider how it disaggregates revenue in other communications (e.g., strategic reports, press releases, information regularly reviewed by the chief operating decision maker) when determining which categories are most relevant and useful. [IFRS 15.B88].

Section 23 includes the following guidance on the required disaggregation of revenue disclosures: [FRS 102.23.131]

Extract from Section 23

- 23.131** An entity shall disaggregate revenue recognised from contracts with customers into categories that depict how its revenue and cash flows are affected by economic factors. Categories that might be appropriate include:
- (a) type of good or service (eg major product lines);
 - (b) geographical market (eg country or region);
 - (c) market or type of customer (eg government and non-government customers);
 - (d) timing of transfer of goods or services (eg revenue from goods or services transferred to customers at a point in time and revenue from goods or services transferred over time); and
 - (e) revenue earned as an agent or as a principal.

In addition to above, IFRS 15 provides other examples that might be appropriate categories when disaggregating revenue:

- Type of contract (for example, fixed-price and time-and-materials contracts)
 - Contract duration (for example, short-term and long-term contracts)
- And
- Sales channels (for example, goods sold directly to consumers and goods sold through intermediaries)

Section 23 does not prescribe a specific characteristic of revenue to be used as the basis for disaggregation, therefore, entities need to make this determination based on entity-specific and/or industry-specific factors that are the most meaningful for their businesses. This might require an entity to use more than one type of category to disaggregate its revenue.

We believe that, when determining categories for disaggregation of revenue, entities need to analyse specific risk factors for each of their revenue streams to determine the appropriate level of revenue disaggregation that will be beneficial to users of the financial statements. If certain risk factors could lead to changes in the nature, amount, timing and uncertainty of revenue recognition and cash flows, those factors will need to be considered as part of the evaluation. Different risk factors associated with each revenue streams might indicate when disaggregation is required.

FRS 102 requires certain types of entities to directly apply particular IFRS Accounting Standards (as adopted in the relevant jurisdiction), including IFRS 8 (see Chapter 3 at 2.4). An entity does not have to duplicate disclosures required by another standard (or another section of FRS 102). For example, if an entity applies IFRS 8 and provides disaggregated revenue disclosures as part of its segment disclosures, the entity does not need to separately provide disaggregated revenue disclosures if the segment-related disclosures are sufficient to illustrate how the nature, amount, timing and uncertainty about revenue and cash flows from contracts with customers are affected by economic factors and are presented on a basis consistent with FRS 102.

However, segment disclosures might not be sufficiently disaggregated to achieve the disclosure requirements of Section 23, as described above. If an entity applies IFRS 8, it is required under Section 23 to explain the relationship between the disaggregated revenue information and revenue information that is disclosed for each reportable segment. [FRS 102.23.132]. Users of the financial statements believe this information is critical to their ability to understand not only the composition of revenue, but also how revenue relates to other information provided in the segment disclosures. Entities can provide this information in a tabular or a narrative form.

How we see it

Regulators might review publicly provided information (e.g., investor presentations, press releases) in order to evaluate whether entities have met the objectives of this disclosure requirement. As discussed above, an entity needs to consider how information about its revenue has been presented for other purposes, including information disclosed outside the financial statements, information regularly reviewed by the chief operating decision maker (e.g., chief executive officer or chief operating officer) and other similar information used by the entity or users of the financial statements to evaluate the entity's financial performance or to make resource allocation decisions.

In addition, as discussed above, to help determine the appropriate level of revenue disaggregation that is beneficial to users of the financial statements, entities would analyse specific risk factors for each revenue stream. Different risk factors for revenue streams might indicate when disaggregation is required.

It is important to note that Section 23 and IFRS 8 have different objectives. The objective of the segment reporting requirements in IFRS 8 is to enable users of the financial statements to evaluate the nature and financial effects of the business activities in which an entity engages and the economic environment in which it operates. [IFRS 8.20]. These disclosure requirements are largely based on how the chief operating decision maker allocates resources to the operating segments of the entity and assesses their performance. [IFRS 8.5(b)]. They also permit aggregation in certain situations. In contrast, Section 23 disclosure requirements focus on how the revenues and cash flows from contracts with customers are affected by economic factors and do not have similar aggregation criteria. As noted above, if an entity concludes that it is necessary to provide disaggregated revenue disclosures along with the segment disclosures required under IFRS 8, it is required under Section 23 to explain the relationship between the disclosures.

Note that for qualifying entities, disclosing additional information that enable users of financial statements to understand the relationship between the disclosure of disaggregated revenue and revenue information that is disclosed for each reportable segment is optional, provided that certain conditions are met (see Chapter 3 at 3 and 3.2).

The illustration below, which is based on Example 41 in IFRS 15, is an example of the disclosures for disaggregation of revenue: [IFRS 15.IE Example 41, IFRS 15.IE210-IE211]

Illustration 11-7: Disaggregation of revenue-quantitative disclosure

An entity reports the following segments: consumer products, transportation and energy, in accordance with IFRS 8. When the entity prepares its investor presentations, it disaggregates revenue into primary geographical markets, major product lines and timing of revenue recognition (i.e., goods transferred at a point in time or services transferred over time).

The entity determines that the categories used in the investor presentations can be used to meet the objective of the disaggregation disclosure requirement in paragraph 23.131, which is to disaggregate revenue from contracts with customers into categories that depict how the nature, amount, timing and uncertainty of revenue and cash flows are affected by economic factors. The following table illustrates the disaggregation disclosure by primary geographical market, major product line and timing of revenue recognition, including a reconciliation of how the disaggregated revenue ties in with the consumer products, transportation and energy segments, in accordance with paragraph 23.132.

Segments	Consumer products	Transport	Energy	Total
	£	£	£	£
<u>Primary geographical markets</u>				
United Kingdom	990	2,250	5,250	8,490
Ireland	300	750	1,000	2,050
Spain	700	260	-	960
	<u>1,990</u>	<u>3,260</u>	<u>6,250</u>	<u>11,500</u>
<u>Major goods/service lines</u>				
Office supplies	600	-	-	600
Appliances	990	-	-	990
Clothing	400	-	-	400
Motorcycles	-	500	-	500
Automobiles	-	2,760	-	2,760
Solar panels	-	-	1,000	1,000
Power plant	-	-	5,250	5,250
	<u>1,990</u>	<u>3,260</u>	<u>6,250</u>	<u>11,500</u>
<u>Timing of revenue recognition</u>				
Goods transferred at a point in time	1,990	3,260	1,000	6,250
Services transferred over time	-	-	5,250	5,250
	<u>1,990</u>	<u>3,260</u>	<u>6,250</u>	<u>11,500</u>

Since entities are encouraged to tailor their disclosure of disaggregated revenue, they are unlikely to follow a single approach.

Consistent with the approach demonstrated in Illustration 11-7 above, some entities could provide disaggregated revenue information within their IFRS 8 segment reporting disclosure. Such disclosure might already provide adequate information that allows users to understand the composition of revenue. However, in other cases, this information might be based on non-GAAP information (i.e., the revenue that is reported to the chief operating decision maker might be calculated on a basis that is not in accordance with

Section 23). In such a situation, an entity might need to disclose additional information to meet the objective in paragraph 23.131.

11.4.1.B Particulars of turnover

Although FRS 102 is not inconsistent with company law, compliance with FRS 102 alone will often be insufficient to ensure compliance with all the disclosure requirements set out in the Act and the Regulations. Therefore, preparers must have regard to the requirements of company law in addition to accounting standards. [FRS 102.A3.10].

For example, as discussed in 11.4.1.A above, paragraph 23.131 requires an entity to disclose the revenue it has recognised from contracts with customers disaggregated into categories. In some cases, the disclosures provided in applying this paragraph might not be sufficient to comply with the requirement in paragraph 68 of Schedule 1 to the Regulations, which requires particulars of turnover to be disclosed. In addition, although paragraph 1.12(cB) provides an exemption for qualifying entities from paragraph 23.131, the requirements of the Regulations is still required to be complied with. [FRS 102.A3.38A].

Accordingly, entities must comply with the requirements on particulars of turnover:

- Where a company has carried on two or more classes of business during the financial year, and these, in the opinion of the directors, differ substantially from each other, the notes to the financial statements must give: [1 Sch 68(1)]
 - A description of each class of business.
 - And
 - The amount of turnover that is attributable to each class of business.
- If the company has supplied markets during the financial year that, in the opinion of the directors, differ substantially from each other, the amount of the turnover attributable to each such market must also be stated. Note that “market” means a market delimited by geographical bounds. [1 Sch 68(2)].

In analysing the source (in terms of business or in terms of market) of turnover, the directors of the company must have regard to the manner in which the company’s activities are organised. [1 Sch 68(3)]. Also, note that classes of business which, in the opinion of the directors, do not differ substantially from each other must be treated as one class, and markets which, in the opinion of the directors, do not differ substantially from each other must be treated as one market, and any amounts properly attributable to one class of business or (as the case may be) to one market which are not material could be included in the amount stated in respect of another. [1 Sch 68(3)].

However, where in the opinion of the directors the disclosure of any information described above would be seriously prejudicial to the interests of the company, that information need not be disclosed, but the fact that any such information has not been disclosed must be stated. [1 Sch 68(5)].

See also the discussion in Chapter 6 at 7.6.

11.4.1.C Contract balances

Section 23 includes the following disclosure requirements for an entity’s contract balances: [FRS 102.23.134]

Extract from Section 23

23.134 An entity shall disclose:

- (a) the opening and closing balances of receivables, contract assets and contract liabilities from contracts with customers, if not otherwise separately presented or disclosed;
- (b) revenue recognised in the reporting period that was included in the contract liability balance at the beginning of the period; and
- (c) revenue recognised in the reporting period from performance obligations satisfied or partially satisfied in previous periods (eg changes in estimates of variable consideration).

As described above, Section 23 requires an entity to disclose quantitative information about contract balances. [FRS 102.23.134(a)]. If an entity chooses to present contract balances on the face of the statement of financial position, the entity needs to consider the requirements in Section 4 and the Regulations (see Chapter 6 at 4). See also discussions in 11.1.2 above.

Section 23 also requires entities to disclose revenue recognised in the reporting period that was included in the contract liability balance at the beginning of the period. [FRS 102.23.134(b)].

In addition, Section 23 requires entities to disclose the amount of revenue recognised in the period that relates to amounts allocated to performance obligations that were satisfied (or partially satisfied) in previous periods (e.g., due to a change in transaction price or in estimates related to the constraint on revenue recognised). [FRS 102.23.134(c)]. For example, this disclosure requirement applies to sales-based and usage-based royalties received from a customer in exchange for a licence of intellectual property that are recognised as revenue in a reporting period, but relate to performance obligations satisfied (or partially satisfied) in previous periods (e.g., sales-based royalties recognised in the current period that are related to a right-to-use licence previously transferred to a customer). This provides relevant information about the timing of revenue recognised that was not a result of performance in the current period.

While it is not an explicit requirement under Section 23, additional disclosure could be provided when necessary to enable users better understand the effect of particular transactions, other events and conditions on the entity's financial position and financial performance. [FRS 102.3.2]. The users of the financial statements might want to understand the relationship between the revenue recognised and changes in the overall balances of an entity's total contract assets and liabilities during a particular reporting period. Additional information could include the information required under IFRS 15. [IFRS 15.117, 118]. Refer to the EY publication, International GAAP®, for the detailed discussions of such additional information required by IFRS 15.

The Illustration below is an example of how an entity might fulfil these requirements:

Illustration 11-8: Contract asset and liability disclosures

Company A discloses receivables from contracts with customers separately in the statement of financial position. To comply with the other disclosure requirements for contract assets and liabilities, Company A includes the following information in the notes to the financial statements:

	20X8	20X7	20X6
Contract asset	£1,500	£2,250	£1,800
Contract liability	£(200)	£(850)	£(500)
Revenue recognised in the period from:			
Amounts included in contract liability at the beginning of the period	£650	£200	£100
Performance obligations satisfied in previous periods	£200	£125	£200

We receive payments from customers based on a billing schedule, as established in our contracts. Contract assets relate to our conditional right to consideration for our completed performance under the contract. Accounts receivable are recognised when the right to consideration becomes unconditional. Contract liabilities relate to payments received in advance of performance under the contract. Contract liabilities are recognised as revenue as (or when) we perform under the contract. In addition, the contract asset decreased in 20X8 due to a contract asset impairment of £400 relating to the early cancellation of a contract with a customer.

How we see it

Paragraph 23.134(a) requires entities to separately disclose contract balances from contracts with customers. Therefore, it is necessary for entities that have material receivables from non-Section 23 contracts to separate these balances for disclosure purposes. For example, an entity might have accounts receivable relating to leasing contracts that would need to be disclosed separately from accounts receivable related to contracts with customers.

Entities need to make sure they have appropriate systems, policies and procedures and internal controls in place to collect and disclose the required information.

11.4.1.D Performance obligations

Section 23 requires an entity to provide more descriptive information about its performance obligations to help users of financial statements analyse the nature, amount, timing and uncertainty about revenue and cash flows arising from contracts with customers. This requirement is in addition to the requirement in Section 8 to disclose material accounting policies. [FRS 102.8.5].

An entity is also required to disclose information about remaining performance obligations and the amount of the transaction price allocated to such obligations, including an explanation of when it expects to recognise the amount(s) in its financial statements. Entities need to make sure they have appropriate systems, policies and procedures and internal controls in place to collect and disclose the required information.

Both quantitative and qualitative information are required as follows: [FRS 102.23.135, FRS 102.23.136, FRS 102.23.137]

Extract from Section 23

- 23.135** An entity shall disclose information about its performance obligations in contracts with customers, including a description of:
- (a) when the entity typically satisfies its performance obligations (eg upon shipment, upon delivery, as services are rendered or upon completion of service);
 - (b) the significant payment terms (eg when payment is typically due, whether the contract includes a financing transaction, and whether the consideration amount is variable);
 - (c) the nature of the goods or services that the entity has promised to transfer, highlighting any promises to arrange for another party to transfer goods or services (ie if the entity is acting as an agent);
 - (d) obligations for returns, refunds and other similar obligations; and
 - (e) types of warranties and related obligations.
- 23.136** For performance obligations that an entity satisfies over time, the entity shall disclose the methods it used to recognise revenue - for example, a description of the output methods or input methods used and how those methods are applied.
- 23.137** An entity shall provide a quantitative or qualitative explanation of the significance of unsatisfied performance obligations and when they are expected to be satisfied. However, an entity need not disclose such information for a performance obligation if either of the following conditions is met:
- (a) the performance obligation is part of a contract that has an original expected duration of one year or less; or
 - (b) the entity recognises revenue from the satisfaction of the performance obligation in accordance with paragraph 23.103.

Note that for qualifying entities, disclosing the information required by paragraphs 23.135(a), 23.135(b), 23.135(c), 23.136 or 23.137 is optional, provided that certain conditions are met (see Chapter 3 at 3 and 3.2).

Section 23 requires an entity to provide a quantitative or qualitative explanation of the significance of unsatisfied performance obligations and when they are expected to be satisfied. [FRS 102.23.137]. This disclosure can be provided on either a quantitative basis (e.g., amounts to be recognised in given time bands, such as between one and two years and between two and three years) or by disclosing a mix of quantitative and qualitative information. In addition, this disclosure would only include amounts related to performance obligations in the current contract. For example, expected contract renewals that have not been executed and do not represent material rights are not performance obligations in the current contract. As such, an entity does not disclose amounts related to such renewals. However, if an entity concludes that expected contract renewals represents a material right to acquire goods or services in the future (and, therefore, was a separate performance obligation - see 5.6 above), the entity includes in its disclosure the consideration attributable to the material right for the options that have not yet been exercised (i.e., the unsatisfied performance obligation(s)).

Consider the following Illustration:

Illustration 11-9: Transaction price allocated to remaining performance obligations in an MSA with a minimum purchase requirement

An entity sells equipment and consumables under a two-year MSA. Both the equipment and the consumables are determined to be distinct performance obligations that are recognised at a point in time. The stand-alone selling price of the equipment and each consumable is £10,000 and £100, respectively. The equipment costs £8,000 and each consumable costs £60. The entity sells the equipment for £6,000 (a 40% discount from the stand-alone selling price) with a customer option to purchase each consumable for £100 (equal to its stand-alone selling price). The customer will incur a penalty if it does not purchase at least 200 consumables over the next two years. The entity concludes that the penalty is substantive and it creates a minimum purchase commitment. The option to purchase the consumables does not represent a material right because it is priced at the stand-alone selling price for the consumable.

As at the entity's reporting date, the customer has purchased 80 consumables during the first six months of the two-year contract. While the entity expects to sell quantities in excess of the remaining 120 units that are subject to the minimum purchase commitment, it only includes the transaction price for the remaining 120 committed consumables in the disclosure of the transaction price allocated to remaining performance obligations. This is because the MSA only commits the parties to the purchase and sale of these minimum units. The entity does not include the transaction price for any expected units in excess of the required minimum because the additional optional purchases are not within the enforceable rights and obligations of the current contract with the customer.

When providing a quantitative disclosure of the transaction price allocated to the remaining performance obligations, an entity might not include consideration that has been excluded from the transaction price (e.g., amounts subject to termination without penalty). Consequently, entities could disclose such information qualitatively in explaining the significance of unsatisfied (or partially satisfied) performance obligations.

Optional exemptions

Section 23 provides a practical expedient under which an entity need not disclose the amount of the remaining performance obligations for contracts with an original expected duration of one year or less or those that meet the requirements of the right to invoice practical expedient in paragraph 23.103. [FRS 102.23.137]. As explained in 8.1.4.B above, the right to invoice practical expedient permits an entity that is recognising revenue over time to recognise revenue as invoiced if the entity's right to payment is an amount that corresponds directly with the value to the customer of the entity's performance to date. For example, an entity is not required to make the disclosure for a three-year service contract under which it has a right to invoice the customer a fixed amount for each hour of service provided.

The illustration below, which is based on Example 42 in IFRS 15, are examples of the required disclosures about remaining performance obligations: [IFRS 15.IE Example 42, IFRS 15.IE212-IE219]

Illustration 11-10: Disclosure of the transaction price allocated to the remaining performance obligations

On 30 June 20X6, an entity enters into three contracts (Contracts A, B and C) with separate customers to provide services. Each contract has a two-year non-cancellable term. The entity considers the requirements in paragraph 23.137 in determining the information in each contract to be included in the disclosure of the transaction price allocated to the remaining performance obligations at 31 December 20X6.

Contract A

Cleaning services are to be provided over the next two years typically at least once per month. For services provided, the customer pays an hourly rate of £25.

Because the entity bills a fixed amount for each hour of service provided, the entity has a right to invoice the customer in the amount that corresponds directly with the value of the entity's performance completed to date in accordance with paragraph 23.103 (see 8.1.4.B above). Consequently, no disclosure is necessary if the entity elects to apply the practical expedient in paragraph 23.137(b).

Contract B

Cleaning services and lawn maintenance services are to be provided as and when needed with a maximum of four visits per month over the next two years. The customer pays a fixed price of £400 per month for both services. The entity measures its progress towards complete satisfaction of the performance obligation using a time-based measure.

The entity discloses the amount of the transaction price that has not yet been recognised as revenue in a table with quantitative time bands that illustrates when the entity expects to recognise the amount as revenue. The information for Contract B included in the overall disclosure is, as follows:

	20X7	20X8	Total
	£	£	£
Revenue expected to be recognised on this contract as of 31 December 20X6	4,800 ^(a)	2,400 ^(b)	7,200

(a) £4,800 = £400 × 12 months.

(b) £2,400 = £400 × 6 months.

Contract C

Cleaning services are to be provided as and when needed over the next two years. The customer pays fixed consideration of £100 per month plus a one-time variable consideration payment ranging from £0-£1,000 corresponding to a one-time regulatory review and certification of the customer's facility (i.e., a performance bonus). The entity estimates that it will be entitled to £750 of the variable consideration (see 6.2.2 above for the discussion on estimating variable consideration). On the basis of the entity's assessment of the factors discussed in 6.2.3 above, the entity includes its estimate of £750 of variable consideration in the transaction price because it is highly probable that the entity will be entitled to the cumulative amount of revenue in future periods once the uncertainty related to the variable consideration is resolved. The entity measures its progress towards complete satisfaction of the performance obligation using a time-based measure.

The entity discloses the amount of the transaction price that has not yet been recognised as revenue in a table with quantitative time bands that illustrates when the entity expects to recognise the amount as revenue. The entity also includes a qualitative discussion about any significant variable consideration that is not included in the disclosure. The information for Contract C included in the overall disclosure is as follows:

	20X7	20X8	Total
	CU	CU	CU
Revenue expected to be recognised on this contract as of 31 December 20X6	1,575 ^(a)	788 ^(b)	2,363

(a) Transaction price = £3,150 (£100 × 24 months + £750 variable consideration) recognised evenly over 24 months at £1,575 per year.

(b) £1,575 ÷ 2 = £788 (i.e., for 6 months of the year).

In addition, as discussed above, the entity could disclose qualitatively that part of the performance bonus has been excluded from the disclosure because it was not included in the transaction price, if it is considered a significant information. That part of the performance bonus was excluded from the transaction price in accordance with the requirements for constraining estimates of variable consideration.

The illustration below, which is based on Example 43 in IFRS 15, is an example of how an entity could make the disclosure required by paragraph 23.137 relating to the amount and timing of when unsatisfied performance obligations are expected to be satisfied, using qualitative information (instead of quantitatively, using time bands), as follows: [IFRS 15.IE Example 43, IFRS 15.IE220-IE221]

Illustration 11-11: Disclosure of the transaction price allocated to the remaining performance obligations-qualitative disclosure

On 1 January 20X6, an entity enters into a contract with a customer to construct a commercial building for fixed consideration of £10 million. The construction of the building is a single performance obligation that the entity satisfies over time. As of 31 December 20X6, the entity has recognised £3.2 million of revenue. The entity estimates that construction will be completed in 20X7, but it is possible that the project will be completed in the first half of 20X8.

At 31 December 20X6, the entity discloses the amount of the transaction price that has not yet been recognised as revenue in its disclosure of the transaction price allocated to the remaining performance obligations. The entity also discloses an explanation of when the entity expects to recognise that amount as revenue. The explanation can be disclosed either on a quantitative basis using time bands that are most appropriate for the duration of the remaining performance obligation or by providing a qualitative explanation. Because the entity is uncertain about the timing of revenue recognition, the entity discloses this information qualitatively as follows:

'As of 31 December 20X6, the aggregate amount of the transaction price allocated to the remaining performance obligation is £6.8 million and the entity will recognise this revenue as the building is completed, which is expected to occur over the next 12-18 months.'

Frequently asked questions

Question 11-11: If an entity does not meet the criteria to use the 'right to invoice' practical expedient, can it still use the disclosure practical expedient regarding the amount of transaction price allocated to remaining performance obligations? ²¹⁷

Section 23 is clear that an entity can only use the practical expedient to avoid disclosing the amount of the transaction price allocated to remaining performance obligations for contracts: (a) with an original expected duration of less than one year; or (b) that qualify for the 'right to invoice' practical expedient. [FRS 102.23.137]. If a contract does not meet either of these criteria, an entity must disclose the information about remaining performance obligations as required by paragraph 23.137. Also, as discussed above, an entity might qualitatively describe any consideration that is not included in the transaction price (e.g., any estimated amount of variable consideration that is constrained) if it is considered significant information in explaining the significance of unsatisfied (or partially satisfied) performance obligations.

11.4.2 Significant judgements

Unlike the requirements in paragraphs 123-126 of IFRS 15, Section 23 does not specifically require disclosure of significant accounting estimates and judgements (and changes in those judgements) made in determining the transaction price, allocating the transaction price to performance obligations and determining when performance obligations are satisfied.

However, note that Section 8 has general requirements requiring disclosure of information regarding significant accounting estimates and judgements made by an entity. This would also apply to the significant accounting estimates and judgements applied in respect of Section 23. [FRS 102.BC.B23.11]. Section 8 requires entities to disclose information about judgements that management has made in the process of applying the entity's accounting policies and that have the most significant effect on the amounts recognised in the financial statements (see Chapter 6 at 7.3). [FRS 102.8.6]. Entities are also required to disclose information about key assumptions concerning the future, and other key sources of estimation uncertainty at the reporting date, that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year (see Chapter 6 at 7.4). [FRS 102.8.7].

When providing the required disclosures in Section 8 about the significant accounting estimates and judgements applied in respect of Section 23, an entity could consider the guidance and related disclosure requirements in paragraphs 123-126 of IFRS 15.

Detailed discussion related to significant judgements in the application of IFRS 15 is available in the EY publication, International GAAP®.

²¹⁷ Based on TRG Agenda paper no. 40, *Practical Expedient for Measuring Progress toward Complete Satisfaction of a Performance Obligation*, dated 13 July 2015.

11.4.3 Assets recognised from the costs to obtain or fulfil a contract

As discussed in 10.3 above, Section 23 specifies the accounting for costs an entity incurs to obtain and fulfil a contract to provide goods or services to customers. Section 23 requires entities to disclose closing balances of assets recognised for costs to obtain or fulfil contracts with customers, as well as any amortisation or impairment losses recognised during the reporting period. These disclosure requirements are as follows: [FRS 102.23.138]

Extract from Section 23

23.138 An entity shall disclose:

- (a) the closing balances of assets recognised from the costs incurred to obtain or fulfil a contract with a customer (in accordance with paragraph 23.113 or 23.117), by main category of asset (eg costs to obtain contracts with customers, pre-contract costs and set-up costs); and
- (b) the amount of amortisation and any impairment losses recognised in the reporting period.

The above quantitative disclosure requirements are consistent with IFRS 15. However, IFRS 15 further requires an entity to disclose information about the method it uses to determine the amortisation for each reporting period related to the assets recognised for costs to obtain or fulfil contracts with customers. [IFRS 15.127]. An entity reporting under FRS 102 could consider providing the similar information.

Under IFRS 15, entities are also required to disclose the judgements made in determining the amount of costs that were incurred to obtain or fulfil contracts with customers that meet the criteria for capitalisation, as well as the method the entity uses to amortise the assets recognised. [IFRS 15.127]. As discussed in 11.4.2 above, an entity reporting under FRS 102 is required to provide information about significant judgements it used in applying the entity's accounting policies. For example, for costs to obtain a contract, an entity that capitalises commission costs upon the signing of each contract needs to describe the judgements used, if considered significant, to determine the commission costs that qualified as costs incurred to obtain a contract with a customer, as well as the determination of the amortisation period. [FRS 102.8.6].

Frequently asked questions

Question 11-12: How are capitalised contract costs and their amortisation classified and presented in the statement of financial position and statement of profit or loss and other comprehensive income, respectively?

See response to Question 10-26 in 10.3.3 above.

11.4.4 Practical expedients

Section 23 allows entities to use several practical expedients. FRS 102.23.139 requires entities to disclose their use of three practical expedients: (a) the practical expedient in FRS 102.23.60 associated with the option to make no adjustments for the time value of money (see 6.5 above); (b) the practical expedient in paragraph 23.113 for the option to adopt a policy of recognising incremental costs incurred to obtain a contract with a customer as an asset (see 10.3.1 above), and (c) the practical expedient in paragraph 23.114 to recognise an immediate expense when incurred for incremental costs of obtaining a contract with a customer in which the amortisation period for the asset that the entity would otherwise have recognised is one year or less (see 10.3.1 above). [FRS 102.23.139].

Section 23 provides other practical expedients. Entities must consider the need to disclose any other practical expedients it uses, particularly if it provides additional information that enable users of financial statements to understand the nature, amount, timing and uncertainty of revenue and cash flows arising from contracts with customers.

12 Periodic review 2024

In March 2024, the FRC issued *Amendments to FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland and other FRSS - Periodic Review 2024* ('Periodic Review 2024 amendments'), following the second periodic review of FRS 102. [FRS 102.1.36]. Subsequently the FRC issued new September 2024 editions of UK and Ireland financial reporting standards (FRS 100 - 105) that encompass all amendments to that date. The Periodic Review 2024 results in substantial amendments to FRS 102 and consequential amendments to other FRSS. The most significant changes apply to leases (see Chapter 23) and revenue recognition to align with changes to IFRSs. Incremental improvements and clarifications have also been made to a number of other sections.

See also discussion in 1 above.

12.1 Effective date

Except for the new supplier finance arrangements disclosure requirements (effective 1 January 2025), the Periodic Review 2024 amendments are effective for accounting periods beginning on or after 1 January 2026, with early application permitted provided all amendments are applied at the same time and that fact is disclosed (see Chapter 3 at 1.2). [FRS 102.1.37, FRS 102.1.38].

The amendments are applied retrospectively in accordance with FRS 102.10.12 (see Chapter 9 at 3.3.2), except when a specific transitional provision allows or requires otherwise (see Chapter 3 at 1.3). [FRS 102.1.39]. The transitional provisions related to revenue from contracts with customers are discussed in 12.2 below.

12.2 Transition methods

Section 1 requires retrospective application when an entity first applies the Periodic Review 2024 amendments. However, in applying revised Section 23, it allows either a 'modified retrospective' adoption or a 'full retrospective' adoption in which the revised Section 23 is applied to all of the periods presented (see 12.2.3 and 12.2.4 below, respectively). [FRS 102.1.61].

The following are the dates relevant to transition:

- *The date of initial application* - the beginning of the reporting period in which an entity first applies revised Section 23. [FRS 102.1.40(a)]. This date of initial application does not change, regardless of the transition method that is applied. Examples of dates of initial application for different year-ends include:

Year ending	Date of initial application
31 December 2026	1 January 2026
30 June 2027	1 July 2026

- *The beginning of the earliest period presented* - the start of the earliest reporting period presented within an entity's financial statements for the reporting period in which the entity first applies revised Section 23. This is relevant for entities using the full retrospective adoption method. For example:

Year ending	Beginning of the earliest period presented	
	(one comparative period)	(two comparative periods)
31 December 2026	1 January 2025	1 January 2024
30 June 2027	1 July 2025	1 July 2024

As discussed in 1 above, the revised Section 23 includes accounting simplifications compared to IFRS 15 to provide proportionate and practical solutions that are cost effective to apply. These simplifications include greater use of hindsight when using practical expedients in estimating variable consideration and evaluating contract modifications when an entity applies the revised Section 23 for the first time or when an entity adopts FRS 102 for the first time (see Chapter 37). [FRS 102.BC.B23.9].

An entity is permitted to use the practical expedient in paragraph 1.65(b) to estimate variable consideration when an entity applies the revised Section 23. That is, for completed contracts that have variable consideration, an entity could use the transaction price at the date the contract was completed rather than estimating variable consideration amounts in the comparative reporting periods. The FRC permits the use of that practical expedient by entities adopting either the modified retrospective method or the full retrospective method when transitioning to revised Section 23 (see 12.2.3 and 12.2.4 below). [FRS 102.1.62(c), FRS 102.1.65(b)]. By contrast, this expedient was applicable only to entities which adopted the full retrospective method under IFRS 15.

Section 4 of the FRC's FRS 102 Factsheet 9 *Initial application of the Periodic Review 2024 amendments*,²¹⁸ which illustrates how revenue transactions might be dealt with on initial application of the Periodic Review 2024 amendments, clarifies that "To account for contracts with variable consideration which are *completed by the reporting date*, the entity may use the transaction price at the date the contract was completed, rather than estimating amounts of variable consideration in comparative periods" (emphasis added). Accordingly, depending on the practical expedients an entity chooses to apply under the full retrospective method (e.g., FRS 102.1.65(a) allows an entity not to restate certain completed contracts - see 12.3.4 below), for all completed contracts with variable consideration, an entity applying the practical expedient in paragraph 1.65(b) above could use the transaction price at the date the contract was completed. As clarified in Section 4 of the FRS 102 Factsheet 9, this practical expedient covers even those contracts with variable consideration that are completed by the reporting date (e.g. 31 December 2026 for an entity with a 31 December year-end that adopted the revised Section 23 on 1 January 2026 - the date when the entity first applied the Periodic Review 2024 amendments). Although under the modified retrospective method an entity is required to apply the revised Section 23 retrospectively only to contracts that are not completed contracts at the date of initial application, [FRS 102.1.62(b)], the entity could also apply this practical expedient in the same manner as described above if any of these contracts contain variable consideration and such contracts are completed by the reporting date, i.e., contracts completed even during the year when the entity first applied the Periodic Review 2024 amendments. [FRS 102.1.62(c)]. Therefore, entities using this practical expedient benefit from greater use of hindsight when estimating variable consideration, regardless of the transition method applied.

An entity is also permitted to use the practical expedient in paragraph 1.65(c) in evaluating contract modifications when an entity applies the Periodic Review 2024 amendments. That is, for contracts that were modified before the date of initial application, an entity need not retrospectively restate the contract for those contract modifications in accordance with paragraphs 23.15 to 23.16 (see 4.4 above). Instead, an entity is permitted to reflect the aggregate effect of all the modifications when identifying the satisfied and unsatisfied performance obligations, determining the transaction price and allocating the transaction price to the satisfied and unsatisfied performance obligations. Entities can choose whether to apply the practical expedient to all contract modifications that occur before either (1) the beginning of the earliest period presented; or (2) the date of initial application. The FRC allows the use of this practical expedient by entities adopting either the modified retrospective method or the full retrospective method when transitioning to revised Section 23 (see 12.2.3 and 12.2.4 below). [FRS 102.1.62(c), FRS 102.1.65(c)]. In contrast, for entities which adopted full retrospective method under IFRS 15, this practical expedient was applied only to all contract modifications that occur before the beginning of the earliest period presented. Accordingly, entities electing the full retrospective method when transitioning to revised Section 23 and using this practical expedient benefit from greater use of hindsight when evaluating contract modifications.

12.2.1 Definition of a completed contract

For the purposes of applying the transition provisions related to revenue from contracts with customers, Section 1 defines a completed contract as a contract for which the entity has transferred all of the goods or services identified in accordance with previous requirements for accounting for revenue from contracts with customers, which the revised Section 23 replaced, i.e., - the legacy Section 23 (see 1 above). [FRS 102.1.67].

²¹⁸ [FRS 102 Factsheet 9 Initial application of the Periodic Review 2024 amendments](#), FRC, issued on 27 November 2024, Section 4 Transitional provisions relating to Section 23 *Revenue from Contracts with Customers*, pages 10 and 11.

Depending on the manner an entity elects to transition to the revised Section 23, it need not apply the revised Section 23 to contracts that qualify as completed contracts before the date of initial application or the beginning of the earliest period presented (depending on the practical expedient) (see 12.2.3 and 12.2.4 below), even if they have not yet received the consideration and that consideration is still subject to variability. Applying a completed contract practical expedient might also affect an entity's revenue recognition in subsequent reporting periods. That is, if an entity applied a practical expedient for completed contracts, it continues to apply its legacy revenue policy to its completed contracts, instead of the revised Section 23. In some cases, even though an entity has fully transferred its identified goods or services, there might still be revenue to recognise in reporting periods after adoption of the revised Section 23.

FRS 102 does not provide guidance on the meaning of 'transferred all of the goods or services'. However, with reference to IFRS 15, the IASB noted in the Basis for Conclusions on IFRS 15 that 'transferred all of the goods or services' is not meant to imply that an entity would apply the 'transfer of control' notion in IFRS 15 to goods or services that have been identified in accordance with legacy IFRS. Rather it is performance in accordance with legacy IFRS requirements (i.e., IAS 11, IAS 18 and related Interpretations). [IFRS 15.BC441]. Legacy Section 23 was based on legacy IFRS. Consequently, in many situations the term 'transferred' would mean 'delivered' within the context of contracts for the sale of goods and 'performed' within the context of contracts for rendering services and construction contracts. In some situations, the entity would use judgement when determining whether it has transferred goods or services to the customer. [IFRS 15.BC445D].

Consider the following examples:

- Contract is completed – a retailer sold products to a customer on 31 December 2025, with immediate delivery. The customer had a poor credit history. Therefore, the retailer required the customer to pay half of the consideration upfront and half within 60 days. In accordance with legacy Section 23, the retailer recognised half of the consideration at the time of the sale. However, the retailer concluded it was not probable that it would be able to collect the remainder and deferred recognition of this amount. Because the goods were delivered prior to the date of initial application of the revised Section 23 (e.g., 1 January 2026) and collectability concerns were only the reason for delaying recognition of revenue under legacy Section 23, the contract is considered completed under the transition provisions in Section 1 (see 12.2.2.E below for further discussion on collectability); or
- Contract is not completed – an entity entered into a contract to provide a service and loyalty points to a customer on 31 January 2025. In accordance with legacy Section 23, the entity deferred a portion of the total contract consideration for the loyalty points and deferred revenue recognition until the points were exercised on 15 January 2026. The entity completed the required service within six months and recognised revenue related to the service over that period in accordance with legacy Section 23. As at the date of initial application of revised Section 23 (e.g., 1 January 2026), the entity had not yet performed in relation to the loyalty points. As a result, the contract was not considered completed under the transition provisions in Section 1 (see 12.2.2.G below for further discussion on loyalty points).

As discussed above, determining which contracts are completed at transition might require significant judgement, particularly if legacy Section 23 did not provide detailed requirements or guidance that indicated when goods had been delivered or services performed (e.g., licences of intellectual property).

Entities must not consider elements of a contract that did not result in recognition of revenue under legacy Section 23 (e.g., warranty provisions) when assessing whether a contract is a completed contract (see 12.2.2.A below).

12.2.2 Implementation questions on definition of a completed contract

12.2.2.A Elements in a contract to be considered

When determining whether a contract meets the definition of a completed contract, an entity must consider all of the elements (or components) in a contract that give rise to revenue in the scope of legacy Section 23. It does not consider the elements of a contract that do not result in recognition of revenue (e.g. warranty provisions accounted for in accordance with Section 21) when assessing whether a contract is a completed contract.

For example, under legacy Section 23, an entity might have accounted for a financing component (i.e., separating the interest income or expense from the revenue). Doing so effectively splits the contract into a revenue component and a financing component.

How we see it

In our view, the financing component generally would not be considered in determining whether the goods or services have transferred to the customer (i.e., it would generally not affect the assessment of whether the contract meets the definition of a completed contract). In addition, income elements that are not within the scope of the revised Section 23 need not be considered even if they were covered by revenue requirements in legacy Section 23.

For example, legacy Section 23 applied to dividends and provided guidance on the recognition of interest and fees integral to the issuance of a financial instrument. None of these elements would be considered when determining whether a contract meets the definition of a completed contract for transition to the revised Section 23. This is because:

- Dividends are not within the scope of the revised Section 23 (see Chapter 13 at 6.3.2) [FRS 102.11.14A, FRS 102.12.9A]
 - The guidance that was previously included in the illustrative examples in the Appendix to legacy Section 23 for fees integral to the issuance of a financial instrument is no longer included in the revised Section 23. Accounting for such fees is included within Section 11 (see Chapter 13 at 6.2) [FRS 102.11.18]
- Or
- Interest income continues to be accounted for in accordance with the effective interest method as set out in Section 11 (see Chapter 13 at 6.2). [FRS 102 Appendix I, FRS 102.11.16].

12.2.2.B Identification of a contract under legacy Section 23

When determining whether a contract is completed, an entity considers the requirements of legacy Section 23 and not the revised Section 23.

How we see it

In order to determine whether a contract is completed, an entity needs to determine the boundaries of a contract, including the term of the contract, whether it was combined with other contracts, whether it was modified, etc. That is, an entity must identify what is the contract in order to assess if it meets the definition of a completed contract.

The revised Section 23 provides detailed requirements to assist entities in identifying a contract, including determining the contract duration. These requirements are more detailed than legacy Section 23 and could lead to different outcomes from legacy Section 23 (e.g., an entity might conclude a contract is of a shorter duration than the stated contractual term in certain circumstances under the revised Section 23, see 4.2 above for further discussion).

While legacy Section 23 did not provide detailed requirements for identifying the contract, accounting policies and an entity's past practice might be informative in identifying the contract, including determining: (a) what the entity considered the contract to be (e.g., master supply agreement or individual purchase orders); and (b) the contract duration (i.e., the stated contractual term or a shorter period). Consider the following examples:

Illustration 12-1: Definition of completed contract: contract duration

Scenario 1

On 30 June 2024, Entity A entered into a contract with a customer to provide services for 24 months. The customer was required to pay a fixed monthly fee of £150, which remained constant during the contract term of 24 months, regardless of the time needed to provide the services or the actual usage from the customer each day. The customer could cancel the contract at any time without penalty by giving Entity A one month's notice. Entity A had not received any cancellation notice up to 1 January 2025 and, based on past experience, Entity A did not expect customers to cancel within the first year. For this contract, Entity A concluded that the contract duration under legacy Section 23 was the stated contractual term of 24 months.

Entity A's accounting policy for these types of contracts under legacy Section 23 stated that revenue from providing monthly services to customers was recognised over the service period, on a monthly basis. While not explicitly stated in its accounting policy, Entity A had typically treated the stated contractual term as the duration of the contract (unless the customer cancelled or the contract was modified) and considered this to be the period over which the contractual rights and obligations were enforceable.

Assume that Entity A adopts the Periodic Review 2024 amendments on 1 January 2026 using the full retrospective method to transition to revised Section 23. Entity A also uses the practical expedient in paragraph 1.65(a)(ii) not to restate contracts that are completed contracts at the beginning of the earliest period presented (i.e., 1 January 2025; Entity A presents one comparative period only). [FRS 102.1.65(a)(ii)].

Under revised Section 23, Entity A is likely to conclude that the contract is a month-to-month contract. However, when determining whether the contract is completed, Entity A only considers the requirements of legacy Section 23. Entity A might have noted that its accounting policy under legacy Section 23 did not focus on the identification of contract duration and, therefore, perhaps the contract is neither a 24-month contract nor a month-to-month contract. Entity A had accounted for this type of service contract based on monthly invoicing and, arguably, that accounting treatment is similar to the accounting treatment of a month-to-month contract. However, while not explicitly stated, Entity A has generally viewed the stated contractual term as the period over which the rights and obligations are enforceable.

Furthermore, Entity A cannot cancel the contract with the customer and is obliged to render services for the entire contract period of 24 months, unless a termination notice is provided by the customer which would limit Entity A's obligation to provide services for the next 30 days from the notification date. Since no cancellation notice had been submitted by the customer at least one month before 1 January 2025, approximately 18 months of services still need to be provided as at the beginning of the earliest period presented (i.e., 1 January 2025). Therefore, Entity A concludes that the contract does not meet the definition of a completed contract and would need to be transitioned to revised Section 23.

Scenario 2

Assume the same facts as Scenario 1, with the exception that the customer submitted an early termination notice on 30 November 2024.

Similar to Scenario 1, the contract duration under legacy Section 23 would have been the stated contractual term of 24 months. However, in this scenario, the customer has submitted the termination notice on 30 November 2024. Therefore, Entity A concludes that the term of the contract ceases on 31 December 2024.

Entity A cannot cancel the contract with the customer and is obliged to render services for the entire contract period of 24 months, unless a termination notice is provided by the customer which limits Entity A's obligation to provide service for the next 30 days from the notification date. Since Entity A had provided all services prior to 31 December 2024, Entity A concludes that the contract is a completed contract. Entity A continues to apply its legacy accounting policy (developed in accordance with legacy Section 23) to any remaining consideration still to be recognised.

Scenario 3

Assume the same facts with Scenario 1, with the exception that the customer was required to pay a non-refundable upfront fee of £50 at commencement of the contract (in addition to the monthly fixed fee). The customer can cancel the contract at any time without penalty, with a month's notice period. The customer cancelled the contract on 30 November 2024.

In its financial statements, Entity A's accounting policy for these types of contracts under legacy Section 23 stated that revenues from non-refundable upfront fees were deferred over the average customer retention period. The customer retention period was estimated to be two years. Therefore, the deferred revenue was recognised as revenue on a straight-line basis over the next 24 months.

Similar to Scenario 2, the contract duration under legacy Section 23 would have been the stated contractual term of 24 months. However, the customer had submitted the termination notice on 30 November 2024 and, therefore, Entity A concludes that the term of the contract ceases on 31 December 2024.

Entity A's legacy accounting policy for the non-refundable upfront fee refers to recognition of the deferred income over average customer retention period, not the contractual term. The definition of a completed contract is not dependent on all revenue being recognised, but rather on all goods and services being transferred to the customer. Furthermore, the period over which revenue is recognised does not affect the contract duration. As such, recognition of this upfront fee is not relevant in determining whether the contract is a completed contract. All previously contracted services had been provided to the customer up to the date of cancellation. Therefore, the contract is a completed contract.

Entity A continues applying its legacy accounting policy (developed in accordance with legacy Section 23) to any remaining consideration still to be recognised. However, given that the customer has terminated the contract early, Entity A needs to reassess, in line with the requirements of legacy Section 23, the period over which this remaining revenue arising from the non-refundable upfront fee would be recognised.

12.2.2.C Determination whether all goods or services have been transferred

When determining whether an entity has 'transferred all goods or services', the entity does not consider the requirements of revised Section 23 for 'transfer of control'. Instead, an entity considers transfer of goods or services in accordance with legacy Section 23. [FRS 102.1.67].

As discussed in 12.2.1 above, FRS 102 does not provide guidance on the meaning of 'transferred all of the goods or services'. However, with reference to IFRS 15, the IASB noted in the Basis for Conclusions on IFRS 15 that 'transferred all of the goods or services' is not meant to imply that an entity would apply the 'transfer of control' notion in IFRS 15 to goods or services that have been identified in accordance with legacy IFRS. Rather, an entity is required to determine whether it has transferred all the goods or services in accordance with the requirements in legacy IFRS requirements (i.e., IAS 11, IAS 18 and related Interpretations) (see 12.2.2.D below). [IFRS 15.BC441].

Legacy Section 23 was based on legacy IFRS. Consequently, in many situations the term "transferred" would mean "delivered" within the context of contracts for the sale of goods and "performed" within the context of contracts for rendering services and construction contracts. In some situations, the entity would use judgement when determining whether it has transferred goods or services to the customer.

[IFRS 15.BC445D].

12.2.2.D Some or all revenue has not been recognised under legacy Section 23

If some or all revenue has not been recognised under legacy Section 23, this could possibly prevent the contract from being completed.

How we see it

The definition of a completed contract is not dependent on an entity having recognised all related revenue. However, the requirements in legacy Section 23 with respect to the timing of recognition might provide an indication of whether the goods or services have been transferred.

Legacy Section 23 provided the following five criteria, all of which needed to be satisfied in order to recognise revenue from the sale of goods: [FRS 102(2022).23.10]

- The entity had transferred to the buyer the significant risks and rewards of ownership of the goods.
 - The entity retained neither continuing managerial involvement to the degree usually associated with ownership nor effective control over the goods sold.
 - The amount of revenue could be measured reliably.
 - It was probable that the economic benefits associated with the transaction would flow to the entity.
- And
- The costs incurred or to be incurred in respect of the transaction could be measured reliably.

Legacy Section 23 viewed the passing of risks and rewards as the most crucial of the five criteria, giving the following four examples of situations in which an entity might have retained the significant risks and rewards of ownership: [FRS 102(2022).23.12]

- When the entity retained an obligation for unsatisfactory performance not covered by normal warranty provisions.
- When the receipt of the revenue from a particular sale was contingent on the derivation of revenue by the buyer from its sale of the goods.
- When the goods were shipped subject to installation and the installation was a significant part of the contract which had not yet been completed by the entity.
- When the buyer had the right to rescind the purchase for a reason specified in the sales contract, or at the buyer's sole discretion without any reason, and the entity was uncertain about the probability of return.

Understanding the reasons for the accounting treatment under legacy Section 23 might, therefore, assist entities in determining whether the goods or services have been transferred and the completed contract definition has been met. However, judgement might be needed in respect of some goods or services. Assume, for example, that an entity sells products, but cannot recognise revenue immediately. The delayed recognition of revenue might be because of factors related to the timing of transfer, such as a bill-and-hold arrangement, or because the goods or services have been transferred, but not all of the criteria for recognition have been met.

12.2.2.E Delayed recognition of revenue due to collectability concerns

If collectability concerns were the only reason for delaying recognition of revenue under legacy Section 23 (i.e., because it was not probable that the economic benefits associated with the transaction would flow to the entity), [FRS 102(2022).23.10(d)], it would not prevent a contract from meeting the definition of a completed contract. However, it is important to ensure that this is the only reason for the delay in recognition.

Consider the following examples:

Illustration 12-2: Definition of completed contract: collectability

Scenario 1

In November 2024, Entity A entered into a contract with a customer to deliver 1,000 products with immediate delivery. Because of the customer's poor credit history, Entity A agreed that the customer could pay for 60% of the products on the date of delivery and the remaining 40% within 60 days of the delivery date. Under its previous accounting policy (in accordance with paragraph 23.10 of legacy Section 23), [FRS 102(2022).23.10], Entity A only recognised revenue for 60% of the consideration and deferred recognition of the remaining 40% until it was probable that this amount would be collected (provided the other criteria in paragraph 23.10 of legacy Section 23 were met). Collectability of the remaining 40% of the consideration became probable at the end of January 2025.

Assume that Entity A adopted the Periodic Review 2024 amendments on 1 January 2026 and used the full retrospective method to transition to revised Section 23. Entity A also uses the practical expedient in paragraph 1.65(a)(ii) not to restate contracts that meet the definition of a completed contract, as defined in paragraph 1.67, at the beginning of the earliest period presented (see 12.2.4 below and 12.2.1 above).

At the beginning of the earliest period presented (i.e., 1 January 2025; Entity A presents one comparative period only), Entity A had transferred all goods identified in the contract by delivering 1,000 products to the customer and had recognised 60% of the revenue. Although Entity A could only partially recognise the revenue from the sale of the 1,000 products (because it was not probable whether it would collect 40% of the consideration), this does not affect the determination of whether the identified goods were transferred to the customer. Therefore, Entity A considers the contract as a completed contract. In line with the discussion in 12.2.4.B below, Entity A continues to account for the contract in accordance with its legacy accounting policy (developed in accordance with legacy Section 23).

Scenario 2

In January 2024, Entity A entered into a contract with a customer to construct a highly specialised system on the customer's premises that was expected to be completed within 11 months. The consideration of £100,000 took into account the particularities of the customer's specific premises. The repayment schedule corresponded to the performance completed to date and Entity A applied the percentage of completion method in accordance with paragraph 23.17 of legacy Section 23, recognising revenue in the accounting period in which the relevant services were rendered. [FRS 102(2022).23.17].

Upon completion of the highly specialised system, Entity A had collected the consideration of £100,000 and recognised an equal amount as revenue. However, in October 2024, while executing the construction activities, Entity A incurred unexpected additional costs to adjust the initial design of the highly specialised system due to certain changes in the customer's premises that had not been communicated at contract inception. Entity A filed a claim for these unexpected costs, requesting an increase in the consideration of £1,000. The construction was completed in November 2024. In February 2025, Entity A agreed with its customer to settle the claim at an amount of £500 to be paid within three months.

Assume that Entity A adopted the Periodic Review 2024 amendments on 1 January 2026 and used the full retrospective method to transition to revised Section 23. Entity A also used the practical expedient in paragraph 1.65(a)(ii) not to restate contracts that meet the definition of a completed contract, as defined in paragraph 1.67, at the beginning of the earliest period presented (see 12.2.4 below and 12.2.1 above).

At the beginning of the earliest period presented (i.e., 1 January 2025), Entity A had transferred all goods and services identified in the contract by completing the construction and delivering the highly specialised system to the customer. The fact that Entity A had submitted a claim for additional consideration for the identified goods and services that had already been transferred to the customer is not relevant when determining whether the identified goods or services have been transferred. Therefore, Entity A considers the contract as a completed contract. In line with the discussion in 12.2.4.B below, Entity A continues to account for the contract in accordance with its legacy accounting policy (developed in accordance with legacy Section 23).

12.2.2.F Transfer of a licence under legacy Section 23

Legacy Section 23 provided limited guidance to assist entities in determining when a licence of intellectual property is transferred (i.e., when the significant risks and rewards of ownership of the licence transfer to the customer in accordance with paragraph 23.10(a) of legacy Section 23). *[FRS 102(2022).23.10(a)]*. Therefore, entities will need to use significant judgement to determine whether a contract involving the licence of intellectual property meets the definition of a completed contract.

Under legacy Section 23, royalties were recognised on an accrual basis in accordance with the substance of the relevant agreement. *[FRS 102(2022).23.29(b)]*. Legacy Section 23 further stated that fees and royalties paid for the use of an entity's assets (such as trademarks, patents, software, music copyright, record masters and motion picture films) are recognised in accordance with the substance of the agreement. As a practical matter, this might be on a straight-line basis over the life of the agreement, for example, when a licensee has the right to use specified technology for a specified period of time. *[FRS 102(2022).23A.34]*. In some cases, whether or not a licence fee or royalty will be received is contingent on the occurrence of a future event. In such cases, revenue is recognised only when it is probable that the fee or royalty will be received, which is normally when the event has occurred'. *[FRS 102(2022).23A.36]*.

Since the guidance provided in legacy Section 23, as described above, focused on the recognition of revenue, it might be difficult to determine when the entity has transferred the significant risks and rewards of ownership to the customer. If an entity has recognised revenue over time under legacy Section 23, it needs to carefully assess the reason for this treatment.

It might be helpful to assess whether or not there are remaining or ongoing obligations related to the licence, as discussed in paragraphs 23A.35 of legacy Section 23:

- If the licence of intellectual property is an in-substance sale and there were no remaining obligations to perform, it is likely that the significant risks and rewards of ownership will have transferred to the customer at the time of sale.
- As discussed in paragraph 23A.35 of legacy Section 23: "An assignment of rights for a fixed fee or non-refundable guarantee under a non-cancellable contract that permits the licensee to exploit those rights freely and the licensor has no remaining obligations to perform is, in substance, a sale. An example is a licensing agreement for the use of software when the licensor has no obligations after delivery. Another example is the granting of rights to exhibit a motion picture film in markets in which the licensor has no control over the distributor and expects to receive no further revenues from the box office receipts. In such cases, revenue is recognised at the time of sale". *[FRS 102(2022).23A.35]*.
- In all other instances, an entity needs to use judgement to determine when the licensee can exploit the rights under the license freely and the licensor has no remaining obligations to perform. This might be helpful in understanding whether the ongoing obligations mean that the significant risks and rewards of ownership did not pass at a single point in time, but over a period of time. Furthermore, this assessment could help in determining whether it is over the entire licence period or a shorter period and might include considering factors such as:
 - The reason that the contract is cancellable (if applicable).
 - The nature of any restrictions over use of the intellectual property. For example, whether it is a characteristic of the licence itself (e.g., the countries covered by the licence) or restricts the licensor's ability to use the rights received (e.g., the licensor cannot use the intellectual property before a specified date).

Or

 - The nature of any remaining obligations and the period in/over which those obligations apply.

Consider the following examples:

Illustration 12-3: Definition of completed contract: licences

Scenario 1

On 1 January 2024, Entity A entered into a three-year contract that granted rights to exhibit a film at cinemas and allowed for multiple showings within a specific period for a non-refundable upfront fee of £9,000. The delivery of the film was the only activity that Entity A was obliged to perform in the contract and there was no further involvement or other obligations for Entity A. The film was delivered to the customer on 1 January 2024 and Entity A concluded that the significant risks and rewards of ownership transferred to the customer on that date.

Entity A's legacy Section 23 accounting policy for this type of contracts stated that revenue was recognised in full upon commencement of the licence period, because that was the first point at which the customer had the risks and rewards of ownership and all the criteria for revenue recognition were met at that date.

Assume that Entity A adopted the Periodic Review 2024 amendments on 1 January 2026 and used the full retrospective method to transition to revised Section 23. Entity A also used the practical expedient in paragraph 1.65(a)(ii) not to restate contracts that meet the definition of a completed contract as defined in FRS 102.1.67 at the beginning of the earliest period presented (see 12.2.4 below and 12.2.1 above).

According to Entity A's previous accounting policy, revenue was recognised in full upon commencement of the licence period (i.e., on 1 January 2024) and Entity A had no further involvement beyond that point. Therefore, at the beginning of the earliest period presented (i.e., 1 January 2025), the contract is completed. In line with the discussion in 12.2.4.B below, Entity A continues to account for the contract in accordance with its legacy accounting policy (developed in accordance with legacy Section 23).

Scenario 2

Assume the same facts as Scenario 1, with the exception that the fee was contingent upon the occurrence of a future event, specifically the purchase price was based on a percentage of the box office receipts during the contract term (i.e., three years).

Entity A concluded that the significant risks and rewards of ownership transferred to the customer on 1 January 2024, when the film was delivered.

The existence of a sales-based royalty earned over a three-year period does not affect the timing of transfer to the customer because Entity A had no further obligations to perform. The licence fee is contingent on box office receipts. In such cases, paragraph 23A.36 of legacy Section 23 stated 'revenue is recognised only when it is probable that the fee or royalty will be received, which is normally when the event has occurred.'

[FRS 102(2022).23A.36].

However, this does not give rise to an additional obligation for Entity A. Therefore, it does not affect the timing of transfer to the customer.

Therefore, at the beginning of the earliest period presented (i.e., 1 January 2025), the contract is completed. Entity A continues to account for the contract in accordance with its legacy accounting policy (developed in accordance with legacy Section 23).

Scenario 3

Assume the same facts with Scenario 1, with the exception that, along with the delivery of the film, Entity A supported the promotion of the films through promotional and marketing campaigns for a period of 18 months after the film was delivered to the customer.

Entity A's legacy Section 23 accounting policy for this type of contracts stated that 'promotional and marketing campaigns are not separately identifiable components in a contract in which it grants rights to exhibit and broadcast films. Revenue is recognised as the promotional and marketing campaigns are performed on a straight-line basis over the period of the licence.'

Entity A concluded that, while the film was delivered on 1 January 2024, the significant risks and rewards of ownership of the deliverable (i.e., the film and services, together) did not transfer to the customer until the services were provided (i.e., 30 June 2025).

The contract included multiple components because Entity A had to provide promotional support services in addition to the delivery of the licence. However, Entity A had considered paragraph 23.8 of legacy Section 23 and determined that these services were not separately identifiable components to which revenue needed to be allocated. [FRS 102(2022).23.8]. Instead, revenue was recognised for both the licence and the promotional support services during the licence period, as Entity A provided the services.

The contract is not considered completed because Entity A has to transfer additional services after transferring the right to exhibit the film. The fact that Entity A had not separately allocated the consideration to each component in the contract does not relieve it from its obligations to undertake the promotional activities over the following 18 months.

Therefore, at the beginning of the earliest period presented (i.e., 1 January 2025), Entity A still had to perform and provide the remaining promotional support services to the customer up to 30 June 2025. Accordingly, the contract does not meet the definition of a completed contract. The contract needs to be transitioned to revised Section 23.

12.2.2.G Transfer of loyalty points under legacy Section 23

Under legacy Section 23, an entity would not have 'transferred' loyalty points granted to a customer until the points were redeemed or expired.

Entities will need to carefully assess their loyalty programmes as points typically arose from several contracts with the same customer(s). Since legacy Section 23 required that such programmes be treated as a revenue element in a contract rather than a cost accrual, a contract would not be considered complete until the loyalty points arising from that contract have been redeemed or have expired.

Entities that operate loyalty programmes might face practical challenges in determining which contracts gave rise to unexpired and unused loyalty points and, therefore, which contracts are not yet completed (and must be transitioned to revised Section 23). Some entities might have data within their systems that assist them in identifying those contracts for each customer. However, if an entity has not specifically tracked such information by customer, the terms and conditions of the loyalty programme might assist entities in understanding whether/when points expire in order to identify the likely timing of the original transaction that gave rise to the point(s). Furthermore, it might help to understand whether the entity used a first-in-first-out approach to the utilisation of loyalty points or some other approach.

Consider the following examples:

Illustration 12-4: Definition of completed contract: loyalty programmes

Entity A sells goods to retail customers. The customers can enter into a loyalty programme such that when they purchase goods, they receive 1 loyalty point for every £100 spent on goods purchased from Entity A. Customers can redeem their accumulated loyalty points for discounts on future purchases from Entity A. When redeemed, 1 point entitles the customer to a £1 discount, which is assumed to be the fair value of each loyalty point. Points awarded expire in two years from the award day.

Entity A recognises revenue from sales of goods when customers buy them at the point of sale. According to legacy Section 23, Entity A allocated the fair value of the consideration received or receivable in respect of the initial sale between the award points and the initial good sold.

On 1 November 2024, Entity A sold £10,000 worth of goods and granted 100 loyalty points to a customer. Using a relative fair value approach, Entity A allocated £9,901 to the sale of goods and £99 to the loyalty points. The revenue from the sale of goods was recognised immediately. However, revenue recognition for the loyalty points was deferred until the points were exercised or expired. On 1 January 2025, the customer had not used the points.

Assume that Entity A adopted the Periodic Review 2024 amendments on 1 January 2026 and uses the full retrospective approach to transition to revised Section 23. Entity A also uses the practical expedient in paragraph 1.65(a)(ii) not to restate contracts that meet the definition of a completed contract as defined in paragraph 1.67 at the beginning of the earliest period presented (i.e., 1 January 2025; Entity A presents one comparative period only) (see 12.2.4 below and 12.2.1 above).

As at the beginning of the earliest period presented, Entity A concludes that the loyalty points have not yet been exercised or expired.

At the beginning of the earliest period presented (i.e., 1 January 2025), Entity A had delivered the goods to the customer that triggered the award of the unredeemed loyalty points. However, at that date, Entity A had not yet performed in relation to the loyalty points that represented a separately identifiable component of the initial sale transactions in which they were granted. Therefore, the contract does not meet the definition of a completed contract. The contract needs to be transitioned to revised Section 23.

12.2.3 Modified retrospective adoption

An entity that elects the modified retrospective method applies the revised Section 23 retrospectively to only the current period presented in the financial statements (i.e., the initial period of application). To do so, the entity recognises the cumulative effect of initially applying the revised Section 23 to all contracts that are not completed contracts at the date of initial application, as an adjustment to the opening balance of retained earnings (or other appropriate components of equity) at the date of initial application.

[FRS 102.1.61(a), FRS 102.1.62(b)].

When an entity applies the modified retrospective method, there is no effect on the statement of financial position as at the beginning of the preceding period. Furthermore, an entity presents comparative periods in accordance with legacy Section 23 because under this method, an entity must not restate comparative information – there is no restated comparative information in its financial statements or in the notes to the financial statements (e.g., disaggregated revenue disclosures in the comparative period) under this method. [FRS 102.1.61(b)].

Under the modified retrospective approach, the revised Section 23 is applied retrospectively only to contracts that are not completed at the date of initial application, e.g., 1 January 2026 for an entity with a 31 December year-end (see 12.2 and 12.2.1 above). [FRS 102.1.62(b)]. An entity must evaluate only those that are not completed before the date of initial application as if the entity had applied the revised Section 23 to them since inception. So, if an entity elects to apply the modified retrospective method, it continues to apply legacy Section 23 to completed contracts at the date of initial application, i.e., completed contracts at the date of initial application are not restated. This is discussed further at 12.2.4.B below. Accordingly, an entity that applies the modified retrospective method applies different accounting to similar contracts after the date of adoption. Consider the example discussed at 12.2 above, a sale by a retailer on 31 December 2025, the contract in that example is considered a completed contract as at the date of initial application (i.e., 1 January 2026 in that example). The retailer would not restate revenue for this contract and would continue to account for the remaining revenue to be recognised under legacy Section 23 after adoption of the revised Section 23. However, any similar sales on or after the date of initial application (i.e., 1 January 2026 in that example) would be subject to the requirements of the revised Section 23. If the retailer prefers to account for similar transactions under the same accounting model, it could choose to adopt the full retrospective method (see 12.2.4 below).

An entity that chooses the modified retrospective method can use only two of the five practical expedients available to entities that apply the full retrospective method. These are described in paragraph 1.65(b) and paragraph 1.65(c) and relate to estimating variable considerations and contract modifications, respectively (see 12.2.4 and 12.2.5 below). [FRS 102.1.62(c)]. The FRC notes that these practical expedients allow greater use of hindsight when estimating variable consideration and evaluating contract modifications than was permitted for ongoing IFRS reporters and first-time adopters of IFRS implementing IFRS 15's requirements for the first time. [FRS 102.BC.B23.9, FRS 102.BC.B23.12]. See further discussions in 12.2 above.

If an entity electing the modified retrospective method uses either the practical expedient on estimating variable considerations or on accounting for contract modifications, the entity must apply the expedient consistently to all contracts and the entity is required to disclose that fact (i.e., the type of practical expedient the entity applied). [FRS 102.1.62(c), FRS 102.1.66].

The following Illustration 12-5 demonstrates the potential effects of the modified retrospective method:

Illustration 12-5: Cumulative effect of adoption under the modified retrospective method

A software vendor with a 31 December year-end adopts the Periodic Review 2024 amendments on 1 January 2026. The vendor adopts the revised Section 23 using the modified retrospective method and applies the revised Section 23 only to contracts that are not completed on 1 January 2026.

The vendor frequently enters into contracts to provide a software licence, professional services and post-delivery service support. It previously accounted for its contracts in accordance with legacy Section 23, particularly paragraph 23A.33 of legacy Section 23. [FRS 102(2022).23A.33]. As a result, it recognised fees from the development of its software by reference to the stage of completion of the development, which included the completion of post-delivery service support services. In effect, the software vendor treated the development of software and post-delivery service support as a single deliverable.

Revised Section 23 provides more detailed requirements for determining whether promised goods or services are performance obligations (discussed further at 5.2 above) than legacy Section 23 provided regarding the number of deliverables to identify.

As a result, the vendor's analysis of contracts in progress as at 1 January 2026 might result in the identification of different performance obligations from those it previously used for revenue recognition. As part of this assessment, the entity needs to allocate the estimated transaction price, based on the relative stand-alone selling price method (see 7.2 above), to the newly identified performance obligations.

The vendor compares the revenue recognised for each contract, from contract inception through to 31 December 2025, to the amount that would have been recognised if the entity had applied the revised Section 23 since contract inception. The difference between those two amounts would be accounted for as a cumulative catch-up adjustment and recognised as at 1 January 2026 in opening retained earnings. From 1 January 2026 onwards, revenue recognised would be based on the revised Section 23.

When there is a change in accounting policy, an entity must provide the disclosures required in paragraph 10.13. However, the FRC provided some additional relief from these disclosures. An entity that elects to apply the revised Section 23 retrospectively using the modified retrospective method is not required to disclose information required by paragraphs 10.13(b) to 10.13(d) (see Chapter 9 at 3.61). However, an entity that elects to apply the modified retrospective method is required to make certain disclosures in the year of initial application. [FRS 102.1.63]. Specifically, the entity must disclose:

- The nature of the change in accounting policy. [FRS 102.10.13(a)].
- And
- For the current period, to the extent practicable, the amount of the adjustment to revenue and to profit or loss for the effect of applying the revised Section 23 and an explanation of the reasons for any significant changes (i.e., changes between the reported results under the revised Section 23 and under legacy Section 23), or an explanation if it is impracticable to determine these amounts. [FRS 102.1.63].

Note also that FRS 102 does not require a third statement of financial position as at the beginning of the preceding period to be presented whenever an accounting policy is applied retrospectively or a retrospective restatement or reclassification is made in the financial statements (see Chapter 9 at 2.3).

Depending on an entity's prior accounting policies, applying the modified retrospective method might be more difficult than an entity would anticipate. Situations that might make application under this method more complex include the following:

- The performance obligations identified under the revised Section 23 are different from the elements/deliverables identified under legacy requirements.
- The relative stand-alone selling price allocation required by the revised Section 23 results in different amounts of the consideration being allocated to performance obligations than had been allocated in the past.

Or

- The contract contains variable consideration and the amount of variable consideration that can be included in the allocable consideration differs from the amount under legacy requirements.

In addition, the modified retrospective method effectively requires an entity to keep two sets of accounting records in the year of adoption in order to comply with the requirement to disclose the amount of adjustment to revenue and to profit or loss which requires corresponding amounts as if they were prepared under legacy Section 23.

12.2.4 Full retrospective adoption

Entities electing the full retrospective adoption must apply the provisions of revised Section 23 to each period presented in the financial statements in accordance with paragraph 10.12, subject to the practical expedients created to provide relief. [FRS 102.1.61(b), FRS 102.1.65]. The requirements of Section 10 are discussed in Chapter 9.

Under the full retrospective method, entities apply the revised Section 23 as if it had been applied since the inception of all its contracts with customers that are presented in the financial statements. That is, an entity electing the full retrospective method transitions all its contracts with customers to revised Section 23 (subject to the practical expedients described below), not just those that are not considered completed contracts as at the beginning of the earliest period presented. This means that for contracts that were considered completed (as defined) before the beginning of the earliest period, an entity still needs to evaluate the contract under the revised Section 23 in order to determine whether there was an effect on revenue recognised in any of the years presented in the period of initial application (unless an entity elects to use one of the practical expedients described below).

To ease the potential burden of applying it on a fully retrospective basis, the FRC has provided relief. An entity is permitted to use one or more of the following practical expedients when applying the revised Section 23 retrospectively: [FRS 102.1.65]

- (a) For completed contracts, an entity need not restate contracts that:
 - (i) Begin and end within the same annual reporting period.

Or

 - (ii) Are completed contracts at the beginning of the earliest period presented.

- (b) For completed contracts that have variable consideration, an entity is allowed to use the transaction price at the date the contract was completed rather than estimating variable consideration amounts in the comparative reporting periods.

The FRC's FRS 102 Factsheet 9²¹⁹ clarifies that this practical expedient is available for contracts with variable consideration which are completed by the reporting date (i.e., the end of the reporting period when the entity first applies the Periodic Review 2024 amendments – see 12.2 above).

- (c) For contracts that were modified before the date of initial application, an entity need not retrospectively restate the contract for those contract modifications in accordance with paragraphs 23.15 to 23.16 (see 4.4 above). Instead, an entity is permitted to reflect the aggregate effect of all the modifications that occurred before the beginning of the earliest period presented or the date of initial application when: *[FRS 102.23.15, FRS 102.23.16]*

- (i) Identifying the satisfied and unsatisfied performance obligations.
- (ii) Determining the transaction price.

And

- (iii) Allocating the transaction price to the satisfied and unsatisfied performance obligations.

See further discussion of this practical expedient in 12.2.5 below.

- (d) For prior periods presented, an entity need not disclose the quantitative or qualitative explanation of the significance of unsatisfied performance obligations and when they are expected to be satisfied as required by paragraph 23.137 (see 11.4.1.D above). *[FRS 102.23.137]*.

The FRC notes that the practical expedients described in (b) and (c) above allow greater use of hindsight when estimating variable consideration and when evaluating contract modifications than was permitted for ongoing IFRS reporters and first-time adopters of IFRS implementing IFRS 15's requirements for the first time. *[FRS 102.BC.B23.9]*. See further discussions in 12.2 above. When there is a change in accounting policy, an entity must provide the disclosures required in paragraph 10.13. However, the FRC provided some additional relief from these disclosures. An entity that elects to apply the revised Section 23 retrospectively on a full retrospective basis is only required to make the disclosure requirements set out in paragraph 10.13(b) for the period immediately preceding initial application, rather than providing the disclosure requirements for the current period and each of the prior period presented. Accordingly, an entity must provide the following: *[FRS 102.10.13, FRS 102.1.64]*

- (a) The nature of the change in accounting policy.
 - (b) For the most recent prior period presented (i.e., the immediately preceding period), to the extent practicable, the amount of the adjustment for each financial statement line item affected.
 - (c) The amount of the adjustment relating to periods before those presented, to the extent practicable.
- And

- (d) An explanation if it is impracticable to determine the amounts to be disclosed in (b) or (c) above.

An entity must make the above disclosures in the period in which the revised Section 23 is applied for the first time under full retrospective method. Financial statements in subsequent periods need not repeat the required disclosures (see Chapter 9 at 3.6.1). *[FRS 102.10.13]*.

Note also that FRS 102 does not require a third statement of financial position as at the beginning of the preceding period to be presented whenever an accounting policy is applied retrospectively or a retrospective restatement or reclassification is made in the financial statements (see Chapter 9 at 2.3).

12.2.4.A Does an entity have to apply elected practical expedients to all periods and to all contracts?

Entities could elect to apply one, some, or all of these practical expedients. However, if an entity elects to use any of these practical expedients, it must apply that practical expedient consistently to all contracts and periods presented. *[FRS 102.1.66]*. It would not be appropriate to apply the selected practical expedient to some, but not all, of the periods presented under the revised Section 23.

Entities that choose to use any of the practical expedients are required to disclose that fact (i.e., the types of practical expedients the entity has applied). *[FRS 102.1.66]*.

²¹⁹ [FRS 102 Factsheet 9 Initial application of the Periodic Review 2024 amendments](#), FRC, issued on 27 November 2024, Section 4 Transitional provisions relating to Section 23 *Revenue from Contracts with Customers*, pages 10 and 11.

12.2.4.B Consequences of applying transition practical expedients: accounting for completed contracts excluded from transition

Depending on the way in which an entity adopts the revised Section 23 and practical expedients an entity applies, it might be able to exclude contracts that meet the definition of a completed contract from the population of contracts to be transitioned to the revised Section 23 (i.e., it would not need to restate those contracts). This is illustrated in Illustration 12-1 at 12.2.2.B, Illustration 12-2 at 12.2.2.E, Illustration 12-3 at 12.2.2.F and Illustration 12-4 at 12.2.2.G above.

The transition provisions in Section 1 provide that if an entity is required, or chooses, not to apply the revised Section 23 to completed contracts in accordance with paragraph 1.62(b) or 1.65(a), these completed contracts are not restated. Accordingly, only contracts that are not completed contracts are included in the transition to revised Section 23. The entity would, therefore, continue to account for the completed contracts in accordance with its accounting policies based on legacy Section 23.

For example, an entity might elect to apply the revised Section 23 retrospectively using the full retrospective method and use the practical expedient in paragraph 1.65(a)(ii) not to restate contracts that are completed contracts at the beginning of the earliest period presented (i.e., 1 January 2025 for an entity with a December year-end that presents one comparative period only). Therefore, the entity also would not record an asset for incremental costs to obtain contracts under the revised Section 23 (see 10.3.1 above) that meet the definition of a completed contract as at the beginning of the earliest period presented. Furthermore, any assets or liabilities related to completed contracts that are on the balance sheet prior to the date of the earliest period presented would continue to be accounted for under legacy Section 23 after the adoption of the revised Section 23.

Note that the same accounting for completed contracts excluded from transition is applied by entities adopting the revised Section 23 under the modified retrospective method (see 12.2.3 above).

12.2.5 Practical expedient on evaluating contract modifications

As discussed in 12.2.3 and 12.2.4 above, an entity is permitted to use the practical expedient on evaluating contract modifications when applying the revised Section 23 retrospectively. For contracts that were modified before the date of initial application, an entity need not retrospectively restate the contract for those contract modifications in accordance with FRS 102.23.15 to 23.16 (see 4.4 above). Instead, an entity is permitted to reflect the aggregate effect of all modifications that occurred before the beginning of the earliest period presented or the date of initial application when: [FRS 102.1.65(c)]

- (i) Identifying the satisfied and unsatisfied performance obligations.
- (ii) Determining the transaction price.

And

- (iii) Allocating the transaction price to the satisfied and unsatisfied performance obligations.

When adopting either the modified retrospective method (see 12.2.3 above) or the full retrospective method (see 12.2.4 above) when transitioning to revised Section 23, an entity that uses the expedient described in above has to identify all contract modifications from the inception of the contract until either: (1) the beginning of the earliest period presented; or (2) the date of initial application. It then determines how each modification affected the identification of performance obligations as at the modification date. However, the entity would not need to determine or allocate the transaction price as at the date of each modification. Instead, at the beginning of the earliest period presented or the date of initial application of the revised Section 23, the entity would determine the total transaction price for all satisfied and unsatisfied performance obligations identified in the contract (as modified up to the relevant date) from contract inception. The entity would then perform a single allocation of the transaction price to those performance obligations, based on their relative stand-alone selling prices. See Illustration 12-6 below.

How we see it

While the practical expedients provide some relief under both transition methods, the adoption of revised Section 23 could be challenging and an entity still needs to use judgement and make estimates. For example, an entity needs to use judgement in estimating stand-alone selling prices when there has been a wide range of selling prices and when allocating the transaction price to satisfied and unsatisfied performance obligations, if there have been several performance obligations or contract modifications over an extended period. Furthermore, depending on how the entity elects to adopt the practical expedient, it is required to apply the revised Section 23's contract modification requirements (see 4.4 above) to either: (a) modifications made after the beginning of the earliest period presented under the revised Section 23 (e.g. modifications made after 1 January 2025 for an entity with a December year-end that presents one comparative period only and with 1 January 2026 as the date the entity first applied the Periodic Review 2024 amendments); or (b) modifications made after the date of initial application (e.g. modifications made after 1 January 2026 for an entity with a December year-end that presents one comparative period only).

Illustration 12-6 below demonstrates the practical expedient for contract modifications.

Illustration 12-6: Transition practical expedient for contract modifications

Entity A entered into a contract with a customer to sell equipment for £1 million and provide services for five years for £20,000 annually.

The equipment was delivered on 1 January 2021 and the service contract commenced at that time. The equipment and the service contract are separate performance obligations.

On 1 July 2023, the contract was modified to extend the provision of service by two years.

On 1 July 2024, the contract was further modified to extend the provision of service by three years.

On 1 July 2025, the contract was modified to provide an additional piece of equipment for £1 million. The additional equipment will be delivered during 2026 and is a separate performance obligation.

Assume that Entity A adopted the Periodic Review 2024 amendments on 1 January 2026 and uses the full retrospective approach to transition to revised Section 23. Entity A also elects to apply the practical expedient on contract modifications in accordance with paragraph 1.65(c). [FRS 102.1.65(c)].

Entity A has two options:

- Entity A could elect to reflect the aggregate effect of modifications that occurred before the date of initial application, i.e., 1 January 2026. The total transaction price for the modified contract is £2,200,000 [£1 million (equipment) + £1 million (equipment) + (10 years × £20,000 (service))], which is allocated to the two products and the service contracts based on the relative stand-alone selling price of each performance obligation.
- Entity A could elect to reflect the aggregate effect of modifications that occurred before the beginning of the earliest period presented, i.e., 1 January 2025 (Entity A presents one comparative period only). In this instance, the total transaction price for the modified contract occurred before 1 January 2025 is £1,200,000 [£1 million (equipment) + (10 years × £20,000 (service))], which is allocated to the first product and the service contract based on the relative stand-alone selling price of each performance obligation.

Entity A is still required to apply the revised Section 23's contract modification requirements to modifications made after the beginning of the earliest period presented. Accordingly, the modification on 1 July 2025 for an additional piece of equipment is accounted for from that date, applying paragraphs 23.13 to 23.16 (see 4.4 above).

In both cases above, see 7 above for a discussion on allocating the transaction price to performance obligations. The transaction price allocated to the second piece of equipment and the remaining unperformed services would be recognised when or as they are transferred to the customer.

12.2.6 Other transition considerations

Regardless of the transition method they choose, many entities have to apply the revised Section 23 to contracts entered into in prior periods. The population of contracts will be larger under the full retrospective method. However, under the modified retrospective method, entities apply the revised Section 23 to all contracts that are not completed as at the date of initial application, regardless of when those contracts commenced.

The FRC has provided some relief from a full retrospective method, in the form of several practical expedients, and provided the option of a modified retrospective method, which provides two practical expedients.

However, there are still a number of application issues that might make applying the revised Section 23 difficult and/or time-consuming, for example:

- In the case of full retrospective adoption, entities must perform an allocation of the transaction price because of changes to the identified deliverables, the transaction price or both. If an entity previously performed a relative fair value allocation, this step might be straightforward. Regardless, an entity is required to determine the stand-alone selling price of each performance obligation as at inception of the contract. Depending on the age of the contract, this information might not be readily available and the prices could differ significantly from current stand-alone selling prices. While the practical expedients in paragraph 1.65 are clear about when it is acceptable to use hindsight in respect of variable consideration to determine the transaction price (see 6.2 above for a discussion on variable consideration), the practical expedients are silent on whether the use of hindsight is acceptable for other aspects of the model (e.g., for the purpose of allocating the transaction price) or whether it is acceptable to use current pricing information if that were the only information available.
- Estimating variable consideration for all contracts for prior periods is likely to require significant judgement. The practical expedient in paragraph 1.65(b) relating to estimating variable consideration is clear that hindsight cannot be used for contracts that are not completed. As a result, entities must make this estimate based only on information that was available at contract inception for contracts that are not completed. Contemporaneous documentation clarifying what information was available to management, and when it was available, is likely to be needed to support these estimates. In addition to estimating variable consideration using the expected value or a most likely amount method, entities must make conclusions about whether such variable consideration is subject to the constraint (see 6.2.3 above for further discussion).
- The modified retrospective method requires entities not to restate the amounts reported in prior periods. However, at the date of initial application, entities electing this method still have to calculate, for all contracts that are not completed, the revenues they would have recognised as if they had applied the revised Section 23 since contract inception. This is needed to determine the cumulative effect of adopting the revised Section 23. It is likely to be most challenging for contracts in which the identified elements/deliverables or allocable consideration change when the new requirements are applied.

Finally, entities need to consider a number of other issues as they prepare to adopt the revised Section 23. For example, entities with significant deferred revenue balances under legacy Section 23 could experience 'lost revenue', if those amounts were deferred at the adoption date of the revised Section 23 and, ultimately, are reflected in the restated prior periods or as part of the cumulative adjustment upon adoption, but are never reported as revenue in a current period within the financial statements. Also, an entity needs to analyse each of its contracts to determine the appropriate timing and pattern of recognition, considering the specific criteria and requirements of the revised Section 23. In some instances, this could result in a change in the timing and/or pattern of revenue recognition compared to its legacy revenue accounting policy. For example, a transaction in which an entity might have a change in recognition timing is that of a contract manufacturer that produces goods designed to a customer's unique specifications and can reasonably conclude that the goods do not have an alternative use. If the manufacturer also has an enforceable right to payment for performance completed to date, it would meet the revised Section 23's third criterion to recognise revenue over time (see 7.1 above for further discussion), even though it might have recognised revenue at a point in time under its legacy revenue accounting policy (e.g. based on the number of units produced or units delivered).

13 Summary of GAAP differences

Key differences between FRS 102 and IFRS 15 in accounting for revenue are set out below.

FRS 102		IFRS 15
Scope		
Interests and dividends	Unless an entity chooses to apply IAS 39 <i>Financial Instruments: Recognition and Measurement</i> or IFRS 9 <i>Financial Instruments</i> (as a policy choice), accounting for interest and dividends are included in the scope of Section 11 <i>Basic Financial Instruments</i> and Section 12 <i>Other Financial Instruments Issues</i> .	Recognition and measurement requirements for interest and dividends are in scope of IFRS 9 <i>Financial Instruments</i> .
Public benefit entities	Explicitly excludes from its scope incoming resources from non-exchange transactions for public benefit entities (i.e., Section 34 <i>Specialised Activities</i> applies instead – see Chapter 36).	No explicit exclusion for public benefit entities.
Interactions with other sections (or accounting standards)	If a component of the arrangement is covered by another section of FRS 102 (for example, Section 20, Section 11 or Section 12) and that other section specifies how to separate and/or initially measure that component, an entity needs to first apply that section of FRS 102. Otherwise, the entity shall apply Section 23 to separate or initially measure those parts of the contract (see 3.1.5 above). The scope of such requirements is applicable only to Section 23's interactions with other sections of FRS 102; it is not applicable to contracts that might be partially within the scope of Section 23 and partially with other FRSS (e.g., FRS 103). An entity would need to apply the requirements in Section 10 to develop an accounting policy to determine how to separate the parts of the contract between Section 23 and the other FRSS.	If a component of the arrangement is covered by another adopted IFRS that is listed in IFRS 15.5, i.e.,: ▪ IFRS 16 <i>Leases</i> ▪ IFRS 17 <i>Insurance Contracts</i> ▪ IFRS 9 <i>Financial Instruments</i>, ▪ IFRS 10 <i>Consolidated Financial Statements</i>, ▪ IFRS 11 <i>Joint Arrangements</i>, ▪ IAS 27 <i>Separate Financial Statements</i> And ▪ IAS 28 <i>Investments in Associates and Joint Ventures</i> and that other adopted IFRS specifies how to separate and/or initially measure that component, an entity needs to first apply that standard. Otherwise, the entity applies IFRS 15 to separate or initially measure those parts of the contract. The scope of such requirements is narrow and not applicable to all contracts that might be partially within the scope of IFRS 15 (i.e., the requirements are applicable only to IFRS 15's interactions with adopted IFRS listed above). An entity applies the requirements in IAS 8 to develop an accounting policy to determine how to separate the parts of the contract between IFRS 15 and the other adopted IFRS.

