The better the question. The better the answer. The better the world works.

From legacy to leading edge with the EY Data Migration & Conversion solution

EY professionals understand that the journey to modernization is not just a technological upgrade; it's also a transformative leap toward a more agile and customer-centric future. Our comprehensive Data Migration & Conversion (DMC) solution empowers insurance carriers to securely and cost-effectively transition from outdated legacy systems to leading-edge environments so that carriers are equipped to thrive in an ever-evolving marketplace.

The payoff for modernizing legacy systems is significant: Carriers can enhance operational efficiency, compliance, data integrity and business agility, while mitigating risk and lowering total cost of ownership. It also empowers carriers to deliver faster, more seamless and simple experiences for brokers, policyholders, members and beneficiaries.

Why choose us for your data conversion journey

Data conversions can be complex – but they don't have to be painful. With the right strategy, technology and team, businesses can minimize risk and quickly unlock value. Our end-to-end solution blends deep insurance know-how with powerful, AI-enabled technology to help carriers move from legacy systems to modern platforms and ecosystems – securely, efficiently and with confidence.

From strategy to execution – every step is covered

We start by getting a clear picture of your conversion goals, potential business impacts and current technology ecosystem. From there, we build a tailored business case and roadmap to help you achieve those goals. We then collaborate with you to execute the full conversion process – from extracting and transforming data to testing and making the operational shifts needed to support your new environment.

Stay ahead of risk and compliance

We identify, mitigate and manage all risks commonly associated with the planning and delivery of migration and conversion, including increasing economic certainty. Our data validation processes help maintain data accuracy and compliance with industry standards.

Policy values affirmed by actuaries

With a central role in delivery, our actuaries bring deep technical knowledge of all product types, riders, features and policy calculations essential to a system conversion. We validate legacy system policy values, mitigating risk while confirming quality, accuracy and alignment of values from official documents.

Deep domain experience at every turn

We bring industry knowledge from life, group benefits and annuities insurance with experience from system integration professionals, data scientists and technology advisors. It's a cross-functional team built to deliver results fast.

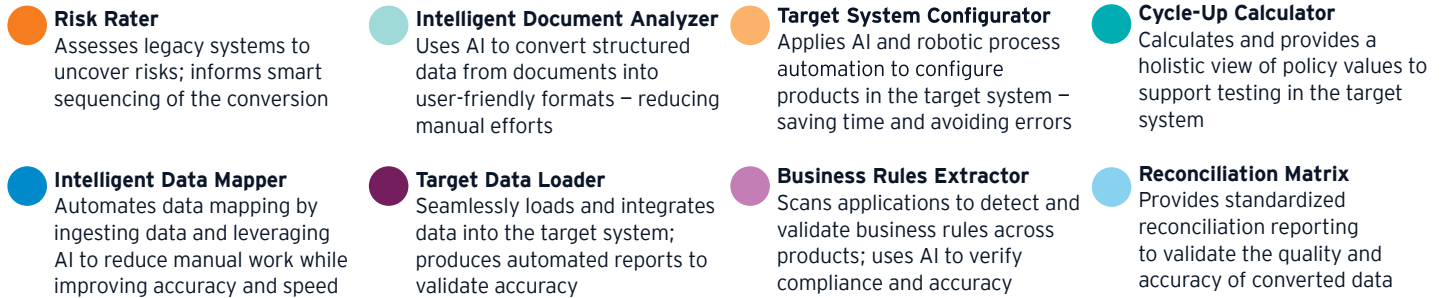

Leading-edge technology

Through the EY DMC Studio, we harness the power of artificial intelligence (AI) and other advanced technologies throughout the conversion journey.

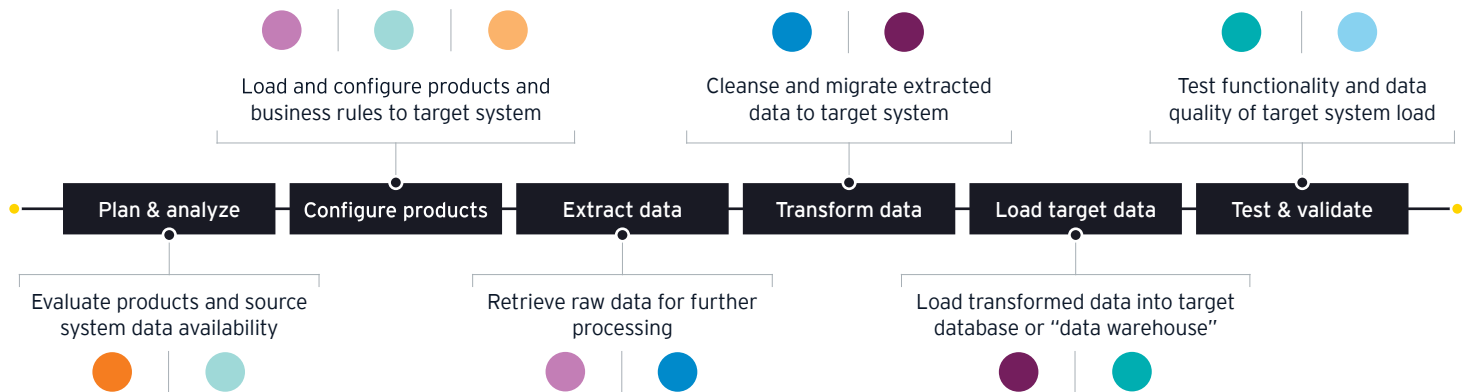

EY Data Migration & Conversion Studio capabilities

The EY DMC Studio is an intuitively designed suite of tools and models that can be used to accelerate conversions, cut costs, reduce risk and minimize disruption. The user-friendly DMC Studio can be easily leveraged by nontechnical users.

AI-powered tools and models

Value across the end-to-end conversion process