FRS 102		IFRS 15
<i>Consideration received or receivable from a customer</i>		
Variable consideration	An entity estimates the variable consideration and includes it in the transaction price but “only to the extent that it is highly probable that that it will be entitled to the cumulative amount of revenue recognised when the uncertainty associated with the variable consideration is subsequently resolved.” See further discussion in 6.2.3 above.	An entity estimates the amount of variable consideration and includes it in the transaction price but “only to the extent that it is highly probable that a significant reversal in the amount of cumulative revenue recognised will not occur when the uncertainty associated with the variable consideration is subsequently resolved.” The above assessment requires an entity to consider both the likelihood and the magnitude of the revenue reversal.
Sale with a right of return, refund liability and return/refund asset	A ‘refund asset’ recognised for products expected to be returned is classified as inventory (see 6.4 above).	IFRS 15 requires presenting the ‘return asset’ separately from the refund liability. IFRS 15 has no explicit classification requirement for the ‘return asset’ recognised in a sale with a right of return. However, we believe that the return asset would generally be presented separately from inventory.
Time value of money	If payment is deferred beyond normal business terms or is financed (by the entity) at a rate of interest that is not market rate, the arrangement constitutes a financing transaction (see 6.5.2 above).	An entity considers all relevant facts and circumstances in assessing whether a contract contains a financing component and whether that financing component is significant to the contract, including: ▪ The difference, if any, between the amount of promised consideration and the cash selling price of the promised goods or services - And ▪ The combined effect of the expected length of time between the transfer of the goods or services and the receipt of consideration and the prevailing market interest rates The assessment of significance is made at the individual contract level - this requires application of judgement.
	A practical expedient similar to IFRS 15 is available if payment is deferred and the arrangement constitutes a financing transaction, an entity need not account for the effects of the time value of money if, at contract inception, the period between the transfer of good or service promised to a customer and when the customer pays for that good or service is expected to be 12 months or less. Absent the use of the practical expedient, no other factors or situations are set out, which could preclude accounting for the financing component. See further discussion in 6.5.2 above.	As a practical expedient, an entity need not adjust the promised amount of consideration for the effects of a significant financing component if the entity expects, at contract inception, that the period between when the entity transfers a promised good or service to a customer and when the customer pays for that good or service will be one year or less. In addition to above, IFRS 15.62 includes several situations which do not provide the customer or the entity with a significant benefit of financing, and therefore, no adjustment for financing component is required.

FRS 102		IFRS 15
	If payment is received in advance, an entity is not required (i.e., policy choice) to adjust the promised amount of consideration for the effects of the time value of money and recognise the resulting interest expense (see 6.5.2.A above).	No overall exemption from accounting for the effects of a significant financing component arising from advance payments.
Non-cash consideration	No specific exclusion when determining the transaction price in relation to the subsequent changes of fair value attributable to the form of non-cash consideration. However, an entity could consider the requirements and guidance in IFRS 15. See further discussion in 6.6 above.	The fair value of the non-cash consideration might vary because of the form of the consideration (e.g., a change in the price of a share to which an entity is entitled to receive from a customer). If the fair value of the non-cash consideration promised by a customer varies for reasons other than only the form of the consideration (e.g., the fair value could vary because of the entity's performance), an entity applies the requirements in constraining estimates of variable consideration.
	No specific guidance on a customer's contribution of goods or services to facilitate an entity's fulfilment of the contract. However, an entity could consider the requirements and guidance in IFRS 15. See further discussion in 6.6 above.	An entity assesses whether it obtains control of goods or services that a customer contributes (for example, materials, equipment or labour) to facilitate an entity's fulfilment of the contract in order to account for these contributed goods or services as non-cash consideration received from the customer.
Consideration payable to a customer	No specific guidance when consideration payable to the customer exceeds the fair value of the distinct good or service received from the customer or when fair value of good or service received from the customer cannot be reasonably estimated. However, an entity could consider the requirements and guidance in IFRS 15. See further discussion in 6.7.2 above.	If the amount of consideration payable to the customer exceeds the fair value of the distinct good or service that the entity receives from the customer, an entity accounts for such an excess as a reduction of the transaction price. If the entity cannot reasonably estimate the fair value of the good or service received from the customer, it accounts for all of the consideration payable to the customer as a reduction of the transaction price.
<i>Allocation of consideration received or receivable</i>		
Basis of estimating stand-alone selling prices	Similar to IFRS 15, except no explicit requirement to maximise the use of observable inputs when estimating a stand-alone selling price. However, an entity could consider the requirements and guidance in IFRS 15. See further discussion in 7.1 above.	If a stand-alone selling price is not directly observable, an entity estimates the stand-alone selling price. In doing so, an entity maximises the use of observable inputs when considering all information that is reasonably available to the entity.

FRS 102		IFRS 15
Application of residual approach	Application of the residual approach allows an entity to estimate the stand-alone selling price by reference to the total transaction price less the sum of the observable or estimated stand-alone selling prices of other goods or services promised in the contract (see 7.1.2 above).	Application of the residual approach allows an entity to estimate the stand-alone selling price of a promised good or service as the difference between the total transaction price and the observable (i.e., not estimated) stand-alone selling prices of other promised goods or services in the contract.
	No explicit guidance on application of residual approach if two or more of promised goods or services have highly variable or uncertain stand-alone selling prices. However, an entity could consider the principle used in the related guidance in IFRS 15. See further discussion in 7.1.2 above.	IFRS 15 allows the use of the residual approach if two or more of the promised goods or services have highly variable or uncertain stand-alone selling prices. In such cases, a combination of methods could be used to estimate the stand-alone selling prices of each of the promised goods or services with highly variable or uncertain stand-alone selling prices (e.g., an entity could apply the residual approach to estimate the aggregate of the stand-alone selling prices for all of the promised goods or services with highly variable or uncertain stand-alone selling prices and then use another method to estimate the stand-alone selling prices of each of those promised goods or services relative to that estimated aggregate stand-alone selling price determined by the residual approach).
Allocation of a discount or variable consideration	Allocation exception relating to discounts and variable consideration are combined into a single requirement. This requirement is less prescriptive than IFRS 15 and refers to the allocation objective, that is, to depict the amount of consideration to which the entity expects to be entitled in exchange for satisfying each performance obligation in the contract. However, an entity could consider the requirements and guidance in IFRS 15. See further discussion in 7 and 7.3 above.	IFRS 15 provides two exceptions to the default method of allocating transaction price based on relative stand-alone selling price method. The two exceptions relate to the allocation of discount and variable consideration. The criteria that must be satisfied to apply the allocation exception to variable consideration are different from the criteria set out in the context of discounts. Where the respective criteria are met, any discount and variable consideration must be entirely allocated to one or more, but not all, performance obligations in the contract.

FRS 102		IFRS 15
	No hierarchy for allocation is established. However, an entity could consider the requirements and guidance in IFRS 15. See further discussion in 7 and 7.3 above.	IFRS 15 establishes a hierarchy for allocation. An entity identifies and allocates variable consideration first. The general guidance related to allocation of transaction price to performance obligations on a relative stand-alone selling price basis and the specific requirements related to allocation of a discount are then applied to allocate the remaining amount of the transaction price that does not meet the criteria related to allocation of variable consideration. However, when an entity meets the specified criteria and applies a discount to one or more performance obligations, the discount is allocated first before using the residual approach to estimate the stand-alone selling price of a good or service.
Revenue recognition		
Bill-and-hold arrangements	No specific guidance. However, an entity could consider the requirements and guidance in IFRS 15. See further discussion in 8.5 above.	IFRS 15 sets out additional criteria, all must be met, in determining whether a customer obtained control of a product in a bill-and-hold arrangement: ▪ The reason for the bill-and-hold arrangement must be substantive (for example, the customer has requested the arrangement) ▪ The product must be identified separately as belonging to the customer ▪ The product currently must be ready for physical transfer to the customer ▪ And ▪ The entity cannot have the ability to use the product or to direct it to another customer
Adjustment to measure of progress when using the input method based on costs incurred	Similar to IFRS 15, input method based on costs incurred might be appropriate when the method includes costs that reflect an entity's performance to date and contribute to the entity's progress in transferring control of goods or services promised to customer. However, there is no specific guidance in relation to 'materials delivered to a customer site but are uninstalled'. An entity could consider the requirements and guidance in IFRS 15. See further discussion in 8.1.4.D above.	If an entity is using an input method based on costs incurred to measure its progress and a cost incurred is not proportionate to the entity's progress in satisfying the performance obligation (e.g., materials are delivered to a customer site but are uninstalled), an entity might need to adjust the input method to recognise the revenue only to the extent of that cost incurred. An adjustment to the input method might also be necessary to exclude costs incurred that do not contribute to an entity's progress in satisfying the performance obligation (e.g., when costs incurred are attributable to significant inefficiencies in the entity's performance that were not reflected in the price of the contract).

FRS 102		IFRS 15
Sale-based or usage-based royalties	An entity does not apply the general requirements related to variable consideration in FRS 102.23.44-23.47 (see 6.2.2 to 6.2.4 above) to a sales-based or usage-based royalty provided in exchange for a licence of intellectual property when the licence of intellectual property is the sole or predominant item to which the royalty relates. Instead, royalties received in exchange for licences of intellectual property are recognised at the later of when: ▪ The subsequent sale or usage takes place - And ▪ The performance obligation to which some or all of the sales-based or usage-based royalty has been allocated has been satisfied (or partially satisfied) See further discussion in 9.5 above.	An entity does not apply the requirements on constraining and updating estimates of variable consideration in IFRS 15.56-59 to a sales-based or usage-based royalty provided in exchange for a licence of intellectual property when the licence of intellectual property is the sole or predominant item to which the royalty relates. Instead, an entity recognises revenue for a sales-based or usage-based royalty promised in exchange for a licence of intellectual property only when (or as) the later of the following events occurs: ▪ The subsequent sale or usage occurs - And ▪ The performance obligation to which some or all of the sales-based or usage-based royalty has been allocated has been satisfied (or partially satisfied)
Contract costs		
Capitalisation of costs to obtain a contract	An entity has an accounting policy choice on whether to expense or capitalise its incremental costs to obtain a contract with a customer that the entity expects to recover. However, a practical expedient similar to IFRS 15 is available where an entity adopts a policy of recognising costs to obtain a contract as an asset. Criteria an entity is required to satisfy, if it selects to capitalise such costs, is similar to IFRS 15. See further discussion in 10.3.1 above.	An entity recognises as an asset the incremental costs of obtaining a contract with a customer if the entity expects to recover those costs. However, as a practical expedient, an entity could recognise the incremental costs of obtaining a contract as an expense when incurred if the amortisation period of the asset that the entity otherwise would have recognised is one year or less.
Measurement after recognition - impairment of capitalised contract costs (i.e., costs to obtain and fulfil a contract)	No prescriptive steps in assessing impairment of capitalised contract costs. Except for estimating recoverable amount of contract costs, guidance on impairment is referred to Section 27. However, an entity could consider the requirements and guidance in IFRS 15. See further discussion in 10.3.4 above.	Provides prescriptive steps in assessing impairment of capitalised contract costs. The impairment requirements must be applied in the following order: ▪ Apply impairment guidance for specific assets (for example, IAS 2 <i>Inventories</i>). ▪ Apply impairment requirements for contract costs under the revenue standard (IFRS 15.101). ▪ Include the resulting carrying amount of contract costs in the carrying amount of the cash-generating unit to which it belongs for the purposes of applying IAS 36 <i>Impairment of Assets</i> to that cash-generating unit.

FRS 102		IFRS 15
Contract balances		
Impairment of contract assets and receivables	An entity must assess a contract asset (and receivables) for impairment, and recognise any impairment loss, in accordance with Section 11. Unless an entity chooses to apply the recognition and measurement provisions of IFRS 9 (as a policy choice) to account for all its financial instruments, impairment of a contract asset would be based on 'incurred loss' model. Compared to IFRS 9's 'expected loss approach', entities recognise impairment losses earlier than entities applying the incurred loss model under Section 11. See further discussion in 11.1.3 above.	An entity must assess a contract asset (and receivables) for impairment in accordance with IFRS 9, which uses an 'expected credit loss' model.
Derecognition of contract assets and contract liabilities	Section 23 explicitly requires an entity to derecognise a contract asset when the customer pays the consideration or the consideration becomes due (i.e., when it becomes a receivable). Section 23 explicitly requires an entity to derecognise a contract liability (or part of a contract liability) when (or as) the entity transfers the promised goods or services to the customer and recognise revenue. See further discussion in 11.1.4 above.	IFRS 15 does not provide any additional requirements for derecognising contract assets. However, IFRS 15 contains illustrative examples that provides guidance on the timing of derecognition of contract assets, which is similar to Section 23. IFRS 15 provides guidance on derecognition of contract liabilities through certain application guidance (e.g., customers' unexercised rights) and illustrative examples, which is similar to the derecognition guidance in Section 23.
Initial measurement of receivable	There is no specific guidance on how to present any difference between the initial measurement of the receivable and the corresponding amount of revenue recognised (see discussion in 11.1.5 above). However, an entity could consider the requirements and guidance in IFRS 15.	Under IFRS 15, if upon initial measurement there is a difference between the measurement of the receivable under IFRS 9 and the corresponding amount of revenue, that difference is presented immediately in profit or loss (e.g., as an impairment loss).
Disclosures		
Overall	The disclosure requirements are based on IFRS 15, but at a reduced level to provide proportionate and practical solutions that are cost effective to apply. In addition, FRS 102 provides certain disclosure exemptions to qualifying entities. See further discussion in 11 above.	IFRS 15 requires a comprehensive and coherent set of revenue recognition disclosures. It contains a disclosure objective and detailed disclosure requirements including both quantitative and qualitative disclosures.

FRS 102		IFRS 15
Amount of revenue recognised during the period	Similar to IFRS 15. For qualifying entities, there are available exemptions from disclosing revenue recognised from contracts with customers separately from its other sources of revenue and disaggregated revenue. However, all UK entities applying FRS 102 are still required to disclose particulars of turnover (see discussion in 11.4.1.B above). [1 Sch 68].	IFRS 15 requires disclosure of revenue recognised from contracts with customers separately from its other sources of revenue. It also requires quantitative and qualitative information by providing disaggregated revenue from contracts with customers into categories that depict how the nature, amount, timing and uncertainty of revenue and cash flows are affected by economic factors.
Segmental disclosures	Similar to IFRS 15. For qualifying entities, there is an exemption from disclosing additional information that enables users of financial statements to understand the relationship between the disclosure of disaggregated revenue and revenue information disclosed for each reportable segment. See further discussion in 11.4.1.A above.	In addition to the disclosure requirements of IFRS 8 <i>Operating Segments</i> , entities within the scope of (or voluntarily applying) IFRS 8 are also required by IFRS 15 to disclose sufficient information to enable users of financial statements to understand the relationship between the disclosure of disaggregated revenue and revenue information disclosed for each reportable segment.
Disclosures on contract balances	Section 23 requires the following quantitative disclosures specific to contract balances: - Opening and closing balances of receivables, contract assets and contract liabilities - Revenue recognised in the reporting period that was included in the contract liability balance at the beginning of the period See further discussion in 11.4.1.C above.	IFRS 15 requires the following quantitative and qualitative disclosures specific to contract balances: - Opening and closing balances of receivables, contract assets and contract liabilities - Revenue recognised in the reporting period that was included in the contract liability balance at the beginning of the period - Explanation of how the timing of satisfaction of performance obligations relates to the typical timing of payment and the effect thereof on contract assets and liabilities - Explanation of the significant changes in the contract asset and contract liability balances during the reporting period
Disclosures on performance obligations	Similar to IFRS 15. For qualifying entities, there are available exemptions from disclosing descriptive information about an entity's performance obligations related to the following: - When typically satisfied - Significant payment terms - And - Nature of goods and services See further discussion in 11.4.1.D above.	IFRS 15 requires the following quantitative and qualitative disclosures specific to performance obligations: - Descriptive information about an entity's performance obligations related to the following: - When typically satisfied - Significant payment terms - Nature of goods and services - Obligations for returns, refunds, and other similar obligations - And

FRS 102		IFRS 15
		- Types of warranties and related obligations) - Revenue recognised in the reporting period from performance obligations satisfied (or partially satisfied) in previous periods
	Similar to IFRS 15. Subject to certain optional exemptions (i.e., optional for contracts with an original expected duration of one year or less or those that meet the requirements of the right to invoice practical expedient - see 8.1.4.B above), Section 23 requires an entity to provide a quantitative or qualitative explanation of the significance of unsatisfied performance obligations and when they are expected to be satisfied. However, for qualifying entities, there is an exemption from disclosing the information described above. In addition, no further information is required to be disclosed when related optional exemptions are applied. See further discussion in 11.4.1.D above.	Subject to certain optional exemptions (i.e., optional for contracts with an original expected duration of one year or less or those that meet the requirements of the right to invoice practical expedient), IFRS 15 requires disclosure of the aggregate amount of the transaction price allocated to performance obligations that are unsatisfied (or partially satisfied) as of the end of the reporting period and quantitative or qualitative explanation of when the related revenue is expected to be recognised. An entity is required to explain qualitatively whether it is applying the optional exemptions and whether any consideration from contracts with customers is not included in the transaction price and, therefore, not included in the information disclosed (e.g., an estimate of the transaction price would not include any estimated amounts of variable consideration that are constrained).
Disclosures on significant judgements made in determining the timing of satisfaction of performance obligations, the transaction price and amounts allocated to performance obligations	The general requirement in FRS 102.8.6 is applied in respect of Section 23 when disclosing the significant judgements made in determining the timing of satisfaction of performance obligations, the transaction price and amounts allocated to performance obligations (see 11 and 11.4.2 above). For performance obligations satisfied over time, Section 23 requires disclosure of the methods used to recognise revenue and how those methods are applied. However, an exemption from providing this specific disclosure requirement is available for qualifying entities. See further discussion in 11.4.1.D above.	IFRS 15 requires qualitative disclosures specific to significant judgements (and changes in judgements) made in determining the timing of satisfaction of performance obligations, the transaction price and amounts allocated to performance obligations, including: - For performance obligations satisfied over time, the method used to recognise revenue and why the method faithfully depicts the transfer of goods and services - For performance obligations satisfied at a point in time, significant judgements made in evaluating when control transfers to a customer - Methods, inputs and assumptions used to estimate variable consideration, adjust consideration for the effects of time value of money, measure non-cash consideration and apply the constraint

FRS 102		IFRS 15
		- Methods, inputs and assumptions used to estimate stand-alone selling prices and the use of any allocation exceptions - Methods, inputs and assumptions used to measure obligations for returns, refunds and other similar obligations
Disclosures on contract costs i.e., costs to obtain or fulfil a contract	Section 23 requires the following quantitative disclosures specific to contract costs: - Closing balances of capitalised contract costs by main category or asset - Amount of amortisation and any impairment losses recognised in the period The general requirement in FRS 102.8.6 is applied in respect of Section 23 when disclosing the judgements made in determining the amount of costs to obtain or fulfil a contract with a customer and the method used to determine amortisation for each reporting period. See further discussion in 11.4.3 above.	IFRS 15 requires the following quantitative and qualitative disclosures specific to contract costs: - Judgements made in determining the amount of costs to obtain or fulfil a contract - Method used to determine amortisation for each reporting period - Closing balances of capitalised contract costs - Amount of amortisation and any impairment losses recognised in the period
Disclosures on practical expedients	Section 23 requires disclosures on the use of the following available options: - Option to make no adjustments for the time value of money (see 'Time value of money' above) - Option to recognise costs incurred to obtain a contract as an asset (see 'Capitalisation of costs to obtain a contract' above) - Option to expense incremental costs of obtaining a contract when incurred if the amortisation period of the asset that the entity otherwise would have recognised is one year or less (see 'Capitalisation of costs to obtain a contract' above) For qualifying entities, exemption from providing the disclosure requirement, as described above, is available. See further discussion in 11.4.4 above.	IFRS 15 requires disclosures on the use of the following practical expedients: - Practical expedient on the existence of a significant financing component (see 'Time value of money' above) - Practical expedient to expense incremental costs of obtaining a contract when incurred if the amortisation period of the asset that the entity otherwise would have recognised is one year or less (see 'Capitalisation of costs to obtain a contract' above)
Illustrative examples		
Illustrative examples	No illustrative examples provided.	Includes illustrative examples which illustrate aspects of IFRS 15.

Appendix A – Defined terms

Extract from FRS 102

Appendix I

Glossary

contract	An agreement between two or more parties that creates enforceable rights and obligations.
contract asset	An entity's right to consideration in exchange for goods or services that the entity has transferred to a customer when that right is conditional on something other than the passage of time (eg the entity's future performance).
contract liability	An entity's obligation to transfer goods or services to a customer for which the entity has received consideration (or the amount is due) from the customer.
customer	A party that has contracted with an entity to obtain goods or services that are an output of the entity's ordinary activities in exchange for consideration.
income	Increases in assets or decreases in liabilities that result in increases in equity, other than those relating to contributions from equity investors.
performance obligation	A promise in a contract with a customer to transfer to the customer either: (a) a distinct good or service (or a distinct bundle of goods or services); or (b) a series of distinct goods or services that are substantially the same and that have the same pattern of transfer to the customer.
revenue	Income arising in the course of an entity's ordinary activities.

Appendix B – Index of Illustrations

Illustration 2-1:	Non-monetary exchange outside the scope of Section 23	1134
Illustration 2-2:	Non-monetary exchange in the scope of Section 23	1134
Illustration 2-3:	Identification of a customer	1135
Illustration 2-4:	Transactions that might be in the scope of multiple sections of FRS 102 and/or other FRSs	1136
Illustration 4-1:	Oral contract	1141
Illustration 4-2:	Collectability of the consideration	1146
Illustration 4-3:	Assessing collectability for a portfolio of contracts	1147
Illustration 4-4:	Determining the duration of the contract	1149
Illustration 4-5:	Duration of a contract without a termination penalty	1150
Illustration 4-6:	Partial termination of a contract	1151
Illustration 4-7:	Services provided during a period after contract expiration	1153
Illustration 4-8:	Unapproved change in scope and price	1155
Illustration 4-9:	Determining whether the amount of consideration reflects the stand-alone selling price of additional goods or services	1160
Illustration 4-10:	Modification of a contract for goods - Additional products for a price that reflects the stand-alone selling price	1161
Illustration 4-11:	Modification of a contract for goods - Additional products for a price that does not reflect the stand-alone selling price	1162
Illustration 4-12:	Modification resulting in a cumulative catch-up adjustment to revenue	1163
Illustration 4-13:	Contract modification that decreases the scope of the promised goods or services in a contract	1164
Illustration 4-14:	Blend-and-extend contract modification	1165
Illustration 5-1:	Explicit and implicit promises in a contract	1171
Illustration 5-2:	Determining the nature of the promise in a contract with a stand-ready element	1174
Illustration 5-3:	Significant integration service	1179
Illustration 5-4:	Significant customisation service	1179
Illustration 5-5:	Highly interdependent and highly interrelated	1180
Illustration 5-6:	Identification of performance obligations in a contract for the sale of a real estate unit that includes the transfer of land	1181
Illustration 5-7:	Hardware sold with cloud services	1183
Illustration 5-8:	Implementation services are distinct	1184
Illustration 5-9:	Implementation services are not distinct	1184
Illustration 5-10:	Allocation of variable consideration for a series versus a single performance obligation comprising non-distinct goods and/or services	1187
Illustration 5-11:	A series in which the goods or services need not be consecutively transferred	1187
Illustration 5-12:	A series for which the accounting result would be different if not treated as a series	1188
Illustration 5-13:	IT outsourcing - series provision is met	1189
Illustration 5-14:	Transaction processing - series provision is met	1189
Illustration 5-15:	Hotel management - series provision is met	1190
Illustration 5-16:	Determining whether promised goods and services represent a series - series provision is met	1190
Illustration 5-17:	Entity is both a principal and an agent	1194

Illustration 5-18:	Determination of whether a reseller of software licences is a principal or agent	1197
Illustration 5-19:	Entity is an agent	1199
Illustration 5-20:	Entity is a principal	1200
Illustration 5-21:	Option that provides the customer with a material right (discount voucher)	1205
Illustration 5-22:	Evaluating a customer option when the stand-alone selling price is highly variable	1206
Illustration 5-23:	Variable consideration (IT outsourcing arrangement)	1208
Illustration 5-24:	Customer option that is not a material right	1209
Illustration 5-25:	Customer option that is a material right	1209
Illustration 5-26:	Customer option	1209
Illustration 5-27:	Variable consideration (variable quantities of goods or services)	1210
Illustration 5-28:	Customer option with no contractual penalties	1210
Illustration 5-29:	Customer option with contractual penalties	1210
Illustration 5-30:	Class of customer evaluation	1211
Illustration 5-31:	Volume discounts	1212
Illustration 5-32:	Evaluating a customer option with volume discounts	1213
Illustration 5-33:	Exercise of a material right under the requirements for changes in the transaction price	1214
Illustration 6-1:	Volume discount incentive	1219
Illustration 6-2:	Consideration is not the stated price - implicit price concession	1223
Illustration 6-3:	Estimating the transaction price using the expected value method	1226
Illustration 6-4:	Estimating the transaction price using the most likely amount	1227
Illustration 6-5:	Variable consideration constraint	1229
Illustration 6-6:	Estimating variable consideration using the expected value method	1230
Illustration 6-7:	Milestone payments	1232
Illustration 6-8:	Right of return	1235
Illustration 6-9:	Restocking fees	1237
Illustration 6-10:	Financing component and right of return	1240
Illustration 6-11:	Advance payment and assessment of discount rate	1241
Illustration 6-12:	Entitlement to non-cash consideration	1244
Illustration 6-13:	Consideration paid to a customer in exchange for a distinct good or service	1250
Illustration 6-14:	Consideration payable to a customer	1252
Illustration 6-15:	Non-refundable upfront fees	1255
Illustration 7-1:	Estimating the stand-alone selling price using the residual approach	1264
Illustration 7-2:	Allocation methodology	1264
Illustration 7-3:	Allocating transaction price when there is a range of stand-alone selling prices	1267
Illustration 7-4:	Estimating the stand-alone selling price of options that are separate performance obligations	1269
Illustration 7-5:	Measuring an option	1270
Illustration 7-6:	Relative stand-alone selling price allocation	1272
Illustration 7-7:	Allocation when an entity is both a principal and an agent in a contract	1272
Illustration 7-8:	Allocation using the relative stand-alone selling price method	1274
Illustration 7-9:	Variable fee service arrangement based on usage	1276
Illustration 7-10:	Fixed-fee service arrangement with overages	1277
Illustration 7-11:	Allocation of variable consideration	1278

Appendix C – Index of Frequently asked questions

Question 3-1:	Are pre-production activities in the scope of Section 23?	1138
Question 3-2:	Are sales of by-products or scrap materials in the scope of Section 23?	1138
Question 3-3:	Are the sales of prepaid gift cards within the scope of Section 23?	1138
Question 3-4:	How does a utility entity determine whether a contract that includes a non-refundable upfront fee received for establishing a connection to a network (i.e., a connection fee) is within the scope of Section 23?	1138
Question 3-5:	Are equity instruments issued by an entity to a customer in connection with a revenue arrangement within the scope of Section 23?	1138
Question 4-1:	Does a master supply arrangement (MSA) create enforceable rights and obligations to be considered a contract within the scope of the model in Section 23?	1142
Question 4-2:	How would an entity determine whether a contract exists within the scope of the model during a free trial period?	1142
Question 4-3:	Do entities need to consider side agreements when determining whether a contract exists within the scope of the model?	1143
Question 4-4:	How would an entity assess collectability for a portfolio of contracts?	1147
Question 4-5:	When would an entity reassess collectability?	1147
Question 4-6:	How do termination clauses and termination payments affect the duration of a contract (i.e., the contractual period)?	1149
Question 4-7:	How would an entity evaluate the contract term when only the customer has the right to cancel the contract without cause and how do termination penalties affect this analysis?	1150
Question 4-8:	If an entity has a past practice of not enforcing termination payments, does this affect the duration of the contract (i.e., the contractual period)?	1151
Question 4-9:	How would an entity account for a partial termination of a contract (e.g., a change in the contract term from three years to two years prior to the beginning of year two)?	1151
Question 4-10:	How is consideration that was received from a customer, but not yet recognised as revenue, accounted for when the contract is cancelled?	1151
Question 4-11:	How does an entity account for services provided during a period after contract expiration in which enforceable rights and obligations do not exist until the contract is renewed?	1152
Question 4-12:	How would an entity assess collectability for a portfolio of contracts?	1154
Question 4-13:	When would an entity evaluate a contract under the contract modification requirements?	1157
Question 4-14:	When an arrangement that has already been determined to meet the Section 23's contract criteria is modified, would an entity need to reassess whether that arrangement still meets the criteria to be considered a contract within the scope of the five-step model and/or the stand-alone selling prices of the underlying goods and services?	1158
Question 4-15:	How does an entity distinguish between a contract modification and a change in the estimated transaction price due to variable consideration after contract inception?	1158
Question 4-16:	How would an entity distinguish between a contract modification and a marketing offer when an entity provides customer incentives?	1159
Question 4-17:	How would an entity account for the exercise of a material right? That is, would an entity account for it as: a contract modification, a continuation of the existing contract or variable consideration?	1159
Question 4-18:	How do entities account for modifications and other changes to licences of intellectual property?	1159

Question 4-19:	How would an entity account for a partial termination of a contract (e.g., a change in the contract term from three years to two years prior to the beginning of year two)?	1164
Question 4-20:	How would an entity account for a contract modification that decreases the scope of a contract?	1164
Question 4-21:	How would an entity account for a 'blend-and-extend' contract modification?	1164
Question 4-22:	How would an entity account for a contract asset that exists when a contract is modified if the modification is treated as the termination of an existing contract and the creation of a new contract?	1165
Question 4-23:	When is a contract considered terminated for purposes of applying FRS 102.23.10(b)?	1167
Question 5-1:	How would an entity assess whether pre-production activities are a promised good or service?	1172
Question 5-2:	What is the nature of the promise in a 'typical' stand-ready obligation?	1173
Question 5-3:	Do all contracts with a stand-ready element include a single performance obligation that is satisfied over time?	1173
Question 5-4:	How would an entity evaluate whether an exclusivity provision in a contract with customer represents a promised good or service?	1174
Question 5-5:	Does a guarantee to defend or maintain a patent represent a promised good or service?	1174
Question 5-6:	How does an entity determine whether 'connected' hardware sold with cloud services represent one or more performance obligations?	1182
Question 5-7:	How would entities determine whether implementation services are distinct?	1183
Question 5-9:	Does a licence to a content library include more than one performance obligation?	1184
Question 5-9:	In order to apply the series requirement, must the goods or services be consecutively transferred?	1187
Question 5-10:	In order to apply the series requirement, does the accounting result need to be the same as if the underlying distinct goods or services were accounted for as separate performance obligations?	1188
Question 5-11:	In order to apply the series requirement, how does an entity consider whether a performance obligation consists of distinct goods or services that are 'substantially the same'?	1188
Question 5-12:	Can an entity choose whether to apply the series requirement?	1190
Question 5-13:	Do all stand-ready obligations meet the criteria to be accounted for as a series?	1191
Question 5-14:	Can an entity make an accounting policy choice to report revenue from contracts with customers on a gross or net basis?	1193
Question 5-15:	How would an entity determine whether it is a principal or an agent in a transaction for a specified good for which it only takes title momentarily or never has physical possession?	1202
Question 5-16:	How would entities determine the presentation of amounts billed to customers (e.g., shipping and handling, expenses or cost reimbursements and taxes) under FRS 102 (i.e., as revenue or as a reduction of costs)?	1202
Question 5-17:	How does an entity allocate the transaction price in a contract with multiple performance obligations in which the entity acts as both a principal and an agent?	1204
Question 5-18:	Would entities consider only the current transaction or would they consider past and future transactions with the same customer when determining whether an option for additional goods or services provides the customer with a material right?	1207
Question 5-19:	Is the material right evaluation solely a quantitative evaluation or does the evaluation also consider qualitative factors?	1207

Question 5-20:	How would an entity distinguish between a contract that contains an option to purchase additional goods or services and a contract that includes variable consideration (see 6.2 below) based on a variable quantity (e.g., a usage-based fee)?	1207
Question 5-21:	When, if ever, would an entity consider the goods or services underlying a customer option as a separate performance obligation?	1210
Question 5-22:	How does an entity consider the class of customer when evaluating whether a customer option is a material right?	1211
Question 5-23:	Are volume rebates and/or discounts on goods or services accounted for as variable consideration or as customer options to acquire additional goods or services at a discount?	1211
Question 5-24:	How does an entity consider whether prospective volume discounts determined to be customer options are material rights?	1212
Question 5-25:	How would an entity consider whether a renewal option is a material right?	1213
Question 5-26:	How would an entity consider whether a loyalty or reward programme is a material right?	1214
Question 5-27:	How would an entity account for the exercise of a material right? That is, would an entity account for it as: a contract modification, a continuation of the existing contract or variable consideration?	962
Question 5-28:	Is an entity required to evaluate whether a customer option that provides a material right includes any effects of time value of money? If so, how would entities perform this evaluation?	963
Question 5-29:	How would revenue be recognised for customer options for additional goods or services that represent a material right but do not have an expiration date (i.e., can an entity recognise breakage for these options)?	964
Question 6-1:	How would entities determine the presentation of amounts billed to customers (e.g., shipping and handling, expenses or cost reimbursements and taxes under the revenue standards (i.e., as revenue or as a reduction of costs)?	964
Question 6-2:	Are volume rebates and/or discounts on goods or services accounted for as variable consideration or as customer options to acquire additional goods or services at a discount?	964
Question 6-3:	How would an entity distinguish between a contract that contains an option to purchase additional goods or services and a contract that includes variable consideration based on a variable quantity (e.g., a usage-based fee)?	964
Question 6-4:	Are liquidated damages, penalties or compensation from other similar clauses accounted for as variable consideration or as warranties under Section 23?	965
Question 6-5:	If a contract includes an undefined quantity of outputs, but the contractual rate per unit is fixed, is the consideration variable?	965
Question 6-6:	If a contract is denominated in a currency other than that of the entity's functional currency, would changes in the contract price due to exchange rate fluctuations be accounted for as variable consideration?	965
Question 6-7:	How would an entity account for price protection or price matching clauses included in a contract with a customer?	966
Question 6-8:	Do early payment (or prompt payment) discounts represent a form of variable consideration?	966
Question 6-9:	How does an entity account for a dispute related to a contract accounted for in accordance with Section 23 that might result in consideration received or receivable from a customer?	968
Question 6-10:	Are there any situations in which an entity would not have to estimate variable consideration at contract inception under Section 23?	968
Question 6-11:	Is an entity required to follow a two-step approach to estimate variable consideration (i.e., first estimate the variable consideration and then apply the constraint to that estimate)?	968

Question 6-12:	How does an entity apply the constraint on variable consideration to milestone payments?	969
Question 6-13:	How would an entity distinguish between a contract modification and a change in the estimated transaction price due to variable consideration after contract inception?	970
Question 6-14:	Is a refund liability a contract liability (and, thus, subject to the presentation and disclosure requirements of a contract liability)?	970
Question 6-15:	Is an entity applying the portfolio approach practical expedient when accounting for rights of return?	970
Question 6-16:	How does an entity account for restocking fees for goods that are expected to be returned?	971
Question 6-17:	How does an entity account for restocking costs related to expected returns (e.g., shipping or repackaging costs)?	971
Question 6-18:	How can an entity evaluate a conditional call option to repurchase an asset?	972
Question 6-19:	Does an entity account for a customer's return of a defective item in exchange for compensation (i.e., not for a replacement item) as a right of return or an assurance-type warranty?	972
Question 6-20:	How do entities consider whether the practical expedient on adjusting for the effects of time value of money applies to contracts with a single payment stream for multiple performance obligations?	975
Question 6-21:	How does an entity allocate the effects of time value of money when there are multiple performance obligations in a contract?	977
Question 6-22:	Is an entity required to evaluate whether a customer option that provides a material right includes any effects of time value of money? If so, how would entities perform this evaluation?	977
Question 6-23:	Who is considered to be an entity's customer when applying the requirements for consideration payable to a customer?	978
Question 6-24:	How does an entity that acts as an agent account for incentive payments made to end-consumers that are not the entity's customers and are outside the distribution chain?	978
Question 6-25:	Which payments to a customer are within the scope of the requirements for consideration payable to a customer?	979
Question 6-26:	Do litigation settlements payable by an entity to its customer represent consideration payable to a customer?	980
Question 6-27:	How does an entity account for upfront payments to a customer or a potential customer?	980
Question 6-28:	How does an entity present 'negative revenue' resulting from consideration paid or payable to a customer that exceeds the amount to which the entity expects to be entitled?	981
Question 6-29:	Over what period would an entity recognise a non-refundable upfront fee (e.g., fees paid for membership to a club, activation fees for phone, cable or internet services) that does not relate to the transfer of a good or service?	981
Question 6-30:	How does a utility entity determine whether a contract that includes a non-refundable upfront fee received for establishing a connection to a network (i.e., a connection fee) is within the scope of Section 23?	982
Question 6-31:	What factors might be relevant when a utility entity applies the guidance to non-refundable upfront fees for establishing a connection to a network?	982
Question 6-32:	How is consideration that was received from a customer, but not yet recognised as revenue, accounted for when the contract is cancelled?	983
Question 7-1:	When estimating the stand-alone selling price, does an entity have to consider its historical pricing for the sale of the good or service involved?	983
Question 7-2:	When using an expected cost plus margin approach to estimate a stand-alone selling price, how would an entity determine an appropriate margin?	984

Question 7-3:	When estimating the stand-alone selling price of a good or service, can an entity estimate a range of prices or does it have to identify a point estimate?	985
Question 7-4:	How does an entity evaluate a contract where the total transaction price exceeds the sum of the stand-alone selling prices?	985
Question 7-5:	Can an entity use the stated contract price as the stand-alone selling price of a good or service?	985
Question 7-6:	Could the form of an option (e.g., a gift card versus a coupon) affect how an option's stand-alone selling price is estimated?	986
Question 7-7:	Can an entity use the practical alternative when some, but not all, of the goods or services in the original contract are subject to a renewal option?	986
Question 7-8:	How does an entity allocate the transaction price in a contract with multiple performance obligations in which the entity acts as both a principal and an agent?	986
Question 7-9:	How does an entity allocate the transaction price in a contract with optional purchases using the relative stand-alone selling price method?	986
Question 7-10:	How does an entity allocate the effects of time value of money when there are multiple performance obligations in a contract?	988
Question 7-11:	How does an entity distinguish between a contract modification and a change in the estimated transaction price due to variable consideration after contract inception?	989
Question 8-1:	Can an entity elect to recognise revenue at a point in time under Section 23?	989
Question 8-2:	Do all contracts with a stand-ready element include a single performance obligation that is satisfied over time?	989
Question 8-3:	What factors does an entity consider when evaluating whether a customer simultaneously receives and consumes the benefits of a commodity (e.g., electricity, natural gas or heating oil) as the entity performs?	989
Question 8-4:	How does an entity evaluate a customer's right to sell (or pledge) a right to obtain an asset when determining whether the customer controls the asset as it is created or enhanced under FRS 102.23.81(b)?	990
Question 8-5:	Does an entity consider the completed asset or the work in progress when assessing whether its performance creates an asset with no alternative use under FRS 102.23.81(c)?	990
Question 8-6:	How does an entity determine whether it has an enforceable right to payment under FRS 102.23.81(c)?	990
Question 8-7:	To have an enforceable right to payment for performance completed to date, does an entity need to have a present unconditional right to payment?	992
Question 8-8:	Does an entity have a right to payment for performance completed to date if the entity receives a non-refundable upfront payment that represents the full transaction price?	993
Question 8-9:	Can an entity conclude it has an enforceable right to payment for performance completed to date when a contract is priced at a loss?	993
Question 8-10:	Can an entity have an enforceable right to payment for performance completed to date if it is not entitled to a reasonable profit margin on standard inventory materials that were purchased but not yet used in completing the performance obligation?	994
Question 8-11:	What does an entity consider when assessing the over time criteria for the sale of a real estate unit?	994
Question 8-12:	Does an entity contemplate consideration it might receive from the potential resale of the asset to determine whether an enforceable right to payment for performance completed to date exists?	995
Question 8-13:	How are the effects of learning curve costs addressed in Section 23?	995
Question 8-14:	How would an entity measure progress towards satisfaction of a stand-ready obligation that is satisfied over time?	996

Question 8-15:	Can multiple measures of progress be used to depict an entity's performance in transferring a performance obligation comprised of two or more goods and/or services that is satisfied over time (i.e., a combined performance obligation)?	997
Question 8-16:	How would an entity determine the appropriate single measure of progress for a combined performance obligation that is satisfied over time?	997
Question 8-17:	Can control of a good or service underlying a performance obligation satisfied over time be transferred at discrete points in time?	997
Question 8-18:	Can an entity use the 'right to invoice' practical expedient for a contract that includes rates that change over the contractual term?	998
Question 8-19:	If an entity does not meet the criteria to use the 'right to invoice' practical expedient, can it still use the disclosure practical expedient regarding the amount of transaction price allocated to remaining performance obligations?	998
Question 8-20:	If an entity begins activities on a specifically anticipated contract either: (1) before it agrees to the contract with the customer; or (2) before the arrangement meets the criteria to be considered a contract under Section 23, how would revenue for those activities be recognised at the date a contract exists?	998
Question 8-21:	How do entities consider costs subject to volatility caused by factors such as foreign exchange rates and commodity prices in a measure of progress if an entity applies an input method based on costs incurred?	1000
Question 8-22:	How does an entity account for fulfilment costs incurred prior to the contract establishment date that are outside the scope of another section of FRS 102 (e.g., Section 13 <i>Inventories</i>)?	1002
Question 8-23:	How do shipping terms affect when an entity has transferred control of a good to a customer?	1002
Question 8-24:	How can an entity evaluate a conditional call option to repurchase an asset?	1002
Question 8-25:	How would an entity account for the exercise of a material right? That is, would an entity account for it as: a contract modification, a continuation of the existing contract or variable consideration?	1005
Question 8-26:	Are customers' unexercised rights (i.e., breakage) a form of variable consideration?	1005
Question 8-27:	How would revenue be recognised for customer options for additional goods or services that represent a material right, but do not have an expiration date (i.e., can an entity recognise breakage for these options)?	1005
Question 9-1:	How do entities account for modifications and other changes to licences of intellectual property?	1005
Question 9-2:	How do entities account for an option to revoke licensing rights?	1006
Question 9-3:	How does an entity account for contracts that grant both permission for past use of intellectual property and a licence to use the intellectual property in the future?	1006
Question 9-4:	Does a licence to a content library include more than one performance obligation?	1006
Question 9-5:	Is a licence that provides a right to access intellectual property a series of distinct goods or services that would be accounted for as a single performance obligation?	1006
Question 9-6:	How do entities account for modifications and other changes to licences of intellectual property?	1007
Question 8-7:	How do entities account for an option to revoke licensing rights?	1007
Question 9-8:	Can the recognition constraint for sales-based or usage-based royalties be applied to royalties that are paid in consideration for sales of intellectual property (rather than just licences of intellectual property)?	1007
Question 9-9:	If a contract for a licence of intellectual property includes payments with fixed amounts (e.g., milestone payments) that are determined by reference to	

	sales-based or usage-based thresholds, would the royalty recognition constraint need to be applied?	1008
Question 9-10:	If a contract for a licence of intellectual property includes a milestone payment based on the first commercial sale, would the royalty recognition constraint apply?	1009
Question 9-11:	Does the application of the royalty recognition constraint preclude the requirement to adhere to the allocation objective in Section 23?	1009
Question 9-12:	Can an entity recognise revenue for sales-based or usage-based royalties for licences of intellectual property on a lag if actual sales or usage data is not available at the end of a reporting period?	1009
Question 9-13:	How does a minimum guarantee affect the recognition of sales-based or usage-based royalties promised in exchange for a licence of intellectual property that is satisfied at a point in time?	1011
Question 9-14:	How does a minimum guarantee affect the recognition of sales-based or usage-based royalties promised in exchange for a licence of intellectual property that is satisfied over time?	1011
Question 9-15:	Can entities apply the royalty recognition constraint for sales-based or usage-based royalties if they do not own the intellectual property or control the intellectual property as a principal in the arrangement?	1011
Question 9-16:	Can entities recognise sales-based or usage-based royalties before the sale or usage of the intellectual property occurs if they have historical information that is highly predictive of future royalty amounts?	1012
Question 9-17:	Must an entity apply the royalty recognition constraint when the royalty is calculated on a financial metric that is not solely based on sales or usage?	1012
Question 9-18:	Does the royalty recognition constraint apply if the licence of intellectual property is not distinct from other goods or services in the contract?	1013
Question 9-19:	Can an entity recognise revenue at an expected average rate when a licence of intellectual property has royalty rates that increase over time?	1013
Question 9-20:	How would an entity distinguish between a contract that contains an option to purchase additional licences and a contract in which additional licence usage might be subject to the royalty recognition constraint?	1014
Question 10-1:	How does an entity evaluate whether a product warranty is a service-type warranty (i.e., a performance obligation) when it is not separately priced?	1016
Question 10-2:	How would an entity account for a customary business practice of providing repairs provided outside the stated contractual warranty period?	1016
Question 10-3:	Does an entity account for a customer's return of a defective item in exchange for compensation (i.e., not for a replacement item) as a right of return or an assurance-type warranty?	1017
Question 10-4:	Are liquidated damages, penalties or compensation from other similar clauses accounted for as variable consideration or as warranties under Section 23?	1018
Question 10-5:	How does an entity account for an onerous contract with a customer when the contract includes more than one performance obligation that is satisfied over time consecutively?	1021
Question 10-6:	Does the timing of commission payments affect whether they are incremental costs?	1021
Question 10-7:	Would commission payments subject to a threshold be considered incremental costs?	1022
Question 10-8:	Would an entity capitalise commissions paid on contract modifications?	1022
Question 10-9:	Would fringe benefits on commission payments be included in the capitalised amounts?	1022
Question 10-10:	Must an entity apply the practical expedient to expense contract acquisition costs to all of its qualifying contracts across the entity or can it apply the practical expedient to individual contracts?	1024

Question 10-11: How would an entity account for capitalised commissions upon a modification of the contract that is treated as the termination of an existing contract and the creation of a new contract?	1026
Question 10-12: Would an entity consider contract renewals when assessing whether the practical expedient applies?	1026
Question 10-13: If a contract contains more than one performance obligation, can an entity apply the practical expedient?	1026
Question 10-14: Can an entity defer costs of a transferred good or service that would otherwise generate an upfront loss because variable consideration is fully or partially constrained?	1027
Question 10-15: How does an entity account for fulfilment costs incurred prior to the contract establishment date that are outside the scope of another section of FRS 102 (e.g., Section 13 <i>Inventories</i>)?	1027
Question 10-16: How are the effects of learning curve costs addressed in Section 23?	1028
Question 10-17: How does an entity account for pre-contract or setup costs?	1028
Question 10-18: Can mobilisation costs be capitalised as costs to fulfil a contract with a customer under Section 23?	1029
Question 10-19: Can an entity defer losses incurred on a contract by capitalising related fulfilment costs when it is expected to generate future profits on the sale of optional goods or services (i.e., loss leader)?	1029
Question 10-20: How does an entity account for costs associated with installation or implementation services?	1031
Question 10-21: How does an entity determine whether a commission on a renewal contract is commensurate with the commission on the initial contract?	1032
Question 10-22: How does an entity determine the amortisation period of an asset recognised for the incremental costs of obtaining a contract with a customer?	1033
Question 10-23: Can an entity attribute the capitalised contract costs to the individual performance obligations in the contract to determine the appropriate amortisation period?	1034
Question 10-24: Over what period would an entity amortise a sales commission (that is only paid once a threshold is met) that is determined to be an incremental cost to obtain a contract?	1034
Question 10-25: When does an entity begin to amortise an asset recognised for the incremental cost of obtaining a renewal contract?	1036
Question 10-26: How are capitalised contract costs and their amortisation classified and presented in the statement of financial position and statement of profit or loss and other comprehensive income, respectively?	1036
Question 10-27: How often does an entity need to assess its capitalised contract costs for impairment under Section 23?	1036
Question 11-1: How would an entity determine the presentation of contract assets and liabilities for contracts that contain multiple performance obligations?	1036
Question 11-2: How would an entity determine the presentation of two or more contracts that are required to be combined under Section 23?	1036
Question 11-3: When would an entity offset contract assets and liabilities against other statement of financial position items (e.g., accounts receivable)?	1037
Question 11-4: Is a refund liability a contract liability (and, thus, subject to the presentation and disclosure requirements of a contract liability)?	1037
Question 11-5: How would an entity account for a contract asset that exists when a contract is modified if the modification is treated as the termination of an existing contract and the creation of a new contract?	1038
Question 11-6: If an entity has not transferred a good or service, when does it have an unconditional right to payment?	1038

Question 11-7: Can income outside the scope of Section 23 be presented as revenue in the income statement?	1038
Question 11-8: How are shipping and handling costs incurred in relation to a revenue contract presented in the income statement?	1040
Question 11-9: How are capitalised contract costs and their amortisation classified and presented in the statement of financial position and statement of profit or loss and other comprehensive income, respectively?	1040
Question 11-10: How would entities determine the presentation of amounts billed to customers (e.g., shipping and handling, expenses or cost reimbursements and taxes) under FRS 102 (i.e., as revenue or as a reduction of costs)?	1040
Question 11-11: If an entity does not meet the criteria to use the 'right to invoice' practical expedient, can it still use the disclosure practical expedient regarding the amount of transaction price allocated to remaining performance obligations?	1042
Question 11-12: How are capitalised contract costs and their amortisation classified and presented in the statement of financial position and statement of profit or loss and other comprehensive income, respectively?	1042

Chapter 26

Government grants

Contents

Overview	1442
1 Introduction	1443
2 Comparison between Section 24 and IFRS	1444
2.1 Recognition	1444
2.2 Measurement	1444
2.3 Presentation	1444
3 Requirements of Section 24 for government grants	1445
3.1 Scope	1445
3.1.1 Government assistance	1445
3.1.2 Government grants	1445
3.1.3 Scope exclusions	1446
3.1.4 Determining the recipient of a government grant	1446
3.1.5 Investment tax credits	1447
3.1.6 Interaction of Section 24 with Section 23	1448
4 Recognition and measurement	1449
4.1 General requirements of Section 24	1449
4.2 Measurement	1450
4.3 Recognition in the income statement	1451
5 The performance model	1452
6 The accrual model	1453
6.1 Grants relating to revenue	1453
6.2 Grants relating to assets	1454
6.3 Particular issues arising from grants relating to assets accounted for as deferred income	1454
7 Practical issues	1455
7.1 Separating grants into components	1455
7.2 Leases at below-market rates	1455

Overview

Section 24 *Government Grants* applies to the accounting for, and the disclosure of, government grants and to the disclosure of other forms of government assistance. The distinction between government grants and other forms of government assistance is important because the section's accounting requirements only apply to the former.

Government grants are government assistance in the form of resource transfer to an entity in exchange of past or future compliance with specified conditions relating to the operating activities of the entity. [FRS 102 Appendix I]. The purpose of government grants, which may be called subsidies, subventions or premiums, and other forms of government assistance is often to encourage a private sector entity to take a course of action that it would not normally have taken if the assistance had not been provided. Government grants are also used to provide financial support as was abundantly illustrated during the coronavirus pandemic when governments all over the world introduced measures to provide financial assistance to businesses to mitigate the significant impact of the pandemic on their economies.

The main accounting issue that arises from government grants is how to deal with the benefit that the grant represents in the profit and loss account. Section 24 allows the application of either the performance model or the accrual model in recognising grants. [FRS 102.24.4]. Under the performance model, grants are recognised as income at the time the performance-related conditions are satisfied. [FRS 102.24.5B]. Under the accrual model, grants related to revenue are recognised as income on a systematic basis over the periods in which the entity recognises, as expenses, the costs that the grants are intended to compensate, whereas grants related to assets must be recognised in income on a systematic basis over the expected useful life of the related asset. [FRS 102.24.5D, FRS 102.24.5F].

This chapter covers the requirements of Section 24 of FRS 102 in relation to recognition, measurement and presentation of government grants and looks at specific examples of government grants. It also covers the required disclosures for grants and other forms of government assistance.

What you need to know

- Grants are not recognised until there is reasonable assurance that the entity will comply with the conditions specified in the grant, and that the grant will be received by the entity.
- An entity must measure the amount of a grant at the fair value of the asset received or receivable.
- For the recognition of grants, Section 24 allows the application of either the performance model or the accrual model, applied on a class-by-class basis.
- Under the performance model, the grants are recognised as income in profit or loss once the performance-related conditions of the grant are satisfied.
- Under the accrual model, the entity will need to classify the grant as relating either to revenue or to assets.
- Grants relating to revenue are recognised in income on a systematic basis over the periods in which the entity recognises the related costs and grants relating to assets are recognised in income on a systematic basis over the expected useful life of the related asset.
- Grants relating to assets must be presented in the statement of financial position as deferred income. Deducting the amount from the carrying amount of the related asset is not permitted.
- The nature of significant other forms of government assistance that do not meet the definition of a government grant must be disclosed.

1 Introduction

Government grants typically involve a transfer of resources by a government body to an entity to support specified activities or projects. The transfer of funds is usually dependent on past or future compliance with certain conditions relating to the entity's operating activities. The exact nature of the support varies over time as governments and their priorities change. For example, financial assistance was provided by governments during the coronavirus pandemic to mitigate the significant impact in their economies.

The main accounting issue that arises from government grants is how to deal with the benefit that the grant represents in the profit and loss account. Section 24 *Government Grants* gives an accounting policy choice over one of two models for recognising the benefit: the performance model and the accrual model.

[FRS 102.24.4]. These methods are discussed at 5 and 6 below.

Section 24 also recognises that an entity may receive other forms of government assistance, such as free technical or marketing advice and the provision of guarantees, including assistance which cannot reasonably have a value placed upon them. Rather than prescribe how these need to be accounted for, it requires disclosure about such assistance. [FRS 102.24.6(d)].

The FRC made minor changes to Section 24 in the September 2024 edition of FRS 102. For example, an amendment was made to clarify that, under the accruals model, grants related to assets includes right-of-use assets. [FRS 102.24.5F].

2 Comparison between Section 24 and IFRS

There are some differences between the accounting and disclosure requirements in Section 24 compared to IFRS accounting standards (IAS 20 *Accounting for Government Grants and Disclosure of Government Assistance*). The key differences are discussed at 2.1 to 2.3 below and are summarised at 9 below.

2.1 Recognition

Section 24 provides an accounting policy choice for recognising grants as income using either a performance model or an accrual model. [FRS 102.24.4]. The performance model means the grant is recognised as income as the performance-related conditions are satisfied. [FRS 102.24.5B]. The accrual model means that grants relating to revenue are recognised as income on a systematic basis over the same periods as the related expenses, and grants relating to assets are recognised in income on a systematic basis over the useful life of the asset. [FRS 102.24.5D, FRS 102.24.5F].

IAS 20 follows an accruals-based approach requiring grants to be recognised in profit or loss on a systematic basis in the same period or periods as the entity recognises as expenses the costs that the grants are intended to compensate. [IAS 20.12]. IAS 20 does not permit a performance model approach.

2.2 Measurement

Section 24 requires that all government grants are measured on initial recognition at the fair value of the asset received or receivable. [FRS 102.24.5].

IAS 20 allows non-monetary government grants to be recorded initially at fair value, or alternatively at a nominal amount. [IAS 20.23].

2.3 Presentation

Section 24 prohibits the deferred element of a grant that relates to an asset being deducted from the carrying amount of the asset. [FRS 102.24.5G].

IAS 20 allows two options in presenting the deferred element in the statement of financial position. The deferred element can be presented either as deferred income or as a deduction against the asset. [IAS 20.24].

3 Requirements of Section 24 for government grants

3.1 Scope

Section 24 applies in accounting for, and in the disclosure of, government grants and in the disclosure of other forms of government assistance. The distinction between government grants and other forms of government assistance is important because the section's accounting requirements only apply to the former. The term 'government' includes agencies of the government and similar bodies whether local, national or international. [FRS 102 Appendix I]. Section 24, however, gives no further guidance on what is meant by 'similar bodies', therefore the assessment of whether a body providing support to an entity is regarded as a 'similar body' under Section 24 is a judgemental area dependent on the specific facts and circumstances.

The accounting for incoming resources from non-exchange transactions other than government grants by public benefit entities or entities within a public benefit entity group is addressed in Section 34 *Specialised Activities*. [FRS 102.PBE24.1A]. See Chapter 36 at 6.

3.1.1 Government assistance

Government assistance is defined as the action, by a government, which is designed to provide economic benefit specific to an entity or range of entities which qualify under specified criteria. [FRS 102 Appendix I]. Examples of government assistance include free marketing or technical advice and the provision of guarantees. [FRS 102.24.6(d)]

3.1.2 Government grants

Government grants are a specific form of government assistance. Under FRS 102, government grants represent government assistance in the form of transfers of resources to an entity in return for past or future compliance with specified conditions relating to the operating activities of the entity. [FRS 102 Appendix I].

Governments may provide grants to entities to motivate them to engage in projects or activities that are considered 'green'. These grants must be recognised and measured in accordance with Section 24 using either the performance or accrual model. There are grants that are named using other terms. For example, an incentive called a 'green tax credit' may fall within the scope of Section 24 if it is not calculated by reference to taxable profits or income tax liabilities.²²⁰

Grants of emission rights may meet the definition of government grants under Section 24. Grants of renewable energy certificates can also meet the definition of government grants, in some cases. The rights and certificates themselves might be classified as intangible assets under Section 18 *Intangible Assets other than Goodwill* or, if they meet the definition of inventory under Section 13 *Inventories*, it might be appropriate to classify them as inventory rather than intangible assets. Entities may wish to consider guidance in the EY publication, International GAAP®, in formulating appropriate accounting policies under FRS 102. Caution must be taken when considering this guidance due to the differences in the requirements between IFRS accounting standards and FRS 102 (see 9 below).

There are other emerging schemes, for example schemes relating to carbon credit projects. It is important that the specific facts and circumstances of a scheme are determined to be able to assess whether the scheme involves a government grant or not. Factors to consider include the primary reason for the scheme, whether there is a transfer of economic benefit from the government and, if so, what conditions are attached and what type of expense the government support may be compensating for.

²²⁰ [FRS 102 Factsheet 8, Climate-related matters](#), Financial Reporting Council, page 16

3.1.3 Scope exclusions

The recognition and measurement provisions of Section 24 do not apply to government assistance that does not meet the definition of a grant and to any forms of government assistance that:

- (a) Cannot reasonably have a value placed on them. [FRS 102.24.2].
 - (b) Comprise transactions with government that cannot be distinguished from the normal trading transactions of the entity. [FRS 102.24.2].
- Or
- (c) Are in the form of reliefs and deductions that are available in determining an entity's taxable profit/loss or are determined or limited based on income tax liability. Examples would include income tax holidays, investment tax credits, accelerated depreciation allowances and reduced income tax rates. [FRS 102.24.3].

FRS 102 does not provide examples of assistance that might be incapable of reasonable measurement or examples of transactions that are indistinguishable from the normal trading transactions of the entity in (a) and (b) above. Such examples might include cases when financial guarantees are provided by government in the absence of any commercial alternative source or where the entity is being favoured by a government's procurement policy.

Minor amendments in the September 2024 edition of FRS 102 were introduced to refine the description of the forms of government assistance delivered through the corporation tax system that are excluded from the scope of Section 24 (item (c) above). The accounting treatment of government assistance in (c) is addressed by Section 29 *Income Tax*. [FRS 102.24.3]. There is further discussion related to this in the context of investment tax credits in 3.1.5 below and in Chapter 31 at 3.3.

Whilst the recognition and measurement provisions of Section 24 do not apply to the forms of government assistance noted above, certain disclosures are required, as discussed at 8.4 below.

3.1.4 Determining the recipient of a government grant

It may not always be clear who the recipient of a government grant is due to the involvement of multiple parties. In certain cases, an entity might receive cash from the government but is merely acting as a 'facilitator' to ensure the benefit of the cash is passed on to the intended beneficiary of the government support. In cases where there are multiple parties, it is important to have a full understanding of the terms of the relevant government support scheme to determine which party needs to be recognising a government grant.

Illustration 3-1: Recipient of a government grant

The government has a scheme in place whereby they will provide £1,000 of financial support to commercial electricity users over 12 months. This support will be provided by way of part settlement of their energy bills. The government provides cash to energy suppliers, and this must be used only for the partial settlement of customer bills. The terms of the scheme state that it does not reduce the amount the energy supplier is able to charge its electricity customers. Any cash remaining after the 12 months must be returned to the government.

In this case, who is the recipient of the government grant, is it the supplier or the electricity users?

Although the energy supplier receives a resource (cash) from the government, it is required to pass that resource on to its customer. The energy supplier still has a right to supply energy at the price in the customer contract, so the provision of support does not affect the supplier's contract with its customer. It is merely the settlement party that has changed, i.e., the energy bill is now part settled by the customer and part settled by the government. It is therefore appropriate, in this case, to consider the customer (not the supplier) as the grant recipient. The supplier is merely facilitating the provision of support to the customer and recognises a liability upon receiving cash from the government that it must use for the partial settlement of customer bills.

3.1.5 Investment tax credits

Section 24 excludes from its scope government assistance provided by way of a reduction in taxable profit or determined or limited according to an entity's income tax liability, citing income tax holidays, investment tax credits, accelerated depreciation allowances and reduced income tax rates as examples. Taxes based on income are required to be accounted under Section 29. [FRS 102.24.3]. This implies that those investment tax credits that are excluded from the scope of Section 24 would be accounted for under Section 29 (see Chapter 31). However, if government assistance is described as an investment tax credit, but it is neither determined nor limited by the entity's income tax liability, nor provided in the form of an income tax deduction, the requirements of Section 24 apply.

Investment tax credits are not defined in FRS 102 and can take different forms and be subject to different terms. Sometimes a tax credit is given as a deductible expense in computing the entity's tax liability, and sometimes as a deduction from the tax liability, rather than as a deductible expense. In some cases, the assistance is chargeable to corporation tax and in others it is not. Entitlement to assistance can be determined in a variety of ways. Investment tax credits may relate to direct investment in property, plant and equipment, research and development or other specific activities. Some credits may be realisable only through a reduction in current or future corporation tax payable, while others may be settled directly in cash if the entity is loss-making or otherwise does not have sufficient corporation tax payable to offset the credit within a certain period. Access to the credit may be limited according to the total of all taxes paid to the government providing the assistance, including employment taxes (such as PAYE and NIC) and VAT, in addition to corporation tax. There may be other conditions associated with receiving the investment tax credit, for example with respect to the conduct and continuing activities of the entity, and the credit may become repayable if ongoing conditions are not satisfied.

This raises the question as to how an entity must account for those forms of government incentives for specific kinds of investments that are delivered through the tax system. Entities must carefully consider the nature of such incentives, and the conditions attached to them to determine whether they fall in the scope of Section 24 or Section 29.

How we see it

In our view, the determination of which framework to apply to a particular investment tax credit (Section 24 or Section 29) is a matter of judgement and all facts and circumstances relating to the specific incentive need to be considered in assessing the substance of the arrangement.

The following factors will often be relevant, but this list of factors must not be considered exhaustive, and entities may identify other factors which they consider to be more important than those listed below.

Feature of credit	Indicator of Section 24 treatment	Indicator of Section 29 treatment
Method of realisation	Directly settled in cash where there are insufficient taxable profits to allow credit to be fully recovered, or available for set off against non-income taxes, such as payroll taxes, sales taxes or other amounts owed to government.	Only available as a reduction in income taxes payable (i.e., benefit is forfeited if there are insufficient income taxes payable). However, a lengthy period allowed for carrying forward unused credits may make this indicator less relevant.
Number of non-income tax conditions attached to initial receipt of grant (e.g., minimum employment, ongoing use of purchased assets)	Many	None or few
Restrictions as to nature of expenditure required to receive the grant	Highly specific	Broad criteria encompassing many different types of qualifying expenditures.
Income tax status of grant income	Taxable	Not taxable

In group accounts, in which entities from several different jurisdictions are consolidated, it may be desirable that all 'investment tax credits' are consistently accounted for, either as a Section 24 government grant or as an income tax under Section 29. However, the judgement as to which section applies is made by reference to the nature of each type of investment tax credit and the conditions attached to it. This may mean that the predominant practice in a particular jurisdiction for a specific type of investment tax credit has evolved differently from the consensus in another tax jurisdiction for what could appear to be a substantially similar credit. We believe that, in determining whether the arrangement is of a type that falls within the scope of Section 24 or Section 29, an entity will need to consider the following factors in the order listed below:

- If there is a predominant local treatment by FRS 102 reporters for a specific investment tax credit as to whether a specific credit in the relevant tax jurisdiction falls within the scope of Section 24 or Section 29, this must take precedence.
- If there is no predominant local treatment by FRS 102 reporters, the group-wide approach to determining the section that applies to such a credit must be applied.
- In the absence of a predominant local consensus or a group-wide approach to making the determination, the indicators listed in the table above provide guidance.

This may mean that an FRS 102 reporter operating in several territories adopts different accounting treatments for apparently similar arrangements in different countries, but it at least ensures a measure of comparability between different FRS 102 reporters operating in the same tax jurisdiction.

How we see it

It is important to note that this is not an accounting policy choice. Accordingly, an entity operating in several territories could be required to adopt different accounting treatments for apparently similar arrangements in different countries if predominant local practice for a specific type of investment tax credit has evolved differently from the consensus in another jurisdiction.

For investment tax credits subject to Section 24 and therefore treated as government grants, the requirements in relation to recognition and measurement of government grant (see 4 below) and presentation (see 8 below) applies.

The treatment of investment tax credits accounted for under Section 29 is discussed in Chapter 31 at 3.3.

3.1.6 Interaction of Section 24 with Section 23

The situation can arise whereby a contract with a customer, accounted for under Section 23 *Revenue from Contracts with Customers*, also includes a government grant that falls within the scope of Section 24, for example as illustrated below:

Illustration 3-2: Contract with a customer contains a government grant

A pharmaceutical entity has a contract with the government of the jurisdiction within which it operates. The contract includes a grant relating to the development of a vaccine and an obligation to deliver a specific quantity of vaccines, with an option to purchase additional vaccines at a discount.

How does the entity allocate the contract between Section 23 and Section 24?

Section 23 applies to all contracts with customers, except when certain other sections apply. [FRS 102.23.1, FRS 102.23.2]. When other sections specify how to separate or initially measure any parts of the contract, entities are required to consider firstly the separation or measurement requirements of that other section. Otherwise, the entity must apply Section 23 to separate or initially measure those parts of the contract. [FRS 102.23.3]. In this example, Section 24 does not specify the requirements to separate or measure parts of the contract, therefore an entity must apply the requirements of Section 23. As a result, the consideration for the portion of the contract that is within the scope of Section 23 (the delivery of specific quantity of vaccines) is measured in accordance with Section 23 (at stand-alone selling price). The difference between the contract value and the consideration for the delivery of the vaccines is the benefit from the government grant that is in scope of Section 24.

4 Recognition and measurement

4.1 General requirements of Section 24

Section 24 requires that: [FRS 102.24.3A]

Extract from Section 24

- 24.3A** Government grants, including non-monetary grants, shall not be recognised until there is reasonable assurance that:
- (a) the entity will comply with the conditions attaching to them; and
 - (b) the grants will be received

The standard does not define 'reasonable assurance', which raises the question of whether or not it means the same as 'probable' (or more likely than not'). [FRS 102.21.4(b)]. The phrase 'reasonable assurance' is generally interpreted as being a high threshold which implies a significantly higher probability than 'more likely than not'. Therefore, an entity cannot recognise government grants before it is significantly more likely than probable that the entity will comply with the conditions attached to them and that the grants will be received. In assessing the likelihood of compliance with conditions attached to the grant, it is acknowledged the conditions may relate to future performance and other future events.

For a grant accounted for under the accrual model related to an asset, a grant cannot be recognised before the asset is acquired, regardless of how likely the acquisition of the asset is. If the grant is also conditional on maintaining a number of jobs to operate the asset, the grant must be recognised as soon as the asset is acquired as long as there is (and continues to be throughout the period during which the grant can be claimed back by government) reasonable assurance that the jobs will be maintained as required.

Receiving a grant usually does not of itself provide conclusive evidence that the conditions attaching to the grant have been or will be fulfilled. This is particularly true since there sometimes exists a supranational legal framework to comply with in addition to the eligibility criteria in local jurisdictions. For example, EU Member State aids also need to comply with EU laws, e.g., in the context of the coronavirus pandemic. A grant may need to be recognised before it is received (in cash or otherwise) or even before the entity formally files a request to receive the grant (i.e., as soon as it becomes eligible to receive the grant). The grant receivable would not generally be a financial asset as it does not arise from contractual rights but rather arises due to government legislation.

The assessment about the existence of a 'reasonable assurance' must be made before the initial recognition of any grant income as well as subsequently, on a continuous basis, until the end of the period during which any grant received could be claimed back by the government. Such assessment requires the entity to understand fully the exact conditions that apply before it can make a valid judgement on whether it is entitled to the grant, and to what extent.

The Illustration below considers two examples.

Illustration 4-1: Recognition of a government grant

- (a) The government has announced that, as a result of the coronavirus pandemic, it is introducing a scheme whereby entities will receive financial support for their employee costs. This support is available to all companies, there are no performance-related conditions and once the entity submits details of all their employees, there is a routine verification process to confirm the identity of the applicant, and the grant is automatically paid.

In this Illustration, there are no conditions attached, and the scheme is very simple by design so that the outcome is known by the entity with certainty. Hence, assessing whether there is 'reasonable assurance' is relatively straightforward.

- (b) The government, with the aim of driving investment in artificial intelligence, has announced a scheme whereby they will provide entities in this industry financial support for the next two years but only for very specific cost types. The application process is complex and requires applicants to submit detailed cost information and forecasts alongside the specific amount of funding they will require to cover both past and future costs. Once the submission is made, there is an extensive approval process by an independent reviewer, which may require further information to be submitted by the entity as the approval process progresses. As this is a new scheme, there is no past experience of approvals that the industry can consider.

In this Illustration, once due care has been applied by the entity to identify eligible projects and costs as set out in the scheme rules, and provide appropriate documentation, it will normally be reasonably assured that the entity will comply with the conditions attaching to the grant. However, caution may need to be exercised when measuring the amount expected to be received.

When the terms and conditions of a grant have been communicated before the end of a reporting period, then in determining whether it is reasonably assured that the entity will comply with the conditions attached to a grant and that the grant will be received as per Section 24, information obtained after the reporting period, (e.g., confirmation of the entity receiving the grant), may provide evidence of an adjusting subsequent event.

Conversely, no 'reasonable assurance' can exist if the terms and conditions of a grant have not been communicated before the end of a reporting period.

How we see it

In our view, entitlement to a grant does not exist before the terms of the grant have been established by the government and clearly communicated publicly or confirmed to the entity for entity-specific grants.

If a new law or regulation introduces a government grant after the end of the reporting period, it will represent a non-adjusting subsequent event.

Illustration 4-2: Date of entitlement to a government grant

An entity has a 31 March year end and on 20 March 20X3 there is an earthquake in the jurisdiction in which it operates. There is severe damage to the company's facilities. The government of that jurisdiction announces on 21 March that it will introduce assistance, but the exact nature and terms of such assistance are not communicated until 4 April 20X3. Hence, the criteria in paragraph 3A of Section 24 cannot be met on 31 March 20X3. The announcement on 4 April 20X3 confirming the conditions related to the grant is a non-adjusting post balance sheet event.

If the facts and circumstances supporting the recognition of the government grant change and it is no longer 'reasonably assured' that the entity will retain the grant it has initially recognised, then the entity needs to derecognise any grant income and reverse any related asset or, to the extent the grant has already been received in cash, recognise a refund liability. This may be before it becomes 'more likely than not' that the entity may need to refund the grant (i.e., before the recognition threshold for a provision is met under Section 21 *Provisions and Contingencies*).

When a grant is derecognised consideration must be given as to whether there has been a change in facts and circumstances or there was an error in the initial application of the recognition criteria. In the case of the latter, please refer to the guidance in Section 10 *Accounting Policies, Estimates and Errors* as discussed in Chapter 9 at 3.5.

Illustration 4-3: Derecognition of a government grant - accrual model

A pharmaceutical company recognised a government grant two years ago based on meeting future conditions on their performance. It has reassessed their future performance and no longer believes it is reasonably assured they will comply with the conditions attached to the government grant. This is due to a decline in performance that could not be foreseen when making the initial judgement on recognising the government grant. Any grant funding already received is required to be repaid.

The company accounts for this government grant using the accrual model. The government grant the company was initially entitled to was £500 to be recognised in the income statement on a straight-line basis over 5 years. Currently, the company has deferred income of £300 and as £250 had already been received in cash, the remaining £250 is held as a receivable on the balance sheet.

On derecognition, the accounting entries will be:

Dr	Grant income (income statement)	£200	
Dr	Deferred income (balance sheet)	£300	
	Cr Government grant receivable (balance sheet)		£250
	Cr Payable to Government (balance sheet)		£250

4.2 Measurement

On initial recognition, all government grants are measured at the fair value of the asset received or receivable. [FRS 102.24.5]. The asset will normally be cash but could be a non-monetary asset such as land or other resources. Fair value is defined as the price, as at the measurement date, that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants. [FRS 102 Appendix I]. Where guidance on determining the fair value of a specific asset is not available in the relevant section of FRS 102, the guidance in Section 2A *Fair Value Measurement* must be used (see Chapter 10).

4.3 Recognition in the income statement

Section 24 provides entities with an accounting policy choice over the method of recognition of government grants in the income statement:

- Performance model (see 5 below)

Or

- Accrual model (see 6 below)

The policy choice must be applied on a class-by-class basis. [FRS 102.24.4].

A class of underlying assets is defined in FRS 102 as a grouping of underlying assets of a similar nature and use in an entity's operations. [FRS 102 Appendix I]. A class of financial assets is then defined as a grouping that is appropriate to the nature of the information disclosed in the financial statements and that takes into account the characteristics of financial assets. [FRS 102.11.48(c)]. Therefore, it appears that government grants of a similar nature and subject to similar conditions will need to be recognised in income in a similar way.

Any accounting policy choice must be made according to the requirements of Section 10 *Accounting Policies, Estimates and Errors*. This requires that the chosen accounting policy results in information that is relevant to the decision-making needs of users of the financial statements and reflects the economic substance of transactions, other events and conditions, and not merely their legal form. [FRS 102.10.4]. In that regard, an understanding of the purpose for which the grant was awarded is a relevant consideration.

5 The performance model

Under this model, grant income is recognised by reference to the achievement of performance-related conditions in the grant imposed on the entity, as follows:

- If there are no imposed specified performance-related conditions on the entity, then the grant is recognised in income when the grant proceeds are received or receivable.
- If there are imposed specified performance-related conditions on the entity, then the grant is recognised in income only when the performance-related conditions are satisfied.
- If the grant is received in advance of being able to be recognised as income under either of the above circumstances, then the amount of the grant is recognised as a liability. [FRS 102.24.5B].

FRS 102 defines performance-related condition as “a condition under which entitlement to resources is conditional on the performance of a specified activity, or a particular level of service or units of outputs to be delivered.” [FRS 102 Appendix I].

When the performance model is applied, a grant with no performance-related conditions will be recognised in income in full when received or receivable (i.e., when the general recognition requirements at 4.1 above are met), irrespective of the nature or timing of the expenditure to which it is contributing.

If a performance-related condition is imposed over a period of time, the question arises as to how the grant is recognised. In the Financial Reporting Council's *Staff Education Note 8 (SEN 8) Government Grants*, an example illustrates where a grant contributed to the build cost of a factory but with a performance-related condition of usage and employment (see Illustration 5-1 below). SEN 8 states that “the mechanism for recognising the grant during the specified period would depend on the detailed terms and conditions, but it would not generally be based on the expected useful life of the building”.²²¹ The Staff Education Notes were published in December 2013 and were subsequently superseded by Staff Factsheets in 2018. The new Staff Factsheets do not include a specific replacement for SEN 8, however, we believe that the SEN 8 guidance remains relevant in the application of Section 24.

One of the most relevant terms and conditions to consider in determining how income must be recognised in profit or loss under the performance model will be how any potential obligation to repay the grant varies as the performance period elapses. There are two most likely scenarios:

- If the potential obligation to repay the grant remains equal to the full amount of the grant throughout the performance period and that obligation is only discharged in full at the end of the performance period then, the full grant must be recognised in profit or loss at the end of the performance period.
- If the potential obligation to repay the grant reduces as the performance period progresses, then it may be appropriate to recognise the release of the grant to income over the performance period in line with the corresponding reduction in the amount potentially repayable.

Illustration 5-1: Grant towards a fixed asset - performance model

A manufacturing company secures a UK government grant of £200,000 as an incentive to open a factory in a region of high unemployment. There are no further conditions associated with the grant, other than that it is used to pay for the construction of this factory. A second grant is secured from the European Union of £130,000 in relation to the construction of the same factory. An additional condition relating to this grant is that the company continues to operate the factory for a period of five years, subject to repayment of the grant on a time-apportioned basis. The company constructs the factory for a total cost of £600,000 and begins to use it. In the same year in which the factory begins operating the company receives both grants. The company has a policy of depreciating buildings over a useful life of 50 years.

How will the company recognise the grants in the income statement?

Under the performance model, the whole of the UK government grant is recognised in income when the factory is opened, because this is the only condition imposed under the grant. However, the grant from the European Union is subject to an additional condition requiring use of the asset for at least five years. This grant would be recognised in income evenly over that five-year period as the performance-related condition is satisfied.

221 [Accounting and Reporting Policy: FRS 102 - Staff Education Note 8 Government Grants](#), Financial Reporting Council, page 5.

6 The accrual model

Under this model, the entity is required to classify a grant, or each part of a grant, as relating to either revenue or assets. [FRS 102.24.5C]. Grants may be received as part of a package of financial or fiscal aids to which a number of conditions are attached. In such cases, care is needed in identifying the conditions giving rise to the costs and expenses which determine the periods over which the grant will be recognised as income. It may also be appropriate to allocate a part of the grant on one basis and a different part on another.

6.1 Grants relating to revenue

Grants relating to revenue must be recognised in the income statement on a systematic basis that matches them with the related costs that they are intended to compensate. [FRS 102.24.5D].

Grants that become receivable as compensation for costs or losses already incurred (i.e., the related costs have been previously recognised in the income statement) or to provide immediate financial support to the entity with no future related costs must be recognised in income when they become receivable.

[FRS 102.24.5E].

The requirement to match a grant relating to revenue against the costs that it is intended to compensate can be difficult to apply in practice, because grants are sometimes given for a particular kind of expenditure that forms a component of a larger project. For example, in trying to determine an appropriate accounting policy for government assistance that is in the form of a grant against training costs incurred as part of a larger project, an entity might consider recognition in income in one of the following ways:

- Matching against direct training costs
- Or
- Matching rateably against total project costs

How we see it

Determining a reasonable approach is dependent on the specific facts and circumstances, including not only the terms of the arrangement but also other facts that might highlight the purpose of the grant, including those relating to the context in which the grant was offered, the conditions attached to it and the consequences of failing to meet those conditions.

Under the accrual method, recognition of a grant related to revenue in income when received in cash is unlikely to be an appropriate method, because it is not obviously linked to the recognition of the related expenditure and would be acceptable only in the rare circumstances where no basis exists for allocating a grant to periods other than the one in which it is received.

In some jurisdictions, grants are taxed as income on receipt; consequently, this is often the argument advanced for taking grants to income when received in cash. However, it is clear that the treatment of an item for tax purposes does not necessarily determine its treatment for accounting purposes, and recognition in the income statement on receipt may result in an unacceptable departure from the principle that government grants accounted under the accrual method and relating to revenue must be matched with the costs that they are intended to compensate. [FRS 102.24.5D]. The recognition of a grant in the income statement in a different period from that in which it is taxed, gives rise to a timing difference that must be accounted for in accordance with Section 29 (see Chapter 31).

How we see it

In attributing a grant relating to revenue to related costs, entities will have to make their own determination as to how the matching principle must be applied in light of the specific facts and circumstances of the case. The only overriding considerations are that the determination must be consistently applied to similar grants and the policy adopted, if material, must be adequately disclosed along with any significant judgements relevant to the application of Section 24.

6.2 Grants relating to assets

Grants relating to assets, including right-of-use assets, must be recognised in the income statement on a systematic basis over the expected useful life of the related asset. [FRS 102.24.5F].

Grants related to depreciable assets are recognised as income over the periods in which, and in proportion to, depreciation on those assets is charged. Grants related to non-depreciable assets may also require the fulfilment of certain obligations, in which case they would be recognised as income over the periods in which the costs of meeting the obligations are incurred. For example, a grant of land may be conditional upon the erection of a building on the site, and it may be appropriate to recognise it as income over the life of the building.

The Regulations prohibit the offset of items that represent assets against items that represent liabilities. [1 Sch 8J. FRS 102 does not therefore permit grants relating to an asset to be deducted from the carrying amount of the asset. The grant must instead be recognised as deferred income. [FRS 102.24.5G].

6.3 Particular issues arising from grants relating to assets accounted for as deferred income

When grants related to assets are accounted for as deferred income, an entity must reflect the unamortised balance carried in the statement of financial position in determining an impairment loss, a gain on disposal or in a reassessment of the useful life of the asset. Further guidance on these situations is provided in the EY publication, International GAAP®.

7 Practical issues

7.1 Separating grants into components

A grant received may relate to a package of activities, the components of which have different costs and conditions. In such cases, it is common that the components for which the grant is given are not specifically identified or quantified. It might be appropriate to treat these different components on different bases rather than accounting for the entire grant in one way, however, this will not always be practicable.

Under the accrual model, an entity is required to classify a grant, or each part of a grant, either as a grant relating to revenue or grant relating to assets. [FRS 102.24.5C]

How we see it

Under the accrual model, the assessment of the appropriate classification of a grant or a part of a grant requires the careful analysis of the facts and circumstances. The final determination as to which classification is appropriate must reflect not only the terms of the arrangement but also other facts that might highlight the purpose of the grant.

Classification of a grant, or a part of a grant, under the accrual model between the components will often involve judgement and entities may place more emphasis on some features than on others. In these cases, and where the effect is material, the financial statements must explicitly state what judgement has been made when applying the standard and disclose the corresponding financial effect.

For a class of grants accounted under the performance model, an entity is not required to separate the grant into components because the recognition of income under this model is based on the satisfaction of the performance-related conditions attached to the grant and not based on the purpose of the grant (i.e., whether the grant relates to revenue or to assets).

7.2 Leases at below-market rates

Section 20 *Leases* requires a lessee to use the information readily available to it to determine whether the arrangement provides the lessee with incoming resources from a government grant, for example, where the lease payments are significantly below-market rate. [FRS 102.20.35]. It is important to note that not all leases at below-market rates contain incoming resources from a government grant, so an entity must carefully assess the fact pattern. The incoming resources from the government grant will be recognised as part of the cost of the right-of-use asset. [FRS 102.20.35]. If the lease is modified, and the modification is not accounted for as a separate lease, having remeasured the lease liability, the lessee must do the following:

- For lease modification that decreases the scope of the lease, recognise a proportionate reduction in the carrying amount of the right-of-use asset to reflect the partial or full termination of the lease, account for any incoming resources from government grant in the modified lease, and recognise any resulting gain or loss in profit or loss.
- For all other lease modifications, make a corresponding adjustment to the right-of-use asset, net of any adjustment for incoming resources from a government grant in the modified lease. [FRS 102.20.73].

Lease modifications under Section 20 are discussed further in Chapter 23 at 6.5.

7.3 Loans at lower than market rates of interest

An entity may receive a loan from the government that either is interest-free or has a below-market rate of interest. Section 24 does not explicitly cover such loans, however, IAS 20 requires that the difference between the initial fair value of a government loan that has a below-market rate of interest, and the proceeds received is treated as a government grant. [IAS 20.10A].

As FRS 102 does not address specifically this transaction, we consider it appropriate that an entity consider the requirements and guidance in IFRS accounting standards in developing and applying an accounting policy that results in information that is relevant and reliable. [FRS 102.10.6].

How we see it

In our view, government loans that are interest free or have a below-market rate of interest are in scope of Section 24. The difference between the initial carrying value of the loan and the proceeds received is treated as a government grant and recognised under either the accrual or performance model. The initial carrying value of the loan is the present value of the future payments discounted at a market rate of interest for a similar debt instrument as determined at initial recognition adjusted for transaction costs.

Illustration 7-1: Interest-free loan from a government agency - accounting under Section 11 and accrual model

Company A secures an interest-free loan of £1,000 from a local government agency to ensure that the company invests in new equipment at its manufacturing facility. The loan is repayable at the end of five years and carries no interest. Company A can draw down the loan on demonstrating that it has incurred qualifying expenditure on property, plant and equipment. The Company adopts the accrual model in accounting for government grants. The Company has chosen to apply the requirements of Section 11 and Section 12 in accounting for its financial instruments.

The loan is a basic financial instrument as defined in Section 11. On initial recognition, the market rate of interest for a similar five-year loan for Company A is 10% per year. The initial fair value of the loan is the present value of the future payment of £1,000, discounted using the market rate of interest for a similar loan of 10% for five years. This equates to £621.

The value of the government incentive to Company A to invest in its factory is £379, which is the difference between the total consideration received of £1,000 and the loan's initial value of £621. This difference is treated as a government grant.

Subsequently, interest will be imputed to the loan using the effective interest method, taking account of any transaction costs (see Chapter 13 at 6.2). Under the accrual model, grants will need to be classified as either relating to revenue or relating to assets. [FRS 102.24.5C]. In this example, the benefit of the loan is to help fund the purchase of new equipment. Therefore, it would be appropriate to recognise the grant as relating to an asset. The grant is recognised in income on a systematic basis over the useful life of the new equipment.

Governments sometimes provide assistance in arrangements that are similar in substance to loans by allowing entities to retain sums that they collect on behalf of the government (e.g., value added taxes) until a future event, as in the following Illustration:

Illustration 7-2: Entity allowed to retain amounts owed to government - accrual model

The local government of an underdeveloped region is trying to stimulate investment in fixed assets by allowing local companies to delay payment of the value added tax (VAT) on their sales. An entity participating in this scheme is entitled to retain an amount up to 40% of its investment in fixed assets. The retained VAT must be paid to the local government after 5 years and does not bear interest.

The fact that amounts retained by the entity are required to be repaid after 5 years makes this arrangement similar in nature to an interest-free loan. Accordingly, the entity would determine a value for the government assistance by comparing the amounts retained to the fair value of a 5-year loan at market rates of interest, as illustrated in Illustration 7-1 above. Where the entity accounts the grant under the accrual model, the entity must determine whether the grant is relating to revenue or assets. [FRS 102.24.5C].

In Illustration 7-2 above, because the grant is intended to stimulate investment in fixed assets, the grant is relating to assets. Therefore, it would be appropriate to recognise the grant in income over the useful life of the asset.

7.3.1 Considerations under the accrual model when accounting for loans at lower than market rates of interest

As discussed in 7.3 above, the difference between the initial value of a government loan that has a below-market rate of interest, and the proceeds received is treated as a government grant.

The issue that then arises is how to recognise the grant in profit or loss if the entity adopted the accrual model in accounting for the government grants. As noted in 6 above, Section 24 requires that the grant accounted for under the accrual model is classified either as a grant relating to revenue or as a grant relating to assets. If a grant is relating to revenue, it is required that the grant is recognised in profit or loss on a systematic basis that matches it with the related costs it is intended to compensate. [FRS 102.24.5D]. If a grant is relating to asset, then the grant is recognised in income on a systematic basis over the expected useful life of the related asset. [FRS 102.24.5F].

The assessment of an appropriate method of allocation requires the entity to identify the nature of the grant which is driven by a careful analysis of the facts and circumstances. The final determination as to which treatment is appropriate must reflect not only the terms of the arrangement but also other facts that might highlight the purpose of the loan, for example:

- Where it is determined that the grant is a grant related to an asset, as in Illustration 7-1 in 7.3 above, recognition as the asset is depreciated would be appropriate.
- Where the grant is a grant related to revenue and is intended to compensate for a specific expense, then recognition at the same time as that expense is recognised in profit or loss would be appropriate. [FRS 102.24.5D]. This could include immediate recognition for expenses or losses that had already been incurred. Where the grant is intended to compensate for the cost of funding, then recognition on the same basis as the interest is charged (i.e., over the term of the loan) would be appropriate. This is shown in the following Illustration.

Illustration 7-3: Below-market interest rate loan from the government - accrual model

Company A secures a low interest loan of £1,000 from the government as part of its support measures for the coronavirus pandemic. The loan is repayable at the end of five years and carries an interest rate of 5%, demonstrably below the market rate. There are no conditions attached regarding the expenditure that the loan must be used for. Also, the grant benefit of the below-market rate loan cannot be attributed to any specific costs, past or future, neither based on the terms of the arrangement nor on other facts and circumstances, other than the cost of funding. The purpose of the grant is to provide the entity with immediate liquidity support by allowing it to borrow more money than it could have based on the market rate. The Company accounts for similar grants under the accrual model.

On initial recognition, the market rate of interest for a similar five-year loan is 10% per year. The initial fair value of the loan is the present value of the future payments for the loan, discounted using the market rate of interest for a similar loan of 10% for five years. This equates to £621.

The value of the government incentive to Company A is £379 being the difference between the total consideration received of £1,000 and the loan's initial fair value of £621. This difference is treated as a government grant.

In this Illustration, the grant is compensating Company A for the higher market rate of interest that would otherwise have been charged as an expense on the loan. Company A recognises the grant benefit on the same basis as the interest is charged, over the term of the loan, thereby matching the benefit with the interest cost.

7.4 Forgivable loans

Section 24 does not specifically identify forgivable loans from the government as a grant. However, in certain circumstances, it may be appropriate to account for all, or part of such a loan, as a government grant. IAS 20 recognises a forgivable loan as a government grant when there is reasonable assurance that the entity will meet the terms of the forgiveness of the loan. [IAS 20.10]. Similar to loans at lower than market rates of interest, we consider it appropriate that an entity consider the requirements and guidance in IFRS accounting standards in developing and applying an accounting policy that results in information that is relevant and reliable. [FRS 102.10.6].

How we see it

In our view, a forgivable loan from government, the repayment of which will be waived under certain prescribed conditions, is to be treated as a government grant when there is reasonable assurance that the entity will meet the terms for forgiveness of the loan.

Illustration 7-4 below is an example of a forgivable loan from the government.

Illustration 7-4: Government grant by way of forgivable loan

An entity participates in a government-sponsored research and development programme under which it is entitled to receive a government grant of up to 50% of the costs incurred for a particular project. The government grant is interest-bearing and fully repayable based on a percentage ('royalty') of the sales revenue of any products developed. Although the repayment period is not limited, no repayment is required if there are no sales of the products.

The entity must account for this type of government grant as a forgivable loan, either under the performance or accrual model, as follows:

- Depending on the policy adopted by the entity in accounting financial instruments, initially recognise the cash received as a liability, applying the initial measurement principles in either IAS 39 *Financial Instruments: Recognition and Measurement*, IFRS 9 *Financial Instruments*, or Section 12 *Other Financial Instruments Issues*.
 - Apply the subsequent measurement principles based on the policy adopted by the entity in accounting for financial instruments.
 - Review at each reporting date whether there is reasonable assurance that the entity will meet the terms for forgiveness of part, or all of the loan based on expected future royalty repayments. If this is the case, derecognise the part or all of the liability initially recorded with a corresponding adjustment to recognise the government grant. Applying the general principles in Section 24, this adjustment is made either through income in the income statement or deferred income in the statement of financial position.
- And
- If the entity subsequently revises its estimates of future sales upwards, it adjusts the amount of the liability in accordance with the subsequent measurement principles adopted by the entity and recognises a corresponding adjustment either as a loss in the income statement for any amounts previously included in profit, a reversal of a deferred income, or a combination of both (i.e., in cases where the reversal is greater than the deferred income balance prior to the adjustment).

However, an arrangement only meets the definition of a forgivable loan if its terms provide for circumstances where repayment would be waived (i.e., forgiven), without any other form of settlement. In Illustration 7-4 above, the entity either repays some or all of the loan if the project generates any sales, or, if no sales are made, its liability is waived in full, with no further recourse to the government. If any other consideration is required to be given in settlement of the obligation, then the arrangement is not a forgivable loan.

Where an entity receives a loan to finance a research and development project and the loan will be forgiven if the project is not successful, then the existence of the forgivable loan has no bearing on assessing the project for capitalisation under the criteria in Section 18 *Intangible Assets other than Goodwill*. One of the criteria for capitalisation of development costs is that the entity must demonstrate that the intangible asset will generate probable economic benefits. [FRS 102.18.8H(d)]. The existence of the forgivable loan does not mean that this requirement is always met. The criteria in Section 18 must be assessed on their own merits.

7.5 Repayment of government grants

A government grant that becomes repayable must be recognised as a liability when the repayment meets the definition of a liability. [FRS 102.24.5A]. A liability is defined as an entity's present obligation to transfer an economic resource as a result of past events. [FRS 102 Appendix I]. An entity must carefully assess the existence of a 'reasonable assurance' required to account for the grant initially so that if the grant subsequently becomes repayable, this is generally not the correction of a prior period error but the consequence of a change in circumstances or new information. Hence it is accounted for as a change in accounting estimate.

Repayment of a grant must be charged first against the related unamortised deferred credit and any excess must be recognised as an expense immediately. Where an entity applies the accrual model in a grant relating to an asset, the previously recognised income must be reversed and charged immediately to profit or loss as expense. This expense must be recorded and presented separately from the depreciation expense. The previously recognised income would have not been offset against the depreciation of the related asset as FRS 102 prohibits the netting against the expense to which the asset is related (see 8.2 below). The expense may be recorded in the same line where the previously recognised income was recorded.

The circumstances giving rise to the repayment of a grant related to an asset may require that consideration be given to the possible impairment of the asset.

7.6 Government assistance

Government assistance is defined by the standard as the “action by government designed to provide an economic benefit specific to an entity or range of entities qualifying under specified criteria”.

[FRS 102 Appendix I].

Government assistance that cannot reasonably have a value placed upon them and transactions with government that cannot be distinguished from the normal trading transactions of the entity are excluded in the definition of a government grant. Examples include free technical or marketing advice and the provision of guarantees. The entities are required to disclose this government assistance from which the entity has directly benefited. [FRS 102.24.6(d)].

The following Illustration describes two different forms of government assistance:

Illustration 7-5: Government assistance

(a) Assistance in the form of priority bidding status

A government specifies that entities below a certain size are to be given priority in bidding for a particular type of government contract by mandating a minimum number of such entities to obtain bidding status. Although the entities will benefit from the quota, the value cannot be identified, and the effects of the assistance cannot be segregated from the trading activities of the qualifying entities.

(b) Assistance in the form of credit facilities at market rates

Three governments that between themselves own just over 50% of the shares in an airline participate in granting it a revolving credit facility at a market rate of interest. This is not a government grant as it is on terms that a private market participant might have accepted but it is government assistance as the benefit cannot be distinguished from normal trading activities of the airline.

8 Presentation

8.1 Statement of financial position

Under the performance model, grants received before the performance-related conditions are satisfied are recognised as liability. [FRS 102.24.5B(c)]. The amount must be presented separately or within an applicable account heading such as 'deferred income'.

Under the accrual model, and where grants are relating to assets, the portion of the grant which is deferred must be recognised and presented as deferred income. [FRS 102.24.5G]. FRS 102 does not allow this amount to be deducted from the carrying amount of the asset. For grants under the accrual model that relate to revenue, any amount received that is not recognised in the income statement at the end of the reporting period must also be presented as deferred income.

8.2 Income statement

FRS 102 does not specifically state where grant income must be presented in the income statement. Although not specifically referred to in Section 24, the amount recognised as income cannot be offset against the expense to which the grant is related. The Regulations do not allow offsetting of income against expenditure. [1 Sch 8]. Therefore, income from grants must be presented as a credit, either separately or under a general heading such as 'other operating income'.

In some instances, grants may be presented as revenue if it meets the definition in the standard.

How we see it

Section 23 defines revenue as income arising in the course of an entity's ordinary activities. [FRS 102 Appendix I]. Determining whether a government grant is income arising in the course of an entity's ordinary activities is a matter of judgement after considering all the facts and circumstances relevant to an entity. Facts to consider relevant to this judgement include consideration of the business model of the entity as well as the frequency and purpose of grants received.

Accordingly, some grants may be presented as revenue while others, that are determined not to arise in the course of an entity's ordinary activities, cannot be presented as revenue.

However, any grant revenue recognised that is outside the scope of Section 23 will need to be presented either separately from revenue from contracts with customers within the income statement or disclosed separately within the notes. This is due to entities being required to present in the statement of comprehensive income, or disclose within the notes, the amount of revenue recognised from contracts with customers separately from other sources of revenue.

It is important to distinguish between those transactions which arise in the course of an entity's ordinary activities, and therefore may be presented as revenue, and transactions that are incidental to the main revenue-generating activities, but do not generate revenue themselves.

8.3 Statement of cash flows

The receipt of grants can cause major movements in the cash flows of an entity.

However, neither Section 24 nor Section 7 *Statement of Cash Flows* (see Chapter 7 at 3.4.14) provide guidance on where in the statement of cash flows to present the cash inflows from the receipt of government grants. As a result, there is likely to be diversity in practice for the presentation of all grants in the statement of cash flows. Cash flows received from grants could be considered to be financing by nature because they provide a source of financing to the entity. Alternatively, cash flows received from grants could be presented as operating cash flows by default since they do not seem to meet the definition of financing activities or investing activities. If an entity accounts for a grant under the accrual model, it may consider cash flows received from these grants as operating cash flows if the grants are related to revenue and cash flows received from grants related to assets could be presented as investing cash flows as they relate to an investing activity. Further discussion on cash flow classification can be found in Chapter 7 at 3.4.14.

How we see it

Selecting the most appropriate presentation will be a matter of judgement. Once adopted, the presentation principles must be applied consistently and clear disclosure of the principles and the impact thereof on the cash flow statement must be provided in accordance with Section 10.

Cash flows from refundable advances must be presented as financing cash flows, whereas their transformation into a grant, if and when the entity meets the conditions for forgiveness of the loan, is a non-cash transaction.

8.4 Disclosure requirements

Section 24 requires, whenever material, that entities must disclose the following information regarding government grants:

- The accounting policy adopted for grants in particular whether the performance or accrual model has been adopted.
 - The nature and extent of grants recognised in the financial statements.
 - Unfulfilled conditions and other contingencies attaching to grants that have been recognised in income.
- And
- An indication of any other forms of government assistance from which the entity has directly benefitted. Examples included free technical or marketing advice and the provision of guarantees. *[FRS 102.24.6]*.

9 Summary of GAAP differences

The key differences between FRS 102 and IFRS in accounting for government grants are set out below.

	FRS 102	IFRS
Recognition	Accounting policy choice using either a performance model (grant is recognised as income as the performance related conditions are satisfied) or an accrual model (If grant is relating to revenue, grant is recognised as income when the related expenses are recognised. If grant is relating to assets, grant is recognised as income on a systematic basis over the useful life of the asset).	Only allows accrual model.
Measurement	All government grants measured on initial recognition at the fair value of the asset received or receivable.	Allows non-monetary government grants to be recorded at a nominal amount as an alternative to fair value.
Presentation	In the statement of financial position, the deferred element of a grant accounted for under the accrual model that relates to an asset can only be presented as deferred income. It is prohibited to be deducted from the carrying amount of the asset. In the statement of profit or loss, the income from grants must be presented as a credit. It is not allowed to be deducted against the corresponding expense.	In the statement of financial position, the deferred element of the grant relating to an asset can be presented as deferred income or deduction against the asset. In the statement of comprehensive income, the income recognised from the grant can be presented separately as a credit in the income statement or a deduction in the related expense.

Appendix A - Defined terms

Extract from FRS 102

Appendix I Glossary

asset	A present economic resource controlled by the entity as a result of past events.
expenses	Decreases in assets or increases in liabilities that result in decreases in equity, other than those relating to distributions to equity investors.
fair value	The price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. In the absence of any specific guidance provided in the relevant section of this FRS, the guidance in Section 2A Fair Value Measurement shall be used in determining fair value.
government	Government, government agencies and similar bodies whether local, national or international.
government assistance	Action by government designed to provide an economic benefit specific to an entity or range of entities qualifying under specified criteria.
government grant	Government assistance in the form of a transfer of resources to an entity in return for past or future compliance with specified conditions relating to the operating activities of the entity.
income	Increases in assets or decreases in liabilities that result in increases in equity, other than those relating to contributions from equity investors.
income tax	All domestic and foreign taxes that are based on taxable profits. Income tax also includes taxes, such as withholding taxes, that are payable by a subsidiary, associate or joint venture on distributions to the reporting entity.
liability	A present obligation of the entity to transfer an economic resource as a result of past events.
non-exchange transaction	A transaction whereby an entity receives value from another entity without directly giving approximately equal value in exchange, or gives value to another entity without directly receiving approximately equal value in exchange.
performance-related condition (in respect of funding commitments, government grants and other non-exchange transactions)	A condition under which entitlement to resources is conditional on the performance of: (a) specified activity; or (b) a particular level of service or units of output to be delivered.
taxable profit (tax loss)	The profit (loss) for a reporting period upon which income taxes are payable or recoverable, determined in accordance with the rules established by the taxation authorities. Taxable profit equals taxable income less amounts deductible from taxable income.
useful life	The period over which an asset is expected to be available for use by an entity or the number of production or similar units expected to be obtained from the asset by an entity.

Overview

This chapter covers the requirements of Section 25 *Borrowing Costs*. Borrowings costs include interest and other costs incurred by an entity in connection with the borrowing of funds such as interest expense calculated using the effective interest method, interest in respect of lease liabilities and exchange differences arising from foreign currency borrowings to the extent that they are regarded as an adjustment to interest costs.

Under FRS 102, capitalisation of borrowing costs directly attributable to the acquisition, construction or production of a qualifying asset is an accounting policy choice applied separately to each class of qualifying assets. Not all assets are considered a qualifying asset under FRS 102. A qualifying asset is an asset that necessarily takes a substantial period of time to get ready for its intended use or sale.

This chapter highlights the key considerations when:

- Identifying qualifying assets.
- Determining when borrowing costs are eligible for capitalisation or when capitalisation needs to be suspended or ceased altogether.
- And
- Applying the disclosure requirements.

What you need to know

- Section 25 deals with the assessment of when borrowing costs can be capitalised and the treatment of capitalised borrowing costs.
- Capitalisation of borrowing costs directly attributable to the acquisition, construction or production of a 'qualifying asset' is an accounting policy choice applied separately to each class of qualifying assets. A qualifying asset is an asset that necessarily takes a substantial period of time to get ready for its intended use or sale.
- Section 25 prescribes separate requirements for borrowing costs incurred from specific borrowings and general borrowings.
- Section 25 sometimes requires significant judgement when identifying a direct relationship between particular borrowings and a qualifying asset, and when evaluating whether the borrowings could otherwise have been avoided.

1 Introduction

A common question when determining the initial measurement of an asset is whether or not finance costs incurred on its acquisition or during the period of its construction need to be capitalised as part of the cost of the asset or expensed through profit or loss. There have always been a number of strong arguments in favour of the capitalisation of directly attributable finance costs. For example, it is argued that they are just as much a cost as any other directly attributable cost; that expensing finance costs distorts the choice between purchasing and constructing an asset; that capitalising the costs leads to a carrying value that is far more akin to the market value of the asset; and that the financial statements are more likely to represent the true results of the project. Section 25 specifies the accounting for borrowing costs.

2 Comparison between Section 25 and IFRS

Overall, Section 25 is consistent with UK Company Law which allows an entity an accounting policy choice as to whether to capitalise borrowing costs when certain criteria are satisfied. This is different to adopted IFRS since IAS 23 *Borrowing Costs* requires capitalisation of borrowing costs when the criteria are satisfied. The key differences between Section 25 and IFRS are also discussed below. See 5 below for the summary of such GAAP differences.

2.1 Capitalisation of borrowing costs

Under FRS 102, capitalisation of borrowing costs directly attributable to the acquisition, construction or production of a qualifying asset is an accounting policy choice applied separately to each class of qualifying assets (see 3.2 below). [FRS 102.25.2].

Under IFRS, capitalisation of borrowing costs is mandatory for most qualifying assets (i.e., there is no accounting policy choice). However, capitalisation is an accounting policy choice for a qualifying asset measured at fair value or inventories that are manufactured, or otherwise produced, in large quantities on a repetitive basis. [IAS 23.4].

2.2 General borrowings

Under FRS 102, the general borrowings on which the capitalisation rate is based, exclude the borrowings specifically for the purpose of obtaining either qualifying assets, until substantially all the activities necessary to prepare that asset for its intended use or sale are complete, and non-qualifying assets. Therefore, only the general borrowings are included in the computation of the capitalisation rate (see 3.4.3.B below). [FRS 102.25.2C]

IFRS explicitly excludes only the borrowings that are specifically for the purpose of obtaining qualifying assets, thus together with all the general borrowings, specific borrowings to obtain non-qualifying assets are also included in computing the capitalisation rate.

2.3 Expenditure on qualifying assets

Under FRS 102, for the purpose of applying the capitalisation rate to the expenditure on the qualifying asset, the expenditure on the asset is the average carrying amount of the asset during the period, including borrowing costs previously capitalised. [FRS 102.25.2C].

Under IFRS, the average carrying amount of the asset during a period, including borrowing costs previously capitalised, is regarded as a reasonable approximation of the expenditures to which the capitalisation rate is applied in that period. Expenditures on a qualifying asset are explicitly limited to those expenditures that have resulted in payments of cash, transfers of other assets or the assumption of interest-bearing liabilities and reduced by any progress payments received and grants received in connection with the asset. [IAS 23.18].

2.4 Disclosure differences

Disclosure differences between FRS 102 and IFRS are discussed at 5 below.

3 The requirements of Section 25

3.1 Scope

Section 25 applies to borrowing costs. Borrowing costs are interest and other costs incurred by an entity in connection with the borrowing of funds. Borrowing costs include:

- Interest expense calculated using the effective interest method as set out in Section 11 *Basic Financial Instruments* (see Chapter 13).
 - Interest expense on lease liabilities as set out in Section 20 *Leases* (see Chapter 23).
- And
- Exchange differences arising from foreign currency borrowings to the extent that they are regarded as an adjustment to interest costs (see 3.4.4 below). [FRS 102.25.1].

Section 25 does not deal with the actual or imputed costs of equity, including preferred capital and other financial instruments not classified as a liability, that are used to fund the acquisition or construction of an asset. This means that any distributions or other payments made in respect of equity instruments, as defined by Section 22 *Liabilities and Equity*, are not within the scope of Section 25. Conversely, interest and dividends payable on instruments that are legally equity, but classified as financial liabilities under FRS 102, appear to be within the scope of Section 25 (see 3.4.5.D below).

When an entity adopts a policy of capitalising borrowing costs (see 3.2 below), Section 25 addresses whether or not to capitalise borrowing costs as part of the cost of the asset. The identification and measurement of finance costs are not directly dealt with in Section 25 and the section does not address many of the ways in which an entity may finance its operations or other finance costs that it may incur. Examples of these other finance costs and their eligibility for capitalisation under Section 25 are discussed at 3.4.5 below.

Section 25 does not preclude the classification of costs, other than those it identifies, as borrowing costs. However, they must meet the basic criterion in Section 25, i.e., that they are “the costs that are directly attributable to the acquisition, construction or production of a qualifying asset” [FRS 102.25.2A], which would, therefore, preclude treating the unwinding of discounts on provisions as borrowing costs. Many unwinding discounts are treated as finance costs in profit or loss. These include discounts relating to various provisions such as those for onerous leases and decommissioning costs. These finance costs will not be borrowing costs under Section 25 because they do not arise in respect of funds borrowed by the entity that can be attributed to a qualifying asset. Therefore, these costs cannot be capitalised. [FRS 102.25.1, FRS 102.25.2]. In addition, as in the case of exchange differences, capitalisation of such costs can only be permitted “... to the extent that they are regarded as an adjustment to interest costs” (see 3.4.4 below). [FRS 102.25.1].

3.2 Accounting for borrowing costs

For borrowing costs directly attributable to the acquisition, construction or production of a qualifying asset, Section 25 provides an accounting policy choice to either:

- Capitalise those borrowing costs.
- Or
- Recognise all borrowing costs as an expense in profit or loss in the period in which they are incurred. [FRS 102.25.2].

Accordingly, all borrowing costs must be recognised as an expense in profit or loss in the period in which they are incurred unless a policy of capitalising borrowing costs is adopted. In addition, borrowing costs that are not directly attributable to a qualifying asset must be expensed as incurred.

Where an entity adopts a policy of capitalisation of borrowing costs for qualifying assets, it must be applied consistently to a class of qualifying assets. [FRS 102.25.2]. The definition of class is discussed at 3.4.1 below.

Since an entity has a policy choice, a change in accounting policy (i.e., capitalisation versus expense) would require retrospective restatements in accordance with Section 10 *Accounting Policies, Estimates and Errors*. [FRS 102.10.11(d), FRS 102.10.12].

3.3 Qualifying assets

Determining whether an asset is considered a qualifying asset is a key step when evaluating whether borrowing costs can be capitalised. The Appendix defines a qualifying asset as follows:

an asset that necessarily takes a substantial period of time to get ready for its intended use or sale. Depending on the circumstances any of the following may be qualifying assets:

- Inventories
- Manufacturing plants
- Power generation facilities
- Intangible assets
- Investment properties
- And
- Biological assets

Financial assets, and inventories that are produced over a short period of time, are not qualifying assets. Assets that are ready for their intended use or sale when acquired are not qualifying assets.

[FRS 102 Appendix I].

How we see it

We consider that financial assets include equity accounted investments and these are therefore, also excluded from the definition of qualifying assets.

Section 25 is silent as to whether other types of assets not mentioned in the definition (e.g., owner-occupied property) can be qualifying assets.

How we see it

In our view, there is nothing to prohibit other assets meeting the definition of a qualifying asset.

Section 25 does not define 'substantial period of time' and this will therefore require the exercise of judgement after considering the specific facts and circumstances.

How we see it

In our view, an asset that normally takes twelve months or more to be ready for its intended use or sale will usually be a qualifying asset.

3.4 Borrowing costs eligible for capitalisation

Borrowing costs are eligible for capitalisation as part of the cost of a qualifying asset if they are directly attributable to the acquisition, construction or production of that qualifying asset (whether or not the funds have been borrowed specifically). [FRS 102.25.2].

Section 25 starts from the premise that borrowing costs that are directly attributable to the acquisition, construction or production of a qualifying asset are those borrowing costs that would have been avoided if the expenditure on the qualifying asset had not been made. [FRS 102.25.2A]. Recognising that it might not always be easy to identify a direct relationship between particular borrowings and a qualifying asset, and to determine the borrowings that could otherwise have been avoided, Section 25 includes separate requirements for specific borrowings and general borrowings (see 3.4.2 and 3.4.3 below).

3.4.1 Class of qualifying assets

"Where an entity adopts a policy of capitalisation of borrowing costs, it must be applied consistently to a class of qualifying assets". [FRS 102.25.2]. There is no specific definition of a 'class of qualifying assets'. However, a 'class of assets' is defined as "a grouping of assets of a similar nature and use in an entity's operations." [FRS 102 Appendix I]. Therefore, it may be possible to have a capitalisation policy only in relation to plant under construction but not to machinery under construction or inventories that are qualifying assets.

3.4.2 Specific borrowings

When an entity borrows funds specifically to obtain a particular qualifying asset, the borrowing costs that are directly related to that qualifying asset can be readily identified. The borrowing costs eligible for capitalisation would be the actual borrowing costs incurred on that specific borrowing during the period less any investment income on the temporary investment of those borrowings. [FRS 102.25.2B].

Entities frequently borrow funds in advance of expenditure on qualifying assets and could temporarily invest the borrowings. Section 25 makes it clear that any investment income earned on the temporary investment of those borrowings needs to be deducted from the borrowing costs incurred and only the net amount capitalised (see Illustration 3.2 below). [FRS 102.25.2B].

How we see it

There is no restriction in Section 25 on the type of investments in which the funds can be invested but, in our view, to maintain the conclusion that the funds are specific borrowings, the investment must be of a nature that does not expose the principal amount to the risk of not being recovered. The more risky the investment, the greater is the likelihood that the borrowing is not specific to the qualifying asset. If the investment returns a loss rather than income, such losses are not added to the borrowing costs to be capitalised.

3.4.3 General borrowings

There could be practical difficulties in identifying a direct relationship between particular borrowings and a qualifying asset, and in determining the borrowings that could otherwise have been avoided

This could be the case, for example, if the financing activity of an entity is co-ordinated centrally, with borrowings arranged to meet its funding requirements as a whole. The construction of the qualifying asset is therefore financed out of general borrowings.

Other circumstances that might cause difficulties are as follows:

- A group has a treasury function that uses a range of debt instruments to borrow funds at varying rates of interest and lends those funds on various bases to other entities in the group.
- Or
- Loans are denominated in or linked to foreign currencies and the group operates in highly inflationary economies or there are fluctuations in exchange rates.

In these circumstances, determining the amount of borrowing costs that are directly attributable to the acquisition of a qualifying asset could be difficult and require the exercise of judgement.

To the extent that funds applied to obtain a qualifying asset form part of the entity's general borrowings, Section 25 requires the application of a capitalisation rate to the expenditure on that asset in determining the amount of borrowing costs eligible for capitalisation. However, the amount of borrowing costs an entity capitalises during a period must not exceed the amount of borrowing costs it incurred during that period.

[FRS 102.25.2C].

The capitalisation rate used in an accounting period is the weighted average of rates applicable to the general borrowings of the entity that are outstanding during the period. This excludes borrowings made specifically for the purpose of obtaining other qualifying assets, until substantially all the activities necessary to prepare that asset for its intended use or sale are complete, and non-qualifying assets. Specific borrowings made for non-qualifying assets are excluded from the calculation as paragraph 2C of Section 25 explicitly requires that the weighted average of rates be applied to 'general borrowings' (see 3.4.3.B below). The capitalisation rate is then applied to the expenditure on the qualifying asset. For this purpose, the expenditure on the asset is the average carrying amount of the asset during the period, including borrowing costs previously capitalised. [FRS 102.25.2C].

Section 25 does not provide specific guidance regarding interest income earned from temporarily investing excess general funds.

How we see it

We believe that any interest income earned is unlikely to be directly attributable to the acquisition or construction of a qualifying asset. In addition, the capitalisation rate required by Section 25 focuses on the borrowings of the entity outstanding during the period of construction or acquisition and does not include temporary investments. As such, borrowing costs capitalised must not be reduced by interest income earned from the investment of general borrowings nor must such income be included in determining the appropriate capitalisation rate.

In some circumstances, it may be appropriate for all borrowings made by the group (i.e., borrowings of the parent and its subsidiaries) to be taken into account in determining the weighted average of the borrowing costs. In other circumstances, it may be appropriate for each subsidiary to use a weighted average of the borrowing costs applicable to its own borrowings. It is likely that this will largely be determined by the extent to which borrowings are made centrally (and, perhaps, interest expenses met in the same way) and passed through to individual group companies via intercompany accounts and intra-group loans. The capitalisation rate is discussed further at 3.4.3.E below.

3.4.3.A Borrowing costs on borrowings related to completed qualifying assets

As noted at 3.4.3 above, determining general borrowings will not always be straightforward and, as a result, the determination of the amount of borrowing costs that are directly attributable to the acquisition of a qualifying asset could be difficult and judgement is required.

The question has arisen as to whether a specific borrowing undertaken to obtain a qualifying asset ever changes its nature into a general borrowing. Historically, different views existed as to whether or not borrowings change their nature throughout the period they are outstanding. Some considered that once the asset for which the borrowing was incurred has been completed, and the entity chooses to use its funds on constructing other assets rather than repaying the loan, this changes the nature of the loan into a general borrowing. However, to the extent that the contract links the repayment of the loan to specific proceeds generated by the entity, its nature as a specific borrowing would be preserved. Others took the view that once the borrowing has been classified as specific, its nature does not change while it remains outstanding.

Entities may wish to consider using the related guidance in IFRS as permitted by Section 10 (see Chapter 9 at 3.1). IAS 23 paragraph 14 clarifies that when a qualifying asset is ready for its intended use or sale, an entity treats any outstanding borrowings made specifically to obtain that qualifying asset as part of general borrowings. [IAS 23.BC14D].

Refer also to further discussion in 3.5.3 below to determine when all the activities necessary to prepare the qualifying asset for its intended use or sale are 'substantially' complete.

3.4.3.B General borrowings related to specific non-qualifying assets

Another question that arises is regarding the treatment of general borrowings used to purchase a specific asset other than a qualifying asset for the purpose of capitalising borrowing costs.

Section 25 explicitly states that the capitalisation rate to be used must be the "weighted average of rates applicable to the entity's general borrowings that are outstanding during the period". [FRS 102.25.2C]. This means that any specific borrowings related to obtaining either qualifying assets, until substantially all the activities necessary to prepare that asset for its intended use or sale are complete, and non-qualifying assets would be excluded. Therefore, only the general borrowings are included in the computation of capitalisation rate.

3.4.3.C Expenditure on the asset

Section 25 explicitly states that for purposes of applying the capitalisation rate to the expenditure on the qualifying asset, "the expenditure on the asset is the average carrying amount of the asset during the period, including borrowing costs previously capitalised". [FRS 102.25.2C].

Accordingly, unlike in IFRS (see 2.3 above), expenditure is not restricted to that resulting in the payment of cash, the transfer of other assets or the assumption of interest-bearing liabilities. Therefore, in principle, costs of a qualifying asset that have only been accrued but have not yet been paid in cash would also be included although, by definition, no interest can have been incurred on an accrued payment. The same principle can be applied to non-interest bearing liabilities e.g., non-interest-bearing trade payables or retention money that is not payable until the asset is completed.

A related issue that can arise in practice is about whether an entity includes expenditures on a qualifying asset incurred before obtaining general borrowings in determining the amount of borrowing costs eligible for capitalisation. Consider the fact pattern below:

- An entity constructs a qualifying asset.
- The entity has no borrowings at the start of the construction of the qualifying asset.
- Partway through construction, it borrows funds generally and uses them to finance the construction of the qualifying asset.

And

- The entity incurs expenditures on the qualifying asset both before and after it incurs borrowing costs on the general borrowings.

An entity applies paragraph 25.2D(a) of FRS 102 to determine the commencement date for capitalising borrowing costs. This paragraph requires an entity to begin capitalising borrowing costs when it meets all of the following conditions:

- It incurs expenditures on the asset.
- It incurs borrowing costs.

And

- It undertakes activities necessary to prepare the asset for its intended use or sale (see also 3.5.1 below). [FRS 102.25.2D(a)].

Applying paragraph 25.2D(a) of FRS 102 to the fact pattern described above, the entity would not begin capitalising borrowing costs until it incurs borrowing costs.

Once the entity incurs borrowing costs and therefore satisfies all the three conditions described above, it then applies paragraph 25.2C of FRS 102 to determine the expenditures on a qualifying asset to which it applies the capitalisation rate.

How we see it

We believe the entity does not disregard expenditures on the qualifying asset incurred before the entity obtains the general borrowings. For this purpose, the expenditure on the asset is the average carrying amount of the asset during the period, including borrowing costs previously capitalised.

The above issue was also discussed by the International Financial Reporting Interpretations Committee (the 'Interpretations Committee') in its June 2018²²² and September 2018²²³ meetings and a similar conclusion was reached.

3.4.3.D Assets carried below cost in the statement of financial position

An asset can be recognised in the financial statements during the period of production on a basis other than cost, i.e., it might have been written down below cost as a result of being impaired. An asset is impaired when its carrying amount or expected ultimate cost, including costs to complete and the estimated capitalised interest thereon, exceeds its estimated recoverable amount or net realisable value (see 3.5.2.A below).

The question then arises as to whether the calculation of interest to be capitalised is based on the cost or the carrying amount of the impaired asset. It could be argued that in this case, cost must be used, as this is the amount that the entity or group has had to finance. However, Section 25 explicitly states that the expenditure on the asset is the average carrying amount (not the cost) of the asset during the period.

3.4.3.E Calculation of capitalisation rate

As noted at 3.4.3 above, determining general borrowings will not always be straightforward, it will be necessary to exercise judgement to meet the main objective - a reasonable measure of the directly attributable finance costs.

The following Illustration sets out the practical application of the method of calculating the amount of finance costs to be capitalised:

²²² [IFRIC Update](#), June 2018, available on the IFRS Foundation's website.

²²³ [IFRIC Update](#), September 2018, available on the IFRS Foundation's website.

Illustration 3-1: Calculation of capitalisation rate (no investment income)

On 1 April 20X2 a company engages in the development of a property, which is expected to take five years to complete, at a cost of £6,000,000. The statements of financial position at 31 December 20X1 and 31 December 20X2, prior to capitalisation of interest, are as follows:

	31 December 20X1	31 December 20X2
	£	£
Development property	-	1,200,000
Other assets	6,000,000	6,000,000
	<u>6,000,000</u>	<u>7,200,000</u>
Loans		
5.5% debenture stock	2,500,000	2,500,000
Bank loan at 6% p.a.	-	1,200,000
Bank loan at 7% p.a.	1,000,000	1,000,000
	<u>3,500,000</u>	<u>4,700,000</u>
Shareholders' equity	<u>2,500,000</u>	<u>2,500,000</u>

The bank loan with an effective interest rate of 6% was drawn down to match the development expenditure on 1 April 20X2, 1 July 20X2 and 1 October 20X2.

Expenditure was incurred on the development as follows:

	£
1 April 20X2	600,000
1 July 20X2	400,000
1 October 20X2	200,000
	<u>1,200,000</u>

As the bank loan at 6% p.a. is a new borrowing specifically to finance the development then the amount of interest to be capitalised for the year ended 31 December 20X2 would be the amount of interest charged by the bank of £42,000 ((£600,000 × 6% × 9/12) + (£400,000 × 6% × 6/12) + (£200,000 × 6% × 3/12)).

However, if all the borrowings were general (i.e., the bank loan at 6% was not specific to the development) and would have been avoided but for the development, then the amount of interest to be capitalised would be:

$$\frac{\text{Total interest expense for period}}{\text{Weighted average total borrowings}} \times \text{Development expenditure}$$

Total interest expense for the period

	£
£2,500,000 × 5.5%	137,500
£1,200,000 (as above)	42,000
£1,000,000 × 7%	70,000
	<u>249,500</u>

Therefore the capitalisation rate would be calculated as:

$$\frac{249,500}{3,500,000 + 700,000^*} = 5.94\%$$

* Weighted average total borrowings is computed as the sum of £3,500,000 (or £3,500,000 × 12/12) and £700,000 (or (£600,000 × 9/12) + (£400,000 × 6/12) + (£200,000 × 3/12)).

The capitalisation rate would then be applied to the expenditure on the qualifying asset, resulting in an amount to be capitalised of £41,580 as follows:

	£
£600,000 × 5.94% × 9/12	26,730
£400,000 × 5.94% × 6/12	11,880
£200,000 × 5.94% × 3/12	2,970
	<u>41,580</u>

In the Illustration above, all borrowings are at fixed rates of interest and, the period of construction extends at least until the end of the period simplifying the calculation. The same principle is applied if borrowings are at floating rates i.e., only the interest costs incurred during that period, and the weighted average borrowings for that period, will be taken into account.

Note that the company's shareholders' equity (i.e., equity instruments - see further discussion at 3.4.5.D below) cannot be taken into account. Also, at least part of the outstanding general borrowings is presumed to finance the acquisition or construction of qualifying assets. Regardless of whether they are financing qualifying or non-qualifying assets, all of the outstanding borrowings are presumed to be general borrowings - unless they are specific borrowings (see discussions at 3.4.3.A and 3.4.3.B above).

The above Illustration also assumes that loans are drawn down to match expenditure on the qualifying asset. If, however, a loan is drawn down immediately and investment income is received on the unapplied funds, then the calculation differs from that in Illustration 3.1 above. This is explained further in Illustration 3.2 below.

Illustration 3-2: Calculation of amount to be capitalised - specific borrowings with investment income

On 1 April 20X2 a company engages in the development of a property, which is expected to take five years to complete, at a cost of £6,000,000. In this scenario, a bank loan of £6,000,000 with an effective interest rate of 6% was taken out on 31 March 20X2 and fully drawn. The total interest charge for the year ended 31 December 20X2 was consequently £270,000.

However, investment income was also earned at 3% on the unapplied funds during the period as follows (assume the same timings and expenditures incurred as in Illustration 3.11 above):

	£
$£5,400,000 \times 3\% \times 3/12$	40,500
$£5,000,000 \times 3\% \times 3/12$	37,500
$£4,800,000 \times 3\% \times 3/12$	36,000
	<u>114,000</u>

Consequently, the amount of interest to be capitalised for the year ended 31 December 20X2 is:

	£
Total interest charge	270,000
Less: investment income	<u>(114,000)</u>
	<u>156,000</u>

3.4.4 Exchange differences as a borrowing cost

An entity might borrow funds in a currency that is not its functional currency e.g., a Euro loan financing a development in a company which has Sterling as its functional currency. This might have been done on the basis that, over the period of the development, the borrowing costs, even after allowing for exchange differences, were expected to be less than the interest cost of an equivalent Sterling loan.

Section 25 defines borrowing costs as including exchange differences arising from foreign currency borrowings to the extent that they are regarded as an adjustment to interest costs. [FRS 102.25.1(c)].

Section 25 does not expand on this point. Therefore, judgement will be required in its application and appropriate disclosure of accounting policies and judgements would provide users with the information they need to understand the financial statements (see 3.5.2 below).

How we see it

In our view, as exchange rate movements are partly a function of differential interest rates, in many circumstances the foreign exchange differences on directly attributable borrowings will be an adjustment to interest costs that can meet the definition of borrowing costs. However, care is needed if there are fluctuations in exchange rates that cannot be attributed to interest rate differentials. In such cases, we believe that a practical approach is to limit exchange losses taken as borrowing costs such that the total borrowing costs capitalised do not exceed the amount of borrowing costs that would be incurred on functional currency equivalent borrowings, taking into consideration the corresponding market interest rates and other conditions that existed at inception of the borrowings.

If the approach discussed above is used – i.e., exchange losses taken as borrowing cost have been limited – and the construction of the qualifying asset takes more than one accounting period, there could be situations where in one period only a portion of foreign exchange differences could be capitalised (i.e., discrete period approach). However, in subsequent years, if the borrowings are assessed on a cumulative basis, foreign exchange losses previously expensed might now meet the recognition criteria (i.e., cumulative approach).

How we see it

In our view, whether foreign exchange gains and losses are assessed on a discrete period basis or cumulatively over the construction period as described above is a matter of accounting policy, which must be consistently applied. As alluded to above, Section 8 *Notes to the Financial Statements* requires clear disclosure of significant accounting policies and judgements that are relevant to an understanding of the financial statements (see 3.6.2 below).

The impact of the two approaches described above are demonstrated in Illustration 3-3 below.

Illustration 3-3: Foreign exchange differences in more than one period

Method A - The discrete period approach

The amount of foreign exchange differences eligible for capitalisation is determined for each period separately. Foreign exchange losses that did not meet the criteria for capitalisation in previous years are not capitalised in subsequent years.

Method B - The cumulative approach

The borrowing costs to be capitalised are assessed on a cumulative basis based on the cumulative amount of interest expense that would have been incurred had the entity borrowed in its functional currency. The amount of foreign exchange differences capitalised cannot exceed the amount of foreign exchange losses incurred on a cumulative basis at the end of the reporting period. The cumulative approach looks at the construction project as a whole as the unit of account ignoring the occurrence of reporting dates. Consequently, the amount of the foreign exchange differences eligible for capitalisation as an adjustment to the borrowing cost in the period is an estimate, which can change as the exchange rates vary over the construction period.

An illustrative calculation of the amount of foreign exchange differences that may be capitalised under Method A and Method B is set out below.

	Year 1	Year 2	Total
	£	£	£
Interest expense in foreign currency (A)	25,000	25,000	50,000
Hypothetical interest expense in functional currency (B)	30,000	30,000	60,000
Foreign exchange loss (C)	6,000	3,000	9,000
Method A - Discrete Approach			
Foreign exchange loss capitalised - lower of C and (B minus A)	5,000	3,000	8,000
Foreign exchange loss expensed	1,000	-	1,000
Method B - Cumulative Approach			
Foreign exchange loss capitalised	5,000*	4,000**	9,000
Foreign exchange loss expensed	1,000	(1,000)	-

* Lower of C and (B minus A) in Year 1.

** Lower of C and (B minus A) in total across the two years. In this Illustration this represents the sum of the foreign exchange loss of £3,000 capitalised using the discrete approach plus the £1,000 not capitalised in year 1.

3.4.5 Other finance costs as a borrowing cost

An entity may incur other finance costs. Section 25 does not specifically address these. Below are Illustrations of other finance costs including discussion on their eligibility for capitalisation under Section 25.

3.4.5.A Derivative financial instruments

Many derivative financial instruments such as interest rate swaps, floors, caps and collars are commonly used to manage interest rate risk on borrowings. The most straightforward and commonly encountered derivative financial instrument used to manage interest rate risk is a floating to fixed interest rate swap, as explained in the following Illustration.

Illustration 3-4: Floating to fixed interest rate swaps

Entity A has borrowed £4 million for five years at a floating interest rate to fund the construction of a building. In order to hedge the cash flow interest rate risk arising from these borrowings, A has entered into a matching pay-fixed receive-floating interest rate swap, based on the same underlying nominal sum and duration as the original borrowing, that effectively converts the interest on the borrowings to fixed rate. The net effect of the periodic cash settlements resulting from the hedged and hedging instruments is as if A had borrowed £4 million at a fixed rate of interest.

Section 25 is silent on the use of hedging instruments in determining directly attributable borrowing costs. Section 12 *Other Financial Instruments Issues* - sets out the basis on which derivatives are recognised and measured. Accounting for hedges is discussed in Chapter 14.

An entity might consider that a specific derivative financial instrument, such as an interest rate swap, is directly attributable to the acquisition, construction or production of a qualifying asset. If the instrument does not meet the conditions for hedge accounting then the effects on profit or loss will be different from those if it does, and they will also be dissimilar from year to year. What is the impact of the derivative on borrowing costs eligible for capitalisation? In particular, does the accounting treatment of the derivative financial instrument affect the amount available for capitalisation? If hedge accounting is not adopted, does this affect the amount available for capitalisation?

The following Illustration highlights the potential implication of these questions.

Illustration 3-5: Cash flow hedge of variable-rate debt using an interest rate swap

Entity A is constructing a building and expects it to take 18 months to complete. To finance the construction, on 1 January 20X1, the entity issues an eighteen-month, £20,000,000 variable-rate note payable, due on 30 June 20X2 at a floating rate of interest plus a margin of 1%. At that date the market rate of interest is 8%. Interest payment dates and interest rate reset dates occur on 1 January and 1 July until maturity. The principal is due at maturity. On 1 January 20X1, the entity also enters into an eighteen-month interest rate swap with a notional amount of £10,000,000 from which it will receive periodic payments at the floating rate and make periodic payments at a fixed rate of 9%, with settlement and rate reset dates every 30 June and 31 December. The fair value of the swap is zero at inception.

On 1 January 20X1, the debt is recorded at £20,000,000. No entry is required for the swap on that date because its fair value was zero at inception.

During the eighteen-month period, floating interest rates change as follows:

	Floating rate	Rate paid by Entity A on note payable
Period to 30 June 20X1	8%	9%
Period to 31 Dec 20X1	8.5%	9.5%
Period to 30 June 20X2	9.75%	10.75%

Under the interest rate swap, Entity A receives interest at the market floating rate as above and pays at 9% on the nominal amount of £10,000,000 throughout the period.

At 31 December 20X1, the swap has a fair value of £37,500, reflecting the fact that it is now in the money as Entity A is expected to receive a net cash inflow of this amount in the period until the instrument is terminated. There are no further changes in interest rates prior to the maturity of the swap and the fair value of the swap declines to zero at 30 June 20X2.

Note that this Illustration excludes the effect of issue costs and discounting. In addition, it is assumed that, if Entity A is entitled to, and applies, hedge accounting, there will be no ineffectiveness.

At 31 December 20X1, the swap has a fair value of £37,500, reflecting the fact that it is now in the money as Entity A is expected to receive a net cash inflow of this amount in the period until the instrument is terminated. There are no further changes in interest rates prior to the maturity of the swap and the fair value of the swap declines to zero at 30 June 20X2.

The cash flows incurred by the entity on its borrowing and interest rate swap are as follows:

	Cash payments		
	Interest on principal	Interest rate swap (net)	Total
	£	£	£
30 June 20X1	900,000	50,000	950,000
31 Dec 20X1	950,000	25,000	975,000
30 June 20X2	1,075,000	(37,500)	1,037,500
Total	2,925,000	37,500	2,962,500

There are a number of different ways in which Entity A could calculate the borrowing costs eligible for capitalisation, including the following.

- (i) The interest rate swap meets the conditions for, and entity A applies, hedge accounting. The finance costs eligible for capitalisation as borrowing costs will be £1,925,000 in the year to 31 December 20X1 and £1,037,500 in the period ended 30 June 20X2.
- (ii) Entity A does not apply hedge accounting. Therefore, it will reflect the fair value of the swap in profit or loss in the year ended 31 December 20X1, reducing the net finance costs by £37,500 to £1,887,500 and increasing the finance costs by an equivalent amount for the 6 months to 30 June 20X2 to £1,075,000. Under this method, it will not be appropriate to reflect the cash payments received in 20X2 for the settlement of the fair value of the swap in the borrowing costs eligible for capitalisation in the period ended 30 June 20X2 because the fair value of the swap is recognised in the income statement and already reflected in the amount of borrowing costs capitalised in 20X1.
However, if Entity A considers that it is inappropriate to reflect the fair value of the swap in borrowing costs eligible for capitalisation, it capitalises costs based on the net cash cost on an accrual accounting basis. In this case this will give the same result as in (i) above.
- (iii) Entity A does not apply hedge accounting and considers only the costs incurred on the borrowing, not the interest rate swap, as eligible for capitalisation. The borrowing costs eligible for capitalisation would be £1,850,000 in 20X1 and £1,075,000 in 20X2.

How we see it

In our view, all these methods are valid interpretations of Section 25; however, the preparer will need to consider the most appropriate method in the particular circumstances after taking into consideration the discussion below.

If using method (ii), it is necessary to demonstrate that the gains or losses on the derivative financial instrument are directly attributable to the construction of a qualifying asset. In making this assessment it is necessary to consider the term of the derivative and this method might not be appropriate if the derivative has a different term to the underlying directly attributable borrowing. If the entity is not hedge accounting for the derivative financial instrument but considers its fair value movement to be directly attributable to the construction of a qualifying asset, then it will have to consider whether part of such fair value movement of the derivative relates to a period after the construction is completed and, therefore, excludes this part of the fair value movement when determining the borrowing costs eligible for capitalisation.

Based on the facts in the Illustration above, and assuming that entering into the derivative financial instrument is considered to be related to the borrowing activities of the entity, method (iii) might not be an appropriate method to use because it appears to be inconsistent with the underlying principle of Section 25 - that the costs eligible for capitalisation are those costs that would have been avoided if the expenditure on the qualifying asset had not been made. [FRS 102.25.2A]. However, method (iii) could be an appropriate method to use in certain circumstances where it is not possible to demonstrate that the gains or losses on a specific derivative financial instrument are directly attributable to a particular qualifying asset, rather than being used by the entity to manage its interest rate exposure on a more general basis.

Note that the discussions above mainly relate to derivative financial instruments entered into to manage the interest rate risk on specific borrowings.

How we see it

In our view, the same methods and considerations can be applied when determining the borrowing costs eligible for capitalisation when derivative financial instruments were entered into to manage the interest rate risk in relation to general borrowings.

Whichever policy is chosen by an entity, it needs to be consistently applied in similar situations.

3.4.5.B Gains and losses on derecognition of borrowings

If an entity repays borrowings early, in whole or in part, then it might recognise a gain or loss on the early settlement. Such gains or losses include amounts attributable to expected future interest rates; in other words, the settlement includes an estimated prepayment of the future cash flows under the instrument. The gain or loss is a function of relative interest rates and how the interest rate of the instrument differs from current and anticipated future interest rates. There might be circumstances in which a loan is repaid while the qualifying asset is still under construction. Section 25 does not address this issue.

Section 11 requires that gains and losses on extinguishment of debt must be recognised in profit or loss (see Chapter 13 at 7.4.3).

How we see it

In our view, gains and losses on derecognition of borrowings are not eligible for capitalisation. It would be extremely difficult to determine an appropriate amount to capitalise and it would be inappropriate thereafter to capitalise any interest amounts (on specific or general borrowings) if doing so would amount to double counting. Decisions to repay borrowings early are not usually directly attributable to the qualifying asset but to other circumstances of the entity.

The same approach would be applied to gains and losses arising from a refinancing when there is a substantial modification of the terms of borrowings as this is accounted for as an extinguishment of the original financial liability and the recognition of a new financial liability (see Chapter 13 at 7.4.2 to 7.4.3).

3.4.5.C Gains or losses on termination of derivative financial instruments

If an entity terminates a derivative financial instrument, for example, an interest rate swap, before the end of the term of the instrument, it will usually have to either make a payment or receive a payment, depending on the fair value of the instrument at that time. The fair value is typically based on expected future interest rates; in other words it is an estimated prepayment of the future cash flows under the instrument.

The treatment of the gain or loss for the purposes of capitalisation will depend on the following:

- The basis on which the entity capitalises the gains and losses associated with derivative financial instruments attributable to qualifying assets (see 3.4.5.A above).

And

- Whether the derivative is associated with a borrowing that has also been terminated.

Entities must adopt a treatment that is consistent with their policy for capitalising the gains and losses from derivative financial instruments that are attributable to qualifying assets (see 3.4.5.A above).

The accounting under Section 12 will differ depending on whether the instrument has been designated as a hedge or not. Assuming the instrument has been designated as a cash flow hedge and that the borrowing has not also been repaid, the entity will usually maintain the cumulative gain or loss on the hedging instrument, subject to reclassification to profit or loss during the same period that the hedged cash flows affect profit or loss. In such a case, the amounts that are reclassified from other comprehensive income will be eligible for capitalisation for the remainder of the period of construction. On the other hand, if the borrowing has been repaid, the cumulative gain or loss in the cash flow hedge equity reserve will be reclassified immediately to profit or loss and will not be eligible for capitalisation. This aligns to the view that gains and losses on derecognition of borrowings are not eligible for capitalisation (see section 3.4.5.B above).

Similarly, assuming the instrument has been designated as a fair value hedge and that the borrowing has not also been repaid, entities would continue to recognise the cumulative gain or loss on the hedging instrument in the carrying amount of the hedged item and this amount would form part of the ongoing determination of amortised cost of the financial liability using the effective interest rate method. Interest expense calculated using the effective interest method is eligible for capitalisation for the remainder of the period of construction (see 3.1 above).

If the entity has not applied hedge accounting for the derivative financial instrument and the borrowing has not also been repaid, but the entity considers it to be directly attributable to the construction of the qualifying asset then it will have to consider whether part of the gain or loss relates to a period after construction is complete.

If the underlying borrowing is also terminated then the gain or loss will not be capitalised and the treatment will mirror that applied on derecognition of the borrowing, as described at 3.4.5.B above.

3.4.5.D Dividends payable on shares classified as financial liabilities

An entity might finance its operations in whole or in part by the issue of preference or other types of shares and in some cases, these will be classified as financial liabilities (see Chapter 12). In some circumstances the dividends payable on these instruments would meet the definition of borrowing costs. For example, an entity might have funded the development of a qualifying asset by issuing preference shares that are classified as financial liabilities under Section 22. In this case, the 'dividends' would be treated as interest and meet the definition of borrowing costs and therefore could be capitalised following the principles on specific borrowings discussed at 3.4.2 above.

Companies with outstanding preference shares which are treated as liabilities under Section 22 might subsequently obtain a qualifying asset. In such cases, these preference share liabilities would be considered to be part of the company's general borrowings. The related 'dividends' would meet the definition of borrowing costs and could be capitalised following the principles on general borrowings discussed at 3.4.3 above - i.e., that they are directly attributable to a qualifying asset.

Capitalisation of dividends or other payments made in respect of any instruments that are classified as equity in accordance with Section 22 is not appropriate as these instruments would not meet the definition of financial liabilities. In addition, as discussed at 3.1 above, Section 25 does not deal with the actual or imputed cost of equity, including preferred capital not classified as a liability.

3.4.6 Capitalisation of borrowing costs in hyperinflationary economies

While Section 31 *Hyperinflation* provides guidance on situations where an entity's functional currency is the currency of a hyperinflationary economy, it does not provide specific guidance on the impact of inflation to accounting for borrowing costs. Thus, under the GAAP hierarchy in Section 10 (see Chapter 9 at 3.1) entities may wish to consider the specific guidance in IFRS. Under IFRS, in situations where IAS 29 *Financial Reporting in Hyperinflationary Economies* applies, an entity needs to distinguish between borrowing costs that compensate for inflation and those incurred in order to acquire or construct a qualifying asset.

[IAS 29.21].

IAS 29 states that "the impact of inflation is usually recognised in borrowing costs. It is not appropriate both to restate the capital expenditure financed by borrowing and to capitalise that part of the borrowing costs that compensates for the inflation during the same period. This part of the borrowing costs is recognised as an expense in the period in which the costs are incurred." [IAS 29.21].

Accordingly, IAS 23 specifies that when an entity applies IAS 29, the borrowing costs that can be capitalised must be restricted and the entity must expense the part of borrowing costs that compensates for inflation during the same period in accordance with paragraph 21 of IAS 29 (as described above).

[IAS 23.9].

Detailed discussion and requirements of IAS 29 can be found in the EY publication, International GAAP®.

3.4.7 Group considerations

3.4.7.A Borrowings in one company and development in another

A question that can arise in practice is whether it is appropriate to capitalise interest in the group financial statements on borrowings that appear in the financial statements of a different group entity from that carrying out the development.

How we see it

Based on the underlying principle of Section 25, capitalisation in such circumstances would only be appropriate if the amount capitalised fairly reflected the interest cost of the group on borrowings from third parties that could have been avoided if the expenditure on the qualifying asset was not made.

Although it would be appropriate to capitalise interest in the group financial statements, if that policy choice was taken, the entity carrying out the development must not capitalise any interest if it has no borrowings in its own financial statements. If, however, the entity has intra-group borrowings or other external borrowings then interest on such borrowings would be capitalised in its own financial statements.

3.4.7.B Qualifying assets held by joint ventures

A number of sectors carry out developments through joint ventures (see Chapter 18) - this is particularly common with property developments. In such cases, the joint venture might be financed principally by equity and the joint venturers might have financed their participation in this equity through borrowings.

In situations where the joint venture is classified as a jointly controlled entity (JCE) in accordance with Section 15 *Investments in Joint Ventures*, it is not appropriate to capitalise interest suffered in the JCE on the borrowings of the venturers as the interest charge is not a cost of the JCE. Neither would it be appropriate to capitalise interest in the financial statements of the venturers, whether in separate or consolidated financial statements, because the qualifying asset does not belong to them. The investing entities have an investment in a financial asset (i.e., an equity instrument of another entity) which is excluded by Section 25 from being a qualifying asset (see 3.3 above).

In situations where loans and borrowings exist between the reporting entity and a joint venture, see discussion in Chapter 18 at section 3.7.3.

In situations where the joint venture is classified as a jointly controlled operation (JCO) or jointly controlled assets (JCA) in accordance with Section 15 and the venturers are accounting for their own and their share of the assets, liabilities, revenue and expenses of the JCO or JCA, then the venturers can choose to capitalise borrowing costs incurred that relate to their own qualifying asset or their share of any qualifying asset. Borrowing costs eligible for capitalisation would be based on the venturer's obligation for the loans of such JCO or JCA together with any direct borrowings of the venturer itself if the venturer funds part of the acquisition of such joint venture's qualifying asset.

3.5 Commencement, suspension and cessation of capitalisation

3.5.1 Commencement of capitalisation

Section 25 requires that an entity capitalise borrowing costs as part of the cost of a qualifying asset from the point when the entity first meets all of the following conditions:

- It incurs expenditure on the asset.
- It incurs borrowing costs.

And

- It undertakes activities necessary to prepare the asset for its intended use or sale. [FRS 102.25.2D(a)].

Section 25 has no further guidance on 'activities necessary to prepare an asset for its intended use or sale'. However, some guidance is provided by IAS 23 which states that the activities necessary to prepare an asset for its intended use or sale can include more than the physical construction of the asset. Necessary activities can start before the commencement of physical construction and include, for example, technical and administrative work such as the activities associated with obtaining permits prior to the commencement of the physical construction. [IAS 23.19]. However, the general principle in capitalisation and recognition of an asset apply, therefore, borrowing costs are only capitalised as part of the cost of the asset when it is probable that they will result in future economic benefits to the entity and the costs can be measured reliably [IAS 23.9]. Borrowing costs cannot be capitalised if the permits that are necessary for the construction are not expected to be obtained.

How we see it

In assessing whether borrowing costs can be capitalised in advance of obtaining permits - assuming the borrowing costs otherwise meet the criteria - a judgement must be made, at the date the expenditure is incurred, as to whether it is sufficiently probable that the relevant permits will be granted.

In line with the discussion above, if during the application and approval process of such permits it is no longer expected that the necessary permits will be granted, capitalisation of borrowing costs must cease, any related borrowing costs that were previously capitalised written off in accordance with Section 27 *Impairment of Assets* and accordingly, the carrying amount of any related qualifying asset subject to development or redevelopment (or, if appropriate, the cash generating unit where such an asset belongs) will be tested for impairment, where applicable (see 3.5.2.A below).

Borrowing costs cannot be capitalised during a period in which there are no activities that change the condition of the asset. For example, a house-builder or property developer would not capitalise borrowing costs on its 'land bank' i.e., that land which is held for future development. Borrowing costs incurred while land is under development are capitalised during the period in which activities related to the development are being undertaken. However, borrowing costs incurred while land acquired for building purposes is held without any associated development activity represent a holding cost of the land. Such costs do not qualify for capitalisation and hence would be considered a period cost (i.e., expensed as incurred). [IAS 23.19].

An entity might make a payment to a third-party contractor before that contractor commences construction activities. It is unlikely to be appropriate to capitalise borrowing costs in such a situation until the contractor commences activities that are necessary to prepare the asset for its intended use or sale. However, that would not preclude the payment being classified as a prepayment until such time as construction activities commence.

3.5.2 Suspension of capitalisation

An entity might incur borrowing costs during an extended period in which it suspends the activities necessary to prepare an asset for its intended use or sale. In such a case, Section 25 states that capitalisation of borrowing costs must be suspended during extended periods in which active development of the asset has paused. [FRS 102.25.2D(b)]. Such costs are costs of holding partially completed assets and do not qualify for capitalisation. However, no further guidance is provided. For example, Section 25 does not distinguish between extended periods of interruption (when capitalisation would be suspended) and periods of temporary delay that are a necessary part of preparing the asset for its intended purpose (when capitalisation is not normally suspended).

Applying guidance provided by IAS 23, an entity does not normally suspend capitalising borrowing costs during a period when it carries out substantial technical and administrative work. Also, capitalising borrowing costs would not be suspended when a temporary delay is a necessary part of the process of getting an asset ready for its intended use or sale. For example, capitalisation would continue during the extended period in a situation where construction of a bridge is delayed by temporary adverse weather conditions or high-water levels, if such conditions are common during the construction period in the geographical region involved. [IAS 23.21]. Similarly, capitalisation continues during periods when inventory is undergoing slow transformation - for example, inventories taking an extended time to mature such as Scotch whisky or Cognac.

Borrowing costs incurred during extended periods of interruption caused, for example, by a lack of funding or a strategic decision to hold back project developments during a period of economic downturn are not considered a necessary part of preparing the asset for its intended purpose and must not be capitalised. Other circumstances might not be as straightforward as the examples described above.

How we see it

The nature of the interruption, its duration, and the level of development activities during such period will inform the determination as to whether the delay is a necessary part of the process of bringing the qualifying asset ready for its intended use or sale (and therefore, whether continuous capitalisation of eligible borrowing costs during such period is appropriate). This will require judgement to be exercised based on particular facts and circumstances. Disclosure of this judgement is required if it is significant to the understanding of the financial statements.

3.5.2.A Impairment considerations

When it is determined that capitalisation is appropriate, an entity continues to capitalise borrowing costs that are directly attributable to the acquisition, construction or production of a qualifying asset as part of the cost of the asset even if the capitalisation causes the expected ultimate cost of the asset to exceed its net realisable value (for inventories that are qualifying assets) or recoverable amount (for all other qualifying assets).

When the carrying amount of the qualifying asset exceeds its recoverable amount or net realisable value (depending on the type of asset), the carrying amount of the asset must be written down or written off in accordance with the Section 27 (see Chapter 29). In certain circumstances, the amount of the write-down or write-off is written back in accordance with Section 27. Section 25 does not have specific guidance in instances where an asset is incomplete thus, an entity may wish to consider the related guidance in IFRS. Under IAS 23, if the asset is incomplete, the impairment assessment is performed by considering the expected ultimate cost of the asset. [IAS 23.16]. The expected ultimate cost, which will be compared to recoverable amount or net realisable value, must include costs to complete and the estimated capitalised interest thereon.

3.5.3 Cessation of capitalisation

Section 25 requires capitalisation of borrowing costs to cease when substantially all the activities necessary to prepare the qualifying asset for its intended use or sale are complete. *[FRS 102.25.2D(c)]*.

IAS 23 provides additional guidance that may be useful in assisting preparers of financial statements as to when a qualifying asset is considered as complete, including when such assets are completed in parts.

IAS 23 states that an asset is normally ready for its intended use or sale when the physical construction of the asset is complete, even though routine administrative work might still continue. If minor modifications, such as the decoration of a property to the purchaser's or user's specification, are all that are outstanding, this indicates that substantially all the activities are complete. *[IAS 23.23]*.

How we see it

In some cases, there might be a requirement for inspection (e.g., to ensure that the asset meets safety requirements) before the asset can be used. Usually 'substantially all the activities' would have been completed before this point in order to be ready for inspection. In such a situation, capitalisation would cease prior to the inspection.

When the construction of a qualifying asset is completed in parts and each part is capable of being used while construction continues on other parts, capitalisation must cease for the borrowing costs on the portion of borrowings attributable to that part when substantially all the activities necessary to prepare that part for its intended use or sale are completed. *[IAS 23.24]*. An example of this might be a business park comprising several buildings, each of which is capable of being fully utilised individually while construction continues on other parts. *[IAS 23.25]*. This principle also applies to single buildings where one part is capable of being fully utilised even if the building as a whole is incomplete (for example, individual floors of a high-rise office building).

For a qualifying asset that needs to be complete in its entirety before any part can be used as intended, it would be appropriate to capitalise related borrowing costs until all the activities necessary to prepare the entire asset for its intended use or sale are substantially complete. An example of this is an industrial plant, such as a steel mill, involving several processes which are carried out in sequence at different parts of the plant within the same site. *[IAS 23.25]*. However, other circumstances may not be as straightforward.

How we see it

Because neither IAS 23 nor IAS 16 provide guidance on what constitutes a 'part', it will therefore depend on particular facts and circumstances and would require the exercise of judgement as to what constitutes a 'part'. Disclosure of this judgement is required if it is significant to the understanding of the financial statements.

3.5.3.A Borrowing costs on 'land expenditures'

An issue may arise about when an entity ceases capitalising borrowing costs on land, for example, consider the fact pattern below:

- An entity acquires and develops land and thereafter constructs a building on that land - the land represents the area on which the building will be constructed.
 - Both the land and the building meet the definition of a qualifying asset.
- And
- The entity uses general borrowings to fund the expenditures on the land and construction of the building.

The issue is whether the entity ceases capitalising borrowing costs incurred in respect of expenditures on the land ('land expenditures') once it starts constructing the building or whether it continues to capitalise borrowing costs incurred in respect of land expenditures while it constructs the building.

How we see it

In our view, in applying Section 25 to determine when to cease capitalising borrowing costs incurred on land expenditures, an entity considers:

- The intended use of the land.
And
- In applying paragraph 25.2D(c) of FRS 102, whether the land is capable of being used for its intended purpose while the construction continues on the building.

Land and buildings are used for owner-occupation (and therefore recognised as property, plant and equipment applying Section 17 *Property, Plant and Equipment*); rent or capital appreciation (and therefore recognised as investment property applying Section 16 *Investment Property*); or for sale (and therefore recognised as inventory applying Section 13 *Inventories*). The intended use of the land is not simply for the construction of a building on the land, but rather to use it for one of these three purposes.

If the land is not capable of being used for its intended purpose while construction continues on the building, the entity considers the land and the building together to assess when to cease capitalising borrowing costs on the land expenditures. In this situation, the land would not be ready for its intended use or sale until substantially all the activities necessary to prepare both the land and building for that intended use or sale are complete (see 3.5.3 above).

The above issue was also discussed by the Interpretations Committee in its June 2018²²⁴ and September 2018²²⁵ meetings and a similar conclusion was reached.

²²⁴ [IFRIC Update](#), June 2018, available on the IFRS Foundation's website.

²²⁵ [IFRIC Update](#), September 2018, available on the IFRS Foundation's website.

4 Disclosures

The disclosure requirements of Section 25 are set out at 4.1 below. Disclosures in respect of borrowing costs required by other sections of FRS 102 and The Large and Medium-sized Companies and Groups (Accounts and Reports) Regulations 2008 ('The Regulations') in respect of borrowing costs are set out at 4.2 and 4.3 below.

4.1 Disclosures required by Section 25

When a policy of capitalising borrowing costs is not adopted, Section 25 does not require any additional disclosure. [FRS 102.25.3]. However, other sections of FRS 102 require certain disclosures in respect of borrowing costs (see 4.2 below).

Where a policy of capitalisation is adopted, an entity must disclose:

- The amount of borrowing costs capitalised in the period.
- And
- The capitalisation rate used. [FRS 102.25.3A].

4.2 Disclosures required by other sections of FRS 102 in respect of borrowing costs

In addition to the disclosure requirements in Section 25, an entity may need to disclose additional information in relation to its borrowing costs in order to comply with requirements in other sections of FRS 102. These include:

- Presentation requirements for items of profit or loss including interest payable, are addressed by Section 5 *Statement of Comprehensive Income and Income Statement* (see Chapter 6). [FRS 102.5.5, 5.5B].
- Disclosure of total interest expense (using effective interest method for financial liabilities that are not at fair value through profit or loss) is required by Section 11 (see Chapter 15 at 4.1). [FRS 102.11.48(b)].
- And
- Section 8 (see Chapter 6) requires disclosure of the following:
 - The measurement bases used in preparing the financial statements and other accounting policies used that are relevant to an understanding of the financial statements (e.g., clear policy to adopt capitalisation of borrowing costs). [FRS 102.8.5].
 - And
 - The significant judgements made in the process of applying an entity's accounting policies that have the most significant effect on the recognised amounts (e.g., criteria in determining a qualifying asset or a 'part' of a qualifying asset, including definition of 'substantial period of time'; determination of capitalisation rate; and treatment of foreign exchange gains and losses as part of borrowing costs, including any derivatives used to hedge such foreign exchange exposures). [FRS 102.8.6].

4.3 Additional disclosures required by The Regulations

Where a policy of capitalisation is adopted, The Regulations require an entity to disclose in the notes: [1 Sch 27(3), 2 Sch 35(3), 3 Sch 45(3)]

- The fact that interest is included in determining the production cost of the qualifying asset (usually achieved by a clear accounting policy - see 3.6.2 above).
- And
- The aggregate amount of interest so included in the cost of qualifying assets.

5 Summary of GAAP differences

The key differences between FRS 102 and IFRS in accounting for borrowing costs are set out below.

	FRS 102	IFRS
Scope	Section 25 applies to all 'qualifying assets' which is defined in the same way as IAS 23 except it has no reference to 'bearer plants'. Instead, qualifying assets include biological asset (a living animal or plant that may or may not be intended for use on a continuing basis in the entity's activities).	IAS 23 applies to all qualifying assets and has same definition of qualifying asset as FRS 102 except that it includes biological assets that meet the definition of bearer plants.
Capitalisation of borrowing costs	Capitalisation of eligible borrowing costs in respect of qualifying assets is a policy choice (i.e., optional).	Capitalisation of eligible borrowing costs is mandatory. However, IAS 23 need not be applied to a qualifying asset measured at fair value or inventories that are manufactured or otherwise produced, in large quantities on a repetitive basis.
	Where an entity adopts a policy of capitalisation of borrowing costs, it must be applied consistently to a class of qualifying assets.	An accounting policy choice exists only for a qualifying asset measured at fair value or inventories that are manufactured or otherwise produced, in large quantities on a repetitive basis. Capitalisation of eligible borrowing costs is mandatory for all other qualifying assets.
	There is no guidance concerning the impact of inflation to the treatment of borrowing costs when an entity's functional currency is the currency of a hyperinflationary economy.	When an entity applies IAS 29, it recognises as an expense the part of borrowing costs that compensates for inflation during the same period.
Capitalisation rate	The capitalisation rate is the weighted average of rates applicable to 'general borrowings' outstanding in the period. This excludes borrowings made specifically for the purpose of obtaining other qualifying assets, until substantially all the activities necessary to prepare that asset for its intended use or sale are complete, and non-qualifying assets.	The capitalisation rate is the weighted average of the borrowing costs applicable to borrowings outstanding in the period other than borrowings made specifically for the purpose of obtaining a qualifying asset. This means that specific borrowings to acquire non-qualifying assets would be included in the computation.
	For purposes of applying the capitalisation rate to the expenditure on the qualifying asset, the expenditure on asset is the average carrying amount of the asset during the period, including borrowing costs previously capitalised.	Expenditures on a qualifying asset are explicitly limited to those expenditures that have resulted in payments of cash, transfers of other assets or the assumption of interest-bearing liabilities and reduced by any progress payments received and grants received in connection with the asset. However, IAS 23 accepts that, when funds are borrowed generally, the average carrying amount of the asset during a period, including borrowing costs previously capitalised, is normally a reasonable approximation of the

FRS 102		IFRS
		expenditure to which the capitalisation rate is applied in that period.
Commencement, suspension and cessation of capitalisation	There is no guidance on 'activities that are necessary to prepare the asset for its intended use or sale'. However, we expect entities will follow the guidance under IFRS.	Additional guidance is provided e.g., borrowing costs incurred are expensed if the asset is held without any associated development activities i.e., activities that change the physical condition of the asset.
	There is no guidance about treatment of borrowing costs in periods of temporary delay. However, we expect entities will follow the guidance under IFRS.	Capitalisation is not normally suspended when substantial technical and administrative work are being carried out or when a temporary delay is a necessary part of the process of getting an asset ready for its intended use or sale.
	There is no guidance about cessation of capitalisation of borrowing costs for qualifying assets being constructed in parts. However, we expect entities will follow the guidance under IFRS.	Explicit guidance is provided for construction of a qualifying asset in parts and each part is capable of being used or sold while construction continues on other parts.
Disclosures	If the company adopts a policy of capitalising borrowing costs, disclosure is required of the amount of borrowing costs capitalised during the period and the capitalisation rate used. It also needs to disclose the aggregate amount of interest so included in the cost of qualifying assets.	An entity must disclose the amount of borrowing costs capitalised during the period and the capitalisation rate used.

Appendix A - Defined terms

Extract from FRS 102

Appendix I

Glossary

asset	A present economic resource controlled by the entity as a result of past events.
borrowing costs	Interest and other costs incurred by an entity in connection with the borrowing of funds.
carrying amount	The amount at which an asset, a liability or equity is recognised in the statement of financial position.
effective interest method	A method of calculating the amortised cost of a financial asset or a financial liability (or a group of financial assets or financial liabilities) and of allocating the interest income or interest expense over the relevant period.
expenses	Decreases in assets or increases in liabilities that result in decreases in equity, other than those relating to distributions to equity investors.
fair value	The price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. In the absence of any specific guidance provided in the relevant section of this FRS, the guidance in Section 2A Fair Value Measurement shall be used in determining fair value.
financial liabilities	Any liability that is: (a) a contractual obligation: (i) to deliver cash or another financial asset to another entity; or (ii) to exchange financial assets or financial liabilities with another entity under conditions that are potentially unfavourable to the entity; or (b) a contract that will or may be settled in the entity's own equity instruments and is: (i) a non-derivative for which the entity is or may be obliged to deliver a variable number of the entity's own equity instruments; or (ii) a derivative that will or may be settled other than by the exchange of a fixed amount of cash or another financial asset for a fixed number of the entity's own equity instruments. For this purpose the entity's own equity instruments do not include instruments that are themselves contracts for the future receipt or delivery of the entity's own equity instruments.
profit or loss	The total of income less expenses, excluding the components of other comprehensive income.
qualifying asset	An asset that necessarily takes a substantial period of time to get ready for its intended use or sale. Depending on the circumstances any of the following may be qualifying assets: (a) inventories; (b) manufacturing plants; (c) power generation facilities; (d) intangible assets; (e) investment properties; and (f) biological assets.

Extract from FRS 102

Financial assets, and inventories that are produced over a short period of time, are not qualifying assets.

Assets that are ready for their intended use or sale when acquired are not qualifying assets.

Chapter 28

Share-based payment

Contents

Overview	1498
1 Introduction	1500
1.1 Background	1500
1.2 Scope of Chapter 28 and referencing convention	1500
1.3 Overall approach to Section 26	1501
1.3.1 Classification differences between share-based payments and financial instruments	1501
2 Comparison between Section 26 and IFRS	1502
2.1 Scope	1502
2.1.1 Definitions and transactions within scope	1502
2.2 Recognition	1502
2.2.1 Accounting after vesting date	1502
2.2.2 Equity instruments vesting in instalments ('graded' vesting)	1502
2.3 Measurement of equity-settled share-based payment transactions	1502
2.3.1 Non-vesting conditions	1502
2.3.2 Employees and others providing similar services	1503
2.3.3 Valuation methodology	1503
2.3.4 Awards where fair value cannot be measured reliably	1503
2.3.5 Cancellation of awards	1503
2.3.6 Replacement awards following a cancellation or settlement	1503
2.4 Share-based payment transactions with cash alternatives	1504
2.4.1 Entity or counterparty has choice of equity or cash settlement	1504
2.4.2 Settlement of an award with cash alternatives when the entity has choice of settlement	1504
2.5 Modification of award from equity-settled to cash-settled and vice versa	1504
2.6 Group plans - alternative accounting treatment	1504
2.7 Unidentifiable goods or services in Government-mandated plans	1505
2.8 Disclosures	1505
2.9 First-time adoption	1505
3 Scope of Section 26	1506
3.1 Definitions	1506
3.2 Transactions within the scope of Section 26	1507
3.2.1 Transactions by other group entities and shareholders	1508
3.2.1.A Scenarios illustrating scope requirements for group entities	1508
3.2.2 Transactions with employee benefit trusts and similar vehicles	1512

3.2.3	Transactions where the identifiable consideration received appears to be less than the consideration given	1512
3.2.3.A	Government-mandated plans	1512
3.2.3.B	Other transactions	1513
3.2.4	'All employee' share plans	1513
3.2.5	Vested transactions	1513
3.3	Transactions not within the scope of Section 26	1514
3.3.1	Transactions with shareholders in their capacity as such	1514
3.3.2	Transfer of assets in group restructuring arrangements	1514
3.3.3	Business combinations	1515
3.3.3.A	Business combinations - common control transactions	1515
3.3.4	Transactions with jointly controlled entities	1515
3.3.4.A	Contribution of a business on the formation of a jointly controlled entity	1515
3.3.4.B	Contribution of non-financial assets (which do not constitute a business) and other transactions	1515
3.3.5	Transactions in the scope of IAS 32, IAS 39 and IFRS 9 or Section 22 (financial instruments)	1516
3.3.6	Transactions relating to investments in subsidiaries, associates and joint ventures	1516
3.4	Some practical applications of the scope requirements	1516
3.4.1	Remuneration in non-equity shares and arrangements with put rights over equity shares	1517
3.4.2	Increase in ownership interest with no change in number of shares held	1517
3.4.3	Awards for which the counterparty has paid 'fair value'	1517
3.4.4	Cash bonus dependent on share price performance	1518
3.4.5	Cash-settled awards based on an entity's 'enterprise value' or other formula	1518
3.4.6	Holding own shares to satisfy awards	1518
4	General recognition principles	1520
4.1	Vesting and vesting conditions	1520
4.1.1	Vesting conditions based on an employee's performance rating	1522
4.1.2	Environment Social and Governance ('ESG') related conditions	1522
4.2	Non-vesting conditions (conditions that are neither service conditions nor performance conditions)	1523
4.3	Vesting period	1525
5	Equity-settled transactions - overview	1526
5.1	Summary of accounting treatment	1526
5.2	The credit entry	1527
6	Equity-settled transactions - cost of awards	1528

Overview

This chapter discusses the requirements of Section 26 *Share-based Payment* ('Section 26'), that provides accounting requirements when an entity enters into a share-based payment transaction that includes an entity receiving goods or services from a supplier of those goods or services in a share-based payment arrangement or incurs an obligation to settle the transaction with the supplier in a share-based payment arrangement when another group entity receives the goods or services. Where the supplier of the goods or services receives; cash or assets of an entity for amounts that are based on the price (or value) of equity instruments (including shares or share options) of the entity or another group entity, or equity instruments (including shares or share options) of the entity or another group entity, when vesting conditions are met, such an arrangement would be in scope of Section 26.

Section 26 is applied in accounting for all share-based payment transactions, whether an entity can identify specifically some, or all, of the goods or services received. Share-based payment transactions include equity-settled share-based payments, cash-settled share-based payments and those transactions where the entity or the supplier has a choice of settlement in cash or equity instruments.

Section 26 is also applied to share-based payment transactions where the transaction is settled by another group entity (or a shareholder), in such instances Section 26 applies to the recipient group entity of the goods or services and the group entity (or shareholder) settling the transaction.

The recognition rules in Section 26 are based on a so-called 'service date model'. In other words, Section 26 requires the goods or services received or acquired in a share-based payment transaction to be recognised when the goods are acquired or the services rendered. However, for awards to employees (or others providing similar services), the measurement rules require a share-based payment transaction to be measured at the date on which the transaction was entered into (grant date model), whereas a transaction with non-employees, is measured at the service date.

The point at which the cost is recognised for goods or services in a share-based payment arrangement depends on the concept of 'vesting'. A share-based payment arrangement vests when the counterparty's entitlement is no longer conditional on the satisfaction of any vesting conditions (service or performance condition). The cost is recognised during the vesting period, which is the period that all vesting conditions for the share-based payment arrangement are to be satisfied.

Section 26 contains accounting requirements for vesting conditions and conditions that are not vesting conditions ('non-vesting conditions'), in addition to accounting requirements for modification and cancellation of share-based payment transactions. The modification and cancellation accounting requirements equally apply to the replacement of awards in a business combination applying Section 19 *Business Combinations and Goodwill*.

Section 26, in many respects contains rules-based 'anti-avoidance' guidance, which often requires an expense to be recorded for transactions that either have no ultimate value to the counterparty or to which, in some cases, the counterparty actually has no entitlement at all.

Most share-based payment transactions undertaken by entities are awards of shares and options as remuneration to employees, in particular senior management and directors. For this reason, the main focus of this chapter is accounting for share-based payment transactions with employees. Other forms of employee benefits that are not share-based payment transactions would fall within the scope of Section 28 *Employee Benefits*, as discussed in Chapter 30.

What you need to know

- An entity applies Section 26 when the entity receives goods or services in a share-based payment transaction that is settled by the entity itself, another group entity or shareholder.
- An entity settling a share-based payment transaction when another group entity receives the goods or services is in scope of Section 26.
- Section 26 applies whether an entity can identify specifically some, or all, of the goods or services received.
- Awards to employees and others providing similar services are measured using the 'grant date model', whereas services provided by others and goods acquired are measured using the 'service date model' for the share-based payment arrangement.
- The cost is recognised over the vesting period, which is the period that all vesting conditions are satisfied.
- Vesting conditions include service conditions or performance conditions. Share-based payment arrangements can also contain non-vesting conditions.
- Section 26 contains specific rules on accounting for modification and cancellation of share-based payment transactions.
- Section 26 in many respects contains rules-based 'anti-avoidance' guidance, which often requires an expense to be recorded for transactions that either have no ultimate value to the counterparty or to which, in some cases, the counterparty has no entitlement at all.

1 Introduction

1.1 Background

Most share-based payment transactions undertaken by entities are awards of shares and options as remuneration to employees, in particular senior management and directors. One advantage of shares and options as remuneration is that they need not entail any cash cost to the entity. If an executive is entitled under a bonus scheme to a free share, the entity can satisfy this award simply by printing another share certificate, which the executive can sell, so that the cash cost of the award is effectively borne by shareholders rather than by the entity itself. However, this very advantage was the source of controversy surrounding share-based remuneration.

Investors became increasingly concerned that share-based remuneration was resulting in a significant cost to them, through dilution of their existing shareholdings. As a result, there emerged an increasing consensus among investors that awards of shares and share options must be recognised as a cost in the financial statements.

Accounting for share-based payment transactions is addressed in Section 26 *Share-based Payment*. However, many of the requirements of Section 26 are virtually impossible to interpret without recourse to IFRS 2 *Share-based Payment*, from which many of the requirements and definitions of Section 26 were ultimately derived.

The IASB published IFRS 2 in February 2004. There have been three subsequent sets of amendments to IFRS 2 as well as further clarifications through the IASB's Annual Improvements process.

In September 2024, the FRC issued amendments to FRS 102 ('Periodic Review 2024') which resulted in Section 26 being more converged with IFRS 2. The key differences between Section 26 and IFRS 2 are explained in this chapter (see 2 below).

The key changes to Section 26, arising from the Periodic Review 2024 can be summarised as follows:

- Consistent with IFRS 2, Section 26 clarifies that equity instruments issued in a business combination in exchange for control of the acquiree are not in scope of Section 26. However, equity instruments issued, cancelled or modified to employees of the acquiree in their capacity as employees are in scope of Section 26. Previously, Section 26 was silent on this matter.
- There is additional guidance on the settlement of a share-based payment transaction, requiring that the payment made be accounted for as a deduction from equity, except to the extent that the payment exceeds the fair value of the equity instruments that would otherwise have been issued, measured at the settlement or repurchase date. Any such excess is recognised as an expense. The guidance now aligns more closely to IFRS 2.
- There is clarification that cash-settled share-based payment transactions are measured at fair value, with guidance provided explaining how to account for vesting conditions and conditions that are not vesting conditions. The guidance is consistent with IFRS 2.

And

- For share-based payment transactions that contain a net settlement feature where there is an obligation on the entity under tax laws or regulations to withhold an amount for an employee's tax obligation associated with that share-based payment, the transaction is accounted for as wholly equity-settled (for the amount that relates to the employee's tax obligation and no more) rather than cash-settled. This guidance is consistent with IFRS 2.

These amendments have been incorporated in the discussions within this chapter.

1.2 Scope of Chapter 28 and referencing convention

This chapter discusses the requirements of Section 26 for entities applying FRS 102 in accounting periods beginning on or after 1 January 2026. It is based on the September 2024 version of FRS 102 which is referred to as 'FRS 102' throughout this chapter.

As noted at 1.1 above, the requirements of Section 26 are virtually impossible to interpret without recourse to IFRS 2, which contains extensive application and implementation guidance. Without this guidance, the practical application of the requirements of Section 26 is difficult and we therefore draw on the guidance in IFRS 2 as part of the explanations in this chapter, applying the hierarchy on selecting accounting policies as set out in Section 10 Accounting Policies, Estimates and Errors (see Chapter 9 at 3.1).

The application of Section 26, and IFRS 2, to a variety of practical situations is unclear. Whilst this chapter addresses some of the complexities, other areas of discussion are beyond the scope of this publication. EY's publication International GAAP® includes a more detailed analysis in certain areas, as indicated within this chapter.

1.3 Overall approach to Section 26

The overall approach to accounting for share-based payment transactions is complex, in part because it is something of a hybrid. Essentially the total cost (i.e., measurement) of an award is calculated by determining whether the award is a liability or an equity instrument, using criteria somewhat different from those used in accounting for financial instruments but then applying measurement principles based on those generally applicable to financial liabilities or equity instruments. However, the periodic allocation (i.e., recognition) of the cost is determined using something closer to a straight-line accruals methodology, which would not generally be used for financial instruments. For convenience, throughout this chapter we refer to the recognition of a cost for share-based payments. In some cases, however, a share-based payment transaction may initially give rise to an asset (e.g., where employee costs are capitalised as part of the cost of PP&E or inventories).

This approach inevitably results in transactions, which convey the same value to the recipients, but which have different legal forms, having several different potential charges in profit or loss. Moreover, many of the requirements are rules derived from the 'anti-avoidance' approach of IFRS 2. This means that an expense often has to be recorded for transactions that either have no ultimate value to the counterparty or to which, in some cases, the counterparty actually has no entitlement at all.

1.3.1 Classification differences between share-based payments and financial instruments

As noted above, not only are there differences between the accounting treatment of liabilities or equity in a share-based payment transaction as compared with that of other transactions involving liabilities or equity instruments (Section 22 Liabilities and Equity), but the classification of a transaction as a liability or equity transaction may differ.

The most important difference is that a share-based payment transaction involving the delivery of equity instruments is always accounted for as an equity transaction, whereas a similar transaction outside the scope of the share-based payment accounting requirements might well be classified as a liability if the number of shares to be delivered varies.

2 Comparison between Section 26 and IFRS

As a result of the Periodic Review 2024 amendments to Section 26 some differences with IFRS have been eliminated by providing additional guidance to assist in applying the principles and promoting greater consistency with IFRS. This section summarises the remaining principal differences between Section 26 and the requirements of IFRS 2. In some of the areas referred to below, the difference between the standards is explicit, but there are others where the lack of guidance or explanation in Section 26 means that it is unclear whether a different accounting treatment is intended.

All the areas below, which set out the differences, are addressed in more detail in the remainder of this chapter, as indicated.

2.1 Scope

2.1.1 Definitions and transactions within scope

Unlike IFRS 2, Section 26 does not provide guidance or examples in areas such as:

- The meaning of 'goods' in 'goods and services' when used in the definition of a share-based payment transaction.
 - Vested transactions.
 - Transactions with shareholders as a whole.
 - The interaction with the requirements of FRS 102 relating to financial instruments.
- And
- The contribution of a business on formation of a joint venture.

The differences are discussed in more detail at 3.2 and 3.3 below.

2.2 Recognition

2.2.1 Accounting after vesting date

FRS 102 includes no guidance on accounting for awards after vesting, whereas IFRS 2 specifically prohibits a reversal of expense (see 7.1.3 below).

2.2.2 Equity instruments vesting in instalments ('graded' vesting)

The implementation guidance of IFRS 2 requires that the graded vesting accounting approach be used for equity instruments vesting in instalments. Section 26 does not explicitly require this approach as there is no similar guidance, as such, a simpler alternative may be acceptable (see 7.2.2 below).

2.3 Measurement of equity-settled share-based payment transactions

2.3.1 Non-vesting conditions

Section 26 refers to 'conditions that are not vesting conditions' and that is a term which is neither defined in FRS 102 or IFRS 2. IFRS 2 however includes examples of such conditions as part of its implementation guidance (see 4 and 7 below).

Section 26 provides an example of a condition that is not a vesting condition, such as a condition that an employee contributes to a saving plan, which is one of the examples provided in the implementation guidance of IFRS 2 as a non-vesting condition.

How we see it

We believe that both terms, 'non-vesting conditions' and 'conditions that are not vesting conditions', are similar and we will refer to the terms interchangeably throughout this chapter.

2.3.2 Employees and others providing similar services

Both Section 26 and IFRS 2 distinguish between awards to employees (and others providing similar services) and those to other parties providing goods or services. The recognition and measurement of equity-settled share-based payment transactions differ according to whether the counterparty is treated as an employee including others providing similar services.

Section 26 provides no additional guidance on the meaning of 'others providing similar services' whereas IFRS 2 defines/explains this term in Appendix A (see 6.2.1 below).

In dealing with the recognition and measurement of share-based payments, FRS 102 sometimes refers only to employees without specifying the treatment for non-employee awards. In such cases, we assume that a similar accounting treatment is intended for non-employee awards.

2.3.3 Valuation methodology

IFRS 2 requires the use of a market price or an option pricing model for the valuation of equity-settled share-based payment transactions. FRS 102 draws a more explicit distinction than IFRS 2 between the valuation of shares and the valuation of options and appreciation rights. Section 26 specifies the following valuation hierarchy:

- Observable market price
- Entity-specific observable market data

And

- Directors' valuation using a generally accepted methodology,
- and gives limited examples for both shares and options/appreciation rights of the type of approach that might be taken. [FRS 102.26.10, FRS 102.26.11]. Section 26 does not mandate the use of an option pricing model for the valuation of share options when market prices are unavailable; instead, it allows use of a valuation methodology 'such as an option pricing model'.

In practical terms, it is not entirely clear what alternatives to an option pricing model are likely to provide a reliable indication of the fair value (see 9.2 and 9.3 below).

IFRS 2 includes guidance in Appendix B about the selection and application of option pricing models, none of which is reproduced in FRS 102 (see 9 below).

2.3.4 Awards where fair value cannot be measured reliably

Section 26 assumes as part of its requirements relating to the measurement of equity-settled share-based payment transactions that it will always be possible to derive a fair value for the award (see 9.2 and 9.3 below). IFRS 2 includes an approach based on the intrinsic value of the equity instruments for the 'rare cases' in which an entity is unable to measure reliably the fair value of those instruments. [IFRS 2.24]. The intrinsic value approach is not addressed in this chapter.

2.3.5 Cancellation of awards

IFRS 2 makes clear that an award may be cancelled either by the entity or by the counterparty and that a failure to meet non-vesting conditions must, in certain situations, be considered to amount to the cancellation of an award. Section 26 includes no explicit requirements to mirror those in IFRS 2 (see 7.4.3 and 8.4 below).

2.3.6 Replacement awards following a cancellation or settlement

Section 26 includes no guidance on the accounting treatment of equity-settled awards to replace an award cancelled during the vesting period and whether, as under IFRS 2, they may be accounted for based on their incremental fair value rather than being treated as a completely new award (see 8.4.4 below).

2.4 Share-based payment transactions with cash alternatives

2.4.1 Entity or counterparty has choice of equity or cash settlement

Where the counterparty has a choice of settlement in equity or cash, Section 26 requires the entity to account for the transaction as wholly cash-settled unless the choice of settlement in cash has no commercial substance (in which case the transaction is accounted for as wholly equity-settled). IFRS 2 requires a split accounting approach (between a liability and equity) for such arrangements (see 11.2 below).

There are no significant differences between the classification requirements of Section 26 and those of IFRS 2 for transactions where the entity has a choice of equity or cash settlement.

2.4.2 Settlement of an award with cash alternatives when the entity has choice of settlement

Section 26 contains no guidance on how to account for the settlement in equity of an award accounted for as cash-settled. This is similar to IFRS 2, however it is clear from other provisions in IFRS 2 on how to account for the settlement in equity of cash-settled accounted transactions (see 11.1.1 below).

When an entity settles in cash an award that has been accounted for as equity-settled, where that award provides an entity with a choice of settlement, paragraph 13A of Section 26 requires the payment made to be accounted for as a deduction from equity, except to the extent that the payment exceeds the fair value of the equity instruments that would otherwise have been issued, measured at the settlement date, with any excess recognised as an expense. This is different from IFRS 2, which requires an entity that has accounted for the transaction as equity-settled to recognise an additional expense for the excess value provided on settlement if the entity chooses the settlement alternative with a higher value. The excess value provided is the difference between cash paid and the fair value of the equity instruments that would have been issued. If settled in equity, as that has the higher value, the excess value provided is the difference between the fair value of the equity instruments issued and the amount of the cash that would have been paid (see 11.1.1.B below).

2.5 Modification of award from equity-settled to cash-settled and vice versa

Section 26 contains no guidance when an equity-settled award is modified to cash-settled or *vice versa*. Whilst IFRS 2 also does not contain guidance on when an equity-settled award is modified to cash-settled, it does contain specific guidance when a cash settled award is modified to equity-settled.

IFRS 2 requires on modification from a cash-settled award to an equity-settled award, that the equity-settled award is measured at modification date, with a credit to equity to the extent goods or services have been received, the liability is derecognised, with the difference between the two amounts recognised immediately in profit or loss (i.e., the difference between the carrying amount of the liability derecognised and the amount recognised in equity on modification date). This IFRS 2 accounting approach also applies when a cash-settled award is cancelled, and an equity-settled award granted is identified as a replacement for that cancelled cash-settled award (see 8.3.5 and 10.4 below).

2.6 Group plans - alternative accounting treatment

Where a share-based payment award is granted by an entity to the employees of one or more members of a group, those members are permitted, as an alternative to the general measurement requirements of Section 26, to measure the share-based payment expense based on a reasonable allocation of the group expense (see 13.2.3.A below). There is no corresponding alternative treatment in IFRS 2.

2.7 Unidentifiable goods or services in Government-mandated plans

For certain government-mandated plans where the goods or services received or receivable in exchange for equity instruments are not identifiable, Section 26 requires the award to be valued based on the equity instruments rather than the goods or services. Under IFRS 2, the scope is not restricted to government-mandated plans.

As the requirements are placed within the section heading 'Government-mandated plans' in Section 26, it appears that the requirements of unidentifiable goods or services are restricted only to certain government arrangements (see 3.2.3 below) and is consistent with the guidance published by the FRC²²⁶ at the time of writing this chapter.

2.8 Disclosures

The disclosure requirements of Section 26 are generally derived from, but less extensive than, those of IFRS 2. However, Section 26 has three specific requirements that are not found in IFRS 2:

- If a valuation methodology is used to determine the fair value of equity-settled awards, the entity is required to disclose both the method and reason for choosing it.
 - For cash-settled share-based payment transactions, an entity is required to disclose how the liability was measured.
- And
- Where the alternative accounting treatment is adopted for group plans, disclosure of this fact is required together with the basis of allocation.

More generally, unlike IFRS 2, FRS 102 includes exemptions from disclosure for certain entities.

The disclosure requirements are discussed at 14 below.

2.9 First-time adoption

The first-time adoption provisions of FRS 102 are set out in Section 35 *Transition to this FRS*. The specific requirements relating to share-based payments are discussed at 17 below. Unlike IFRS 1 First-time Adoption of International Financial Reporting Standards, Section 35 does not specify the accounting treatment of an award that was granted prior to transition but subsequently modified.

²²⁶ [Significant differences between FRS 102 and the IFRS for SMEs Accounting Standard](#), updated in March 2024, on the FRC's website. Accessed 16/12/2025.

3 Scope of Section 26

This section covers the scope of the share-based payment accounting requirements of Section 26 as follows:

- Definitions from Appendix I to FRS 102 that are relevant to determining whether transactions are within the scope of Section 26 (see 3.1 below).
- A discussion of transactions that fall within the scope of Section 26 (see 3.2 below) including group arrangements (see 3.2.1 below), transactions with employee benefit trusts (EBTs) and similar vehicles (see 3.2.2 below) and transactions where the consideration received might not be clearly identifiable (see 3.2.3 below).
- A discussion of transactions that fall outside the scope of Section 26 (see 3.3 below).
And
- Some examples of situations commonly encountered in practice and a discussion of whether they are within scope of Section 26 (see 3.4 below).

3.1 Definitions

The following definitions from Appendix I: Glossary to FRS 102 are relevant to the scope of Section 26.

Extract from FRS 102

Appendix I

Glossary

cash-settled share-based payment transaction	A share-based payment transaction in which the entity acquires goods or services by incurring a liability to transfer cash or other assets to the supplier of those goods or services for amounts that are based on the price (or value) of the equity instruments (including shares and share options) of the entity or another group entity.
equity (equity instrument is not defined)	The residual interest in the assets of the entity after deducting all its liabilities.
equity-settled share-based payment transaction	A share-based payment transaction in which the entity: (a) receives goods or services as consideration for its own equity instruments (including shares or share options); or (b) receives goods or services but has no obligation to settle the transaction with the supplier.
group (group entity is not defined)	A parent and all its subsidiaries.
share-based payment	The equity instruments (including shares and share options), cash or other assets to which a counterparty may become entitled in a share-based payment transaction.
share-based payment arrangement	An agreement between the entity (or another group entity or any shareholder of any group entity) and another party (including an employee) that entitles the other party to receive: (a) cash or other assets of the entity for amounts that are based on the price (or value) of equity instruments (including shares or share options) of the entity or another group entity; or (b) equity instruments (including shares or share options) of the entity or another group entity, provided the specified vesting conditions, if any, are met.

share-based payment transaction	A transaction in which the entity: (a) receives goods or services from the supplier of those goods or services (including an employee) in a share-based payment arrangement; or (b) incurs an obligation to settle the transaction with the supplier in a share-based payment arrangement when another group entity receives those goods or services.
share option	A contract that gives the holder the right, but not the obligation, to subscribe to the entity's shares at a fixed or determinable price for a specific period of time.

It will be seen from these definitions that FRS 102 applies not only to awards of shares and share options but also to awards of cash (or other assets) of a value equivalent to the value, or a movement in the value, of a particular number of shares.

3.2 Transactions within the scope of Section 26

Subject to the exceptions noted at 3.3 below, Section 26 must be applied to all share-based payment transactions, including:

- (a) Equity-settled share-based payment transactions (discussed at 5 to 9 below)
- (b) Cash-settled share-based payment transactions (discussed at 10 below)
- (c) Transactions where either the entity or the supplier of goods or services can choose whether the transaction is to be equity-settled or cash-settled (discussed at 11 below) [FRS 102.26.1]

Whilst the boundaries between these types of transaction are reasonably self-explanatory, there may be transactions, as discussed in more detail at 10 and 11 below, that an entity may intuitively regard as equity-settled which are in fact required to be treated as cash-settled.

Although most share-based payment transactions are with employees, the scope of Section 26 is not restricted to employee transactions. For example, if an external supplier of goods or services, including another group entity, is paid in shares or share options, or cash of equivalent value, Section 26 must be applied.

A share-based payment transaction as defined in FRS 102 (see 3.1 above) requires goods or services to be received or acquired, but FRS 102 does not define 'goods' or give any additional guidance as to what might be included within such a term. IFRS 2 includes the following within its scope, and it seems appropriate to use this guidance for the purposes of Section 26:

- Inventories
- Consumables
- Property, plant and equipment (PP&E)
- Intangibles
- Other non-financial assets [IFRS 2.5]

It will be seen that 'goods' do not include financial assets, which raises some further issues (see 3.3.6 below).

Although not always explicitly stated, the scope of Section 26 extends to:

- Certain transactions by other group entities and by shareholders of group entities (see 3.2.1 below).
- Transactions with employee benefit trusts ('EBTs') and similar vehicles (see 3.2.2 below).
- Certain transactions where the identifiable consideration received appears to be less than the consideration given (see 3.2.3 below).
- 'All employee' share plans (see 3.2.4 below).

Section 26 is silent on certain other transactions or arrangements, including vested transactions (see 3.2.5 below), where it is unclear whether these transactions or arrangements fall within the scope of the share-based payment accounting requirements.

In the absence of specific guidance in FRS 102 we suggest that entities follow the requirements of IFRS 2, or general practice that has evolved through the application of IFRS 2, as set out in the sections below. This is on the basis that the definitions applicable to scoping (see 3.1 above) are the same as IFRS 2 and applying the hierarchy in Section 10 on selecting relevant and reliable accounting policies (see 1.2 above).

3.2.1 Transactions by other group entities and shareholders

The definition of 'share-based payment transaction' (see 3.1 above) and additional requirements in paragraph 1A of Section 26 have the effect that the scope of Section 26 is not restricted to transactions where the reporting entity acquires goods or services in exchange for providing its own equity instruments (or cash or other assets based on the cost or value of those equity instruments). Within a group of companies, it is common for one member of the group (typically the parent) to have the obligation to settle a share-based payment transaction in which services are provided to another member of the group (typically a subsidiary). This transaction is within the scope of Section 26 for the entity receiving the services (even though it is not a direct party to the arrangement between its parent and its employee), the entity settling the transaction and the group as a whole.

Accordingly, Section 26 requires an entity to account for a transaction in which it either:

- Receives goods or services when another entity in the same group (or shareholder of any group entity) has the obligation to settle the share-based payment transaction.
- Or
- Has an obligation to settle a share-based payment transaction when another entity in the same group receives the goods or services.

Unless the transaction is clearly for a purpose other than payment for goods or services supplied to the entity receiving them. [FRS 102.26.1A].

Moreover, the definition of 'equity-settled share-based payment transaction' (see 3.1 above) has the effect that the analysis of the transaction as equity-settled or cash-settled (and its accounting treatment) may differ when viewed from the perspective of the entity receiving the goods or services, the entity settling the transaction and the group as a whole, depending on whether or not an entity is required to settle the award and whether that settlement is in its own equity instruments.

An entity settling a share-based payment when another entity in the group receives the goods or services recognises the transaction as an equity-settled share-based payment transaction only if it is settled in its own equity instruments. Otherwise, the transaction is recognised as a cash-settled share-based payment transaction. [FRS 102.26.2A].

3.2.1.A Scenarios illustrating scope requirements for group entities

In this section we consider seven scenarios, all based on the simple structure in Figure 3-1. These scenarios are by no means exhaustive but cover the situations commonly seen in practice.

The scenarios below are based on the scope requirements of Section 26 as set out at 3.2.1 above and do not reflect the alternative accounting treatment for members of group schemes. This alternative accounting treatment allows the group expense to be allocated between members of the group on a reasonable basis, rather than requiring each group entity to recognise and measure its expense in accordance with the general requirements of Section 26. [FRS 102.26.16]. The exemption and the accounting treatment of group share schemes generally are discussed in more detail at 13 below.

Figure 3-1: Scope of Section 26

The scenarios assume that:

- the shareholder is not a group entity
- And
- the subsidiary is directly owned by the parent company (see also 13.2.1 below in relation to intermediate parent companies).

Scenario	Who grants the award?	Which entity receives the goods or services?	Who settles the award?	On which entity's shares is the award based?	Award settled in shares or cash?
1	Parent	Subsidiary	Parent	Parent	Shares
2	Shareholder	Subsidiary	Shareholder	Parent	Shares
3	Subsidiary	Subsidiary	Subsidiary	Parent	Shares
4	Subsidiary	Subsidiary	Subsidiary	Subsidiary	Shares
5	Parent	Subsidiary	Parent	Subsidiary	Shares
6	Parent	Subsidiary	Parent	Parent	Cash
7	Shareholder	Subsidiary	Shareholder	Parent	Cash

Scenario 1

Parent awards equity shares in Parent to employees of Subsidiary in exchange for services to Subsidiary. Parent settles the award with the employees of Subsidiary.

▪ Consolidated financial statements of Parent

Under the definition of 'share-based payment transaction', "the entity [i.e., the Parent group] ... receives goods or services ... in a share-based payment arrangement ...". A share-based payment arrangement includes "an agreement between the entity ... and another party (including an employee) that entitles the other party to receive ... equity instruments ... of the entity ...".

The transaction is classified as an equity-settled transaction because it is settled in an equity instrument of the group.

▪ Separate financial statements of Parent

Parent does not receive the goods or services, but it does have the obligation to settle. This is within the scope of paragraph 1A(b) of Section 26 as Parent "has an obligation to settle a share-based payment transaction when another entity in the same group receives the goods or services". The transaction is classified as an equity-settled transaction because it is settled in an equity instrument of Parent. [FRS 102.26.2A].

▪ Subsidiary

Under the definition of 'share-based payment transaction', "the entity [i.e., Subsidiary] ... receives goods or services ... in a share-based payment arrangement ...". A 'share-based payment arrangement' includes "an agreement between ... another group entity [i.e., Parent] ... and another party (including an employee) that entitles the other party to receive ... equity instruments of ... another group entity".

The transaction is classified as an equity-settled transaction because Subsidiary "has no obligation to settle the transaction with the supplier".

Even if Subsidiary is not a party to the agreement with its employees, it nevertheless records a cost for this transaction. In effect, the accounting treatment is representing that Subsidiary has received a capital contribution from Parent, which Subsidiary has then 'spent' on employee remuneration. This treatment is often referred to as 'push-down' accounting - the idea being that a transaction undertaken by one group entity (in this case, Parent) for the benefit of another group entity (in this case, Subsidiary) is 'pushed down' into the financial statements of the beneficiary entity.

Scenario 2

Shareholder awards equity shares in Parent to employees of Subsidiary in exchange for services to Subsidiary. Shareholder settles the award with the employees of Subsidiary.

▪ Consolidated financial statements of Parent

Paragraph 1A of Section 26 refers to awards settled by a shareholder of a group entity on behalf of the entity receiving the goods or services.

The transaction is classified as an equity-settled transaction, because the Parent group 'receives goods or services but has no obligation to settle the transaction with the supplier'.

▪ Separate financial statements of Parent

Scenario 2 is not within the scope of Section 26 for the separate financial statements of Parent because Parent (as a separate entity) receives no goods or services, nor does it settle the transaction.

- *Subsidiary*

Under the definition of 'share-based payment transaction', "the entity [i.e., Subsidiary] ... receives goods or services ... in a share-based payment arrangement ...". A 'share-based payment arrangement' includes "an agreement between ... another group entity [i.e., Parent] ... and another party (including an employee) that entitles the other party to receive ... equity instruments of ... another group entity".

The transaction is classified as an equity-settled transaction because Subsidiary "has no obligation to settle the transaction with the supplier".

Scenario 3

Subsidiary awards equity shares in Parent to employees of Subsidiary in exchange for services to Subsidiary. Subsidiary settles the award with its employees.

- *Consolidated financial statements of Parent*

Under the definition of 'share-based payment transaction', "the entity [i.e., the Parent group] ... receives goods or services ... in a share-based payment arrangement ...". A share-based payment arrangement includes "an agreement between the entity ... and another party (including an employee) that entitles the other party to receive ... equity instruments ... of the entity ...".

The transaction is classified as an equity-settled transaction because it is settled in an equity instrument of Parent. [FRS 102.26.2A].

- *Separate financial statements of Parent*

Scenario 3 is not within the scope of Section 26 for the separate financial statements of Parent because Parent (as a separate entity) receives no goods or services, nor does it settle the transaction.

- *Subsidiary*

Under the definition of 'share-based payment transaction', "the entity [i.e., Subsidiary] ... receives goods or services ... in a share-based payment arrangement ...". A 'share-based payment arrangement' includes "an agreement between ... another group entity [i.e., Parent] ... and another party (including an employee) that entitles the other party to receive ... equity instruments of ... another group entity".

The transaction is classified as a cash-settled transaction because Subsidiary has the obligation to settle the award with equity instruments issued by Parent - i.e., a financial asset in Subsidiary's separate financial statements - rather than with Subsidiary's own equity instruments.

However, for the approach in this Scenario to apply, it must be the case that Subsidiary grants the award as a principal rather than acting as agent for Parent. If Subsidiary appears to be granting an award but is really doing so only on the instructions of Parent, as will generally be the case for UK companies, then the approach in Scenario 1 above is more likely to apply. This is discussed in more detail at 13.2.5.B below.

Scenario 4

Subsidiary awards equity shares in Subsidiary to employees of Subsidiary in exchange for services to Subsidiary. Subsidiary settles the award with the employees of Subsidiary.

- *Consolidated financial statements of Parent*

Under the definition of 'share-based payment transaction', "the entity [i.e., the Parent group] ... receives goods or services ... in a share-based payment arrangement". A share-based payment arrangement includes "an agreement between the entity ... and another party (including an employee) that entitles the other party to receive ... equity instruments ... of the entity ...".

In the consolidated financial statements of Parent, shares of Subsidiary not held by Parent are a non-controlling interest.

- *Separate financial statements of Parent*

Scenario 4 is not within the scope of Section 26 for the separate financial statements of Parent because Parent (as a separate entity) receives no goods or services, nor does it settle the transaction.

- *Subsidiary*

Under the definition of 'share-based payment transaction', "the entity [i.e., Subsidiary] ... receives goods or services ... in a share-based payment arrangement". A share-based payment arrangement includes "an agreement between the entity ... and another party (including an employee) that entitles the other party to receive ... equity instruments ... of the entity ...".

The transaction is classified as an equity-settled transaction because it is settled in an equity instrument of Subsidiary.

Scenario 5

Parent awards equity shares in Subsidiary to employees of Subsidiary in exchange for services to Subsidiary. Parent settles the award with the employees of Subsidiary.

- *Consolidated financial statements of Parent*

Under the definition of 'share-based payment transaction', "the entity [i.e., the Parent group] ... receives goods or services ... in a share-based payment arrangement". A share-based payment arrangement includes "an agreement between the entity ... and another party (including an employee) that entitles the other party to receive ... equity instruments of the entity ...".

The transaction is classified as an equity-settled transaction because it is settled in an equity instrument of the group. In the consolidated financial statements of Parent, shares of Subsidiary not held by Parent are a non-controlling interest.

- *Separate financial statements of Parent*

Parent does not receive the goods or services, but it does have the obligation to settle. This is within the scope of paragraph 1A(b) of Section 26 as Parent "has an obligation to settle a share-based payment transaction when another entity in the same group receives the goods or services". The transaction is classified as a cash-settled transaction as Parent is settling the award not in its own equity instrument but in an equity instrument issued by a subsidiary and held by Parent - i.e., a financial asset in Parent's separate financial statements. [FRS 102.26.2A].

- *Subsidiary*

Under the definition of 'share-based payment transaction', "the entity [i.e., Subsidiary] ... receives goods or services ... in a share-based payment arrangement". A 'share-based payment arrangement' includes "an agreement between ... another group entity [i.e., Parent] ... and another party (including an employee) that entitles the other party to receive equity instruments of the entity...".

The transaction is classified as an equity-settled transaction, because Subsidiary "has no obligation to settle the transaction with the supplier".

Scenario 6

Parent awards cash based on the value of shares in Parent to employees of Subsidiary in exchange for services to Subsidiary. Parent settles the award with the employees of Subsidiary.

- *Consolidated financial statements of Parent*

Under the definition of 'share-based payment transaction', "the entity [i.e., the Parent group] ... receives goods or services ... in a share-based payment arrangement". A 'share-based payment arrangement' includes "an agreement between the entity ... and another party (including an employee) that entitles the other party to receive ... cash ... of the entity ... based on the price (or value) of equity instruments ... of the entity ...".

The transaction is classified as a cash-settled transaction, because it is settled in cash of the group.

- *Separate financial statements of Parent*

Parent does not receive the goods or services, but it does have the obligation to settle. This is within the scope of paragraph 1A(b) of Section 26 as Parent "has an obligation to settle a share-based payment transaction when another entity in the same group receives the goods or services". The transaction is classified as a cash-settled transaction, because it is settled not in an equity instrument issued by Parent, but in cash based on the value of shares in Parent.

- *Subsidiary*

When the drafting of the definition of a 'share-based payment transaction' is examined closely, it is not absolutely clear that this arrangement is within the scope of Section 26 for Subsidiary. To be a share-based payment transaction (and therefore in the scope of Section 26) for the reporting entity, a transaction must also be a share-based payment arrangement. A share-based payment arrangement is defined as one in which the counterparty receives (our emphasis added):

Cash or other assets of the entity

Or

Equity of the entity or any other group entity

- As drafted, the definition has the effect that a transaction settled in equity is in the scope of Section 26 for a reporting entity, whether the equity used to settle the transaction is the entity's own equity or that of another group entity. Where a transaction is settled in cash, however, the definition has the effect that a transaction is in the scope of Section 26 for a reporting entity only when that entity's own cash (or other assets) is used in settlement, and not when another group entity settles the transaction.

How we see it

When read with the general scope requirements in paragraphs 1 and 1A of Section 26, we believe that the apparent omissions from the definition of 'share-based payment transaction' must be ignored. We see it as a drafting slip and that the transaction must be classified as an equity-settled transaction by Subsidiary, because Subsidiary "receives goods or services but has no obligation to settle the transaction with the supplier". Appendix B to IFRS 2 provides guidance on cash-settled payments to employees when the subsidiary itself does not have the obligation.

Scenario 7

Shareholder awards cash based on the value of shares in Parent to employees of Subsidiary in exchange for services to Subsidiary. Shareholder settles the award with the employees of Subsidiary.

- This transaction is within the scope of paragraph 1A of Section 26 for the consolidated financial statements of Parent and for the separate financial statements of Subsidiary as it is a transaction where the shareholder has an obligation to settle on behalf of the entity receiving the goods or services. However, it does not strictly meet the definitions in Appendix I. As noted at Scenario 6 above, the definitions of 'share-based payment transaction' and 'cash-settled share-based payment transaction' as drafted do not explicitly address any arrangement that is settled in cash by a party other than the reporting entity.

How we see it

We believe that the above transaction is required to be treated as being within the scope of Section 26 for the consolidated financial statements of Parent and the separate financial statements of Subsidiary and the transaction accounted for as equity-settled.

- The transaction is not within the scope of Section 26 for the separate financial statements of Parent, because Parent (as a separate entity) receives no goods or services, nor does it settle the transaction.

3.2.2 Transactions with employee benefit trusts and similar vehicles

It is common for an entity to establish a trust to hold shares in the entity for the purpose of satisfying share-based awards to employees. In such cases, it is often the trust, rather than any entity within the legal group, that makes share-based awards to employees. Awards by EBTs and similar vehicles are within the scope of Section 26 and are discussed at 13.3 below.

3.2.3 Transactions where the identifiable consideration received appears to be less than the consideration given

3.2.3.A Government-mandated plans

A share-based payment transaction as defined (see 3.1 above) involves the receipt of goods or services. Nevertheless, Section 26 also applies to government-mandated plans "...established under law by which equity investors (such as employees) are able to acquire equity without providing goods or services that can be specifically identified (or by providing goods or services that are clearly less than the fair value of the equity instruments granted). This indicates that other consideration has been or will be received (such as past or future employee services) ...". [FRS 102.26.17].

Such arrangements are treated as equity-settled share-based payment transactions under FRS 102 and the unidentifiable goods or services are measured as the difference between the fair value of the equity instrument and the fair value of any identifiable goods or services received (or to be received) measured at the grant date. [FRS 102.26.17]. The determination of the grant date is addressed at 6.3 below.

Section 26 offers no further explanation or guidance as to the type of arrangement that is expected to fall within the scope of this paragraph. The reference to employees and employee services is somewhat puzzling since share-based payment transactions with employees are always measured at the fair value of the share-based payment rather than the fair value of the employee services, identifiable or otherwise.

What is also not made explicitly clear in paragraph 17 is that, in this situation, the fair value of a share-based payment with a non-employee would need to be that of the equity instruments rather than that of the goods or services (as would normally be the case for an award to a non-employee, see 6.1 and 6.4 below).

As Section 26 refers only to 'programmes mandated under law' beneath the heading 'Government-mandated plans', it appears that the guidance does not require an entity to apply the requirements of paragraph 17 to other transactions with non-employees, in which the value of goods or services received or receivable falls short of the fair value of the equity instruments or cash transferred.

IFRS 2 includes a similar requirement for transactions with non-employees where no specifically identifiable goods or services have been (or will be) received but does not restrict the scope to government-mandated plans. [IFRS 2.2]. Paragraph 1 of Section 26 contains similar wording and requirements to that of paragraph 2 of IFRS 2 but then goes on to restrict the requirement to government mandated plans.

IFRS 2 asserts that, if the identifiable consideration received (if any) appears to be less than the fair value of consideration given in any share-based payment arrangement, the implication is that, in addition to the identifiable goods and services acquired, the entity must also have received some unidentifiable consideration equal to the difference between the fair value of the share-based payment and the fair value of any identifiable consideration received. Accordingly, the cost of the unidentified consideration must be accounted for in accordance with IFRS 2. [IFRS 2.13A].

For example, if an entity agrees to pay a supplier of services with a clearly identifiable market value of £1,000 by issuing shares with a value of £1,500, IFRS 2 requires the entity to recognise an expense of £1,500. This is notwithstanding the normal requirement of IFRS 2 that an equity-settled share-based payment transaction with a non-employee be recognised at the fair value of the goods or services received (see 6.1 and 6.4 below).

3.2.3.B Other transactions

In rare circumstances a transaction may occur in which no goods or services are received by the entity. For example, a principal shareholder of an entity, for reasons of estate planning, may transfer shares to a relative. In the absence of indications that the relative has provided, or is expected to provide, goods or services to the entity in exchange for the shares, such a transfer would be outside the scope of Section 26 as a transaction clearly for a purpose other than payment for goods or services supplied to the entity.

[FRS 102.26.1A].

3.2.4 'All employee' share plans

Many countries, including the UK, encourage wider share-ownership by allowing companies to award a limited number of free or discounted shares to employees without either the employee or the employer incurring tax liabilities which would apply if other benefits in kind to an equivalent value were given to employees. These share schemes are referred to in different jurisdictions by terms such as 'all-employee share plans', 'employee share purchase plans' and 'broad-based plans'.

There is no exemption from the scope of Section 26 for such plans (unless they are immaterial).

3.2.5 Vested transactions

Section 26 does not specifically address the accounting treatment of awards once they have vested, other than on settlement of equity-settled share-based payment transaction where an entity repurchases the vested equity instrument (see 8.4 below). Drawing on the requirements of IFRS 2, a transaction accounted for as a share-based payment does not necessarily cease to be within the scope of Section 26 once it has vested in the counterparty (see 4 below). This is made clear by the numerous provisions of IFRS 2 referring to the accounting treatment of vested awards.

Once equity shares have been unconditionally delivered or beneficially transferred to the counterparty (e.g., as the result of the vesting of an award of ordinary shares, or the exercise of a vested option over ordinary shares), the holder of those shares will often be in exactly the same position as any other holder of ordinary shares and the shares will generally be accounted for under Section 22, rather than under Section 26.

If, however, the holder of a share or vested option enjoys rights not applicable to all holders of that class of share, such as a right to put the share or the option to the entity for cash, or holds a special class of share with rights that do not apply to other classes of equity, the share or option might remain in the scope of Section 26 as long as any such rights continue to apply. The same is true of modifications made after vesting which add such rights to a vested share or option or otherwise alter the life of the share-based payment transaction. The special terms or rights will often be linked to the holder's employment with the entity but could also apply to an arrangement with a non-employee.

The significance of this is that accounting and disclosure requirements could be very different depending on whether transactions are considered to be within the scope of Section 26.

How we see it

To summarise the above, an equity-settled share-based payment transaction will remain in scope of Section 26 until the equity instruments have been unconditionally delivered or beneficially transferred to the counterparty (e.g., as the result of the vesting of an award of ordinary shares, or the exercise of a vested option over ordinary shares), and the counterparty enjoys rights that are applicable to all holders of ordinary shares. However, if the counterparty holds a special class of share with rights that do not apply to other classes of equity, the shares might still remain in the scope of Section 26 as long as any such rights continue to apply.

The above discussion on the life of a share-based payment transaction focuses on shares or share options awarded, however, a cash-settled share-based payment transaction is within the scope of Section 26 for its entire life, i.e., until settlement. [FRS 102.26.14, FRS 102.26.14B, FRS 102.26.14C].

3.3 Transactions not within the scope of Section 26

Section 26 simply states that share-based transactions that are clearly for a purpose other than payment to the entity for goods or services are not within its scope. [FRS 102.26.1A]. Other than equity-instruments issued in exchange for control of the acquiree in a business combination, it does not include any more specific examples of transactions that are outside the scope of its requirements. [FRS 102.26.1B]. IFRS 2 includes some specific scope exemptions, and we expect that similar exemptions are intended to apply in the application of Section 26. The following transactions are outside the scope of IFRS 2:

- Transactions with shareholders in their capacity as such (see 3.3.1 below)
 - Transfers of assets in group restructuring arrangements (see 3.3.2 below)
 - Business combinations (see 3.3.3 below)
 - Businesses combinations - common control transactions (see 3.3.3.A below)
 - Contribution of a business on the formation of a joint venture (jointly controlled entity) (see 3.3.4.A below)
- And
- Transactions in the scope of IAS 32 *Financial Instruments: Presentation* and IAS 39 *Financial Instruments: Recognition and Measurement* or IFRS 9 *Financial Instruments* or Section 22 (see 3.3.5 below). In addition, the scope exemptions in IFRS 2 combined with those in IAS 32 and IAS 39 (or IFRS 9) appear to have the effect that there is no specific guidance in IFRS for accounting for certain types of investments when acquired in return for shares (see 3.3.6 below)

However, as noted at 3.2.4 above, there is no exemption for share schemes aimed mainly at lower and middle ranking employees, referred to in different jurisdictions by terms such as 'all-employee share schemes', 'employee share purchase plans' and 'broad-based plans'.

How we see it

In the absence of specific examples in Section 26, other than equity instruments issued in exchange for the acquiree in a business combination, we believe that the scope exemptions included in IFRS 2 also apply to Section 26. See 3.3.1 to 3.3.6 below.

3.3.1 Transactions with shareholders in their capacity as such

IFRS 2 does not apply to transactions with employees (and others) purely in their capacity as shareholders. For example, an employee may already hold shares in the entity as a result of previous share-based payment transactions. If the entity then raises funds through a rights issue, whereby all shareholders (including the employee) can acquire additional shares for less than the current fair value of the shares, such a transaction is not a 'share-based payment transaction' for the purposes of IFRS 2. [IFRS 2.4].

3.3.2 Transfer of assets in group restructuring arrangements

In some group restructuring arrangements, one entity will transfer a group of net assets, which does not meet the definition of a business, to another entity in return for shares. Careful consideration of the precise facts and circumstances is needed in order to determine whether, for the separate or individual financial statements of any entity affected by the transfer, such a transfer meets the definition of a share-based payment transaction.

How we see it

If the transfer is considered primarily to be a transfer of goods by their owner in return for payment in shares, then, in our view, this is to be accounted for as a share-based payment transaction.

Accounting for intra-group asset transfers in return for shares is considered further in Chapter 8 at 4.4.2.B.

3.3.3 Business combinations

Transactions in which equity instruments are issued to acquire goods as part of the net assets in a business combination are outside the scope of Section 26, but equity instruments granted to the employees of the acquiree in their capacity as employees (e.g., in return for continued service following the business combination) are within its scope, as are the cancellation, replacement or modification of a share-based payment transaction as a result of the business combination or other equity restructuring. [IFRS 102.26.1B].

If a vendor of an acquired business remains as an employee of that business following the business combination and receives a share-based payment for transferring control of the entity and for remaining in continuing employment, it is necessary to determine how much of the share-based payment relates to the acquisition of control (and therefore forms part of the consideration for the business combination) and how much relates to the provision of future services (which is a post-combination operating expense). There is further discussion on this issue in Chapter 22 at 3.6.2.C.

3.3.3.A Business combinations - common control transactions

Both IFRS 2 and Section 26 do not apply to a combination of entities or businesses under common control. [IFRS 2.5, FRS 102.26.1B]. Whilst the scope exemption included in paragraph 1B of Section 26, specifies 'business combinations', this includes business combinations under common control. [FRS 102.19.3, FRS 102 Appendix I].

3.3.4 Transactions with jointly controlled entities

3.3.4.A Contribution of a business on the formation of a jointly controlled entity

A jointly controlled entity may issue equity instruments to its venturer as consideration for the contribution of a business on the formation of the jointly controlled entity.

There is a scope exemption in IFRS 2 on accounting for the contribution of a business on the formation of a joint venture as defined by IFRS 11 *Joint Arrangements*, when the joint venture issues equity instruments. [IFRS 2.5]. A 'joint venture' under IFRS 11 is similar to a 'jointly controlled entity' under FRS 102 (see Chapter 18). The scope of Section 26 does not contain a similar scope exemption for jointly controlled entities.

How we see it

We believe that, similar to IFRS 2, Section 26 would not apply to the jointly controlled entity that issues equity instruments on the contribution of a business by the venturer on the formation of a jointly controlled entity, as the entity is not receiving or acquiring goods or services, but a business instead.

Whilst we believe that this type of transaction is not in scope of Section 26, in the absence of specific guidance elsewhere in FRS 102, we expect that entities will apply the requirements of Section 10 in selecting an accounting policy to account for the contribution of a business on the formation of a jointly controlled entity (see Chapter 9 at 2.1).

3.3.4.B Contribution of non-financial assets (which do not constitute a business) and other transactions

When non-financial assets, which do not constitute a business, are contributed to a jointly controlled entity in return for shares, consideration would need to be given as to whether the issue of shares are in scope of Section 26 as they are not specifically scoped out of the Section for the jointly controlled entity. These transactions are in scope of IFRS 2.

How we see it

We believe that Section 26 applies to these transactions in a similar manner to IFRS 2, therefore, the assets must be accounted for at fair value in the jointly controlled entity's books (see 3.2 above).

Both IFRS 2 and Section 26 do not directly address other types of transactions involving jointly controlled entities or transactions involving associates, particularly arrangements granted by the investors to the employees of associates or jointly controlled entities as they do not meet the definition of 'group' entities (see 13 below).

3.3.5 Transactions in the scope of IAS 32, IAS 39 and IFRS 9 or Section 22 (financial instruments)

IFRS 2 does not apply to transactions within the scope of IAS 32, IAS 39 or IFRS 9. Therefore, if an entity enters into a transaction to purchase, in return for shares, a commodity surplus to its production requirements or with a view to short-term profit taking, the contract is treated as a financial instrument under IAS 32 and IAS 39 or IFRS 9 rather than a share-based payment transaction under IFRS 2. [IFRS 2.6]. Some Practical examples of scope issues involving IFRS 2 and IAS 32/IAS 39/IFRS 9 are discussed at 3.4 below.

Whilst Section 26 has no specific corresponding reference to financial assets or liabilities, Section 22 excludes from its scope financial instruments, contracts and obligations under share-based payment transactions (except for the classification requirements that relate to treasury shares) and refers users to Section 26. [FRS 102.22.2(d)].

3.3.6 Transactions relating to investments in subsidiaries, associates and joint ventures

As noted at 3.2 above, IFRS 2 applies to share-based payment transactions involving goods or services, with 'goods' defined so as to exclude financial assets. This means that, when (as is commonly the case) an entity acquires an investment in a subsidiary, associate or joint venture for the issue of equity instruments, there is no explicit guidance as to the required accounting in the separate financial statements of the investor when it chooses to apply a policy of 'cost' under paragraph 24 of Section 9 *Consolidated and Separate Financial Statements* (see Chapter 8 at 4.4.2.B).

3.4 Some practical applications of the scope requirements

This section addresses the application of the scope requirements of Section 26 to a number of situations frequently encountered in practice. The situations are not specifically addressed in Section 26, but the following sections draw on the requirements of Section 26 together with related guidance in IFRS 2 and our experience of the practical application of IFRS 2:

- Remuneration in non-equity shares and arrangements with put rights over equity shares (see 3.4.1 below).
- An increase in the counterparty's ownership interest with no change in the number of shares held (see 3.4.2 below).
- Awards for which the counterparty has paid 'fair value' (see 3.4.3 below).
- A cash bonus which depends on share price performance (see 3.4.4 below).
- Cash-settled awards based on an entity's 'enterprise value' or other formula (see 3.4.5 below).
- Holding own shares to satisfy or 'hedge' awards (see 3.4.6 below).

The following aspects of the scope requirements are covered elsewhere in this chapter:

- Employment taxes on share-based payment transactions (see 15 below).
- Instruments such as limited recourse loans that sometimes fall within the scope of the share-based payment, rather than financial instruments, requirements because of the link both to the entity's equity instruments and to goods or services received in exchange (see 16.2 below).

3.4.1 Remuneration in non-equity shares and arrangements with put rights over equity shares

A transaction is within the scope of Section 26 only where it involves the delivery of an equity instrument, or cash or other assets based on the price or value of "equity instruments (including shares and share options) of the entity or another group entity" (see 3.1 above).

There can sometimes be advantages to giving an employee, in lieu of a cash payment, a share that carries a right to a 'one-off' dividend, or is mandatorily redeemable, at an amount equivalent to the intended cash payment. Such a share would almost certainly be classified as a liability (based on Section 22). Payment in such a share would not fall in the scope of Section 26 since the consideration paid by the entity for services received is a financial liability rather than an equity instrument (see the definitions at 3.1 above).

How we see it

If the amount of remuneration delivered in this way were equivalent to the value of a particular number of equity instruments issued by the entity, then the transaction would be in scope of Section 26 as a cash-settled share-based payment transaction, since the entity would have incurred a liability (i.e., by issuing the redeemable shares) for an amount based on the price of its equity instruments.

Similarly, if an entity grants an award of equity instruments to an employee together with a put right whereby the employee can require the entity to purchase those shares for an amount based on their fair value, both elements of that transaction are in the scope of Section 26 as a single cash-settled transaction (see 10 below).

3.4.2 Increase in ownership interest with no change in number of shares held

An increasingly common arrangement, typically found in entities with venture capital investors, is one where an employee (often part of the key management) subscribes initially for, say, 1% of the entity's equity with the venture capitalist holding the other 99%. The employee's equity interest will subsequently increase by a variable amount depending on the extent to which certain targets are met. This is achieved not by issuing new shares but by cancelling some of the venture capitalist's shares.

How we see it

In our view, such an arrangement falls within the scope of Section 26 as the employee is rewarded with an increased equity stake in the entity if certain targets are achieved. The increased equity stake is consistent with the definition of equity as 'a residual interest' notwithstanding the fact that no additional shares are issued.

In such arrangements, it is often asserted that the employee has subscribed for a share of the equity at fair value. However, the subscription price paid must represent a fair value using a Section 26 valuation basis in order for there to be no additional share-based payment expense to recognise (see 3.4.3 below).

3.4.3 Awards for which the counterparty has paid 'fair value'

In certain situations, such as where a special class of share is issued, the counterparty might be asked to subscribe a certain amount for the share which is agreed as being its 'fair value' for taxation or other purposes.

How we see it

This does not mean that such arrangements fall outside the scope of Section 26, either for measurement or disclosure purposes, if the arrangement meets the definition of a share-based payment transaction. In many cases, the agreed 'fair value' will be lower than a fair value measured in accordance with Section 26 because it will reflect the impact of service and non-market performance vesting conditions which are excluded from a Section 26 fair value (see 7 and 9 below).

This is addressed in more detail in 16.4.5 below.

3.4.4 Cash bonus dependent on share price performance

An entity might agree to pay its employees a £100 cash bonus if its share price remains at £10 or more over a given period. Intuitively, this does not appear to be in the scope of Section 26, since the employee is not being given cash of equivalent value to a particular number of shares. However, it could be argued that it does fall within the scope of Section 26 on the basis that the entity has incurred a liability, and the amount of that liability is 'based on' the share price (in accordance with the definition of a cash-settled share-based payment transaction). It is nil if the share price is below £10 and £100 if the share price is £10 or more.

How we see it

Either interpretation mentioned above is acceptable.

3.4.5 Cash-settled awards based on an entity's 'enterprise value' or other formula

As noted at 3.1 above, Section 26 includes within its scope transactions in which the entity acquires goods or services by incurring a liability "based on the price (or value) of equity instruments (including shares and share options) of the entity or another group entity". Employees of an unquoted entity may receive a cash award based on the value of the equity of that entity. Such awards are typically, but not exclusively, made by venture capital investors to the management of entities in which they have invested and which they aim to sell in the medium term. Further discussion of the accounting implications of awards made in connection with an exit event may be found at 16.4 below.

More generally, where employees of an unquoted entity receive a cash award based on the value of the equity, there is no quoted share price and an 'enterprise value' has therefore to be calculated as a surrogate for it. This begs the question of whether such awards are within the scope of Section 26 (because they are based on the value of the entity's equity) or that of Section 28.

How we see it

In order for an award to be within the scope of Section 26, any calculated 'enterprise value' must represent the fair value of the entity's equity. Where the calculation uses techniques recognised by Section 26 as yielding a fair value for equity instruments (as discussed at 9 below), we believe that the award is regarded as within the scope of Section 26.

An unquoted entity may have calculated the value of its equity based on net assets or earnings (see 9.3 below). In our view, this may be appropriate in some cases, if the value approximates to the fair value of the equity instruments.

Where, however, the enterprise value is based on a constant formula, such as a fixed multiple of earnings before interest, tax, depreciation and amortisation (EBITDA), in our view it is unlikely that this will represent a good surrogate for the fair value of the equity on an ongoing basis, even if it did so at the inception of the transaction.

It is not difficult to imagine scenarios in which the fair value of the equity of an entity could be affected with no significant change in EBITDA, for example as a result of changes in interest rates and effective tax rates, or a significant impairment of assets. Alternatively, there might be a significant shift in the multiple of EBITDA equivalent to fair value, for example if the entity were to create or acquire a significant item of intellectual property.

The accounting treatment of awards based on the 'market price' of an unquoted entity raises similar issues, as discussed more fully at 16.5 below.

3.4.6 Holding own shares to satisfy awards

Entities often seek to 'hedge' the cost of share-based payment transactions by buying their own equity instruments in transactions with existing shareholders. For example, an entity could grant an employee options over 10,000 shares and buy 10,000 of its own shares into treasury, or into its employee benefit trust, at the date that the award is made. If the award is share-settled, the entity will deliver the shares to the counterparty. If it is cash-settled, it may be in a position to sell the shares to raise the cash it is required to deliver to the counterparty. In either case, the cash cost of the award is capped at the amount paid for the shares at the date the award is made, less any amount paid by the employee on exercise. It could of course be argued that such an arrangement only 'hedges' an increase in the price of the shares. If the share price goes down so that the option is never exercised, the entity is left holding 10,000 of its own shares that cost more than they are now worth.

Whilst these strategies may cap the cash cost of share-based payment transactions that are eventually exercised, they will not have any effect on the charge to profit or loss required by Section 26 for such transactions. This is because purchases and sales of own shares are accounted for as movements in equity and are therefore never included in profit or loss, i.e., the recognition of an expense under Section 26 for the share-based payment transaction and accounting for movements in own shares are two completely distinct areas which must be treated separately for accounting purposes (see 5.1 below).

4 General recognition principles

The recognition rules in Section 26 are based on a so-called 'service date model'. In other words, an entity is required to recognise the goods or services received or acquired in a share-based payment transaction when it obtains the goods or as the services are received. [FRS 102.26.3]. For awards to employees (or others providing similar services), this contrasts with the measurement rules, which normally require a share-based payment transaction to be measured as at the date on which the transaction was entered into, which may be some time before or after the related services are received (see 5 to 8 below).

Where the goods or services received or acquired in exchange for a share-based payment transaction do not qualify for recognition as assets they are recognised as expenses. [FRS 102.26.4]. Typically, services will not qualify as assets and must therefore be expensed immediately, whereas goods will generally be initially recognised as assets and expensed later as they are consumed. However, some payments for services may be capitalised (e.g., as part of the cost of PP&E or inventories) and some payments for goods may be expensed immediately (e.g., where they are for items included within development costs written off as incurred).

The corresponding credit entry when goods are acquired or services are rendered is, in the case of an equity-settled transaction, an increase in equity and, in the case of a cash-settled transaction, a liability (or decrease in cash or other assets). [FRS 102.26.3].

The primary focus of the discussion in the remainder of this chapter is the application of these rules to transactions with employees, with the accounting treatment of transactions with non-employees addressed at 3.2.3 above and 6.1 and 6.4 below.

4.1 Vesting and vesting conditions

Under Section 26, the point at which a cost is recognised for goods or services depends on the concept of 'vesting'. The following definitions in Appendix I to FRS 102 are relevant. [FRS 102 Appendix I].

Extract from FRS 102

Appendix I

Glossary

performance condition

A vesting condition that requires:

- (a) the counterparty to complete a specified period of service (i.e., a service condition); the service requirement can be explicit or implicit; and
- (b) specified performance target(s) to be met while the counterparty is rendering the service required in (a).

The period of achieving the performance target(s):

- (a) shall not extend beyond the end of the service period; and
- (b) may start before the service period on the condition that the commencement date of the performance target is not substantially before the commencement of the service period.

A performance target is defined by reference to:

- (a) the entity's own operations (or activities) or the operations or activities of another entity in the same group (i.e., a non-market vesting condition); or
- (b) the price (or value) of the entity's equity instruments or the equity instruments of another entity in the same group (including shares and share options) (i.e., a market vesting condition).

A performance target might relate either to the performance of the entity as a whole or to some part of the entity (or part of the group), such as a division or an individual employee.

service condition

A vesting condition that requires the counterparty to complete a specified period of service during which services are provided to the entity. If the counterparty, regardless of the reason, ceases to provide service during the vesting period, it has failed to satisfy the condition. A service condition does not require a performance target to be met.

vest	Become an entitlement. Under a share-based payment arrangement, a counterparty's right to receive cash, other assets or equity instruments of the entity vests when the counterparty's entitlement is no longer conditional on the satisfaction of any vesting conditions.
vesting condition	The conditions that determine whether the entity receives the services that entitle the counterparty to receive cash, other assets or equity instruments of the entity, under a share-based payment arrangement. Vesting conditions are either service conditions or performance conditions

This definition of 'vest' refers only to equity instruments of the entity and omits any reference to equity instruments of other group entities. This appears to be a drafting oversight given that the scope of Section 26 and the definitions of equity and cash-settled share-based payment transactions in Appendix I to FRS 102 all refer to the equity instruments of the entity and other group entities.

The definition of vesting conditions emphasises the receipt of services by the entity, therefore a condition that does not contain a corresponding service condition is not a vesting condition. The recognition principles in FRS 102 use this approach to set out the differing accounting treatments, discussed further below, depending on whether the share-based payment transaction includes a service condition.

The absence of a service requirement means that an award will vest, or be deemed to vest, immediately as there is no service to be rendered before the counterparty becomes unconditionally entitled to the award. This concept of immediate vesting is reinforced by the fact that FRS 102 requires an entity to presume, in the absence of evidence to the contrary, that services rendered by the counterparty (for example, an employee) as consideration for the share-based payments have already been received. Where there is immediate vesting, the entity is required to recognise the services received, i.e., the cost of the award, in full on the grant date of the award with a corresponding credit to equity or liabilities. [FRS 102.26.5].

If, as will generally be the case for employee awards, the share-based payments do not vest until the counterparty completes a specified period of service, the entity must presume that the services to be rendered by the counterparty as consideration for those share-based payments will be received in the future, during the vesting period, i.e., the period over which the services are being rendered in order for the award to vest. The entity is required to account for those services as they are rendered by the counterparty during the vesting period, with a corresponding increase in equity or liabilities. [FRS 102.26.6]. An example of a service condition is one where an employee is granted a share option with a service requirement of remaining in employment with an entity for three years, the award vests three years after the date of grant. Accordingly, if the employee remains employed by the entity the cost of the award will be recognised over that three-year period.

As mentioned above, the vesting of awards might also be conditional on performance conditions which require both the counterparty to complete a specified period of service and specified performance targets to be met. The definitions of 'vesting condition', 'service condition' and 'performance condition' reproduced above clarify the distinction between different types of conditions attached to a share-based payment.

Examples of performance conditions are; a specified increase in the entity's profit over a specified period of time (a non-market condition, see 7.2 below) or a specified increase in the entity's share price (a market condition, see 7.3 below). [FRS 102.26.9]. As discussed more fully at 4.2 below, performance conditions refer to performance by an employee (such as a personal sales target) or performance by the entity (or part of the entity), rather than an external performance indicator, such as a general stock market index.

Therefore, a condition that an award vests if, in three years' time, earnings per share have increased by 10% and the employee is still in employment, is a performance condition. If, however, the award becomes unconditional in three years' time if earnings per share have increased by 10%, irrespective of whether the employee is still in employment, that condition is not a performance condition, but a 'non-vesting' condition because there is no associated service requirement (see 4.2 below).

In addition to the general discussion above and in the remainder this section, specific considerations relating to awards that vest on a flotation or change of control (or similar exit event) are addressed at 16.4 below.

4.1.1 Vesting conditions based on an employee's performance rating

An entity may grant awards to employees that vest based on conditions that include the employee's performance rating. A performance rating would appear to meet the definition of a non-market performance condition in that it is a vesting condition that requires an employee to render service for a period of time and to achieve a specified performance rating while providing the service in employment of the entity (see 4.1 above). Performance ratings can be influenced by the judgement of the individual(s) conducting an employee's evaluation; therefore, the question often arises whether the inherent subjectivity of a performance evaluation could delay the grant date for the award (see 6.3 below). The impact of such condition on the accounting treatment required by Section 26 depends on the framework that is established by the entity to facilitate an employee's understanding of how their performance will be measured. A framework that clearly articulates criteria and includes more objective measures is more likely to result in a more predictive outcome and, thus likely a non-market performance condition. On the contrary, a framework that contains more subjective measures that provide less clarity and is less predictive of the outcome, would not. The following are aspects of the framework that will need to be considered in making the determination:

- Whether the criteria are sufficiently clear at the inception of the share-based payment arrangement such that there is a mutual understanding between the entity and the employee about how the performance rating will be measured.
 - Whether the criteria relates only to the performance of the individual employee or the employee's performance relative to their peers, over the relevant measurement period.
- And
- Whether the employee is able to predict the outcome under the related performance rating framework, given the set criteria.

In certain cases, the number of instruments underlying the award might vary depending on the employee's performance relative to the criteria in the framework. The entity will be required to estimate the potential outcome during the performance period and to recognise the cost for the number of instruments that the employee is expected to be entitled based on their performance rating (see 7.2.4 below).

4.1.2 Environment Social and Governance ('ESG') related conditions

With the increase in focus by stakeholders of entities on ESG related matters, a growing number of share-based payment arrangements include conditions that require environmental, social and/or governance related targets to be met for the award to vest. An entity that grants such an award will need to assess if the ESG target is a vesting condition or non-vesting condition.

As noted in 4.1 above, a vesting condition is either a service condition or performance condition, with the latter requiring the counterparty to complete a specified period of service and specified performance targets (such as a specified increase in the entity's profit over a specified period of time). A performance condition that is referenced to the entity's own operations (or activities) or the operations or activities of another entity in the same group, is a non-market vesting condition. A performance target might relate either to the performance of the entity as a whole or to some part of the entity (or part of the group), such as a division or an individual employee. Neither Section 26 nor IFRS 2 explicitly defines a 'non-vesting condition' (see 4.2 below) but uses the term to describe a condition that is neither a service condition nor a performance condition.

The identification of an ESG related target as a vesting condition is not always straightforward. One such area is conditions related to climate change. An entity may enter into a share-based payment arrangement with employees that vests on satisfying a service period and on achieving targets based on Scope 1, 2 and/or 3 GHG (greenhouse gas) emissions.²²⁷ In general, Scope 1 emissions arise from sources that are owned or controlled by the entity, while Scope 2 emissions occur indirectly from the generation of purchased energy consumed by the entity. If the service condition requirements in the definition of a performance condition are met, both Scope 1 and Scope 2 emissions targets would meet the definition of performance vesting conditions as they both relate to the performance of the entity's own operations or activities. Scope 3 emissions are all indirect emissions (not included in scope 2) that occur in the value chain (upstream and downstream) of an entity. Fifteen reporting categories²²⁸ exist for measuring an entity's Scope 3 emissions.

²²⁷ IFRS S2 Climate-related Disclosures, Appendix A Defined terms, available on the [IFRS Foundation's website](#).

²²⁸ [Greenhouse Gas Protocol, Corporate Value Chain \(Scope 3\) Accounting and Reporting Standard](#), available from the [Greenhouse Gas Protocol website](#).

Determining whether a Scope 3 emissions target is a performance condition will require analysis of the conditions that has led to the emissions in determining if the definition of a performance condition is met or whether it represents a non-vesting condition. To meet the definition of a performance condition, the target is required to be referenced to the entity's own operations or activities. Whilst the service condition must not be for a period that is less than the period the Scope 3 target must be met, the following are some factors that could help in determining if the target is a performance condition:

- Whether an entity is able to influence if a target is met through its own actions. For example, when an entity grants a share-based payment award subject to a service condition and achieving a 20% reduction in Scope 3 Category 7 emissions (related to Employee Commuting emissions), as part of the entity's net zero commitment, and the entity has also put in place various policies to help meet the emission targets by providing employees hybrid working arrangements and incentives for carpooling. Another example may be an entity granting a share-based payment award subject to a service condition and achieving a 20% reduction in Scope 3 Category 1 emissions (related to Purchased Goods and Services emissions), as part of the entity's net zero commitment. The entity has introduced penalties into agreements with suppliers where suppliers have not met emission reduction targets agreed with the entity, has terminated some supplier agreements and entered into agreements with new suppliers in order to help meet the entity's emission targets.
- Whether the conditions are related to the entity's activities. For example, the target of achieving a 20% reduction in Scope 3 emissions in the examples in the previous bullet, is referenced to activities the entity is undertaking to meet its own target as part of its overall net zero commitment.

How we see it

Practice is evolving and there is judgement in determining if Scope 3 emission targets are performance conditions. However, in our view if the target is referenced to the entity's operations or activities, the achievement of a target does not need to be solely based on the actions of the entity to meet the definition of a performance condition. An example is when determining whether electric vehicle volume revenue target is met, such a target is also influenced by events outside an entity's direct control, such as consumer choice.

4.2 Non-vesting conditions (conditions that are neither service conditions nor performance conditions)

Some share-based payment transactions are dependent on the satisfaction of conditions that are neither service conditions nor performance conditions. For example, an employee might be given the right to 100 shares in three years' time, subject only to the employee not working in competition with the reporting entity during that time. An undertaking not to work for another entity does not include a requirement for the counterparty to complete a specified period of service with the entity, the employee could sit on a beach for three years and still be entitled to collect the award. Accordingly, such a condition is not regarded as a vesting condition for the purposes of Section 26 but is instead referred to as a 'condition that is not a vesting condition'. [FRS 102.26.9]. Alternatively, IFRS 2 refers to such a condition as a 'non-vesting condition'. Throughout this chapter we will refer to a 'condition that is not a vesting condition' as a 'non-vesting condition' (see 2.3.1 above).

Section 26 introduces the concept of a non-vesting condition when discussing the measurement of equity-settled awards, providing an example of a condition when an employee contributes to a saving plan as a condition that is not vesting condition, but does not otherwise define the term. [FRS 102.26.9]. The accounting impact of non-vesting conditions is discussed in detail at 7.4 below.

Although IFRS 2 contains a little more explanation about non-vesting conditions than is found in FRS 102, it does not explicitly define a 'non-vesting condition' but uses the term to describe a condition that is neither a service condition nor a performance condition. However, the concept of the 'non-vesting' condition is not entirely clear, and the identification of such conditions is not always straightforward. This has sometimes resulted in differing views on the appropriate classification of certain types of conditions depending on whether they were considered to be measures of the entity's performance or its activities and hence performance vesting conditions.

As noted at 4.1 above, FRS 102 and IFRS 2 define a vesting condition as a condition that determines whether the entity receives the services that entitle the counterparty to receive payment in equity or cash. Performance conditions are those that require the counterparty to complete a specified period of service and specified performance targets to be met (such as a specified increase in the entity's profit over a specified period of time).

The Basis for Conclusions on IFRS 2 adds that the feature that distinguishes a performance condition from a non-vesting condition is that the former has an explicit or implicit service requirement and the latter does not. [IFRS 2.BC171A].

In issuing its Annual Improvements to IFRSs 2010-2012 Cycle in December 2013 the IASB considered whether a definition of 'non-vesting condition' was needed. It decided that "the creation of a stand-alone definition ... would not be the best alternative for providing clarity on this issue". [IFRS 2.BC364]. Instead, it sought to provide further clarification in the Basis for Conclusions to IFRS 2, as follows:

"...the Board observed that the concept of a non-vesting condition can be inferred from paragraphs BC170-BC184 of IFRS 2, which clarify the definition of vesting conditions. In accordance with this guidance it can be inferred that a non-vesting condition is any condition that does not determine whether the entity receives the services that entitle the counterparty to receive cash, other assets or equity instruments of the entity under a share-based payment arrangement. In other words, a non-vesting condition is any condition that is not a vesting condition." [IFRS 2.BC364].

For a condition to be a performance vesting condition, it is not sufficient for the condition to be specific to the performance of the entity. There must also be an explicit or implied service condition that extends to the end of the performance period. For example, a condition that requires the entity's profit before tax or its share price to reach a minimum level, but without any requirement for the employee to remain in employment throughout the performance period, is not a performance condition, but a non-vesting condition.

Specific examples of non-vesting conditions given by IFRS 2 include:

- A requirement to make monthly savings during the vesting period.
- A requirement for a commodity index to reach a minimum level.
- Restrictions on the transfer of vested equity instruments.

And

- An agreement not to work for a competitor after the award has vested (i.e., a 'non-compete' agreement). [IFRS 2.BC171B, IFRS 2.IG24].

The IASB has also clarified that a condition related to a share market index target (rather than to the specific performance of the entity's own shares) is a non-vesting condition because a share market index reflects not only the performance of an entity but also that of other entities outside the group. Even where an entity's share price makes up a substantial part of the share market index, the IASB confirmed that this would still be a non-vesting condition because it reflects the performance of other, non-group, entities.

[IFRS 2.BC354, IFRS 2.BC355, IFRS 2.BC356, IFRS 2.BC357, IFRS 2.BC358].

Thus, whilst conditions that are not related to the performance of the entity are always, by their nature, non-vesting conditions, conditions that relate to the performance of the entity may or may not be non-vesting conditions depending on whether there is also a requirement for the counterparty to render service.

As noted at 4.1 above, both FRS 102 and IFRS 2 define a performance condition. The definition clarifies the extent to which the period of achieving the performance target(s) needs to coincide with the service period and states that this performance period:

- (a) Shall not extend beyond the end of the service period.

And

- (b) May start before the service period on the condition that the commencement date of the performance target is not substantially before the commencement of the service period.

There clearly remains an element of judgement in the interpretation of 'substantially' as used in the definition.

There is further discussion of the accounting treatment of non-vesting conditions at 7.4 below.

4.3 Vesting period

FRS 102 defines the vesting period as follows:

Appendix I

Glossary

vesting period

The period during which all the specified vesting conditions of a share-based payment arrangement are to be satisfied.

The vesting period is not the same as the exercise period or the life of the option, as demonstrated by Illustration 4-1 below.

Illustration 4-1: Meaning of 'vesting period' - award with vesting conditions only

An employee is awarded options that can be exercised at any time between three and ten years from the date of the award, provided the employee remains in service for at least three years from the date of the award. For this award, the vesting period is three years; the exercise period is seven years; and the life of the option is ten years. However, for the purposes of calculating the fair value of the award (see 9 below), the life of the award is taken as the period ending with the date on which the counterparty is most likely actually to exercise the option, which may be some time before the full ten-year life expires.

It is also important to distinguish between vesting conditions and other restrictions on the exercise of options and/or trading in shares, as demonstrated by Illustration 4-2 below.

Illustration 4-2: Meaning of 'vesting period' - award with vesting conditions and other restrictions

An employee is awarded options that can be exercised at any time between five and ten years from the date of the award, provided the employee remains in service for at least three years from the date of the award. In this case, the vesting period remains three years as in Illustration 4-1 above, provided that the employee's entitlement to the award becomes absolute at the end of three years, in other words, the employee does not have to provide services to the entity in years 4 and 5. The restriction on exercise of the award in the period after vesting is a non-vesting condition, which would be reflected in the original valuation of the award at the date of grant (see 5, 6 and 9 below).

The accounting implications of vesting conditions, non-vesting conditions and vesting periods for equity-settled transactions are discussed at 5 to 8 below and for cash-settled transactions at 10 below.

5 Equity-settled transactions – overview

5.1 Summary of accounting treatment

The provisions relating to accounting for equity-settled transactions are complex, even when supplemented by additional guidance found in the appendices and implementation guidance to IFRS 2. As noted at 1.2 above, FRS 102 does not replicate this guidance and therefore we have referred to IFRS 2 to supplement the requirements of FRS 102.

The key points can be summarised as follows:

- (a) All equity-settled transactions are measured at fair value. However, transactions with employees are measured using a 'grant date model' (i.e., the transaction is recorded at the fair value of the equity instrument at the date when it is originally granted), whereas transactions with non-employees are normally measured using a 'service date model' (i.e., the transaction is recorded at the fair value of the goods or services received at the date they are received). As noted at 4 above, all transactions, however measured, are recognised using a 'service date model' (see 6 below).
- (b) Where an award is made subject to future fulfilment of conditions, a 'market condition' (i.e., one related to the market price (or value) of the entity's equity instruments) or a 'non-vesting condition' (i.e., one that is neither a service condition nor a performance condition) is taken into account in determining the fair value of the award. However, the effect of conditions other than market and non-vesting conditions is ignored in determining the fair value of the award (see 4 above and 7 below).
- (c) Where an award is made subject to future fulfilment of service or performance vesting conditions, its cost is recognised over the period during which the service condition is fulfilled (see 4 above and 7 below). The corresponding credit entry is recorded within equity (see 5.2 below).
- (d) Until an equity instrument has vested (i.e., the entitlement to it is no longer conditional on future service) any amounts recorded are in effect contingent and will be adjusted if more or fewer awards vest than were originally anticipated to do so. However, an equity instrument awarded subject to a market condition or a non-vesting condition is considered to vest, irrespective of whether that market or non-vesting condition is fulfilled, provided that all other vesting conditions are satisfied (see 7 below).
- (e) No adjustments are made, either before or after vesting, to reflect the fact that an award has no value to the employee or other counterparty e.g., in the case of a share option, because the option exercise price is above the current market price of the share (see 7.1.1 and 7.1.3 below).
- (f) If an equity instrument is cancelled, whether by the entity or the counterparty (see (g) below) before vesting, any amount remaining to be expensed is charged in full at that point (see 8.4 below). If an equity instrument is modified before vesting (e.g., in the case of a share option, by changing the performance conditions or the exercise price), the financial statements must continue to show a cost for at least the fair value of the original instrument, as measured at the original grant date, together with any excess of the fair value of the modified instrument over that of the original instrument, as measured at the date of modification (see 8.3 below).
- (g) Where an award lapses during the vesting period due to a failure by the counterparty to satisfy a non-vesting condition within the counterparty's control, or a failure by the entity to satisfy a non-vesting condition within the entity's control, the lapse of the award is accounted for as if it were a cancellation (see (f) above and 7.4.3 below).
- (h) In determining the cost of an equity-settled transaction, whether the entity satisfies its obligations under the transaction with a fresh issue of shares or by purchasing its own shares in the financial markets or from private company shareholders is completely irrelevant to the charge in profit or loss, although there is clearly a difference in the cash flows. Where own shares are purchased, they are accounted for as treasury shares (see 3.4.6 above).

The requirements summarised in (d) to (g) above can have the effect that an entity is required to record a cost for an award that is deemed to vest for accounting purposes, but ultimately has no value to the counterparty because the award either does not vest or vests but is not exercised. These rather counter-intuitive requirements are in part 'anti-abuse' provisions to prevent entities from applying a 'selective' grant date model, whereby awards that increase in value after grant date remain measured at grant date while awards that decrease in value are remeasured. This is discussed further in the detailed analysis at 6 to 8 below.

5.2 The credit entry

As noted at (c) in the summary at 5.1 above, the basic accounting entry for an equity-settled share-based payment transaction is: *[FRS 102.26.3]*

Dr	Profit or loss for the period (employee costs)
	Cr Equity

FRS 102 does not prescribe whether the credit is required in a separate reserve or, if the entity chooses to treat it as such, how it must be described. Under the Companies Act 2006, an entity is permitted to credit a separate 'other reserve' rather than the credit being allocated initially to the profit and loss reserve. The 'other reserve' is generally labelled as 'shares to be issued' or 'share-based payment reserve' with the share-based payment credit held within this reserve until the award vests (if an award of free shares), is exercised or lapses (an award of options). When such trigger events occur, it will be appropriate for the entity to make a transfer between reserves.

The credit is not taken to share capital and share premium as these are used to record the legal proceeds of a share issue.

Overall, there will be a net nil impact on equity arising from the accounting as the profit and loss expense is ultimately reflected in the profit and loss reserve and offset by the credit taken directly to equity. The impact on distributable profits of employee share schemes depends on whether the reporting entity is a public company. Whilst FRS 102 is not specifically addressed, the effect of the similar accounting requirements of IFRS 2 is discussed in Section 7 of TECH 02/17BL: *Guidance on Realised and Distributable Profits under the Companies Act 2006* (TECH 02/17BL). *[TECH 02/17BL.7]*.

Occasionally there will be a credit to profit or loss (see for instance Illustration 7-7 at 7.2.4 below) and a corresponding reduction in equity.

6 Equity-settled transactions – cost of awards

6.1 Cost of awards – overview

The general measurement rule in FRS 102 is that an entity must measure the goods or services received, and the corresponding increase in equity, directly, at the fair value of the goods or services received, unless that fair value cannot be estimated reliably. If the fair value of the goods or services received cannot be estimated reliably, the entity must measure their value, and the corresponding increase in equity, indirectly, by reference to the fair value of the equity instruments granted. [FRS 102.26.7].

FRS 102 defines 'fair value' as: [FRS 102.26.1C]

Extract from FRS 102 Appendix I

fair value	fair value is the amount for which an asset could be exchanged, a liability settled or an equity instrument granted could be exchanged, between knowledgeable, willing parties in an arm's length transaction.

Where the share-based payment is measured on the basis of the fair value of the equity instruments rather than the goods or services, Section 26 has its own specific rules in relation to determining the fair value which differ from the more general requirements of Section 2A Fair Value Measurement (see 6.5 below) and definition in FRS 102 Appendix I Glossary of 'fair value'. Section 2A specifically scopes out 'share-based payment transactions within the scope of Section 26. [FRS 102.2A.1(a)].

On their own, the general measurement principles of paragraph 7 of Section 26 might suggest that the reporting entity must determine in each case whether the fair value of the equity instruments granted or that of the goods or services received is more reliably determinable. However, paragraph 7 goes on to clarify that, in the case of transactions with employees and others providing similar services, the fair value of the equity instruments must always be used "because typically it is not possible to estimate reliably the fair value of the services received" (see 6.2 below). [FRS 102.26.7].

Moreover, transactions with employees and others providing similar services are measured at the date of grant (see 6.2 below), whereas those with non-employees are measured at the date when the entity obtains the goods or the counterparty renders service (see 6.4 below). [FRS 102.26.8].

The overall position can be summarised by the following matrix.

Counterparty	Measurement basis	Measurement date	Recognition date
Employee	Fair value of equity instruments awarded	Grant date	Service date
Non-employee	Fair value of goods or services received or, if goods or services not reliably measurable, fair value of equity instruments awarded	Service date	Service date

One effect of a grant date measurement model is that, applied to a grant of share options that is eventually exercised, it 'freezes' the accounting cost at the (typically) lower fair value at the date of grant. This excludes from the post-grant financial statements the increased cost and volatility that would be associated with a model that constantly remeasured the award to fair value until exercise date.

The price to be paid in accounting terms for the grant date model is that, when an award falls in value after grant date, it continues to be recognised at its higher grant date value. It is therefore quite possible that, during a period of general economic downturn, financial statements will show significant costs for options granted in previous years, but which are currently worthless.

6.2 Transactions with employees and others providing similar services

These will comprise the great majority of transactions accounted for as equity-settled share-based payments under Section 26 and include all remuneration in the form of shares, share options and any other form of reward settled in equity instruments of the entity or a member of its group.

6.2.1 Who is an 'employee'?

Given the difference between the accounting treatment of equity-settled transactions with employees and with non-employees, it is obviously important to understand what is meant by 'employees and others providing similar services'. [FRS 102.26.7]. FRS 102 does not provide a definition, but IFRS 2 defines 'employees and others providing similar services' as:

Extract from IFRS 2

Appendix A

Defined terms

employees and others providing similar services

Individuals who render personal services to the entity and either (a) the individuals are regarded as employees for legal or tax purposes, (b) the individuals work for the entity under its direction in the same way as individuals who are regarded as employees for legal or tax purposes, or (c) the services rendered are similar to those rendered by employees. For example, the term encompasses all management personnel, ie those persons having authority and responsibility for planning, directing and controlling the activities of the entity, including non-executive directors.

The implication of (a) and (b) above is that it is not open to an entity to argue that an individual who is not an employee as a matter of law is therefore automatically a non-employee for the purposes of IFRS 2 and FRS 102.

The implication of (b) and (c) above is that, where a third party provides services pursuant to a share-based payment transaction that could be provided by an employee (e.g., where an external IT consultant works alongside an in-house IT team), that third party is treated as an employee rather than a non-employee for the purposes of IFRS 2 and FRS 102.

Conversely, however, where an entity engages a consultant to undertake work for which there is not an existing in-house function, the implication is that such an individual is not regarded as an employee.

How we see it

In our view, the reference in (c) to "services ... similar to those rendered by employees" is to services rendered by employees that the entity actually has, rather than to employees that the entity might have if it were to recruit them. Otherwise, the distinction in IFRS 2 and FRS 102 between employees and non-employees would have no effect, since it would always be open to an entity to argue that it could employ someone to undertake any task instead of engaging a contractor.

Exceptionally, there might be cases where the same individual is engaged in both capacities. For example, a director of the entity might also be a partner in a firm of lawyers and be engaged in that latter capacity to advise the entity on a particular issue. It might be more appropriate to regard payment for the legal services as made to a non-employee rather than to an employee.

6.2.2 Basis of measurement

As noted above, equity-settled transactions with employees must be measured by reference to the fair value of the equity instruments granted at 'grant date' (see 6.3 below). [FRS 102.26.8]. FRS 102 offers no explanation as to why this is the case, but IFRS 2 asserts that this approach is necessary because shares, share options and other equity instruments are typically only part of a larger remuneration package, such that it would not be practicable to determine the value of the work performed in consideration for the cash element of the total package, the benefit-in-kind element, the share option element and so on. [IFRS 2.12].

In essence, this is really an anti-avoidance provision. The underlying concern is that, if an entity were able to value options by reference to the services provided for them, it might assert that the value of those services was zero, on the argument that its personnel are already so handsomely rewarded by the non-equity elements of their remuneration package (such as cash and health benefits), that no additional services are (or indeed could be) obtained by granting options.

6.3 Grant date

The determination of grant date is critical to the measurement of equity-settled share-based transactions with employees, since grant date is the date at which such transactions must be measured (see 6.2.2 above). Grant date is defined as:

Extract from FRS 102

Appendix I

Glossary

grant date	The date at which the entity and another party (including an employee) agree to a share-based payment arrangement, being when the entity and the counterparty have a shared understanding of the terms and conditions of the arrangement. At grant date the entity confers on the counterparty the right to cash, other assets, or equity instruments of the entity, provided the specified vesting conditions, if any, are met. If that agreement is subject to an approval process (for example, by shareholders), grant date is the date when that approval is obtained.

In practice, it is not always clear when a shared understanding of the award (and, therefore, grant date) has occurred. Issues of interpretation can arise as to:

- How precise the shared understanding of the terms of the award must be.
- Exactly what level of communication between the reporting entity and the counterparty is sufficient to ensure the appropriate degree of agreement and 'shared understanding'.

As a consequence, the determination of the grant date is often difficult in practice. We discuss the following issues in more detail in the sections below:

- Basic determination of grant date (see 6.3.1 below).
- The communication of awards to employees and the rendering of services in advance of grant date (see 6.3.2 below).
- Awards where the exercise price or performance target depends on a formula or on a future share price (see 6.3.3 below).
- Awards where the exercise price is paid in shares - net settlement of award (see 6.3.4 below).
- An award of equity instruments to a fixed monetary value (see 6.3.5 below).
- Awards with multiple service and performance periods (see 6.3.6 below).
- Awards subject to modification or discretionary re-assessment by the entity after the original grant date (see 6.3.7 below).
- Mandatory or discretionary awards to 'good leavers' (see 6.3.8 below).

Some arrangements give rise to significant issues of interpretation in relation to the determination of grant date and the appropriate accounting treatment. For example:

- Automatic full or *pro rata* entitlement to awards on cessation of employment (see 6.3.8.C below).
- Awards over a fixed pool of shares (including 'last man standing' arrangements) (see 6.3.9 below).

An outline of the nature of these arrangements is given in this chapter but a detailed discussion is beyond the scope of this publication.

6.3.1 Determination of grant date

The definition of 'grant date' in Appendix I to FRS 102 (see 6.3 above) emphasises that a grant occurs only when all the conditions are understood and agreed by the parties to the arrangement, and any required approval process has been completed. This is reinforced by the implementation guidance accompanying the same definition in IFRS 2 which, in our view, must also be considered by an entity applying FRS 102.

For example, if an entity makes an award 'in principle' to an employee of options whose terms are subject to review or approval by a remuneration committee or the shareholders, 'grant date' is the later date when the necessary formalities have been completed. [FRS 102 Appendix I, IFRS 2.IG1, IFRS 2.IG2, IFRS 2.IG3].

The implementation guidance to IFRS 2 emphasises that “the word ‘agree’ is used in its usual sense, which means that there must be both an offer and an acceptance of that offer”. Therefore, there cannot be a grant unless an offer by one party has been accepted by the other party. The guidance notes that agreement will be explicit in some cases (e.g., if an agreement has to be signed), but in others it might be implicit, such as when an employee starts to deliver services for the award. [IFRS 2.IG2].

How we see it

In our view, determination of when the counterparty has agreed to an offer will often be an area of judgement that depends on the precise facts and circumstances of a particular situation.

The implementation guidance to IFRS 2 further notes that employees may begin rendering services in consideration for an award before it has been formally ratified. For example, a new employee might join an entity on 1 January and be granted options relating to performance for a period beginning on that date, but subject to formal approval by the remuneration committee at its next quarterly meeting on 15 March. In that case, the entity would typically begin expensing the award from 1 January based on a best estimate of its fair value, but would subsequently adjust that estimate so that the ultimate cost of the award was its actual fair value at 15 March (see 6.3.2 below). [IFRS 2.IG4]. This reference to formal approval could be construed as indicating that, in fact, FRS 102 and IFRS 2 require not merely that there is a mutual understanding of the award (which might well have been in existence since 1 January), but also that the entity has completed all processes necessary to make the award a legally binding agreement.

In practice, many situations are much less clear-cut than the examples given in the implementation guidance. Some of the practical interpretation issues are considered further below.

6.3.2 Communication of awards to employees and services in advance of grant date

As discussed at 6.3.1 above, the definition of grant date in FRS 102 together with the implementation guidance to IFRS 2 indicate that, in order for a grant to have been made, there must not merely be a mutual understanding of the terms, including the conditions attached to the award, but there must also be a legally enforceable arrangement. Thus, if an award requires board or shareholder approval for it to be legally binding on the reporting entity, it has not been granted until such approval has been given, even if the terms of the award are fully understood at an earlier date. However, if services are effectively being rendered for an award from a date earlier than the grant date as defined in IFRS 2, the cost of the award is required to be recognised over a period starting with that earlier date. An estimate of the grant date fair value of the award is used (e.g., by estimating the fair value of the equity instruments at the end of the reporting period), for the purposes of recognising the services received during the period between service commencement date and grant date. [IFRS 2.IG4].

How we see it

In some situations, the employee will have a valid expectation of an award, and the entity will have a corresponding obligation, based on an earlier commitment by the entity. However, it might be the case that not all of the precise terms and conditions have been finalised. In our view, provided it is possible to estimate the fair value of the arrangement, an estimated cost for services is to be recognised in advance of grant date in such cases as well as in those situations where formal approval does not take place until a later date.

In situations where the entity estimates at the reporting date the grant date fair value of an award for services received in advance of grant date, the estimate is revised at subsequent reporting periods until the date of grant has been established. Once grant date has been established the entity revises the earlier estimate so that the amounts recognised for services received in respect of the grant are ultimately based on the grant date fair value of the equity instruments awarded.

The implications of this approach are demonstrated in Illustration 6-1 below for a situation where formal approval of an award is delayed. It is important, however, to retain a sense of proportion in considering the overall impact on the financial statements. For example, in cases where the share price or value is not particularly volatile, whether the grant date is, say, 1 January or 1 April may not make a great difference to the valuation of the award, particularly when set beside the range of acceptable valuations resulting from the use of estimates in the valuation process.

Illustration 6-1: Determination of grant date*Scenario 1*

On 1 January an entity advises employees of the terms of a share award designed to reward performance over the following three years. The award is subject to board approval, which is given two months later on 1 March. Grant date is 1 March. However, the cost of the award would be recognised over the three-year period beginning 1 January, since the employees would have effectively been rendering service for the award from that date.

Scenario 2

On 1 January an entity's board resolves to implement a share scheme designed to reward performance over the following three years. The award is notified to employees two months later on 1 March. Grant date is again 1 March. *Prima facie*, in this case, the cost of the award would be recognised over the two years and ten months beginning 1 March, since the employees could not be regarded as rendering service in January and February for an award of which they were not aware at that time.

However, if a similar award is made each year, and according to a similar timescale, there might be an argument that, during January and February of each year, the employees are rendering service for an award of which there is high expectation, and that the cost is therefore, as in Scenario 1, recognised over the full three year period. The broader issue of the accounting treatment for awards of which there is a high expectation is addressed in the discussion of matching share awards at 16.1 below.

Scenario 3

On 1 January an entity advises employees of the terms of a share award designed to reward performance over the following three years. The award is subject to board approval, which is given two months later on 1 March. However, in giving such approval, the board makes some changes to the performance conditions as originally communicated to employees on 1 January. The revised terms of the award are communicated to employees a month later on 1 April. Grant date is 1 April. However, the cost of the award would be recognised over the three-year period beginning 1 January, since the employees would have effectively been rendering service for the award from that date.

Examples of situations where an employee might render service in advance of the formal grant date because the precise conditions of an award are outstanding are considered at 6.3.3 to 6.3.6 and at 16.4.1 below.

6.3.3 Exercise price or performance target dependent on a formula or future share price

Some share plans define the exercise price not in absolute terms, but as a factor of the share price. For example, the price might be expressed as:

- A percentage of the share price at exercise date.
- Or
- A percentage of the lower of the share price at grant date and at exercise date.

The effect of this is that, although the actual exercise price is not known until the date of exercise, both the entity and the counterparty already have a shared understanding of how the price will be calculated and it is possible to estimate the outcome on an ongoing basis without the need for additional approval or inputs.

A similar approach might be applied in the setting of performance targets, i.e., they are set by reference to a formula rather than in absolute terms and so do not require further input by the entity or its shareholders.

In order for there to be a shared understanding and a grant date, the formula or method of determining the outcome needs to be sufficiently clear and objective to allow both the entity and the counterparty to make an estimate of the outcome of the award during the vesting period. Where there is subjectivity in determining the formula or method of determining the outcome there can be no shared understanding and a grant date (see scenario 2 in Illustration 6-3 in 6.3.6 below).

How we see it

In our view, grant date is the date on which the terms and conditions (including the formula for calculating the exercise price or performance target) are determined sufficiently clearly and agreed by the entity and the counterparty, subject to the matters discussed at 6.3.2 above.

6.3.4 Exercise price paid in shares (net settlement of award)

Some share awards allow the exercise price to be paid in shares. In practical terms, this means that the number of shares delivered to the counterparty will be the total 'gross' number of shares awarded less as many shares as have, at the date of exercise, a fair value equal to the exercise price.

How we see it

The above situation is analogous to that described at 6.3.3 above in that, whilst the absolute 'net' number of shares awarded will not be known until the date of exercise, the basis on which that 'net' number will be determined is established in advance. Accordingly, in our view, grant date is the date on which the terms and conditions (including the ability to surrender shares to a fair value equal to the exercise price) are determined and agreed by the entity and the counterparty, subject to the matters discussed at 6.3.2 above.

Such a scheme could be analysed as a share-settled share appreciation right (whereby the employee receives shares to the value of the excess of the value of the shares given over the exercise price), which is accounted for as an equity-settled award.

Awards settled in shares net of a cash amount to meet an employee's tax liability are considered further at 15.3 below.

6.3.5 Award of equity instruments to a fixed monetary value

Some entities may grant awards to employees of shares equivalent to a fixed value. For example, an entity might award as many shares as are worth £10,000, with the number of shares being calculated by reference to the share price as at the vesting date. The number of shares ultimately received will not be known until the vesting date. This begs the question of whether such an award can be regarded as having been granted until that date, on the argument that it is only then that the number of shares to be delivered, which is a key term of the award, is known, and therefore there cannot be a 'shared understanding' of the terms of the award until that later date.

How we see it

The above situation is analogous to those in 6.3.3 and 6.3.4 above in that, whilst the absolute number of shares awarded will not be known until the vesting date, the basis on which that number will be determined is established in advance in a manner sufficiently clear and objective as to allow an ongoing estimate by the entity and by the counterparty of the number of awards expected to vest. Accordingly, in our view, grant date is the date on which the terms and conditions are determined sufficiently clearly and agreed by the entity and the counterparty, subject to the matters discussed at 6.3.2 above.

FRS 102 does not address the valuation of such awards and IFRS 2 does not address it directly. Intuitively, it might seem obvious that an award which promises (subject to vesting conditions) shares to the value of £10,000 must have a grant date fair value of £10,000, adjusted for the time value of money, together with market conditions and non-vesting conditions. However, matters are not so clear-cut, as shown in Illustration 6-2:

Illustration 6-2: Award of shares to a fixed monetary value

At the beginning of year 1, the reporting entity grants:

- To Employee A an award of 1,000 shares subject to remaining in employment for three years.
- And
- To Employee B £10,000 subject to remaining in employment for three years, to be paid in as many shares as are (at the end of year 3) worth £10,000.

Both awards vest, and the share price at the end of year 3 is £10, so that both employees receive 1,000 shares.

Applying Section 26, the charge for A's award is clearly $1000 \times$ the fair value as at the beginning of year 1 of a share deliverable in three years' time. What is the charge for B's award?

How we see it

In our view, the fair value of the equity instruments granted for B's award would be the £10,000 adjusted for the time value of money, as the value employee B will receive is fixed at £10,000 and is independent of the share price. This amount, determined at grant date, would be recognised as an expense over the vesting period, which in this case is a three-year service condition for employee B.

Although Section 26 does not directly address the valuation of awards of equity instruments equivalent to a fixed monetary value, the standard does require the grant date fair value of the equity instruments awarded to be recognised, which for a fixed monetary award would be the fixed monetary amount to be received adjusted for the time value of money.

6.3.6 Awards with multiple service and performance periods

Entities frequently make awards that cover more than one reporting period, but with different performance conditions for each period, rather than a single cumulative target for the whole vesting period. In such cases, the grant date may depend on the precision with which the terms of the award are communicated to employees, as demonstrated by Illustration 6-3 below.

Illustration 6-3: Awards with multiple service and performance periods

Scenario 1

At the beginning of year 1, an entity enters into a share-based payment arrangement with an employee. The employee is informed that the maximum potential award is 40,000 shares, 10,000 of which will vest at the end of year 1, and 10,000 more at the end of each of years 2 to 4. Vesting of each of the four tranches of 10,000 shares is conditional on:

- (a) The employee having been in continuous service until the end of each relevant year.

And

- (b) Revenue targets for each of those four years, as communicated to the employee at the beginning of year 1, having been attained.

In this case, the terms of the award are clearly understood by both parties at the beginning of year 1, and this is therefore the grant date under FRS 102 (subject to issues such as any requirement for later formal approval – see 6.3 above). The cost of the award can be recognised using a 'graded' vesting approach, or using a simpler alternative – see 7.2.2 below.

Scenario 2

At the beginning of year 1, an entity enters into a share-based payment arrangement with an employee. The employee is informed that the maximum potential award is 40,000 shares, 10,000 of which will vest at the end of year 1, and 10,000 more at the end of each of years 2 to 4. Vesting of each tranche of 10,000 shares is conditional on:

- (a) The employee having been in continuous service until the end of each relevant year.

And

- (b) Budgeted revenue targets for each of those four years, to be communicated to the employee once management establish the budget at the beginning of each relevant year in respect of that year only, having been attained.

In this case, in our view, at the beginning of year 1 there is a clear shared understanding only of the terms of the first tranche of 10,000 shares that will potentially vest at the end of year 1. There is no clear understanding of the terms of the tranches potentially vesting at the end of years 2 to 4 because their vesting depends on attaining budgeted revenue targets for those years which have not yet been set. The revenue targets remain subjective until management establish the budget for the relevant year and communicate the target to employees.

Accordingly, each of the four tranches of 10,000 shares has a separate grant date (and, therefore, a separate measurement date), i.e., the beginning of each of years 1, 2, 3 and 4, and a vesting period of one year from the relevant grant date.

In this type of situation, the entity would also need to consider whether, in the absence of a grant date, the employee was nonetheless rendering services in advance of the grant date. However, if targets are unquantified and do not depend on a formula, for example, then it is likely to be difficult to estimate an expense in advance of the grant date (see 6.3.2 above).

A variation on the above two scenarios which is seen quite frequently in practice is an award where the target is quantified for the first year and the targets for subsequent years depend on a formula-based increase in the year 1 target. The formula is set at the same time as the year 1 target.

Whether the accounting treatment for scenario 1 above or scenario 2 above is the more appropriate in such a situation is, in our view, a matter of judgement depending on the precise terms of the arrangement (see 6.3.3 above).

How we see it

To summarise the above, where an award is made over more than one reporting period but with different performance conditions, rather than a single cumulative target, grant date will depend on the precision with which the terms of the award are communicated to employees. If the terms are clearly understood by both parties at the start of the award for all periods (i.e., scenario 1 above), grant date is established. If the performance conditions are set at a later date for subsequent periods, grant date is established when the terms are understood by both parties, which would result in different grant dates for each tranche (i.e., scenario 2 above). The entity would also need to consider whether, in the absence of a grant date, the employee was nonetheless rendering services in advance of the grant date.

6.3.7 Awards subject to modification by entity after original grant date

Some employee share awards are drafted in terms that give the entity discretion to modify the detailed terms of the scheme after grant date. Some have questioned whether this effectively means that the date originally determined as the 'grant date' is not in fact the grant date as defined in FRS 102, on the grounds that the entity's right to modify means that the terms are not in fact understood by both parties in advance.

How we see it

The above, in our view, is very often not an appropriate analysis. If it were, it could mean that significant numbers of share-based awards to employees (in the UK) would be required to be measured at vesting date, which clearly is not intended under the grant date model in Section 26.

The assessment of whether or not an intervention by the entity after grant date constitutes a modification is often difficult. Some situations commonly encountered in practice are considered in the sections below.

6.3.7.A Significant equity restructuring or transactions

Many schemes contain provisions designed to ensure that the value of awards is maintained following a major capital restructuring (such as a share split or share consolidation – see 8.7 below) or a major transaction with shareholders as a whole (such as a major share buyback or the payment of a special dividend). These provisions will either specify the adjustments to be made in a particular situation or, alternatively, may allow the entity to make such discretionary adjustments as it sees fit in order to maintain the value of awards. In some cases, the exercise of such discretionary powers may be relatively mechanistic (e.g., the adjustment of the number of shares subject to options following a share split). In other cases, more subjectivity will be involved (e.g., in determining whether a particular dividend is a 'special' dividend for the purposes of the scheme).

In our view, where the scheme rules specify the adjustments to be made or where there is a legal requirement to make adjustments in order to remedy any dilution that would otherwise arise, the implementation of such adjustments would not result in the recognition of any incremental fair value. This assumes that the adjustment would simply operate on an automatic basis to put the holders of awards back to the position that they would have been in had there not been a restructuring and hence there would be no difference in the fair value of the awards before and after the restructuring (or other specified event).

However, where there is no such explicit requirement in the scheme rules or under relevant legislation, we believe that there must be a presumption that the exercise of the entity's discretionary right to modify is a 'modification' as outlined in FRS 102. In such a situation, the fair values before and after the modification may differ and any incremental fair value is required to be expensed over the remaining vesting period (see 8.3 below).

How we see it

In summary, as noted above, no incremental fair value would arise where the adjustment would simply operate on an automatic basis to put the holders of awards back to the position that they would have been in had there not been a restructuring, if the scheme rules or relevant legislation require an adjustment to remedy any dilution. Where there is no explicit requirement in the scheme rules or relevant legislation the exercise of the entity's discretionary right to modify is a 'modification' as defined in FRS 102.

6.3.7.B Interpretation of general terms

More problematic might be the exercise of any discretion by the entity to interpret the more general terms of a scheme in deciding whether performance targets have been met and therefore whether, and to what extent, an award should vest. In this case, there might be more of an argument that the entity's intervention constitutes a modification.

If such an intervention were not regarded as a modification, then the results might be different depending on the nature of the award and the conditions attached to it. Where an award is subject to a market condition, or to a non-vesting condition, an expense might well have to be recognised in any event, if all the non-market vesting conditions (e.g., service) were satisfied, see 7.3 and 7.4 below.

However, suppose that an award had been based on a non-market performance condition, such as a profit target, which was met, but only due to a gain of an unusual, non-recurring nature. The Board of Directors concludes that this must be ignored, with the effect that the award does not vest. If this is regarded as the exercise of a pre-existing right to ensure that the award vests only if 'normal' profit reaches a given level, then there has been no modification. On this analysis, the award has not vested, and any expense previously recognised would be reversed. If, however, the Board's intervention is regarded as a modification, it would have no impact on the accounting treatment in this case, as the effect would not be beneficial to the employee and so the modification would be ignored under the general requirements of FRS 102 relating to modifications (see 8.3.2 below).

6.3.7.C Discretion to make further awards

Some schemes may contain terms that give the entity the power to increase an award in circumstances where the recipient is considered to have delivered exceptional performance, or some such similar wording.

How we see it

In our view, unless the criteria for judging such exceptional performance are so clear as to be, in effect, performance conditions, the presumption is that any award made pursuant to such a clause is granted, and therefore measured, when it is made.

There may be circumstances where an award described as 'discretionary' may not truly be so, since the entity has created an expectation amounting to an obligation to make the award. However, we believe that it would be somewhat contradictory to argue that such expectations had been created in the case of an award stated to be for (undefined) exceptional performance only.

6.3.8 'Good leaver' arrangements

It is common for awards to contain a so-called 'good leaver' clause. A 'good leaver' clause is one which makes provision for an employee who leaves before the end of the full vesting period of an award nevertheless to receive some or all of the award on leaving (see 6.3.8.A below).

In other cases, the original terms of an award will either make no reference to 'good leavers' or will not be sufficiently specific to allow the accounting treatment on cessation of employment to be an automatic outcome of the original terms of the scheme. In such cases, and in situations where awards are made to leavers on a fully discretionary basis, the accounting approach differs from that required where the original terms are clear about 'good leaver' classification and entitlement (see 6.3.8.B below).

We refer throughout this section on 'good leavers' to an employee leaving employment, but similar considerations apply when an individual automatically becomes entitled to an award before the end of the original vesting period due to other reasons specified in the terms of the agreement, e.g., attaining a certain age or achieving a specified length of service, even if the individual remains in employment after the relevant date. In these situations, the date of full entitlement is the date on which any services, and therefore expense recognition, cease for the purposes of Section 26.

Arrangements for a good leaver to receive all, or part, of an award on leaving employment must be distinguished from a situation where an employee leaves with no award and where forfeiture accounting is likely to apply (see 8.4.1.A below).

6.3.8.A Provision for 'good leavers' made in original terms of award

In some cases, the types of persons who are 'good leavers' may be explicitly defined in the original terms of the arrangement (common examples being persons who die or reach normal retirement age before the end of the full vesting period, or who work for a business unit that is sold or closed during the vesting period). In other cases, the entity may have the discretion to determine on a case-by-case basis whether a person can be treated as a 'good leaver'.

In addition, some schemes may specify the entitlement of a 'good leaver' on leaving (e.g., that the leaver receive a portion of the award pro-rata to the extent that the performance conditions have been met as at the date of leaving), whereas others leave the determination of the award to the entity at the time that the employee leaves.

Whichever situation applies, any expense relating to an award to a good leaver must be fully recognised by the leaving date (or date of unconditional entitlement, if earlier than the usual vesting date) because, at that point, the good leaver ceases to provide any services to the entity for the award and any remaining conditions attached to the award will be treated as non-vesting rather than vesting conditions (see 4.2 above).

How we see it

In our view, an award which vests before the end of the original vesting period due to the operation of a 'good leaver' clause is measured at the original grant date only where, under the rules of the scheme as understood by both parties at the original grant date, the award is made:

- To a person clearly identified as a 'good leaver'
- And
- In an amount clearly quantified or quantifiable

Where, as outlined above, the rules of the scheme make clear the categories of 'good leaver' and their entitlement, the entity must assess at grant date how many good leavers there are likely to be and to what extent the service period for these particular individuals is expected to be shorter than the full vesting period. The grant date fair value of the estimated awards to good leavers must be separately determined, where significant, and the expense relating to good leavers recognised over the expected period between grant date and leaving employment (or date of unconditional entitlement). In this situation the entity would re-estimate the number of good leavers and adjust the cumulative expense at each reporting date. This would be a change of estimate rather than a modification of the award as it would all be in accordance with the original terms and would require no discretionary decisions on the part of the entity. We would not generally expect an entity to have significant numbers of good leavers under such an arrangement.

6.3.8.B Discretionary awards to 'good leavers'

Awards where the arrangements for leavers are clear as at the original grant date of the award are discussed at 6.3.8.A above. However, it is often the case that the entity determines only at, or near, the time that the employee leaves either that the employee is a 'good leaver' or the amount of the award. In such cases, grant date or modification date (see further below) must be taken as the later of the date on which such determination is made, or the date on which the award is notified to the employee. This is because the employee had no clear understanding at the original grant date of an automatic entitlement to equity instruments other than through full vesting of the award at the end of the full service period.

How we see it

In our view, an entity is required to assess the appropriate accounting treatment for discretionary awards to 'good leavers' based on the particular facts and circumstances and the extent to which the discretionary award is linked to the original award.

The discretionary award at the time of leaving is considered to be either a modification of an original award in the employee's favour (for example, where vesting conditions are waived to allow an individual to keep an award) or the forfeiture of the original award and the granting of a completely new award on a discretionary basis (see 8.3 and 8.5 below).

In some cases, a good leaver will be allowed, on a discretionary basis, to keep existing awards that remain subject to performance conditions established at the original grant date. In this situation, any conditions that were previously treated as vesting conditions will become non-vesting conditions following the removal of the service requirement (see 4.1 and 4.2 above). This will be the case whether the discretionary arrangement is accounted for as the forfeiture of the old award plus a new grant or as a modification of the original award.

The non-vesting conditions will need to be reflected in the measurement of the fair value of the award as at the date of modification or new grant (although the non-vesting conditions alone will not result in any incremental fair value). Any fair value that is unrecognised as at the date of the good leaver ceasing employment will need to be expensed immediately as there is no further service period over which to recognise the expense.

There is further discussion of modifications at 8.3 below and of replacement and *ex gratia* awards granted on termination of employment at 8.5 below.

6.3.8.C Automatic full or pro rata entitlement on cessation of employment

In some cases, entities establish schemes where a significant number of the participants will potentially leave employment before the end of the full vesting period and will be allowed to keep a *pro rata* share of the award.

Such arrangements are encountered relatively infrequently and mostly outside the UK. Accordingly, a detailed discussion of the accounting treatment is beyond the scope of this publication. There is further detail available in EY's publication International GAAP®.

6.3.9 Awards over a fixed pool of shares (including 'last man standing' arrangements)

An award over a fixed pool of shares is sometimes granted to a small group of, typically senior employees. Such awards might involve an initial allocation of shares to each individual but also provide for the redistribution of each employee's shares to the other participants should any individual leave employment before the end of the vesting period. This is often referred to as a 'last man standing' arrangement.

The accounting requirements for such an arrangement are unclear and discussion of the various approaches seen in practice is beyond the scope of this publication. In the absence of specific guidance, several interpretations are possible, and these are discussed in EY's publication International GAAP®.

6.4 Transactions with non-employees

In accounting for equity-settled transactions with non-employees, the starting point is that the value of the goods or services received provides the more reliable indication of the fair value of the transaction. The fair value to be used is that at the date on which the goods are obtained or the services rendered. [FRS 102.26.3, FRS 102.26.7, FRS 102.26.8J]. This implies that, where the goods or services are received on a number of dates over a period, the fair value at each date must be used, although in the case of a relatively short period there may be no great fluctuation in fair value.

If the entity rebuts the presumption that the goods or services provide the more reliable indication of fair value, it may use as a surrogate measure the fair value of the equity instruments granted, but as at the date when the goods or services are received, not the original grant date. However, where the goods or services are received over a relatively short period and the share price does not change significantly, an average share price can be used in calculating the fair value of equity instruments granted.

6.4.1 Effect of change of status from employee to non-employee (or vice versa)

Neither FRS 102 nor IFRS 2 gives specific guidance on how to account for an award when the status of the counterparty changes from employee to non-employee (or *vice versa*) but, in all other respects, the award remains unchanged.

How we see it

We believe, the accounting following the change of status will depend on the entity's assessment of whether or not the counterparty is performing the same or similar services before and after the change of status. If it is concluded that the counterparty is providing the same or similar services before and after the change of status, the measurement approach remains unchanged. However, if the services provided are substantially different, the accounting following the change of status will be determined by the counterparty's new status.

A change of status is rare in practice. A detailed discussion is beyond the scope of this publication, but the matter is addressed in EY's publication International GAAP®.

6.5 Determining the fair value of equity instruments

As discussed at 6.2 and 6.4 above, FRS 102 requires the following equity-settled transactions to be measured by reference to the fair value of the equity instruments issued rather than that of the goods or services received:

- All transactions with employees.
- And
- Transactions with non-employees where, in rare cases, the entity rebuts the presumption that the fair value of goods or services provided is more reliably measurable.

There will also be situations where the identifiable consideration received (if any) from non-employees appears to be less than the fair value of consideration given. In such cases, an entity will need to determine the fair value of the equity instruments (see 3.2.3 above).

For all transactions measured by reference to the fair value of the equity instruments granted, Section 26 requires fair value to be measured at the 'measurement date', i.e., grant date in the case of transactions with employees and service date in the case of transactions with non-employees. [FRS 102.26.8]. Fair value must be based on market prices if available. [FRS 102.26.10, FRS 102.26.11]. In the absence of market prices or other entity-specific market data, a valuation method must be used to estimate what the market price would have been on the measurement date in an arm's length transaction between knowledgeable and willing parties. The technique used must be a generally recognised valuation methodology for valuing equity instruments that is appropriate to the circumstances of the entity and uses market data to the greatest extent possible. [FRS 102.26.10, FRS 102.26.11].

Paragraphs 10 to 11 of Section 26 outline requirements on valuation and are discussed at 9 below, supplemented by guidance from the appendices and implementation guidance to IFRS 2. As noted elsewhere in this chapter, the 'fair value' of equity instruments under Section 26 takes account of some, but not all, conditions attached to an award rather than being a 'true' fair value (see 7.3 and 7.4 below on the treatment of market and non-vesting conditions).

7 Equity-settled transactions – allocation of expense

7.1 Overview

Equity-settled transactions, particularly those with employees, raise particular accounting problems since they are often subject to vesting conditions (see 4.1 above) that can be satisfied only over an extended vesting period.

An award of equity instruments that vests immediately is presumed, in the absence of evidence to the contrary, to relate to services that have already been rendered, and is therefore expensed in full at grant date. [FRS 102.26.5]. This may lead to the immediate recognition of an expense for an award to which the employee may not be legally entitled for some time, as demonstrated in Illustration 7-1.

Illustration 7-1: Award with non-vesting condition only

An entity grants a director share options, exercisable after three years provided the director does not compete with the reporting entity for a period of at least three years. The 'non-compete' clause is considered to be a non-vesting condition (see 4.2 above and 7.4 below). As this is the only condition to which the award is subject, the award has no vesting conditions and therefore vests immediately. The fair value of the award at the date of grant, including the effect of the 'non-compete' clause, is determined to be £150,000.

Accordingly, the entity immediately recognises a cost of £150,000.

This cost can never be reversed, even if the director goes to work for a competitor and loses the award. This is discussed more fully at 7.4 below.

Where equity instruments are granted subject to vesting conditions (as in many cases they will be, particularly where payments to employees are concerned), FRS 102 creates a presumption that they are a payment for services to be received in the future, during the 'vesting period', with the transaction being recognised during that period, as demonstrated in Illustration 7-2. [FRS 102.26.6].

Illustration 7-2: Award with service condition only

An entity grants a director share options on condition that the director remain in employment for three years. The requirement to remain in employment is a service condition, and therefore a vesting condition, which will take three years to fulfil. The fair value of the award at the date of grant, ignoring the effect of the vesting condition, is determined to be £300,000. The entity will record a cost of £100,000 a year in profit or loss for three years, with a corresponding increase in equity.

In practice, the calculations required by FRS 102 are unlikely to be as simple as that in Illustration 7-2. In particular:

- The final number of awards that vest cannot be known until the vesting date (because employees may leave before the vesting date, or because relevant performance conditions may not be met).
- And
- The length of the vesting period may not be known in advance (since vesting may depend on satisfaction of a performance condition with no, or a variable, time-limit on its attainment).

In order to deal with such issues, FRS 102 requires a continuous re-estimation process as summarised at 7.1.1 below.

7.1.1 The continuous estimation process of Section 26

The overall objective is that, at the end of the vesting period, the cumulative cost recognised in profit or loss (or, where applicable, included in the carrying amount of an asset), must represent the product of the following two items:

- The number of equity instruments that have vested, or would have vested, but for the failure to satisfy a market condition (see 7.3 below) or a non-vesting condition (see 7.4 below).
- The fair value (excluding the effect of any non-market vesting conditions, but including the effect of any market conditions or non-vesting conditions) of those equity instruments at the date of grant.

It is essential to appreciate that the 'grant date' measurement model in FRS 102 seeks to capture the value of the contingent right to shares promised at grant date, to the extent that the promise becomes (or is deemed to become (see 7.1.2 below)) an entitlement of the counterparty, rather than the value of any shares finally delivered. Therefore, if an option vests, but is not exercised because it would not be in the counterparty's economic interest to do so, FRS 102 still requires a cost for the award to be recognised.

In order to achieve this outcome, FRS 102 requires the following process to be applied:

- (a) At grant date, the fair value of the award (excluding the effect of any service and non-market performance vesting conditions, but including the effect of any market conditions or non-vesting conditions) is determined. [FRS 102.26.7, FRS 102.26.8, FRS 102.26.9].
- (b) At each subsequent reporting date until vesting, the entity calculates a best estimate of the cumulative charge to profit or loss at that date, being the product of:
 - (i) The grant date fair value of the award determined in (a) above.
 - (ii) The current best estimate of the number of awards that will vest (see 7.1.2 below). [FRS 102.26.9].
 - (iii) The expired portion of the vesting period.
- (c) The charge (or credit) to profit or loss for the period is the cumulative amount calculated in (b) above less the amounts already charged in previous periods. There is a corresponding credit (or debit) to equity. [FRS 102.26.3].
- (d) Once the awards have vested, no further accounting adjustments are made to the cost of the award, except in respect of certain modifications to the award (see 8 below).
- (e) If a vested award is not exercised, an entity may (but need not) make a transfer between reserves (see 7.1.3 below).

The overall effect of this process is that a cost is recognised for every award that is granted, except when it is forfeited for failure to meet a vesting condition (see 7.1.2 below). [FRS 102.26.9].

7.1.2 Vesting and forfeiture

In normal English usage, and in many share scheme documents, an award is described as 'vested' when all the conditions needed to earn it have been met, and as 'forfeited' where it lapses before vesting because one or more of the conditions has not been met.

IFRS 2 uses the term 'forfeiture' in a much more restricted sense to refer to an award that does not vest in IFRS 2 terms. FRS 102 takes a similar approach although it does not specifically refer to 'forfeiture' of an award. Essentially the approach is as follows:

- Where an award is subject only to vesting conditions other than market conditions, failure to satisfy any one of the conditions is treated as a forfeiture (and any cumulative expense recognised to date is reversed).
- Where an award is subject to both:
 - Vesting conditions other than market conditions
 - Market conditions and/or non-vesting conditions
 Failure to satisfy any one of the vesting conditions other than market conditions is treated as a forfeiture. Otherwise (i.e., where all the vesting conditions other than market conditions are satisfied), the award is deemed to vest even if the market conditions and/or non-vesting conditions have not been satisfied.
- Where an award is subject only to non-vesting conditions, it is always deemed to vest.

Where an award has been modified (see 8.3 below) so that different vesting conditions apply to the original and modified elements of an award, forfeiture will not apply to the original award if the service and non-market performance conditions attached to that element have been met. This will be the case even if the service and non-market performance conditions attached to the modified award have not been met and so the modified award is considered to have been forfeited (resulting in the reversal of any incremental expense relating to the modification). Illustration 8-6 and Illustration 8-7 at 8.3 below demonstrate this point.

As a result of the interaction of the various types of conditions, the reference in the summary at 7.1.1 above to the 'best estimate of the number of awards that will vest' really means the best estimate of the number of awards for which it is expected that all non-market vesting conditions will be met.

In practice, however, it is not always clear how that best estimate is to be determined, and in particular what future events may and may not be factored into the estimate. This is discussed further at 7.2 to 7.4 and 8.6 below.

7.1.3 Accounting after vesting

FRS 102 does not address specifically the treatment of share-based payment transactions once they have vested but it seems appropriate to adopt the approach required by IFRS 2.

Once an equity-settled transaction has vested (or, in the case of a transaction subject to one or more market or non-vesting conditions, has been treated as vested (see 7.1.2 above)), no further accounting entries are made to reverse the cost already charged, even if the instruments that are the subject of the transaction are subsequently forfeited or, in the case of options, are not exercised. However, the entity may make a transfer between different components of equity. [IFRS 2.23]. For example, an entity's accounting policy might be to credit all amounts recorded for share-based transactions to a separate reserve such as 'Shares to be issued'. Where an award lapses after vesting, it would then be appropriate to transfer an amount equivalent to the cumulative cost for the lapsed award from 'Shares to be issued' to another component of equity, usually the profit and loss reserve.

This prohibition against 'truing up' (i.e., reversing the cost of vested awards that lapse) is controversial, since it has the effect that a cost is still recognised for options that are never exercised, typically because they are 'underwater' (i.e., the current share price is lower than the option exercise price), so that it is not in the holder's interest to exercise the option.

7.2 Vesting conditions other than market conditions

7.2.1 Awards with service conditions and non-market vesting conditions

7.2.1.A Awards with service conditions

Most share-based payment transactions with employees are subject to explicit or implied service conditions. Illustration 7-3 and Illustration 7-4 below demonstrate the application of the allocation principles discussed at 7.1 above to awards subject only to service conditions which are based on the implementation guidance to IFRS 2. [IFRS 2.IG11].

Illustration 7-3: Award with no change in the estimate of number of awards vesting

An entity grants 100 share options to each of its 500 employees. Vesting is conditional upon the employees working for the entity over the next three years. The entity estimates that the fair value of each share option is £15. The entity's best estimate at each reporting date is that 100 (i.e., 20%) of the original 500 employees will leave during the three-year period and therefore forfeit their rights to the share options.

If everything turns out exactly as expected, the entity will recognise the following amounts during the vesting period for services received as consideration for the share options.

Year	Calculation of cumulative expense	Cumulative expense (£)	Expense for period‡ (£)
1	50,000 options × 80%* × £15 × 1/3†	200,000	200,000
2	50,000 options × 80% × £15 × 2/3	400,000	200,000
3	50,000 options × 80% × £15 × 3/3	600,000	200,000

* The entity expects 100 of its 500 of employees to leave and therefore only 80% of the options to vest.

† The vesting period is 3 years, and 1 year of it has expired.

‡ In each case the expense for the period is the difference between the calculated cumulative expense at the beginning and end of the period.

Illustration 7-4: Award with revised estimate of number of awards vesting due to staff turnover

As in Illustration 7-3 above, an entity grants 100 share options to each of its 500 employees. Vesting is conditional upon the employee working for the entity over the next three years. The entity estimates that the fair value of each share option is £15.

In this case, however, 20 employees leave during the first year, and the entity's best estimate at the end of year 1 is that a total of 75 (15%) of the original 500 employees will have left before the end of the vesting period. During the second year, a further 22 employees leave, and the entity revises its estimate of total employee departures over the vesting period from 15% to 12% (i.e., 60 of the original 500 employees). During the third year, a further 15 employees leave. Hence, a total of 57 employees (20 + 22 + 15) forfeit their rights to the share options during the three-year period, and a total of 44,300 share options (443 employees × 100 options per employee) finally vest.

The entity will recognise the following amounts during the vesting period for services received as consideration for the share options.

Year	Calculation of cumulative expense	Cumulative expense (£)	Expense for period (£)
1	50,000 options × 85% × £15 × 1/3	212,500	212,500
2	50,000 options × 88% × £15 × 2/3	440,000	227,500
3	44,300 options × £15 × 3/3	664,500	224,500

In Illustration 7-4 above, the number of employees that leave during year 1 and year 2 is not directly relevant to the calculation of cumulative expense in those years, but would naturally be a factor taken into account by the entity in estimating the likely number of awards finally vesting.

7.2.1.B Non-market vesting conditions

It is common for entities to enter into share-based payment arrangements with employees subject to vesting conditions that include performance conditions (see 4.1 above). A performance condition requires a specified period of service to be completed and the achievement of performance targets. Performance targets are either non-market vesting conditions (also referred to as 'non-market performance conditions'), considered further in this section of the chapter, or market conditions (see 7.3 below). A performance target that is a non-market vesting condition is referenced to the entity's own operations (or activities) or the operations or activities of another entity in the same group. A performance target might relate either to the performance of the entity as a whole or to some part of the entity (or part of the group), such as a division or an individual employee.

Examples of non-market vesting conditions include achieving EPS, sales, profit or some Environmental, Social and Governance (ESG) targets. Examples of ESG targets include targets to reduce Scope 1, Scope 2 and possibly Scope 3 GHG emissions (see 4.1.2 above), health and safety incidents of an entity or targets to increase employee engagement and workforce diversity.

Section 26 requires that an entity not take into account vesting conditions other than market conditions when estimating the fair value of equity instruments granted. Instead, vesting conditions, other than market conditions i.e., non-market vesting conditions, are taken into account by adjusting the number of equity instruments that are expected to vest. [FRS 102.26.9(a)].

In determining the expected number of equity instruments that are expected to vest as a result of a non-market vesting condition, the cumulative charge during the vesting period would be based on the best estimate of which outcome will occur, and the final cumulative charge would be based on the grant date fair value of the actual outcome. For example, if an employee was granted 100 share options which vest if the employee remains in service for three years and on achieving a profit-before-tax ('PBT') target, if that employee is still in service at the end of the three years, either 100 options will vest if the PBT target is met or zero options will vest if the PBT target is not met. During the vesting period the entity would need to make an assessment of the number of options that are expected to vest at each reporting date. If the entity assesses at the end of year one the probability that the PBT target would be met is 70% and the service condition will be met, the year one expense would be based on the full 100 options expected to vest at the end of year three, which represents the best estimate of the most likely outcome. In this example, the outcome is binary, the employee will receive either 100 or zero options based on the achievement or not of the PBT target and service condition, they will never receive 70% of the options. Assuming the entity recognised an expense for the award in year one and year two based on the entity's best estimate of the most likely outcome (i.e., the PBT and service condition are expected to be met), but then in year three the service condition is met but the PBT target is not, the entity would reverse in year three any previous expense recognised due to the failure to satisfy the non-market vesting condition.

See the Illustrations in 7.2.3 to 7.2.5 below that set out the accounting when determining the number of equity instruments expected to vest when an award includes a number of possible outcomes linked to non-market vesting conditions.

7.2.2 Equity instruments vesting in instalments ('graded' vesting)

An entity may make share-based payments that vest in instalments (sometimes referred to as 'graded' vesting). For example, an entity might grant an employee 600 options, 100 of which vest if the employee remains in service for one year, a further 200 after two years and the final 300 after three years. In today's more mobile labour markets, such awards are often favoured over awards which vest only on an 'all or nothing' basis after an extended period.

IFRS 2 requires that each instalment be treated as three separate awards, of 100, 200 and 300 options, because each instalment has a different vesting period and therefore, the grant date fair value of each instalment will likely differ (e.g., the length of the vesting period may affect the likely timing of cash flows arising from the exercise of options in determining the fair value). [IFRS 2.IG11]. This may well have the effect that, compared to the expense for an award with a single 'cliff' vesting, the expense for an award vesting in instalments will be for a different amount in total and require accelerated recognition of the expense in earlier periods, as demonstrated in Illustration 7-5 below.

How we see it

We believe that, similar to IFRS 2, graded vesting accounting can apply to share-based payments transactions that vest in instalments. This is on the basis that the definition of 'vest' and 'vesting period' in both IFRS 2 and Section 26 are the same and both contain similar guidance with respect to recognition of an expense when services are provided. However, as Section 26 does not explicitly require the graded vesting accounting approach to be used, we believe that a simpler alternative may be acceptable.

Illustration 7-5: Award vesting in instalments ('graded' vesting)

An entity is considering the implementation of a scheme that awards 600 free shares to each of its employees, with no conditions other than continuous service. Two alternatives are being considered:

- All 600 shares vest in full only at the end of three years.
- 100 shares vest after one year, 200 shares after two years and 300 shares after three years. Any shares received at the end of years 1 and 2 would have vested unconditionally.

The fair value of a share delivered in one year's time is £3; in two years' time £2.80; and in three years' time £2.50.

For an employee that remains with the entity for the full three-year period, the first alternative would be accounted for as follows:

Year	Calculation of cumulative expense	Cumulative expense (£)	Expense for period (£)
1	600 shares × £2.50 × 1/3	500	500
2	600 shares × £2.50 × 2/3	1,000	500
3	600 shares × £2.50 × 3/3	1,500	500

For the second alternative, the analysis is that the employee has simultaneously received an award of 100 shares vesting over one year, an award of 200 shares vesting over two years and an award of 300 shares vesting over 3 years. This would be accounted for as follows:

Year	Calculation of cumulative expense	Cumulative expense (£)	Expense for period (£)
1	[100 shares × £3.00] + [200 shares × £2.80 × 1/2] + [300 shares × £2.50 × 1/3]	830	830
2	[100 shares × £3.00] + [200 shares × £2.80 × 2/2] + [300 shares × £2.50 × 2/3]	1,360	530
3	[100 shares × £3.00] + [200 shares × £2.80 × 2/2] + [300 shares × £2.50 × 3/3]	1,610	250

At first sight, such an approach seems to be taking account of vesting conditions other than market conditions in determining the fair value of an award, contrary to the basic principle of paragraph 9 of Section 26 (see 7.1.1 above). However, it is not the vesting conditions that are being taken into account *per se*, but the fact that the varying vesting periods will give rise to different lives for the award (which are generally required to be taken into account - see 8.2 and 9 below).

If graded vesting accounting is applied, provided all conditions are clearly understood at the outset, the accounting treatment demonstrated in Illustration 7-5 would apply even if the vesting of shares in each year also depended on a performance condition unique to that year (e.g., that profit in that year must reach a given minimum level), as opposed to a cumulative performance condition (e.g., that profit must have grown by a minimum amount by the end of year 1, 2 or 3). This is because all tranches of the arrangement have the same service commencement date and so for the awards that have a performance condition relating to year 2 or year 3 there is a service condition covering a longer period than the performance condition. In other words, an award that vests at the end of year 3 conditional on profitability in year 3 is also conditional on the employee providing service for three years from the date of grant in order to be eligible to receive the award. This is discussed further at 6.3.6 above.

7.2.3 Transactions with variable vesting periods due to non-market vesting conditions

An award may have a vesting period which is subject to variation. For example, the award might be contingent upon the achievement of a particular performance target (such as achieving a given level of cumulative earnings) within a given maximum period, but vesting immediately once the target has been reached. Alternatively, an award might be contingent on levels of earnings growth over a period, but with vesting occurring more quickly if growth is achieved more quickly. Also, some plans provide for 're-testing', whereby an original target is set for achievement within a given vesting period, but if that target is not met, a new target and/or a different vesting period are substituted.

FRS 102 has no specific requirements in respect of variable vesting periods, it simply refers to revising the number of awards expected to vest if new information indicates that the number of equity instruments expected to vest differs from previous estimates. [FRS 102.26.9(a)]. However, it seems appropriate to follow the requirements of IFRS 2 in this area. Therefore, in such cases, the entity needs to estimate the length of the vesting period at grant date, based on the most likely outcome of the performance condition. Subsequently, it is necessary to continuously re-estimate, not only the number of awards that will finally vest, but also the date of vesting, as shown by Illustration 7-6. [IFRS 2.15(b), IFRS 2.IG12]. This contrasts with the IFRS 2 treatment of awards with market conditions and variable vesting periods, where the initial estimate of the vesting period is prohibited from being revised (see 7.3.4 below).

Illustration 7-6: Award with non-market vesting condition and variable vesting period

At the beginning of year 1, the entity grants 100 shares each to 500 employees, conditional upon the employees remaining in the entity's employment during the vesting period. The shares will vest:

- At the end of year 1 if the entity's earnings increase by more than 18%.
 - At the end of year 2 if the entity's earnings increase by more than an average of 13% per year over the two-year period.
- Or
- At the end of year 3 if the entity's earnings increase by more than an average of 10% per year over the three-year period.

The award is estimated to have a fair value of £30 per share at grant date. It is expected that no dividends will be paid during the whole three-year period.

By the end of the first year, the entity's earnings have increased by 14%, and 30 employees have left. The entity expects that earnings will continue to increase at a similar rate in year 2, and therefore expects that the shares will vest at the end of year 2. The entity expects, on the basis of a weighted average probability, that a further 30 employees will leave during year 2, and therefore expects that an award of 100 shares each will vest for 440 (500 - 30 - 30) employees at the end of year 2.

By the end of the second year, the entity's earnings have increased by only 10% and therefore the shares do not vest at the end of that year. 28 employees have left during the year. The entity expects that a further 25 employees will leave during year 3, and that the entity's earnings will increase by at least 6%, thereby achieving the average growth of 10% per year necessary for an award after 3 years, so that an award of 100 shares each will vest for 417 (500 - 30 - 28 - 25) employees at the end of year 3.

By the end of the third year, a further 23 employees have left and the entity's earnings have increased by 8%, resulting in an average increase of 10.67% per year. Therefore, 419 (500 - 30 - 28 - 23) employees receive 100 shares at the end of year 3.

The entity will recognise the following amounts during the vesting period for services received as consideration for the shares.

Year	Calculation of cumulative expense	Cumulative expense (£)	Expense for period (£)
1	440 employees × 100 shares × £30 × 1/2*	660,000	660,000
2	417 employees × 100 shares × £30 × 2/3*	834,000	174,000
3	419 employees × 100 shares × £30	1,257,000	423,000
* The entity's best estimate at the end of year 1 is that it is one year through a two-year vesting period and at the end of year 2 that it is two years through a three-year vesting period.			

In Illustration 7-6, which is based on IG Example 2 in the implementation guidance to IFRS 2, it is assumed that the entity will pay no dividends (to any shareholders) throughout the maximum possible three-year vesting period. This has the effect that the fair value of the shares to be awarded is equivalent to their market value at the date of grant.

If dividends were expected to be paid during the vesting period, this would no longer be the case. Employees would be better off if they received shares after two years rather than three, since they would have a right to receive dividends from the end of year two.

One solution might be to use the approach in IG Example 4 in the implementation guidance to IFRS 2 (the substance of which is reproduced as Illustration 7-8 at 7.2.5 below). That Example deals with an award whose exercise price is either £12 or £16, dependent upon various performance conditions. Because vesting conditions other than market conditions are ignored in determining the value of an award, the approach is in effect to treat the award as the simultaneous grant of two awards, whose value, in that case, varies by reference to the different exercise prices.

The same principle could be applied to an award of shares that vests at different times according to the performance conditions, by determining different fair values for the shares (in this case depending on whether they vest after one, two or three years). The cumulative charge during the vesting period would be based on a best estimate of which outcome will occur, and the final cumulative charge would be based on the grant date fair value of the actual outcome (which will require some acceleration of expense if the actual vesting period is shorter than the previously estimated vesting period).

Such an approach appears to be taking account of non-market vesting conditions in determining the fair value of an award, contrary to the basic principle of paragraph 9 of Section 26 (see 7.1.1 above). However, it is not the vesting conditions that are being taken into account *per se*, but the fact that the varying vesting periods will give rise to different lives for the award (which are generally required to be taken into account, see 8.2 and 9 below). That said, the impact of the time value of the different lives on the fair value of the award will, in many cases, be insignificant and it will therefore be a matter of judgement as to how precisely an entity switches from one fair value to another.

Economically speaking, the entity in Illustration 7-6 has made a single award, the true fair value of which must be a function of the weighted probabilities of the various outcomes occurring. However, under the accounting model for equity-settled awards, the probability of achieving non-market performance conditions is not taken into account in valuing an award. If this is required to be ignored, the only approach open is to proceed as in Illustration 7-6 above and treat the arrangement as if it consisted of the simultaneous grant of three awards.

Some might object that this methodology is not relevant to the award in Illustration 7-6 above, since it is an award of shares rather than, in the case of Illustration 7-8 below, an award of options. However, an award of shares is no more than an award of options with an exercise price of zero. Moreover, the treatment in the previous paragraph is broadly consistent with the IFRS 2 treatment of an award vesting in instalments (see 7.2.2 above).

In Illustration 7-6 above, the vesting period, although not known, is at least one of a finite number of known possibilities. The vesting period for some awards, however, may be more open-ended, such as is frequently the case for an award that vests on a trade sale or flotation of the business. Such awards are discussed further at 16.4 below.

How we see it

In summary, as noted above, where an equity-settled award has a variable vesting period on achieving a non-market vesting condition, the cumulative charge during the vesting period would be based on a best estimate of which outcome will occur, and the final cumulative charge would be based on the grant date fair value of the actual outcome (which will require some acceleration of expense if the actual vesting period is shorter than the previously estimated vesting period).

7.2.4 Transactions with variable number of equity instruments awarded depending on non-market performance vesting conditions

More common than awards with a variable vesting period are those where the number of equity instruments awarded varies, typically increasing to reflect the margin by which a particular minimum target is exceeded. In accounting for such awards, the entity must continuously revise its estimate of the number of shares to be awarded in line with the requirement to revise the estimate of the number of equity instruments expected to vest if new information indicates that this number differs from previous estimates. [FRS 102.26.9(a)]. This is demonstrated in Illustration 7-7 below (which is based on IG Example 3 in the implementation guidance to IFRS 2).

Illustration 7-7: Award with non-market vesting condition and variable number of equity instruments

At the beginning of year 1, an entity grants an option over a variable number of shares (see below), estimated to have a fair value at grant date of £20 per share under option, to each of its 100 employees working in the sales department. The share options will vest at the end of year 3, provided that the employees remain in the entity's employment, and provided that the volume of sales of a particular product increase by at least an average of 5% per year. If the volume of sales of the product increases by an average of between 5% and 10% per year, each employee will be entitled to exercise 100 share options. If the volume of sales increases by an average of between 10% and 15% each year, each employee will be entitled to exercise 200 share options. If the volume of sales increases by an average of 15% or more, each employee will be entitled to exercise 300 share options.

By the end of the first year, seven employees have left and the entity expects that a total of 20 employees will leave by the end of year 3. Product sales have increased by 12% and the entity expects this rate of increase to continue over the next two years, so that 80 employees will be entitled to exercise 200 options each.

By the end of the second year, a further five employees have left. The entity now expects only three more employees to leave during year 3, and therefore expects a total of 15 employees to have left during the three-year period. Product sales have increased by 18%, resulting in an average of 15% over the two years to date. The entity now expects that sales will average 15% or more over the three-year period, so that 85 employees will be entitled to exercise 300 options each.

By the end of year 3, a further seven employees have left. Hence, 19 employees have left during the three-year period, and 81 employees remain. However, due to trading conditions significantly poorer than expected, sales have increased by a 3-year average of only 12%, so that the 81 remaining employees are entitled to exercise only 200 share options.

The entity will recognise the following amounts during the vesting period for services received as consideration for the options.

Year	Calculation of cumulative expense	Cumulative expense (£)	Expense for period (£)
1	80 employees × 200 options × £20 × 1/3	106,667	106,667
2	85 employees × 300 options × £20 × 2/3	340,000	233,333
3	81 employees × 200 options × £20	324,000	(16,000)

This Illustration reinforces the point that it is quite possible for an equity-settled transaction to give rise to a credit to profit or loss for a particular period during the period to vesting.

Other types of awards seen where variable number of equity instruments are awarded depending on non-market vesting conditions include an employee receiving awards dependent on an individual's performance rating, the higher the rating the more equity-instruments are awarded (see 4.1.2 above). When the vesting of a share-based payment arrangement is based on an individual's performance rating, for there to be a grant date of such an award the framework for determining the performance rating outcome needs to be sufficiently clear and objective to allow both the entity and the employee to make an estimate of the outcome of the award during the vesting period (see 6.3.3 above). Consistent with Illustration 7-7 above, the entity must continuously revise its estimate of the number of equity instruments to be awarded, provided a grant date has been established for the award. However, if the framework for determining the performance rating outcome is not sufficiently clear and objective, the grant date may not occur until a later date, but the entity would need to consider if services are effectively being rendered for an award from a date earlier than the grant date as defined in FRS 102 and the cost of the award recognised over a period starting with that earlier date (see 6.3.2 above).

7.2.5 Transactions with variable exercise price due to non-market vesting conditions

Another mechanism for delivering higher value to the recipient of a share award so as to reflect the margin by which a particular target is exceeded might be to vary the exercise price depending on performance. IFRS 2 requires such an award to be dealt with, in effect, as more than one award and we believe that it is appropriate to adopt a similar approach under FRS 102. The fair value of each award is determined, and the cost during the vesting period based on the best estimate of which award will actually vest, with the final cumulative charge being based on the actual outcome. [IFRS 2.IG12, IFRS 2.IG Example 4].

This is demonstrated in Illustration 7-8 below.

Illustration 7-8: Award with non-market vesting condition and variable exercise price

An entity grants to a senior executive 10,000 share options, conditional upon the executive remaining in the entity's employment for three years. The exercise price is £40. However, the exercise price drops to £30 if the entity's earnings increase by at least an average of 10% per year over the three-year period.

On grant date, the entity estimates that the fair value of the share options, with an exercise price of £30, is £16 per option. If the exercise price is £40, the entity estimates that the share options have a fair value of £12 per option. During year 1, the entity's earnings increased by 12%, and the entity expects that earnings will continue to increase at this rate over the next two years. The entity therefore expects that the earnings target will be achieved, and hence the share options will have an exercise price of £30.

During year 2, the entity's earnings increased by 13%, and the entity continues to expect that the earnings target will be achieved. During year 3, the entity's earnings increased by only 3%, and therefore the earnings target was not achieved. The executive completes three years' service and therefore satisfies the service condition. Because the earnings target was not achieved, the 10,000 vested share options have an exercise price of £40.

The entity will recognise the following amounts during the vesting period for services received as consideration for the options.

Year	Calculation of cumulative expense	Cumulative expense (£)	Expense for period (£)
1	10,000 options × £16 × 1/3	53,333	53,333
2	10,000 options × £16 × 2/3	106,667	53,334
3	10,000 options × £12	120,000	13,333

At first sight this may seem a rather surprising approach. In reality, the entity in Illustration 7-8 made a single award, the fair value of which must lie between £12 and £16, as a function of the weighted probabilities of either outcome occurring. Economically speaking, this is indeed the case. However, under the accounting model for equity-settled share-based payments in IFRS 2 and FRS 102, the probability of achieving non-market performance conditions is not taken into account in valuing an award. If this is required to be ignored, the only approach open is to proceed with the 'two award' analysis as above.

7.3 Market conditions

7.3.1 What is a 'market condition'?

The Glossary to FRS 102 defines the term 'market vesting condition' which for ease, has been referred to as either 'market condition' or 'market vesting condition' throughout this chapter. The following definitions in FRS 102 Appendix I are relevant:

Extract from FRS 102

Appendix I**Glossary****intrinsic value**

The difference between the fair value of the shares to which the counterparty has the (conditional or unconditional) right to subscribe or which it has the right to receive, and the price (if any) the counterparty is (or will be) required to pay for those shares. For example, a share option with an exercise price of CU15, on a share with a fair value of CU20, has an intrinsic value of CU5.

market vesting condition

A performance condition upon which the exercise price, vesting or exercisability of an equity instrument depends that is related to the market price (or value) of the entity's equity instruments (or the equity instruments of another entity in the same group), such as attaining a specified share price or a specified amount of intrinsic value of a share option, or achieving a specified target that is based on the market price (or value) of the entity's equity instruments (or the equity instruments of another entity in the same group) relative to an index of market prices of equity instruments of other entities.

A market vesting condition requires the counterparty to complete a specified period of service (i.e., a service condition); the service requirement can be explicit or implicit.

In order for a market condition to be treated as a performance vesting condition rather than as a non-vesting condition, there must also be an implicit or explicit service condition (see 4.2 above).

A performance condition based on the share price and one based on the intrinsic value of the option are effectively the same, since the values of each will obviously move in parallel.

Section 26 includes a specified increase in the entity's share price as an example of a market condition. [FRS 102.26.9]. A market condition often seen in practice, although more common in a listed entity and not specifically mentioned in FRS 102, is a condition based on total shareholder return (TSR). TSR is a measure of the increase or decrease in a given sum invested in an entity over a period on the assumption that all dividends received in the period had been used to purchase further shares in the entity. The market price of the entity's shares is an input to the calculation.

However, a condition linked to a purely internal financial performance measure such as profit or earnings per share is not a market condition. Such measures will affect the share price or value, but are not directly linked to it, and hence are not market conditions.

A condition linked solely to a general market index is not a market condition, but a non-vesting condition (see 4.2 above and 7.4 below), because the reporting entity's own share price is not relevant to the satisfaction of the condition.

However, if the condition were that the entity's own share price had to outperform a general index of shares, that condition would be a market condition because the reporting entity's own share price is then relevant to the satisfaction of the condition.

7.3.2 Summary of accounting treatment

The key feature of the accounting treatment of an equity-settled transaction subject to a market condition is that the market condition is taken into account in valuing the award at the date of grant, 'with no subsequent adjustment to the estimated fair value, irrespective of the outcome of the market condition or condition that is not a vesting condition, provided that all other vesting conditions are satisfied'.

[FRS 102.26.9(b)]. In other words, an award is treated as vesting irrespective of whether the market condition is satisfied, provided that all other service and non-market performance conditions are satisfied. The requirements relating to market conditions can have rather controversial consequences, as demonstrated by Illustration 7-9.

Illustration 7-9: Award with market condition

An entity grants an employee an option to buy a share on condition of remaining in employment for three years and the share price at the end of that period being at least £7. At the end of the vesting period, the share price is £6.80. The share price condition is factored into the initial valuation of the option, and the option is considered to vest provided that the employee remains for three years, irrespective of whether the share price does in fact reach £7.

Therefore, an award is sometimes treated as vesting (and a cost is recognised for that award) when it does not actually vest in the natural sense of the word. See also Illustration 7-11 at 7.3.4 below.

This treatment is clearly significantly different from that for transactions involving a non-market vesting condition, where no cost would be recognised where the conditions were not met. As discussed at 7.2 above, the methodology prescribed for transactions with a vesting condition other than a market condition is to determine the fair value of the option ignoring the condition and then to multiply that fair value by the estimated (and ultimately the actual) number of awards expected to vest based on the likelihood of that non-market vesting condition being met.

In any event, it appears that it may be possible to soften the impact of the rules for market conditions relatively easily by introducing a non-market vesting condition closely correlated to the market condition. For instance, the option in Illustration 7-9 above could be modified so that exercise was dependent not only upon the £7 target share price and continuous employment, but also on a target growth in earnings per share. Whilst there would not be a perfect correlation between earnings per share and the share price, it would be expected that they would move roughly in parallel, particularly if the entity has historically had a fairly consistent price/earnings ratio. Thus, if the share price target were not met, it would be highly likely that the earnings per share target would not be met either. This would allow the entity to show no cumulative cost for the option, since only one (i.e., not all) of the non-market related vesting conditions would have been met.

Similarly, entities in sectors where the share price is closely related to net asset value (e.g., property companies and investment trusts) could incorporate a net asset value target as a non-market performance condition that would be highly likely to be satisfied only if the market condition was satisfied (i.e., two separate conditions exist, one based on the market price/value of the shares and the other based on the net asset value).

The matrices below illustrate the interaction of market conditions and vesting conditions other than market conditions. Matrix 1 summarises the possible outcomes for an award with the following two vesting conditions:

- The employee remaining in service for three years (service condition).
- The entity's share price increasing by 10% over the vesting period (share price target).

Matrix 1

	Service condition met?	Share price target (market condition) met?	Section 26 expense?
1	Yes	Yes	Yes
2	Yes	No	Yes
3	No	Yes	No
4	No	No	No

It will be seen that, to all intents and purposes, the 'Share price target (market condition) met?' column is redundant, as this is not relevant to whether or not the award is treated as vesting for accounting purposes. The effect of this is that the entity would recognise an expense for outcome 2, even though no awards truly vest.

Matrix 2 summarises the possible outcomes for an award with the same conditions as in Matrix 1, plus a requirement for earnings per share to grow by a general inflation index plus 10% over the period ('EPS target').

Matrix 2

	Service condition met?	Share price target (market condition) met?	EPS target (non-market condition) met?	Section 26 expense?
1	Yes	Yes	Yes	Yes
2	Yes	No	Yes	Yes
3	Yes	Yes	No	No
4	Yes	No	No	No
5	No	Yes	Yes	No
6	No	No	Yes	No
7	No	Yes	No	No
8	No	No	No	No

Again, it will be seen that, to all intents and purposes, the 'Share price target (market condition) met?' column is redundant, as this is not relevant to whether or not the award is treated as vesting. The effect of this is that the entity would recognise an expense for outcome 2, even though no awards truly vest. However, no expense would be recognised for outcome 4, which is, except for the introduction of the EPS target, equivalent to outcome 2 in Matrix 1, for which an expense is recognised. This illustrates that the introduction of a non-market vesting condition closely related to a market condition may mitigate the impact of the accounting requirements.

Examples of the application of the accounting treatment for transactions involving market conditions are given at 7.3.3 and 7.3.5 below.

7.3.3 Transactions with market conditions and known vesting periods

Following on from the discussion at 7.3.2 above, the accounting for these transactions is essentially the same as that for transactions without market conditions but with a known vesting period (including 'graded' vesting, see 7.2.2 above), except that adjustments are made to reflect the changing probability of the achievement of the non-market vesting conditions only, as demonstrated by Illustration 7-10 below (based partly on IG Example 5 in the implementation guidance to IFRS 2). [FRS 102.26.9].

Illustration 7-10: Award with market condition and fixed vesting period

At the beginning of year 1, an entity grants to 100 employees 1,000 share options each, conditional upon the employees remaining in the entity's employment until the end of year 3. However, the share options cannot be exercised unless the share price has increased from £50 at the beginning of year 1 to more than £65 at the end of year 3.

If the share price is above £65 at the end of year 3, the share options can be exercised at any time during the next seven years, i.e., by the end of year 10. The entity applies an option pricing model which takes into account the possibility that the share price will exceed £65 at the end of year 3 (and hence the share options vest and become exercisable) and the possibility that the share price will not exceed £65 at the end of year 3 (and hence the options will be treated as having vested under Section 26 but will never be exercisable, as explained below). It estimates the fair value of the share options with this market condition to be £24 per option.

FRS 102 requires the entity to recognise the services received from a counterparty who satisfies all other vesting conditions (e.g., services received from an employee who remains in service for the specified service period), irrespective of whether that market condition is satisfied. It makes no difference whether the share price target is achieved, since the possibility that the share price target might not be achieved has already been taken into account when estimating the fair value of the share options at grant date. However, the options are subject to another condition (i.e., continuous employment) and the cost recognised is required to be adjusted to reflect the ongoing best estimate of employee retention.

By the end of the first year, seven employees have left and the entity expects that a total of 20 employees will leave by the end of year 3, so that 80 employees will have satisfied all conditions other than the market condition (i.e., continuous employment).

By the end of the second year, a further five employees have left. The entity now expects only three more employees will leave during year 3, and therefore expects that a total of 15 employees will have left during the three-year period, so that 85 employees will have satisfied all conditions other than the market condition.

By the end of year 3, a further seven employees have left. Hence, 19 employees have left during the three-year period, and 81 employees remain. However, the share price is only £60, so that the options cannot be exercised. Nevertheless, as all conditions other than the market condition have been satisfied, a cumulative cost is recorded as if the options had fully vested in 81 employees.

The entity will recognise the following amounts during the vesting period for services received as consideration for the options (which in economic reality do not vest).

Year	Calculation of cumulative expense	Cumulative expense (£)	Expense for period (£)
1	80 employees $\times$ 1,000 options $\times$ £24 $\times$ 1/3	640,000	640,000
2	85 employees $\times$ 1,000 options $\times$ £24 $\times$ 2/3	1,360,000	720,000
3	81 employees $\times$ 1,000 options $\times$ £24	1,944,000	584,000

7.3.4 Transactions with variable vesting periods due to market conditions

Where a transaction has a variable vesting period due to a market condition, a best estimate of the most likely vesting period will have been used in determining the fair value of the transaction at the date of grant. IFRS 2 requires the expense for that transaction to be recognised over an estimated expected vesting period consistent with the assumptions used in the valuation, without any subsequent revision.

[IFRS 2.15(b), IFRS 2.IG14]. FRS 102 does not specify the accounting treatment in this situation but it seems consistent with the general requirement in paragraph 9 of Section 26 that there is “no subsequent adjustment to the estimated fair value, irrespective of the outcome of the market vesting condition”.

This may mean, for example, that if the actual vesting period for an employee share option award turns out to be longer than that anticipated for the purposes of the initial valuation, a cost is nevertheless recorded in respect of all employees who reach the end of the anticipated vesting period, even if they do not reach the end of the actual vesting period, as shown by Illustration 7-11 below, which is based on IG Example 6 in the implementation guidance in IFRS 2.

Illustration 7-11: Award with market condition and variable vesting period

At the beginning of year 1, an entity grants 10,000 share options with a ten-year life to each of ten senior executives. The share options will vest and become exercisable immediately if and when the entity's share price increases from £50 to £70, provided that the executive remains in service until the share price target is achieved.

The entity applies an option pricing model which takes into account the possibility that the share price target will be achieved during the ten-year life of the options, and the possibility that the target will not be achieved. The entity estimates that the fair value of the share options at grant date is £25 per option. From the option pricing model, the entity determines that the most likely vesting period is five years. The entity also estimates that two executives will have left by the end of year 5, and therefore expects that 80,000 share options (10,000 share options × 8 executives) will vest at the end of year 5.

Throughout years 1 to 4, the entity continues to estimate that a total of two executives will leave by the end of year 5. However, in total three executives leave, one in each of years 3, 4 and 5. The share price target is achieved at the end of year 6. Another executive leaves during year 6, before the share price target is achieved.

IFRS 2 and FRS 102 require the entity to recognise the services received over the expected vesting period, as estimated at grant date, and also require the entity not to revise that estimate. Therefore, the entity recognises the services received from the executives over years 1-5. Hence, the transaction amount is ultimately based on 70,000 share options (10,000 share options × 7 executives who remain in service at the end of year 5). Although another executive left during year 6, no adjustment is made, because the executive had already completed the expected vesting period of 5 years.

The entity will recognise the following amounts during the initial expected five-year vesting period for services received as consideration for the options.

Year	Calculation of cumulative expense	Cumulative expense (£)	Expense for period (£)
1	8 employees × 10,000 options × £25 × 1/5	400,000	400,000
2	8 employees × 10,000 options × £25 × 2/5	800,000	400,000
3	8 employees × 10,000 options × £25 × 3/5	1,200,000	400,000
4	8 employees × 10,000 options × £25 × 4/5	1,600,000	400,000
5	7 employees × 10,000 options × £25	1,750,000	150,000

IFRS 2 does not specifically address the converse situation, namely where the award actually vests before the end of the anticipated vesting period.

How we see it

In our view, where the award vests before the end of the anticipated vesting period, any expense not yet recognised at the point of vesting is immediately accelerated. We consider that this treatment is most consistent with the overall requirement of FRS 102 to recognise an expense for share-based payment transactions "as the services are received". It is difficult to regard any services being received for an award after it has vested.

Moreover, the prohibition in IFRS 2 on adjusting the vesting period as originally determined refers to "the estimate of the expected vesting period". In our view, the acceleration of vesting that we propose on applying FRS 102 is not the revision of an estimated period, but the substitution of an estimate for a known vesting period.

Suppose in Illustration 7-11 above, the award had in fact vested at the end of year 4. We believe that the expense for such an award must be allocated as follows:

Year	Calculation of cumulative expense	Cumulative expense (£)	Expense for period (£)
1	8 employees × 10,000 options × £25 × 1/5	400,000	400,000
2	8 employees × 10,000 options × £25 × 2/5	800,000	400,000
3	8 employees × 10,000 options × £25 × 3/5	1,200,000	400,000
4	8 employees × 10,000 options × £25 × 4/4	2,000,000	800,000

7.3.5 Transactions with multiple outcomes depending on market conditions

In practice, it is very common for an award subject to market conditions to give varying levels of reward that increase depending on the extent to which a 'base line' market performance target has been exceeded. Such an award is demonstrated in Illustration 7-12 below.

Illustration 7-12: Award with market conditions and multiple outcomes

At the beginning of year 1, the reporting entity grants an employee an award of shares that will vest on the third anniversary of grant if the employee is still in employment. The number of shares depends on the share price achieved at the end of the three-year period. The employee will receive:

- No shares if the share price is below £10.00
- 100 shares if the share price is in the range £10.00 - £14.99
- 150 shares if the share price is in the range £15.00 - £19.99
- 180 shares if the share price is £20.00 or above

In effect the entity has made three awards, which need to be valued as follows:

- (a) 100 shares if the employee remains in service for three years and the share price is greater than £10.00
- (b) 50 (150 - 100) shares if the employee remains in service for three years and the share price is greater than £15.00
- And
- (c) 30 (180 - 150) shares if the employee remains in service for three years and the share price is £20.00 or more

Each award would be valued, ignoring the impact of the three-year service condition but taking account of the share price target. This would result in each tranche of the award being subject to an increasing level of discount to reflect the relative probability of the share price target for each tranche of the award being met. All three awards would then be expensed over the three-year service period, and forfeited only if the awards lapsed as a result of the employee leaving during that period.

It can be seen that the (perhaps somewhat counterintuitive) impact of this is that an equity-settled share-based payment where the number of shares increases in line with increases in the entity's share price may nevertheless have a fixed grant date value irrespective of the number of shares finally awarded.

7.3.6 Transactions with independent market conditions, non-market vesting conditions or non-vesting conditions

7.3.6.A Independent market and non-market vesting conditions

The discussion at 7.3.2 above addressed the accounting treatment of awards with multiple conditions that must all be satisfied, i.e., a market condition and a non-market vesting condition. However, entities might also make awards with multiple conditions, only one of which need be satisfied, i.e., the awards vest on satisfaction of either a market condition or a non-market vesting condition. Neither FRS 102 nor IFRS 2 provides any explicit guidance on the treatment of such awards and the requirements are far from clear, as demonstrated by Illustration 7-13 below.

Illustration 7-13: Award with independent market conditions and non-market vesting conditions

An entity grants an employee 100 share options that vest after three years if the employee is still in employment and the entity achieves either:

- An increase in its share price over three years of at least 15%.
- Or
- Cumulative profits over three years of at least £200 million.

The fair value of the award, ignoring vesting conditions, is £300,000. The fair value of the award, taking account of the share price condition, but not the other conditions, is £210,000.

In our view, the entity has, in effect, simultaneously issued two awards, call them 'A' and 'B', which vest as follows:

A On achievement of three years' service plus minimum share price increase.

And

B On achievement of three years' service plus minimum earnings growth.

If the conditions for both awards are simultaneously satisfied, one or other effectively lapses.

It is clear that award A, if issued separately, would require the entity to recognise an expense of £210,000 if the employee were still in service at the end of the three-year period. It therefore seems clear that, if the employee does remain in service, there must be a charge of £210,000 irrespective of whether the award actually vests. It would be anomalous for the entity to avoid recording a charge that would have been recognised if the entity had made award A in isolation simply by packaging it with award B.

If in fact the award vested because the earnings condition, but not the market condition, had been satisfied, it would then be appropriate to recognise a total expense of £300,000.

During the vesting period, we believe that the entity is required to make an assessment at each reporting date of the basis on which the award is expected to vest. It must assess whether, as at that date, the award is expected to vest by virtue of the earnings condition, but not the share price condition, being satisfied. Assume (for example) that the entity assesses at the end of year 1 that the award is likely to vest by virtue of the share price condition, and at the end of year 2 that it is likely to vest by virtue of the earnings condition, and that the award actually does not vest, but the employee remains in service. This would give rise to annual expense as follows:

Year	Calculation of cumulative expense	Cumulative expense (£)	Expense for period (£)
1	$210,000 \times 1/3$	70,000	70,000
2	$300,000 \times 2/3$	200,000	130,000
3	$210,000 \times 3/3$	210,000	10,000

We believe that ongoing reassessment during the vesting period is most consistent with the general accounting approach to awards with a number of possible outcomes.

As for other awards, the accounting treatment would also require an assessment of whether the employee was actually going to remain in service.

A further question that arises is how the award must be accounted for if both conditions are satisfied. It would clearly be inappropriate to recognise an expense of £510,000 (the sum of the separate fair values of the award) - this would be double-counting, because the employee receives only one package of 100 options. However, should the total expense be taken as £210,000 or £300,000? In our view, it is more appropriate to recognise a cost of £300,000 since the non-market vesting condition has been satisfied.

How we see it

As noted above, the entity has simultaneously issued two awards which vest on achievement of three years' service plus; minimum share price increase or minimum earnings growth. If the conditions for both awards are simultaneously satisfied, one or the other effectively lapses, we believe the higher of both expenses is recognised. We also believe that ongoing reassessment during the vesting period is most consistent with the general approach of FRS 102 to awards with a number of possible outcomes.

7.3.6.B Independent market conditions and non-vesting conditions

Arrangements are also seen where a share-based payment transaction vests on the satisfaction of either a market condition or a non-vesting condition.

The fact that there are two alternative conditions on which the award might vest means that, unless the two conditions are perfectly correlated, the grant date fair value of such an award will be higher than that of an award where there is only one possible basis on which the award might vest. Irrespective of whether the market and/or non-vesting conditions are met, the entity will recognise the grant date fair value provided all other service and non-market vesting conditions are met (i.e., the expense recognition is consistent with that of any award with market and/or non-vesting conditions).

How we see it

In our view, an entity granting an award on the basis of a service condition (and any other non-market vesting conditions) plus either a market condition or a non-vesting condition is required to measure the fair value of the award at grant date taking into account the probability that either the market condition or the non-vesting condition will be met.

7.3.7 Awards with a condition linked to flotation price

Awards in an unlisted entity may be granted with a condition linked to the achievement of a specific price when the entity floats.

How we see it

On flotation there is a market and a market price for the entity's equity instruments and the achievement of a specific price on flotation would, in our view, be a market condition when accompanied by a corresponding service requirement (see 16.4 below).

7.4 Conditions that are not vesting conditions ('Non-vesting conditions')

We believe that the terms "conditions that are not vesting conditions", which is the term referred to in FRS 102, and "non-vesting conditions", which is the term referred to in IFRS 2, are similar (see 2.3.1 above) and we will refer to the term as non-vesting conditions in this section. FRS 102 does not specify the accounting treatment for non-vesting conditions other than to state that "... conditions that are not vesting conditions shall be taken into account when estimating the fair value of the equity instruments granted at the measurement date, with no subsequent adjustment to the estimated fair value, irrespective of the outcome of the ... condition that is not a vesting condition, provided that all other vesting conditions are satisfied". [FRS 102.26.9(b)].

The accounting treatment for awards with non-vesting conditions has some similarities to that for awards with market conditions in that:

- The fair value of the award at grant date is reduced to reflect the impact of the condition.
- And
- An expense is recognised for the award irrespective of whether the non-vesting condition is met, provided that all vesting conditions (other than market conditions) are met.

However, in some situations under IFRS 2 and in the absence of specific guidance, FRS 102, the accounting for non-vesting conditions differs from that for market conditions as regards the timing of the recognition of expense if the non-vesting condition is not satisfied (see 7.4.3 below).

7.4.1 Awards with no conditions other than non-vesting conditions

Any award that has only non-vesting conditions (e.g., an option award to an employee that may be exercised on a trade sale or IPO of the entity, irrespective of whether the employee is still in employment at that time) must be expensed in full at grant date. This is discussed further at 4.2 above and at 16.4 below, and demonstrated in Illustration 7-1 at 7.1 above.

7.4.2 Awards with non-vesting conditions and variable vesting periods

Neither FRS 102 nor IFRS 2 explicitly addresses the determination of the vesting period for an award with a non-vesting condition but a variable vesting period (e.g., an award which delivers 100 shares when the price of gold reaches a given level, but without limit as to when that level must be achieved, so long as the employee is still in employment when the target is reached).

How we see it

However, given the close similarity between the required treatment for awards with non-vesting conditions and that for awards with market conditions, we believe that entities must follow the guidance in the standard for awards with market conditions and variable vesting periods (see 7.3.4 above).

7.4.3 Failure to meet non-vesting conditions

As noted above, the accounting under IFRS 2, and in the absence of specific guidance, FRS 102, for non-vesting conditions sometimes differs from that for market conditions in the timing of the recognition of expense if the non-vesting condition is not satisfied. The treatment depends on the nature of the non-vesting condition, as follows:

- If a non-vesting condition within the control of the counterparty (e.g., making monthly savings in an SAYE scheme) is not satisfied during the vesting period, the failure to satisfy the condition is treated as a cancellation (see 8.4 below), with immediate recognition of any expense for the award not previously recognised. *[IFRS 2.28A, IFRS 2.IG24].*
- If a non-vesting condition within the control of the entity (e.g., continuing to operate the scheme) is not satisfied during the vesting period, the failure to satisfy the condition is treated as a cancellation (see 8.4 below), with immediate recognition of any expense for the award not previously recognised. *[IFRS 2.28A, IFRS 2.IG24].*
- If a non-vesting condition within the control of neither the counterparty nor the entity (e.g., a financial market index reaching a minimum level) is not satisfied, there is no change to the accounting and the expense continues to be recognised over the vesting period, unless the award is otherwise treated as forfeited.

How we see it

The reference to the vesting period, when a non-vesting condition is not met that is not within the control of either party, would include any deemed vesting period calculated as described in 7.4.2 above.

If an award is forfeited due to a failure to satisfy a non-vesting condition after the end of the vesting period (e.g., a requirement for an employee not to work for a competitor for a two year period after vesting), no adjustment is made to the expense previously recognised, consistent with the general provisions for accounting for awards in the post-vesting period (see 7.1.3 above). This would be the case even if shares previously issued to the employee were required to be returned to the entity.

8 Equity-settled transactions – modification, cancellation and settlement

8.1 Background

It is quite common for equity instruments to be modified or cancelled before or after vesting. Typically, this is done where the conditions for an award have become so onerous as to be virtually unachievable, or (in the case of an option) where the share price has fallen so far below the exercise price of an option that it is unlikely that the option will ever be 'in the money' to the holder during its life. An entity may take the view that such equity awards are so unattainable as to have little or no motivational effect, and accordingly replace them with less onerous alternatives. Conversely, and more rarely, an entity may make the terms of a share award more onerous (possibly because of shareholder concern that targets are insufficiently demanding). In addition, an entity may 'settle' an award, i.e., cancel it in return for cash or other consideration.

The provisions in FRS 102 relating to modification, cancellation and settlement are derived from those in IFRS 2 and, where necessary, we have drawn on the guidance in IFRS 2 to supplement and explain the FRS 102 requirements. The provisions in both standards (like the summary of them below) are framed in terms of share-based payment transactions with employees. IFRS 2 and FRS 102 indicates that the provisions are equally applicable to transactions with parties other than employees that are measured by reference to the fair value of the equity instruments granted (see 6.4 above). [FRS 102.26.12]. For transactions with parties other than employees, however, all references to 'grant date' must be taken as references to the date on which the third party supplied goods or rendered service.

In the discussion below, any reference to a 'cancellation' is to any cancellation, whether instigated by the entity or the counterparty. As well as more obvious situations where an award is cancelled by either the entity or the counterparty, cancellations include:

- A failure by the entity to satisfy a non-vesting condition within the control of the entity.
And
- A failure by the counterparty to satisfy a non-vesting condition within the control of the counterparty (see 7.4.3 above).

The basic principles of the rules for modification, cancellation and settlement, which are discussed in more detail at 8.3 and 8.4 below, can be summarised as follows:

- As a minimum, the entity must recognise the amount that would have been recognised for the award if it remained in place on its original terms.
- If the value of an award to an employee is reduced (e.g., by reducing the number of equity instruments subject to the award or, in the case of an option, by increasing the exercise price), there is no reduction in the cost recognised in profit or loss.
- However, if the value of an award to an employee is increased (e.g., by increasing the number of equity instruments subject to the award or, in the case of an option, by reducing the exercise price), the incremental fair value must be recognised as a cost. The incremental fair value is the difference between the fair value of the original award and that of the modified award, both measured at the date of modification. [FRS 102.26.12].

8.1.1 Determining the date of the modification

Determining the date of the modification is an important step in applying the rules for modification accounting. It is at that date that the entity must obtain a fair value not only for the modified award, but also for the original award updated to the date of modification, in order to determine any incremental fair value to be recognised. [FRS 102.26.12(a), IFRS 2.27].

How should an entity determine the date of the modification?

Neither FRS 102 nor IFRS 2 contains explicit guidance on determining the date of the modification, unlike determination of grant date. Grant date is defined as, "The date at which the entity and another party (including an employee) agree to a share-based payment arrangement, being when the entity and the counterparty have a shared understanding of the terms and conditions of the arrangement. At grant date the entity confers on the counterparty the right to cash, other assets, or equity instruments of the entity, provided the specified vesting conditions, if any, are met. If that agreement is subject to an approval process (for example, by shareholders), grant date is the date when that approval is obtained."

[FRS 102 Appendix I].

To determine the date of modification, we would expect an entity to first consider some of the existing principles in the standard on determining grant date. Not all these principles may be applicable in determining the date of the modification because grant date has already been established and the employees have either already provided or are currently providing services in return for the share-based payment award. The grant date principles that can be applied in establishing the date of modification include; there to be a shared understanding of the modified terms and conditions and the relevant approval for the modified award being obtained.

There may be instances where judgement is required in determining the date of the modification when other facts and circumstances indicate that the date of modification is different than the date employees are formally notified of a modification, especially when an entity has obtained relevant board approvals prior to employees being notified. Some of the factors to consider in addition to the grant date principles are as follows:

- A modification that is beneficial to employees approved by the board, for example removal of a non-market vesting condition or reducing the exercise price, where there is no subsequent further approval required (for example, by shareholders) and the communication to employees is shortly after that approval date, may indicate the date of the modification arises at the date of board approval. A factor that may further help to support the board approval date as the date of the modification is if there was some form of communication prior to the approval of a change in terms that created a valid expectation by the employees prior to the board approval that the award would be modified. Another factor to support the board approval date for the modification is that the communication to employees shortly after the board approval is considered an administrative task. If there was a substantive delay in communicating the amended award to employees, it is important to understand why there was such a delay and this could be a factor in determining that the date of the modification is when there is a shared understanding of the terms by both parties i.e., at the later date.
- Where an entity is permitted to amend certain terms and conditions of the original award that do not require approval by the employees, the date of modification is likely to be the date of board approval for the modified terms, provided the approval creates rights and obligations for both parties (the employee and entity). See discussion above in 6.3.7, where an entity has discretion to modify the details of an award after grant date. If a modification requires the approval by employees or requires further services to be provided (for example, in a situation where the vesting period is extended), the date of modification is likely to be once a shared understanding of the terms has been reached.

These are some of the factors to consider in addition to the grant date principles; there may be others, and an entity will need to consider all facts and circumstances to establish the date of modification.

How we see it

There is no accounting policy choice to determine the date of modification, and we would expect an entity to first consider some of the principles in the standard on determining grant date, such as there being a shared understanding of the modified terms and conditions, and the relevant approval for the modified award being obtained.

A mere intent by the entity's management to change the conditions of the award is not sufficient to determine a modification date as an intent would not create rights and obligations under the share-based payment arrangement. There is no basis in FRS 102 for accounting for an anticipated future change to the terms of an award. The entity must account for those awards in issue at the reporting date (see 8.6 below).

However, there could be instances where judgement is required in determining the date of the modification when other facts and circumstances indicate that the date of modification is different than the date employees are formally notified of a modification.

8.2 Valuation requirements when an award is modified, cancelled or settled

These provisions have the important practical consequence that, when an award is modified, cancelled or settled, the entity must obtain a fair value not only for the modified award, but also for the original award, updated to the date of modification. If the award had not been modified, there would have been no need to obtain a valuation for the original award after the date of grant.

Any modification of a performance condition clearly has an impact on the 'real' value of an award, but it may have no direct effect on the value of the award for accounting purposes. As discussed at 7.2 to 7.4 above, this is because market conditions and non-vesting conditions are taken into account in valuing an award whereas non-market vesting conditions are not. Accordingly, by implication, a change to a non-market performance condition will not necessarily affect the expense recognised for the award.

For example, if an award is contingent upon sales of a given number of units and the number of units required to be sold is decreased, the 'real' value of the award is clearly increased. However, as the performance condition is a non-market condition, and therefore not relevant to the original determination of the value of the award, there is no incremental fair value required to be accounted for. However, if the change in the condition results in an increase in the estimated number of awards expected to vest, the change of estimate will however give rise to an accounting charge (see 7.1 to 7.4 above).

If an award is modified by changing the service period, the situation is more complex. A service condition does not of itself change the fair value of the award, but a change in service period may indirectly change the life of the award, which is relevant to its value (see 9 below). Similar considerations apply where performance conditions are modified in such a way as to alter the anticipated vesting date.

The valuation requirements relating to cancelled and settled awards are considered further at 8.4 below.

8.3 Modification

When an award is modified, the entity must as a minimum recognise the cost of the original award as if it had not been modified (i.e., based on the original grant date fair value, spread over the original vesting period, and subject to the original vesting conditions). [FRS 102.26.12(b)].

In addition, a further cost must be recognised for any modifications that increase the fair value of the award. If the modification occurs during the vesting period, this additional cost is spread over the period from the date of modification until the vesting date of the modified award, which might not be the same as that of the original award. [FRS 102.26.12(a)]. Although not explicitly stated in Section 26, but nevertheless consistent with its requirements, where a modification is made after the original vesting period has expired, and is subject to no further vesting conditions, any incremental fair value must be recognised immediately.

Whether a modification increases or decreases the fair value of an award is determined as at the date of modification, as demonstrated by Illustration 8-1. [FRS 102.26.12].

Illustration 8-1: Does a modification increase or decrease the value of an award?

At the beginning of year 1 an entity granted two executives, A and B, a number of options with a fair value of £100 each.

At the beginning of year 2, A's options are modified such that they have a fair value of £85, their current fair value being £80. This is treated as an increase in fair value of £5 (even though the modified award is worth less than the original award when first granted). Therefore, an additional £5 of expense would be recognised in respect of A's options.

At the beginning of year 3, B's options are modified such that they have a fair value of £120, their current fair value being £125. This is treated as a reduction in fair value of £5 (even though the modified award is worth more than the original award when first granted). However, there is no change to the expense recognised for B's options as the entity must recognise, as a minimum, the original grant date fair value of the options (i.e., £100).

This treatment ensures that movements in the fair value of the original award are not reflected in the entity's profit or loss, consistent with the accounting treatment of other equity instruments.

Appendix B and the implementation guidance to IFRS 2 provides further detailed guidance on these requirements as set out in the following sections.

8.3.1 Modifications that increase the value of an award

8.3.1.A Increase in fair value of equity instruments granted

If the modification increases the fair value of the equity instruments granted, (e.g., by reducing the exercise price or changing the exercise period), the incremental fair value, measured at the date of modification, must be recognised over the period from the date of modification to the date of vesting for the modified instruments, as demonstrated in Illustration 8-2 below (which is based on IG Example 7 in the implementation guidance to IFRS 2). [FRS 102.26.12(a), IFRS 2.B.43(a)].

Illustration 8-2: Award modified by repricing

At the beginning of year 1, an entity grants 100 share options to each of its 500 employees. Each grant is conditional upon the employee remaining in service over the next three years. The entity estimates that the fair value of each option is £15.

By the end of year 1, the entity's share price has dropped, and the entity reprices its share options. The repriced share options vest at the end of year 3. The entity estimates that, at the date of repricing, the fair value of each of the original share options granted (i.e., before taking into account the repricing) is £5 and that the fair value of each repriced share option is £8.

40 employees leave during year 1. The entity estimates that a further 70 employees will leave during years 2 and 3, so that there will be 390 employees at the end of year 3 (500 - 40 - 70).

During year 2, a further 35 employees leave, and the entity estimates that a further 30 employees will leave during year 3, so that there will be 395 employees at the end of year 3 (500 - 40 - 35 - 30).

During year 3, 28 employees leave, and hence a total of 103 employees ceased employment during the original three-year vesting period, so that, for the remaining 397 employees, the original share options vest at the end of year 3.

FRS 102 and IFRS 2 requires the entity to recognise:

- The cost of the original award at grant date (£15 per option) over a three-year vesting period beginning at the start of year 1.
- Plus, the incremental fair value of the repriced options at the repricing date (£3 per option, being the £8 fair value of each repriced option less the £5 fair value of the original option) over a two-year vesting period beginning at the date of repricing (end of year 1).

This would be calculated as follows.

Year	Calculation of cumulative expense		Cumulative expense (£)	Expense for period (£)
	Original award (a)	Modified award (b)	(a+b)	
1	390 employees × 100 options × £15 × 1/3		195,000	195,000
2	395 employees × 100 options × £15 × 2/3	395 employees × 100 options × £3 × 1/2	454,250	259,250
3	397 employees × 100 options × £15	397 employees × 100 options × £3	714,600	260,350

In effect, the original award and the incremental value of the modified award are treated as if they were two separate awards.

A similar treatment to that in Illustration 8-2 above is adopted where the fair value of an award subject to a market condition has its value increased by the removal or mitigation of the market condition.

[IFRS 2.B.43(c)]. Where a vesting condition other than a market condition is changed, the treatment set out at 8.3.1.C below is adopted. The standards do not specifically address the situation where the fair value of an award is increased by the removal or mitigation of a non-vesting condition.

How we see it

In our view, it seems appropriate to account for the increase in fair value by the removal or mitigation of a non-vesting condition in the same way as for a modification caused by the removal or mitigation of a market condition, i.e., as in Illustration 8-2 above.

8.3.1.B Increase in number of equity instruments granted

Paragraph 12 of Section 26 on modification of awards begins by referring solely to modifications to the conditions on which equity instruments were granted rather than the number of equity instruments granted. However, in discussing the related accounting treatment, paragraph 12 goes on to refer both to the fair value of an award and to the number of equity instruments granted. If the modification increases the number of equity instruments granted, the fair value of the additional instruments, measured at the date of modification, must be recognised over the period from the date of modification to the date of vesting for the modified instruments. [FRS 102.26.12(a)]. Although not explicitly stated, it follows that if there is no further vesting period for the modified instruments, the incremental cost must be recognised immediately.

It is often the case, however, that a change in the number of equity instruments granted is combined with other modifications to the award, such situations are considered further at 8.3.2 and 8.3.4 below.

8.3.1.C Removal or mitigation of non-market related vesting conditions

Where a vesting condition, other than a market condition, is modified in a manner that is beneficial to the employee, the modified vesting condition is required to be taken into account when applying the general requirements of FRS 102 as discussed at 7.1 to 7.4 above. In other words, the entity would continuously estimate the number of awards likely to vest and/or the vesting period. This is consistent with the general principle that vesting conditions, other than market conditions, are not taken into account in the valuation of awards, but are reflected by recognising a cost for those instruments that ultimately vest on achievement of those conditions. See also the discussion at 8.2 above.

Neither FRS 102 nor IFRS 2 provide an example that addresses this point specifically, but we assume that the intended approach is as in Illustration 8-3 below. In this Illustration, the entity modifies an award in a way that is beneficial to the employee even though the modification does not result in any incremental fair value. The effect of the modification is therefore recognised by basing the expense on the original grant date fair value of the awards and an assessment of the extent to which the modified vesting conditions will be met.

Illustration 8-3: Modification of non-market vesting condition in employee's favour

At the beginning of year 1, the entity grants 1,000 share options to each member of its sales team, with exercise conditional upon the employee remaining in the entity's employment for three years, and the team selling more than 50,000 units of a particular product over the three-year period. The fair value of the share options is £15 per option at the date of grant.

At the end of year 1, the entity estimates that a total of 48,000 units will be sold and accordingly records no cost for the award in year one.

During year 2, there is such a severe downturn in trading conditions that the entity believes that the sales target is too demanding to have any motivational effect, and reduces the target to 30,000 units, which it believes is achievable. It also expects 14 members of the sales team to remain in employment throughout the three-year performance period. It therefore records an expense in year 2 of £140,000 ($£15 \times 14 \text{ employees} \times 1,000 \text{ options} \times 2/3$). This cost is based on the originally assessed value of the award (i.e., £15) since the performance condition was never factored into the original valuation, such that any change in performance condition likewise has no effect on the valuation and does not result in any incremental fair value.

By the end of year 3, the entity has sold 35,000 units, and the share options vest as the modified performance condition has been met. Twelve members of the sales team have remained in service for the three-year period. The entity would therefore recognise a total cost of £180,000 ($12 \text{ employees} \times 1,000 \text{ options} \times £15$), giving an additional cost in year 3 of £40,000 (total charge £180,000, less £140,000 charged in year 2).

How we see it

Where a vesting condition, other than a market condition, is modified in a manner that is beneficial to the employee, the modified vesting condition is taken into account when applying the general requirements of FRS 102, and the entity would continuously estimate the number of awards likely to vest and/or the vesting period.

The difference between the accounting consequences for different methods of enhancing an award could cause confusion in some cases. For example, it may sometimes not be clear whether an award has been modified by increasing the number of equity instruments or by lowering the performance targets, as demonstrated in Illustration 8-4.

Illustration 8-4: Increase in number of equity instruments or modification of vesting conditions?

An entity grants a performance-related award which provides for different numbers of options to vest after 3 years, depending on different performance targets as follows:

Profit growth	Number of options
5%-10%	100
10%-15%	200
over 15%	300

During the vesting period, the entity concludes that the criteria are too demanding and modifies them as follows:

Profit growth	Number of options
5%-10%	200
over 10%	300

This raises the issue of whether the entity has changed:

(a) The performance conditions for the vesting of 200 or 300 options.

Or

(b) The number of equity instruments awarded for achieving growth of 5%-10% or growth of over 10%.

In our view, the reality is that the change is to the performance conditions for the vesting of 200 or 300 options, and must therefore be dealt with as in 8.3.1.C above rather than 8.3.1.B above. Suppose, however, that the conditions had been modified as follows:

Profit growth	Number of options
5%-10%	200
10%-15%	300
over 15%	400

In this case, there has clearly been an increase in the number of equity instruments subject to an award for a growth increase of over 15%, which would have to be accounted for as such (i.e., under 8.3.1.B above rather than 8.3.1.C above). In such a case, it might seem more appropriate to deal with the changes to the lower bands as changes to the number of shares awarded rather than changes to the performance conditions.

How we see it

The removal of the 'over 15%' performance condition is seen as a change in performance condition, whereas the increase in options for each profit growth target is seen as an increase in the number of equity instruments granted.

8.3.2 Modifications that decrease the value of an award

This type of modification does not occur very often, as the effect would be somewhat demotivating and, in some cases, contrary to local labour regulations. However, there have been occasional examples of an award being made more onerous, usually in response to criticism by shareholders that the original terms were insufficiently demanding.

The general requirement of FRS 102 and of IFRS 2 (as outlined at 8.3 above) is that, where an award is made more onerous (and therefore less valuable), the financial statements must still recognise the cost of the original award. This rule is in part an anti-avoidance measure since, without it, an entity could reverse the cost of an out-of-the-money award by modifying it so that it was unlikely to vest (for example, by adding unattainable non-market performance conditions) rather than cancelling the award and triggering an acceleration of expense as discussed at 8.4 below.

8.3.2.A Decrease in fair value of equity instruments granted

If the modification decreases the fair value of the equity instruments granted (e.g., by increasing the exercise price or reducing the exercise period), the decrease in value is effectively ignored and the entity continues to recognise a cost for services as if the awards had not been modified. [FRS 102.26.12(b), IFRS 2.B.44(a)]. This approach also applies to reductions in the fair value of an award by the addition of a market condition or by making an existing market condition more onerous. [IFRS 2.B.44(c)].

How we see it

IFRS 2 notes the approach to apply to modifications of awards for market conditions that are not beneficial to employees (e.g., the decrease in fair value is effectively ignored) but has no specific guidance on how the above approach applies to non-vesting conditions. We assume that reductions in the fair value resulting from the addition or amendment of a non-vesting condition are similarly ignored. We believe this approach equally applies under FRS 102.

Illustration 8-5 demonstrates the accounting for an award that is modified by replacing a non-market performance condition with a market condition:

Illustration 8-5: Award modified by replacing a non-market performance condition with a market condition

At the beginning of year 1, an entity grants 1,000 share options to each of its 10 employees, with exercise conditional upon the employee remaining in the entity's employment for three years, and an earnings per share (EPS) target (non-market performance condition) being met over the three-year period. The fair value of the share options is £15 per option at the date of grant.

At the end of year 1, the entity estimates that all the employees will remain in service until the end of year 3 and that the EPS target will be met. It therefore records a cost of £50,000 for the award in year 1 ($£15 \times 10 \text{ employees} \times 1,000 \text{ options} \times 1/3$).

During year 2, the entity reassesses the arrangement and replaces the EPS target with a share price target (market condition) that must be achieved by the end of year 3. At the date of modification, the fair value of the option with the market condition is £12 and the fair value of the original option is £17. Therefore, the fair value of the award has decreased as a result of the modification but, under Section 26, this decrease is not accounted for and the entity must continue to use the original grant date fair value. An expense must be recognised based on this grant date fair value unless the award does not vest due to failure to meet a service or non-market performance condition specified at the original grant date. At the original grant date, the conditions were a service condition and a non-market performance condition. With the removal of the non-market performance condition, the only condition that has been in place since grant date is the service condition.

At the end of year 2 the entity estimates that nine employees will fulfil the service condition by the end of year 3. It therefore records a cumulative expense in year 2 of £90,000 ($£15 \times 9 \text{ employees} \times 1,000 \text{ options} \times 2/3$) and an expense for the year of £40,000 ($£90,000 - £50,000$).

At the end of year 3 the share price target has not been met but eight employees have met the service condition. The entity therefore recognises a cumulative expense of £120,000 ($£15 \times 8 \text{ employees} \times 1,000 \text{ options}$) and an expense for the year of £30,000 ($£120,000 - £90,000$).

In the above illustration, the expense reversal only relates to those employees who have forfeited their options by failing to fulfil the employment condition. There is no reversal of expense for those employees who met the service condition but whose options did not vest (in real terms) because the market condition was not met. In FRS 102 terms the options of those eight employees vested because all non-market conditions were met and so the entity must recognise the grant date fair value for those awards. This is the case even though the original grant date fair value did not take account of the effect of the market condition (unlike an award with a market condition specified from grant date). This outcome is the result of the different treatment of market and non-market conditions within Section 26, and the requirement to recognise an expense for an award with a market condition provided all other conditions have been met (see further discussion at 7.3.2 above).

8.3.2.B Decrease in number of equity instruments granted

If the modification reduces the number of equity instruments granted, IFRS 2 requires the reduction to be treated as a cancellation of that portion of the award (see 8.4 below). [FRS 102.26.12(b), IFRS 2.B.44(b)]. Essentially this has the effect that any previously unrecognised cost of the cancelled instruments is immediately recognised in full, whereas the cost of an award whose value is reduced by other means continues to be spread in full over the remaining vesting period.

In situations where a decrease in the number of equity instruments is combined with other modifications so that the total fair value of the award remains the same or increases, it is unclear whether the approach required is one based on the value of the award as a whole or, as in the previous paragraph, one based on each equity instrument as the unit of account. This is considered further at 8.3.4 below.

8.3.2.C Additional or more onerous non-market related vesting conditions

Where a non-market vesting condition is modified in a manner that is not beneficial to the employee, again it is ignored and a cost recognised as if the original award had not been modified, as shown by Illustration 8-6 (which is based on IG Example 8 in the implementation guidance to IFRS 2). [FRS 102.26.12(b), IFRS 2.B.44(c), IFRS 2.IG15, IFRS 2.IG Example 8].

Illustration 8-6: Award modified by changing non-market performance conditions

At the beginning of year 1, the entity grants 1,000 share options to each member of its sales team, conditional upon the employee remaining in the entity's employment for three years, and the team selling more than 50,000 units of a particular product over the three-year period. The fair value of the share options is £15 per option at the date of grant. During year 2, the entity believes that the sales target is insufficiently demanding and increases it to 100,000 units. By the end of year 3, the entity has sold 55,000 units, and the modified share options are forfeited. Twelve members of the sales team have remained in service for the three-year period.

On the basis that the original target would have been met, and twelve employees would have been eligible for awards, the entity would recognise a total cost of £180,000 (12 employees × 1,000 options × £15) in accordance with the minimum cost requirements of paragraph 12 of Section 26. The cumulative cost in years 1 and 2 would, as in the Examples above, reflect the entity's best estimate of the original 50,000 unit sales target being achieved at the end of year 3. If, conversely, sales of only 49,000 units had been achieved, any cost booked for the award in years 1 and 2 would have been reversed in year 3, since the original target of 50,000 units would not have been met.

It is noted in IG Example 8 that the same accounting result would have occurred if the entity had increased the service requirement rather than modifying the performance target. Because such a modification would make it less likely that the options would vest, which would not be beneficial to the employees, the entity would take no account of the modified service condition when recognising the services received. Instead, it would recognise the services received from the twelve employees who remained in service for the original three-year vesting period. Other modifications to vesting periods are discussed below.

8.3.3 Modifications with altered vesting period

Where an award is modified so that its value increases, FRS 102 and IFRS 2 require the entity to continue to recognise an expense for the grant date fair value of the unmodified award over its original vesting period, even where the vesting period of the modified award is longer (see 8.3.1 above). This appears to have the effect that an expense may be recognised for awards that do not actually vest, as demonstrated by Illustration 8-7 (which is based on Illustration 8-2 above).

Illustration 8-7: Award modified by reducing the exercise price and extending the vesting period

At the beginning of year 1, an entity grants 100 share options to each of its 500 employees, with vesting conditional upon the employee remaining in service over the next three years. The entity estimates that the fair value of each option is £15.

By the end of year 1, the entity's share price has dropped, and the entity reprices its share options. The repriced share options vest at the end of year 4. The entity estimates that, at the date of repricing, the fair value of each of the original share options granted (i.e., before taking into account the repricing) is £5 and that the fair value of each repriced share option is £7.

40 employees leave during year 1. The entity estimates that a further 70 employees will leave during years 2 and 3, and a further 25 employees during year 4, such that there will be 390 employees at the end of year 3 (500 - 40 - 70) and 365 (500 - 40 - 70 - 25) at the end of year 4.

During year 2, a further 35 employees leave, and the entity estimates that a further 30 employees will leave during year 3 and 30 more in year 4, such that there will be 395 employees at the end of year 3 (500 - 40 - 35 - 30) and 365 (500 - 40 - 35 - 30 - 30) at the end of year 4.

During year 3, 28 employees leave, and hence a total of 103 employees ceased employment during the original three-year vesting period, so that, for the remaining 397 employees, the original share options would have vested at the end of year 3. The entity now estimates that only a further 20 employees will leave during year 4, leaving 377 at the end of year 4. In fact, 25 employees leave, so that 372 satisfy the criteria for the modified options at the end of year 4.

In our view the entity is required to recognise:

- The cost of the original award at grant date (£15 per option) over a three-year vesting period beginning at the start of year 1, based on the ongoing best estimate of, and ultimately the actual, number of employees at the end of the original three-year vesting period.

The incremental fair value of the repriced options at repricing date (£2 per option, being the £7 fair value of each repriced option less the £5 fair value of the original option) over a three year vesting period beginning at the date of repricing (end of year one), but based on the ongoing best estimate of, and ultimately the actual, number of employees at the end of the modified four-year vesting period.

This would be calculated as follows:

Year	Calculation of cumulative expense		Cumulative expense (£)	Expense for period (£)
	Original award	Modified award		
1	390 employees × 100 options × £15 × 1/3		195,000	195,000
2	395 employees × 100 options × £15 × 2/3	365 employees × 100 options × £2 × 1/3	419,333	224,333
3	397 employees × 100 options × £15	377 employees × 100 options × £2 × 2/3	645,767	226,434
4	397 employees × 100 options × £15	372 employees × 100 options × £2	669,900	24,133

How we see it

It may seem strange that a cost is being recognised for the original award in respect of the 25 employees who leave during year 4, who are never entitled to anything. However, in our view, this is consistent with:

- The overall requirement of FRS 102 and IFRS 2 that the minimum cost of a modified award is the cost that would have been recognised if the award had not been modified.
- IG Example 8 in IFRS 2 (the substance of which is reproduced in Illustration 8-6 above) where an expense is clearly required to be recognised to the extent that the original performance conditions would have been met if the award had not been modified.

As noted in Illustration 8-6 and 8-7 above, the rule in FRS 102 and IFRS 2 requiring recognition of a minimum expense for a modified award (i.e., as if the original award had remained in place) applies irrespective of whether the effect of the modification is that an award becomes less valuable to the employee (as in Illustration 8-6) or more valuable to the employee (as in Illustration 8-7).

Where a modified vesting period is shorter than the original vesting period, a question arises as to when all the expense relating to both the original and modified elements of the award must be recognised.

How we see it

In our view, the expense is recognised by the end of the modified vesting period as no services will be rendered beyond that point. In this type of modification, which is distinct from a change of estimate where there is a variable vesting period (see 7.2.3 above), we believe that an entity has an accounting policy choice between retrospective and prospective adjustment of the vesting period as at the modification date.

8.3.4 Modifications that reduce the number of equity instruments granted but maintain or increase the value of an award

As discussed at 8.3.2.B above, IFRS 2 requires cancellation accounting to be applied to a reduction in the number of equity instruments when a modification reduces both the number of equity instruments granted and the total fair value of the award. [IFRS 2.B.44(b)]. FRS 102 is silent on the accounting treatment of such arrangements, and we therefore suggest that entities follow the IFRS 2 requirements. The IFRS 2 approach is consistent with the fact that part of the award has been removed without compensation to the employee. However, a modification of this kind is rarely seen in practice because of the demotivating effect and, in some jurisdictions, a requirement to pay compensation to the counterparty. An entity is more likely to modify an award so that the overall fair value remains the same, or increases, even if the number of equity instruments is reduced. These types of modification, sometimes known as 'value for value' exchanges or 'give and take' modifications, are considered below.

Where an entity reduces the number of equity instruments but also makes other changes so that the total fair value of the modified award remains the same as, or exceeds, that of the original award as at the modification date, it is unclear whether the unit of account for accounting purposes must be an individual equity instrument or the award as a whole. Illustration 8-8 and Illustration 8-9 below show the two situations and the two approaches.

Illustration 8-8: Modification where number of equity instruments is reduced but total fair value of award is unchanged

At the beginning of year 1, an entity granted an employee 200 share options with a grant date fair value of £9 and a vesting period of three years. During years 1 and 2, the entity recognises a cumulative expense of £1,200 ($200 \times £9 \times 2/3$). At the end of year 2 the exercise price of the options is significantly higher than the market price and the options have a fair value of £5 per option. On this date, the entity modifies the award and exchanges the 200 underwater options for 100 'at the money' options with a fair value of £10 each. The total fair value of the new awards of £1,000 ($100 \times £10$) equals the total fair value of the awards exchanged ($200 \times £5$), as measured at the modification date.

View 1 is that the unit of account is an individual option. Taking this approach, the decrease in the number of options from 200 to 100 will be accounted for as a cancellation with an acceleration at the modification date of any un-expensed element of the grant date fair value of 100 options (i.e., recognition of an additional amount of £300 ($100 \times £9 \times 1/3$)). The grant date fair value of the remaining 100 options continues to be recognised over the remainder of the vesting period together with their incremental fair value following the modification. Therefore, in year 3, there would be an expense of £300 (for the remaining grant date fair value) plus £500 ($100 \times (£10 - £5)$) for the incremental fair value of 100 options. In total, therefore, an expense of £2,300 is recognised.

View 2 is that the total number of options exchanged is the more appropriate unit of account. In this case, the cancellation of the original options and the grant of replacement options are accounted for as one modification. There would therefore be no acceleration of expense in respect of the reduction in the number of options from 200 to 100 and the grant date fair value of the original award would continue to be recognised over the vesting period. In this case, the total expense recognised would be £1,800 ($200 \times £9$).

Illustration 8-9: Modification where number of equity instruments is reduced but total fair value is increased

At the beginning of year 1, an entity granted to its employees 1,000 share options with an exercise price equal to the market price of the shares at grant date. There is a two-year vesting period and the grant date fair value is £10 per option. The entity's share price has declined significantly so that the share price is currently significantly less than the exercise price. At the end of year 1, the entity decides to reduce the exercise price of the options and, as part of the modification, it also reduces the number of options from 1,000 to 800. At the date of modification, the fair value of the original options is £7 per option and that of the modified options £11 per option.

View 1 is that the unit of account is an individual option. Taking this approach, the decrease in the number of options from 1,000 to 800 will be accounted for as a cancellation of 200 options with an acceleration at the modification date of any remaining grant date fair value relating to those 200 options. The total expense recognised in year 1 is £6,000 ($(800 \times £10 \times 1/2) + (200 \times £10)$). The grant date fair value of the remaining 800 options continues to be recognised over the remainder of the vesting period together with the incremental fair value of those awards as measured at the modification date. In total the entity will recognise an expense of £13,200 (original grant date fair value of £10,000 ($1,000 \times £10$) plus incremental fair value of £3,200 ($800 \times (£11 - 7)$)).

View 2 is that the unit of account is the total number of options as there are linked modifications forming one package. In this case, the incremental fair value is calculated as the difference between the total fair value before and after the modification. In total the entity will recognise an expense of £11,800 (original grant date fair value of £10,000 ($1,000 \times £10$) plus incremental fair value on modification of £1,800 ($(800 \times £11) - (1,000 \times £7)$)).

How we see it

Given the lack of clarity, we believe that an entity could make an accounting policy choice as to whether it considers the unit of account to be an individual equity instrument or an award as a whole. However, once made, that accounting policy choice is applied consistently to all modifications that reduce the number of equity instruments but maintain or increase the overall fair value of an award. Whichever policy is chosen, the general requirements of FRS 102 will still need to be applied to determine whether the amendments to the arrangement are such that it is appropriate to treat the changes as a modification rather than as a completely new award (see 8.4.2 and 8.4.4 below).

8.3.5 Modification of award from equity-settled to cash-settled (and vice versa)

Occasionally an award that was equity-settled when originally granted is modified to become cash-settled, or an originally cash-settled award is modified to become equity-settled. FRS 102 provides no explicit guidance on such modifications. IFRS 2 provides no explicit guidance on modifications from equity-settled to cash-settled but does provide specific guidance on modifications of awards from cash-settled to equity-settled. In the absence of specific guidance on such modifications in FRS 102, it is possible to arrive at a reasonable approach by analogy to various provisions of FRS 102 and IFRS 2 in respect of:

FRS 102

- The modification of equity-settled awards during the vesting period (see 8.3 above)
- And
- The settlement of equity-settled awards in cash (see 8.4 below).

IFRS 2

- The addition of a cash-settlement alternative to an equity-settled award after grant date (as demonstrated in IG Example 9 in the implementation guidance to IFRS 2)
- And
- The settlement in equity of awards where the entity has a choice of settlement, but which have been accounted for as cash-settled during the vesting period (see 11.1.1.A below).

A detailed discussion of this topic is beyond the scope of this publication, but the subject is addressed more fully in EY's publication International GAAP®.

8.4 Cancellation and settlement

The accounting for cancellation and settlement of an award, in paragraphs 13 and 13A of Section 26, is consistent with the basic requirement of IFRS 2 (as set out in (a) and (b) below). However, Section 26 does not address the treatment of replacement awards following a cancellation and in the absence of specific guidance in FRS 102, we consider it appropriate to follow the full guidance in IFRS 2, as outlined below, for replacement of an award.

Where an award is cancelled or settled (i.e., cancelled with some form of compensation), other than by forfeiture for failure to satisfy the vesting conditions, IFRS 2 requires the following approach:

- (a) If the cancellation or settlement occurs during the vesting period, it is treated as an acceleration of vesting, and the entity recognises immediately the amount that would otherwise have been recognised for services received over the remainder of the vesting period. *[FRS 102.26.13, IFRS 2.28(a)]*.
- (b) Where the entity pays compensation for a cancelled award:
 - (i) Any compensation paid up to the fair value of the award at cancellation or settlement date (whether before or after vesting) is accounted for as a deduction from equity, as being equivalent to the redemption of an equity instrument. *[FRS 102.26.13A, IFRS 2.28, IFRS 2.29]*.
 - (ii) Any compensation paid in excess of the fair value of the award at cancellation or settlement date (whether before or after vesting) is accounted for as an expense in profit or loss. *[FRS 102.26.13A, IFRS 2.28(b), IFRS 2.29]*.
 - (iii) If the share-based payment arrangement includes liability components, the fair value of the liability is remeasured at the date of cancellation or settlement. Any payment made to settle the liability component is accounted for as an extinguishment of the liability. *[IFRS 2.28(b), IFRS 2.29]*.
- (c) If the entity grants new equity instruments during the vesting period and, on the date that they are granted, identifies them as replacing the cancelled or settled instruments, the entity is required to account for the new equity instruments as if they were a modification of the cancelled or settled award. Otherwise, it accounts for the new instruments as an entirely new award. *[IFRS 2.28, IFRS 2.29]*.

It is noted that the calculation of any additional expense in (b) above depends on the fair value of the award at the date of cancellation or settlement, not on the cumulative expense already charged. This has the important practical consequence that, when an entity pays compensation on cancellation or settlement of an award, it must obtain a fair value for the original award, updated to the date of cancellation or settlement. If the award had not been cancelled or settled, there would have been no need to obtain a valuation for the original award after the date of grant.

These requirements raise some further detailed issues of interpretation on a number of areas, as follows:

- The distinction between 'cancellation' and 'forfeiture' (see 8.4.1 below)
 - The distinction between 'cancellation' and 'modification' (see 8.4.2 below)
 - The calculation of the expense on cancellation (see 8.4.3 below)
- And
- Replacement awards (see 8.4.4 and 8.5 below).

8.4.1 Distinction between cancellation and forfeiture

Although not specifically stated, we believe that, similar to IFRS 2, the guidance provided in Section 26.13A on cancellations and settlement does not relate to grants cancelled by forfeiture when the vesting conditions are not satisfied. The significance of this is that the terms of many share-based awards provide that they are, or can be, 'cancelled', in a legal sense, on forfeiture. IFRS 2 clarifies that, where an award is forfeited (within the meaning of that term in IFRS 2 – see 7.1.2 above), the entity must apply the accounting treatment for a forfeiture (i.e., reversal of expense previously recognised), even if the award is legally cancelled as a consequence of the forfeiture. FRS 102 does not have such an explicit distinction but we presume that a similar treatment is intended.

8.4.1.A Termination of employment by entity

In some cases, it might not always be immediately clear whether cancellation or forfeiture has occurred, particularly where options lapse as the result of a termination of employment by the entity. For example, an entity might grant options to an employee at the beginning of year 1 on condition of his remaining in employment until the end of year 2. During year 1, however, economic conditions require the entity to make a number of its personnel, including that employee, redundant, as a result of which his options lapse. Is this lapse a forfeiture or a cancellation for accounting purposes?

The uncertainty arises because it could be argued either that the employee will be unable to deliver the services required in order for the options to vest (suggesting a forfeiture) or that the options lapse as a direct result of the employer's actions (suggesting a cancellation).

The definition of 'service condition' addresses this uncertainty. The definition includes the following guidance:

"...If the counterparty, regardless of the reason, ceases to provide service during the vesting period, it has failed to satisfy the condition. ...". [FRS 102 Appendix I].

Therefore, Section 26 requires the failure to satisfy a service condition as the result of any termination of employment to be accounted for as a forfeiture rather than as a cancellation. For example, a situation where the entity terminates the employment contract is required to be accounted for as a forfeiture.

8.4.1.B Surrender of award by employee

It is sometimes the case that an employee, often a member of senior management, will decide or be encouraged by the entity, to surrender awards during the vesting period. The question arises as to whether the surrendered awards are to be treated as a cancellation or forfeiture for accounting purposes. FRS 102 and IFRS 2 allow forfeiture accounting, and the consequent reversal of any cumulative expense, only in situations where vesting conditions are not satisfied. A situation where the counterparty voluntarily surrenders an award, and therefore the opportunity to meet the vesting conditions, is a decision within the control of the counterparty rather than a failure to satisfy a vesting condition and must be accounted for as a cancellation rather than as a forfeiture.

How we see it

We do not believe that the intention of the guidance in Section 26 was to allow an employee to 'fail' to meet a service condition by voluntarily surrendering an award. Such an action therefore continues to be treated as a cancellation rather than as a forfeiture.

8.4.2 Distinction between cancellation and modification

One general issue raised by the approach to modification and cancellation in FRS 102 and IFRS 2 is where the boundary lies between 'modification' of an award in the entity's favour and outright cancellation of the award. As a matter of legal form, the difference is obvious. However, if an entity were to modify an award in such a way that there was no realistic chance of it ever vesting (for example, by introducing a requirement that the share price increase 1,000,000 times by vesting date), some might argue that this amounts to a *de facto* cancellation of the award. The significance of the distinction is that, whereas the cost of a 'modified' award continues to be recognised on a periodic basis over the vesting period (see 8.3 above), the remaining cost of a cancelled award is recognised immediately.

8.4.3 Calculation of the expense on cancellation

The basic accounting treatment for a cancellation and settlement is demonstrated in Illustration 8-10 below.

Illustration 8-10: Cancellation and settlement - basic accounting treatment

At the start of year 1, an entity grants an executive 30,000 options on condition that she remains in employment for three years. Each option is determined to have a fair value of £10.

At the end of year 1, the executive is still in employment and the entity charges an expense of £100,000 ($30,000 \times £10 \times 1/3$). At the end of year 2, the executive is still in employment. However, the entity's share price has suffered a decline which the entity does not expect to have reversed by the end of year 3, such that the options, while still 'in the money' now have a fair value of only £6.

The entity cancels the options at the end of year 2 and in compensation pays the executive £6.50 per option cancelled, a total payment of £195,000 ($30,000 \text{ options} \times £6.50$).

FRS 102 and IFRS 2 first require the entity to record a cost as if the options had vested immediately. The total cumulative cost for the award must be £300,000 ($30,000 \text{ options} \times £10$). £100,000 was recognised in year 1, so that an additional cost of £200,000 is recognised.

As regards the compensation payment, the fair value of the awards cancelled is £180,000 ($30,000 \text{ options} \times £6.00$). Accordingly, £180,000 of the payment is accounted for as a deduction from equity, with the remaining payment in excess of fair value, £15,000, applying paragraphs 13 and 13A of Section 26.

The net effect of this is that an award that ultimately results in a cash payment to the executive of only £195,000 (i.e., £6.50 per option) has resulted in a total charge to profit or loss of £315,000 (i.e., £10.50 per option, representing £10 grant date fair value + £6.50 compensation payment - £6.00 cancellation date fair value).

Illustration 8-10 shows the basic calculation of the required cancellation 'charge'. In more complex situations, however, the amount of the 'charge' may not be so clear-cut, due to an ambiguity in the drafting of paragraph 28(a) of IFRS 2 and paragraph 13 of Section 26, which state that an entity:

"shall account for the cancellation or settlement ... as an acceleration of vesting and therefore shall recognise immediately the amount that otherwise would have been recognised for services received over the remainder of the vesting period." [FRS 102.26.13, IFRS 2.28(a)].

There is something of a contradiction within this requirement as demonstrated by Illustration 8-11.

Illustration 8-11: Cancellation and settlement – best estimate of cancellation expense

At the beginning of year 1, entity A granted 150 employees an award of free shares, with a grant date fair value of £5, conditional upon continuous service and performance targets over a 3-year period from grant date. The number of shares awarded varies according to the extent to which targets (all non-market vesting conditions) have been met and could result in each employee still in service at the end of year 3 receiving a minimum of 600, and a maximum of 1,000 shares.

Halfway through year 2 (i.e., 18 months after grant date), A is acquired by B, following which A cancels all of its share awards. At the time of the cancellation, 130 of the original 150 employees were still in employment. At that time, it was A's best estimate that, had the award run to its full term, 120 employees would have received 900 shares each. Accordingly, the cumulative expense recognised by A for the award as at the date of takeover would, under the normal estimation processes discussed at 7.1 to 7.4 above, be £270,000 (900 shares × 120 employees × £5 × 18/36).

How must A account for the cancellation of this award?

The opening phrase of paragraph 28(a) of IFRS 2 (echoed in paragraph 13 of Section 26, "the entity shall account for the cancellation ...as an acceleration of vesting" - suggests that A must recognise a cost for all 130 employees in service at the date of cancellation. However, the following phrase, "[the entity] shall therefore recognise immediately the amount that would otherwise have been recognised for services received over the remainder of the vesting period", suggests that the charge must be based on only 120 employees, the best estimate, as at the date of cancellation of the number of employees in whom shares will finally vest.

How we see it

In our view, either reading is possible. Recognise the cancellation cost, either based on the employees in service at the date of cancellation or based on the best estimate of the number of employees at the date of cancellation to whom the shares would vest.

There is then the issue of the number of shares per employee that is required to be taken into account in the cancellation charge. Is this the 1,000 shares per employee (the maximum amount that could vest) or 900 shares per employee (the amount expected by the entity at the date of cancellation actually to vest)?

How we see it

In our view, it is unclear whether the intention was that the cancellation charge is to be based on the number of shares considered likely, as at the date of cancellation, to vest for each employee (900 shares in this example) or whether it be based on the maximum number of shares (1,000 shares in this example). Given the lack of clarity, in our view an entity must make an accounting policy choice.

In extreme cases, the entity's best estimate, as at the date of cancellation, might be that no awards are likely to vest. In this situation, no cancellation expense would be recognised. However, there would need to be evidence that this was not just a rather convenient assessment made as at the date of cancellation. Typically, the previous accounting periods would also have reflected a cumulative expense of zero on the assumption that the awards would never vest.

An effect of these requirements is that they create an accounting arbitrage between an award that is 'out of the money' but not cancelled (the cost of which continues to be spread over the remaining period to vesting) and one which is formally cancelled (the cost of which is recognised immediately). Entities might well prefer to opt for cancellation so as to create a 'one-off' charge to earnings rather than continue to show, particularly during difficult trading periods, significant periodic costs for options that no longer have any real value. However, such early cancellation of an award precludes any chance of the cost of the award being reversed through forfeiture during, or at the end of, the vesting period if the original vesting conditions are not met.

8.4.4 Replacement awards

FRS 102 contains no specific requirements or guidance in relation to replacement awards and so we consider it appropriate to draw on those in IFRS 2. The remainder of this section therefore reflects the IFRS 2 requirements. Whilst the requirements relating to accounting for replacement awards are generally clear under IFRS 2, there are nevertheless some issues of interpretation.

As set out at 8.4 above, a new award that meets the criteria in paragraph 28(c) of IFRS 2 to be treated as a replacement of a cancelled or settled award is accounted for as a modification of the original award and any incremental value arising from the granting of the replacement award is recognised over the vesting period of that replacement award. Where the criteria are not met, the new equity instruments are accounted for as a new grant (in addition to accounting for the cancellation or settlement of the original arrangement). The requirements are discussed in more detail below.

8.4.4.A Designation of award as replacement award

Whether or not an award is a 'replacement' award (and therefore recognised at only its incremental, rather than its full, fair value) is determined by whether the entity designates it as such on the date that it is granted.

Entities need to ensure that designation occurs on grant date as defined by IFRS 2 (and FRS 102) (see 6.3 above). For example, if an entity cancels an award on 15 March and notifies an employee in writing on the same day of its intention to ask the remuneration committee to grant replacement options at its meeting in two months on 15 May, such notification (although formal and in writing) may not strictly meet the requirement for designation on grant date (i.e., 15 May).

How we see it

In our view, what is important is that the entity establishes a clear link between the cancellation of the old award and the granting of a replacement award even if there is later formal approval of the replacement award following the communication of its terms to the counterparty at the same time as the cancellation of the old award.

An entity does not have a free choice to designate any newly granted awards as replacement awards. In our view, however, such designation cannot credibly be made unless there is evidence of some connection between the cancelled and replacement awards. This might be that the cancelled and replacement awards involve the same counterparties, or that the cancellation and replacement are part of the same arrangement.

8.4.4.B Incremental fair value of replacement award

Where an award is designated as a replacement award, any incremental fair value must be recognised over the vesting period of the replacement award. The incremental fair value is the difference between the fair value of the replacement award and the 'net fair value' of the cancelled or settled award, both measured at the date on which the replacement award is granted. The net fair value of the cancelled or settled award is the fair value of the award, immediately before cancellation, less any compensation payment that is accounted for as a deduction from equity. [IFRS 2.28(c)]. Thus the 'net fair value' of the original award can never be less than zero (since any compensation payment in excess of the fair value of the cancelled award would be accounted for in profit or loss, not in equity – see Illustration 8-10 at 8.4.3 above).

There is some confusion within IFRS 2 as to whether a different accounting treatment is intended to result from, on the one hand, modifying an award and, on the other hand, cancelling it and replacing it with a new award on the same terms as the modified award. This is explored in Illustration 8-12 below, which is based on the same fact pattern as Illustration 8-2 at 8.3.1.A above.

Illustration 8-12: Replacement awards – is there an accounting arbitrage between modification and accounting for cancellation and a new grant?

At the beginning of year 1, an entity grants 100 share options to each of its 500 employees. Each grant is conditional upon the employee remaining in service over the next three years. The entity estimates that the fair value of each option is £15.

By the end of year 1, the entity's share price has dropped. The entity cancels the existing options and issues options which it identifies as replacement options, which also vest at the end of year 3. The entity estimates that, at the date of cancellation, the fair value of each of the original share options granted is £5 and that the fair value of each replacement share option is £8.

40 employees leave during year 1. The entity estimates that a further 70 employees will leave during years 2 and 3, so that there will be 390 employees at the end of year 3 ($500 - 40 - 70$).

During year 2, a further 35 employees leave, and the entity estimates that a further 30 employees will leave during year 3, so that there will be 395 employees at the end of year 3 ($500 - 40 - 35 - 30$).

During year 3, 28 employees leave, and hence a total of 103 employees ceased employment during the original three-year vesting period, so that, for the remaining 397 employees, the replacement share options vest at the end of year 3.

Paragraph BC233 of IFRS 2 suggests that the intention of the IASB was that the arrangement should be accounted for in the same way as the modification in Illustration 8-2 above.

However, it is not clear that this intention is actually reflected in the drafting of paragraph 28 of IFRS 2 which seems to require the cancellation of the existing award to be treated as an acceleration of vesting, explicitly and without qualification, and any 'new equity instruments' granted to be accounted for in the same way as a modification of the original grant of equity instruments. It does not require this treatment for the cancellation of the 'original instruments', because this has already been addressed as an acceleration of vesting.

The application of, firstly, the main text of IFRS 2 and, secondly, the Basis for Conclusions to IFRS 2 to the entity in Illustration 8-12 is set out below.

The main text in IFRS 2 appears to require the entity to recognise:

- The entire cost of the original options at the end of year 1 (since cancellation has the effect that they are treated as vesting at that date), based on the 390 employees expected at that date to be in employment at the end of the vesting period. This is not the only possible interpretation of the requirement of paragraph 28(a), see the broader discussion in Illustration 8-11 at 8.4.3 above.
- For the options replacing the 390 cancelled awards, the incremental fair value of the replacement options at repricing date (£3 per option, being the £8 fair value of each replacement option less the £5 fair value of each cancelled option) over a two year vesting period beginning at the date of cancellation (end of year 1), based on the (at first estimated and then actual) number of employees at the end of year 3 (i.e., the final number could be less than the estimate of 390).
- For any additional replacement options (i.e., replacement options awarded in excess of the 390×100 options that were expected to vest at cancellation date), the full incremental fair value at repricing date (being the £8 fair value of each replacement option) over a two-year vesting period beginning at the repricing date (end of year 1). The expense is based on the (at first estimated and then actual) number of employees in excess of 390 at the end of year 3.

This would be calculated as follows:

Year	Calculation of cumulative expense		Cumulative expense (£)	Expense for period (£)
	Original award	Replacement award		
1	390 employees $\times$ 100 options $\times$ £15	-	585,000	585,000
2	390 employees $\times$ 100 options $\times$ £15	390 employees $\times$ 100 options $\times$ £3 $\times$ 1/2 5 employees $\times$ 100 options $\times$ £8 $\times$ 1/2	645,500	60,500
3	390 employees $\times$ 100 options $\times$ £15	390 employees $\times$ 100 options $\times$ £3 7 employees $\times$ 100 options $\times$ £8	707,600	62,100

By contrast, the accounting treatment implied by the Basis for Conclusions is as follows (see Illustration 8-2 above):

Year	Calculation of cumulative expense		Cumulative expense (£)	Expense for period (£)
	Original award (a)	Modified award (b)	(a+b)	
1	390 employees $\times$ 100 options $\times$ £15 $\times$ 1/3	-	195,000	195,000
2	395 employees $\times$ 100 options $\times$ £15 $\times$ 2/3	395 employees $\times$ 100 options $\times$ £3 $\times$ 1/2	454,250	259,250
3	397 employees $\times$ 100 options $\times$ £15	397 employees $\times$ 100 options $\times$ £3	714,600	260,350

In the above illustration, both the periodic allocation of expense and the total expense differ under each interpretation. This is because, under the first interpretation, the cost of the original award is accelerated at the end of year 1 for all 390 employees expected at that date to be in employment at the end of the vesting period, whereas under the second interpretation a cost is recognised for the 397 employees whose awards finally vest. The difference between the two total charges of £7,000 (£714,600 - £707,600) represents $397 - 390 = 7$ employees @ £1,000 (100 options × £10 (£15 + £3 - £8)) each = £7,000.

How we see it

In practice, the second (modification accounting) approach above tends to be seen more frequently. However, we believe that either interpretation is valid, and an entity adopts one or the other consistently as a matter of accounting policy.

In Illustration 8-12 above, we base the cancellation calculations on 390 employees (the number expected to be employed at the end of the vesting period as estimated at the cancellation date) rather than on 460 employees (the number in employment at the cancellation date). As discussed in Illustration 8-11 at 8.4.3 above, either approach may be adopted but the selected approach must be applied consistently.

The discussion above relates to situations in which awards are cancelled and replaced for reasons other than expected, or actual, failure by the counterparty to meet a service condition. Changes to awards in contemplation, or as a consequence, of cessation of employment are considered at 6.3.8.B above and at 8.5 and 8.6 below.

8.4.4.C Replacement of vested awards

The rules for replacement awards summarised in paragraph (c) at 8.4 above apply “if a grant of equity instruments is cancelled or settled during the vesting period ...”. [IFRS 2.28]. FRS 102 does not explicitly state that its requirements relate solely to awards cancelled or settled during the vesting period, but this seems to be implied by the references to “an acceleration of vesting” and “the remainder of the vesting period”. [FRS 102.26.13]. However, if the original award has already vested when a replacement award is granted, there is no question of accelerating the cost of the cancelled award, as it has already been recognised during the vesting period. The issue is rather the treatment of the new award itself. Whilst neither IFRS 2 nor FRS 102 explicitly addresses this point, it appears that such a replacement award is treated in the same way as a completely new award. In other words, its full fair value is recognised immediately or, if there are any vesting conditions for the replacement award, over its vesting period.

By contrast, the rules in IFRS 2 for modification of awards (discussed in 8.3 above) apply whether the award has vested or not. Paragraphs 26 and 27 of IFRS 2 (modifications) are not restricted to events “during the vesting period” in contrast to paragraph 28 (cancellation and settlement, including replacement awards), which is restricted to events “during the vesting period”. [IFRS 2.26, IFRS 2.27, IFRS 2.28]. In FRS 102, any such distinction is less clear because the paragraph on modifications is written in the context of a modification of vesting conditions and, whilst it refers explicitly to the accounting treatment of modifications during the vesting period, it is silent on the modification of vested awards. [FRS 102.26.12].

How we see it

In the absence of explicit guidance, we believe that it is appropriate to follow the accounting approach of IFRS 2. This has the effect that the accounting cost of modifying an already vested award (i.e., the incremental fair value of the modified award) may, at first sight, appear to be lower than the cost of cancelling and replacing it, which requires the full fair value of the new award to be expensed. However, the full fair value of the new replacement award will be reduced by the fair value of the cancelled award that the employee has surrendered as part of the consideration for the new award. This analysis will, in many cases, produce an accounting outcome similar to that of the modification of an unvested award.

8.5 Replacement and *ex gratia* awards on termination of employment

When an employee's employment is terminated during the vesting period of an award of shares or options, the award will typically lapse in consequence. It is common in such situations, particularly where the employee was part of the senior management, for the entity to make an alternative award, or to allow the employee to retain existing awards, as part of the package of benefits agreed with the employee on termination of employment.

Generally, such an award is an *ex gratia* award, in other words, it is a voluntary award to which the outgoing employee had no legal entitlement under the terms of the original award. However, a number of plan rules set out, in a 'good leaver' clause (see 6.3.8 above), the terms on which any *ex gratia* award may be made, usually by applying a formula to determine, or limit, how much of the original award can be considered to have vested.

In many cases the award will be made on a fully vested basis, i.e., the employee has full entitlement without further conditions needing to be fulfilled. In other cases, however, an employee will be allowed to retain awards that remain subject to the fulfilment of the original conditions (other than future service).

Whichever form the award takes, in accounting terms it will be treated as vesting at the date of termination of employment because any remaining conditions will be accounted for as non-vesting conditions in the absence of an explicit or implied service condition (see 4.2 above).

It has not always been clear whether the termination of employment must be accounted for as a forfeiture or as a cancellation. However, as discussed at 8.4.1.A above, if an employee is unable to satisfy a service condition for any reason, this is required to be accounted for under FRS 102 and IFRS 2 as a forfeiture rather than as a cancellation.

IFRS 2 does not specifically address the accounting for any replacement or *ex gratia* awards granted on termination of employment. It perhaps follows from the treatment of the termination of employment as a forfeiture to:

- Reverse any expense relating to the forfeited award.
- And
- Recognise the *ex gratia* award as a completely new award granted at the date of termination of employment.

However, the guidance is not clear and there might be situations where entities consider it more appropriate to apply modification accounting (recognising the original grant date fair value of the award that would otherwise be forfeited on its original terms (because the service condition would not be met) plus the incremental value of the modified terms).

How we see it

In the absence of clarity, we believe that judgement will be required based on the specific facts and circumstances and the extent to which the changes to the arrangements are considered to be a waiver of existing conditions in connection with the cessation of employment rather than the introduction of a discretionary replacement arrangement on completely new terms.

8.6 Entity's plans for future modification or replacement of award - impact on estimation process at reporting date

As discussed at 7.1.1 and 7.1.2 above, FRS 102 requires an entity to determine a cumulative charge at each reporting date by reference to an estimate of the number of awards that will vest (within the specific meaning of that term in FRS 102). The process of estimation at each reporting date must take into account any new information that indicates a change to previous estimates.

In addition to the normal difficulties inherent in any estimation process, it is not entirely clear which anticipated future events must be taken into account in the estimation process and which must not, as demonstrated by Illustration 8-13 below.

Illustration 8-13: Estimation of number of awards expected to vest - treatment of anticipated future events

At the beginning of year 1, an entity granted an award of 1,000 shares to each of its 600 employees at a particular manufacturing unit. The award vests on completion of three years' service. As at the end of year 1, the entity firmly intends to close the unit, and terminate the employment of employees, as part of a rationalisation programme. This closure would occur part way through year 2. The entity has not, however, announced its intentions or taken any other steps so as to allow provision for the closure under Section 21 Provisions and Contingencies.

Under the original terms of the award, the award would lapse on termination of employment. However, the entity intends to compensate employees made redundant by changing the terms of their award so as to allow full vesting on termination of employment.

What is the 'best estimate', as at the end of year 1, of the number of awards expected to vest? Specifically, must the entity:

- (a) Ignore the intended closure altogether, on the grounds that there is no other recognition of it in the financial statements?
- (b) Take account of the impact of the intended closure on vesting of the current award, but ignore the intended modification to the terms of the award to allow vesting?
- Or
- (c) Take account of both the intended closure and the intended modification of the award?

In our view, there is no basis in FRS 102 for accounting for an anticipated future change to the terms of an award. The entity must account for those awards in issue at the reporting date, not those that might be in issue in the future. Accordingly, we do not consider approach (c) above to be appropriate if any change to the issued awards was simply an intention.

Equally, we struggle to support approach (a) above. FRS 102 requires the entity to use an estimate of the number of awards expected to vest and its best available estimate as at the end of year 1 must be that the unit will be closed, and the employees' employment terminated, in year 2. This view is supported by the fact that, unlike other areas of accounting such as impairment and provisions, accounting for share-based payment transactions does not explicitly prohibit an entity from taking account of the consequences of reorganisations and similar transactions to which it is not yet committed.

Accordingly, we believe that approach (b) must be followed.

The entity's best estimate, at the end of year 1, must be that none of the awards currently in place will vest (because all the employees will be made redundant and so will not meet the service condition before the end of the vesting period). It therefore applies forfeiture accounting at the end of year 1 and reverses any cost previously recorded for the award.

When the terms of the award are changed (see 8.1.1 above) in year 2 to allow full vesting on redundancy, the entity will either recognise the full cost of the new award (as all cost relating to the original award has been reversed) or will treat the revised arrangement as a modification of the original award that is beneficial to the employee. In effect, the modification approach is based on a view that the original award is not now going to lapse because it will be modified before employment ceases and the forfeiture crystallises. In our view, in the absence of clarity in the standard, the entity is required to assess the more appropriate approach based on the particular facts and circumstances.

Either approach will have what many may see as the less than ideal result that the entity will recognise a credit in profit or loss in year 1 and an expense in year 2, even though there has been no change in management's best estimate of the overall outcome. This follows from the analysis, discussed above, that we do not believe that the entity can account, in year 1, for the award on the basis of what its terms may be in year 2.

The best estimate is made as at each reporting date. A change in estimate made in a later period in response to subsequent events, affects the accounting expense from that later period only (i.e., there is no restatement of earlier periods presented).

How we see it

In summary, as noted above, we believe there is no basis to account for an anticipated future change to the terms of an award. The entity must account for those awards in issue at the reporting date, not those that might be in issue in the future. The best estimate of the awards expected to vest at the end of the reporting date is based on the awards currently in place, in other words, at the end of year 1 none of the awards in place will vest. When the terms of the award are changed, it is then based on facts and circumstances, whether the change is accounted for as a new award or treat the revised arrangement as a modification of the original award.

8.7 Share splits and consolidations

It is relatively common for an entity to divide its existing equity share capital into a larger number of shares (share splits) or to consolidate its existing share capital into a smaller number of shares (share consolidations). The impact of such splits and consolidations is not specifically addressed in either FRS 102 or IFRS 2.

Suppose that an employee has options over 100 shares in the reporting entity, with an exercise price of £1. The entity undertakes a '1 for 2' share consolidation, i.e., the number of shares in issue is halved such that, all other things being equal, the value of one share in the entity after the consolidation is twice that of one share before the consolidation.

IFRS 2 is required to be applied to modifications to an award arising from equity restructurings (FRS 102 is silent on this). [IFRS 2.BC24]. In many cases, a share scheme will provide for automatic adjustment so that, following the consolidation, the employee holds options over only 50 shares with an exercise price of £2. As discussed at 6.3.7.A above, all things being equal, it would be expected that the modified award would have the same fair value as the original award and so there would be no incremental expense to be accounted for.

However, it may be that the scheme has no such provision for automatic adjustment, such that the employee still holds options over 100 shares. The clear economic effect is that the award has been modified, since its value has been doubled. It could be argued that, on a literal reading of IFRS 2, no modification has occurred, since the employee holds options over 100 shares at the same exercise price before and after the consolidation.

How we see it

In our view, whilst it seems appropriate to have regard to the substance of the transaction, and treat it as giving rise to a modification, it can be argued that FRS 102 and IFRS 2 as drafted does not require such a treatment. In the absence of clear guidance, the accounting policy adopted must be applied consistently.

Sometimes, the terms of an award give the entity discretion to make modifications at a future date in response to more complex changes to the share structure, such as those arising from bonus issues, share buybacks and rights issues where the effect on existing options may not be so clear-cut. These are discussed further at 6.3.7.A above.

9 Equity-settled transactions – valuation

9.1 Introduction

As noted at 6.1 above, an equity-settled share-based payment transaction is valued either at the fair value of the goods or services received using the general requirements of FRS 102 for the determination of fair value or at the fair value of the equity instruments granted using the specific requirements set out in Section 26. FRS 102 defines fair value as: *[FRS 102.26.1C]*

Extract from FRS 102

Defined term

fair value	fair value is the amount for which an asset could be exchanged, a liability settled or an equity instrument granted could be exchanged, between knowledgeable, willing parties in an arm's length transaction.

The timing of the fair value measurement, and whether it is based on the goods or services or on the equity instruments, is driven by a number of factors including the relative reliability of measurement and the identity of the counterparty (see 6 above).

In this section we consider the specific requirements in Section 26 for the valuation of shares, share options and equity-settled share appreciation rights. No distinction is drawn between awards to employees and to non-employees and the requirements must therefore be applied to the measurement of employee awards at grant date and non-employee awards at service date.

9.2 Shares

Section 26 requires the fair value of shares (and the related goods or services received) to be determined using the following three-tier measurement hierarchy:

- (a) If an observable market price is available for the equity instruments granted, use that price.
- (b) If an observable market price is not available, measure the fair value of equity instruments granted using entity-specific observable market data such as:
 - (i) A recent transaction in the entity's shares.
 - (ii) A recent independent fair valuation of the entity or its principal assets.
- (c) If an observable market price is not available and obtaining a reliable measurement of fair value under (b) is impracticable, indirectly measure the fair value of the shares using a valuation method that uses market data to the greatest extent practicable to estimate what the price of those equity instruments would be on the grant date in an arm's length transaction between knowledgeable, willing parties. The entity's directors must use their judgement to apply a generally accepted valuation methodology for valuing equity instruments that is appropriate to the circumstances of the entity. *[FRS 102.26.10]*.

FRS 102 defines a requirement as 'impracticable' when the entity cannot apply it after making every reasonable effort to do so. *[FRS 102 Appendix I]*.

It seems unlikely that the market price referred to in (a), or the entity-specific observable market data referred to in (b), will be available for the measurement of the vast majority of share-based awards granted by unlisted entities. Most entities will therefore be required to apply the approach required by (c) and use an appropriate valuation methodology.

The selection of an appropriate methodology for valuing the equity of an unlisted entity is beyond the scope of this publication but, in many cases of awards of free shares (which are akin to options with a zero strike price), it is likely that an approach similar to that used for valuing share options will be adopted (see 9.3 below).

FRS 102 states that all market conditions and non-vesting conditions must be taken into account when estimating the fair value of the shares or share options at the measurement date (see further discussion at 7.3 and 7.4 above on market conditions and non-vesting conditions). *[FRS 102.26.9]*. Apart from this, there is no mention of adjusting the market price, or estimated market price, of an entity's shares to take into account the terms and conditions on which they were granted (which would, typically, reduce the value). Many conditions and restrictions attached to awards will be covered by the requirements of paragraph 9. However, this guidance does not specifically address the common situation where the counterparty is not entitled to receive dividends during the vesting period.

Under the requirements of IFRS 2, no adjustment is required to the estimated grant date fair value of shares if the employees are entitled to receive dividends, or dividend equivalents paid in cash, during the vesting period (as they are in no different a position in this respect than if they already held shares). However, where employees are not entitled to receive dividends during the vesting period, IFRS 2 requires the valuation to be reduced by the present value of dividends expected to be paid during the vesting period. [IFRS 2.B31, IFRS2.B33, IFRS 2.B34].

The accounting treatment of awards which give the right to receive dividends during the vesting period is discussed further at 16.3 below.

If an entity is taking approach (c) above in determining a fair value for the equity instruments, then it seems appropriate to adjust for all the terms and conditions on which the shares have been awarded (other than those vesting conditions which are not taken into account in the determination of fair value).

Where an entity is using approaches (a) or (b), it might appear that it is required to use an unadjusted market price or other observable price without adjusting for the specific terms and conditions of the share-based payment. However, that seems to be at variance with the requirements of paragraph 9 to take certain conditions into account.

How we see it

In our view, it will generally be more appropriate to adjust the fair value for the terms and conditions on which the right to the equity instrument is granted if the instrument granted is not precisely that for which the market price, or other observable price, is available.

9.3 Share options and equity-settled share appreciation rights

A share option is defined in FRS 102 as “a contract that gives the holder the right, but not the obligation, to subscribe to the entity’s shares at a fixed or determinable price for a specific period of time”.

[FRS 102 Appendix I].

A share appreciation right (SAR) is not specifically defined in FRS 102 but is a grant where the counterparty will become entitled either to shares (or, more commonly, to a future cash payment) based on the increase in the entity’s share price or value from a specified level over a period of time (see further discussion at 10 below on cash-settled awards).

Section 26 requires the fair value of share options and equity-settled share appreciation rights (and the related goods or services received) to be determined using the following three-tier measurement hierarchy:

- (a) If an observable market price is available for the equity instruments granted, use that price.
- (b) If an observable market price is not available, measure the fair value of share options and share appreciation rights granted using entity-specific observable market data such as for a recent transaction in the share options.
- (c) If an observable market price is not available and obtaining a reliable measurement of fair value under (b) is impracticable, indirectly measure the fair value of share options or share appreciation rights using an alternative valuation methodology such as an option pricing model. The inputs for an option pricing model (such as the weighted average share price, exercise price, expected volatility, option life, expected dividends and the risk-free interest rate) are to use market data to the greatest extent possible. Paragraph 10 of Section 26 (see 9.2 above) provides guidance on determining the fair value of the shares used in determining the weighted average share price. The entity derives an estimate of expected volatility consistent with the valuation methodology used to determine the fair value of the shares. [FRS 102.26.11].

Section 26 does not mandate the use of an option pricing model, however, in practice, it is likely that use of a pricing model will often be a practical basis for determining the fair value of share options and appreciation rights.

The treatment of vesting and non-vesting conditions in the determination of the fair value of share options must be considered in the same way as for the fair value of shares (see 9.2 above) as paragraph 9 of Section 26 refers to both shares and share options.

A discussion of valuation methodology is beyond the scope of this publication. Whilst not addressing the subject of valuation in detail, EY’s publication International GAAP® draws on the guidance in Appendix B to IFRS 2 relating to the valuation of share-based payments and addresses some aspects of the pricing of options, particularly with respect to employee awards.

10 Cash-settled transactions

Throughout the discussion in this section, 'cash' must be read as including 'other assets' in accordance with the definition of a cash-settled share-based payment transaction (see 3.1 above).

10.1 Scope of requirements

Section 26 notes that cash-settled share-based payment transactions include:

- Share appreciation rights (SARs), where employees are entitled to a future cash payment (rather than an equity instrument) based on the increase in an entity's share price from a specified level over a specified period of time.
- A right to a future cash payment through a grant of shares (including shares to be issued upon the exercise of share options) that are redeemable, either mandatorily (e.g., upon cessation of employment) or at the employee's option. [FRS 102.26.2].

Another type of cash-settled arrangement frequently encountered in practice is a grant of phantom options, where employees are entitled to a cash payment equivalent to the gain that would have been made by exercising options at a notional price over a notional number of shares and then selling the shares at the date of exercise.

As is clear from the inclusion of certain types of redeemable share as a specific example of a cash-settled share-based payment arrangement, FRS 102 looks beyond the simple issue of whether an award entitles an employee to receive instruments that are in form shares or options to the terms of those instruments. The fact that certain redeemable shares would be treated as a cash-settled, not an equity-settled, award is consistent with the fact that a share with these terms would be regarded as a financial liability rather than an equity instrument of the issuer (based on Section 22).

In some cases, the boundary between equity-settled and cash-settled schemes may appear somewhat blurred, so that further analysis may be required to determine whether a particular arrangement is equity-settled or cash-settled. Some examples of such arrangements are discussed at 10.2 below.

10.2 What constitutes a cash-settled award?

There are a number of possible circumstances in which, on, or shortly after, settlement of an equity-settled award either:

- The entity incurs a cash outflow equivalent to that which would arise on cash-settlement (e.g., because it purchases its own shares to deliver to counterparties).
- Or
- The counterparty receives cash equivalent to the amount that would arise on cash-settlement (e.g., because the shares are sold for cash on behalf of the counterparty).

Such situations raise the question of whether such schemes are in fact truly equity-settled or cash-settled.

Examples of relatively common mechanisms for delivering the cash-equivalent of an equity-settled award to employees are discussed below. It emerges from the analysis below that, the accounting for share-based payment transactions is driven by questions of form rather than substance. To put it rather crudely, what matters is often not so much whether the entity has made a cash payment for the fair value of the award, but rather the name of the payee.

The significance of this is that the analysis affects the profit or loss charge for the award, as demonstrated by Illustration 10-1 below.

Illustration 10-1: Equity-settled award satisfied by purchase of own shares

An entity awards an employee a free share with a fair value at grant date of £5 which has a fair value of £8 at vesting. At vesting the entity acquires one of its own shares from an existing shareholder for £8 for delivery to the employee. If the scheme were treated as cash-settled, there would be a charge to profit or loss of £8 (the fair value at vesting date, see 10.3 below). If it were treated as equity-settled (as required in this case by FRS 102), profit or loss would show a charge of only £5 (the fair value at grant date), with a further net charge of £3 in equity, comprising the £8 paid for the share accounted for as a treasury share or own share less the £5 credit to equity (being the credit entry corresponding to the £5 charge to profit or loss - see 5.2 above).

The analyses below all rely on a precise construction of the definition of a cash-settled share-based payment transaction, i.e., one “in which the entity acquires goods or services by incurring a liability to transfer cash or other assets to the supplier of those goods or services for amounts that are based on the price (or value) of equity instruments (including shares and share options) of the entity or another group entity” (emphasis added). [FRS 102 Appendix I]. Thus, if the entity is not actually required, legally or constructively, to pay cash to the counterparty, there is no cash-settled transaction under FRS 102, even though the arrangement may give rise to an external cash flow and, possibly, another form of recognised liability.

Some have raised the question of whether the entity must recognise some form of liability to repurchase own equity in situations where the entity has a stated policy of settling equity-settled transactions using previously purchased treasury or own shares.

How we see it

In our view, the normal provisions of accounting for financial instruments apply and there would be no question of recognising a liability to repurchase own equity on the basis merely of a declared intention. It is only when the entity enters into a forward contract or a call option with a third party that some accounting recognition of a future share purchase may be required.

An entity might sometimes purchase a number of its own shares shortly after issuing a similar number of shares in settlement of an equity-settled transaction. This raises the question of whether such a scheme would be considered as in substance cash-settled. In our view, further enquiry into the detailed circumstances of the purchase is required in order to determine the appropriate analysis.

Broadly speaking, so long as there is no obligation (explicit or implicit) for the entity to settle in cash with the counterparty, such purchase arrangements will not require a scheme to be treated as cash-settled under Section 26. However, in our view, there might be situations in which post-settlement share purchases are indicative of an obligation to the counterparty, such that treatment as a cash-settled scheme would be appropriate.

For example, if the entity were to create an expectation by employees that any shares awarded can always be liquidated immediately, because the entity will ensure that there is a market for the shares, it could well be appropriate to account for such a scheme as cash-settled. This will often be the case with awards granted to the employees of an unlisted company. The treatment of schemes in which the entity has a choice of settlement, but has created an expectation of cash-settlement, provides a relevant analogy (see 11.1.3 below).

A more extreme example of such a situation would be where the entity has arranged for the shares delivered to the counterparty to be sold on the counterparty's behalf but has at the same time entered into a contract to purchase those shares. In that situation, in our view, the substance is that:

- The entity has created an expectation by the counterparty of a right to receive cash.
- And
- The intermediate purchaser or broker is no more than an agent paying that cash to the counterparty on behalf of the entity.

Accordingly, it would be appropriate to account for such an arrangement as a cash-settled award.

Similar issues arise in the application of ‘drag along’ and ‘tag along’ rights in the context of an exit event and these are discussed at 16.4.6 below.

How we see it

In summary, where an entity might sometimes make a market purchase of its own shares shortly after issuing a similar number of shares in settlement of an equity-settled transaction, detailed analysis is required to determine the appropriate classification of the share-based payment award.

If an entity were to create an expectation by employees that shares can be liquidated quickly by the entity ensuring there is a market for the shares, our view is that it could be appropriate to account for the award as cash-settled.

Where the entity arranges a broker to purchase some or all shares from the counterparty on the counterparty's behalf and the entity then purchases those shares from the broker, it would be appropriate to account for the purchase arrangement of those shares as a cash-settled share-based payment transaction.

10.3 Required accounting for cash-settled share-based payment transactions

10.3.1 Basic accounting treatment

For a cash-settled share-based payment transaction, Section 26 requires an entity to measure the goods or services acquired and the corresponding liability incurred at the fair value of the liability. Until that liability is settled, the entity is required to remeasure the fair value at each reporting date and at the date of settlement. Any changes in fair value arising from this process of remeasurement must be recognised in profit or loss for the period. [FRS 102.26.14].

It is clear that the ultimate cost of a cash-settled transaction must be the actual cash paid to the counterparty, which will be the fair value at settlement date, but the liability is recognised and measured as follows:

- At each reporting date between grant and settlement the fair value of the award is determined in accordance with the requirements of Section 26.
- During the vesting period, the liability recognised at each reporting date is the Section 26 fair value of the award at that date multiplied by the expired portion of the vesting period.
- From the end of the vesting period until settlement, the liability recognised is the full fair value of the liability at the reporting date.

Where the cost of services received in a cash-settled transaction is recognised in the carrying amount of an asset (e.g., inventory) in the entity's statement of financial position, the carrying amount of the asset must not be adjusted for changes in the fair value of the liability.

The fair value of the liability must be measured by reference to the fair value of the cash-settled share-based payment transaction. For example, share appreciation rights are measured by reference to the fair value of the underlying equity instruments measured in accordance with paragraphs 10 and 11 of Section 26. [FRS 102.26.14A].

The term 'fair value' is defined in paragraph 1C of Section 26 and differs from the definition of fair value in FRS 102 Appendix I. Fair value is defined in Section 26 as, "the amount for which an asset could be exchanged, a liability settled or an equity instrument granted could be exchanged, between knowledgeable, willing parties in an arm's length transaction." [FRS 102.26.1C]. As discussed in 9.3 above, whilst Section 26 does not mandate the use of an option pricing model, in practice, it is likely that use of a pricing model will often be a practical basis for determining fair value. The use of a pricing model is consistent with the requirement in IFRS 2 that fair value be determined by applying an option pricing model, taking into account the terms and conditions on which the cash-settled transaction was granted, and the extent to which the employees have rendered service to date.

10.3.2 Application of the accounting treatment

The treatment required by Section 26 for cash-settled transactions is demonstrated by Illustration 10-2 which is based on IG Example 12 in the implementation guidance to IFRS 2.

Illustration 10-2: Cash-settled transaction with service condition

An entity grants 100 cash-settled share appreciation rights (SARs) to each of its 500 employees, on condition that the employees remain in its employment for the next three years. The SARs can be exercised on the third, fourth and fifth anniversary of the grant date.

During year 1, 35 employees leave. The entity estimates that a further 60 will leave during years 2 and 3 (i.e., the award will vest in 405 employees).

During year 2, 40 employees leave, and the entity estimates that a further 25 will leave during year 3 (i.e., the award will vest in 400 employees).

During year 3, 22 employees leave, so that the award vests in 403 employees. At the end of year 3, 150 employees exercise their SARs (leaving 253 employees still to exercise).

Another 140 employees exercise their SARs at the end of year 4, leaving 113 employees still to exercise, who do so at the end of year 5.

The entity estimates the fair value of the SARs at the end of each year in which a liability exists as shown below. The intrinsic values of the SARs at the date of exercise (which equal the cash paid out) at the end of years 3, 4 and 5 are also shown below.

Year	Fair value	Intrinsic value
	£	£
1	14.40	
2	15.50	
3	18.20	15.00
4	21.40	20.00
5		25.00

The entity will recognise the cost of this award as follows:

Year	Calculation of liability	Calculation of cash paid	Liability (£)	Cash paid (£)	Expense for period (£)*
1	405 employees × 100 SARs × £14.40 × 1/3		194,400	-	194,400
2	400 employees × 100 SARs × £15.50 × 2/3		413,333	-	218,933
3	253 employees × 100 SARs × £18.20	150 employees × 100 SARs × £15.00	460,460	225,000	272,127
4	113 employees × 100 SARs × £21.40	140 employees × 100 SARs × £20.00	241,820	280,000	61,360
5	-	113 employees × 100 SARs × £25.00	-	282,500	40,680

* Liability at end of period + cash paid in period - liability at start of period

The accounting treatment for cash-settled transactions is therefore (despite some similarities in the methodology) significantly different from that for equity-settled transactions. An important practical issue is that, for a cash-settled transaction, the entity must determine the fair value at each reporting date rather than at grant date (and at the date of any subsequent modification or settlement) as would be the case for equity-settled transactions.

As Illustration 10-2 shows, it is not necessary to determine the fair value of a cash-settled transaction at grant date in order to determine the share-based payment expense.

We discuss in more detail below the following aspects of the accounting treatment of cash-settled transactions:

- Determining the vesting period (see 10.3.2.A below)
- Periodic allocation of cost (see 10.3.2.B below)
- Treatment of non-market vesting conditions (see 10.3.2.C below)

- Treatment of market conditions and non-vesting conditions (see 10.3.2.D below)
And
- Treatment of modification, cancellation and settlement (see 10.3.2.E below)

10.3.2.A Determining the vesting period

The rules for determining vesting periods are the same as those applicable to equity-settled transactions, as discussed at 7.1 to 7.4 above. Where an award vests immediately, there is a presumption that, in the absence of evidence to the contrary, the award is in respect of services that have already been rendered and must therefore be expensed in full at grant date. [FRS 102.26.5].

Where cash-settled awards are made subject to vesting conditions (as in many cases they will be, particularly where payments to employees are concerned), there is a presumption that the awards are a payment for services to be received in the future, during the 'vesting period', with the transaction being recognised during that period, as demonstrated in Illustration 10-2 above.

10.3.2.B Periodic allocation of cost

The required treatment for cash-settled transactions is simply to measure the fair value of the liability at each reporting date. [FRS 102.26.14]. This might suggest that the full fair value, and not just a time-apportioned part of it, must be recognised at each reporting date, as would be the case for any liability that is a financial instrument measured at fair value.

However, paragraph 14 needs to be read with paragraph 6 which states that if the counterparty is required to complete a specified period of service, the entity "shall account for those services as they are rendered during the vesting period, with a corresponding increase in ... liabilities". This indicates that a spreading approach is to be adopted. [FRS 102.26.6].

For cash-settled awards vesting in instalments (sometimes referred to as 'graded' vesting), we believe that the requirements of IFRS 2 illustrated in IG11 of IFRS 2, whereby each instalment is treated as a separate award, can be followed similarly as to equity-settled awards (see 7.2.2 above). This results in multiple separate awards having been granted with different vesting periods. As for all cash-settled share-based payment transactions the fair value for each instalment will be determined at each reporting date and at the date of settlement. On a cumulative basis, the amount ultimately recognised for goods or services received as consideration for the cash-settled awards will be equal to the cash that is paid. [FRS 102.26.6, FRS 102.26.14C].

How we see it

We believe, for cash-settled share-based payment transactions vesting in instalments, the requirement of IFRS 2 illustrated in IG11 of IFRS 2 can be followed with the associated cost recognised over the different vesting periods. However, as Section 26 does not explicitly require the graded vesting accounting approach to be used, we believe that a simpler alternative may be acceptable.

10.3.2.C Non-market vesting conditions

FRS 102 makes clear that:

- Vesting conditions (other than market conditions) must not be taken into account in estimating the fair value of a cash-settled share-based payment. Instead, as for equity-settled share-based payment transactions, such conditions must be taken into account by adjusting the number of awards included in the measurement of the liability arising from the cash-settled share-based payment transaction. [FRS 102.26.14B].
- The amount recognised for the goods or services received during the vesting period must be based on the entity's best estimate of the number of awards expected to vest. This estimate must be revised, if necessary, if subsequent information indicates that the number of awards expected to vest differs from previous estimates. On the vesting date, the entity must revise the estimate to equal the number of awards that ultimately vested. [FRS 102.26.14B].
- On a cumulative basis, the amount ultimately recognised for goods or services received as consideration for the cash-settled share-based payment will be equal to the cash that is paid. [FRS 102.26.14C].

10.3.2.D Market conditions and non-vesting conditions

Section 26 clarifies that market conditions and non-vesting conditions must be taken into account in estimating the fair value of the cash-settled share-based payment at each reporting date and at the date of settlement. There will be no ultimate cost for an award subject to a market condition or non-vesting condition that is not satisfied as any liability would be reversed. [FRS 102.26.14(b)].

This differs from the accounting model for equity-settled transactions with market conditions or non-vesting conditions, which can result in a cost being recognised for awards subject to those conditions even when they are not satisfied (see 7.3 and 7.4 above).

10.3.2.E Modification, cancellation and settlement

FRS 102 provides no specific guidance on modification, cancellation and settlement of cash-settled awards. However, as cash-settled awards are accounted for using a full fair value model no such guidance is needed. It is clear that:

- Where an award is modified, the liability recognised at and after the point of modification will be based on its new fair value, with the effect of any movement in the liability recognised immediately.
- Where an award is cancelled the liability will be derecognised, with a credit immediately recognised in profit or loss.
- Where an award is settled, the liability will be derecognised, and any gain or loss on settlement immediately recognised in profit or loss.

How we see it

As noted above, FRS 102 provides no specific guidance on modification, cancellation and settlement of cash-settled awards. In our view, as cash-settled awards are accounted for using a full fair value model no such guidance is needed, the accounting set out above would apply.

10.4 Modification of award from equity-settled to cash-settled or from cash-settled to equity-settled

As noted at 8.3.5 above, a detailed discussion of this topic is beyond the scope of this publication but is addressed more fully in EY's publication International GAAP®.

11 Transactions with equity and cash alternatives

Some share-based payment transactions (particularly those with employees) provide either the entity or the counterparty with the choice of settling the transaction either in shares (or other equity instruments) or in cash (or other assets). [FRS 102.26.15].

More detailed guidance is provided as to how that general principle must be applied to transactions:

- Where the entity has choice of settlement (see 11.1 below).
- Where the counterparty has choice of settlement (see 11.2 below).

A common type of arrangement seen in practice is the 'matching' award or deferred bonus arrangement where an employee is offered a share award or a cash alternative to 'match' a share award or a cash bonus earned during an initial period. This type of arrangement is discussed further at 16.1 below.

Some share-based payment transactions rather than providing either the entity or the counterparty with a choice between settlement in equity or in cash, offer no choice but instead require an arrangement that will generally be equity-settled to be settled in cash in certain specific and limited circumstances (awards with contingent cash settlement). There will also be situations where there is contingent settlement in equity of an award that is otherwise cash-settled. These types of arrangement are considered in more detail at 11.3 below.

Some awards offer an equity alternative and a cash alternative where the cash alternative is not based on the price or value of the equity instruments. These arrangements are considered at 11.4 below.

11.1 Transactions where the entity has choice of settlement in equity or in cash

Section 26 requires that an entity with a choice of settling a transaction in cash (or other assets) or by transferring equity instruments, must account for the transaction as a wholly equity-settled share-based payment transaction (in accordance with paragraphs 7 to 13A of Section 26) unless:

- (a) The choice of settlement in equity instruments has no commercial substance (e.g., because the entity is legally prohibited from issuing shares).

Or

- (b) The entity has a past practice or a stated policy of settling in cash or generally settles in cash whenever the counterparty asks for cash settlement.

If (a) or (b) applies, the transaction must be accounted for as wholly cash-settled in accordance with paragraph 14 of Section 26 (see 10 above). [FRS 102.26.15A].

An important practical effect of the above criteria is that some schemes that may appear at first sight to be equity-settled may in fact have to be treated as cash-settled. For example, if an entity has consistently adopted a policy of granting *ex gratia* cash compensation to all those deemed to be 'good' leavers (or all 'good' leavers of certain seniority) in respect of partially vested share options, such a scheme may well be treated as cash-settled for the purposes of FRS 102 to the extent to which there are expected to be such 'good' leavers during the vesting period. 'Good leaver' arrangements are also discussed at 6.3.8 above.

11.1.1 Accounting at date of settlement for awards where there is a choice of equity- or cash-settlement

FRS 102 contains guidance on how to account as at the date of settlement for an award that has been accounted for as equity-settled, but which is settled in cash (see 11.1.1.B below). However, it contains no guidance on how to account as at the date of settlement, for an award that has been accounted for as cash-settled, but which is settled in equity. We suggest the following approach (see 11.1.1.A below) based on the requirements of IFRS 2.

11.1.1.A Settlement of an award treated as cash-settled during vesting period

IFRS 2 gives no specific guidance as to the accounting treatment on settlement where an entity has accounted for an award as cash-settled, but it is settled in equity. However, it is clear from other provisions of IFRS 2, including the general rules on settlement and the provisions relating to settlement of an award where the counterparty has the choice of settlement method, that:

- The liability must be remeasured to fair value through the income statement at settlement date.
- If cash settlement occurs, the cash paid is applied to reduce the liability.
- If equity settlement occurs, the liability is transferred into equity.

11.1.1.B Settlement of an award treated as equity-settled during vesting period

When a transaction that has been accounted for as equity-settled, Section 26 specifies the following approach:

(a) On settlement:

- (i) If the transaction is cash-settled, the cash is accounted for as a deduction from equity, subject to (b) below.
- (ii) If the transaction is equity-settled, there is a transfer from one component of equity to another (if necessary).

And

(b) If the cash payment exceeds the fair value of the equity instruments that would otherwise have been issued as at the date of settlement, the entity recognises an additional expense for the excess value given. [FRS 102.26.13A].

This is demonstrated in Illustration 11-1 below.

Illustration 11-1: Settlement of transaction treated as equity-settled where fair value of cash settlement exceeds fair value of equity settlement

An entity has accounted for a share-based payment transaction where there is a choice of settlement as an equity-settled transaction and has recognised a cumulative expense of £1,000 based on the fair value at grant date.

At settlement date the fair value of the equity-settlement option is £1,700 and that of the cash-settlement option £2,000. If the entity settles in equity, no further accounting entry is required. However, there may be a transfer within equity of the £1,000 credited to equity during the vesting period.

If the entity settles in cash, the entity must recognise an additional expense of £300 (applying paragraph 13A of Section 26, being the difference between the fair value of the equity-settlement option (£1,700) and that of the cash-settlement option (£2,000)). The accounting entry is:

	£	£
Profit or loss (employee costs)	300	
Equity	1,700	
Cash		2,000

It can be seen in the Illustration above, if the transaction was settled in equity, no additional expense would be recognised on settlement and the cumulative expense would have only been £1,000 based on the fair value at grant date. The accounting treatment is different under IFRS 2 when the entity has a choice of settlement, and the entity chooses to settle in equity instruments. Under IFRS 2, if on the settlement date, the equity instruments issued had a higher fair value than the cash alternative, the difference between the fair value of the equity instruments issued and the amount of the cash that would have been paid, is recognised as an additional expense (see 2.4.2 above). [IFRS2.43(b)].

11.1.2 Change in classification of award after grant date

Neither FRS 102 nor IFRS 2 specifies whether a transaction, where the entity has a choice of settlement in equity or cash, must be assessed as equity-settled or cash-settled only at the inception of the transaction or whether this is assessed at each reporting date until the transaction is settled.

FRS 102 states that a transaction must be treated as equity-settled unless either criterion (a) or criterion (b) in paragraph 15A of Section 26 applies (see 11.1 above). As it is not specified that this assessment takes place only at inception of the award, in our view FRS 102 requires an ongoing assessment of the relevance of these criteria.

FRS 102 also does not specify how to account for a change in classification resulting from a change in the entity's policy or intention. In our view, the most appropriate treatment is to account for such a change as if it were a modification of the manner of settlement of the award (see 10.4 above). Where the entity can choose the manner of settlement, the substance of the situation is the same as a decision to modify the manner of settlement of an award which does not already give the entity a choice. These situations are distinct from those where the manner of settlement depends on the outcome of a contingent event outside the entity's control (see 11.3 below).

How we see it

As noted above, where the entity is able to choose the manner of settlement, we believe an entity continuously reviews at each reporting date whether the entity “has a present obligation to settle in cash”. Where there is a change in classification resulting from a change in the entity’s policy or intention, the most appropriate treatment is to account for such a change as if it were a modification of the manner of settlement of the award (see 10.4 above).

11.1.3 Economic compulsion for cash settlement (including unlisted entity awards with a presumption of cash settlement)

Some awards may nominally give the reporting entity the choice of settling in cash or equity, while in practice giving rise to an economic compulsion to settle only in cash. In addition to the examples mentioned at 11.1 above, this will often be the case where an entity that is a subsidiary or owned by a small number of individuals, such as members of the same family, grants options to employees. In such cases there will normally be a very strong presumption that the entity will settle in cash in order to avoid diluting the existing owners’ interests. Similarly, where the entity is not listed, there is little real benefit for an employee in receiving a share that cannot be realised except when another shareholder wishes to buy it or there is a change in ownership of the business as a whole.

How we see it

In our view, such schemes are generally most appropriately accounted for as cash-settled schemes from inception. In any event, once the scheme has been operating for a while, it is likely that there will be a past practice of cash settlement such that the scheme is required to be treated cash-settled under the general provisions of FRS 102 summarised above.

A similar conclusion is often reached even where the terms of the agreement do not appear to offer the entity a choice of settling the award in cash, but it has established a constructive obligation or a past practice of so doing (see 10.2 above).

11.2 Transactions where the counterparty has choice of settlement in equity or in cash

Where the counterparty has a choice of settlement in either equity instruments or cash, it will generally be the case that the arrangement will be accounted for as a cash-settled share-based payment transaction (see 10 above).

Section 26 requires an entity to account for a transaction where the counterparty has a choice of settlement in cash (or other assets) or by the transfer of equity instruments, as a wholly cash-settled share-based payment transaction (in accordance with paragraph 14), except for when the conditions set out in paragraph 15B of Section 26 are met. [FRS 102.26.15B]. If the choice of settlement in cash (or other assets) has no commercial substance because the cash settlement amount (or value of the other assets) bears no relationship to, and is likely to be lower in value than, the fair value of the equity instruments, the entity must account for the transaction as wholly equity-settled in accordance with paragraphs 7 to 13 of Section 26. [FRS 102.26.15B(a)]. In addition, if the choice of settlement relates only to a net settlement feature and there is an obligation on the entity under tax laws or regulations to withhold an amount for an employee’s tax obligation associated with that share-based payment, the entity must account for the transaction as wholly equity-settled in accordance with paragraphs 7 to 13 of Section 26 (see 15.3.1 below). [FRS 102.26.15B(b)].

In cases where the fair values of the cash and equity alternatives are similar, the approach required by FRS 102 is broadly consistent with the outcome of the approach required by IFRS 2. A split accounting approach, between liabilities and equity, is required by IFRS 2 which mainly has an impact where the fair value of the equity alternative exceeds that of the cash alternative.

FRS 102 only provides guidance when there is change in settlement of an equity-settled share-based payment. The discussions at 11.1.1 and 11.1.2 above may also provide some guidance for transactions where the counterparty has choice of settlement.

11.2.1 Transactions with settlement alternatives of different value

In many share-based payment transactions with a choice of settlement, the value of the share and cash alternatives is equal. The counterparty will have the choice between, say, 1,000 shares or the cash value of 1,000 shares. Under FRS 102, this transaction would be accounted for as a cash-settled transaction.

However, it is not uncommon, particularly in transactions with employees, for the equity-settlement alternative to have more value. For example, an employee might be able to choose at vesting between the cash value of 1,000 shares immediately or 2,000 shares (often subject to further conditions such as a minimum holding period, or a further service period). In such a situation, it will need to be decided whether the arrangement falls within paragraph 15B of Section 26 (see 11.2 above) leading to the entire arrangement being accounted for as an equity-settled transaction.

11.2.2 'Backstop' cash settlement rights

Some schemes may provide cash settlement rights to the holder so as to cover more or less remote contingencies.

If the terms of the award provide the employee with a general right of cash-settlement, FRS 102 requires the award to be treated as cash-settled. This is the case even if the right of cash settlement is extremely unlikely to be exercised (e.g., because it would give rise to adverse tax consequences for the employee as compared with equity settlement). If, however, the right to cash-settlement is exercisable only in specific circumstances, a more detailed analysis may be required (see 11.3 below).

11.3 Awards requiring cash or equity settlement in specific circumstances (awards with contingent cash or contingent equity settlement)

This section is written with a focus on awards with contingent cash settlement. However, similar considerations will apply in a situation where it is the settlement in equity that depends on the outcome of circumstances outside the control of the entity, or both the entity and the counterparty.

Rather than giving either the entity or the counterparty a general right to choose between settlement in equity or in cash, some awards require cash settlement in certain specific and limited circumstances but otherwise will be equity-settled. These arrangements are sometimes referred to as contingent settlement provisions and are driven by the occurrence or non-occurrence of specific outcomes rather than by choice. Questions arise as to whether such an award must be accounted for as equity-settled or cash-settled and whether this must be re-assessed on an ongoing basis during the vesting period.

Neither FRS 102 nor IFRS 2 has specific guidance on the accounting treatment of such arrangements. In advising on the July 2015 amendments to FRS 102, the Accounting Council noted that respondents to the draft amendments to Section 26 pointed out that this is a subject that has recently been discussed in the context of IFRS 2 although no changes have yet been made, or indeed proposed, to the published guidance. The Accounting Council therefore advised that the need for further amendment for situations where settlement in cash depends on the occurrence of an event outside the control of either party to a transaction should be re-considered as part of the next review of FRS 102.²²⁹ No further amendments have been proposed, most likely as a result of no related amendments being proposed to IFRS 2 by the IASB.

In the absence of specific guidance, we consider some possible accounting analyses at 11.3.1 to 11.3.3 below, as follows:

- Two different approaches to the assessment of awards with contingent cash settlement (see 11.3.1 to 11.3.2 below).
Awards that require cash settlement on a change of control (see 11.3.3 below).
- The accounting treatment for changes in the manner of settlement where the award is contingent on future events (see 11.3.4).

²²⁹ FRS 102 - The Financial Reporting Standard applicable in the UK and Republic of Ireland, September 2015, paragraph 39 of The Accounting Council's Advice to the FRC to issue Amendments to FRS 102 - Small entities and other minor amendments.

How we see it

In our view, in the absence of specific guidance in FRS 102, the two different approaches set out in sections 11.3.1 and 11.3.2 below could be applied to awards which offer no choice in settlement but instead require cash settlement in certain specific and limited circumstances (i.e., awards with contingent cash settlement). Equally, similar considerations will apply to awards which offer no choice in settlement but instead require equity settlement in certain specific and limited circumstances (i.e., awards with contingent equity settlement).

11.3.1 Approach 1 – Treat as cash-settled if contingency is outside entity's control

One approach might be to observe that the underlying principle that determines whether an award is accounted for as equity-settled or cash-settled appears to be whether the reporting entity can unilaterally avoid cash-settlement (see 11.1 and 11.2 above). Under this approach, any award where the counterparty has a right to cash-settlement is always treated as a liability, irrespective of the probability of cash-settlement, unless there is no commercial substance. By contrast, an award where the choice of settlement rests with the entity is accounted for as a liability only where the entity's own actions have effectively put it in a position where it has no real choice but to settle in cash.

Applying this approach, it is first of all necessary to consider whether the event that requires cash-settlement is one over which the entity has control. If the event, however unlikely, is outside the entity's control, then under this approach the award is required to be treated as cash-settled. However, if the event is within the entity's control, the award must be treated as cash-settled only if the entity has a liability by reference to the criteria summarised in 11.1 above.

How we see it

Whilst, in our view, this is an acceptable accounting approach, it does not seem entirely satisfactory. For example, it is common for an equity-settled share-based payment award to contain a provision to the effect that, if the employee dies in service, the entity will pay to the employee's estate the fair value of the award in cash. The approach above would lead to the conclusion that the award must be classified as cash-settled, on the basis that it is beyond the entity's control whether an employee dies in service. This seems a somewhat far-fetched conclusion and is moreover inconsistent with the accounting treatment that the entity would apply to any other death-in-service benefit.

11.3.2 Approach 2 – Treat as cash-settled if contingency is outside entity's control and probable

Under US GAAP²³⁰ a cash settlement feature that can be exercised only upon the occurrence of a contingent event that is outside the employee's control (such as an initial public offering) does not give rise to a liability until it becomes probable that that event will occur.

How we see it

In our view, the above approach based on the probability of a contingent event that is outside the control of both the counterparty and the entity is also acceptable in the absence of specific guidance in FRS 102 (and IFRS 2) and has frequently been used in practice by entities applying IFRS 2.

The impact of Approach 1 and Approach 2 can be demonstrated by reference to an award that requires cash-settlement in the event of a change of control of the entity (see 11.3.3 below).

11.3.3 Application of Approach 1 and Approach 2 to awards requiring cash settlement on a change of control

It is not uncommon for the terms of an award to provide for compulsory cash-settlement by the entity if there is a change of control of the reporting entity. Such a provision ensures that there is no need for any separate negotiations to buy out all employee options, so as to avoid non-controlling (minority) interests arising in the acquired entity when equity-settled awards are settled after the change of control.

²³⁰ ASC 718 - Compensation - Stock Compensation (formerly FAS123(R), Share-Based Payment), FASB, para. 718-10-25-11.

The determination of whether or not a change of control is within the control of the entity is beyond the scope of this publication.

If the facts and circumstances of a particular case indicate that a change of control is within the entity's control, the conclusion under either Approach 1 or Approach 2 above would be that the award must be treated as cash-settled only if the entity has a liability by reference to the criteria summarised at 11.1 above.

If, however, the change of control is not considered to be within the control of the reporting entity, the conclusion will vary depending on whether Approach 1 or Approach 2 is followed. Under Approach 1, an award requiring settlement in cash on a change of control outside the control of the entity would be treated as cash-settled, however unlikely the change of control may be. Under Approach 2 however, an award requiring settlement in cash on a change of control outside the control of the entity would be treated as cash-settled only if a change of control were probable.

A difficulty with Approach 2 is that it introduces rather bizarre inconsistencies in the accounting treatment for awards when the relative probability of their outcome is considered. As noted at 11.2.2 above, an award that gives the counterparty an absolute right to cash-settlement is accounted for as a liability, however unlikely it is that the counterparty will exercise that right (unless the cash settlement option is considered to have no commercial substance). Thus, under this approach, the entity could find itself in the situation where it treats:

- As a liability: an award with an unrestricted right to cash-settlement for the counterparty, where the probability of the counterparty exercising that right is less than 1%.
But
- As equity: an award that requires cash settlement in the event of a change of control which is assessed as having a 49% probability of occurring.

How we see it

In our view, an entity could adopt either of these accounting treatments (Approach 1 or Approach 2) as set out in sections 11.3.1 and 11.3.2 above but must do so consistently and state its policy for accounting for such transactions, if material.

It is noted in the selection of an accounting policy that the IASB had discussions, but did not conclude, on whether an approach based on the 'probable' outcome, as set out here, be applied under IFRS 2 or whether an approach based on the accounting treatment for a compound financial instrument be used. Any further developments in this area could affect the availability of the alternative treatments in future. The detailed discussions are beyond the scope of this publication but are addressed in EY's publication International GAAP®.

There is further discussion at 16.4 below of awards that vest or are exercisable on a flotation or change of control, including the question of whether a cash-settlement obligation rests with the entity itself or with other parties involved in the change of control (see 16.4.6 below).

11.3.4 Accounting for change in manner of settlement where award is contingent on future events outside the control of the entity and the counterparty

When, under Approach 2 above, the manner of settlement of an award changes solely as a consequence of a re-assessment of the probability of a contingent event, there is neither settlement of the award nor modification of its original terms. The terms of the award are such that there have been two potential outcomes, one equity-settled and one cash-settled, running in parallel since grant date. It is as if, in effect, the entity has simultaneously issued two awards, only one of which will vest.

At each reporting date the entity is required to assess which outcome is more likely and account for the award on an equity- or cash-settled basis accordingly.

How we see it

In our view, any adjustments arising from a switch between the cumulative amount for the cash-settled award and the cumulative amount for the equity-settled award is required to be taken to profit or loss in the current period. This is similar to the approach for an award with multiple independent vesting conditions (see 7.3.6 above).

When applying an approach where the two outcomes have both been part of the arrangement from grant date, an entity measures the fair value of the equity-settled award only at the original grant date and there is no remeasurement of the equity-settled award on reassessment of the settlement method. As the cash-settled award would be remeasured on an ongoing basis, a switch in the manner of settlement during the period until the shares vest or the award is settled in cash could give rise to significant volatility in the cumulative expense. At the date of vesting or settlement, however, the cumulative expense will equate to either the grant date fair value of the equity-settled approach or the settlement value of the cash-settled approach depending on whether or not the contingent event has happened.

The situation discussed in this section (i.e., an arrangement with two potential outcomes from grant date because the manner of settlement is not within the control of either the entity or the counterparty) is not the same as an award where the manner of settlement is entirely within the entity's control. Where the entity has such control and therefore a choice of settlement, a change in the manner of settlement is treated as a modification with a potential catch-up adjustment through equity (see 8.3.5 and 10.4 above).

11.4 Cash settlement alternative where the cash sum is not based on share price or value

Some awards may provide a cash-settlement alternative that is not based on the share price. For example, an employee might be offered a choice between 500 shares or £1,000,000 on the vesting of an award.

How we see it

Whilst an award of £1,000,000, if considered in isolation, would obviously not be a share-based payment transaction, in our view it falls within the scope of Section 26 if it is offered as an alternative to a transaction that is within the scope of that Section. FRS 102 has no specific guidance in this area, but we draw on the Basis for Conclusions to IFRS 2 which states that the cash alternative may be fixed or variable and, if variable, may be determinable in a manner that is related, or unrelated, to the price of the entity's shares.

Under the requirements of paragraphs 15B of Section 26, the award will be treated as cash-settled unless the option arrangements do not have commercial substance (see 11.2 above).

12 Replacement share-based payment awards issued in a business combination

12.1 Background

It is relatively common for an entity (A) to acquire another (B) which, at the time of the business combination, has outstanding employee share options or other share-based awards. If no action were taken by A, employees of B would be entitled, once any vesting conditions had been satisfied, to shares in B. This is not a very satisfactory outcome for either party: A now has non-controlling (minority) shareholders in subsidiary B, which was previously wholly-owned, and the employees of B are the owners of unmarketable shares in an effectively wholly-owned subsidiary.

The obvious solution, adopted in the majority of cases, is for some mechanism to be put in place such that the employees of B end up holding shares in the new parent A. This can be achieved, for example, by:

- A granting options over its own shares to the employees of B in exchange for the surrender of the employees' options over the shares of B.
- Or
- Changing the terms of the options so that they are over a special class of shares in B which are mandatorily convertible into shares of A.

It is important that entities understand the nature and reasons for the replacement share-based payment award to determine if and how much of the award relates to the acquisition of control (which forms part of the cost of combination, accounted for under Section 19) and how much relates to the provision of future services (accounted for under Section 26). It is necessary for entities to understand who initiated the arrangement and when the parties entered into the arrangement to help in assessing the nature of the arrangement (see Chapter 22 at 3.6.2.C). [FRS 102.19.11B].

FRS 102 contains no guidance about how such a substitution transaction must be accounted for in the consolidated financial statements of A and this area is beyond the scope of this publication. Under IFRS, the relevant guidance is included in IFRS 3 and the requirements, which are based on accounting for the modification of share-based payments, are addressed in EY's publication International GAAP®.

The treatment in the single entity financial statements of B is discussed at 12.2 below.

12.2 Financial statements of the acquired entity

The replacement of an award based on the acquiree's equity with one based on the acquirer's equity appears, from the perspective of the acquired entity, to be a cancellation and replacement.

How we see it

In our view, this must be accounted for in accordance with the general principles for such transactions (see 8.4 above) but taking into account the specific provisions of Section 26 in respect of group share schemes (see 13 below).

In addition to considerations about whether this is accounted for as a separate cancellation and new grant or as a modification of the original terms, the acquiree needs to take into account its new status as a subsidiary of the acquirer. If the acquiree's employees are now receiving awards granted by the new parent, the new subsidiary might choose to apply the provisions for groups in paragraph 16 of Section 26 (see 13.2.3.A below) rather than the general approach for an entity receiving goods or services but not obliged to settle the award.

13 Group share schemes

In this section we consider various aspects of share-based payment arrangements operated within a group of companies and involving several legal entities. The main areas covered are as follows:

- Typical features of a group share scheme (see 13.1 below)
- A summary of the accounting treatment of group share schemes (see 13.2 below)
- Employee benefit trusts ('EBTs') and similar arrangements (see 13.3 below)
- An example of a group share scheme (based on an equity-settled award satisfied by a purchase of shares) illustrating the accounting by the different entities involved (see 13.4 below)
- An example of a group share scheme (based on an equity-settled award satisfied by a fresh issue of shares) illustrating the accounting by the different entities involved (see 13.5 below)
- An example of a group cash-settled transaction where the award is settled by an entity other than the one receiving goods or services (see 13.6 below)

And

- The accounting treatment when an employee transfers between group entities (see 13.7 below)

Associates and joint arrangements do not meet the definition of group entities but there will sometimes be share-based payment arrangements that involve the investor or venturer and the employees of its associate or joint venture. Such arrangements are beyond the scope of this publication but are addressed in EY's publication International GAAP®.

13.1 Typical features of a group share scheme

In this section we use the term 'share scheme' to encompass any transaction falling within the scope of Section 26, whether accounted for as equity-settled or cash-settled.

It is common practice for a group to operate a single share scheme covering the employees of the parent and/or several subsidiaries, but the precise terms and structures of group share schemes are so varied that it is rare to find two completely identical arrangements. From an accounting perspective, however, group share schemes can generally be reduced to a basic framework, as described below, which will serve as the basis of the following discussion.

A group scheme typically involves transactions by several legal entities:

- The parent, over whose shares awards are granted and which is often responsible for settling the award (either directly or through a trust).
- The subsidiary employing an employee who has been granted an award ('the employing subsidiary').
- In some cases, an EBT that administers the scheme. The accounting treatment of transactions with EBTs is discussed at 13.3 below.

In practice, it might not always be a simple assessment to determine which entity is receiving an employee's services and which entity is responsible for settling the award. For example, the scheme may be directed by a group employee services entity, or an individual might be a director of the parent as well as providing services to other operating entities within the group.

Where an employee services company is involved, it will be necessary to evaluate the precise group arrangements in order to decide whether the entity is, in substance, the employer. It will often be the case that the services company is simply administering the arrangements on behalf of the parent entity.

How we see it

Where an individual provides services to more than one group entity, an assessment will need to be made as to which entity or entities are receiving the individual's services in return for the award (e.g., the employee service company or the entity or entities the service company makes a charge for an individual's services). This will depend on the precise facts and circumstances of a particular situation.

A share-based award is often granted to an employee by the parent, or a group employee services entity, which will in turn have an option exercisable against the EBT for the shares that it may be required to deliver to the employee. Less commonly, the trustees of the EBT make awards to the employees and enter into reciprocal arrangements with the parent.

If the parent takes the view that it will satisfy any awards using existing shares it will often seek to fix the cash cost of the award by arranging for the EBT to purchase, on the day that the award is made, sufficient shares from existing shareholders to satisfy all or part of the award. This will be funded by external borrowings, a loan from the parent, a contribution from the employing subsidiary, or some combination. The cash received from the employee on exercise of the option can be used by the EBT to repay any borrowings.

If the parent takes the view that it will satisfy the options with a fresh issue of shares, these will be issued to the EBT, either:

- (a) At the date on which the employee exercises his option (in which case the EBT will subscribe for the new shares using the cash received from the employee together with any non-refundable contribution made by the employing subsidiary, see below). Such arrangements are generally referred to as 'simultaneous funding'.
 - (b) At some earlier date (in which case the EBT will subscribe for the new shares using external borrowings, a loan from the parent or a contribution from the employing subsidiary, or some combination. The cash received from the employee on exercise of the option may then be used by the EBT to repay any borrowings). Such arrangements are generally referred to as 'pre-funding'.
- Or
- (c) Some shares will be issued before the exercise date as in (b) above, and the balance on the exercise date as in (a) above.

As noted in (a) above, the employing subsidiary often makes a non-refundable contribution to the EBT in connection with the scheme, so as to ensure that employing subsidiaries bear an appropriate share of the overall cost of a group-wide share scheme.

13.2 Accounting treatment of group share schemes – summary

13.2.1 Background

From a financial reporting perspective, it is generally necessary to consider the accounting treatment in:

- The group's consolidated financial statements
 - The parent's separate financial statements
- And
- The employing subsidiary's financial statements

We assume throughout this section on group share schemes that the subsidiary is directly owned by the parent company. In practice, there will often be one or more intermediate holding companies between the ultimate parent and the subsidiary. The intermediate parent company generally will not be the entity granting the award, receiving the goods or services or responsible for settling the award. Therefore, under Section 26, we believe that there is no requirement for the intermediate company to account for the award in its separate financial statements.

The accounting entries to be made in the various financial statements will broadly vary according to:

- Whether the award is satisfied using shares already held or a fresh issue of shares
 - Whether any charge is made to the employing subsidiary for the cost of awards to its employees
 - Whether an EBT is involved. The accounting treatment of transactions undertaken with and by EBTs is discussed in more detail at 13.3 below
- And
- The tax consequences of the award. For the purposes of the discussion and illustrative examples below, tax effects are ignored. A more general discussion of the tax effects of share-based payment transactions is found at 15 below

The sections below largely discuss the application of the basic requirements of Section 26 to share-based payment transactions within a group of entities. However, in addition to the application of those requirements, Section 26 allows an alternative treatment based on the allocation of a group share-based payment expense to group entities on a reasonable basis (see 13.2.3.A below).

How we see it

As noted above, we believe there is no requirement under FRS 102 for the intermediate company to account for the award in its separate or individual financial statements as it generally will not be the entity granting the award, receiving the goods or services or responsible for settling the award.

13.2.2 Scope of Section 26 for group share schemes

By virtue of the definition of a 'share-based payment transaction' (see 3.1 and 3.2.1 above), a group share-based payment transaction is in the scope of Section 26 for:

- The consolidated financial statements of the group (the accounting for which follows the general principles set out in 4 to 11 above)
 - The separate or individual financial statements of the entity in the group that receives goods or services (see 13.2.3 below)
- And
- The separate or individual financial statements of the entity in the group (if different from that receiving the goods or services) that settles the transaction with the counterparty. This entity will typically, but not necessarily, be the parent (see 13.2.4 below)

As discussed at 3 above, the scope paragraphs of Section 26, together with the definitions in Appendix I to FRS 102, indicate whether transactions are to be accounted for as equity-settled or as cash-settled in most group situations including:

- Transactions settled in the equity of the entity, or in the equity of its parent (see 13.2.5 below).
- Cash-settled transactions settled by a group entity other than the entity receiving the goods or services (see 13.2.6 below).

At 3.2.1.A above, we consider seven scenarios commonly found in practice and outline the approach required by Section 26 in the consolidated and separate or individual financial statements of group entities depending on whether the award is settled in cash or shares and which entity grants the award, has the obligation to settle the award and receives the goods or services. These scenarios do not reflect the alternative treatment for group plans in Section 26 (see 13.2.3.A below).

It is common practice in a group share scheme to require each participating entity in the group to pay a charge, either to the parent or to an EBT, in respect of the cost of awards made under the scheme to employees of that entity. This is generally done either as part of the group's cash-management strategy, or in order to obtain tax relief under applicable local legislation. The amount charged could in principle be at the discretion of the group but is often based on either the fair value of the award at grant date or the fair value at vesting, in the case of an award of free shares, or exercise, in the case of an award of options.

Neither FRS 102 nor IFRS 2 directly addresses the accounting treatment of such intragroup management charges and other recharge arrangements, which is discussed further at 13.2.7 below. [IFRS 2.B.46].

Worked examples illustrating how these various principles translate into accounting entries are given at 13.4 to 13.6 below.

13.2.3 Entity receiving goods or services

The entity in a group receiving goods or services in a share-based payment transaction determines whether the transaction must be accounted for as equity-settled or cash settled in its separate or individual financial statements. It does this by assessing the nature of the awards granted and its own rights and obligations.

The entity accounts for the transaction as equity-settled when either the awards granted are the entity's own equity instruments, or the entity has no obligation to settle the share-based payment transaction. Otherwise, the entity accounts for the transaction as cash-settled. Where the transaction is accounted for as equity-settled it is remeasured after grant date only to the extent permitted or required by Section 26 for equity-settled transactions generally, as discussed at 4 to 7 above.

A possible consequence of these requirements is that the amount recognised by the entity may differ from the amount recognised by the consolidated group or by another group entity settling the share-based payment transaction. This is discussed further at 13.6 below.

The cost recognised by the entity receiving goods or services is calculated according to the principles set out above unless the group applies the alternative treatment for group plans in Section 26 (see 13.2.3.A below). The cost under Section 26 is not adjusted for any intragroup recharging arrangements, the accounting for which is discussed at 13.2.7 below.

13.2.3.A Alternative treatment for group plans

As an alternative to the accounting treatment in paragraphs 7 to 15C of Section 26 (see 5 to 11 and 13 of this chapter), in a share-based payment arrangement granted by an entity to the employees of one or more group entities, those group entities are permitted to measure the share-based payment expense on the basis of a reasonable allocation of the group expense calculated in accordance with FRS 102, IFRS 2 or on an equivalent basis. [FRS 102.26.16].

It is worthwhile to note that paragraph 16 of Section 26 explicitly allows an alternative to the 'measurement' of a share-based payment, but not an alternative to the 'recognition' requirements. This is an important distinction in determining whether another GAAP is 'equivalent' as referred to in paragraph 16 of Section 26.

This view is supported by paragraph AG28 of FRS 100, which states that "In deciding whether the share-based payment expense for the group has been calculated on a basis equivalent to FRS 102 or IFRS 2, it is intended that preparers will apply similar considerations to those set out in paragraph AG6. That is, the concept of 'equivalence' referred to in this paragraph of FRS 102 is intended to be aligned to that in, for UK entities, section 401 of the Act and, for Irish entities, section 300 of the Companies Act 2014. Therefore, it is necessary to consider whether the basis on which the group share-based payment expense has been calculated is in accordance with the basic requirements of the measurement basis of FRS 102 or IFRS 2 (such as the requirement to measure the goods or services received on a fair value basis), without requiring strict conformity with each and every aspect of that basis. This assessment should be based on the particular facts, including the similarities to and differences from the requirements of the relevant standard". [FRS 102.26.16].

13.2.4 Entity settling the transaction

As noted at 3.2.1 above, Section 26 sets out the accounting treatment when the entity settling the transaction does not receive the goods or services. An entity settling a share-based payment transaction when another entity in the group receives the goods or services must recognise the transaction as an equity-settled share-based payment transaction only if it is settled in its own equity instruments, otherwise, the transaction is recognised as cash-settled share-based payment. [FRS 102.26.2A].

The above requirements relate only to the credit entry, the classification of the transaction as equity- or cash-settled, and its measurement. They do not specify the debit entry, which is therefore subject to the general requirement of Section 26 (and IFRS 2) that a share-based payment transaction must normally be treated as an expense, unless there is the basis for another treatment (see 4 above).

In our view, the settling entity is not always required to treat the transaction as an expense. Instead:

- Where the settling entity is a parent (direct or indirect) of the entity receiving the goods or services and is accounting for the transaction as equity-settled, it will generally account for the settlement of the award as an addition to the cost of its investment in the employing subsidiary (or of that holding company of the employing subsidiary which is the settling entity's directly-held subsidiary). It may then be necessary to review the carrying value of that investment to ensure that it is not impaired.
- Where the settling entity is a parent (direct or indirect) of the entity receiving the goods or services and is accounting for the transaction as cash-settled (whereas the subsidiary will be accounting for the transaction as equity-settled), in our view it has an accounting policy choice for the treatment of the remeasurement of the cash-settled liability. Either:
 - It accounts for the entire award as part of the contribution to the subsidiary and therefore as an addition to the cost of its investment in the employing subsidiary (or of that holding company of the employing subsidiary which is the settling entity's directly-held subsidiary).
 - Or
 - After the initial capitalisation of the grant date fair value of the liability, it remeasures the liability through profit or loss.

Whichever policy is chosen, it may then be necessary to review the carrying value of the investment to ensure that it is not impaired.

- In other cases (i.e., where the settling entity is a subsidiary (direct or indirect) or fellow subsidiary of the entity receiving the goods or services), it must treat the settlement as a distribution and charge it directly to equity. Whether or not such a settlement is a legal distribution is a matter of law.

How we see it

As noted above, the debit entry depends on the classification of the award, and which entity is settling the award in the group, parent or another entity. If the settling entity is the parent of the entity receiving the goods or services; in an equity-settled transaction, the debit is recognised as an addition to the cost of investment, in a cash-settled transaction, there is an accounting policy choice for the treatment of the remeasurement of the cash-settled liability.

If the settling entity is not the parent (i.e., direct or indirect subsidiary or fellow subsidiary, of the entity receiving the goods or services), the settlement is treated as a distribution and charged directly to equity.

We adopt the approach of full capitalisation by the parent entity in the worked examples set out at 13.4 to 13.6 below.

13.2.5 Transactions settled in equity of the entity or its parent

13.2.5.A Awards settled in equity of subsidiary

Where a subsidiary grants an award to its employees and settles it in its own equity, the subsidiary accounts for the award as equity-settled. *[FRS 102.26.1, FRS 102 Appendix I]*.

The parent accounts for the award as equity-settled in its consolidated financial statements. In its separate financial statements, the parent does not account for the award under FRS 102 because the Parent receives no goods or services, nor does it settle the transaction (see 3.2.1 above). In both cases, the transaction may have implications for other aspects of the financial statements, since its settlement results in the partial disposal of the subsidiary.

Where the parent is responsible for settling the award, it accounts for the transaction as equity-settled in its consolidated financial statements. In its separate financial statements, however, it accounts for the award as cash-settled, since it is settled not in its own equity, but in the equity of the subsidiary (see 3.2.1 and 13.2.4 above). From the perspective of the parent's separate financial statements, the equity of a subsidiary is a financial asset.

13.2.5.B Awards settled in equity of the parent

Where the parent grants an award directly to the employees of a subsidiary and settles it in its own equity, the subsidiary accounts for the award as equity-settled, with a corresponding increase in equity as a contribution from the parent. *[FRS 102.26.1, FRS 102.26.1A]*.

The parent accounts for the award as equity-settled in both its consolidated and separate financial statements (see 3.2.1 above). *[FRS 102.26.2A]*.

Where a subsidiary grants an award of equity in its parent to its employees and settles the award itself, it accounts for the award as cash-settled, since it is settled not in its own equity, but in the equity of its parent. From the perspective of the subsidiary's separate or individual financial statements, the equity of the parent is a financial asset. *[FRS 102.26.1]*.

This requirement potentially represents something of a compliance burden. For the purposes of the parent's consolidated financial statements the fair value of the award needs to be calculated once, at grant date. For the purposes of the subsidiary's financial statements, however, the basic requirements of Section 26 require the award to be accounted for as cash-settled, with the fair value recalculated at each reporting date. In some cases, the rather unclear wording of paragraph 16 of Section 26 might mean that the arrangements are considered to meet the criteria for the alternative accounting treatment for group schemes. If this were the case, the subsidiary could, in effect, account on an equity-settled basis until the point of settlement (see 13.2.3.A above).

However, this approach, which results in equity-settled accounting in the consolidated financial statements and cash-settled accounting in the subsidiary financial statements, applies only when a subsidiary 'grants', and is therefore obliged to settle, such an award. In some jurisdictions, including the UK, it is normal for grants of share awards to be made by the parent, or an employee service company or EBT, rather than by the subsidiary, although the subsidiary may well make recommendations to the grantor of the award as to which of its employees are to benefit.

In those cases, the fact that the subsidiary may communicate the award to the employee does not necessarily mean that the subsidiary itself has granted the award. It may simply be notifying the employee of an award granted by another group entity and which the other group company has the obligation to settle. In that case the subsidiary must apply the normal requirement of Section 26 to account for the award as equity-settled.

13.2.6 Cash-settled transactions not settled by the entity receiving goods or services

The scope section of Section 26 (see 3 above) considers arrangements in which the parent has an obligation to make cash payments to the employees of a subsidiary linked to the price of either:

- The subsidiary's equity instruments.
- Or

- The parent's equity instruments.

In both cases, the subsidiary has no obligation to settle the transaction. Therefore, unless the alternative accounting rules are applied (see below), the subsidiary accounts for the transaction as equity-settled, recognising a corresponding credit in equity as a contribution from its parent. [FRS 102.26.1, FRS 102.26.1A].

The subsidiary subsequently remeasures the cost of the transaction only for any changes resulting from non-market vesting conditions not being met in accordance with the normal provisions of Section 26 discussed at 4 to 7 above. Section 26 does not specifically make the point made in IFRS 2, that this will differ from the measurement of the transaction as cash-settled in the consolidated financial statements of the group. [IFRS 2 B56, IFRS 2.B57].

The parent has an obligation to settle the transaction in cash, paragraph 2A of Section 26 requires the parent to account for the transaction as cash-settled in both its consolidated and separate financial statements as the settling entity. [FRS 102.26.1, FRS 102.26.2A].

The requirement for the subsidiary to measure the transaction as equity-settled is somewhat controversial. The essential rationale for requiring the subsidiary to record the cost of a share-based payment transaction settled by its parent is to reflect that the subsidiary is effectively receiving a capital contribution from its parent.

Using the alternative accounting treatment for group plans set out in Section 26 (see 13.2.3.A above), it appears that the subsidiary in this situation could base its expense either on an equity-settled calculation or on an allocation of the group cash-settled expense.

13.2.7 Intragroup recharges and management charges

As noted at 13.2.2 above, neither FRS 102 nor IFRS 2 deals specifically with the accounting treatment of intragroup recharges and management charges that may be levied on the subsidiary that receives goods or services, the consideration for which is equity or cash of another group entity.

The accounting requirements of FRS 102 for group share schemes derive from requirements in IFRS 2 which evolved, via an Interpretation, from an exposure draft (D17) published in 2005.²³¹ In the absence of more specific guidance, we suggest that the treatment outlined below is applied to recharge arrangements in place between entities applying FRS 102. For entities applying the Companies Act 2006, the accounting treatment under D17 is also addressed in Section 7 of TECH 02/17BL. [TECH 02/17BL.7.53, TECH 02/17BL.7.54, TECH 02/17BL.7.55, TECH 02/17BL.7.56].

D17 proposed that any such payment made by a subsidiary is charged directly to equity, on the basis that it represents a return of the capital contribution recorded as the credit to equity required by IFRS 2 (see 13.2.3 and 13.2.6 above) up to the amount of that contribution, and a distribution thereafter.

How we see it

In our view, whilst IFRS 2 and FRS 102 as currently drafted does not explicitly require the accounting set out in D17 for the subsidiary, this is likely to be the more appropriate analysis for most cases where the amount of the recharge or management charge to a subsidiary is directly related to the value of the share-based payment transaction. Indeed, the only alternative, 'mechanically' speaking, would be to charge the relevant amount to profit or loss. This would result in a double charge (once for the FRS 102 charge, and again for the management charge or recharge) which we consider not only less desirable for most entities, but also less appropriate in cases where the amounts are directly related.

Accordingly, in the Illustrations at 13.4 to 13.6 below, we apply the treatment originally proposed in D17 to any payments made by the subsidiary for participation in the group scheme.

231 D17 - IFRS 2 - Group and Treasury Share Transactions, IASB, 2005, para. IE5.

Many intragroup recharge arrangements are based directly on the value of the underlying share-based payment, typically at grant date, vesting date or exercise date. In other cases, a more general management charge might be levied that reflects not just share-based payments but also a number of other arrangements or services provided to the subsidiary by the parent. Where there is a more general management charge of this kind, we believe that it is more appropriate for the subsidiary to recognise a double charge to profit or loss rather than debiting the management charge to equity as would be the case for a direct recharge.

IFRS 2 and FRS 102 also do not address how the parent must account for a recharge or management charge received. In our view, to the extent that the receipt represents a return of a capital contribution made to the subsidiary, the parent may choose whether to credit:

- The carrying amount of its investment in the subsidiary.
- Or
- Profit or loss (with a corresponding impairment review of the investment).

Even if part of the recharge received is credited to the carrying amount of the investment, any amount received in excess of the capital contribution previously debited to the investment in subsidiary must be accounted for as a distribution from the subsidiary and credited to the income statement of the parent. Where applicable, the illustrative examples at 13.4 to 13.6 below show the entire amount as a credit to the income statement of the parent rather than part of the recharge being treated as a credit to the parent's investment in its subsidiary.

How we see it

In the absence of guidance in IFRS 2 and FRS 102 on accounting by the parent for a recharge or management charge received, in our view, to the extent that the receipt represents a return of a capital contribution made to the subsidiary, the parent could choose whether to credit the carrying amount of its investment in subsidiary (up to the capital contribution previously debited to the carrying amount of its investment) with the excess recognised in profit or loss or the full receipt recognised in profit or loss.

A further issue that arises in practice is the timing of recognition of the recharge by the parties to the arrangement. In the absence of a contractual agreement, the treatment adopted might depend on the precise terms and whether there are contractual arrangements in place, but two approaches generally result in practice:

- To account for the recharge when it is actually levied or paid (which is consistent with accounting for a distribution).
- Or
- To accrue the recharge over the life of the award or the recharge agreement even if, as is commonly the case, the actual recharge is only made at vesting or exercise date.

An entity must choose the more appropriate treatment for its particular circumstances. The first approach is often the more appropriate in a group context where recharge arrangements might be rather informal and therefore not binding until such time as a payment is made. It is also consistent with the overall recognition of the arrangement through equity. The second approach, which is likely to be the more appropriate approach when a liability is considered to exist in advance of the payment date. It is closer in some respects to the accounting treatment of a provision or financial liability, but would reflect changes in the liability through equity rather than profit or loss and would build up the liability over the life of the award rather than recognising it in full when a present obligation has been identified.

Whichever accounting treatment is adopted, any adjustments to the amount to be recognised as a recharge, whether arising from a change in the Section 26 expense or other changes, must be recognised in the current period and previous periods must not be restated.

How we see it

In the absence of guidance in FRS 102 and IFRS 2 on the timing of recognition of the recharge, in our view, an entity chooses the most appropriate treatment for its particular circumstances based on the guidance set out above, i.e., account for the charge when levied/paid or accrue the recharge over the life of the award.

Where applicable, the examples at 13.4 to 13.6 below illustrate the first of the two treatments outlined above and recognise the recharge only when it becomes payable at the date of exercise.

13.3 Employee benefit trusts ('EBTs') and similar arrangements

13.3.1 Background

For some time entities have established trusts and similar arrangements for the benefit of employees. These are known by various names but, for the sake of convenience, in this section we will use the term 'EBT' ('employee benefit trust') to cover all such vehicles by whatever name they are actually known.

The commercial purposes of using such vehicles vary from employer to employer but may include the following:

- An EBT, in order to achieve its purpose, needs to hold shares that have either been issued to it by the entity or been bought by the EBT on the open market.
- In the case of longer-term benefits, the use of an EBT may 'ring fence' the assets set aside for the benefit of employees in case of the insolvency of the entity.
- The use of an EBT may be necessary in order to achieve a favourable tax treatment for the entity or the employees, or both.

The detailed features of an EBT will again vary from entity to entity but typical features often include the following:

- The EBT provides a warehouse for the shares of the sponsoring entity, for example by acquiring and holding shares that are to be sold or transferred to employees in the future. The trustees may purchase the shares with finance provided by the sponsoring entity (by way of cash contributions or loans), or by a third-party bank loan, or by a combination of the two. Loans from the entity are usually interest-free. In other cases, the EBT may subscribe directly for shares issued by the sponsoring entity or acquire shares in the market.
- Where the EBT borrows from a third party, the sponsoring entity will usually guarantee the loan, i.e., it will be responsible for any shortfall if the EBT's assets are insufficient to meet its debt repayment obligations. The entity will also generally make regular contributions to the EBT to enable the EBT to meet its interest payments, i.e., to make good any shortfall between the dividend income of the EBT (if any) and the interest payable. As part of this arrangement the trustees may waive their right to dividends on the shares held by the EBT.
- Shares held by the EBT are distributed to employees through an employee share scheme. There are many different arrangements, these may include:
 - The purchase of shares by employees when exercising their share options under a share option scheme.
 - The purchase of shares by the trustees of an approved profit-sharing scheme for allocation to employees under the rules of the scheme.
 - The transfer of shares to employees under some other incentive scheme.
- The trustees of an EBT may have a legal duty to act at all times in accordance with the interests of the beneficiaries under the EBT. However, most EBTs (particularly those established as a means of remunerating employees) are specifically designed so as to serve the purposes of the sponsoring entity, and to ensure that there will be minimal risk of any conflict arising between the duties of the trustees and the interest of the entity.

13.3.2 Accounting for EBTs

The requirement to treat an EBT as an extension of the entity is included in Section 9 (see Chapter 8 at 4.5). [FRS 102.9.35, FRS 102.9.36, FRS 102.9.37]. This treatment has the following broad consequences for the consolidated and separate financial statements of the reporting entity:

- Until such time as the entity's own shares held by the EBT vest unconditionally in employees (e.g., as the result of the vesting of an award of ordinary shares, or the exercise of a vested option over ordinary shares), any consideration paid for the shares must be deducted in arriving at shareholders' equity.
- Other assets and liabilities (including borrowings) of the EBT must be recognised as assets and liabilities in the financial statements of the sponsoring entity.
- No gain or loss is recognised in profit or loss or other comprehensive income on the purchase, sale, issue or cancellation of the entity's own shares. Consideration paid or received for the purchase or sale of the entity's own shares in an EBT is shown separately from other purchases and sales of the entity's own shares ('true' treasury shares held by the reporting entity) in the statement of changes in equity.

- Any dividend income arising on own shares must be excluded from profit or loss and deducted from the aggregate of dividends paid. Where material, the deduction from the aggregate dividends paid must be disclosed. [FRS 102.9.38(g)].

And

- Finance costs and any administration expenses must be charged as they accrue and not as funding payments are made to the EBT.

The discussion above, and in the remainder of 13 below, focuses on arrangements where the EBT holds unallocated shares of the reporting entity and/or shares that have been allocated to employees in connection with share awards but where the awards have not yet vested unconditionally. There will also be situations in practice in which an EBT reaches the stage where, or is designed so that, it only holds shares to which employees have full entitlement (i.e., the shares are fully vested). In this situation the shares are beneficially owned and controlled by the individual employees but might remain in trust for tax or other reasons in the period following vesting. Where an EBT does not hold any unvested shares and there are no other assets or liabilities in the EBT over which the entity continues to exercise control, there will be nothing left in the EBT to incorporate into the entity's financial statements by extension.

13.3.3 Illustrative Examples - awards satisfied by shares purchased by, or issued to, an EBT

The following Illustrations show the interaction of accounting for the EBT with the requirements of Section 26. Illustration 13-1 shows the treatment where an award is satisfied using shares previously purchased by the EBT. Illustration 13-2 shows the treatment where freshly issued shares are used.

Illustration 13-1: Interaction of accounting for share purchase by EBT and accounting for share-based payment transactions

On 1 January in year 1, the EBT of ABC plc made a market purchase of 100,000 shares of ABC plc at £2.50 per share. These were the only ABC shares held by the EBT at that date.

On 1 May in the same year, ABC granted executives options over between 300,000 and 500,000 shares at £2.70 per share, which will vest at the end of year 1, the number vesting depending on various performance criteria. It is determined that the cost to be recognised in respect of this award under FRS 102 is £0.15 per share.

Four months later, on 1 September, the EBT made a further market purchase of 300,000 shares at £2.65 per share.

At the end of year 1, options vested over 350,000 shares and were exercised immediately.

The accounting entries for the above transactions in the consolidated financial statements of ABC would be as set out below.

	£	£
1 January		
Own shares (equity)	250,000	
Cash		250,000
<i>To record purchase of 100,000 £1 shares at £2.50/share</i>		
1 May – 31 December		
Profit or loss	52,500	
Equity [†]		52,500
<i>To record cost of vested 350,000 options at £0.15/option</i>		
1 September		
Own shares (equity)	795,000	
Cash		795,000
<i>To record purchase of 300,000 £1 shares at £2.65/share</i>		
31 December		
Cash	945,000	
Equity ^{†1}		945,000
<i>Receipt of proceeds on exercise of 350,000 options at £2.70/share</i>		
Equity [†]	914,375	
Own shares (equity) ²		914,375
<i>Release of shares from EBT to employees</i>		

1 This reflects the fact that the entity's resources have increased as a result of a transaction with an owner, which gives rise to no gain or loss and is therefore credited direct to equity.

2 It is necessary to transfer the cost of the shares 'reissued' by the EBT out of own shares, as the deduction for own shares would otherwise be overstated. The total cost of the pool of 400,000 shares immediately before vesting was £1,045,000 (£250,000 purchased on 1 January and £795,000 purchased on 1 September), representing an average cost per share of £2.6125. £2.6125 × 350,000 shares = £914,375.

† These amounts must all be accounted for in the profit and loss reserve or, until the awards are exercised, a separate reserve for share-based payments.

Illustration 13-1 illustrates the importance of keeping the accounting for the cost of the shares completely separate from that for the cost of the share-based payment award. In cash terms, ABC has made a 'profit' of £30,625, since it purchased 350,000 shares with a weighted average cost of £914,375 and issued them to the executives for £945,000. However, this 'profit' is accounted for entirely within equity, whereas a calculated expense of £52,500 is recognised in profit or loss.

Illustration 13-2: Interaction of accounting for fresh issue of shares to EBT and accounting for share-based payment transactions

On 1 January in year 1, the EBT of ABC plc subscribed for 100,000 £1 shares of ABC plc at £2.50 per share, paid for in cash provided by ABC by way of loan to the EBT. In accordance with the Companies Act, these proceeds must be credited to the share capital account up to the par value of the shares issued, with any excess taken to a share premium account. These were the only ABC shares held by the EBT at that date.

On 1 May in the same year, ABC granted executives options over between 300,000 and 500,000 shares at an exercise price of £2.70 per share, which will vest at the end of year 1, the number vesting depending on various performance criteria. It is determined that the fair value to be recognised in respect of this award is £0.15 per share.

Four months later, on 1 September, the EBT subscribed for a further 300,000 shares at £2.65 per share, again paid for in cash provided by ABC by way of loan to the EBT.

At the end of year 1, options vested over 350,000 shares and were exercised immediately.

The accounting entries for the above transactions in the consolidated financial statements of ABC would be as set out below.

	£	£
1 January		
Equity ⁺¹	250,000	
Share capital		100,000
Share premium		150,000
<i>To record issue of 100,000 £1 shares to EBT at £2.50/share</i>		
1 May - 31 December		
Profit or loss	52,500	
Equity [†]		52,500
<i>To record cost of vested 350,000 options at £0.15/option</i>		
1 September		
Equity ⁺¹	795,000	
Share capital		300,000
Share premium		495,000
<i>To record issue of 300,000 £1 shares at £2.65/share</i>		
31 December		
Cash	945,000	
Equity ⁺²		945,000
<i>Receipt of proceeds on exercise of 350,000 options at £2.70/share</i>		

- 1 This entry is required to reconcile the legal requirement to record an issue of shares with the fact that, in reality, there has been no increase in the resources of the reporting entity. All that has happened is that one member of the reporting group (the EBT) has transferred cash to another (the parent entity).
 - 2 This reflects the fact that the entity's resources have increased as a result of a transaction with an owner, which gives rise to no gain or loss and is therefore credited direct to equity.
- † These amounts are required to be accounted for in the profit and loss reserve (subject to note 1 above) or, until the awards are exercised, a separate reserve for share-based payments.

How we see it

In our view, the debit to equity in note 1 on issue of shares, is not strictly accounted for within any 'Own shares reserve' in equity, which must be restricted to shares acquired from third parties, although it is increasingly common in practice to see an entry in 'own shares' to reflect such a holding of shares by an EBT.

13.3.4 Financial statements of the EBT

The EBT may be required to prepare financial statements in accordance with requirements imposed by local law or by its own trust deed. The form and content of such financial statements are beyond the scope of this publication.

13.4 Illustrative example of group share scheme – equity-settled award satisfied by purchase of shares

The discussion in 13.4.1 to 13.4.3 below is based on Illustration 13-3 and addresses the accounting treatment for three distinct aspects of a group share scheme; a share-based payment arrangement involving group entities (see 13.2 above), the use of an EBT (see 13.3 above) and a group recharge arrangement (see 13.2.7 above).

This illustrative example treats the recharge by the parent to the subsidiary as an income statement credit in the individual accounts of the parent and recognises the recharge when it is paid. In some situations, entities might consider it appropriate to apply alternative accounting treatments (see 13.2.7 above).

Illustration 13-3: Group share scheme (purchase of shares)

On 1 July 20X1 an employee of S Limited, a subsidiary of the H plc group, is awarded options under the H group share scheme over 3,000 shares in H plc at £1.50 each, exercisable between 1 July 20X4 and 1 July 20X7, subject to a service condition and certain performance criteria being met in the three years ending 30 June 20X4.

H plc is the grantor of the award and has the obligation to settle it. On 1 January 20X2, in connection with the award, the H plc group EBT purchases 3,000 shares from existing shareholders at a price of £2.00 per share, funded by a loan from H plc. On exercise of the option, S Limited is required to pay the differential between the purchase price of the shares and the exercise price of the option (£0.50 per share) to the EBT.

For the purposes of FRS 102, the options are considered to have a fair value at grant date of £1 per option. Throughout the vesting period of the option, H takes the view that the award will vest in full.

The option is exercised on 1 September 20X6, at which point the EBT uses the option proceeds, together with the payment by S Limited, to repay the loan from H plc.

H plc and its subsidiaries have a 31 December year end.

13.4.1 Consolidated financial statements

So far as the consolidated financial statements are concerned, the transactions to be accounted for are:

- The purchase of the shares by the EBT and their eventual transfer to the employee
And
- The cost of the award.

Transactions between H plc or S Limited and the EBT are ignored since the EBT is treated as an extension of H plc (see 13.3 above). The accounting entries required are set out below. As in other examples in this chapter, an entry to equity is not allocated to a specific reserve as this will vary between entities (although the most common for an entity complying with the Companies Act 2006 will be the profit and loss reserve or a separate 'other reserve' for share-based payments).

		£	£
y/e 31.12.20X1	Profit or loss (employee costs)*	500	
	Equity		500
1.1.20X2	Own shares (equity)	6,000	
	Cash		6,000
y/e 31.12.20X2	Profit or loss (employee costs)*	1,000	
	Equity		1,000
y/e 31.12.20X3	Profit or loss (employee costs)*	1,000	
	Equity		1,000
y/e 31.12.20X4	Profit or loss (employee costs)*	500	
	Equity		500
1.9.20X6	Cash (option proceeds)†	4,500	
	Equity‡	1,500	
	Own shares (equity)**		6,000

* Total cost £3,000 (3000 options × £1) spread over 36 months. Charge for period to December 20X1 is $6/36 \times £3,000 = £500$, and so on. In practice, where options are granted to a group of individuals, or with variable performance criteria, the annual charge will be based on a continually revised cumulative charge (see further discussion at 7.1 to 7.4 above).

† 3,000 options at £1.50 each.

‡ This reflects the fact that the overall effect of the transaction for the group in cash terms has been a 'loss' of £1,500 (£6,000 original cost of shares less £4,500 option proceeds received). However, under FRS 102 this is an equity transaction, not an expense.

** £6,000 cost of own shares purchased on 1 January 20X2 now transferred to the employee. In practice, it is more likely that the appropriate amount to be transferred would be based on the weighted average price of shares held by the EBT at the date of exercise, as in Illustration 13-1 at 13.3.3 above. In such a case there would be a corresponding adjustment to the debit to equity marked with ‡ above.

13.4.2 Parent

13.4.2.A Accounting by parent where the subsidiary company is the employing company

The parent accounts for the share-based payment transaction under FRS 102 as an equity-settled transaction since the parent settles the award by delivering its own equity instruments to the employees of the subsidiary (see 13.2.4 above). However, as discussed at 13.2.4 above, instead of recording an expense, as in its consolidated financial statements, the parent records an increase in the carrying value of its investment in subsidiary. It might then be necessary to consider whether the ever-increasing investment in subsidiary is supportable or is in fact impaired. As this is a matter to be determined in the light of specific facts and circumstances, it is not considered in this example. Any impairment charge would be recorded in profit or loss.

In addition to accounting for the share-based payment transaction, the parent records the transactions of the EBT and the purchase of shares.

This gives rise to the following entries:

		£	£
y/e 31.12.20X1	Investment in subsidiary*	500	
	Equity		500
1.1.20X2	Own shares (equity)	6,000	
	Cash		6,000
y/e 31.12.20X2	Investment in subsidiary*	1,000	
	Equity		1,000
y/e 31.12.20X3	Investment in subsidiary*	1,000	
	Equity		1,000
y/e 31.12.20X4	Investment in subsidiary*	500	
	Equity		500
1.9.20X6	Cash†	6,000	
	Equity‡	1,500	
	Profit or loss§		1,500
	Own shares** (equity)		6,000

* Total increase in investment £3,000 (3000 shares × £1 fair value of each option) spread over 36 months. Increase during period to December 20X1 is $6/36 \times £3,000 = £500$, and so on. In practice, where options were granted to a group of individuals, or with variable performance criteria, the annual adjustment would be based on a continually revised cumulative adjustment (see further discussion at 7.1 to 7.4 above).

† £4,500 option exercise proceeds from employee plus £1,500 contribution from S Limited.

‡ This is essentially a balancing figure representing the fact that the entity is distributing own shares with an original cost of £6,000 but has treated £1,500 of the £6,000 of the cash it has received as income (see § below) rather than as payment for the shares.

§ The £1,500 contribution by the subsidiary to the EBT has been treated as a distribution from the subsidiary (see 13.2.7 above) and recorded in profit or loss. It might then be necessary to consider whether, as a result of this payment, the investment in the subsidiary had become impaired. As this is a matter to be determined in the light of specific facts and circumstances, it is not considered in this example. Any impairment charge would be recorded in profit or loss.

** £6,000 cost of own shares purchased on 1 January 20X2 now transferred to employee. In practice, it is more likely that the appropriate amount to be transferred would be based on the weighted average price of shares held by the EBT at the date of exercise, as in Illustration 13-1 at 13.3.3 above.

13.4.2.B Parent company as employing company

If, in Illustration 13-3, the employing entity were the parent rather than the subsidiary, it would record an expense under FRS 102. It would also normally waive £1,500 of its £6,000 loan to the EBT (i.e., the shortfall between the original loan and the £4,500 option proceeds received from the employee).

As the EBT is treated as an extension of the parent, the accounting entries for the parent would be the same as those for the group, as set out at 13.4.1 above.

13.4.3 Employing subsidiary

The employing subsidiary is required to account for the FRS 102 expense and the contribution to the EBT on exercise of the award. This gives rise to the accounting entries set out below. The entries to reflect the expense are required by FRS 102 (see 13.2.3 above). The treatment of the contribution to the EBT as a distribution is discussed at 13.2.7 above.

	£	£
y/e 31.12.20X1 Profit or loss*	500	
Equity		500
y/e 31.12.20X2 Profit or loss*	1,000	
Equity		1,000
y/e 31.12.20X3 Profit or loss*	1,000	
Equity		1,000
y/e 31.12.20X4 Profit or loss*	500	
Equity		500
1.9.20X6 Equity†	1,500	
Cash		1,500

* Total cost £3,000 (3000 options × £1) spread over 36 months. Charge for period to December 20X1 is $6/36 \times £3,000 = £500$, and so on. In practice, where options were granted to a group of individuals, or with variable performance criteria, the annual charge would be based on a continually revised cumulative charge (see further discussion at 7.1 to 7.4 above).

† This is to be treated as a reduction of whatever component of equity was credited with the £3,000 quasi-contribution from the parent in the accounting entries above.

13.5 Illustrative example of a group share scheme – equity-settled award satisfied by fresh issue of shares

The discussion in 13.5.1 to 13.5.3 below is based on Illustration 13-4 and addresses the accounting treatment for three distinct aspects of a group share scheme, a share-based payment arrangement involving group entities (see 13.2 above), the use of an EBT (see 13.3 above) and a group recharge arrangement (see 13.2.7 above). The illustration assumes that the share-based payment arrangement is settled by a fresh issue of shares.

This illustrative example treats the recharge by the parent to the subsidiary as an income statement credit in the individual accounts of the parent and recognises the recharge when it is paid. In some situations, entities might consider it appropriate to apply alternative accounting treatments (see 13.2.7 above).

Illustration 13-4: Group share scheme (fresh issue of shares)

On 1 July 20X1 an employee of S Limited, a subsidiary of the H plc group, is awarded options under the H group share scheme over 3,000 shares in H plc at £1.50 each, exercisable between 1 July 20X4 and 1 July 20X7, subject to a service condition and certain performance criteria being met in the three years ending 30 June 20X4. The fair value of the options on 1 July 20X1 is £1 each.

H plc grants the award and has the obligation to settle it.

When preparing accounts during the vesting period H plc and its subsidiaries assume that the award will vest in full. The options are finally exercised on 1 September 20X6, at which point H plc issues 3,000 new shares to the EBT at the then current market price of £3.50 for £10,500. The EBT funds the purchase using the £4,500 option proceeds received from the employee together with £6,000 contributed by S Limited, effectively representing the fair value of the options at exercise date ($3,000 \times [£3.50 - £1.50]$). H plc and its subsidiaries have a 31 December year end.

13.5.1 Consolidated financial statements

The consolidated financial statements need to deal with:

- The charge required by FRS 102 in respect of the award
- And
- The issue of shares.

Transactions between H plc or S Limited and the EBT are ignored since the EBT is treated as an extension of H plc (see 13.3 above). The accounting entries required are set out below. As in other examples in this chapter, an entry to equity is not allocated to a specific reserve as this will vary between entities (although the most common for an entity complying with the Companies Act 2006 will be the profit and loss reserve or a separate 'other reserve' for share-based payments).

		£	£
y/e 31.12.20X1	Profit or loss*	500	
	Equity		500
y/e 31.12.20X2	Profit or loss*	1,000	
	Equity		1,000
y/e 31.12.20X3	Profit or loss*	1,000	
	Equity		1,000
y/e 31.12.20X4	Profit or loss*	500	
	Equity		500
1.9.20X6	Cash	4,500	
	Other equity†	6,000	
	Share capital/premium†		10,500

* Total cost £3,000 (3000 options × £1) spread over 36 months. Charge for period to December 20X1 is $6/36 \times £3,000 = £500$, and so on. In practice, where options were granted to a group of individuals, or with variable performance criteria, the annual charge would be based on a continually revised cumulative charge (see further discussion at 7.1 to 7.4 above).

† From the point of view of the consolidated group, the issue of shares results in an increase in net assets of only £4,500 (i.e., the exercise price received from the employee), since the £6,000 contribution from the employing subsidiary to the EBT is an intragroup transaction. However, an entity applying the Companies Act 2006 is required to increase its share capital and share premium accounts by the £10,500 legal consideration for the issue of shares. The £6,000 consideration provided from within the group is effectively treated as a bonus issue.

13.5.2 Parent

13.5.2.A Accounting by parent where subsidiary is the employing company

The parent accounts for the share-based payment transaction under FRS 102 as an equity-settled transaction since the parent settles the award by delivering its own equity instruments via its EBT to the employees of the subsidiary (see 13.2.4 above). However, as discussed at 13.2.4 above, instead of recording an expense, as in its consolidated financial statements, the parent records an increase in the carrying value of its investment in subsidiary. It might then be necessary to consider whether the ever-increasing investment in subsidiary is supportable or is in fact impaired. As this is a matter to be determined in the light of specific facts and circumstances, it is not considered in this example. Any impairment charge would be recorded in profit or loss.

In addition to accounting for the share-based payment transaction, the parent records the transactions of the EBT and the issue of shares.

		£	£
y/e 31.12.20X1	Investment in subsidiary*	500	
	Equity		500
y/e 31.12.20X2	Investment in subsidiary*	1,000	
	Equity		1,000
y/e 31.12.20X3	Investment in subsidiary*	1,000	
	Equity		1,000
y/e 31.12.20X4	Investment in subsidiary*	500	
	Equity†		500
1.9.20X6	Cash‡	10,500	
	Equity‡	6,000	
	Profit or loss**		6,000
	Share capital/premium‡		10,500

* Total increase in investment £3,000 (3,000 shares × £1 fair value of each option) spread over 36 months. Increase during period to December 20X1 is $6/36 \times £3,000 = £500$, and so on. In practice, where options were granted to a group of individuals, or with variable performance criteria, the annual adjustment would be based on a continually revised cumulative adjustment (see further discussion at 7.1 to 7.4 above).

† £4,500 option exercise proceeds from employee plus £6,000 contribution from the subsidiary.

‡ This assumes that local law requires the entity to record share capital and share premium of £10,500, as in 13.5.1 above. However, FRS 102 *prima facie* requires the £6,000 cash received by the EBT from the subsidiary to be treated as income (see ** below) rather than as part of the proceeds of the issue of shares. In order, in effect, to reconcile these conflicting analyses, £6,000 of the £10,500 required by law to be capitalised as share capital and share premium has been treated as an appropriation out of other equity.

** The £6,000 contribution by the subsidiary to the EBT has been treated as a distribution from the subsidiary (see 13.2.7 above) and recorded in profit or loss. It might then be necessary to consider whether, as a result of this payment, the investment in the subsidiary had become impaired. As this is a matter to be determined in the light of specific facts and circumstances, it is not considered in this illustration. Any impairment charge would be recorded in profit or loss.

13.5.2.B Parent company as employing company

If, in Illustration 13-4, the employing entity were the parent rather than the subsidiary, it would clearly have to record an expense under FRS 102. It would also have to fund the £6,000 shortfall between the option exercise proceeds of £4,500 and the £10,500 issue proceeds of the shares.

As the EBT is treated as an extension of the parent, the accounting entries for the parent would be the same as those for the group, as set out in 13.5.1 above.

13.5.3 Employing subsidiary

The employing subsidiary is required to account for the FRS 102 expense and the contribution to the EBT on exercise of the award. This gives rise to the accounting entries set out below. The entries to reflect the expense are required by FRS 102 (see 13.2.3 above). The treatment of the contribution to the EBT as a distribution is discussed at 13.2.7 above.

	£	£
y/e 31.12.20X1 Profit or loss*	500	
Equity		500
y/e 31.12.20X2 Profit or loss*	1,000	
Equity		1,000
y/e 31.12.20X3 Profit or loss*	1,000	
Equity		1,000
y/e 31.12.20X4 Profit or loss*	500	
Equity		500
1.9.20X6 Equity†	6,000	
Cash		6,000

* Total cost £3,000 (3,000 options × £1) spread over 36 months. Charge for period to December 20X1 $6/36 \times £3,000 = £500$, and so on. In practice, where options were granted to a group of individuals, or with variable performance criteria, the annual charge would be based on a continually revised cumulative charge (see further discussion at 7.1 to 7.4 above).

† £3,000 of this payment is treated as a reduction of whatever component of equity was credited with the £3,000 quasi-contribution from the parent in the accounting entries above. The remaining £3,000 would be treated as a distribution and deducted from any appropriate component of equity.

13.6 Illustrative example - cash-settled transaction not settled by the entity receiving goods or services

The discussion in 13.6.1 to 13.6.3 below is based on Illustration 13-5.

Illustration 13-5: Cash-settled scheme not settled by receiving entity

On 1 July 20X1 an employee of S Limited, a subsidiary of the H plc group, is awarded a right, exercisable between 1 July 20X4 and 1 July 20X7, to receive cash equivalent to the value of 3,000 shares in H plc at the date on which the right is exercised. Exercise of the right is subject to a service condition and certain performance criteria being met in the three years ending 30 June 20X4. The cash will be paid to the employee not by S, but by H. Throughout the vesting period of the award, H and S take the view that it will vest in full.

The award does in fact vest, and the right is exercised on 1 September 20X6.

The fair value of the award (per share-equivalent) at various relevant dates is as follows:

Date	Fair value £
1.7.20X1	1.50
31.12.20X1	1.80
31.12.20X2	2.70
31.12.20X3	2.40
31.12.20X4	2.90
31.12.20X5	3.30
1.9.20X6	3.50

If the award had been equity-settled (i.e., the employee had instead been granted a right to 3,000 free shares), the grant date fair value of the award would have been £1.50 per share.

H plc and its subsidiaries have a 31 December year end.

13.6.1 Consolidated financial statements

The group has entered into a cash-settled transaction which is accounted for using the methodology discussed at 10.3 above. This gives rise to the following accounting entries:

		£	£
y/e 31.12.20X1	Profit or loss*	900	
	Liability		900
y/e 31.12.20X2	Profit or loss*	3,150	
	Liability		3,150
y/e 31.12.20X3	Profit or loss*	1,950	
	Liability		1,950
y/e 31.12.20X4	Profit or loss*	2,700	
	Liability		2,700
y/e 31.12.20X5	Profit or loss*	1,200	
	Liability		1,200
y/e 31.12.20X6	Profit or loss*	600	
	Liability		600
1.9.20X6	Liability	10,500	
	Cash		10,500

* Charge for period to 31 December 20X1 is $6/36 \times 3000 \times £1.80$ [reporting date fair value] = £900. Charge for year ended 31 December 20X2 is $18/36 \times 3000 \times £2.70$ = £4,050 less £900 charged in 20X1 = £3,150 and so on (refer to Illustration 10-2 at 10.3.2 above). In practice, where options were granted to a group of individuals, or with variable performance criteria, the annual charge would be based on a continually revised cumulative charge (see further discussion at 10 above).

13.6.2 Parent company

The parent accounts for the share-based payment transaction under FRS 102 as a cash-settled transaction, since the parent settles the award by delivering cash to the employees of the subsidiary (see 13.2.4 above).

How we see it

As discussed at 13.2.4 above, instead of recording a cost, consistent with the consolidated financial statements, the parent treats the debit entry (including, as a matter of accounting policy choice, any remeasurement of the liability) as an increase in the carrying value of its investment in subsidiary.

It might then be necessary to consider whether the ever-increasing investment in subsidiary is supportable or is in fact impaired. As this is a matter to be determined in the light of specific facts and circumstances, it is not considered in this example. Any impairment charge would be recorded in profit or loss.

This would result in the following accounting entries:

		£	£
y/e 31.12.20X1	Investment in subsidiary*	900	
	Liability		900
y/e 31.12.20X2	Investment in subsidiary*	3,150	
	Liability		3,150
y/e 31.12.20X3	Investment in subsidiary*	1,950	
	Liability		1,950
y/e 31.12.20X4	Investment in subsidiary*	2,700	
	Liability		2,700
y/e 31.12.20X5	Investment in subsidiary*	1,200	
	Liability		1,200
y/e 31.12.20X6	Investment in subsidiary*	600	
	Liability		600
1.9.20X6	Liability	10,500	
	Cash		10,500

* Increase in investment to 31 December 20X1 is $6/36 \times 3000 \times £1.80$ [reporting date fair value] = £900. Increase for year ended 31 December 20X2 is $18/36 \times 3000 \times £2.70$ = £4,050 less £900 charged in 20X1 = £3,150 and so on (refer to Illustration 10-2 at 10.3.2 above). In practice, where options were granted to a group of individuals, or with variable performance criteria, the annual charge would be based on a continually revised cumulative charge (see further discussion at 10 above).

Where the parent entity was also the employing entity (and therefore receiving goods or services), it would apply the same accounting treatment in its separate financial statements as in its consolidated financial statements (see 13.6.1 above).

13.6.3 Employing subsidiary

The employing subsidiary accounts for the transaction as equity-settled, since it receives services, but incurs no obligation to its employees (see 13.2.3 and 13.2.6 above). This gives rise to the following accounting entries:

		£	£
y/e 31.12.20X1	Profit or loss*	750	
	Equity		750
y/e 31.12.20X2	Profit or loss*	1,500	
	Equity		1,500
y/e 31.12.20X3	Profit or loss*	1,500	
	Equity		1,500
y/e 31.12.20X4	Profit or loss*	750	
	Equity		750

* Charge for period to 31 December 20X1 is $6/36 \times 3000 \times £1.50$ [grant date fair value] = £750, and so on. In practice, where options were granted to a group of individuals, or with variable performance criteria, the annual charge would be based on a continually revised cumulative charge (see further discussion at 7.1 to 7.4 above).

The effect of this treatment is that, while the group ultimately records a cost of £10,500, the subsidiary records a cost of only £4,500.

However, there may be cases where the subsidiary records a higher cost than the group. This would happen if, for example:

- The award vests, but the share price has fallen since grant date, so that the value of the award at vesting (as reflected in the consolidated financial statements) is lower than the value at grant (as reflected in the subsidiary's financial statements).

Or

- The award does not actually vest because of a failure to meet a market condition and/or a non-vesting condition (so that the cost is nil in the consolidated financial statements) but is treated by FRS 102 as vesting in the subsidiary's financial statements, because it is accounted for as equity-settled (see 7.3 and 7.4 above).

13.7 Employee transferring between group entities

It is not uncommon for an employee to be granted an equity-settled share-based payment award while in the employment of one subsidiary in the group, but to transfer to another subsidiary in the group before the award is vested, with the entitlement to the award remaining unchanged.

Section 26 does not specifically address the accounting in such cases. For entities applying the alternative accounting treatment for group plans in paragraph 16 of Section 26, that paragraph appears to support an appropriate allocation of the group expense between the employing entities (see 13.2.3.A above). In other cases, we suggest that group entities adopt an approach based on that in IFRS 2. Under IFRS 2, each subsidiary measures the services received from the employee by reference to the fair value of the equity instruments at the date those rights to equity instruments were originally granted, and the proportion of the vesting period served by the employee with each subsidiary. [IFRS 2.B.59]. In other words, for an award with a three-year vesting period granted to an employee of subsidiary A, who transfers to subsidiary B at the end of year 2, subsidiary A will (cumulatively) record an expense of 2/3, and subsidiary B 1/3, of the fair value at grant date. However, any subsidiary required to account for the transaction as cash-settled in accordance with the general principles discussed at 13.2 above accounts for its portion of the grant date fair value and for any changes in the fair value of the award during the period of employment with that subsidiary. [IFRS 2.B.60].

After transferring between group entities, an employee may fail to satisfy a vesting condition other than a market condition, for example by leaving the employment of the group. In this situation each subsidiary adjusts the amount previously recognised in respect of the services received from the employee in accordance with the general principles of FRS 102 and IFRS 2 (see 7.1 to 7.4 above). [IFRS 2.B.61].

14 Disclosures

The disclosure requirements of Section 26 fall into three main categories:

- The nature and extent of share-based payment arrangements (see 14.1 below)
- The measurement of share-based payment arrangements (see 14.2 below)

And

- The effect on the financial statements of share-based payment transactions (see 14.3 below).

The requirements apply to all entities applying FRS 102 although a 'qualifying entity', as defined in Section 1 Scope of FRS 102, may take advantage in its individual financial statements of an exemption from the requirements of paragraphs 18(b), 19 to 21 and 23 of Section 26 provided the following criteria are met:

- If the qualifying entity is a subsidiary, the share-based payment arrangement concerns equity instruments of another group entity.
- If the qualifying entity is an ultimate parent, the share-based payment arrangement concerns its own equity instruments and its separate financial statements are presented alongside the consolidated financial statements of the group,

and, in both cases, provided that the equivalent disclosures required by FRS 102 are included in the consolidated financial statements of the group in which the entity is consolidated. [FRS 102.1.8, FRS 102.1.9, FRS 102.1.10, FRS 102.1.11, FRS 102.1.12].

14.1 Nature and extent of share-based payment arrangements

IFRS 2 contains a general requirement that an entity must "disclose information that enables users of the financial statements to understand the nature and extent of share-based payment arrangements that existed during the period", [IFRS 2.44], and then lists the minimum disclosures required to meet the overall requirement.

FRS 102 does not include the overall requirement from IFRS 2, but picks up some of the detailed disclosures and includes the following disclosure requirements to enable users of the financial statements to understand the nature and extent of share-based payment arrangements that existed during the period: [FRS 102.26.18]

Extract from Section 26

- 18** An entity shall disclose the following information about the nature and extent of share-based payment arrangements that existed during the period:
- (a) A description of each type of share-based payment arrangement that existed at any time during the period, including the general terms and conditions of each arrangement, such as vesting requirements, the maximum term of options granted, and the method of settlement (e.g., whether in cash or equity). An entity with substantially similar types of share-based payment arrangements may aggregate this information.
 - (b) The number and weighted average exercise prices of share options for each of the following groups of options:
 - (i) outstanding at the beginning of the period;
 - (ii) granted during the period;
 - (iii) forfeited during the period;
 - (iv) exercised during the period;
 - (v) expired during the period;
 - (vi) outstanding at the end of the period; and
 - (vii) exercisable at the end of the period.

How we see it

The reconciliation in (b) above, in our view, reflects all changes in the number of equity instruments outstanding. The reconciliation includes not just awards with a grant date during the period, but also includes subsequent additions to earlier grants e.g., options or shares added to the award in recognition of dividends declared during the period (where this is part of the original terms of the award), and changes to the number of equity instruments as a result of demergers, share splits or consolidations and other similar changes.

In addition, as drafted, the requirements in (b) above appear to apply only to share options. However, since there is little distinction between the treatment of an option with a zero exercise price and the award of a free share, in our view the disclosures are not be restricted to awards of options.

14.2 Measurement of share-based payment arrangements

IFRS 2 contains a general requirement that an entity must “disclose information that enables users of the financial statements to understand how the fair value of the goods or services received, or the fair value of the equity instruments granted, during the period was determined”, [IFRS 2.46], and then lists the minimum disclosures required to meet the overall requirement.

FRS 102 contains its own general disclosure requirements for equity-settled, cash-settled, modified and group share-based payment arrangements but does not mandate the disclosure of specific details other than as set out at 14.2.1 to 14.2.4 below.

14.2.1 Equity-settled arrangements

For equity-settled share-based payment arrangements, FRS 102 requires an entity to disclose: [FRS 102.26.19]

Extract from Section 26

19	For equity-settled share-based payment arrangements, an entity shall disclose information about how it measured the fair value of goods or services received or the value of the equity instruments granted. If a valuation methodology was used, the entity shall disclose the method and its reason for choosing it.

Unlike IFRS 2, FRS 102 has no specific requirement to disclose the inputs to an option pricing model and other assumptions made in the determination of fair value.

The requirement in FRS 102 to disclose the reason for choosing the valuation methodology used is not found in IFRS 2, but is consistent with the fact that FRS 102 allows directors to select an appropriate method of valuation rather than requiring the use of an option-pricing model (as is the case in IFRS 2 when market price information is not available).

14.2.2 Cash-settled arrangements

For cash-settled share-based payment arrangements, FRS 102 requires an entity to disclose: [FRS 102.26.20]

Extract from Section 26

20	For cash-settled share-based payment arrangements, an entity shall disclose information about how the liability was measured.

FRS 102 does not expand on this general requirement. There is no direct correlation between this requirement and the disclosure requirements of IFRS 2 as the latter do not specifically address the measurement of cash-settled arrangements. The FRS 102 requirement is therefore potentially more onerous.

14.2.3 Modification of share-based payment arrangements

Where share-based payment arrangements have been modified during the accounting period, FRS 102 requires an entity to disclose: [FRS 102.26.21]

Extract from Section 26

21	For share-based payment arrangements that were modified during the period, an entity shall disclose an explanation of those modifications.

Unlike IFRS 2, there is no specific requirement to disclose the incremental fair value or information about how that incremental value was measured.

14.2.4 Group share-based payment arrangements

If the reporting entity is part of a group share-based payment arrangement, FRS 102 requires the entity to disclose: [FRS 102.26.22]

Extract from Section 26

22	If the entity is part of a group share-based payment arrangement, and it measures its share-based payment expense on the basis of a reasonable allocation of the expense for the group, it shall disclose that fact and the basis for the allocation (see paragraph 26.16).

14.3 Effect of share-based payment transactions on financial statements

IFRS 2 contains a general requirement that an entity must “disclose information that enables users of the financial statements to understand the effect of share-based payment transactions on the entity's profit or loss for the period and on its financial position”, [IFRS 2.50], and then lists the minimum disclosures required to meet the overall requirement.

FRS 102 does not include such a general requirement but picks up some of the detailed disclosures and requires an entity to: [FRS 102.26.23]

Extract from Section 26

23	An entity shall disclose the following information about the effect of share-based payment transactions on the entity's profit or loss for the period and on its financial position: (a) the total expense recognised in profit or loss for the period; and (b) the total carrying amount at the end of the period for liabilities arising from share-based payment transactions.

15 Taxes related to share-based payment transactions

15.1 Income tax deductions for the entity

The particular issues raised by the accounting treatment for income taxes on share-based payment transactions are discussed in Chapter 31 at 8.

15.2 Employment taxes of the employer

An employing entity in the UK is required to pay National Insurance on share options and other share-based payment transactions with employees, just as if the employees had received cash remuneration. This raises the question of how such taxes must be accounted for as FRS 102 contains no specific guidance in this area.

How we see it

Prior to the publication of the original version of FRS 102, UITF Abstract 25: National Insurance contributions on share option gains, specified the accounting for such taxes in a way that spread the anticipated cost over the vesting period. In our view, a similar approach is to be applied for National Insurance ('NI') contributions on outstanding share options (and similar awards) that are expected to be exercised.

UITF 25 required the provision to be:

- Calculated at the latest enacted NI rate applied to the difference between the market value of the underlying shares at the reporting date and the option exercise price
 - Allocated over the period from grant date to the end of the vesting period, after which it must be updated using the current market value of the shares
- And
- Expensed through profit or loss unless the options form part of capitalised staff costs.

In some situations, the entity may require employees to reimburse the amount of NI paid. UITF 25 required this to be treated in accordance with the general rules now in Section 21 for the reimbursement of the expenditure required to settle a provision.

15.3 Sale or surrender of shares by employee to meet employee's tax liability ('sell to cover' and net settlement)

An award of shares or options to an employee may give rise to a personal tax liability for the employee, often related to the fair value of the award when it vests or, in the case of an option, is exercised. To meet this tax liability, employees may wish to sell or surrender as many shares as are needed to raise proceeds equal to the tax liability (sometimes described respectively as 'sell to cover' or 'net settlement').

This does not, in our view, require the scheme to be considered as cash-settled, any more than if the employee wished to liquidate the shares in order to buy a car or undertake home improvements. However, if the manner in which the cash is passed to, or realised for, the employee gives rise to a legal or constructive obligation for the employer, then the scheme might well be cash-settled (see 10.2 above), to the extent of any such obligation.

Where employees must pay income tax on share awards, the tax is often initially collected from the employer, but with eventual recourse by the tax authorities to the employee for tax not collected from the employer. Such tax collection arrangements mean that even an equity-settled award results in a cash cost for the employer for the income tax.

In such a situation, the employer may require the employee, as a condition of taking delivery of any shares earned, to indemnify the entity against the tax liability, for example by:

- Direct payment to the entity.
 - Authorising the entity to deduct the relevant amount from the employee's salary.
- Or
- Surrendering as many shares to the entity as have a fair value equal to the tax liability.

How we see it

If the entity requires the employee to surrender the relevant number of shares, in our view the scheme must be treated as cash-settled to the extent of the indemnified amount, as explained in Illustration 15-1 below, unless the criteria to account for the arrangement as equity-settled under the limited exception in FRS 102 for a 'net settlement feature' are met (see below).

FRS 102 contains a limited exception to the general requirement to consider whether a net settlement feature needs to be split into equity-settled and cash-settled portions. An entity is required to account for a net settlement feature meeting certain specified criteria as equity-settled in their entirety. However, the exception is narrow in scope and the requirement to assess whether an arrangement has an equity-settled element and a cash-settled element continues to be relevant in many cases. The exception is discussed and demonstrated further in 15.3.1 below.

The following Illustration shows the application of IFRS 2 to an arrangement where the exception does not apply and the entity must separate the transaction into two elements.

Illustration 15-1: Surrendering of vested shares by employee to indemnify liability of entity to pay employee's tax liability (net settlement where FRS 102 exception does not apply)

An individual has a personal tax rate of 40% and free shares are taxed at their fair value on vesting. The individual is granted an award of 100 free shares with a grant date fair value of £3 each. The fair value at vesting date is £5, so that the employee's tax liability (required to be discharged in the first instance by the employer via PAYE) is £200 (40% of £500). Tax law or regulation does not require the entity to withhold an amount for the employee's tax obligation (see Illustration 15-2 below for a demonstration of that situation).

If the employee were required to surrender the 40 shares needed to settle the tax liability, the substance of the transaction is that, at grant date, the entity is making an award of only 60 shares (with a grant date fair value of £3 each) and is bearing the cost of the employment tax itself. On this analysis, the entity will have recorded the following entries by the end of the vesting period:

	£	£
Employee costs (based on 60 shares at grant date fair value)	180	
Equity		180
Employee costs (based on 40% of vesting date value)	200	
Employment tax liability		200

The award is then satisfied by the delivery of 60 shares by the entity to the employee.

If, instead of being required to surrender the shares needed to settle the tax liability, the employee has a free choice as to how to indemnify the employer, the employer will have recorded the following entries by the end of the vesting period:

	£	£
Employee costs (based on 100 shares at grant date fair value)	300	
Equity		300
Receivable from employee (based on 40% of vesting date value)	200	
Employment tax liability		200

The award is then satisfied by the delivery of 100 shares to the employee, and the employee indicates that he wishes to surrender 40 shares to discharge his obligation to the employer under the indemnity arrangement. The entity therefore receives 40 shares from the employee in settlement of the £200 receivable from him.

In practice, this would almost certainly be effected as a net delivery of 60 shares, but in principle there are two transactions:

- A release of 100 shares to the employee;
- And
- The re-acquisition of 40 of those shares at £5 each from the employee.

The entity then settles the tax liability:

	£	£
Employment tax liability	200	
Cash		200

Even in this case, some might take the view that the substance of the arrangement is that the employee has the right to put 40 shares to the employer, and accordingly 40% of the award must be accounted for as cash-settled, resulting in essentially the same accounting as when the employee is required to surrender 40 shares, as set out above. An entity must therefore make a careful assessment of the appropriate accounting treatment based on the terms of a particular arrangement.

An amendment to IFRS 2, issued in June 2016, introduced an exception to the requirement to split an award into an equity-settled element and a cash-settled element where certain specified criteria relating to an entity's tax withholding obligations are met. The exception means that net-settled arrangements that meet the criteria will be accounted for as entirely equity-settled under IFRS. Paragraph 15B(b) of Section 26 also contains a similar exception (see 15.3.1 below).

15.3.1 Share-based payments with a net settlement feature for withholding tax obligations (net settlement where FRS 102 exception applies)

Extract from FRS 102

Appendix I

Glossary

net settlement feature (of a share-based payment)

A term of a share-based payment arrangement that permits or requires the entity to withhold the number of equity instruments equal to the monetary value of the employee's tax obligation from the total number of equity instruments that otherwise would have been issued to the employee upon exercise (or vesting) of the share-based payment. Such terms may exist when tax laws or regulations oblige an entity to withhold an amount for an employee's tax obligation associated with a share-based payment and transfer that amount, normally in cash, to the tax authority on the employee's behalf.

Paragraph 15B of Section 26 contains an exception for specific types of share-based payment transactions with a net settlement feature, which was introduced to FRS 102 in the Periodic Review 2024 amendments to align Section 26 with the exception in IFRS 2. The exception relates to the classification of a share-based payment transaction in which an entity withholds a specified portion of shares that would otherwise be issued to the employee at the date of exercise or vesting. The shares are withheld in return for the entity settling the employee's tax obligation relating to the share-based payment.

Section 26 states that "When the counterparty has a choice of settlement of the transaction in cash (or other assets) or by the transfer of equity instruments, the entity shall account for the transaction as a wholly cash-settled share-based payment transaction in accordance with paragraph 26.14 unless ... the choice of settlement relates only to a net settlement feature and there is an obligation on the entity under tax laws or regulations to withhold an amount for an employee's tax obligation associated with that share-based payment". [FRS 102.26.15B(b)]. In such circumstances, the entity accounts for the transaction as a wholly equity-settled transaction in accordance with paragraphs 7 to 13A of Section 26. However, where an entity withholds an amount of shares that exceeds the monetary value of the employee's tax obligation, the entity accounts for the excess shares withheld as a cash-settled share-based payment when this amount is paid in cash (or other assets) to the employee.

The exception to the usual requirements of Section 26 (which are set out in 15.3 above) is narrow in scope and applies only in situations where there is a statutory withholding obligation.

If a transaction would have been classified entirely as equity-settled, were it not for this net settlement feature, then the exception in FRS 102 applies and the transaction is accounted for as equity-settled in its entirety (rather than being divided into an equity-settled portion and a cash-settled portion as discussed in 5.3 above).

An entity applying the exception must account for the withholding of shares to fund the payment to the tax authority as a deduction from equity. However, the deduction from equity may only be made up to the fair value at the net settlement date of the shares to be withheld. If the payment exceeds this fair value, the excess is expensed through profit or loss. [FRS 102.26.13A(c)].

Where the entity withholds any equity instruments in excess of the employee's tax obligation associated with the share-based payment (i.e., the entity withholds an amount of shares that exceeds the monetary value of the employee's tax obligation), then the excess shares must be accounted for as a cash-settled share-based payment when this amount is paid in cash (or other assets) to the employee. In other words, such shares are treated as a separate cash-settled share-based payment and fully recognised as an expense (rather than as a deduction from equity) as at the date of settlement.

To illustrate the application of the exception, the substance of Example 12B to the implementation guidance accompanying IFRS 2 has been reproduced as Illustration 15-3 below.

Illustration 15-3: Share-based payment transactions with a net settlement feature for withholding tax obligations (application of FRS 102 exception)

At the beginning of year 1 an entity grants an award of 100 shares to an employee. The award is conditional upon the completion of four years' service which the employee is expected to achieve.

The employee's tax obligation of 40% is based on the fair value of the shares at vesting date. Tax law in the entity's jurisdiction requires the entity to withhold an amount for an employee's tax obligation associated with a share-based payment and transfer that amount in cash to the tax authority on behalf of the employee.

The terms and conditions of the share-based payment arrangement require the entity to withhold shares from the settlement of the award to the employee in order to settle the employee's tax obligation. Accordingly, the entity settles the transaction on a net basis by withholding the number of shares with a fair value equal to the monetary value of the employee's tax obligation and issuing the remaining shares to the employee at the end of the vesting period.

The fair value at grant date is £2 per share and at the end of year 4 is £10 per share.

The fair value of the shares on the vesting date (end of year 4) is £1,000 ($100 \times £10$) and therefore the employee's tax obligation is £400 ($100 \times £10 \times 40\%$). Accordingly, on the vesting date, the entity issues 60 shares to the employee, withholds 40 shares from the employee and pays £400 (the fair value of the shares withheld) in cash to the tax authority on the employee's behalf. In effect, it is as if the entity issued 100 vested shares to the employee and then repurchased 40 of them at fair value.

Accounting during the vesting period and on recognition and settlement of the tax obligation

Over the four-year vesting period, the entity recognises a cumulative share-based payment expense of £200 (£50 per annum) with a corresponding credit to equity. This is calculated as 100 shares $\times$ £2 grant date fair value.

	£	£
Dr Employee costs	200	
Cr Equity		200
At the date of vesting the tax liability is recognised and subsequently paid:		
Dr Equity	400	
Cr Tax liability		400
Dr Tax liability	400	
Cr Cash		400

16 Other practical issues

We consider below the application of Section 26 to the following types of arrangement encountered in practice:

- Matching share awards (including deferred bonuses delivered in shares) (see 16.1 below)
 - Loans to employees to purchase shares (limited recourse and full recourse loans) (see 16.2 below)
 - Awards entitled to dividends or dividend equivalents during the vesting period (see 16.3 below)
 - Awards vesting or exercisable on an exit event or change of control (flotation, trade sale etc.) (see 16.4 below)
- And
- Shares used as a currency of payment (see 16.6 below).

16.1 Matching share awards (including deferred bonuses delivered in shares)

As noted in the discussion at 11.2.1 above, in our view the rules in Section 26 for awards where there is a choice of equity- or cash-settlement do not fully address awards where the equity and cash alternatives may have significantly different fair values and vesting periods. A matching share award is an example of the type of scheme giving rise to such issues.

Under a matching share award, the starting point is usually that an employee is awarded a bonus for a one-year performance period. At the end of that period, the employee may then be either required or permitted to take all or part of that bonus in shares rather than cash. To the extent that the employee takes shares rather than cash, the employing entity may then be required or permitted to make a 'matching' award of an equal number of shares (or a multiple or fraction of that number). The matching award will typically vest over a longer period.

Whilst such schemes can appear superficially similar, the accounting analysis may vary significantly, according to whether:

- The employee has a choice, or is required, to take some of the 'base' bonus in shares and whether any such shares must be retained by the employee for the matching shares to vest.
- And/or
- The employer has a choice, or is required, to match any shares taken by the employee.

The detailed accounting for such arrangements is beyond the scope of this publication but is addressed in EY's publication International GAAP®. The requirements of FRS 102 and IFRS 2 are not identical for awards where there is a choice of settlement but are closely aligned (see 11 above). However, it is expected that many companies with a matching share scheme will be part of a larger group arrangement and will potentially be able to recognise an expense based on the group expense in accordance with paragraph 16 of Section 26 (see 13.2.3.A above).

16.2 Loans to employees to purchase shares (limited recourse and full recourse loans)

Share awards to employees are sometimes made by means of so-called 'limited recourse loan' schemes. The detailed terms of such schemes vary, but typical features include the following:

- The entity makes an interest-free loan to the employee which is immediately used to acquire shares to the value of the loan on behalf of the employee.
- The shares may be held by the entity, or a trust controlled by it (see 13.3 above), until the loan is repaid.
- The employee is entitled to dividends, except that these are treated as paying off some of the outstanding loan.
- Within a given period (say, five years) the employee must either have paid off the outstanding balance of the loan, at which point the shares are delivered to the employee, or surrendered the shares. Surrender of the shares by the employee is treated as discharging any outstanding amount on the loan, irrespective of the value of the shares.

The effect of such an arrangement is equivalent to an option exercisable within five years with an exercise price per share equal to the share price at grant date less total dividends since grant date. There is no real loan at the initial stage. The entity has no right to receive cash or another financial asset, since the loan can be settled by the employee returning the (fixed) amount of equity 'purchased' at grant date.

Indeed, the only true cash flow in the entire transaction is any amount paid at the final stage if the employee chooses to acquire the shares at that point. The fact that the exercise price is a factor of the share price at grant date and dividends paid between grant date and the date of repayment of the 'loan' is simply an issue for the valuation of the option. The fair value of the option will generally need to be based on the employee's implicit right to buy the shares at a future date rather than being the share price at grant date (the face value of the loan).

The loan arrangement might have a defined period during which the employee must remain in service (five years in the example above) and during which there might also be performance conditions to be met. Where this is the case, the FRS 102 expense will be recognised by the entity over this period. However, where, as is frequently the case, such an award is subject to no future service or performance condition, i.e., the 'option' is, in effect, immediately exercisable by the employee should he choose to settle the 'loan', the cost will need to be recognised in full at grant date (see 7.1 above).

How we see it

As noted above, an arrangement with a limited recourse loan to the shares is equivalent to a share option provided to employees.

Where the limited recourse loan arrangement requires no future service or performance condition to be met by the employee, in effect, the 'option' is immediately exercisable, and the Section 26 expense is recognised in full at grant date. If the arrangement requires the employee to be in service that may include performance conditions to be met, the Section 26 expense is recognised over that period.

Under more complex arrangements, the loan to the employee to acquire the shares is a full recourse loan (i.e., it cannot be discharged simply by surrendering the shares and there can be recourse to other assets of the employee). However, the amount repayable on the loan is reduced not only by dividends paid on the shares, but also by the achievement of performance targets, such as the achievement of a given level of earnings.

The appropriate analysis of such awards is more difficult, as they could be viewed in two ways:

- Either the employer has made a loan (which the employee has chosen to use to buy a share), accounted for as a financial asset, and has then entered into a performance-related cash bonus arrangement with the employee, accounted for as an employee benefit.

Or

- The transaction is a share option where the exercise price varies according to the satisfaction of performance conditions and the amount of dividends on the shares, accounted for under Section 26.

The different analyses give rise to potentially significantly different expenses. This will particularly be the case where one of the conditions for mitigation of the amount repayable on the loan is linked to the price of the employer's equity. As this is a market condition, the effect of accounting for the arrangement under Section 26 may be that an expense is recognised in circumstances where no expense would be recognised if the arrangement were treated as an employee benefit under Section 28.

Such awards need to be carefully analysed, in the light of their particular facts and circumstances, in order to determine the appropriate treatment. Factors that could suggest that Section 26 is the more relevant would, in our view, include:

- The employee can use the loan only to acquire shares.
- The employee cannot trade the shares until the loan is discharged.
- The entity has a practice of accepting (e.g., from leavers) surrender of the shares as full discharge for the amount outstanding on the loan and does not pursue any shortfall between the fair value of the shares and the amount owed by the employee. This would tend to indicate that, in substance, the loan is not truly full recourse.

How we see it

As noted above, a loan arrangement subject to full recourse requires careful analysis of the particular facts and circumstances to determine which is the appropriate standard to apply; Section 11 and Section 12, Section 28 or Section 26, considering the factors noted above.

16.3 Awards entitled to dividends or dividend equivalents during the vesting period

Some awards entitle the holder to receive dividends on unvested shares (or dividend equivalents on options) during the vesting period.

For example, an entity might award shares that are regarded as fully vested for the purposes of tax legislation (typically because the employee enjoys the full voting and dividend rights of the shares), but not for accounting purposes (typically because the shares are subject to forfeiture if a certain minimum service period is not achieved). In practice, the shares concerned are often held by an EBT until the potential forfeiture period has expired.

Another variant of such an award that is sometimes seen is where an entity grants an employee an option to acquire shares in the entity which can be exercised immediately. However, if the employee exercises the option but leaves within a certain minimum period from the grant date, he is required to sell back the shares to the entity (typically either at the original exercise price, or the lower of that price or the market value of the share at the time of the buy-back).

Such awards do not fully vest for the purposes of Section 26 until the potential forfeiture or buy-back period has expired. The cost of such awards must therefore be recognised over this period.

This raises the question of the accounting treatment of any dividends paid to employees during the vesting period either as a charge to profit or loss as employee costs or a return on an equity instrument.

Conceptually, it could be argued that such dividends cannot be dividends for financial reporting purposes since the equity instruments to which they relate are not yet regarded as issued for financial reporting purposes. This would lead to the conclusion that dividends paid in the vesting period must be charged to profit or loss as an employment cost.

However, the charge to be made for the award under Section 26 will already take account of the fact that the recipient is entitled to receive dividends during the vesting period. Thus, it could be argued that also to charge profit or loss with the dividends paid is a form of double counting. Moreover, whilst the relevant shares may not have been fully issued for financial reporting purposes, the basic Section 26 accounting does build up an amount in equity over the vesting period. It could therefore be argued that, conceptually, if not legally, any dividend paid relates not to an issued share, but rather to the equity instrument represented by the cumulative amount that has been recorded for the award as a credit to equity and can therefore appropriately be shown as a deduction from equity.

However, this argument is valid only to the extent that the credit to equity represents awards that are expected to vest. It cannot apply to dividends paid to employees whose awards are either known not to have vested or treated as expected not to vest when applying Section 26 (since there is no credit to equity for these awards).

How we see it

When employees are entitled to dividends paid during the vesting period and reflected in the fair value of the award, we believe that the most appropriate approach is to analyse the dividends paid so that, by the date of vesting, cumulative dividends paid on awards treated by Section 26 as vested are deducted from equity and those paid on awards treated by Section 26 as unvested are charged to profit or loss. The allocation for periods prior to vesting is to be based on a best estimate of the final outcome, as demonstrated by Illustration 16-1 below.

Illustration 16-1: Award with rights to receive (and retain) dividends during vesting period

An entity grants 100 free shares to each of its 500 employees. The shares are treated as fully vested for legal and tax purposes, so that the employees are eligible to receive any dividends paid. However, the shares will be forfeited if the employee leaves within three years of the award being made. Accordingly, for the purposes of Section 26, vesting is conditional upon the employee working for the entity over the next three years. The entity estimates that the fair value of each share (including the right to receive dividends during the Section 26 vesting period) is £15. Employees are entitled to retain any dividend received even if the award does not vest.

20 employees leave during the first year, and the entity's best estimate at the end of year 1 is that 75 employees will have left before the end of the vesting period. During the second year, a further 22 employees leave, and the entity revises its estimate of total employee departures over the vesting period from 75 to 60. During the third year, a further 15 employees leave. Hence, a total of 57 employees (20 + 22 + 15) forfeit their rights to the shares during the three-year period, and a total of 44,300 shares (443 employees × 100 shares per employee) finally vest.

The entity pays dividends of £1 per share in year 1, £1.20 per share in year 2, and £1.50 in year 3.

Under FRS 102, the entity will recognise the following amounts during the vesting period for services received as consideration for the shares.

Year	Calculation of cumulative expense	Cumulative expense (£)	Expense for period (£)
1	100 shares × 425 employees × £15 × 1/3	212,500	212,500
2	100 shares × 440 employees × £15 × 2/3	440,000	227,500
3	100 shares × 443 × £15 × 3/3	664,500	224,500

On the assumption that all employees who leave during a period do so on the last day of that period (and thus receive dividends paid in that period), in our view the dividends paid on the shares must be accounted for as follows:

		£	£
Year 1	Dr. Profit or loss (employee costs) ¹	7,500	
	Dr. Equity ¹	42,500	
	Cr. Cash ²		50,000
Year 2	Dr. Profit or loss (employee costs) ³	3,300	
	Dr. Equity ³	54,300	
	Cr. Cash ⁴		57,600
Year 3	Dr. Profit or loss (employee costs) ⁵	1,590	
	Dr. Equity ⁵	67,110	
	Cr. Cash ⁶		68,700

¹ 20 employees have left and a further 55 are anticipated to leave. Dividends paid to those employees (100 shares × 75 employees × £1 = £7,500) are therefore recognised as an expense. Dividends paid to other employees are recognised as a reduction in equity.

² 100 shares × 500 employees × £1.

³ 22 further employees have left and a further 18 are anticipated to leave. The cumulative expense for dividends paid to leavers and anticipated leavers is therefore £10,800 (100 shares × 20 employees × £1 = £2,000 for leavers in year 1 + 100 shares × 40 employees × [£1 + £1.20] for leavers and anticipated leavers in year 2 = £8,800). £7,500 was charged in year 1, so the charge for year 2 is £10,800 - £7,500 = £3,300. This could also have been calculated as charge for leavers and expected leavers in current year £4,800 (100 shares × 40 [22 + 18] employees × £1.20) less reversal of expense in year 1 for reduction in anticipated final number of leavers £1,500 (100 shares × 15 [75 - 60] employees × £1.00). Dividends paid to other employees are recognised as a reduction in equity.

⁴ 100 shares × 480 employees in employment at start of year × £1.20.

⁵ 15 further employees have left. The cumulative expense for dividends paid to leavers is therefore £12,390 (£2,000 for leavers in year 1 (see 3 above) + 100 shares × 22 employees × [£1 + £1.20] = £4,840 for leavers in year 2 + 100 shares × 15 employees × [£1 + £1.20 + £1.50] = £5,550 for leavers in year 3). A cumulative expense of £10,800 (see 3 above) was recognised by the end of year 2, so the charge for year 3 is £12,390 - £10,800 = £1,590. This could also have been calculated as charge for leavers in current year £2,250 (100 shares × 15 employees × £1.50) less reversal of expense in years 1 and 2 for reduction in final number of leavers as against estimate at end of year 2 £660 (100 shares × 3 [60 - 57] employees × [£1.00 + £1.20]). Dividends paid to other employees are recognised as a reduction in equity.

⁶ 100 shares × 458 employees in employment at start of year × £1.50.

16.4 Awards vesting or exercisable on an exit event or change of control (flotation, trade sale etc.)

Entities frequently issue awards connected to a significant event such as a flotation, trade sale or other change of control of the business. It may be that an award that would otherwise be equity-settled automatically becomes cash-settled if such an event crystallises and the entity has no choice as to the method of settlement (as discussed at 11.3 above).

However, it may also be the case that an award vests only on such an event, which raises various issues of interpretation, as discussed below.

The sections below must be read together with the more general discussions elsewhere in this chapter (as referred to in the narrative below) on topics such as grant date, vesting period, vesting and non-vesting conditions and classification as equity-settled or cash-settled. References to flotation are required to be read as also including other exit events.

16.4.1 Grant date

Sometimes awards are structured so that they will vest on flotation, or so that they will vest on flotation subject to further approval at that time. For awards in the first category, grant date as defined in FRS 102 will be the date on which the award is first communicated to employees (subject to the normal requirements of Section 26 relating to a shared understanding, offer and acceptance, as discussed at 6.3 above). For awards in the second category, grant date will be at or around the date of flotation, when the required further approval is given.

This means that the cost of awards subject to final approval at flotation will generally be significantly higher than that of awards that do not require such approval. Moreover, as discussed further at 6.3 above, it may well be the case that employees begin rendering service for such awards before grant date (e.g., from the date on which the entity communicates its intention to make the award in principle). In that case, the entity would need to consider making an initial estimate of the value of the award for the purpose of recognising an expense from the date services have been provided and continually re-assess that value up until the actual grant date. As with any award dependent on a non-market vesting condition, an expense would be recognised only to the extent that the award is considered likely to vest. The classification of a requirement to float as a non-market vesting condition is discussed further at 16.4.3 below.

16.4.2 Vesting period

Many awards that vest on flotation have a time limit – in other words, the award lapses if flotation has not occurred on or before a given future date. In principle, as discussed at 7.2.3 above, when an award has a variable vesting period due to a non-market performance condition, the reporting entity is required to make a best estimate of the likely vesting period at each reporting date and calculate the Section 26 expense on the basis of that best estimate with the final cumulative charge based on the grant date fair value of the actual outcome. Such an approach appears to be taking account of a non-market performance condition in determining the fair value of an award where an award has a variable vesting period, contrary to the basic principle of paragraph 9 of Section 26. However, it is not the vesting conditions that are being taken into account *per se*, but the fact that the varying vesting periods will give rise to different lives for the award. That said, the impact of the time value of the different lives on the fair value of the award will, in many cases, be insignificant and it will therefore be a matter of judgement as to how precisely an entity switches from one fair value to another.

In practice, the likely timing of a future flotation is notoriously difficult to assess months, let alone years, in advance. In such cases, it would generally be acceptable simply to recognise the cost over the full potential vesting period until there is real clarity that a shorter period may be more appropriate. However, in making the assessment of the likelihood of vesting, it is important to take the company's circumstances into account. The likelihood of an exit event in the short- to medium-term is perhaps greater for a company owned by private equity investors seeking a return on their investment than for a long-established family-owned company considering a flotation.

It is worth noting that once an exit event becomes likely, the Section 26 expense will in some cases need to be recognised over a shorter vesting period than was originally envisaged as the probability of the exit event occurring will form the basis at the reporting date of the estimate of the number of awards expected to vest (see also the discussion at 7.2.3 and 8.6 above).

How we see it

To summarise the above, when an award has a variable vesting period due to a non-market performance condition, the reporting entity makes a best estimate of the likely vesting period at each reporting date and calculates the Section 26 charge on the basis of that best estimate, with the final cumulative expense based on the grant date fair value of the actual outcome. Judgement would need to be applied, and it is important to take the company's circumstances into account, as the likelihood of an exit event in the short- to medium-term is perhaps greater for a company owned by private equity investors seeking a return on their investment than for a long-established family-owned company considering a flotation. In addition to determining the vesting period, judgement would also be needed to determine the likelihood of vesting. Once the exit event becomes likely, the Section 26 expense may need to be recognised over a shorter vesting period than was originally envisaged as the probability of the exit event occurring will form the basis at the reporting date of the estimate of the number of awards expected to vest.

16.4.3 Is flotation or sale a vesting condition or a non-vesting condition?

There was debate in the past about whether a requirement for a flotation or sale to occur in order for an award to vest was a vesting condition or a non-vesting condition. The argument for it being a non-vesting condition was that flotation or sale may occur irrespective of the performance of the entity. The counter-argument was essentially that the price achieved on flotation or sale, which typically affects the ultimate value of the award (see 16.4.4 below), reflects the performance of the entity and is therefore a non-market performance condition (provided there is an associated service condition).

Based on discussions on the interpretation of IFRS 2 by the IASB and the IFRS IC, it appears appropriate to treat a requirement to float or be sold as a performance vesting condition rather than as a non-vesting condition, provided there is also a service condition for the duration of the performance condition. If the service period is not at least as long as the duration of the flotation or sale condition, the condition will need to be accounted for as a non-vesting condition.

How we see it

As discussed at 4.1 and 4.2 above, it is clear that a performance target period cannot extend beyond the end of the associated service period in order for the definition of a performance vesting condition to be met. Therefore, the flotation or sale condition will be treated as a non-vesting condition, rather than as a vesting condition, if the service period is not at least as long as the duration of the flotation or sale condition.

It is possible that in a share-based payment transaction a flotation or sale condition can be both a performance vesting condition and a non-vesting condition in an award that vests in instalments, 'graded vesting' (see 7.2.2 above). Where the share-based payment transaction vests in instalments and the service period is not at least as long as the duration of the flotation or sale condition, that condition will be treated as a non-vesting condition (see 4.2 above). In contrast, when the service condition is the same duration as the flotation and sale condition, that condition will be treated as non-market performance condition (see 4.1 above), this is demonstrated in Illustration 16-2 below.

Illustration 16-2: Award vesting in instalments with a flotation or sale condition

An entity issues an award to employees at the beginning of year 1 with gradual vesting over five years. The award will vest 20% in each year of service over the five-year period. In addition to the service condition there is a flotation or sale condition that must be met at the end of year 5. As discussed in section 7.2.2 above, for an award that vests in instalments, graded vesting accounting can be applied (or a simpler alternative to graded vesting accounting may be acceptable). If graded vesting accounting is applied, each instalment will be treated as five different tranches because each tranche has a different vesting period with different fair values. The flotation or sale condition will be a non-vesting condition and factored in the grant date fair value of tranches 1 to 4 as the service period is not as long as the duration of the flotation or sale condition. However, for tranche 5, the service and performance conditions are for the same duration, therefore the flotation or sale condition will be treated as a non-market performance condition and not factored into the grant date fair value but factored into the number of awards that will vest for tranche 5.

The impact of treating the flotation or sale condition differently, results in an expense being recognised for the first four tranches regardless of the flotation or sale condition being met, so long as the service condition is met, as the likelihood of not meeting the flotation or sale condition is factored into the grant date fair value. In contrast for tranche 5 if the flotation or service condition is not met but the service condition is met, no expense will be recognised as the non-market performance condition has not been met.

The flotation or sale condition even though is deemed to relate to the entity's own operations and therefore generally classified as a performance condition; it will sometimes be concluded that fulfilment of the condition is outside the control of both the entity and the counterparty. The settlement of an award in equity or cash might depend on the outcome of the condition i.e., there might be either cash- or equity-settlement that is entirely contingent on the exit event. Such contingent arrangements are discussed at 11.3 above.

16.4.4 Awards requiring achievement of a minimum price on flotation or sale

Some awards with a condition contingent on flotation (or another similar event) vest only if a minimum price per share is achieved. For example, an entity might grant all its employees share options, the vesting of which is contingent upon a flotation or sale of the shares at a price of at least £5 per share within five years, and the employee still being in employment at the time of the flotation or sale.

Taken alone, the requirement for a flotation or sale to occur is a non-market performance condition (see further below and at 16.4.3 above). However, if a minimum market price has to be achieved, the question arises as to whether, in addition to the service requirement, such an award comprises:

- A single market performance condition (i.e., float or sell within five years at a share price of at least £5).
- Or
- Two conditions:
 - A market performance condition (share price at time of flotation or sale of at least £5).
 - And
 - A non-market performance condition (flotation or sale achieved within five years).

The significance of this is the issue discussed at 7.3 above, namely that an expense must always be recognised for all awards with a market condition, if all the non-market vesting conditions are satisfied, even if the market condition is not. In either case, however, there is a market condition which needs to be factored into the valuation of the award.

If the view is that 'flotation or sale at £5 within five years' is a single market condition, the entity will recognise an expense for the award for all employees still in service at the end of the five-year period, since the sole non-market vesting condition (i.e., service) will have been met. Note that this assumes that the full five-year period is considered the most likely vesting period at grant date (see 16.4.2 above).

If, on the other hand, the view is that 'flotation or sale within five years' and 'flotation or sale share price at £5' are two separate conditions, and no flotation or sale occurs, no expense will be recognised since the performance element of the non-market vesting condition (i.e., 'flotation or sale within five years') has not been satisfied. However, even on this second analysis, if a sale or flotation is achieved at a price less than £5, an expense must be recognised, even though the award does not truly vest, since the non-market condition (i.e., 'flotation or sale within five years' with its associated service requirement) will have been met.

How we see it

In our view, the appropriate analysis in the example above is to regard 'flotation or sale within five years' and 'flotation or sale share price at £5' as two separate conditions.

The example above assumes that there is a service condition equal in duration to the other condition attached to the award and hence the analysis above only considers vesting conditions. If the fact pattern were such that there was no service condition, or a service condition that was of a shorter duration than the other conditions, then those conditions would need to be treated as non-vesting conditions rather than as performance vesting conditions.

16.4.5 Awards 'purchased for fair value'

As noted at 3.4.3 above, entities that are contemplating a flotation or trade sale may invite employees to subscribe for shares (often a special class of share) for a relatively nominal amount. In the event of a flotation or trade sale occurring, these shares may be sold or will be redeemable at a substantial premium. It is often argued that the initial subscription price paid represents the fair value of the share at the time, given the inherent high uncertainty as to whether a flotation or trade sale will in fact occur.

The premium paid on the shares in the event of a flotation or trade sale will typically be calculated in part by reference to the price achieved. The question therefore arises as to whether such arrangements fall within the scope of Section 26. It might be argued for example that, as the employee paid full fair value for the award at issue, there has been no share-based payment and, accordingly, the award is not within the scope of Section 26.

How we see it

In our view, in order to determine whether the arrangement, or a portion thereof, falls within the scope of Section 26, it is necessary to consider whether the arrangement has features that would not be expected in 'normal' equity transactions, in particular, a requirement for the holder of the shares to remain in employment until flotation or sale and/or individual buyback arrangements. If this is the case, regardless of the amount subscribed, the terms suggest that the shares are being awarded in connection with, and in return for, employee services and hence that the arrangement is within the scope of Section 26. This means that, even if the share-based payment transaction has no material fair value once the subscription price has been taken into account (and therefore gives rise to no FRS 102 expense), it will be necessary to make the disclosures required by Section 26.

Moreover, even if the amount paid by the employees can be demonstrated to be fair value for tax or other purposes, that amount would not necessarily meet the valuation requirements of Section 26. Specifically, a 'true' fair value would take into account non-market vesting conditions (such as a requirement for the employee to remain in employment until flotation or a trade sale occurs). However, a valuation for Section 26 purposes would not take such conditions into account (see 6.5 and 7.2.1 above) and would therefore typically be higher than the 'true' fair value.

Where the arrangement relates to a special class of share rather than ordinary equity shares, the underlying shares might well be classified under FRS 102 as a liability rather than as equity. However, if the redemption amount to be settled is linked to the flotation price of the 'real' equity, the arrangement will be a cash-settled share-based payment transaction under Section 26 (see 3.4.1 above).

It is common in such situations for the cost of satisfying any obligations to the holders of the special shares to be borne by shareholders rather than by the entity itself. This raises a number of further issues, which are discussed at 3.2.1 above and at 16.4.6 below.

The approach outlined in this section, i.e., that there will generally be no additional Section 26 expense to recognise when the counterparty subscribes for a share at fair value, is the approach most commonly applied in practice by entities. In this type of arrangement, the subscription price, or market value if lower, is often refundable to employees who leave employment before the shares vest.

How we see it

Where the subscription price, or market value if lower, is refundable to employees who leave employment before the shares vest, the amounts paid by the counterparty for the shares are generally classified as a liability by the entity until such time as the shares finally vest (at which point the cash paid will be treated as the proceeds of issuing shares).

16.4.6 'Drag along' and 'tag along' rights

An award might be structured to allow management of an entity to acquire a special class of equity at fair value (as in 16.4.5 above), but (in contrast to 16.4.5 above) with no redemption right on an exit event. However, rights are given:

- To any buyer of the 'normal' equity also to buy the special shares (sometimes called a 'drag along' right).
- To a holder of the special shares to require any buyer of the 'normal' equity also to buy the special shares (sometimes called a 'tag along' right).

Such schemes are particularly found in entities where the 'normal' equity is held by a provider of venture capital, which will generally be looking for an exit in the medium term.

It may well be that, under the scheme, the entity itself is required to facilitate the operation of the drag along or tag along rights, which may involve the entity collecting the proceeds from the buyer and passing them on to the holder of the special shares.

This raises the issue of whether such an arrangement is equity-settled or cash-settled. The fact that, in certain circumstances, the entity is required to deliver cash to the holder of a share suggests that the arrangement is an award requiring cash settlement in specific circumstances, the treatment of which is discussed at 11.3 above.

However, if the terms of the award are such that the entity is obliged to pass on cash to the holder of the share only if, and to the extent that, proceeds are received from an external buyer, in our view the arrangement may be economically no different to the 'broker settlement' arrangements typically entered into by listed entities.

Under such broker settlement arrangements, the entity may either sell employees' shares in the market on the employees' behalf or, more likely, arrange for a third-party broker to do so. A sale of shares on behalf of an employee is undertaken by the entity as agent and does not give rise to an increase in equity and an expense, although a share-based payment expense will be recognised for the award of shares. Such an arrangement does not of itself create a cash-settled award, provided that the entity has not created any obligation to the employees. If, however, the entity has either created an expectation among employees that it will step in to make good any lack of depth in the market or has indeed itself contracted to repurchase the shares in question, it may well mean that analysis as a cash-settled scheme is more appropriate. However, as the entity may enter into much the same transaction with a broker whether it is selling shares on its own behalf or on behalf of its employees, the challenge is for the entity to be able to demonstrate the true economic nature of the transaction.

Following on from the approach to broker settlement arrangements outlined above, an arrangement where the employees' shares are being sold to an external buyer could be regarded as equity-settled because the entity's only involvement as a principal is in the initial delivery of shares to employees. However, consideration must be given to all the factors that could suggest that the scheme is more appropriately regarded as cash-settled.

In making such an assessment, care needs to be taken to ensure that the precise facts of an arrangement are considered. For example, a transaction where the entity has some discretion over the amount of proceeds attributable to each class of shareholder might indicate that it is inappropriate to treat the entity simply as an agent in the cash payment arrangement. It might also be relevant to consider the extent to which, under relevant local law, the proceeds received can be 'ring fenced' so as not to be available to settle other liabilities of the entity.

It is also the case that arrangements that result in employees obtaining similar amounts of cash can be interpreted very differently under Section 26 depending on how the arrangement is structured and whether, for example:

- The entity is required to pay its employees cash on an exit (having perhaps held shares itself via a trust and those shares having been subject to 'drag along' rights).
- Or
- The employees themselves have held the right to equity shares on a restricted basis with vesting, and 'drag along' rights, taking effect on a change of control and the employees receiving cash for their shares.

How we see it

For 'drag along' and 'tag along' rights, if for example, there is no discretion over the amount of proceeds attributable to each class of shareholder and the entity is obliged to pass on cash received from the external buyer to the holder of the shares, in our view, the arrangement is economically no different to the broker settlement arrangements typically entered into by listed entities. This could allow the arrangement to be regarded as equity-settled as the entity's only involvement as principal is in the initial delivery of the shares. The appropriate accounting treatment in such cases requires a significant amount of judgement based on the precise facts and circumstances.

16.5 Shares used as a currency of payment

Settlement of share-based payment arrangements can take many forms, and in some instances the market value of shares is used as currency to settle the share-based payment transaction. Section 26 contains little guidance on how to measure such arrangements. Awards of equity instruments to a fixed monetary value, as discussed at 6.3.5 above, is one example where the market value of the equity instrument at vesting date is used as a currency to settle an award to a fixed value. An award issued to employees of a subsidiary or business unit which is settled by reference to the fair value of shares in another group entity is another example where the market value of shares is used as a currency to settle the share-based payment transaction (see discussion below).

16.5.1 Awards assessed on the market value of a subsidiary or business unit and settled by reference to the fair value of shares in the parent entity

Some entities implement share-based remuneration schemes which aim to reward employees by reference to the 'market' value of the equity of the business unit for which they work provided service conditions are met. This could arise where the Group considers the parent's share price to be a somewhat blunt instrument for measuring the performance of the employees of a particular subsidiary or business unit. Indeed, it is not difficult to imagine situations in which a particular subsidiary might perform well but the parent's share price might be dragged down by other factors, or conversely where the parent's share price might rise notwithstanding poor results for that subsidiary. The detail of such schemes varies, but they generally take the form as follows:

- At grant date, the employee is awarded a (real or notional) holding in the equity of the employing subsidiary, the market value of which is measured at grant date and the listed parent will convert the market value of those subsidiary shares at vesting date, into equal value of parent shares to settle the award (scenario 1).
- Or
- The employee is granted an award of as many shares of the listed parent as have a value, at a specified future date (often at, or shortly after, the end of the vesting period but sometimes at a later date), equal to the increase over the vesting period in the market value of the employee's (notional) holding in the equity of the employing subsidiary, otherwise known as share-settled share appreciation rights (akin to an option granted to the employee that is settled in the parent's shares) (scenario 2).

In the two scenarios above, the parent's shares are used as a currency to settle an arrangement with the subsidiary employees that is not dependent on the parent's share price. The share price of the parent's shares is used to determine the number of parent shares that will be issued on settlement. Put another way, the parent's share price (either at grant date or subsequently) does not affect the measurement of the award (see 6.3.5 above).

After grant date, Section 26 requires remeasurement of an equity-settled share-based payment transaction only for changes in the service condition being met and other non-market vesting conditions. There is no remeasurement after grant date for market conditions and non-vesting conditions. Therefore, an important feature in accounting for the awards in the scenarios outlined above is to assess, whether the basis on which the subsidiary's equity is valued truly yields a market price (or value) to determine the type of performance conditions attached to the awards.

If the basis on which the subsidiary's equity is valued yields a 'market value', the awards in the two scenarios are considered as containing only a service condition, and those awards would not be considered as containing a non-market vesting condition or market condition (there is no specific target share price to be achieved). The awards are measured at grant date using valuation inputs related to the subsidiary's share price and are not remeasured. The fair value at vesting date is used as a conversion feature to determine the number of parent shares to be received as an exit mechanism, and the employee is receiving 'value for value'. The expense recognised is only adjusted for the failure to meet vesting conditions other than market conditions (e.g., service conditions).

If the 'market value' of the subsidiary is based on a constant formula (e.g., an EBITDA multiple), an assessment is required whether that formula provides a good surrogate for the market value of the subsidiary on an ongoing basis (see 3.4.5 above). If deemed not to provide a good surrogate for the market value, the awards outlined in the scenarios above could then be considered as containing a non-market vesting condition as the constant formula used by the subsidiary will result in variable number of shares that will vest based on the performance of that entity (see 4.1 above). This would then result in an expense recognised that is revised at each reporting date consistent with the accounting for non-market vesting conditions. If the formula used to determine the number of parent's shares to be delivered can be determined sometime after the employee has satisfied the service vesting condition, then that formula driven condition would be treated as a non-vesting condition (see 4.2 above). In contrast to the approach used to measure the non-market vesting condition, the non-vesting condition is taken into account in estimating the fair value of the award granted and not subsequently remeasured. The expense recognised is only adjusted for the failure to meet vesting conditions other than market conditions (e.g., service conditions).

How we see it

As noted above, where the parent's shares are used as a currency to settle a share-based payment arrangement with subsidiary employees based on the subsidiary equity instrument value in the scenarios above, the measurement of the award is not affected by the parent's share price.

In addition, the arrangement is not dependent on the parent's share price.

However, an important feature in accounting for the awards in the scenarios outlined above is to assess whether the basis on which the subsidiary's equity is valued truly yields a market price (or value) to determine the type of performance conditions attached to the awards and whether the awards contain non-vesting conditions.

17 First-time adoption and transitional provisions

17.1 Transitional provisions on first-time adoption of FRS 102

Section 35 sets out the transitional provisions for first-time adoption of FRS 102 and is discussed in Chapter 37. Issues arising from the specific requirements of Section 35 in relation to share-based payment transactions are discussed below.

Subject to the special provisions outlined below, a first-time adopter is not required to apply Section 26:

- To equity instruments (including the equity component of share-based payment transactions previously treated as compound instruments) that were granted before the date of transition to FRS 102.
- To liabilities arising from share-based payment transactions that were settled before the date of transition to FRS 102. *[FRS 102.35.10(b)].*

There are special provisions for first-time adopters of FRS 102 that have previously applied IFRS 2 or FRS 101 which are discussed further below.

Where a first-time adopter has previously applied IFRS 2 or FRS 101 Reduced Disclosure Framework, it must “apply either IFRS 2 (as applicable) or Section 26 of this FRS at the date of transition” to equity instruments (including the equity component of share-based payment transactions previously treated as compound instruments) granted before the date of transition to FRS 102. Therefore, unlike the full exemption from accounting for pre-transition grants given to those first-time adopters that have not previously accounted for share-based payments, those who have previously applied IFRS 2 are required to continue accounting for ongoing awards either under the previous standard or under Section 26.

[FRS 102.35.10(b)].

How we see it

In our view, the intention is simply that an entity may complete the accounting for a pre-transition grant using the original grant date fair value and it is not intended that the application of Section 26 to such grants must necessarily result in a remeasurement. However, there is nothing in paragraph 10(b) of Section 35 to prohibit such a remeasurement (for example, as a result of applying the group allocation arrangements of paragraph 16 of Section 26).

FRS 102 and IFRS 2 are not identical for awards where there is a choice of settlement but are closely aligned (see 11 above), therefore it is less likely that the classification of a share-based payment transaction as equity-settled or cash-settled will differ depending on whether an entity is applying FRS 102 or IFRS 2. If a classification difference does still result from adoption of FRS 102, it appears that an entity could continue with the IFRS 2 classification for existing awards, even if new grants would be classified differently under FRS 102.

There is a lack of clarity in relation to certain other aspects of the requirements for those entities with share-based payments to which IFRS 2 or FRS 101 has previously been applied but where the accounting treatment of such arrangements differs, or could differ, under Section 26. For example, it is unclear whether a company which has recognised an expense for a transaction for which no apparent consideration has been received has a choice as to whether it carries on doing so (given that there is no general equivalent of paragraph 13A of IFRS 2 (see 3.2.3 above)).

18 Summary of GAAP differences

The differences between FRS 102 and IFRS are set out below.

	FRS 102	IFRS 2
Scope: Definitions and transactions within scope (see 2.1 above)	FRS 102 does not provide guidance or examples in areas such as: 1. The meaning of 'goods' in 'goods and services' when used in the definition of a share-based payment transaction. 2. Vested transactions. 3. Transactions with shareholders as a whole. 4. Interaction with accounting for financial instruments. Or 5. Contribution of a business on formation of a joint venture.	IFRS 2 has specific guidance or examples in these areas.
Recognition: Accounting after the vesting date (see 2.2.1 above)	FRS 102 includes no guidance on accounting for awards after vesting.	IFRS 2 specifically prohibits a reversal of the expense once awards have vested.
Recognition: Equity instruments vesting in instalments ('graded' vesting) (see 2.2.2 above)	FRS 102 does not explicitly require the graded vesting approach be used for equity instruments vesting in instalments.	The implementation guidance of IFRS 2 supports that the graded vesting accounting approach is applied.
Measurement of equity-settled transactions: Non-vesting conditions (see 2.3.1 above)	FRS 102 contains no definition of conditions that are not vesting conditions, but the example provided is similar to that provided for non-vesting conditions in IFRS 2.	IFRS 2 does not include a definition of a 'non-vesting condition' but includes examples of such conditions as part of the Implementation Guidance.
Employees and others providing similar services (see 2.3.2 above)	FRS 102 offers no additional guidance on the meaning of 'others providing similar services'.	This term is explained/defined in Appendix A to IFRS 2.
Valuation methodology (see 2.3.3 above)	FRS 102 draws a more explicit distinction than IFRS 2 between the valuation of shares and the valuation of options and appreciation rights. It does not mandate use of an option pricing model in the absence of market price information.	IFRS 2 requires the use of a market price or an option pricing model for the valuation of equity-settled transactions. The standard includes guidance in Appendix B about the selection and application of option pricing models.
Awards where fair value cannot be measured reliably (see 2.3.4 above)	FRS 102 contains no specific requirements and assumes that it will always be possible to fair value an award.	IFRS 2 includes an approach based on intrinsic value to be used in 'rare cases' where an entity is unable to measure fair value reliably.

FRS 102		IFRS 2
Cancellation of awards (see 2.3.5 above)	FRS 102 contains no specific requirements to mirror those in IFRS 2.	IFRS 2 makes clear that an award may be cancelled either by the entity or the counterparty and that a failure to meet non-vesting conditions must, in certain situations, be considered cancellation of an award.
Replacement awards following a cancellation or settlement (see 2.3.6 above)	FRS 102 includes no guidance on the accounting treatment of equity-settled awards to replace a cancelled award during the vesting period.	Under IFRS 2 replacement awards may be accounted for on the basis of their incremental fair value rather than being treated as a completely new award.
Share-based payment transactions with cash alternatives: Counterparty has choice of settlement in equity or cash (see 2.4.1 above)	FRS 102 requires cash-settled accounting unless there is no commercial substance to the amount of the cash settlement alternative.	IFRS 2 requires a split accounting approach, splitting the arrangement into equity-settled and cash-settled components.
Settlement of an award with cash alternatives when the entity has choice of settlement (see 2.4.2 above)	There is no guidance in FRS 102 on how to account for the settlement in equity of an award accounted for as cash-settled. FRS 102 provides guidance on how to account for the settlement in cash of an award accounted for as equity-settled, requiring an additional expense when the payment exceeds the fair value of the equity instruments that would otherwise have been issued at settlement date.	IFRS 2 does not specifically address how to account for the settlement in equity of an award accounted for as cash-settled, however other provisions in IFRS 2 provides guidance. When an award is accounted for as equity-settled, but the entity then elects the settlement alternative with the higher value at that date, the excess value provided is recognised as an additional expense.
Modification of award from equity-settled to cash-settled and vice versa (see 2.5 above)	FRS 102 contains no guidance.	IFRS 2 has no specific guidance when an equity-settled award is modified to cash-settled. IFRS 2 provides specific guidance when a cash settled award is modified to equity-settled. The equity-settled award is measured at modification date, with a credit to equity to the extent goods or services have been received, the liability is derecognised, with the difference between the carrying amount of the liability derecognised and the amount recognised in equity on modification date recognised

FRS 102		IFRS 2
		immediately in profit or loss. This accounting approach also applies when a cash-settled award is cancelled and an equity-settled granted is identified as a replacement for that cancelled cash-settled award.
Alternative accounting treatment for group plans (see 2.6 above)	Where a share-based payment award is granted by an entity to the employees of one or more group entities, those group entities are permitted, as an alternative to the measurement requirements of FRS 102, to recognise the share-based payment expense on the basis of a reasonable allocation of the group expense.	IFRS 2 has no corresponding alternative treatment.
Unidentifiable goods or services (see 2.7 above)	In the absence of specifically identifiable goods or services, other circumstances may indicate that goods or services have been (or will be) received, which is consistent with IFRS 2. But Section 26 then appears to restrict the requirements for certain government-mandated plans where the goods or services received or receivable are not identifiable and requires the award to be valued on the basis of the equity instruments rather than the goods or services.	Under IFRS 2, the scope is not restricted to government-mandated plans.
Disclosures (see 2.8 above)	The disclosure requirements of FRS 102 are generally derived from, but less extensive than, those of IFRS 2. However, there are certain specific requirements that are not found in IFRS 2. There are disclosure exemptions for certain entities.	There are no exemptions from disclosure under IFRS 2.

Appendix A – Defined terms

Extract from FRS 102

Appendix I Glossary

asset	A present economic resource controlled by the entity as a result of past events.
business combination	The bringing together of separate entities or businesses into one reporting entity.
carrying amount	The amount at which an asset, a liability or equity is recognised in the statement of financial position.
cash	Cash on hand and demand deposits.
cash-settled share-based payment transaction	A share-based payment transaction in which the entity acquires goods or services by incurring a liability to transfer cash or other assets to the supplier of those goods or services for amounts that are based on the price (or value) of the equity instruments (including shares and share options) of the entity or another group entity.
control	The power to govern the financial and operating policies of an entity so as to obtain benefits from its activities.
equity	The residual interest in the assets of the entity after deducting all its liabilities.
equity-settled share-based payment transaction	A share-based payment transaction in which the entity: (a) receives goods or services as consideration for its own equity instruments (including shares or share options); or (b) receives goods or services but has no obligation to settle the transaction with the supplier.
expenses	Decreases in assets or increases in liabilities that result in decreases in equity, other than those relating to distributions to equity investors.
fair value	fair value is the amount for which an asset could be exchanged, a liability settled or an equity instrument granted could be exchanged, between knowledgeable, willing parties in an arm's length transaction. ²³²
financial position	The relationship of the assets, liabilities and equity of an entity as reported in the statement of financial position.
grant date	The date at which the entity and another party (including an employee) agree to a share-based payment arrangement, being when the entity and the counterparty have a shared understanding of the terms and conditions of the arrangement. At grant date the entity confers on the counterparty the right to cash, other assets, or equity instruments of the entity, provided the specified vesting conditions, if any, are met. If that agreement is subject to an approval process (for example, by shareholders), grant date is the date when that approval is obtained.
group	A parent and all its subsidiaries.
impracticable	Applying a requirement is impracticable when the entity cannot apply it after making every reasonable effort to do so.
liability	A present obligation of the entity to transfer an economic resource as a result of past events.

²³² [This definition of 'Fair value' is as defined in paragraph 1C of Section 26 which differs from the general definition of fair value in FRS 102 Appendix I Glossary.](#)

market vesting condition	A performance condition upon which the exercise price, vesting or exercisability of an equity instrument depends that is related to the market price (or value) of the entity's equity instruments (or the equity instruments of another entity in the same group), such as attaining a specified share price or a specified amount of intrinsic value of a share option, or achieving a specified target that is based on the market price (or value) of the entity's equity instruments (or the equity instruments of another entity in the same group) relative to an index of market prices of equity instruments of other entities. A market vesting condition requires the counterparty to complete a specified period of service (ie a service condition); the service requirement can be explicit or implicit.
measurement	The process of determining the monetary amounts at which the elements of the financial statements are to be recognised and carried in the statement of financial position and statement of comprehensive income.
net settlement feature	A term of a share-based payment arrangement that permits or requires the entity to withhold the number of equity instruments equal to the monetary value of the employee's tax obligation from the total number of equity instruments that otherwise would have been issued to the employee upon exercise (or vesting) of the share-based payment. Such terms may exist when tax laws or regulations oblige an entity to withhold an amount for an employee's tax obligation associated with a share-based payment and transfer that amount, normally in cash, to the tax authority on the employee's behalf.
performance condition	A vesting condition that requires: (a) the counterparty to complete a specified period of service (i.e., a service condition); the service requirement can be explicit or implicit; and (b) specified performance target(s) to be met while the counterparty is rendering the service required in (a). The period of achieving the performance target(s): (a) shall not extend beyond the end of the service period; and (b) may start before the service period on the condition that the commencement date of the performance target is not substantially before the commencement of the service period. A performance target is defined by reference to: (a) the entity's own operations (or activities) or the operations or activities of another entity in the same group (ie a non-market vesting condition); or (b) the price (or value) of the entity's equity instruments or the equity instruments of another entity in the same group (including shares and share options) (i.e., a market vesting condition). A performance target might relate either to the performance of the entity as a whole or to some part of the entity (or part of the group), such as a division or an individual employee.
profit or loss	The total of income less expenses, excluding the components of other comprehensive income.
recognition	The process of capturing for inclusion in the statement of financial position or statement of comprehensive income an item that meets the definition of one of the elements of financial statements: (a) assets; (b) liabilities; (c) equity; (d) income; or (e) expenses.

	Recognition involves depicting the item in one of those statements - either alone or in aggregation with other items - in words and by a monetary amount, and including that amount in one or more totals in that statement.
reporting date	The end of the latest period covered by financial statements or by an interim financial report.
service condition	A vesting condition that requires the counterparty to complete a specified period of service during which services are provided to the entity. If the counterparty, regardless of the reason, ceases to provide service during the vesting period, it has failed to satisfy the condition. A service condition does not require a performance target to be met.
share-based payment	The equity instruments (including shares and share options), cash or other assets to which a counterparty may become entitled in a share-based payment transaction.
share-based payment arrangement	An agreement between the entity (or another group entity or any shareholder of any group entity) and another party (including an employee) that entitles the other party to receive: (a) cash or other assets of the entity for amounts that are based on the price (or value) of equity instruments (including shares or share options) of the entity or another group entity; or (b) equity instruments (including shares or share options) of the entity or another group entity, (c) provided the specified vesting conditions, if any, are met.
share-based payment transaction	A transaction in which the entity: (a) receives goods or services from the supplier of those goods or services (including an employee) in a share-based payment arrangement; or (b) incurs an obligation to settle the transaction with the supplier in a share-based payment arrangement when another group entity receives those goods or services.
share option	A contract that gives the holder the right, but not the obligation, to subscribe to the entity's shares at a fixed or determinable price for a specific period of time.
vest	Become an entitlement. Under a share-based payment arrangement, a counterparty's right to receive cash, other assets or equity instruments of the entity vests when the counterparty's entitlement is no longer conditional on the satisfaction of any vesting conditions.
vesting conditions	The conditions that determine whether the entity receives the services that entitle the counterparty to receive cash, other assets or equity instruments of the entity, under a share-based payment arrangement. Vesting conditions are either service conditions or performance conditions.
vesting period	The period during which all the specified vesting conditions of a share-based payment arrangement are to be satisfied.

Overview

Section 27 *Impairment of Assets* ('Section 27') applies to the impairment of assets and the recognition of impairment of losses, except in relation to:

- Contract assets and assets arising from costs to obtain or fulfil a contract
- Deferred tax assets
- Assets arising from employee benefits
- Financial assets within the scope of Section 11 *Basic Financial Instruments* or Section 12 *Other Financial Instruments Issues*
- Investment property measured at fair value
- Biological assets related to agricultural activity measured at fair value less costs to sell

Deferred acquisition costs and intangible assets arising from contracts within the scope of FRS 103 *Insurance Contracts*.

What you need to know

- Section 27 sets out the accounting and reporting requirements for the impairment of inventories and most non-current non-financial assets.
- For assets other than inventories, Section 27 specifies when an entity needs to perform an impairment test, how to perform it, how impairment loss and reversals are recognised, and the related disclosures.
- Section 27 requires entities to assess at each reporting date whether there is any indication that an asset may be impaired. Entities are only required to carry out an impairment test if there is an indication of impairment. An entity is not required to perform an impairment test if there is no indication of impairment.
- The purpose of the impairment test is to ensure that tangible and intangible assets, including goodwill, are not carried at a figure greater than their recoverable amount. This recoverable amount is compared with the carrying value of the asset to determine if the asset is impaired.
- Recoverable amount is defined as the higher of fair value less costs to sell (FVLCS) and value in use (VIU); the general principle being that an asset must not be carried at more than the amount it will raise, either from selling it now or from using it.
- In many cases assets will be tested for impairment at a cash generating unit ('CGU') level.
- Entities must assess inventories for impairment at the end of each reporting period. Inventories are impaired if their carrying value exceeds their selling price less costs to complete and sell. Impairment of inventories is discussed in Chapter 16 at 3.3.

1 Introduction

In principle an asset is impaired when an entity will not be able to recover that asset's balance sheet carrying value, either through use or sale. If circumstances arise which indicate assets might be impaired, a review must be undertaken of their cash generating abilities either through use (value in use) or sale (fair value less costs to sell). This review will produce an amount (recoverable amount) which is compared with the asset's carrying value. If the carrying value is higher, the difference must be written off as an impairment loss.

These principles are consistent with those under IAS 36 *Impairment of Assets*, although there are some differences in application as discussed at 2 below. The relevant provisions are set out within Section 27 *Impairment of Assets* and are discussed at 3 to 9 below.

2 Comparison between Section 27 and IFRS

2.1 Scope

The scope of Section 27 includes inventories unlike IAS 36. The requirements for impairment of inventories under IFRS are dealt with in IAS 2 *Inventories*. Differences between IAS 2 and Section 27 are discussed in Chapter 16.

The scope of Section 27 is discussed at 3.1 below.

2.2 Timing of impairment tests

On an annual basis, entities must consider whether there are indicators of impairment in respect of all assets within the scope of Section 27. Entities need only undertake a full impairment test when such indicators are found. Indicators of impairment are discussed at 4.3 below.

This differs to IAS 36, which requires annual impairment tests for goodwill, indefinite-lived intangibles and intangibles not yet available for use. [IAS 36.10].

The timing of impairment tests under Section 27 is discussed at 4.1 below.

2.3 Allocation of goodwill

Under both IAS 36 and Section 27, goodwill acquired in a business combination is allocated to each of the acquirer's CGUs that are expected to benefit from the acquisition, whether or not the acquiree's other assets or liabilities are assigned to those units. [IAS 36.80, FRS 102.27.25].

However, if it is not possible to allocate goodwill to a CGU (or group of CGUs) non-arbitrarily, Section 27 contains provisions that allow entities to test for impairment by determining the recoverable amount of either the acquired entity as a whole (if goodwill relates to a non-integrated acquired entity) or the entire group of entities, excluding non-integrated entities (if goodwill relates to an integrated entity).

[FRS 102.27.27]. IAS 36 contains no such provision. All goodwill must be allocated to a CGU (or group of CGUs).

The allocation of goodwill under Section 27 is discussed further at 5 below.

2.4 Disclosure differences

Section 27 requires less detailed disclosures than IAS 36. The specific disclosure requirements under Section 27 are discussed at 9 below.

3 Requirements of Section 27 for impairment

3.1 Objective and scope

Section 27 explains that an impairment loss occurs when the carrying amount of an asset exceeds its recoverable amount, whether that is its value in use or its fair value less costs to sell. If, and only if, the recoverable amount of an asset is less than its carrying amount, the entity must reduce the carrying amount of the asset to its recoverable amount. That reduction is an impairment loss. [FRS 102.27.5].

Section 27 has a general application to all assets, but certain items are outside its scope: [FRS 102.27.1]

Extract from Section 27

- 27.1** This section applies to the impairment of assets and the recognition of impairment losses except in relation to:
- (a) contract assets and assets arising from costs to obtain or fulfil a contract (see paragraphs 23.121 to 23.123);
 - (b) deferred tax assets (see Section 29 *Income Tax*);
 - (c) assets arising from employee benefits (see Section 28 *Employee Benefits*);
 - (d) financial assets within the scope of Section 11 *Basic Financial Instruments* - or Section 12 *Other Financial Instruments Issues*;
 - (e) investment property measured at fair value (see Section 16 *Investment Property*);
 - (f) biological assets related to agricultural activity measured at fair value less costs to sell (see Section 34 *Specialised Activities*); and
 - (g) deferred acquisition costs and intangible assets arising from contracts within the scope of FRS 103 *Insurance Contracts*.

A parent, in its separate financial statements, must select and adopt a policy of accounting for the following investments at either cost less impairment; at fair value with changes in fair value recognised in other comprehensive income in accordance with Section 17 *Property, Plant and Equipment*; or, at fair value with changes in fair value recognised in profit or loss: [FRS 102.9.26]

- Subsidiaries (as defined in Section 9 *Consolidated and Separate Financial Statements*)
 - Associates (as defined in Section 14 *Investments in Associates*)
- And
- Jointly controlled entities (as defined in Section 15 *Investments in Joint Ventures*)

When entities make an accounting policy choice to account for these investments at cost less impairment, they fall within scope of Section 27 for impairment purposes. Similarly, where an entity that is not a parent makes an accounting policy choice to account for their investments in associates and jointly controlled entities at cost less impairment in their individual financial statements, as permitted by Sections 14 and 15 respectively, those investments also fall within scope of Section 27. [FRS 102.14.5, FRS 102.15.10]. Section 27 also includes within its scope investments in associates and joint ventures accounted for using the equity method in the consolidated accounts of a group. [FRS 102.14.8A, FRS 102.15.13]. The requirements of Sections 9, 14 and 15 are discussed further in Chapters 8, 17 and 18.

3.2 Impairment of inventories

While Section 27 includes specific requirements relating to the impairment of inventories, readers need to refer to Chapter 16 where we have chosen to discuss those requirements together with the other principles on the recognition and measurement of inventories.

4 Impairment of assets other than inventories

4.1 General principles

Section 27 requires entities to assess at each reporting date whether there is any indication that an asset may be impaired. Entities are only required to carry out an impairment test if there is an indication of impairment. [FRS 102.27.7].

As it might be unduly onerous for all assets in scope to be tested for impairment every year, Section 27 requires assets to be tested only if there is an indication that impairment may have occurred. If there are indications that the carrying amount of an asset may not be fully recoverable, an entity must estimate the recoverable amount. The 'indications' of impairment may relate to either the assets themselves or to the economic environment in which they are operated. Possible indicators of impairment are discussed further at 4.3 below.

The purpose of the impairment test is to ensure that tangible and intangible assets, including goodwill, are not carried at a figure greater than their recoverable amount. This recoverable amount is compared with the carrying value of the asset to determine if the asset is impaired.

Recoverable amount is defined as the higher of fair value less costs to sell (FVLCS) and value in use (VIU); the general principle being that an asset must not be carried at more than the amount it will raise, either from selling it now or from using it. [FRS 102.27.11].

Fair value less costs to sell essentially means what the asset could be sold for, having deducted costs of disposal (incrementally incurred direct selling costs). Value in use is defined in terms of discounted future cash flows, as the present value of the cash flows expected from the future use and eventual sale of the asset at the end of its useful life. As the recoverable amount is to be expressed as a present value, not in nominal terms, discounting is a central feature of the impairment test. Diagrammatically, this comparison between carrying value and recoverable amount, and the definition of recoverable amount, can be shown as follows:

It may not always be necessary to identify both VIU and FVLCS, as if either of VIU or FVLCS is higher than the carrying amount then there is no impairment and no write-down is necessary. Thus, if FVLCS is greater than the carrying amount then no further consideration need be given to VIU, or to the need for an impairment write down. The more complex issues arise when the FVLCS is not greater than the carrying value, and so a VIU calculation is necessary.

If, and only if, the recoverable amount of an asset is less than its carrying amount, the entity must reduce the carrying amount of the asset to its recoverable amount. That reduction is an impairment loss.

[FRS 102.27.5].

4.2 Key features of Section 27

Although an impairment test can theoretically be conducted on individual assets, this will not always be possible. Goodwill does not have a separate FVLCS at all. Even if FVLCSs can be obtained for individual items of property, plant and equipment, estimates of VIUs usually cannot be. This is because the cash flows necessary for the VIU calculation are not usually generated by single assets, but by groups of assets being used together.

Often, therefore, the impairment test cannot be done at the level of the individual asset, and it must be applied to a group of assets. Section 27 uses the term cash-generating unit (CGU) for the smallest identifiable group of assets that together have cash inflows that are largely independent of the cash inflows from other assets and that therefore can be the subject of a VIU calculation. This focus on the CGU is fundamental, as it has the effect of making the impairment test essentially a business-value test. The issue of testing individual assets or CGUs is discussed further at 4.4 below. Goodwill cannot always be allocated

to an individual CGU, but to a group of CGUs. Section 27 has guidance in respect of the level at which goodwill is tested for impairment which is discussed in section 5 below.

Assets and CGUs need only be tested for impairment if there are indicators of impairment. The 'indications' of impairment relate to either the assets themselves or to the economic environment in which they are operated. Section 27 gives examples of indications of impairment, which entities are required to consider, but these indicators are explicitly referred to as the minimum indications an entity needs to consider, and therefore the list is not intended to be exhaustive. [FRS 102.27.9]. As such the entity may identify other indications that an asset is impaired, that would equally trigger an impairment test.

An impairment loss occurs when the carrying amount ('CA') of an asset or CGU exceeds its recoverable amount ('RA'), whether that is its value in use ('VIU') or its fair value less costs to sell ('FVLCS').

Figure 1-1 below illustrates the key stages in the process of measuring and recognising impairment losses under Section 27. The key components of the diagram are discussed in detail in the remainder of this chapter.

Figure 1-1: Determining and accounting for impairment

The entity assesses at each reporting date, whether an impairment assessment is required and acts accordingly:

- PP&E classified as investment property (see Chapter 19), except where the investment property is rented to another group company and the reporting entity chooses to apply the cost model.
- Biological assets related to agricultural activity (see Chapter 36).
- If there is an indication that an asset could be impaired, an impairment test is required.
- An asset is assessed for impairment either at an individual asset level or the level of a CGU depending on the level at which the recoverable amount can be determined, meaning the level at which largely independent cash inflows are generated.

- If the impairment test is performed at a CGU level, the entity needs to be divided into CGUs.
- After the identification of the CGUs, the carrying amount of the CGUs is determined. Note, notional adjustments to the carrying value of the CGU are required when testing non-wholly owned CGUs with goodwill (see 5.4 below).
- If goodwill cannot be allocated to CGUs on a non-arbitrary basis, then it is allocated:
 - To the acquired entity in its entirety, if the goodwill relates to an acquired entity that has not been integrated.
 - Or
 - To the entire group of entities, excluding any entities that have not been integrated, if the goodwill relates to an entity that has been integrated.
- The recoverable amount of the asset or CGU assessed for impairment is established and compared with the carrying amount.
- The asset or CGU is impaired if its carrying amount exceeds its recoverable amount, defined as the higher of FVLCS and VIU.
- For assets carried at cost, any impairment loss is recognised as an expense in profit or loss.
- For assets carried at revalued amount, any impairment loss is recorded first against any previously recognised revaluation gains in other comprehensive income in respect of that asset.
- Impairment losses in a CGU are first recorded against goodwill and second, if the goodwill has been written off, on a *pro rata* basis to the carrying amount of other assets in the CGU. However, the carrying amount of an asset cannot be reduced below the highest of its FVLCS, VIU or zero. If the preceding rule is applied, further allocation of the impairment loss is made *pro rata* to the other assets of the unit (group of units).
- An impairment loss for an asset other than goodwill recognised in prior periods is reversed if and only if the reasons for the impairment loss have ceased to apply. An impairment loss recognised for goodwill is not reversed.

The application of the guidance in Section 27 may require significant judgement, for example in relation to the determination of the recoverable amount. Where this does not result in a materially different outcome, simplifications and approximations are applied in practice to reduce the complexity of the exercise.

4.3 Indicators of impairment

Identifying indicators of impairment is a crucial stage in the impairment assessment process. An entity must assess at each reporting date whether there is any indication that an asset may be impaired. If any such indication exists, the entity must estimate the recoverable amount of the asset. If there is no indication of impairment, it is not necessary to estimate the recoverable amount. [FRS 102.27.7]. Section 27 gives examples of indications of impairment, but makes it clear this is not an exhaustive list. They are divided into external and internal indications.

External sources of information:

- (a) During the period, an asset's market value has declined significantly more than would be expected as a result of the passage of time or normal use.
- (b) Significant changes with an adverse effect on the entity have taken place during the period, or will take place in the near future, in the technological, market, economic or legal environment in which the entity operates or in the market to which an asset is dedicated.
- (c) Market interest rates or other market rates of return on investments have increased during the period, and those increases are likely to affect materially the discount rate used in calculating an asset's value in use and decrease the asset's fair value less costs to sell.
- (d) The carrying amount of the net assets of the entity is more than the estimated fair value of the entity as a whole (such an estimate may have been made, for example, in relation to the potential sale of part or all of the entity).

Internal sources of information:

- (e) Evidence is available of obsolescence or physical damage of an asset.
- (f) Significant changes with an adverse effect on the entity have taken place during the period, or are expected to take place in the near future, in the extent to which, or manner in which, an asset is used or is expected to be used. These changes include the asset becoming idle, plans to discontinue or restructure the operation to which an asset belongs, plans to dispose of an asset before the previously expected date, and reassessing the useful life of an asset as finite rather than indefinite.

- (g) Evidence is available from internal reporting that indicates that the economic performance of an asset is, or will be, worse than expected. In this context economic performance includes operating results and cash flows. [FRS 102.27.9].

How we see it

While it is not specifically set out in Section 27, in our view the presence of indicators of impairment will not necessarily mean that the entity is required to calculate the recoverable amount of the asset. A previous calculation may have shown that an asset's recoverable amount was significantly greater than its carrying amount and it may be clear that subsequent events have been insufficient to eliminate this headroom. Similarly, previous analysis may show that an asset's recoverable amount is not sensitive to one or more of these indicators.

Clearly there is an important judgement to be made in deciding whether an impairment review is needed. As discussed below, once triggered, an impairment review can become a complicated process with serious implications for the financial statements of an entity. Many will therefore wish to avoid performing such a process and thus may wish to argue that there has not been an indication of impairment of significant consequence. Much might depend on the judgement of matters such as whether there has been a 'significant' adverse change in the market or just an adverse change.

Section 27 also explains that if there is an indication that an asset may be impaired, this may indicate that the entity needs to also review the remaining useful life, the depreciation (amortisation) method or the residual value for the asset and adjust it in accordance with the applicable section of FRS 102 (e.g., Section 17 *Property, Plant and Equipment* and Section 18 *Intangible Assets other than Goodwill*), even if no impairment loss is recognised for the asset. [FRS 102.27.10].

The complete destruction of a non-current asset would result in the derecognition of that asset rather than an impairment. That is because the complete destruction of an asset means that no future economic benefits are expected either from its use or disposal (except for disposal benefits, e.g., from metal content in the scrap). See Chapter 20 at 3.8 for more information on the derecognition guidance in Section 17.

4.3.1 Future performance

The specific wording in (g) above makes clear that FRS 102 requires an impairment review to be undertaken if performance is or will be worse than expected. Thus Section 27 requires an impairment test to be undertaken if performance is or will be significantly below that previously budgeted. In particular, there may be indicators of impairment even if the asset is profitable in the current period if budgeted results for the future indicate that there will be losses or net cash outflows when these are aggregated with the current period results.

4.3.2 Individual assets or part of CGU?

Some of the indicators are aimed at individual fixed assets rather than the CGU of which they are a part, for example a decline in the market value of an asset or evidence that it is obsolete or damaged. Such indicators may also imply that a wider review of the business or CGU is required. However, this is not always the case. For instance, if the market value of a new head office drops below its carrying value due to a property slump, this is an indicator of impairment and may trigger a review. However, if the asset belongs to a CGU and it is clear the CGU as a whole is not impaired, it may not be necessary to re-estimate the asset's recoverable amount, even if its individual value has declined. In short, it may be irrelevant to the recoverable amount of the CGU that it contains a head office whose market value has fallen.

Similarly, if a machine has been damaged but continues to form part of a factory, being the CGU (i.e., the damage did not result in the asset's derecognition), no impairment loss will be recognised as long as the factory is not impaired.

4.3.3 Interest rates

Including interest rates as indicators of impairment could imply that assets are judged to be impaired if they are no longer expected to earn a market rate of return, even though they may generate the same cash flows as before. However, an upward movement in general interest rates will not give rise to a write-down in assets if they do not materially affect the rate of return expected from the asset or CGU itself. Although not explicitly stated in the standard, it is possible that the asset's recoverable amount is not sensitive to a particular indicator.

The discount rate used in a VIU calculation must be based on the rate specific for the asset. An entity is not required to make a formal estimate of an asset's recoverable amount if the discount rate used in calculating the asset's VIU is unlikely to be affected by the increase in market rates. For example, it is possible that the recoverable amount of an asset that has a long remaining useful life is not materially affected by increases in short-term rates. Further an entity is not required to make a formal estimate of an asset's recoverable amount if previous sensitivity analysis of the recoverable amount show that it is unlikely that there will be a material decrease in recoverable amount because future cash flows are also likely to increase to compensate for the increase in market rates. Consequently, the potential decrease in recoverable amount may simply be unlikely to result in a material impairment loss.

Geopolitical events (such as a war) can result in a significant increase in interest rates in the affected countries. This may affect an entity's discount rate when using a discounted cash flow model, as it could impact current market assessments of the time value of money and the risks specific to the asset(s) or cash-generating unit(s) for which the future cash flow estimates have not been adjusted.

4.4 Dividing the entity into cash generating units (CGUs)

If an impairment assessment is required, one of the first tasks will be to identify the individual assets affected and if those assets do not have individually identifiable and largely independent cash inflows, to divide the entity into CGUs. An asset's cash generating unit is the smallest identifiable group of assets that includes the asset and generates cash inflows that are largely independent of the cash inflows from other assets or groups of assets. [FRS 102.27.8].

The group of assets that is considered together must be as small as is reasonably practicable, i.e., the entity must be divided into as many CGUs as possible - an entity must identify the lowest aggregation of assets that generate largely independent cash inflows.

It must be emphasised that the focus is on the asset group's ability to generate cash inflows. Cash outflows or any bases for cost allocation have no relevance for the identification of CGUs.

The division cannot go beyond the level at which each income stream is 'capable' of being separately monitored. For example, it may be difficult to identify a level below an individual factory as a CGU but of course an individual factory may or may not be a CGU.

An entity can identify independent cash inflows for individual factories or other assets or groups of assets such as offices, retail outlets or assets that directly generate revenue such as those held for rental or hire. Intangible assets such as brands, customer relationships and trademarks used by an entity for its own activities are less likely to generate largely independent cash inflows and will therefore be tested together with other assets at a CGU level (see further discussion at 4.4.2).

Focusing on cash inflows avoids a common misconception in identifying CGUs. Management may seek to argue that the costs for each of their retail outlets are not largely independent because of purchasing synergies and therefore these outlets cannot be separate CGUs. However, this will not be the deciding feature. Section 27 explicitly refers to the allocation of cash outflows that are necessarily incurred to generate the cash inflows. If they are not directly attributed, cash outflows can be 'allocated on a reasonable and consistent basis'. [FRS 102.27.17(b)]. Goodwill has to be allocated to CGUs as described in section 5 below. In addition, although Section 27 does not contain any guidance in respect of 'corporate assets' (an asset that does not generate cash inflows independently of other assets or groups of assets and whose carrying amount cannot be fully attributed to one CGU), we would expect that such assets would also need to be allocated to CGUs in a similar way (see 4.5.2 below).

A practical approach to identifying CGUs involves two stages, the first being to work down to the smallest group of assets for which a stream of cash inflows can be identified. These groups of assets will be CGUs unless the performance of their cash inflow-generating assets is dependent on those generated by other assets, or *vice versa* their cash inflows are affected by those of other assets. If the cash inflows generated by the group of assets are not largely independent of those generated by other assets, the second stage is to add other assets to the group to form the smallest collection of assets that generates largely independent cash inflows. The existence of a degree of flexibility over what constitutes a CGU is obvious. The identification of cash generating units will require judgement and Section 27 itself does not give any further guidance on this area. However, under the hierarchy in Section 10 *Accounting Policies, Estimates and Errors*, users may wish to refer to the associated guidance in IAS 36.

Under IAS 36, in identifying whether cash inflows from an asset are largely independent of the cash inflows from other assets, entities are advised to consider various factors including:

- How management monitors the entity's operations (such as by product lines, businesses, individual locations, districts or regional areas).

Or

- How management makes decisions about continuing or disposing of the entity's assets and operations. [IAS 36.69].

While monitoring by management may help identify CGUs, it does not override the requirement that the identification of CGUs is based on largely independent cash 'inflows'.

In practice, different entities will have varying approaches to determining their CGUs. While a CGU as defined in Section 27 is the smallest identifiable group of assets that generates cash inflows that are largely independent, the level of judgement involved means that there is still likely to be a reasonable degree of flexibility in most organisations. In practice, most entities may tend towards larger rather than smaller CGUs to keep the complexity of the process within reasonable bounds, but this leads to the risk that lower level impairments are avoided because poor cash flows from some assets may be offset by better ones from other assets in the CGU.

The following Illustrations show how an entity might identify their CGUs.

Illustration 4-1: Identification of CGUs - Independent cash flows

A bus company provides services under contract with a municipality that requires minimum service on each of five separate routes. Assets devoted to each route and the cash flows from each route can be identified separately. One of the routes operates at a significant loss.

Because the entity does not have the option to curtail any one bus route, the lowest level of identifiable cash inflows that are largely independent of the cash inflows of other assets or groups of assets are the cash inflows generated by the five routes together. The cash generating unit for each route is the bus company as a whole.

Illustration 4-2: Identification of CGUs - Management monitoring and decision making

Scenario A - magazine titles

A publisher owns 150 magazine titles of which 70 were purchased and 80 were self-created. The price paid for a purchased magazine title is recognised as an intangible asset. The costs of creating magazine titles and maintaining the existing titles are recognised as an expense when incurred. Cash inflows from direct sales and advertising are identifiable for each magazine title. Titles are managed by customer segments. Management has a policy to abandon old titles before the end of their economic lives and replace them immediately with new titles for the same customer segment.

It is likely that the recoverable amount of an individual magazine title can be assessed. Even though the level of advertising income for a title is influenced, to a certain extent, by the other titles in the customer segment, cash inflows from direct sales and advertising are identifiable for each title. In addition, although titles are managed by customer segments, decisions to abandon titles are made on an individual title basis.

Therefore, it is likely that individual magazine titles generate cash inflows that are largely independent of each other and that each magazine title is a separate cash-generating unit.

Scenario B - suburban newspapers

An entity publishes 10 suburban newspapers, each with a different masthead, across 4 distinct regions within a city centre. The price paid for a purchased masthead is recognised as an intangible asset. The newspapers are distributed to residents free of charge. No newspaper is distributed outside its region. All of the revenue generated by each newspaper comes from advertising sales. An analysis of advertising sales shows that for each masthead:

- Approximately 90% of sales come from advertisers purchasing 'bundled' advertisements that appear in all those newspapers published in one particular region of the city.
 - Approximately 6% of sales come from advertisers purchasing 'bundled' advertisements that appear in all 10 newspapers in the city.
- And
- Approximately 4% of sales come from advertisers purchasing advertisements that appear in one newspaper only.

What is the CGU for an individual masthead?

Identify the smallest aggregation of assets for which a stream of cash inflows can be identified.

The fact that it is possible to use a *pro rata* allocation basis to determine the cash inflows attributable to each newspaper means that each masthead is likely to represent the smallest aggregation of assets for which a stream of cash inflows can be identified.

Are the cash inflows generated by an individual masthead largely independent of those of other mastheads and, conversely, is that individual masthead affecting the cash inflows generated by other mastheads?

As approximately 96% of cash inflows for each masthead arise from 'bundled' advertising sales across multiple mastheads, the cash inflows generated by an individual masthead are not largely independent.

Therefore, the individual mastheads would most likely need to be aggregated to form the smallest collection of assets that generates largely independent cash inflows. On the basis that approximately 90% of cash inflows for each masthead arise from 'bundled' advertising sales across all of the newspapers published in a particular region, it is likely that those mastheads published in one region will together form a CGU.

Scenario C - retail outlets

An entity has a chain of retail outlets located in the same country. The business model of the entity is highly integrated and the majority of the entity's revenue generating decisions, such as decisions about investments and monitoring of performance, are carried out at an entity level by the executive committee, with some decisions (such as product range and marketing) delegated to the regional or store levels. The majority of the operations, such as purchasing, are centralised. Management operates its business on a regional basis; but sales are monitored at the individual store level.

The outlets are usually bought and sold in packages of outlets that are subject to common economic characteristics, e.g., outlets of similar size or location such as a shopping centre or city or region. Only in rare situations has the entity sold or closed down an individual outlet.

The determining factor for CGUs is the level at which largely independent cash inflows are generated, and not the manner in which the entity's operations are organised and monitored. The fact that operations and costs are managed centrally does not in itself affect the source and independence of the cash inflows. The interdependence of cash outflows is unlikely to be relevant to the identification of CGUs.

The key issue in deciding whether CGUs must be identified at the level of the individual store as opposed to a group of stores is whether, if a store is closed down, all the customers of that store would seek out another of the entity's stores such that there is no significant 'leakage' of customers from the store closure. Unless the customers transfer their business to another of the entity's stores, the individual stores are separate CGUs.

Management in Scenario C can consider that the primary way in which they monitor their business is on a regional or segmental basis, but cash inflows are monitored at the level of an individual store. Individual stores generate independent cash inflows in most circumstances and the overriding requirement under Section 27 is that the identification of CGUs is based on largely independent cash inflows. This means that in many circumstances an entity will need to conclude that an individual store represents a separate CGU.

Scenario C discusses a traditional 'bricks and mortar' retail business. It is important to be aware that the business models of some retailers have significantly changed over recent years, and with the increased importance of internet sales will probably further change in the years ahead. Evolving 'omni-channel' business models have potential impacts on the identification of CGUs in the retail sector which require careful consideration. For further guidance on the identification of CGUs in omni-channel business models in the retail sector, see the EY publication, International GAAP®, Chapter 21, Section 3.1. Another specific issue of particular relevance to retailers is that of so-called 'flagship stores' where questions can arise as to whether these stores are separate cash-generating units for the purpose of impairment testing, and which cash flows to include in the test. This matter is also discussed in further detail in the EY publication, International GAAP®, Chapter 21, Section 3.6.

4.4.1 Grouping of assets

As shown in Illustration 4-3 below, it is possible that the entity is capable of identifying individual cash inflows from assets. However, as stated in 4.4 above, the process to identify a CGU is based on the presence of individually identifiable and independent cash inflows. It is possible that the individually identifiable cash inflows are not independent when the allocation of cash inflows to individual assets is solely based on a management decision.

Illustration 4-3: Identification of CGUs - grouping of assets

Scenario A - A tour operator's hotels

A tour operator owns three hotels of a similar class near the beach at a large holiday resort. These hotels are advertised as alternatives in the operator's brochure, at the same price. Holidaymakers are frequently transferred from one to another and there is a central booking system for independent travellers. In this case, the hotels can be regarded as offering genuinely substitutable products by a sufficiently high proportion of potential guests and can be grouped together as a single CGU. Effectively, the hotels are being run as a single hotel on three sites. The entity will have to bear in mind that disposal decisions can still be made on a hotel-by-hotel basis and have to weigh this appropriately in its determination of its CGUs.

Scenario B - Container ships

A shipping company operates a series of container vessels of similar size in a specific region that it considers to be a single CGU. As well as this shipping business, it has other types and regions of shipping operations where CGUs are established on an appropriate basis.

Management can identify the actual cash inflows from the individual vessels, but it determines that the following are the principal features that indicate that these container ships comprise a single CGU:

- The vessels are interchangeable within the contracts and none is on a long-term hire to any individual client.
- The pricing of the contract is not vessel specific.
- A reasonable portion of the contracts require the operator to have a certain level of capacity available, comprising multiple vessels.
- The investment, continuance and disposal decisions are made by class of vessel and not linked to the actual revenue generated by that vessel.
- The class of vessels has a clear and distinctive market and management views and makes decisions by reference to the CGU, not individual assets.

The fact that one or more of the assets could be used individually, i.e., taken out of the 'pool', would not in itself prevent the assets being considered part of a single CGU. Management concluded that, as the allocation of contracts to individual vessels is solely based on a management decision, the individual container vessel does not generate independent cash inflows. The container vessels therefore need to be tested together at a CGU level.

In Scenario B above, an analogy can be made to the conclusion in one of the illustrative examples to IAS 36, IE11-IE16, that plants B and C of entity M are part of one CGU which is illustrated in the following Illustration 4-4:

Illustration 4-4: Identification of CGUs - single product entity

Entity M produces a single product and owns plants A, B, C. Each plant is located in a different continent. A produces a component that is assembled in either B or C. The combined capacity of B and C is not fully utilised. M's products are sold worldwide from either plant B or C. For example, B's product can be sold in C's continent if the products can be delivered faster from B than from C. Utilisation levels from B and C depend on the allocation of sales between the two sites. There is no active market for A's products.

It is likely that A, B and C together, therefore M as a whole, are the smallest identifiable group of assets that generates cash inflows that are largely independent. This is due to:

- A's cash inflows depending on sales of the final product by B and C
- And
- Cash inflows for B and C depend on the allocation of the production across the two sites

As explained in 4.4.4 below, the conclusion would be different if an active market for A's product existed, resulting in A being one CGU and B and C together another CGU.

As a result of applying the methodology illustrated in Illustration 4-2 above, an entity could identify a large number of CGUs. However, it is acceptable to make reasonable approximations and one way in which entities can apply this in practice is to group together assets that are separate CGUs, but which if considered individually for impairment would not be material. Retail outlets, usually separate CGUs, can be grouped if they are all subject to the same economic circumstances and grouping them together rather than examining them individually will have an immaterial effect. However, the entity will still have to scrutinise the individual CGUs to ensure that those that it intends to sell or that have significantly underperformed are not supported by the others with which they are grouped. They would need to be identified and dealt with individually.

In practice, different entities will inevitably have varying approaches when determining their CGUs. There is judgement to be exercised in determining an income stream and in determining whether it is largely independent of other streams. Given this, entities tend towards larger rather than smaller CGUs, to keep the complexity of the process within reasonable bounds.

4.4.2 CGUs and intangible assets

The same requirements apply to testing intangible assets for impairment under Section 27 as for all other assets. The recoverable amount is the higher of the FVLCS or VIU of the individual asset or of the CGU to which the asset belongs. If the individual intangible asset's FVLCS is lower than the carrying amount and it does not generate largely independent cash inflows, the CGU to which it belongs will be reviewed for impairment.

Many intangible assets do not generate independent cash inflows as individual assets and so they are tested for impairment with other assets of the CGU of which they are part. A trademark, for example, will generate largely independent cash inflows if it is licensed to a third party but more commonly it will be part of a CGU.

If impairment is tested by reference to the FVLCS or VIU of the CGU, impairment losses, if any, will be allocated in accordance with Section 27. Any goodwill allocated to the CGU has to be written off first. After that, the other assets of the CGU, including the intangible asset, will be reduced *pro rata* based on their carrying amount (see 6.2 below). [FRS 102.27.21]. However, the carrying amount of an asset cannot be reduced below the highest of its FVLCS, VIU or zero. [FRS 102.27.22]. If the preceding rule is applied, further allocation of the impairment loss is made *pro rata* to the other assets of the unit (group of units).

[FRS 102.27.23].

If the intangible asset is no longer useable then it must be written off, e.g., an in-process research and development project that has been abandoned, so it is no longer part of the larger CGU, and its own recoverable amount is nil.

4.4.2.A Intangible assets as corporate assets

As discussed at 4.4.2 above, many intangible assets do not generate independent cash inflows as individual assets and must therefore be tested for impairment with other assets of the CGU of which they are part. However, one question an entity would need to assess beforehand, is whether the intangible asset in question might constitute a 'corporate asset' (an asset that does not generate cash inflows independently of other assets or groups of assets and whose carrying amount cannot be fully attributed to one CGU) or whether the intangible asset is a core asset to the cash-generating nature of a CGU? Section 27 provides no definition of corporate assets or specific guidance on how to deal with such assets, although they would certainly fall within its scope. Under the hierarchy in Section 10, users may consider guidance which is provided under IAS 36. Corporate assets are discussed further at 4.5.2 below.

The judgement as to whether an asset is a corporate asset or is attributed to specific CGU can have a significant impact on the level at which CGUs are identified and therefore at which level assets are assessed for impairment. A careful consideration of all facts and circumstances is required to avoid carrying out impairment tests at a level that is too high with the result of masking potential impairments.

Assume a scenario where Entity A acquires Entity B. Entity B operates in a different industry to A. The reason for the acquisition was diversification with no expected cross synergies between A's and B's operations. Entity B sells product X under a European wide well-known brand and operates across Europe. Each country has its own manufacturing site from which mainly small local companies in the same country are served. Before the acquisition, entity B concluded that every manufacturing site in each country is a separate CGU. On acquisition of Entity B an intangible asset for the brand is recorded in Entity A's group financial statements. No goodwill was recorded. At which level is Entity A required to set the CGUs for the acquired business? In this specific example, the single brand would not result in a determination that the CGU(s) of Entity B's business are at the overall level of B. There are individual production sites in each European country from which customers in the same country are served and there is no cross selling of products to customers in other European countries, therefore independent cash inflows can be identified on a country level resulting in the identification of CGUs on a country level. The treatment of the brand would follow the guidance as set out at 4.5.2 below for corporate assets.

On the other hand, if in the example above B was a professional services company operating across Europe and Entity B's brand identifies Entity B as one integrated pan-European service provider and markets itself to customers as such, the determination of CGU(s) of Entity B's business at an overall level of B including the brand can be appropriate, particularly where a majority of the customers have a presence in multiple European countries and are looking for one supplier that can serve each local presence.

As explained above, the identification of CGUs involves judgement and a careful consideration of all facts and circumstances is required.

How we see it
